**ENERGY CONSERVATION**

Declining levels of natural energy resources mandate that the school district develop and implement plans to conserve all forms of energy used in district facilities. The need to participate in reserving the nation's energy resources and the economic reality of increased cost of utility services require that an energy conservation program be supported by all school personnel.

The Board of Trustees accepts responsibility to maintain and fund an aggressive program to reduce consumption of energy by the school district and to provide education on energy conservation.
