SECTION 00 01 10 - TABLE OF CONTENTS

Written Contract Documents and Specification Sections identified below are grouped and identified as "Bid Packages" and are numbered and dated as such. The intent of these groups of Documents is to convey sufficient information to allow a designated portion of the Work to be bid upon and constructed. All previously issued Contract Documents and Specifications apply to each successive "Bid Package" and, if not printed and bound herewith, are available from the Construction Manager.

Changes made to prior issues (additions, deletions, and changes) are highlighted in **bold** and ~~strikethrough~~ text within each section, and the Issue date is changed herein to reflect the most current issue. The Contractor is responsible for evaluating all Documents issued, both current and previous issues, and dividing and assigning work to the various trades and subcontractors.

PROCUREMENT AND CONTRACTING REQUIREMENTS GROUP

DIVISION 00 -- PROCUREMENT AND CONTRACTING REQUIREMENTS

INTRODUCTORY INFORMATION

NUMBER	TITLE	ISSUE ID	DATE
00 01 03	Project Directory		06-05-2026
00 01 10	Table of Contents		06-05-2026
00 31 00	Available Project Information		06-05-2026
00 60 00	Project Forms		06-05-2026
00 63 13	RFI Form		06-05-2026
00 63 25	Substitution Request Form (During Construction)		06-05-2026

PROCUREMENT AND CONTRACTING REQUIREMENTS – TO BE INCLUDED WITH FUTURE ISSUE

In the absence of forms provided by the Architect or Construction Manager, the following forms shall be used to administer the project.

AIA forms and pre-printed documents listed below are not included in this Project Manual and are hereby made a part of the Contract Documents. AIA forms and pre-printed documents may be obtained from distributors listed at https://www.aiacontracts.org/purchase.

CSI forms and pre-printed documents listed below are not included in this Project Manual and are hereby made a part of the Contract Documents. CSI forms and pre-printed documents may be obtained from www.csiresources.org.

ADDITIONAL PROCUREMENT AND CONTRACTING REQUIREMENTS

Additional Subcontract Procurement and Contracting Documents prepared by the Contractor are bound separately and are not enumerated herein.

SECTION 003100 - AVAILABLE PROJECT INFORMATION

PART 1 GENERAL

1.1 EXISTING CONDITIONS

A. Certain information relating to existing surface and subsurface conditions and structures is available to Contractor, but are not part of the Contract Documents, as follows:

B. Pre-Construction Environmental Soils Report:

1. A copy is included with this document.
2. Contractor is urged to examine data provided.
3. Contractor should visit the site and become acquainted with existing conditions.
4. This report, by its nature, cannot reveal all conditions that exist on the site. Should subsurface conditions be found to vary substantially from this report, changes in the design and construction of foundations will be made, with resulting credits or expenditures to the Contract Sum accruing to Owner.
5. Interpretation: This report is provided only for information and convenience. Owner and Architect disclaim responsibility for accuracy, true location and extent of soil conditions that have been evaluated by others. Owner and Architect further disclaim responsibility for interpretation of the report data by the Contractor; including but not limited to projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
6. Applicable Requirements: Specific and variable recommendations contained in this document are subject to acceptance by Owner for incorporation in the Contract Documents prepared by Architect. Comply with requirements specified in the Contract Documents for earthwork and other applicable work scope items.

1.2 SUSTAINABILITY CERTIFICATION INFORMATION

A. Sustainability Compliance Manual and Checklist:

1. A copy of the CTHPB Compliance Manual is included with this document.
2. A copy of the CTHPB Checklist with targeted points identified by Owner and Architect is included with this document.
3. Contractor is required to examine documents provided, and comply with referenced requirements as may be specified in the Contract Documents.
4. See Section 018113 - Sustainable Design Requirements - CTHPB for sustainable design requirements.

1.3 ENVIRONMENTAL INFORMATION

A. Stormwater Pollution Control Plan:

1. A copy of the Plan will be included witth this document.

2. Contractor is required to examine documents provided, and comply with referenced requirements as may be specified in the Contract Documents.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 006000 - PROJECT FORMS

PART 1 GENERAL

1.1 SUMMARY

A. Procedures for use of administrative forms.

B. Administrative forms.

1.2 PROCEDURES

A. Use of forms in this Section is required.

1. Use of Contractor's alternative forms is acceptable subject to approval of Architect, and provided that content of alternative forms is substantially equivalent to forms provided in this Section.

B. Complete applicable information on form. Indicate date transmitted and date of required response, as applicable. Attach supporting documentation and additional descriptive information as necessary to fully describe the request.

C. Use a single form for each separate request. Closely related items may be included in a single request only if acceptance of one item requires acceptance of all items in the request.

D. Comply with the requirements of Section 016000 for requests for substitution after execution of the Contract.

1.3 ARCHITECT'S ACTION

A. When requests are made within the time allowed for Architect's review, Architect will make reasonable effort to respond in a timely manner, but no claim for delay by Contractor will be allowed.

B. Substitution Requests: Architect's review is for general conformance with the Contract Documents only and does not relieve Contractor from full compliance with the Contract Documents and Contractor's representations specified in Section 016000.

1.4 FORMS

A. Request for Information: Number consecutively; include Architect's project number; clearly specify the document reference by specification Section number, article, paragraph, Drawing number, and detail numbers as applicable. Architect will complete the lower portion of the form as the written response.

1. RFI Form: Contractor's standard form from Procore or similiar tracking system.

B. Substitution Request: Number consecutively; complete all required information on the form; indicate applicable cost savings and time affect, if any. Architect will complete the lower portion of the form as the written response, and will attach further written response as necessary to explain the decision, if required. Forms submitted without all required information as indicated on the form may be returned for completion before review by Architect.

1. Substitution Request Form (During Construction): 006325 - Substitution Request Form - During Construction.

C. Forms are on pages immediately following the end of this Section.

SECTION 011000 - SUMMARY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Instructions to Bidders, AIA Document A201 "The General Conditions of the Contract for Construction," and Division 01 General Requirements, are a part of this Section and shall be binding on the Contractor and all Subcontractors who perform this work.

1.2 PROJECT

A. Project Name: EDGEWOOD PRE-K ACADEMY.

B. Owner's Name: City of Bristol.

C. Architect's Name: Quisenberry Arcari Malik, LLC.

1.3 PROJECT DESCRIPTION

A. This is the second phase of the renovation to Edgewood Pre-K Academy.

B. The scope consists of three major components:

1. Abatement and Demolition:

    a. Exploratory excavation activity.

    b. Selective demolition of existing site elements.

    c. Backfilling of voids and excavations left from site demolition activities.

    d. Selective demolition for hazardous materials abatement.

    e. Selective demolition of non-structural interior building elements.

    f. Selective demolition of building envelope elements, including structural elements.

2. Site/ Utility Infrastructure: The existing site layout will remain largely the same with the existing independent parent and bus circulation paths on the site remaining.

    a. Sidewalks, playscapes and play areas will be redesigned.

    b. New electrical, water and sewer lines will be brought to the building.

3. Renovations to Existing Edgewood Pre-K Academy: The existing part of the school will have a Renovate-As-New classification and be fully renovated.

    a. The scope of the work includes cutting, capping of existing utilities within the school, and make ready for new utility services to be provided.

b. Additional structural bracing will be provided at select building elements identified in the contract documents to reinforce the existing facility structure.

c. The Mechanical, Electrical, Plumbing, Technology, Audio/ Visual, and Security systems will be demolished in the existing building and new systems will be provided throughout the facility.

d. A fully addressable Fire Suppression system will be installed within the existing facility and new construction to bring the facility up to current Building Code requirements.

e. All existing flat roofs will be replaced with a new single-ply membrane roofing on all existing building, as required to obtain the required 20 year warranty certification.

f. Buildiing envelope work includes all new, windows and doors, cleaning and restoration of existing masonry, new metal panels, and masonry accent courses

g. The interior construction will be a combination of metal stud and masonry walls. Finishes will include gypsum soffits, acoustical ceiling tile, VET and Ceramic flooring.

h. The interior scope includes millwork, interior doors and frames, clear story windows, tile wainscot in the bathrooms. The public toilet rooms will have full-height ceramic wall tile and ceramic flooring.

1.4 CONTRACT DESCRIPTION

A. Contract Type: Multiple trade contracts under the CM at Risk based on a Guaranteed Maximum Price (GMP) as described in the contract for construction.

B. Construction Manager for this Project is Project's constructor. The terms "Construction Manager" and "Contractor" are synonymous.

1.5 DIVISION 01 SPECIFICATIONS

A. Division 01 General Requirements expand on the broad provisions of the Conditions of the Contract, and govern the execution of the work of all Sections of the specifications. Division 01 General Requirements specify administrative and procedural requirements relating to execution of the Work, and temporary facilities for use during the construction period.

B. If Construction Manager provides additional Division 01 sections and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for direction before proceeding.

1.6 BID PACKAGES AT EDGEWOOD PRE-K DESCRIPTION

A. The work of this Bid Package is defined by the Construction Manager.

1.7 PROJECT WARRANTY

A. Refer to General Conditions for warranty provisions applicable to this Contract.

1. Project warranty period is governed by the codes and statues within the State in which the Project is located, and other provisions of the Contract.

B. Guarantee of Materials and Workmanship:

1. Guarantee in writing to Owner that all work performed and all materials and equipment furnished under this Contract are new and in accordance with the Contract Documents, are free from defects in equipment, materials or design furnished, or workmanship performed by Contractor or any of his subcontractors or suppliers at any tier. Such guarantee shall continue for a period not less than one (1) year from the date of Substantial Completion of the Work, or as otherwise required by the codes and statutes within the State in which the Project is located or other provisions of the Contract.

2. Under this guarantee, Contractor agrees to remedy at his own expense any inferior or defective equipment, materials, workmanship, or design that should develop during the guarantee period, or in restoring any other work damaged in fulfilling the terms of the guarantee.

3. Do not perform any work that shall void any manufacturer guarantee or warranty.

C. Manufacturer's Guarantee and Warranty:

1. As identified in other Sections of the specifications, provide written manufacturer's guarantees and warranties for specific materials, products, and equipment furnished and installed under this Contract.

2. Guarantees and Warranties Period: Valid for the period of time stated in each applicable specification Section from the date of Substantial Completion of the Work, but not less than twelve (12) months.

D. Extended Warranties:

1. As identified in other Sections of the specifications, provide written manufacturer's guarantees and warranties for specific materials, products, and equipment furnished and installed under this Contract.

2. Guarantees and Warranties Period: Valid for the stated extended period beyond twelve (12) months from the date of Substantial Completion of the Work.

E. Exclusions:

1. Warranty requirements contained in the specifications take precedence. These exclusions are superseded by warranty coverage requirements of the specifications.

2. Notify Architect of design conditions which cannot be fully warranted. Submit notice in writing prior to purchase of the affected product or system.

3. Failure to provide such notice will not be grounds for waiver of warranty requirements contained in the specifications.

4. Upon receipt of such notice, Architect will consider modifications necessary to assure that final construction is warrantable to the full extent of Contract requirements.

1.8 WORK BY OWNER

A. Items noted in Drawings as NIC (Not in Contract) will be supplied and installed by Owner before Substantial Completion.

1.9 OWNER OCCUPANCY

A. Owner will not occupy the existing building during the entire construction period.

B. Owner intends to occupy the Project upon Substantial Completion.

C. Cooperate with Owner to minimize conflict and to facilitate Owner's operations.

D. Schedule the Work to accommodate Owner occupancy.

1.10 CONTRACTOR USE OF SITE AND PREMISES

A. Construction Operations: Limited to areas designated by the Construction Manager.

B. Arrange use of site and premises to allow:

1. Work by Others.
2. Work by Owner.
3. Use of site and premises by the public.

C. Provide access to and from site as required by law and by Owner:

1. Emergency Building Exits During Construction: Keep all exits required by code open during construction period; provide temporary exit signs if exit routes are temporarily altered. Review exiting plans with the fire marshal and building officials.
2. Do not obstruct roadways, sidewalks, or other public ways without permit.

D. Existing building spaces may not be used for storage.

E. Time Restrictions:

1. Limit conduct of especially noisy work to the hours of 8am to 5pm.

F. Utility Outages and Shutdown:

1. Limit disruption of utility services to hours the building is unoccupied.
2. Do not disrupt or shut down life safety systems, including but not limited to fire sprinklers and fire alarm system, without 7 days notice to Owner and authorities having jurisdiction.
3. Prevent accidental disruption of utility services to other facilities.

G. Special School District Restrictions:

1. Contractor and associated personnel and subcontractors are not permitted to use existing and new toilet facilities and service sinks in the building for personal use, for cleaning tools, or for disposing of construction waste materials.
2. No construction waste materials may be disposed of in Owner's dumpsters or other Owner containers.

3. Control smoke, dust, dirt, odors and other objectionable effects, and limit to the immediate area of construction. Contractor is responsible for cleaning other areas affected by noncompliance with this requirement, including contents of affected areas.
4. Clean work areas of debris, and "broom clean" no less frequently than at the end of each work day. Remove all debris from exterior site areas which could be wind blown. See Section 017000 for additional requirements.

H. Special Restriction: All Contractor's personnel, including but not limited to subcontractors, suppliers, inspectors, laborers, and any personnel under contract to or in the direct employ of the Contractor are not permitted to interact with students of the existing school facility in any manner.

1.11 DELEGATED DESIGN WORK

A. See Section 014000 - Quality Requirements, for delegated design requirements.

B. Design of products and systems, or components of products and systems, specified to be provided by Contractor are as identified in specification Sections.

C. Contractor's Responsibilities:
1. Comply with specified design requirements for each applicable product or system.
2. Coordinate design and space requirements with other affected work and Architect.
3. Review applicable submittals and coordinate selections with Architect.
4. Receive and unload products and systems at the site; inspect for completeness and for damage.
5. Handle, store, install, and finish products and systems.
6. Repair or replace damaged, defective, or missing items.
7. Arrange for manufacturer's warranties, inspections, and service.
8. Comply with applicable provisions of Division 01 - General Requirements, specifically including administrative requirements, coordination, quality, regulatory, and product requirements.

1.12 SCHEDULE

A. General: The schedule for the base bid is as follows:
1. The abatement and demolition work must be completed by August 15, 2026.
2. The remaining renovation work must be completed prior to the start of the 2027-2028 school year.

1.13 SPECIFICATION FORMATS AND CONVENTIONS

A. Specification Format: The Specifications are organized into Divisions and Sections using the 48-division format and CSI/CSC's "Master Format" numbering system.

1. Section Identification: The Specifications use Section numbers and titles to help cross-referencing in the Contract Documents. Sections in the Project Manual are in numeric sequence; however, the sequence is incomplete because all available Section numbers are not used. Consult the table of contents at the beginning of the Project Manual to determine numbers and names of Sections in the Contract Documents.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be inferred as the sense requires. Singular words shall be interpreted as plural, and plural words shall be interpreted as singular where applicable as the context of the Contract Documents indicates.

2. Imperative mood and streamlined language are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. Occasionally, the indicative or subjunctive mood may be used in the Section Text for clarity to describe responsibilities that must be fulfilled indirectly by Contractor or by others when so noted.

a. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.

2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.

1.14 CODES, STANDARDS AND PERMITS

A. All work under this contract shall conform to all codes and standards in effect as of the date of receipt of Bids which are applicable to this Project. All work shall also conform to specific requirements and interpretations of local authorities having jurisdiction over the Project. These Codes, standards, and authorities are referred to collectively as “the governing codes and authorities” and similar terms throughout the Specifications. Determination of applicable codes and standards and requirements of the authorities having jurisdiction shall be the responsibility of the Contractor; as shall be the analysis of all such codes and standards in regard to their applicability to the Project for the purposes of determining necessary construction to conform to such code requirements, for securing all approvals and permits necessary to proceed with construction, and to obtain all permits necessary for the Owner to occupy the facility for their intended use. In the case of conflicts between the requirements of different codes and standards, the most restrictive or stringent requirements shall be met.

B. The codes that were used in the design of this Project are as follows:

1. Refer to Sheet R-1 of the construction document drawings set.

C. Code Enforcement and Approvals: The owner has Secured and paid for the general building permit for the work and conform to all conditions and requirements of the permit and code enforcement authorities.

D. Identify all permits (other than general building permits) required from authorities having jurisdiction over the Project for the construction and occupancy of the work. Prepare the necessary applications and submit required plans and documents to obtain such permits in a timely manner. Permit fees to be paid by the Subcontractor.

1. Display all permit cards as required by the authorities and deliver legible photocopies of all permits to the Architect and Owner promptly upon their receipt.

2. Arrange for all inspections, testing and approvals required for all permits. Notify the Owner, and Architect at least three business days in advance, so they may arrange to observe.

3. Comply with all conditions and provide all notices required by all permits.

4. Perform and/or arrange for and pay for all testing and inspections required by the governing codes and authorities, other than those provided by the Owner, and notify the Owner, and Architect of such inspections at least three business days in advance, so they may arrange to observe.

5. Where inspecting authorities require corrective work in conjunction with applicable codes and authorities promptly comply with such requirements, except in cases where such requirements clearly exceed the requirements of the Contract Documents, in which case proceed in accordance with the procedures for modifications to the Work established in the Contract Documents

1.15 OCCUPATIONAL SAFETY AND HEALTH ACT

A. The Contractor and each Subcontractor shall comply with the requirements of the Occupational Safety and Health Act of 1970 and the Construction Safety Act of 1969, including all standards and regulations which have been promulgated by the Governmental Authorities which administer such Acts. Said requirements, standards and regulations are incorporated herein by reference.

1. In accordance with Connecticut General Statutes Sec. 31-53b, all employees on the Project site must show proof of completing and maintaining the OSHA 10-hour certification requirements in accordance with federal OSHA Training Institute standards.

B. The Contractor and each Subcontractor shall comply with said regulations, requirements and standards and require and be directly responsible for compliance therewith on the part of his agents, employee’s material men and Subcontractors; and shall directly receive and be responsible for all citations, assessments, fines or penalties which may be incurred by reason of his agents, employees, material men or Subcontractors failing to so comply.

1.16 GENERAL AND FINAL CLEANING

A. General: Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.

2. The contractor must maintain a clean and safe site. The contractor is responsible for weekly cleaning in the construction and surrounding area impacted by construction. Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Construction dumpsters are to be located in a secured fenced area. Comply with manufacturer's written instructions.
3. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F.
4. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 011001 – HAZARDOUS MATERIALS GENERAL CONDITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. Section includes the qualifications for Contractors who will be performing hazardous materials abatement work, Site restrictions, project phasing and additional general requirements.

B. Related Sections:
1. Section 011600: Hazardous Materials Scheduling and Phasing
2. Section 012200: Hazardous Materials Unit Prices
3. Section 017701: Hazardous Materials Contract Closeout
4. Section 020750: Selective Demolition for Hazardous Materials Abatement
5. Section 020800: Asbestos Abatement
6. Section 020820: Universal Waste Reclamation
7. Section 020900: Lead Paint Awareness
8. Section 021100: PCB Remediation

1.3 HAZARDOUS MATERIALS ABATEMENT CONTRACTOR (HMAC) QUALIFICATIONS

A. All bidders shall submit a record of prior experience in asbestos and lead demolition projects, listing no less than three (3) completed jobs in the past year, with all projects of similar size and scope. The Hazardous Materials Abatement Contractor (HMAC) shall list the experience and training of the site supervisor and all on-site workers. The information that shall be included is as follows:
1. Project Name and Address
2. Owner's Name and Address
3. Architect/Consultant/Construction Manager
4. Contract Amount
5. Date of Completion
6. Extras and Change Orders

B. The HMAC selected must appear on the State of Connecticut Department of Public Health (CT DPH) list of licensed Asbestos Abatement Contractors.

C. Contractors performing work that disturb painted surfaces beyond that described in Section 020900 Lead Paint Awareness shall comply with the OSHA Lead in Construction Standard 29 CFR 1926.62.

D. Submit a written statement regarding whether the HMAC has ever been found out-of-compliance with federal or state asbestos and/or lead regulations pertaining to worker protection, removal, transport, or disposal.

E. Award of this Contract may not necessarily be based solely on the submitted lowest Base Bid amount. The Owner reserves the right to award this Contract to the Bidder who best meets all HMAC qualifications.

1.4 HMAC USE OF SITE AND PREMISES

A. Limit use of Site and premises as follows:
   1. Owner occupancy.
   2. Work by Owner.
   3. Use of Site and premises by the public.

B. Coordinate use of the premises under the direction of the Owner. The school will be vacant during the work of this project.

C. Assume full responsibility for protection and safekeeping of products under this Contract.

D. The HMAC shall not interfere with general Site operations. The HMAC shall coordinate parking for employees with the Owner.

E. The HMAC shall coordinate location of waste container(s) with Owner operations.

1.5 WORK PHASING

A. Work under this project shall be performed in phases to accommodate Owner, Architect, and Construction Manager requirements and remaining construction phases. Coordinate abatement schedule and operations with the Construction Manager and Owner's Consultant and other trades.

B. The HMAC shall become familiar with the phasing of this work and shall include the required mobilization and re-mobilization as necessary to support the work phasing.

1.6 OWNER'S OPERATIONS

A. School will be vacant at the time of the asbestos abatement activities but adjacent buildings will be occupied. The HMAC and their work force shall stay within the confines of the construction area at all times throughout the project.

B. Maintain means of egress. Do not block corridors, pathways, exits, means of egress form the building, roadways, loading areas, parking areas or other areas of the Site used for Owner operations.

C. Coordinate Work with the Owner, the Architect, and the Owner's Consultant.

D. Maintain the fire alarm, fire detection system, and sprinkler system active at all times during abatement.

E. Maintain permanent means of egress during abatement. Provide and maintain temporary means of egress as required by Fire Marshall.

1.7 CLOSEOUT AND PUNCH LIST

A. The HMAC shall carefully check his/her own work and that of any Subcontractor as the work is being performed. Unsatisfactory work shall be corrected immediately.

B. When the HMAC determines that they are substantially complete, that is, has less than one percent of his Contract remaining to be completed, they shall prepare for submission to the Owner's Consultant, a list of items to be completed or corrected. The failure to include any items on such list does not alter the responsibility of the HMAC to complete all work in accordance with the Contract Documents.

C. Upon receipt of the HMAC's list of items to be completed or corrected, the Owner's Consultant will promptly make a thorough inspection and prepare a "punch list" setting forth in accurate detail any items on the HMAC's list and any additional items that are not acceptable.

D. When the "punch list" has been prepared, the Owner's Consultant will arrange a meeting with the HMAC to identify and explain all punch list items and answer questions on the work that must be completed before final acceptance.

E. The HMAC shall correct all "punch list" items or shall cause the correction of the "punch list" items within a time frame to be established when the "punch list" is made. The time frame for the completion of the "punch list" shall not exceed the completion date of the Contract. Should the "punch list" not be completed within the specified time frame, the Owner may invoke the rights given under the General Conditions.

F. The Owner's Consultant shall not be expected to inspect any area more than once for the preparation of the "punch list" items. If, during an inspection, the Owner's Consultant discovers five (5) or more deficient conditions, then the area shall be declared "Not Ready" for Inspection.

G. All inspections and sampling required for hazardous materials abatement compliance will be performed by the Owner's Consultant.

1.8 CLEANING

A. Throughout the construction period, the HMAC shall maintain the building and the site free of rubbish, debris, surplus materials, and other items not required for the Work. Remove such material from the site daily to prevent accumulations. Remove all construction debris from work areas, and remove all hazardous waste and asbestos waste as required by the most current federal, state, and local regulations and the requirements of the specifications.

B. The HMAC shall perform wet cleaning of floors daily on the outside of each asbestos abatement work area. Cleaning shall be performed to a minimum distance of five feet from the work area.

1.9 ADDITIONAL GENERAL REQUIREMENTS

A. The HMAC shall employ a competent and English-speaking Asbestos Abatement Supervisor with at least three (3) years of experience on projects of similar scope and magnitude. The Supervisor shall be responsible for all work involving hazardous materials abatement as described in the specifications and defined in the applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the "Competent Person" as defined by OSHA regulations.

B. The HMAC shall allow the work of this contract to be inspected, if required, by local, state, federal, and any other authorities having jurisdiction over such work. The HMAC shall immediately notify the Owner and Owner's Consultant and shall maintain written evidence of such inspection for review by the Owner and Owner's Consultant.

C. The HMAC shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The HMAC shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence.

D. The HMAC shall immediately notify the Owner and Owner's Consultant of the delivery of all

permits, licenses, certificates of inspection, of approval or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless to who issued, and shall cause them to be displayed to the Owner and Owner's Consultant for verification and recording.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 011001

SECTION 011600 – HAZARDOUS MATERIALS SCHEDULING AND PHASING

PART - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. Section includes the requirements for the hazardous materials abatement schedule submittal and completion of work.

B. Related Sections:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 012200:	Hazardous Materials Unit Prices
3.	Section 017701:	Hazardous Materials Contract Closeout
4.	Section 020750:	Selective Demolition for Hazardous Materials Abatement
5.	Section 020800:	Asbestos Abatement
6.	Section 020820:	Universal Waste Reclamation
7.	Section 020900:	Lead Paint Awareness
8.	Section 021100:	PCB Remediation

1.3 GENERAL REQUIREMENTS

A. The abatement work for this project will be conducted over the course of several phases. The Hazardous Materials Abatement Contractor (HMAC) shall complete all hazardous materials abatement work included within each of the phases. The HMAC shall include the costs of all required remobilizations in their price.

B. The HMAC shall review and become familiar with the overall phasing plan established by the Construction Manager. The HMAC shall perform the required abatement work within each phase of work as determined by the Construction Manager.

C. The work of this project shall begin upon receipt of the "Notice to Proceed" from the Construction Manager. A Pre-Construction Meeting shall be scheduled by the Construction Manager and must be attended by the Hazardous Materials Abatement Contractor (HMAC) and any Sub-Contractors. The assigned Site Supervisor(s) must also attend this meeting.

D. A working schedule for each phase of work shall be established by the Construction Manager and shall be maintained by the HMAC. Variations, amendments, and corrections to the presented schedule will be discussed and the Construction Manager will inform the HMAC of additions or changes in the scheduling requirements for the project.

E. The HMAC shall refer to other Sections of the Owner's Consultant specifications and Architect specifications to determine any other work affecting the hazardous materials abatement. The HMAC shall consider the work of all other trades in their schedule and performance.

F. Refer to all other applicable sections of the specification for coordination with other trades. The abatement HMAC shall coordinate work with all other activities associated with the project.

G. The work of this project shall be completed while school is vacant and no children under the

age of 18 are present within the building. Coordinate abatement schedule with the Construction Manager and the Owner's Consultant.

1.4 TIME FOR COMPLETION AND WORKING HOURS

A. Upon award of contract from the Owner, the HMAC shall immediately submit state and federal notifications for asbestos abatement, order materials, supplies, and components for the work of this project.

B. The HMAC shall begin the work immediately upon receipt of the written "Notice to Proceed" from the Owner. The date of the commencement of the work is termed the "Construction Start Date." The HMAC will be required to complete all work of this Contract within the time period stipulated in the finalized schedule. The last day in the schedule is termed as "Contract Completion Date."

C. If conditions arise that are beyond the control of the HMAC and force delays in the performance of the Work, the Owner and Construction Manager shall be immediately notified. The HMAC shall state the reason for the delay and shall estimate the expected duration of the delay. Any application for an extension of the Contract completion date shall be made under proper change order procedures. The acceptance of the cause for delay and change order is subject to the Owner's review and approval.

D. Work hours will be established in coordination with the Owner, Owner's Consultant, and Construction Manager.

E. Any extra hours or days per week worked by the HMAC or Sub-Contractors shall be at no extra cost to the Owner. Denial of extra hours or days per week by the Owner shall not be grounds for extra time allotted to the overall Contract time. The HMAC shall be responsible for all overtime payment to cover Owner's Consultant overtime fees for work performed above and beyond normal working hours.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 011600

SECTION 012013 - PRICE AND PAYMENT PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedures for preparation and submittal of applications for progress payments.

B. Documentation of changes in Contract Sum and Contract Time.

C. Modification procedures.

D. Correlation of Contractor submittals based on Contract modifications.

E. Procedures for preparation and submittal of application for final payment.

1.2 RELATED REQUIREMENTS

A. Section 012100 - Allowances: Payment procedures relating to allowances.

B. Section 012200 - Hazardous Materials Unit Prices.

C. Section 012200.1 - Unit Prices: Monetary values of unit prices; Payment and modification procedures relating to unit prices.

D. Section 017800 - Closeout Submittals: Project record documents.

1.3 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the Schedule of Values with preparation of Contractor's Construction Schedule.

1. Correlate line items in the Schedule of Values with other required administrative forms and schedules, including the following:

a. Application for Payment forms with Continuation Sheets.

b. Submittals Schedule.

c. Contractor's Construction Schedule.

2. Submit the Schedule of Values to the Architect at earliest possible date but no later than seven days before the date scheduled for submittal of initial Applications for Payment.

B. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the Schedule of Values. Provide at least one line item for each Specification Section. For major trades with line item values greater than $25,000, provide a separate line item for units of work within each trade with a value not exceeding $25,000.

1. Identification: Include the following Project identification on the Schedule of Values:

a. Project name and location.

b. Name of Construction Manager.

c. Name of Architect.

d. Architect's project number.

e. Contractor's name and address.

f. Date of submittal.

2. Submit draft of AIA Document G702 and AIA Document G703 Continuation Sheets.

3. Arrange the Schedule of Values in tabular form with separate columns to indicate the following for each item listed:

a. Related Specification Section or Division.

b. Description of the Work.

c. Name of subcontractor.

d. Name of manufacturer or fabricator.

e. Name of supplier.

f. Change Orders (numbers) that affect value.

g. Dollar value.

1) Percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

4. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Provide several line items for principal subcontract amounts, where appropriate.

a. Include separate line items under Contractor and principal subcontracts for Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.

b. Include the following mandatory line items:

1) Mobilization.

2) Demobilization.

3) Builders Risk Insurance.

4) Bonds.

5) Coordination Drawings.

6) Scheduling.

7) Commissioning.

8) Project record documents.

9) Operation and Maintenance manuals.

10) Field Engineering.

11) Daily Building Cleanup.

12) Safety Program.

13) Full-Time Project Manager.

14) Full-Time Project Superintendent.

15) Field Offices.

16) Dumpsters.

17) Cold Weather Protection.

18) Temporary Heat.

5. Round amounts to nearest whole dollar; total shall equal the Contract Sum.

6. Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

   a. Differentiate between items stored on-site and items stored off-site. If specified, include evidence of insurance or bonded warehousing.

7. Provide separate line items in the Schedule of Values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

8. Each item in the Schedule of Values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.

   a. Temporary facilities and other major cost items that are not direct cost of actual work-in- place may be shown either as separate line items in the Schedule of Values or distributed as general overhead expense, at Contractor's option.

9. Schedule Updating: Update and resubmit the Schedule of Values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.4 APPLICATIONS FOR PROGRESS PAYMENTS

A. Payment Period: Submit at intervals stipulated in the Agreement.

B. Use Form AIA G702 and Form AIA G703, edition stipulated in the Agreement.

C. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit sample to Architect for approval.

   1. Forms filled out by hand will not be accepted.

D. For each item, provide a column for listing each of the following:

1. Item Number.
2. Description of work.
3. Scheduled Values.
4. Previous Applications.
5. Work in Place and Stored Materials under this Application.
6. Authorized Change Orders.
7. Total Completed and Stored to Date of Application.
8. Percentage of Completion.
9. Balance to Finish.
10. Retainage.

E. Execute certification by signature of authorized officer.

F. Use data from approved Schedule of Values. Provide dollar value in each column for each line item for portion of work performed and for stored products.

G. List each authorized Change Order as a separate line item, listing Change Order number and dollar amount as for an original item of work.

H. Submit one electronic and three hard-copies of each Application for Payment.

I. Include the following with the application:

1. Transmittal letter as specified for submittals in Section 013000.
2. Construction progress schedule, revised and current as specified in Section 013216.
3. Current construction photographs specified in Section 013000.
4. Conditional release of liens from each Subcontractor and vendor for the current month's payment application, and unconditional release of liens from each Subcontractor and vendor for the previous month's payment application.
5. Project record documents as specified in Section 017800, for review by Owner which will be returned to the Contractor.
6. Affidavits attesting to off-site stored products.

J. When Architect requires substantiating information, submit data justifying dollar amounts in question. Provide one copy of data with cover letter for each copy of submittal. Show application number and date, and line item by number and description.

1.5 MODIFICATION PROCEDURES

A. Submit name of the individual authorized to receive modification documents and who will be responsible for informing others in Contractor's employ or subcontractors of modifications to the Contract Documents.

B. Project Modification Forms: Forms for use primarily by Contractor are identified in Table of Contents. Use of Contractor's typical forms will be considered, subject to approval of Architect.

C. Establish and maintain a construction cost log, including the status of all pending and executed Change Orders (accepted, declined, pending, etc.), status of requests for information, supplemental instructions, other modification documents, and the status of allowances, including Owner's contingency allowance.

D. Supplemental Instructions: For minor modifications not involving an adjustment to the Contract Sum or Contract Time; Architect will issue instructions directly to Contractor.

1. Architect's issuance of supplemental instructions may constitute a modification of the Contract Documents involving an adjustment to the Contract Sum or Contract Time. If Architect's supplemental instructions require such a modification of the Contract Documents, prepare a request for change order or other modification according to applicable modification procedures specified in this Section.

E. Construction Change Directive: For other required modifications, Architect will issue a document signed by Architect and Owner instructing Contractor to proceed with the modification, for subsequent inclusion in a Change Order.

1. The document will describe the required changes and will designate method of determining any change in Contract Sum or Contract Time.

2. Promptly execute the change.

F. Proposal Request: For modifications for which advance pricing is desired, Architect will issue a document which includes a detailed description of a proposed modification with supplementary or revised drawings and specifications. Contractor shall prepare and submit a fixed price quotation within 10 days, estimating any changes to Contract Sum and Contract Time for executing the modification. Contractor's quotation shall stipulate any overtime work required and the period of time during which the requested price will be considered valid.

G. Contractor may propose a change by submitting a request for change order or modification to Architect, describing the proposed change and its full effect on the Work, with a statement describing the reason for the change, and the effect on the Contract Sum and Contract Time with full documentation and a statement describing the effect on Work by separate or other contractors.

1. Document any requested substitutions in accordance with Section 016000.

H. Computation of Change in Contract Amount: As specified in the Agreement and Conditions of the Contract.

1. For change requested by Architect for work falling under a fixed price contract, the amount will be based on Contractor's price quotation.

2. For change requested by Contractor, the amount will be based on the Contractor's request for a Change Order as approved by Architect.

3. For pre-determined unit prices and quantities, the amount will be based on the fixed unit prices.

4. For change ordered by Architect without a quotation from Contractor, the amount will be determined by Architect based on the Contractor's substantiation of costs as specified for Time and Material work.

I. Substantiation of Costs: Provide full information required for evaluation.

1. Provide the following data:

a. Quantities of products, labor, and equipment.

b. Taxes, insurance, and bonds.

c. Overhead and profit.

d. Justification for any change in Contract Time.

e. Credit for deletions from Contract, similarly documented.

2. Support each claim for additional costs with additional information:

a. Origin and date of claim.

b. Dates and times work was performed, and by whom.

c. Time records and wage rates paid.

d. Invoices and receipts for products, equipment, and subcontracts, similarly documented.

3. For Time and Material work, submit itemized account and supporting data after completion of change, within time limits indicated in the Conditions of the Contract.

J. Execution of Change Orders: Contractor will issue Change Orders for signatures of parties as provided in the Conditions of the Contract.

K. After execution of Change Order, promptly revise Schedule of Values and Application for Payment forms to record each authorized Change Order as a separate line item and adjust the Contract Sum.

L. Promptly revise progress schedules to reflect any change in Contract Time, revise sub-schedules to adjust times for other items of work affected by the change, and resubmit.

M. Promptly enter changes in Project Record Documents.

1.6 APPLICATION FOR FINAL PAYMENT

A. Prepare Application for Final Payment as specified for progress payments, identifying total adjusted Contract Sum, previous payments, and sum remaining due.

B. Application for Final Payment will not be considered until the following have been accomplished:

1. All closeout procedures specified in Section 017000.
2. Receipt of unconditional release of liens from Contractor and each Subcontractor and vendor for the previous month's payment application.
3. Receipt of final Certificate of Occupancy from jurisdictional authority.
4. Acceptance of Work by Owner and Architect.

Section 012200 - HAZARDOUS MATERIALS UNIT PRICING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. A unit price is an amount proposed by Bidders and stated on the Bid Form as a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order in the event the project Scope of Work is altered.

B. Unit prices shall include costs of all materials, all direct or indirect expenses of the Contractor or Sub-Contractors, profit, insurance, bonding, and any applicable taxes. For deleted work, the net credit to the contract shall be 0% less.

C. Unit prices shall be used for work outside of the base bid and to quantify the actual value of quantity allowances.

D. Section Includes the following:

1. Unit Price Schedule

E. Related Sections:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 011600:	Hazardous Materials Scheduling and Phasing

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 UNIT PRICE SCHEDULE

A. Unit Prices in accordance with the following schedule will apply to this Contract. Unit prices include labor, disposal, and all necessary fees.

Item No. 1 – ASBESTOS CONTAINING FLOORING MATERIALS (All Layers to Substrate), REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ per square foot.

Item No. 2 – ASBESTOS CONTAINING INTERIOR CAULKS, REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ per linear foot.

Item No. 3 – ASBESTOS CONTAINING MUDDED PIPE FITTING INSULATION/ROOF DRAIN FITTING, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ each.

Item No. 4 – ASBESTOS CONTAINING MUDDED PIPE FITTING INSULATION WITHIN MASONRY WALLS, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ each.

Item No. 5 - ASBESTOS CONTAINING THERMAL SYSTEM INSULATION, REMOVAL AND DISPOSAL AS FRIABLE ASBESTOS WASTE.

$_____ per linear foot.

Item No. 6 – ASBESTOS CONTAINING INTERIOR PARTITION/TRANSOM WINDOW SASH, REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ per sash.

Item No. 7 – DOORS WITH ASBESTOS CONTAINING CORE INSULATION, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ each.

Item No. 8 – DOORS WITH ASBESTOS CONTAINING WINDOW GLAZING COMPOUND, REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ each.

Item No. 9 – ASBESTOS CONTAINING DUCT FLANGE SEALANT, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ linear foot.

Item No. 10 – ASBESTOS CONTAINING VALVE PACKING, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ each.

Item No. 11 – ASBESTOS CONTAINING GASKETS AT BOLTED CONNECTIONS, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ each.

Item No. 12 – ASBESTOS CONTAINING EXTERIOR CAULKS, REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ per linear foot.

Item No. 13 – ASBESTOS CONTAINING CEMENT BOARD PANEL (EXTERIOR), REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ per square foot.

Item No. 14 – ASBESTOS CONTAINING ROOF FLASHING CEMENT (ALL LAYERS), REMOVAL AND DISPOSAL AS ASBESTOS AND PCB WASTE >50 PPM.

$_____ per square foot.

Item No. 15 – ASBESTOS CONTAINING SILVER PAINT, REMOVAL AND DISPOSAL AS ASBESTOS WASTE.

$_____ per square foot.

Item No. 16 – SPOT REPAIR UTILIZING OSHA GLOVE BAG REMOVAL METHOD FOR LESS THAN 3 SQUARE FEET/LINEAR FEET OF ACM.

$_____ per glove bag.

Item No. 17 – PREPARATION OF A SMALL CONTAINMENT (for abating asbestos >3 SF/3 LF but <260 LF/160 SF) WITH DECONTAMINATION UNIT (including remobilization, if necessary).

$_____ per containment.

Item No. 18 – PREPARATION OF A LARGE CONTAINMENT (for abating asbestos >260 LF/160 SF) WITH DECONTAMINATION UNIT (including remobilization, if necessary).

$_____ per containment

Item No. 19– DISPOSAL OF ASBESTOS AND PCB WASTE >50 PPM.

$_____ per ton.

Item No. 20 – DISPOSAL OF PCB WASTE >50 PPM.

$_____ per ton.

Item No. 21 – DISPOSAL OF HAZARDOUS LEAD WASTE.

$_____ per ton.

Item No. 22 – DISPOSAL OF HAZARDOUS LEAD WASTE.

$_____ per T-Pak.

Item No. 23 – REMOVAL AND DISPOSAL OF PCB/DEHP CONTAINING LIGHT BALLASTS.

$_____ each.

Item No. 24 – REMOVAL AND DISPOSAL/RECYCLING OF LEAD ACID BATTERIES.

$_____ each.

Item No. 25 – REMOVAL AND RECYCLING OF MERCURY VAPOR LIGHT TUBE.

$_____ per four-foot tube.

Item No. 26 – REMOVAL AND RECYCLING OF MERCURY VAPOR LIGHT TUBE.

$_____ per eight-foot tube.

Item No. 27 – REMOVAL AND RECYCLING OF MERCURY VAPOR LIGHT TUBE.

$_____ per round or u-shape tube.

Item No. 28 – REMOVAL AND RECYCLING OF REFRIGERANT.

$_____ per fixture.

3.2 SOIL REMEDIATION UNIT PRICE SCHEDULE

Item No. 29 – POLLUTED AND CONTAMINATED- RCS-1 RECLAMATION FACILITY

$_____ per ton.

Item No. 30 – POLLUTED AND CONTAMINATED- RCS-2 RECLAMATION FACILITY

$_____ per ton.

Item No. 31 – POLLUTED AND CONTAMINATED - PERMITTED CT DEEP AUTHORIZED BENEFICIAL RE-USE FACILITY

$_____ per ton.

Item No. 32 – POLLUTED AND CONTAMINATED - NON-RCRA IN-STATE LANDFILL

$_____ per ton.

Item No. 33 – POLLUTED AND CONTAMINATED - NON-RCRA OUT-OF-STATE UNLINED LANDFILL

$_____ per ton.

Item No. 34 – POLLUTED AND CONTAMINATED - NON-RCRA OUT-OF-STATE LINED LANDFILL

$_____ per ton.

Item No. 35 – POLLUTED AND CONTAMINATED - THERMAL DESORPTION FACILITY

$_____ per ton.

Item No. 36 – RCRA HAZARDOUS WASTE LANDFILL FACILITY

$_____ per ton.

END OF SECTION 012200

SECTION 012200.1 - UNIT PRICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. List of unit prices, for use in preparing Bids.

B. Measurement and payment criteria applicable to Work performed under a unit price payment method.

1.2 RELATED REQUIREMENTS

A. Section 012013 - Price and Payment Procedures: Additional payment and modification procedures.

B. Section 012100 - Allowances: Allowance amount to be determined by Contractor based on Unit Pricing.

C. Section 012200 - Hazardous Materials Unit Prices.

1.3 COSTS INCLUDED

A. Unit Prices included on the Bid Form shall include full compensation for all required labor, products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

1.4 UNIT QUANTITIES SPECIFIED

A. Quantities indicated in the drawings or specifications are for bidding and contract purposes only. Quantities and measurements of actual Work will determine the payment amount.

1.5 MEASUREMENT OF QUANTITIES

A. Measurement methods delineated in the individual specification Sections complement the criteria of this Section. In the event of conflict, the requirements of the individual specification Section govern.

B. Take all measurements and compute quantities. Measurements and quantities will be verified by Architect.

C. Assist by providing necessary equipment, workers, and survey personnel as required.

D. Perform surveys required to determine quantities, including control surveys to establish measurement reference lines. Notify Architect prior to starting work.

1.6 PAYMENT

A. Payment for Work governed by unit prices will be made on the basis of the actual measurements and quantities of Work that is incorporated in or made necessary by the Work and accepted by the Architect, multiplied by the unit price.

B. Payment will not be made for any of the following:

1. Products wasted or disposed of in a manner that is not acceptable.
2. Products determined as unacceptable before or after placement.
3. Products not completely unloaded from the transporting vehicle.
4. Products placed beyond the lines and levels of the required Work.
5. Products remaining on hand after completion of the Work.
6. Loading, hauling, and disposing of rejected Products.

1.7 SCHEDULE OF UNIT PRICES

A. Masonry Restoration and Cleaning:

1. Provide a single, all-inclusive composite unit price per square foot to perform the combined scope of masonry cleaning, repointing, and brick replacement in accordance with Section 040100 - Masonry Restoration and Cleaning.
2. Itemized Breakdown Requirement: Provide an itemized cost breakdown for each of the three separate portions of work listed below. The sum of these three items must equal the total Composite Unit Price. Each itemized price shall be utilized independently for adjustments during construction as field conditions dictate:

a. Brick Replacement: Price by square foot of wall area.

b. Repointing: Price by square foot of wall area.

c. Brick Cleaning: Price by square foot wall area.

3. Coordinate this composite unit price and its itemized components with the allowance requirements of Section 01 21 00 - Allowances.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 012300 - ALTERNATES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Description of Alternates.

B. Documentation of changes to Contract Sum and Contract Time.

1.2 GENERAL ALTERNATE REQUIREMENTS

A. The description of each Alternate is recognized to be incomplete and abbreviated, but requires that each change must be complete for the scope or work affected. Refer to applicable specification Sections and applicable Drawings for the specific requirements of work.

B. Base Bid: Include work associated with described deductive alternates and exclude described additive alternates. Failure to submit proposals for all alternates may result in rejection of bid.

1.3 DESCRIPTION OF ALTERNATE REQUIREMENTS

A. Alternates are defined as alternative products, materials, equipment, systems, methods, units of work, or major elements of construction which may, at Owner's option, be selected for the work in place of corresponding requirements of the Contract Documents. Selection may occur prior to the Contract date, or may be deferred for possible selection at a subsequent date.

B. Include as part of each Alternate, miscellaneous devices, appurtenances, differences in utility or power requirements, and similar items incidental to or required for complete and functioning installation, whether or not specifically mentioned as part of the alternate description.

C. Immediately following award of the Contract, prepare and distribute to each entity involved, notification of the status of each Alternate. Indicate whether alternates have been accepted, rejected, or deferred for consideration at a later date. Indicate a complete description of negotiated modifications to described scope of Alternates, if any.

1.4 ACCEPTANCE OF ALTERNATES

A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected at Owner's option. Accepted Alternates will be identified in the Owner-Contractor Agreement.

B. Coordinate related work and modify surrounding work to integrate the Work of each Alternate.

1.5 SCHEDULE OF ALTERNATES

A. Alternate No. 01: Roof Screens.

1. Base Bid: No roof.

2. Alternate: Include roof screens in accordance with Section 08 45 00 in locations shown on drawings.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 012500 - SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedural requirements for proposed substitutions.

1.2 RELATED REQUIREMENTS

A. Section 013000 - Administrative Requirements: Submittal procedures, coordination.

B. Section 016000 - Product Requirements: Fundamental product requirements, product options, delivery, storage, and handling, and substitution limitations.

1.3 DEFINITIONS

A. Substitutions: Changes from Contract Documents requirements proposed by Contractor to materials, products, assemblies, and equipment.

1. Substitutions for Cause: Proposed due to changed Project circumstances beyond Contractor's control.

a. Unavailability.

b. Regulatory changes.

c. Other limitations specified in Section 016000.

2. Substitutions for Convenience: Proposed due to possibility of offering substantial advantage to the Project.

a. Substitution requests offering advantages solely to the Contractor will not be considered.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 GENERAL REQUIREMENTS

A. A Substitution Request for products, assemblies, materials, and equipment constitutes a representation that the submitter:

1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product, equipment, assembly, or system.

2. Agrees to provide the same warranty for the substitution as for the specified product.

3. Agrees to provide same or equivalent maintenance service and source of replacement parts, as applicable.
4. Agrees to coordinate installation and make changes to other work that may be required for the work to be complete, with no additional cost to Owner.
5. Waives claims for additional costs or time extension that may subsequently become apparent.
6. Agrees to reimburse Owner and Architect for review or redesign services associated with re-approval by authorities.

B. A Substitution Request for specified installer constitutes a representation that the submitter:
1. Has acted in good faith to obtain services of specified installer, but was unable to come to commercial, or other terms.

C. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Burden of proof is on proposer.
1. Note explicitly any non-compliant characteristics.
2. Submit shop drawings, product data, and certified test results attesting to the proposed product equivalence.
3. Architect will notify Contractor in writing of decision to accept or reject request.

D. Substitution Request Content: Include information necessary for tracking the status of each Substitution Request, and information necessary to provide an actionable response.

E. Limit each request to a single proposed substitution item.
1. Submit an electronic document, combining the request form with supporting data into single document.

3.2 SUBSTITUTION PROCEDURES DURING PROCUREMENT

A. Instructions to Bidders specifies time restrictions for submitting requests for substitutions during the bidding period, and the documents required.

B. Substitution Request Form (before award of contract):
1. Submit substitution requests by completing the form in Section 004000; see this section for additional information and instructions. Use only this form; other forms of submission are unacceptable.

C. Owner will consider requests for substitutions only if submitted at least 7 days prior to the date for receipt of bids.

3.3 SUBSTITUTION PROCEDURES DURING CONSTRUCTION

A. Substitution Request Form (after award of contract):
1. Submit substitution requests by completing the form in Section 006000; see this section for additional information and instructions. Use only this form; other forms of submission are unacceptable.

B. Architect will consider requests for substitution only within 60 days after date of commencement of Work, unless otherwise determined by Architect to be acceptable under extenuating circumstances.

1. Substitutions will also be considered when a Product, through no fault of Contractor, becomes unavailable or unsuitable due to regulatory change.

C. Submit request for Substitution for Cause within 14 days of discovery of need for substitution, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.

D. Submit request for Substitution for Convenience immediately upon discovery of its potential advantage to the project, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.

1. In addition to meeting general documentation requirements, document how the requested substitution benefits the Owner through cost savings, time savings, greater energy conservation, or in other specific ways.
2. Document means of coordinating of substitution item with other portions of the work, including work by affected subcontractors.
3. Bear the costs engendered by proposed substitution of:

a. Owner's compensation to the Architect for any required redesign, time spent processing and evaluating the request.

b. Other construction by Owner.

c. Other unanticipated project considerations.

E. Substitutions will not be considered under one or more of the following circumstances:

1. When they are indicated or implied on shop drawing or product data submittals, without having received prior approval.
2. Without a separate written request.
3. When acceptance will require revisions to Contract Documents.

3.4 RESOLUTION

A. Architect may request additional information and documentation prior to rendering a decision. Provide this data in an expeditious manner.

B. Architect will notify Contractor in writing of decision to accept or reject request.

1. Architect's decision following review of proposed substitution will be noted on the submitted form.

3.5 ACCEPTANCE

A. Accepted substitutions change the work of the Project. They will be documented and incorporated into work of the project by Change Order, Construction Change Directive, Architectural Supplementary Instructions, or similar instruments provided for in the Conditions of the Contract.

3.6 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals, for closeout submittals.

B. Include completed and approved Substitution Request Forms as part of the Project record.

END OF SECTION

SECTION 013000 - ADMINISTRATIVE REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General administrative requirements.

B. Preconstruction meeting.

C. Site mobilization meeting.

D. Progress meetings.

E. Project closeout meeting.

F. Contractor's daily reports.

G. Progress and documentation photographs.

H. Use of Architect's digital Drawing files.

I. Submittals for review, information, and project closeout.

J. Number of copies of submittals.

K. Requests for Information (RFI) procedures.

L. Submittal procedures.

1.2 RELATED REQUIREMENTS

A. Section 016000 - Product Requirements: General product requirements.

B. Section 017000 - Execution and Closeout Requirements: Additional coordination requirements.

C. Section 017800 - Closeout Submittals: Project record documents; operation and maintenance data; warranties and bonds.

1.3 GENERAL ADMINISTRATIVE REQUIREMENTS

A. Comply with requirements of Section 017000 - Execution and Closeout Requirements for coordination of execution of administrative tasks with timing of construction activities.

B. Make the following types of submittals to Architect:

1. Requests for Interpretation (RFI).
2. Requests for substitution.
3. Shop drawings, product data, and samples.

4. Test and inspection reports.
5. Design data.
6. Manufacturer's instructions and field reports.
7. Applications for payment and change order requests.
8. Progress schedules.
9. Coordination drawings.
10. Correction Punch List and Final Correction Punch List for Substantial Completion.
11. Closeout submittals.
12. Other specified submittals.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PRECONSTRUCTION MEETING

A. Schedule meeting after Notice of Award.

B. Attendance Required:
1. Owner.
2. Architect.
3. Contractor.
4. Other invited participants.

C. Minimum Agenda:
1. Execution of Owner-Contractor Agreement.
2. Submission of executed bonds and insurance certificates.
3. Distribution of Contract Documents.
4. Submission of list of subcontractors, list of products, schedule of values, and progress schedule.
5. Submission of initial Submittal schedule.
6. Designation of personnel representing the parties to Contract, including Contractor, Owner, and Architect.
7. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.
8. Scheduling.

D. Record minutes and distribute copies within two days after meeting to participants, with copies to Architect, Owner, participants, and those affected by decisions made.

3.2 SITE MOBILIZATION MEETING

A. Schedule meeting at the Project site prior to Contractor occupancy.

B. Attendance Required:

1. Contractor.
2. Owner.
3. Architect.
4. Special consultants.
5. Contractor's superintendent.
6. Major subcontractors.
7. Other invited participants.

C. Minimum Agenda:

1. Use of premises by Owner and Contractor.
2. Owner's requirements.
3. Construction facilities and controls provided by Owner.
4. Temporary utilities provided by Owner.
5. Survey and building layout.
6. Security and housekeeping procedures.
7. Schedules.
8. Application for payment procedures.
9. Procedures for testing.
10. Procedures for maintaining record documents.
11. Requirements for start-up of equipment.
12. Inspection and acceptance of equipment put into service during construction period.

D. Record minutes and distribute electronically within two days after meeting to participants, with copies to Architect, Owner, participants, and those affected by decisions made.

3.3 PROGRESS MEETINGS

A. Schedule and administer meetings throughout progress of the work at weekly intervals, unless otherwise agreed upon and approved by Owner.

B. Make arrangements for meetings, prepare agenda with copies for participants, preside at meetings.

C. Attendance Required:

1. Contractor.
2. Owner.
3. Architect.

4. Special consultants.
5. Contractor's superintendent.
6. Major subcontractors.

D. Minimum Agenda:

1. Review minutes of previous meetings.
2. Review and discussion of Weekly Progress Report.
3. Review of work progress.
4. Field observations, problems, and decisions.
5. Identification of problems that impede, or will impede, planned progress.
6. Review of submittals schedule and status of submittals.
7. Review of RFIs log and status of responses.
8. Modification (Change Order) status.
9. Review of off-site fabrication and delivery schedules.
10. Maintenance of progress schedule.
11. Corrective measures to regain projected schedules.
12. Planned progress during succeeding work period.
13. Coordination of projected progress.
14. Maintenance of quality and work standards.
15. Effect of proposed changes on progress schedule and coordination.
16. Other business relating to work.

E. Record minutes and distribute electronically within two days after meeting to participants, with copies to Architect, Owner, participants, and those affected by decisions made.

3.4 PROJECT CLOSEOUT MEETING

A. Schedule and administer a Project closeout meeting minimum 3 months before scheduled Date of Substantial Completion, at location mutually agreed upon by Owner, Contractor, and Architect.

B. Attendance Required: Owner, Contractor, job superintendent, and Architect.

C. Minimum Agenda:

1. Review specified closeout process, tasks required of respective participants, task scheduling, and deadline dates for each critical path task in the closeout process.
2. Review closeout submittals required and submittal procedures for each.
3. Review maintenance materials requirements and Owner's requirements for delivery and storage.
4. Review final inspection requirements of AHJ and coordination of same.
5. Review status of record documentation, and discuss process for completing and distributing record documentation to Owner and Architect.

D. Record minutes and distribute electronically within two days after meeting to participants and those affected by decisions made.

3.5 DAILY CONSTRUCTION REPORTS

A. Include only factual information. Do not include personal remarks or opinions regarding operations and/or personnel.

B. Prepare a daily construction report recording the following information concerning events at Project site and project progress:

1. Date.
2. High and low temperatures, and general weather conditions.
3. List of subcontractors at Project site.
4. List of separate contractors at Project site.
5. Approximate count of personnel at Project site.
    a. Include a breakdown for supervisors, laborers, journeymen, equipment operators, and helpers.
6. Major equipment at Project site.
7. Material deliveries.
8. Safety, environmental, or industrial relations incidents.
9. Meetings and significant decisions.
10. Unusual events (submit a separate special report).
11. Stoppages, delays, shortages, and losses. Include comparison between scheduled work activities (in Contractor's most recently updated and published schedule) and actual activities. Explain differences, if any. Note days or periods when no work was in progress and explain the reasons why.
12. Meter readings and similar recordings.
13. Emergency procedures.
14. Directives and requests of Authority(s) Having Jurisdiction (AHJ).
15. Change Orders received and implemented.
16. Testing and/or inspections performed.
17. List of verbal instruction given by Owner and/or Architect.
18. Signature of Contractor's authorized representative.

3.6 PROGRESS PHOTOGRAPHS AND DOCUMENTATION

A. Document existing conditions in the work area prior to start of demolition. Take initial photographs in quantity and at locations required to fully document existing conditions which may become concealed as the result of new Work.

B. Submit initial photographs to Owner and Architect, and discuss existing conditions that are a concern of Contractor in relation to proposed new Work.

C. Take additional photographs as Work progresses, at same locations and from same viewing angles as initial photographs.

D. Establish system for storing photographs electronically throughout the progress of construction; provide access to photographs to Owner and Architect via web interface.

E. Submit photographs with each application for payment, taken not more than 3 days prior to submission of application for payment.

F. Submit new photographs at least once a month, within 3 days after being taken.

G. Maintain one set of all photographs at project site for reference; same copies as submitted, identified as such.

H. Photography Type: Digital; electronic files.

I. Provide photographs of site and construction throughout progress of work produced by an experienced photographer, acceptable to Architect.

J. In addition to periodic, recurring views, take photographs of each of the following events:

1. Completion of site clearing.
2. Excavations in progress.
3. Foundations in progress and upon completion.
4. Structural framing in progress and upon completion.
5. Enclosure of building, upon completion.
6. Final completion, minimum of ten (10) photos.

K. Views:

1. Provide non-aerial photographs from four cardinal views at each specified time, until date of Substantial Completion.
2. Consult with Architect for instructions on views required.
3. Provide factual presentation.
4. Provide correct exposure and focus, high resolution and sharpness, maximum depth of field, and minimum distortion.

L. Digital Photographs: 24 bit color, minimum resolution of 1024 by 768, in JPG format; provide files unaltered by photo editing software.

1. File Naming: Include project identification, date and time of view, and view identification.
2. PDF File: Assemble all photos into printable pages in PDF format, with 2 to 3 photos per page, each photo labeled with file name; one PDF file per submittal.

3.7 DIGITAL DRAWING FILES

A. Architect's Digital Files: Upon request by Contractor, a digital copy of Architectural and Structural Project Building Information Model (BIM) and MEP CADD drawing files will be provided as a courtesy for Contractor's limited use. Such information is not considered to be a part of the Contract Documents.

1. Use of this information is at Contractor's sole risk.

2. Report to Architect discrepancies, if any, between published Contract Documents and information provided according to General Conditions and other administrative requirements of the Contract.
3. Prior to receiving digital files, execute data licensing agreement; Architect's standard form.
4. The following files will be furnished free of charge, if requested:
    a. Building floor plans.
    b. Reflected ceiling plans.
5. Architect is not responsible for updating or maintaining currency of digital drawing files after initially provided to Contractor.
6. Additional digital files will be provided, upon request, at a cost of $200.00 for each file; cost will be deducted from the Contract Sum, and Architect will recover corresponding cost from Owner.
7. Submittals prepared using any of these files as the primary submittal content without the inclusion of substantial additional content generated by Contractor according to specified requirements for applicable submittals will not be accepted or reviewed by Architect.

3.8 REQUESTS FOR INFORMATION (RFI)

A. Definition: A request seeking one of the following:
1. An interpretation, amplification, or clarification of some requirement of Contract Documents arising from inability to determine from them the exact material, process, or system to be installed; or when the elements of construction are required to occupy the same space (interference); or when an item of work is described differently at more than one place in Contract Documents.
2. A resolution to an issue which has arisen due to field conditions and affects design intent.

B. Whenever possible, request clarifications at the next appropriate project progress meeting, with response entered into meeting minutes, rendering unnecessary the issuance of a formal RFI.

C. Preparation: Prepare an RFI immediately upon discovery of a need for interpretation of Contract Documents. Failure to submit a RFI in a timely manner is not a legitimate cause for claiming additional costs or delays in execution of the work.
1. Prepare a separate RFI for each specific item.
    a. Review, coordinate, and comment on requests originating with subcontractors and/or materials suppliers.
    b. Do not forward requests which solely require internal coordination between subcontractors.
2. Prepare using an electronic version of the form included in Section 00 63 13.
3. Combine RFI and its attachments into a single electronic file. PDF format is preferred.

D. Reason for the RFI: Prior to initiation of an RFI, carefully study all Contract Documents to confirm that information sufficient for their interpretation is definitely not included.
1. Include in each request Contractor's signature attesting to good faith effort to determine from Contract Documents information requiring interpretation.

2. Unacceptable Uses for RFIs: Do not use RFIs to request the following::

    a. Approval of submittals (use procedures specified elsewhere in this section).

    b. Approval of substitutions (see Section - 016000 - Product Requirements)

    c. Changes that entail change in Contract Time and Contract Sum (comply with provisions of the Conditions of the Contract).

    d. Different methods of performing work than those indicated in the Contract Drawings and Specifications (comply with provisions of the Conditions of the Contract).

3. Improper RFIs: Requests not prepared in compliance with requirements of this section, and/or missing key information required to render an actionable response. They will be returned without a response, with an explanatory notation.

4. Frivolous RFIs: Requests regarding information that is clearly indicated on, or reasonably inferable from, Contract Documents, with no additional input required to clarify the question. They will be returned without a response, with an explanatory notation.

    a. The Owner reserves the right to assess the Contractor for the costs (on time-and-materials basis) incurred by the Architect, and any of its consultants, due to processing of such RFIs.

E. Content: Include identifiers necessary for tracking the status of each RFI, and information necessary to provide an actionable response.

1. Official Project name and number, and any additional required identifiers established in Contract Documents.

2. Owner's, Architect's, and Contractor's names.

3. Discrete and consecutive RFI number, and descriptive subject/title.

4. Issue date, and requested reply date; "ASAP", "As Soon as Possible", or "Immediately" not acceptable as reply date.

5. Reference to particular Contract Document(s) requiring additional information/interpretation. Identify pertinent drawing and detail number and/or specification section number, title, and paragraph(s).

6. Annotations: Field dimensions and/or description of conditions which have engendered the request.

7. Contractor's Suggested Resolution: A written and/or a graphic solution, to scale, is required in cases where clarification of coordination issues is involved, for example; routing, clearances, and/or specific locations of work shown diagrammatically in Contract Documents. If applicable, state the likely impact of the suggested resolution on Contract Time or the Contract Sum.

F. Attachments: Include sketches, coordination drawings, descriptions, photos, submittals, and other information necessary to substantiate the reason for the request.

G. RFI Log: Prepare and maintain a tabular log of RFIs for the duration of the project.

1. Indicate current status of every RFI. Update log promptly and on a regular basis.

2. Note dates of when each request is made, and when a response is received.

3. Highlight items requiring priority or expedited response.
4. Highlight items for which a timely response has not been received to date.
5. Identify and include improper or frivolous RFIs.

H. Review Time: Architect will respond and return RFIs to Contractor within seven calendar days of receipt. For sequential reviews involving Architect's consultants, Owner, or another affected party, allow an additional 3 calendar days. For the purpose of establishing the start of the mandated response period, RFIs received after 12:00 noon will be considered as having been received on the following regular working day.

1. Response period may be shortened or lengthened for specific items, subject to mutual agreement, and recorded in a timely manner in progress meeting minutes.

I. Responses: Content of answered RFIs will not constitute in any manner a directive or authorization to perform extra work or delay the project. If in Contractor's belief it is likely to lead to a change to Contract Sum or Contract Time, promptly issue a notice to this effect, and follow up with an appropriate Change Order request to Owner.

1. Response may include a request for additional information, in which case the original RFI will be deemed as having been answered, and an amended one is to be issued forthwith. Identify the amended RFI with an R suffix to the original number.
2. Do not extend applicability of a response to specific item to encompass other similar conditions, unless specifically so noted in the response.
3. Upon receipt of a response, promptly review and distribute it to all affected parties, and update the RFI Log.
4. Notify Architect within seven calendar days if an additional or corrected response is required by submitting an amended version of the original RFI, identified as specified above.
5. If the Contractor submits an RFI on an activity with seven (7) days or less of float on the current project schedule, the Contractor shall not be entitled to any time extension due to the time it takes the Architect to respond to the request provided that the Architect responds within the seven (7) days set forth above.

3.9 SUBMITTAL SCHEDULE

A. After development and review by the Owner and Architect acceptance of the Contractor's Construction or CPM schedule prepare a complete schedule of submittals. Submit the schedule to the Construction Administrator within thirty (30) days of Contract Award.

1. Coordinate Submittal Schedule with the list of subcontracts, Schedule of Values, and the list of products as well as the Contractor’s Construction or CPM Schedule.
2. Prepare the schedule in chronological order. Provide the following information:

a. Schedule date for the initial submittal.

b. Related section number.

c. Submittal category (Shop Drawings, Product Data, or Samples).

d. Name of Subcontractor.

e. Description of the part of Work covered.

f. Scheduled date for resubmittal.

g. Scheduled date for the Architect's final release of approval.

B. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or modifications to submittals noted by the Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's CPM Schedule.

2. Initial Submittal: Submit concurrently with start-up construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.

3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.

a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.

2. Submit all submittal items required for each specification section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.

3.10 SUBMITTALS FOR REVIEW

A. When the following are specified in individual sections, submit them for review:

1. Product data.

2. Design data.

3. Shop drawings.

4. Samples for selection.

5. Samples for verification.

B. Submit to Architect for review for the limited purpose of checking for compliance with information given and the design concept expressed in Contract Documents.

C. Samples will be reviewed for aesthetic, color, or finish selection.

D. After review, provide copies and distribute in accordance with SUBMITTAL PROCEDURES article below and for record documents purposes described in Section 017800 - Closeout Submittals.

3.11 SUBMITTALS FOR INFORMATION

A. When the following are specified in individual sections, submit them for information:
   1. Sustainability design submittals and reports.
   2. Certificates.
   3. Test data, test reports, and evaluation reports.
   4. Inspection reports.
   5. Qualification statements.
   6. Manufacturer's instructions.
   7. Manufacturer's field reports.
   8. Sample Warranties.
   9. Surveys.
   10. Approvals of authorities having jurisdiction.
   11. Quality control submittals, including field test reports and inspections.
   12. Other types indicated.

B. Submit for Architect's knowledge as contract administrator or for Owner.

3.12 SUBMITTALS FOR PROJECT CLOSEOUT

A. Submit Correction Punch List for Substantial Completion.

B. Submit Final Correction Punch List for Substantial Completion.

C. When the following are specified in individual Sections, submit them at project closeout in conformance to requirements of Section 017800 - Closeout Submittals:
   1. Project record documents.
   2. Operation and maintenance data.
   3. Warranties.
   4. Bonds.
   5. Demonstration and Training Videos.
   6. Other types specified.

D. Final Property Survey.

E. Submit for Owner's benefit during and after project completion.

3.13 NUMBER OF COPIES OF SUBMITTALS

A. Electronic Documents - Submittals for Review and Information: Submit one electronic copy in PDF format; an electronically-marked up file will be returned. Create PDFs at native size and right-side up; illegible files will be rejected.

B. Submittals for Review: Submit electronically.

C. Submittals for Information: Submit electronically.

D. Samples: Submit the number specified in individual specification Sections; one of which will be retained by Architect.

1. After review, produce duplicates.
2. Retained samples will not be returned to Contractor unless specifically so stated.

3.14 SUBMITTAL PROCEDURES - GENERAL

A. General Requirements:

1. Use a single transmittal for related items.
2. Submit separate packages of submittals for review and submittals for information, when included in the same specification section.
3. Transmit using approved form.
    a. Use Contractor's form, subject to prior approval by Architect.
4. Sequentially identify each item. For revised submittals use original number and a sequential combination numberical and alphabetical suffix.
5. Identify: Project; Contractor; subcontractor or supplier; pertinent drawing and detail number; and specification section number and article/paragraph, as appropriate on each copy.
6. Include form provided in Section 016117 - Accessory Material VOC Content Certification Form .
7. Apply Contractor's stamp, signed or initialed certifying that review, approval, verification of products required, field dimensions, adjacent construction work, and coordination of information is in accordance with the requirements of the work and Contract Documents.
    a. Submittals not bearing Contractor's review stamp, indicating both review and approval, will not be reviewed and be returned for required review.
    b. Submittals from sources other than Contractor will not be acknowledged, reviewed, or returned.
8. Deliver each submittal on date noted in submittal schedule, unless an earlier date has been agreed to by all affected parties, and is of the benefit to the project.
    a. Send submittals in electronic format via email to Architect.
9. Schedule submittals to expedite the Project, and coordinate submission of related items.
    a. For each submittal for review, allow 15 calendar days excluding delivery time to and from the Contractor.
    b. For sequential reviews involving Architect's consultants, Owner, or another affected party, allow an additional 7 calendar days.
    c. For the purpose of establishing the start of the mandated review period, submittals received after 12:00 noon will be considered as having been received on the following regular working day.
    d. Mass Submittals:

1) Definition: Six (6) or more submittals in one (1) day or twenty (20) or more submittals in one (1) week.

2) Procedure: When Mass Submittals are received, Architect's review time stated above may be extended as necessary to perform proper review. Architect will review Mass Submittals based upon priority determined by Architect after consultation with Owner and Contractor.

10. Identify variations from Contract Documents and product or system limitations that may be detrimental to successful performance of the completed work.
11. Provide space for Contractor and Architect review stamps.
12. When revised for resubmission, identify all changes made since previous submission.
13. Distribute reviewed submittals. Instruct parties to promptly report inability to comply with requirements.
14. Incomplete submittals will not be reviewed, unless they are partial submittals for distinct portion(s) of the work, and have received prior approval for their use.
15. Submittals not reviewed by Contractor will be rejected, and will not be reviewed by Architect. Claims for delay as the result of submittals not reviewed by Contractor will not be allowed.
16. Submittals not requested will be recognized, and will be returned "Not Reviewed",

B. Product Data Procedures:

1. Submit only information required by individual specification sections.
2. Collect required information into a single submittal.
3. Submit concurrently with related shop drawing submittal.
4. Do not submit (Material) Safety Data Sheets for materials or products.
5. Manufacturer's Catalog Submittals: If manufacturer's published catalog information is used as part of a submittal, include only those pages from catalog that are specifically applicable to the proposed products for this Project.

a. Clearly identify in the submittal those specific products and components for which review and action is requested.

b. Submittals received that do not clearly identify specific applicable products, or that include more pages than those specifically applicable to the subject submittal, will be returned as "not reviewed" and the time for submittal review will not commence until a properly scoped submittal is received by Architect.

C. Shop Drawing Procedures:

1. Prepare accurate, drawn-to-scale, original shop drawing documentation by interpreting Contract Documents and coordinating related work.
2. Do not reproduce the Contract Documents to create shop drawings, unless otherwise permitted.
3. Generic, non-project-specific information submitted as shop drawings do not meet the requirements for shop drawings.

D. Samples Procedures:

1. Transmit related items together as single package to Architect's office, unless otherwise specified.
2. Identify each item to allow review for applicability in relation to shop drawings showing installation locations.
3. Include with transmittal high-resolution image files of samples to facilitate electronic review and approval. Provide separate submittal page for each item image.

3.15 SUBMITTAL REVIEW

A. Submittals for Review: Architect will review each submittal, and approve, or take other appropriate action. See below for actions to be taken.

B. Submittals for Information: Architect will acknowledge receipt and review. See below for actions to be taken.

C. Architect's actions will be reflected by marking each returned submittal using virtual stamp on electronic submittals.

1. Notations may be made directly on submitted items and/or listed on appended Submittal Review cover sheet.

D. Architect's and consultants' actions on items submitted for review:

1. Authorizing purchasing, fabrication, delivery, and installation:

a. "No Exception Taken", or language with same legal meaning.

b. "Make Corrections Noted", or language with same legal meaning.

1) At Contractor's option, submit corrected item, with review notations acknowledged and incorporated.

c. "Revise and Resubmit", or language with same legal meaning.

1) Resubmit corrected item, with review notations acknowledged and incorporated. Resubmit separately, or as part of project record documents.

2) Non-responsive resubmittals may be rejected.

2. Not Authorizing fabrication, delivery, and installation:

a. "Revise and Resubmit".

1) Resubmit revised item, with review notations acknowledged and incorporated.

2) Non-responsive resubmittals may be rejected.

b. "Rejected".

1) Submit item complying with requirements of Contract Documents.

E. Architect's and consultants' actions on items submitted for information:

1. Items for which no action was taken:

a. "Received" - to notify the Contractor that the submittal has been received for record only.

2. Items for which action was taken:

a. "Reviewed" - no further action is required from Contractor.

b. "Rejected" - Submit item complying with requirements of Contract Documents.

F. Architect's Actions:

1. Architect will review each submittal, mark it with appropriate "action," and return it to Contractor within specified time allowance; except when it must be held for coordination, and Contractor is so advised.

2. Where submittals include materials, products, systems, or manufacturers not specified, approved by Addendum prior to execution of the Contract, or approved in writing in conjunction with the proposed products list submittal specified in Section 016000, Architect reserves the right to exceed the specified time allowance to allow sufficient time to determine the acceptability of such items, and no claim for delay by Contractor will be allowed.

3. Where submittals include a material, product, system, or manufacturer substitution which has not been previously accepted or approved in writing, Architect reserves the right to reject such submittal and require a compliant submittal, or may direct that other action be taken by Contractor to achieve compliance with Contract Documents, and no claim for delay by Contractor will be allowed.

4. Architect's review is for general conformance only and does not relieve Contractor from full compliance with the Contract Documents.

3.16 SUBMITTAL PROCEDURES - ELECTRONIC

A. Project Submittals: All documents transmitted for purposes of administration of the contract are to be in electronic (PDF) format and transmitted via an Internet-based submittal service that receives, logs and stores documents, provides electronic stamping and signatures, and notifies addressees via email.

1. Besides submittals for review, information, and closeout, this procedure applies to requests for information (RFIs), progress documentation, contract modification documents (e.g. supplementary instructions, change proposals, change orders), applications for payment, field reports and meeting minutes, Contractor's correction punchlist, and any other document any participant wishes to make part of the project record.

2. It is Contractor's responsibility to submit documents in PDF format.

3. Paper document transmittals will not be reviewed; emailed PDF documents will not be reviewed.

B. Cost: The cost of the service is to be paid by Contractor; include the cost of the service in the contract sum.

C. Submittal Service: Use one of the following:

1. Architect's approved internet-based service.

2. Substitutions: Permitted, subject to approval of Architect.

D. Distribute electronic copies of each fully reviewed submittal to all Subcontractors involved with or having coordination responsibility for the submittal. Instruct parties to promptly report any inability to comply with requirements.

END OF SECTION

SECTION 013216 - CONSTRUCTION PROGRESS SCHEDULE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Preliminary schedule.

B. Construction progress schedule, bar chart type.

1.2 RELATED SECTIONS

A. Section 011600 - Hazardous Materials Scheduling and Phasing: Special requirements for abatement and hazardous material removal work.

1.3 SUBMITTALS

A. Within 10 days after date of Agreement, submit preliminary schedule.

B. If preliminary schedule requires revision after review, submit revised schedule within 5 days.

C. Within 10 days after review of preliminary schedule, submit draft of proposed complete schedule for review.

1. Include written certification that major contractors have reviewed and accepted proposed schedule.

D. Within 5 days after joint review, submit complete schedule.

E. Submit updated schedule with each Application for Payment.

F. Submit under transmittal letter form specified in Section 013000 - Administrative Requirements.

1.4 QUALITY ASSURANCE

A. Scheduler: Contractor's personnel or specialist Consultant specializing in CPM scheduling with two years minimum experience in scheduling construction work of a complexity comparable to this Project, and having use of computer facilities capable of delivering a detailed graphic printout within 48 hours of request.

B. Contractor's Administrative Personnel: Two years minimum experience in using and monitoring CPM schedules on comparable projects.

1.5 SCHEDULE FORMAT

A. Listings: In chronological order according to the start date for each activity. Identify each activity with the applicable specification section number.

B. Diagram Sheet Size: Maximum 22 x 17 inches.

C. Sheet Size: Multiples of 8-1/2 x 11 inches.

D. Scale and Spacing: To allow for notations and revisions.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PRELIMINARY SCHEDULE

A. Prepare preliminary schedule in the form of a horizontal bar chart.

3.2 CONTENT

A. Show complete sequence of construction by activity, with dates for beginning and completion of each element of construction.

B. Identify each item by specification section number.

C. Identify work of separate stages and other logically grouped activities.

D. Include conferences and meetings in schedule.

E. Show accumulated percentage of completion of each item, and total percentage of Work completed, as of the first day of each month.

F. Provide separate schedule of submittal dates for shop drawings, product data, and samples, and dates reviewed submittals will be required from Architect. Indicate decision dates for selection of finishes.

G. Coordinate content with schedule of values specified in Section 012013 - Price and Payment Procedures.

H. Provide legend for symbols and abbreviations used.

3.3 BAR CHARTS

A. Include a separate bar for each major portion of Work or operation.

B. Identify the first work day of each week.

3.4 REVIEW AND EVALUATION OF SCHEDULE

A. Participate in joint review and evaluation of schedule with Architect at each submittal.

B. Evaluate project status to determine work behind schedule and work ahead of schedule.

C. After review, revise as necessary as result of review, and resubmit within 10 days.

3.5 UPDATING SCHEDULE

A. Maintain schedules to record actual start and finish dates of completed activities.

B. Indicate progress of each activity to date of revision, with projected completion date of each activity.

C. Update diagrams to graphically depict current status of Work.

D. Identify activities modified since previous submittal, major changes in Work, and other identifiable changes.

E. Indicate changes required to maintain Date of Substantial Completion.

F. Submit reports required to support recommended changes.

G. Provide narrative report to define problem areas, anticipated delays, and impact on the schedule. Report corrective action taken or proposed and its effect including the effects of changes on schedules of separate contractors.

3.6 DISTRIBUTION OF SCHEDULE

A. Distribute copies of updated schedules to Contractor's project site file, to subcontractors, suppliers, Architect, Owner, and other concerned parties.

B. Instruct recipients to promptly report, in writing, problems anticipated by projections indicated in schedules.

END OF SECTION

This page intentionally left blank

SECTION 013553 - SECURITY PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Security measures including formal security program, entry control, personnel identification, and miscellaneous restrictions.

1.2 RELATED REQUIREMENTS

A. Section 011000 - Summary: Use of premises and occupancy.

1.3 SECURITY PROGRAM

A. Protect Work and Owner's operations from theft, vandalism, and unauthorized entry.

B. Initiate program at project mobilization.

C. Maintain program throughout construction period until Owner occupancy.

1.4 ENTRY CONTROL

A. Restrict entrance of persons and vehicles into Project site .

B. Allow entrance only to authorized persons with proper identification.

C. Maintain log of workers and visitors, make available to Owner on request.

1.5 PERSONNEL IDENTIFICATION

A. Provide identification badge to each person authorized to enter premises.

B. Badge To Include: Personal photograph, name, assigned number , expiration date and employer.

C. Require return of badges at expiration of their employment on the Work.

1.6 RESTRICTIONS

A. Do not allow cameras on site or photographs taken except by written approval of Owner.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 014000 - QUALITY REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Submittals.

B. Quality assurance.

C. Testing and inspection agencies and services.

D. Contractor's construction-related professional design services.

E. Contractor's design-related professional design services.

F. Control of installation.

G. Mock-ups.

H. Tolerances.

I. Manufacturers' field services.

J. Defect Assessment.

K. Basis of design specifications.

1.2 RELATED REQUIREMENTS

A. Section 013000 - Administrative Requirements: Submittal procedures.

B. Section 014216 - Definitions.

C. Section 014339 - Stand-Alone Exterior Mockup: Additional mock-up requirements.

D. Section 016000 - Product Requirements: Requirements for material and product quality.

E. Individual Specification Sections: Special inspections and tests required, and standards for special inspections and tests.

1.3 DEFINITIONS

A. Contractor's Professional Design Services: Design of some aspect or portion of the project by party other than the design professional of record. Provide these services as part of the Contract for Construction.

1. Design Services Types Required:

a. Construction-Related: Services Contractor needs to provide in order to carry out the Contractor's sole responsibilities for construction means, methods, techniques, sequences, and procedures.

b. Design-Related: Design services explicitly required to be performed by another design professional due to highly-technical and/or specialized nature of a portion of the project. Services primarily involve engineering analysis, calculations, and design, and are not intended to alter the aesthetic aspects of the design.

B. Design Data: Design-related, signed and sealed drawings, calculations, specifications, certifications, shop drawings and other submittals provided by Contractor, and prepared directly by, or under direct supervision of, appropriately licensed design professional.

1.4 CONTRACTOR'S CONSTRUCTION-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Provide such engineering design services as may be necessary to plan and safely conduct certain construction operations, pertaining to, but not limited to the following:

1. Temporary sheeting, shoring, or supports.
2. Temporary scaffolding.
3. Temporary bracing.
4. Temporary falsework for support of spanning or arched structures.
5. Temporary foundation underpinning.
6. Temporary stairs or steps required for construction access only.
7. Temporary hoist(s) and rigging.
8. Investigation of soil conditions to support construction equipment.

1.5 CONTRACTOR'S DESIGN-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Base design on performance and/or design criteria indicated in individual specification sections.

1. Submit a Request for Interpretation to Architect if the criteria indicated are not sufficient to perform required design services.

C. Scope of Contractor's Professional Design Services: Provide for the following items of work:

1. Structural Design of Steel Connections: As described in Section 051200 - Structural Steel Framing.
2. Structural Design of Metal Framing: As described in Section 054000 - Cold-Formed Metal Framing.
3. Structural Design of Metal Fabrications: As described in Section 055000 - Metal Fabrications.
4. Structural Design of Stairs: As described in Section 055100 - Metal Stairs.

5. Structural Design of Railings: As described in Section 055213 - Pipe and Tube Railings.
6. Structural Design of Flagpole Asssemblies, Foundations, and Supports: As described in Section 107516 - Ground-Set Flagpoles.
7. Sprinkler Layout: Coordinate with ceiling installation, detailed pipe layout, and hydraulic calculations as described in Section 211300 - Fire-Suppression Sprinkler Systems.
8. System Design: As described in Section 230913 - Instrumentation and Control Devices for HVAC.
9. System Design: As described in Section 230923 - Direct-Digital Control System for HVAC.
10. Power System Studies, Assessments, and Selection Criteria: As described in Section 260573 - Power System Studies.
11. Emergency Responder Communication Enhancement System Design: As described in Section 275129.17 - Two-way Radio Communication Enhancement Systems.
12. Fire Alarm Systems Design: As described in Section 284600-Fire Detection and Alarm.
13. Delegated engineering design services specified in individual Sections.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Designer's Qualification Statement: Submit for Architect's knowledge as contract administrator, or for Owner's information.

1. Include information for each individual professional responsible for producing, or supervising production of, design-related professional services provided by Contractor.

a. Full name.

b. Professional licensure information.

c. Statement addressing extent and depth of experience specifically relevant to design of items assigned to Contractor.

C. Design Data: Submit for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.

1. Include calculations that have been used to demonstrate compliance to performance and regulatory criteria provided, and to determine design solutions.
2. Include required product data and shop drawings.
3. Include a statement or certification attesting that design data complies with criteria indicated, such as building codes, loads, functional, and similar engineering requirements.
4. Include signature and seal of design professional responsible for allocated design services on calculations and drawings.
5. Provide additional copies of design data for Architect's design consultants, including but not limited to structural engineer, mechanical engineer, plumbing engineer, and electrical engineer; transmit to each design consultant's address concurrently, if requested by Architect.

D. Test Reports: After each test or inspection, testing agency will promptly submit electronic copies of report to Architect and to Contractor.

1. Transmit one copy of each report to Owner, if requested.

2. Provide additional copies of each test/inspection report for Architect's design consultants, including but not limited to structural engineer, mechanical engineer, plumbing engineer, electrical engineer, and specialty consultant; transmit to each design consultant's address concurrently, if requested by Architect.

3. Include in content of reports:

a. Date issued.

b. Project title and number.

c. Name of inspector.

d. Date and time of sampling or inspection.

e. Identification of product and specifications Section.

f. Location in the Project.

g. Type of test/inspection.

h. Date of test/inspection.

i. Results of test/inspection.

j. Compliance with Contract Documents.

k. When requested by Architect, provide interpretation of results.

4. Test report submittals are for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.

E. Certificates: When specified in individual specification sections, submit certification by the manufacturer and Contractor or installation/application subcontractor to Architect, in quantities specified for Product Data.

1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect.

F. Manufacturer's Instructions: When specified in individual specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, for the Owner's information. Indicate special procedures, perimeter conditions requiring special attention, and special environmental criteria required for application or installation.

G. Manufacturer's Field Reports: Submit reports for Architect's benefit as contract administrator or for Owner.

1. Submit report in duplicate within 30 days of observation to Architect for information.

2. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

H. Erection Drawings: Submit drawings for Architect's benefit as contract administrator or for Owner.

1. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

2. Data indicating inappropriate or unacceptable Work may be subject to action by Architect or Owner.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications:

1. Prior to start of work, submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.

2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.

3. Qualification Statement: Provide documentation showing testing laboratory is accredited under IAS AC89.

B. Designer Qualifications: Where professional engineering design services and design data submittals are specifically required of Contractor by Contract Documents, provide services of a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.8 QUALITY CONTROL - GENERAL

A. Maintain quality control over subcontractors, suppliers, manufacturers, products, services, site conditions, and workmanship to produce Work of specified quality according to the requirements of the Contract Documents.

B. Special Testing and Inspection: It is recognized that specified special testing and inspection program is intended to assist Contractor, Owner, Architect, and jurisdictional authorities in nominal determination of probable compliance with specified requirements for certain elements of the Work. This program is not intended to limit Contractor's standard quality control program.

1.9 TESTING AND INSPECTION AGENCIES AND SERVICES

A. Owner will employ and pay for services of an independent testing agency to perform specified testing.

B. Contractor shall employ and pay for services of an independent testing agency to perform other specified testing.

1.10 BASIS OF DESIGN SPECIFICATIONS

A. Individual specification Sections may include a Basis of Design Manufacturer or Product, which forms the basis of the specifications, Drawing details, and other requirements of the Contract Documents. Unless the specifications have identified that no substitutions will be permitted, the specified Basis of Design Manufacturer or Product is not intended to exclude other manufacturers, products, or systems which comply with the requirements of the Contract Documents, subject to the provisions and requirements specified in individual specification Sections.

1. See Section 016000 - Product Requirements for product selection options.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

1. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.

C. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

D. Have work performed by persons qualified to produce required and specified quality.

E. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

F. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, and disfigurement.

3.2 MOCK-UPS

A. Mock-ups, General: Full-size installation of physical assemblies consisting of multiple systems and products constructed on-site, or at designated off-site location, in advance of final work to allow the Architect an opportunity to view and approve qualities of materials and execution and establish the standard by which the Work will be judged. Mockups are not Samples.

B. Before installing portions of the Work where mock-ups are required, construct mock-ups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mock-up is to demonstrate the proposed range of aesthetic effects and workmanship.

C. Field Sample Panels: Assemble a composite panel separate from building for review.

1. Construct composite panel using each system's required components specified in individual Sections of the specifications, or as indicated on Drawings. Provide adequate supporting structure for mockup materials as necessary.
2. Refer to individual Sections for size requirements.
3. Once mock-up has been accepted by Architect, maintain mock-up in accepted condition for remaining duration of Contract Time. Remove mock-up and clear area immediately prior to Substantial Completion.

D. Integrated Interior Mock-ups: Construct integrated interior mock-up as indicated on Drawings. Coordinate installation of materials and products as required in individual Specification Sections.

1. Do not construct integrated interior mock-up until building is enclosed and weatherproof, and building's environmental control systems are operating and will maintain temperature and relative humidity at designed occupancy levels throughout the remainder of the construction period.
2. Provide required lighting and additional lighting where required to enable Architect to evaluate quality of the Work.

E. Integrated Exterior Mock-ups: Construct integrated exterior mock-up as indicated on drawings. Coordinate installation of exterior envelope materials and products as required in individual Specification Sections. Provide adequate supporting structure for mock-up materials as necessary.

1. Include typical and unique transition conditions.
2. Construct mock-up in phased sequence matching sequencing of building construction, so that building envelope and drainage plane details can be observed on mock-up prior to installation on building, and also prior to installation of finish materials on mock-up.

F. Notify Architect seven (7) working days in advance of dates and times when mock-ups will be completed and ready for review and evaluation.

G. Provide supervisory personnel who will oversee mock-up construction. Provide workers that will be employed during the construction at Project.

H. Assemble and erect specified items with specified backing materials, attachment and anchorage devices, weather barriers, flashings, sealants, applied coatings, surface treatments, and finishes.

I. Obtain Architect's approval of mock-ups before starting work, fabrication, or construction.

1. Architect will issue written comments within seven (7) working days of initial review and each subsequent follow up review of each mock-up.
2. Make corrections as necessary until Architect's approval is issued.

J. Accepted mock-ups shall be a comparison standard for the remaining Work.

K. Where mock-up has been accepted by Architect and is specified in product specification Sections to be removed, protect mock-up throughout construction, remove mock-up and clear area when directed to do so by Architect.

1. Comply with construction waste management requirements specified in Section 017419.

3.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

3.4 TESTING AND INSPECTION

A. See individual specification Sections and structural Drawings for testing and inspection required.

B. Testing Agency Duties:

1. Test samples of mixes submitted by Contractor.
2. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
3. Perform specified sampling and testing of products in accordance with specified standards.
4. Ascertain compliance of materials and mixes with requirements of Contract Documents.
5. Promptly notify Architect and Contractor of observed irregularities or non-compliance of Work or products.
6. Perform additional tests and inspections required by Architect.
7. Submit reports of all tests/inspections specified.

C. Limits on Testing/Inspection Agency Authority:

1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
2. Agency may not approve or accept any portion of the Work.
3. Agency may not assume any duties of Contractor.
4. Agency has no authority to stop the Work.

D. Contractor Responsibilities:

1. Deliver to agency at designated location, adequate samples of materials proposed to be used that require testing, along with proposed mix designs.
2. Cooperate with laboratory personnel, and provide access to the Work and to manufacturers' facilities.
3. Provide incidental labor and facilities:

    a. To provide access to Work to be tested/inspected.

    b. To obtain and handle samples at the site or at source of Products to be tested/inspected.

    c. To facilitate tests/inspections.

d. To provide storage and curing of test samples.

4. Re-testing: Performed by same agency if required because of non-conformance to specified requirements, on instructions from Architect.

a. Paid for by Contractor if required because of non-conformance with specified requirements.

3.5 MANUFACTURERS' FIELD SERVICES

A. When specified in individual specification Sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment,test, adjust and balance of equipment, and inspection of installed materials as applicable, and to initiate instructions when necessary.

1. Manufacturer's field representative will be required to submit daily reports as specified in this Section, when daily observations and inspections are specified in individual Sections.

B. Submit qualifications of observer to Architect minimum 30 days in advance of required observations.

1. Observer subject to approval of Architect.

C. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

3.6 DEFECT ASSESSMENT

A. Replace Work or portions of the Work not complying with specified requirements.

B. If, in the opinion of Architect, it is not practical to remove and replace the Work, Architect will direct an appropriate remedy or adjust payment, with Owner's consent.

END OF SECTION

This page intentionally left blank

SECTION 014100 - REGULATORY REQUIREMENTS

PART 1 GENERAL

1.1 REQUIREMENTS INCLUDED

A. Obtain and pay for required permits, fees, licenses, and inspections as stipulated in the Agreement.

B. Arrange for required regulatory inspections and approvals.

C. Comply with applicable codes and regulations as stipulated in the Agreement.

1. Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities.

2. Contractor is required to promptly report to Architect any nonconformity discovered by or made known to Contractor as a Request for Information.

1.2 SUMMARY OF APPLICABLE CODES

A. See Drawings for additional information.

1.3 RELATED REQUIREMENTS

A. Section 014000 - Quality Requirements.

B. Section 018113 - Sustainable Design Requirements - CTHPB.

1.4 QUALITY ASSURANCE

A. Become familiar with applicable requirements of codes and regulations.

B. Verify that substituted materials and equipment used in the Work meet or exceed requirements of applicable codes and regulations.

C. Contractor's Designer Qualifications: Refer to Section - 014000 - Quality Requirements.

D. Comply with execution requirements of authority having jurisdiction.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

This page intentionally left blank

SECTION 014216 - DEFINITIONS

A. This Section supplements the definitions contained in the General Conditions and other Contract Documents.

B. Other definitions are included in individual specification Sections.

1.2 SPECIFICATION EXPLANATIONS

A. General: Explanations are provided to assist in understanding format, language, implied requirements and conventions of specification content. None of these explanations will be interpreted to modify the substance of content requirements.

B. Division 01 General Requirements: Expand on the broad provisions of the Conditions of the Contract, and govern the execution of the work of all Sections of the specifications. Division 01 General Requirements specify administrative and procedural requirements relating to execution of the Work, and temporary facilities for use during the construction period.

C. Sections and Divisions: The basic unit of specification text is the "Section," each of which is named and numbered. These are organized into related families called "Divisions," which generally conform to the most current edition of "MasterFormat" as published by CSI. Any Section title is not intended to limit meaning or content of Section, nor to be fully descriptive of requirements specified therein, nor to be an integral part of the text.

D. Imperative Language: Used generally in the Specifications. Except as otherwise specified, requirements expressed imperatively are to be performed by Contractor. For clarity of reading at certain locations, contrasting subjective language is used to describe the responsibilities which must be fulfilled either indirectly by Contractor, or when so noted by others.

1.3 SPECIFICATION CONTENT CONVENTIONS

A. Overlapping Requirements: Where compliance with two or more industry standards or sets of requirements is specified, and overlapping of those requirements also establishes different or conflicting minimums or levels of quality, the more stringent requirement will be enforced (which is generally the more costly level).

B. Refer apparently equal but different requirements and uncertainties as to which level of quality is required to Architect for interpretation or decision before proceeding.

C. Specification Minimum: In every instance, the specified requirement is the minimum to be performed or fulfilled. In complying with minimum requirements, the indicated numeric values are either minimums or maximums as noted or as appropriate for the context of the requirement. Refer instances of uncertainty to Architect for decision.

D. Abbreviations: The language of the Specifications and elsewhere in the Contract Documents is of the abbreviated type in certain instances, and implies words and meanings which will be appropriately interpreted. Actual work abbreviations of a self-explanatory nature have been included in the text.

E. Trade associations and general standards are frequently abbreviated. Singular words will be interpreted as plural and plural words will be interpreted as singular wherever applicable and wherever the full context of the requirements so indicate.

F. Specialists: In certain instances the Specification text may require that specific work be assigned to certain specialists or expert entities for the performance of those units of the Work. These are specified as requirements on which the Contractor has no choice or option.

G. Approve/Approved: Where used in conjunction with Architect's or Architect's consultant response to submittals, requests, applications, inquiries, reports, and claims by Contractor, the meaning of the term "approve" or "approved" will be held to the limitations of Architect's responsibilities and duties as specified in Section 013000 and stipulated in the General Conditions of the Contract. In no case will approval by Architect be interpreted as an assurance to Contractor that the requirements of the Contract Documents have been fulfilled.

H. By Others: Work performed by entities outside the Contract; interchangeable with "NIC" or "Not in Contract."

I. Contract Documents: Those documents defined in the Owner-Contractor Agreement (Contract) as applicable to the construction of the Project by Contractor.

1. Refer to General Conditions of the Contract for Construction for broader definition of this term.

J. Contractor's Option: Where materials, products, systems or methods are specified to be at Contractor's option, the choice of which material, method, product, or system will be used is solely Contractor's. There will be no change in Contract Sum or Time because of such choice.

K. Demolish (Demo): Dismantle a defined component of existing construction, remove it from the Site, and dispose of it either as specified or in lawful manner.

L. Directed, Requested, etc.: Where not otherwise explained, terms such as "directed," "requested," "authorized," "selected," "approved," "required," "accepted," and "permitted" mean "directed by Architect", "requested by Architect", etc. However, no such implied meaning will be interpreted to extend Architect's responsibility into Contractor's area of construction supervision.

M. Dispose: Remove from the Project Site in lawful manner.

N. Drawings: Capitalized term referring to the drawings prepared by Architect and its design consultants, and by any Owner consultants as applicable; bound and published as a sub-set of the Contract Documents as defined in Owner-Contractor Agreement (Contract). Non-capitalized term "drawings" used in the Contract Documents generally refers to other drawings not part of the Contract Documents, unless the context explicitly indicates otherwise.

O. Equipment: Defined as products with operational parts, regardless of whether motorized or manually operated, and particularly including connections (wiring, piping, etc.).

P. Furnish: To supply, deliver, unload, and inspect for damage (by Contractor).

Q. General Requirements: Provisions or requirements of Division 01 specification Sections. General Requirements apply to the entire Work of the Contract and, where so indicated, to other elements of work which are included in the Project. See specification explanations in this Section.

R. Indicated: Cross reference to details, notes or schedules on the Drawings, other paragraphs or schedules in the Specifications, and similar means of recording requirements in the Contract Documents. Where terms such as "shown," "noted," "scheduled," and "specified" are used in lieu of "indicated," it is for the purpose of helping the reader accomplish the cross reference, and no limitation is intended except as specifically noted.

S. Install: To unpack, assemble, erect, apply, place, finish, cure, protect, clean, start up, and make ready for use (by Contractor).

T. Installer: The entity (person or firm) engaged by Contractor or his Subcontractor or Sub-subcontractor for the performance of a particular unit of work at the project site, including installations, erection, application and similar required operations.

U. Material(s): Defined as products which must be substantially cut, shaped, worked, mixed, finished, refined or otherwise fabricated, processed, installed or applied to form units of work.

V. Not in Contract (NIC): Work performed by entities outside the Contract; interchangeable with "By Others."

W. Product(s): Material, machinery, components, equipment, fixtures, and systems forming the work result. Not materials or equipment used for preparation, fabrication, conveying, or erection and not incorporated into the work result. Products may be new, never before used, or re-used materials or equipment.

X. Project Manual: The book-sized volume that includes the procurement requirements (if any), the contracting requirements, and the Specifications.

Y. Reinstall: Install a removed component of existing construction into new construction as indicated.

Z. Remove: Dismantle a defined component of existing construction in a manner which protects and preserves the component for future use/installation; definition includes lawful disposal, unless otherwise specifically indicated to be reinstalled, salvaged, or other described action.

AA. Salvage: Remove in a manner preserving the existing condition and integrity of the component, set aside, store and protect for future reinstallation.

BB. Work (the Work): Capitalized term referring to the entire scope of work of the Project as defined in the Contract Documents. Non-capitalized term "work" used in the Contract Documents generally refers to work by specific trades or other entities as components or phases of the Work, unless the context explicitly indicates otherwise.

1. Refer to General Conditions of the Contract for Construction for broader definition of this term.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

SECTION 014219 - REFERENCE STANDARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements relating to referenced standards.

1.2 QUALITY ASSURANCE

A. For products or workmanship specified by reference to a document or documents not included in the Project Manual, also referred to as reference standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Comply with the most current date of issue for each reference standard as of the Permit issue date listed on the Contract Documents, except where a different reference standard issue date is established by applicable code.

C. Obtain copies of standards when required by Contract Documents.

D. Maintain copy at project site during submittals, planning, and progress of the specific work, until Date of Substantial Completion.

E. Should specified reference standards conflict with Contract Documents, request clarification from the Architect before proceeding.

F. Neither the contractual relationships, duties, or responsibilities of the parties in Contract nor those of the Architect shall be altered by Contract Documents by mention or inference otherwise in any reference document.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

This page intentionally left blank

SECTION 014533 - CODE-REQUIRED SPECIAL INSPECTIONS AND PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Code-required special inspections and testing.

B. Testing services incidental to special inspections.

C. Submittals.

1.2 RELATED REQUIREMENTS

A. Individual Technical Specification Sections: Specific requirements for testing of materials and assemblies.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authority having jurisdiction.

B. IAS: International Accreditation Service, Inc.

C. NIST: National Institute of Standards and Technology.

1.4 DEFINITIONS

A. Authority Having Jurisdiction (AHJ): Agency or individual officially empowered to enforce the building, fire and life safety code requirements of the permitting jurisdiction in which the Project is located.

B. Special Inspection and Testing:

1. Special inspections are inspections and testing of materials, installation, fabrication, erection or placement of components and connections mandated by the AHJ that also require special expertise to ensure compliance with the approved contract documents and the referenced standards.
2. Special inspections are separate from and independent of tests and inspections conducted by Owner or Contractor for the purposes of quality assurance and contract administration.

1.5 REFERENCE STANDARDS

A. ASTM D3740 - Standard Practice for Minimum Requirements for Agencies Engaged in Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction.

B. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

C. ASTM E543 - Standard Specification for Agencies Performing Nondestructive Testing.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Special Inspection and Testing Agency Qualifications: Prior to the start of work, Special Inspection Agency is required to:

1. Submit agency name, address, and telephone number, names of full time registered Engineer and responsible officer.

2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.

3. Submit certification that Special Inspection Agency is acceptable to AHJ.

C. Special Inspection and Test Reports: After each special inspection, Special Inspector is required to promptly submit two copies of report; one to Architect and one to the AHJ.

1. Include:

a. Date issued.

b. Project title and number.

c. Name of Special Inspector.

d. Date and time of special inspection.

e. Identification of product and specifications Section.

f. Location in the Project.

g. Type of special inspection.

h. Date of special inspection.

i. Results of special inspection.

j. Compliance with Contract Documents.

2. Final Special Inspection Report: Document special inspections and correction of discrepancies prior to the start of the work.

D. Fabricator Special Inspection Reports: After each special inspection of fabricated items at the Fabricator's facility, Special Inspector is required to promptly submit two copies of report; one to Architect and one to AHJ.

1. Include:

a. Date issued.

b. Project title and number.

c. Name of Special Inspector.

d. Date and time of special inspection.

e. Identification of fabricated item and specification Section.

f. Location in the Project.

g. Results of special inspection.

h. Verification of fabrication and quality control procedures.

i. Compliance with Contract Documents.

j. Compliance with referenced standard(s).

E. Certificates: When special inspection requirements are specified in individual specification Sections, Special Inspector is required to submit certification by the manufacturer, fabricator, and installation subcontractor to Architect and AHJ, in quantities specified for Product Data.

1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect and AHJ.

1.7 SPECIAL INSPECTION AND TESTING AGENCY

A. Owner will employ services of a Special Inspection and Testing Agency to perform inspections and associated testing and sampling required by the building code.

B. The Special Inspection and Testing Agency may employ and pay for services of an independent testing agency to perform testing and sampling associated with special inspections and required by the building code.

C. Owner's employment of agency in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 SPECIAL INSPECTIONS AND TESTING - GENERAL

A. Frequency of Special Inspections and Testing: Special Inspections are indicated as continuous or periodic.

1. Continuous Special Inspection and Testing: Special Inspection Agency shall be present in the area where the work is being performed and observe the work at all times the work is in progress.

2. Periodic Special Inspection and Testing: Special Inspection Agency shall be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

3.2 STRUCTURAL SPECIAL INSPECTIONS

A. A schedule of required special inspections and testing for structural work is included in the Structural Drawings.

1. Additional special inspection and testing requirements are specified in this Section.

3.3 SPECIAL INSPECTIONS FOR SOILS

A. Materials and Placement: Verify each item below complies with approved construction documents and approved geotechnical report.

1. Design bearing capacity of material below shallow foundations; periodic.
2. Design depth of excavations and suitability of material at bottom of excavations; periodic.
3. Materials, densities, lift thicknesses; placement and compaction of backfill: continuous.
4. Subgrade, prior to placement of compacted fill verify proper preparation; periodic.

B. Testing: Classify and test excavated material; periodic.

3.4 SPECIAL INSPECTION AND TESTING AGENCY DUTIES AND RESPONSIBILITIES

A. Special Inspection and Testing Agency is required to:

1. Verify samples submitted by Contractor comply with the referenced standards and the approved Contract Documents.
2. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
3. Perform specified sampling and testing of products in accordance with specified reference standards.
4. Ascertain compliance of materials and products with requirements of Contract Documents.
5. Promptly notify Architect and Contractor of observed irregularities or non-compliance of work or products.
6. Perform additional tests and inspections required by Architect.
7. Submit reports of all tests or inspections specified.

B. Limits on Special Inspection and Testing Agency Authority:

1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
2. Agency may not approve or accept any portion of the work.
3. Agency may not assume any duties of Contractor.
4. Agency has no authority to stop the work.

3.5 CONTRACTOR DUTIES AND RESPONSIBILITIES

A. Contractor Responsibilities - General:

1. Deliver to agency at designated location, adequate samples of materials for special inspections that require material verification.
2. Cooperate with agency and laboratory personnel; provide access to approved documents at project site, to the work, to manufacturers' facilities, and to fabricators' facilities.
3. Provide incidental labor and facilities:
    a. To provide access to work to be tested or inspected.
    b. To obtain and handle samples at the site or at source of Products to be tested or inspected.
    c. To facilitate tests or inspections.
    d. To provide storage and curing of test samples.
4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing or inspection services.
5. Re-testing: Performed by same agency if required because of non-conformance to specified requirements, on instructions from Architect.
    a. Paid by Contractor if required because of non-conformance to specified requirements.

END OF SECTION

This page intentionally left blank

SECTION 015013 - TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Dewatering.

B. Temporary utilities.

C. Temporary telecommunications services.

D. Temporary sanitary facilities.

E. Temporary Controls: Barriers, enclosures, and fencing.

F. Security requirements.

G. Vehicular access and parking.

H. Waste removal facilities and services.

I. Project identification sign.

J. Field offices.

1.2 DEWATERING

A. Provide temporary means and methods for dewatering all temporary facilities and controls.

B. Maintain temporary facilities in operable condition.

1.3 TEMPORARY UTILITIES

A. Provide and pay for all electrical power, lighting, water, heating and cooling, and ventilation required for construction purposes.

B. New permanent facilities may not be used.

C. Use trigger-operated nozzles for water hoses, to avoid waste of water.

1.4 TELECOMMUNICATIONS SERVICES

A. Provide, maintain, and pay for telecommunications services to field office at time of project mobilization.

B. Telecommunications services shall include:

1. Windows-based personal computer or lap-top computer dedicated to project telecommunications, with necessary software and laser printer.
2. Telephone Land Lines: One line, minimum; one handset per line.
3. Internet Connections: Minimum of one; DSL modem or faster.
4. Email: Account/address reserved for project use.

1.5 TEMPORARY SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures. Provide at time of project mobilization.

B. Maintain daily in clean and sanitary condition.

1.6 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas, to prevent access to areas that could be hazardous to workers or the public, to allow for owner's use of site and to protect existing facilities and adjacent properties from damage from construction operations and demolition.

B. Provide barricades and covered walkways required by governing authorities for public rights-of-way and for public access to existing building.

C. Provide protection for plants designated to remain. Replace damaged plants.

D. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.7 FENCING

A. Construction: Commercial grade chain link fence.

B. Provide minimum 6 foot high fence around construction site; equip with vehicularand pedestrian gates with locks.

1.8 EXTERIOR ENCLOSURES

A. Provide temporary insulated weather tight closure of exterior openings to accommodate acceptable working conditions and protection for Products, to allow for temporary heating and maintenance of required ambient temperatures identified in individual specification sections, and to prevent entry of unauthorized persons. Provide access doors with self-closing hardware and locks.

1.9 VEHICULAR ACCESS AND PARKING

A. Comply with regulations relating to use of streets and sidewalks, access to emergency facilities, and access for emergency vehicles.

B. Coordinate access and haul routes with governing authorities and Owner.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

E. Provide temporary parking areas to accommodate construction personnel. When site space is not adequate, provide additional off-site parking.

F. Do not allow vehicle parking on existing pavement, unless authorized by Owner in writing.

1.10 WASTE REMOVAL

A. See Section 017419 - Construction Waste Management and Disposal, for additional requirements.

B. Provide waste removal facilities and services as required to maintain the site in clean and orderly condition.

C. Provide containers with lids. Remove trash from site periodically.

D. If materials to be recycled or re-used on the project must be stored on-site, provide suitable non-combustible containers; locate containers holding flammable material outside the structure unless otherwise approved by the authorities having jurisdiction.

E. Open free-fall chutes are not permitted. Terminate closed chutes into appropriate containers with lids.

1.11 PROJECT IDENTIFICATION

A. Provide project identification sign of design, construction, and location approved by Owner. The project sign template is attached at the end of this Section.

B. No other signs are allowed without Owner permission except those required by law.

1.12 FIELD OFFICES

A. Office: Weathertight, with lighting, electrical outlets, heating, cooling equipment, and equipped with sturdy furniture, drawing rack, and drawing display table.

B. Provide space for Project meetings, with table and chairs to accommodate 10 persons.

C. Locate offices a minimum distance of 30 feet from existing and new structures.

1.13 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary utilities, equipment, facilities, materials, prior to Date of Substantial Completion inspection.

B. Remove underground installations to a minimum depth of 2 feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 015639 – TEMPORARY TREE AND PLANT PROTECTION

PART 1 - GENERAL

1.0 SECTION INCLUDES

A. General protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: For limits placed on Contractor's use of the site.

B. Section 01 5000 - Temporary Facilities and Controls: For other temporary site fencing.

C. Section 31 1000 - Site Clearing: For removing existing trees and shrubs.

D. Section 31 2310 – Earthwork: Preparation of subsoil that may affect existing plants.

1.3 DEFINITIONS

A. Caliper: Diameter of a trunk measured by a diameter tape or the average of the smallest and largest diameters at a height 6 inches (150 mm) above the ground for trees up to and including 4-inch (100-mm) size at this height and as measured at a height of 12 inches (300 mm) above the ground for trees larger than 4-inch (100-mm) size.

B. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

C. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated.

D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at project site.

1. Review methods and procedures related to temporary tree and plant protection including, but not limited to, the following:

    a. Tree-service firm's personnel and equipment needed to make progress and avoid delays.
    b. Arborist's responsibilities.
    c. Quality-control program.
    d. Coordination of Work and equipment movement with the locations of protection zones.
    e. Trenching by hand or with air spade within protection zones.
    f. Field quality control.

1.6 SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include plans, elevations, sections, and locations of protection-zone fencing and signage, showing relation of equipment-movement routes and material storage locations with protection zones.
2. Detail fabrication and assembly of protection-zone fencing and signage.
3. Indicate extent of trenching by hand or with air spade within protection zones.

C. Samples: For each type of the following:

1. Organic Mulch: 1-pint (0.5-L) volume of organic mulch; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch.
2. Protection-Zone Fencing: Assembled samples of manufacturer's standard size made from full-size components.
3. Protection-Zone Signage: Full-size samples of each size and text, ready for installation.

D. Qualification Data: For arborist and tree service firm.

E. Certification: From arborist, certifying that trees indicated to remain have been protected during construction according to recognized standards and that trees were promptly and properly treated and repaired when damaged.

F. Maintenance Recommendations: From arborist, for care and protection of trees affected by construction during and after completing the Work.

G. Existing Conditions: Documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.

1. Use sufficiently detailed photographs or video recordings.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

H. Quality-control program.

1.7 QUALITY ASSURANCE

A. Arborist Qualifications: Licensed arborist in jurisdiction where project is located.

B. Tree Service Firm Qualifications: An experienced tree service firm that has successfully completed temporary tree and plant protection work similar to that required for this project and that will assign an experienced, qualified arborist to project site during execution of the Work.

C. Quality-Control Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work without damaging trees and plantings. Include dimensioned diagrams for placement of protection zone fencing and signage, the arborist's and tree-service firm's responsibilities, instructions given to workers on the use and care of protection zones, and enforcement of requirements for protection zones.

D. Root Pruning Operations: All root pruning operations shall be performed by the Contract Arborist and directed in the field by an ISA Certified Arborist with documented experience in similar SSAT excavation and root pruning.

1.8 FIELD CONDITIONS

A. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Moving or parking vehicles or equipment.
3. Foot traffic.

4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

B. Do not direct vehicle or equipment exhaust toward protection zones.

C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

PART 2 - PRODUCTS

2.0 MATERIALS

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:

1. Type: Wood and bark chips.
2. Size Range: 3 inches (76 mm) maximum, 1/2-inch (13-mm) minimum.

B. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements: Previously used materials may be used when approved by Landscape Architect.

1. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 2-inch (50-mm) maximum opening in pattern and weighing a minimum of 0.4 lb/ft (0.6 kg/m); remaining flexible from minus 60 to plus 200 deg F (minus 16 to plus 93 deg C); inert to most chemicals and acids; minimum tensile yield strength of 2000 psi (13.8 MPa) and ultimate tensile strength of 2680 psi (18.5 MPa); secured with plastic bands or galvanized-steel or stainless-steel wire ties; and supported by tubular or T-shape galvanized-steel posts spaced not more than 96 inches (2400 mm) apart.

a. Height: 48 inches (1200 mm).
b. Color: High-visibility orange, nonfading.

C. Protection-Zone Signage: Shop-fabricated, rigid plastic or metal sheet with attachment holes prepunched and reinforced; legibly printed with nonfading lettering and as follows:

1. Size and Text: 12 inch by 18-inch sign reading “NO ENTRY - TREE PROTECTION ZONE”.
2. Lettering: 3-inch (75-mm) high minimum, black characters on white background.

PART 3 - EXECUTION

3.0 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

B. All existing trees to remain to be evaluated by a licensed arborist for tree protection, pruning or removal, if necessary, for safety reasons.

C. Prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.1 PREPARATION

A. Locate and clearly identify trees, shrubs, and other vegetation to remain or to be relocated. Flag each tree trunk at 54 inches (1372 mm) above the ground.

B. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.

C. Tree-Protection Zones: Mulch areas inside tree-protection zones and other areas indicated. Do not exceed indicated thickness of mulch.

1. Apply 4-inch (100-mm) uniform thickness of organic mulch unless otherwise indicated. Do not place mulch within 6 inches (150 mm) of tree trunks.

3.2 PROTECTION ZONES

A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people and animals from easily entering protected areas except by entrance gates. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

1. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Landscape Architect.

B. Protection-Zone Signage: Install protection-zone signage in visibly prominent locations in a manner approved by Landscape Architect. Install one sign spaced approximately every 50 feet (15 m) on protection-zone fencing, but no fewer than two signs with each facing a different direction.

C. Maintain protection zones free of weeds and trash.

D. Maintain protection-zone fencing and signage in good condition as acceptable to Landscape Architect and remove when construction operations are complete, and equipment has been removed from the site.

1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.3 ROOT PRUNING

A. Prune tree roots that are affected by temporary and permanent construction. Prune roots as follows:

1. Cut roots manually by digging a trench and cutting exposed roots with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
2. Cut Ends: Do not paint cut root ends.
3. Temporarily support and protect roots from damage until they are permanently redirected and covered with soil.
4. Cover exposed roots with burlap and water regularly.
5. Backfill as soon as possible according to requirements in Section 31 2310 ~~31 2323~~.

B. Root Pruning at Edge of Protection Zone: Prune tree roots 12 inches (300 mm) outside of the protection zone by cleanly cutting all roots to the depth of the required excavation.

C. Site Inspection: Arborist shall probe subsurface soil moisture condition more than 72 hours in advance of start of work. Using a tile probe or similar method, probe subsurface to a 2-to-3-foot depth to determine if sufficient soil moisture exists. If sufficient moisture is not found, immediate coordination with the Construction Manager shall be made to irrigate the proposed work areas. Methodology may be soaker hose, sprinklers, soaker cans with small, drilled holes to release water slowly or other methods. A second follow-up inspection shall be made to determine final sufficiency to begin.

D. Root Pruning at Utility Trenches: The Contractor shall reveal the structural roots on the side of the trees affected by trenching using compressed air or hand digging. The Contractor shall operate a diamond blade vibratory knife, vibratory plow or rock saw within 2 feet of the proposed trench line to cleanly cut any large structural roots without tearing the root bark. Hand work may be required in some locations. Unless otherwise instructed by the Engineer, root pruning shall be performed to a depth of 2.5 feet only in the vicinity of existing trees. Root pruning shall occur prior to protective fencing and clearing and grubbing.

3.4 FIELD QUALITY CONTROL

A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.5 REPAIR AND REPLACEMENT

A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or to be relocated that are damaged by construction operations, in a manner approved by Landscape Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours according to arborist's written instructions.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Landscape Architect.

B. Trees: Remove and replace trees indicated to remain that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during

construction operations that Landscape Architect determines are incapable of restoring to normal growth pattern.

1. Small Trees: Provide new trees of same size and species as those being replaced for each tree that measures 6 inches (150 mm) or smaller in caliper size.
2. Large Trees: Provide two new tree(s) of 6-inch (150-mm) caliper size for each tree being replaced that measures more than 6 inches (150 mm) in caliper size.

    a. Species: As selected by Landscape Architect.

3. Plant and maintain new trees as specified in Section 32 9300.

C. Soil Aeration: Where directed by Landscape Architect, aerate surface soil compacted during construction. Aerate 10 feet (3 m) beyond drip line and no closer than 36 inches (900 mm) to tree trunk. Drill 2-inch (50-mm) diameter holes a minimum of 12 inches (300 mm) deep at 24 inches (600 mm) o.c. Backfill holes with an equal mix of augered soil and sand.

3.6 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove excess excavated material, displaced trees, trash, and debris and legally dispose of them off Owner's property.

END OF SECTION 015639

SECTION 015705 – ENVIRONMENTAL PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes the following:
1. The work covered by this section consists of furnishing all labor, materials, tools, and equipment and performing all work required for the prevention of environmental pollution during and as a result of construction operations under this contract.
2. Prior to commencement of work, the Contractor shall meet with representatives of the Consultant to develop mutual understandings relative to compliance of the environmental protection program

B. Related Sections:
1. Section 02 61 23 Excavation, Handling, Transportation, and Disposal of Excavated Materials
2. Section 01 57 13 Temporary Erosion & Sedimentation Controls
3. Section 01 57 14 Temporary Dust Control
4. Section 31 23 10 Earthwork

C. Related Drawings
1. REM-1A and REM-1B

1.3 SUBMITALS

A. The Contractor shall submit for approval three sets of details and literature fully describing environmental protection methods to be employed in carrying out construction activities.

1.4 REFERENCES

A. All regulations cited and those of other governing agencies in their most recent version are applicable. This Section refers to requirements found in these references, but in no way is intended to cite or reiterate all provisions therein or elsewhere. It is the Contractor's responsibility to know, understand, and abide by all such regulations and common practices. Other provisions contained in these references may from time to time during the execution of this Contract be enforced by the Owner’s Consultant. In the event of a conflict, the most stringent regulations shall govern. The following documents and/or publications are made part of this Section by reference herein:
1. Connecticut “Stormwater and Dewatering Wastewaters from Construction Activities” (DEEP-WPED-GP-015).
2. Connecticut “Contaminated Soil and/or Sediment Management (Staging and Transfer)” General Permit- expired September 19, 2018.
3. Connecticut Guidelines for Soil Erosion and Sediment Control, Connecticut Council, DEP Bulletin 34, ISBN 0-942085-10-8 on Soil and Water Conservation in cooperation with CTDEEP dated May 2002.
4. Local regulations governing dust control, soil handling, and health & safety (see Section 312500, Sedimentation and Erosion Controls).
5. Connecticut Air Pollution Regulations (22a-174-1 through 44 and 22a-174-200).
6. Connecticut “General Permit for the Discharge of Stormwater and Dewatering Wastewaters

from Construction Activities (construction stormwater general permit)" effective December 31, 2020.

7. Connecticut " National Pollutant Discharge Elimination System General Permit for the Discharge of Stormwater Associated with Industrial Activities Permit No. CTR050000 dated October 1, 2025.
8. Connecticut Water Pollution Control Regulation 22a-430 of Chapter 446k
9. Clean Water Act ("CWA"), Section 402(b) as amended, 33 USC 1251, et. seq., and pursuant to an approval dated September 26, 1973
10. Connecticut Hazardous Waste Management Regulations- Sections 22a-449(c)-100 through -119, incorporating 40 CFR 124 and 40 CFR 260 to 279 through January 1, 2001. Also includes RCSA Section 22a-449(c)-11 regarding hazardous waste transporter permits.
11. Connecticut "Dewatering and Remediation Wastewater to Surface Water and Groundwater (D2R GP) effective March 1, 2026
12. Connecticut " Application for an Emergency or Temporary Discharge Authorization" effective April 1, 2024 (DEEP-WPED-APP-202)
13. General Pretreatment Permit for Significant Industrial User, Dewatering, and Remediation Discharges (SIU GP) / Dewatering and Remediation Wastewater December 2025.
14. Connecticut Underground Storage Tank (UST) Regulations 22a-449(d) -101 through 114.
15. Connecticut Release Based Clean-up Regulations (22a134tt-1 to 22a-134tt-13) effective March 1, 2026
16. Connecticut Hazardous Waste Management Regulations (22a-149 (c) 100 through 119, and 22a-454-1)
17. Connecticut Regulations for Solid Waste Management (22a-208a-1(a), 22a -209-1, and 22a-209-3; 22a-209-18 and 22a-209d-1)
18. General Permit to Act as a Contractor to Contain or Remove or Otherwise Mitigate the Effects of Certain Releases (Registered Existing Release Response Contractor) Effective October 20, 2025, expires October 20, 2029
19. Waste Facility/ Environmental Spill Response Contractor Program CGS 22a-454
20. Release Reporting RCSA 22a-450-1 to 6

PART 2 - PRODUCTS

2.1 STRAW WADDLES

A. The straw wattles or equivalent shall be used along the perimeter of the work area and soil stockpiles. Erosion and sediment controls shall be maintained by the Contractor to assure they are working effectively in accordance with Connecticut's Erosion and Sediment Control Guidelines and local soil handling guidelines.

PART 3 - EXECUTION

3.1 NOTIFICATION AND STOPPAGE OF WORK

A. The Owners Consultant will notify the Contractor in writing of any non-compliance with the foregoing provisions. The Owners Consultant shall, after receipt of such notice, immediately take corrective action. Such notice, when delivered to the Contractor or his authorized representative at the site of the work, shall be deemed sufficient for the purpose. If the Contractor fails to act promptly, the Owner may order stoppage of all or part of the work through the Consultant until satisfactory corrective action has been taken. No claim for an extension of time or for excess costs or damage incurred by the Contractor as a result of time lost due to any stop work orders shall be made unless it was later determined that the Contractor was in compliance.

3.2 AREA OF CONSTRUCTION ACTIVITY

A. Insofar as possible, the Contractor shall confine his construction activities to those areas defined by the plans and specifications. All land resources within the project boundaries and outside the limits of permanent work performed under this contract shall be preserved in their present condition or be restored to a condition after completion of construction at least equal to that which existed prior to work under this contract.

3.3 NOTIFICATIONS

A. If soil impacts are identified under the Connecticut Release Based Clean-up Regulations (RBCRs) and the Site is tier classified. Contractor will not start work for remediation of soils until a public notice has been provided by the owner, as applicable, for the Site if tier classification has been completed, under the RBCRs.

END OF SECTION 015705

SECTION 015713 – TEMPORARY EROSION AND SEDIMENTATION CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 Summary

A. Section Includes:

1. Installation of temporary erosion and sedimentation control measures
2. Maintenance of temporary erosion and sedimentation control measures.
3. Monitoring of site condition and installation of supplemental temporary erosion and sedimentation control measures.
4. Sediment removal and disposal
5. Temporary seeding or other surface stabilization measures.
6. Removal of temporary erosion and sedimentation control measures.
7. Monitoring, documentation, and recordkeeping.
8. Installation of permanent erosion control materials.
9. Final cleanup.

B. Erosion and sediment control techniques include, but are in no way limited to, silt fence, hay bales, drainage structure inserts/filters, mulching with hay/straw, netting/matting, grassing, stone dikes/berms/check-dams, compost blankets and berms, barriers, diversions, traps, basins, and appurtenances which will ensure that erosion and sediment pollution will be either eliminated or maintained within acceptable limits.

C. The measures specified herein are the minimum requirements which Contractor shall comply to control erosion and siltation throughout execution of the work. Contractor shall provide additional work if necessary to control erosion and siltation throughout the duration of the construction as conditions dictate, or as directed by Engineer.

D. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

E. Contractor is responsible for all health and safety.

1.3 SUBMITTALS

A. Submit material specifications and shop drawings for all materials furnished under this Section.

B. Prior to the start of the construction, submit schedule for the construction of required stormwater detention basins, temporary and permanent erosion and sedimentation control measures, clearing and grubbing, grading, structures at watercourses, construction, and paving.

C. During construction, submit to Engineer schedule changes that affect timing of construction.

D. Submit copies of all inspection and maintenance report forms.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Regulations of Connecticut State Agencies (RCSA)

1. 22a-315-10 through 19, Soil and Water Conservation

C. Connecticut Department of Energy and Environmental Protection (DEEP)

1. Connecticut Guidelines for Soil Erosion and Sediment Control, State of Connecticut Council on Soil and Water Conservation, 2023.

D. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 819, 2024 and any supplements.

1.6 PERMIT CONDITIONS

A. Contractor and Subcontractors are bound to comply with any project-related permits obtained by Owner or Engineer for the work of the project. Such permits will affect performance of the work, and Contractor and Subcontractors are bound to comply with requirements of such permit and representations contained in permit application as though Contractor and Subcontractor were the Permittee/permit-holder. Requirements and conditions set forth in Owner or Engineer-obtained project-related permits and permit applications shall be binding on Contractor just as any Specification would be.

1.7 QUALITY CONTROL

A. Contractor shall be responsible for the timely installation and maintenance of all sedimentation control devices necessary to prevent the erosion of soil or movement of sediment from construction activities to off-site areas via surface runoff or underground drainage systems. Measures in addition to those shown on the Drawings necessary to prevent the movement of sediment off site shall be installed, maintained, removed, and cleaned up at the expense of Contractor.

B. Where additional erosion and sedimentation control measures are required beyond what is indicated on the Drawings or herein, comply with applicable sections of the Connecticut Guidelines for Soil Erosion and Sediment Control, State of Connecticut Council on Soil and Water Conservation and CT DEEP, 2023.

C. If applicable, comply with applicable provisions of the Connecticut Department of Energy and Environmental Protection (DEEP) General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities, (DEEP-WPED-GP-015), latest revision thereof. Conditions of such General Permit, other conditions of approval or authorizations, and associated Stormwater Pollution Control Plan (SWPCP) shall become part of the Contract Documents.

D. Engineer has the authority to order immediate, additional, temporary control measures to prevent contamination of adjacent streams or other watercourses, or other areas of water impoundment and damage by erosion.

E. If Engineer observes construction procedures and operations that jeopardize erosion control provisions, Engineer will notify Contractor. If such construction procedures and operations are not corrected promptly, Engineer may suspend the performance of any or all construction until corrections have been made, and such suspension shall not be the basis of any claim by Contractor for additional compensation, nor for an extension of time to complete the Work.

F. Should construction materials be washed away or otherwise rendered ineffective in the opinion of Engineer during the progression of the Work, Contractor shall replace the installations at no additional cost to the Owner.

1.8 COORDINATION WITH PERMANENT EROSION CONTROL PROVISIONS

A. Coordinate temporary erosion and sedimentation control measures with permanent erosion control features to the extent practical to ensure economical, effective, and continuous erosion control throughout construction and post-construction periods.

PART 2 - PRODUCTS

2.1 Hay bales

A. Hay bales shall be made of cut hay with forty (40) pounds minimum weight and 120 pounds maximum weight. Bales shall be free of rotten or degraded hay, significant splits, or voids. Hay bales shall be held together with a minimum of two bands made of either wire or heavy twine.

B. Stakes to anchor the bales shall be a minimum of 36 inches long and made of hardwood with a minimum dimension of 1½-inch by 1½-inch normal size. Metal stakes may be used instead of wooden stakes. Metal stakes shall be round, “U,” “T,” “L,” or “C” shaped with a minimum weight of 0.5 pounds per foot.

C. Replace individual hay bales upon loss of 30% of original mass or volume, whichever is less.

D. Silt Fence

E. Woven Polypropylene geotextile having a minimum weight of 3.1 ounces per square yard conforming to the following:

1. Mechanical and Physical Properties of Silt Fence Geotextile

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Weight	ASTM D 3776	oz/yd^2	5.6
Grab Tensile Strength	ASTM D 4632	Pounds	60
Grab Elongation (Max percent)	ASTM D 4632	Percent (%)	15–30
Trapezoidal Tear	ASTM D 4533	Pounds	30
Puncture	ASTM D 4833	Pounds	30
Mullen Burst	ASTM D 3786	psi	150–200
Permittivity	ASTM D 4491	Sec^{-1}	0.15
Flow Rate	ASTM D 4491	gal/min/ft2	15–20
Apparent Opening Size	ASTM D 4751	(U.S. Sieve)	30–35
UV Resistance (at 500 hours)	ASTM D 4355	% strength retained	70

F. Silt fence shall be constructed of a minimum thirty-six (36) inch wide continuous woven geotextile. The material shall have a high sediment filtration capacity, high slurry flow, and minimum clogging characteristics. Edges of the fabric shall be finished to prevent the outer fibers from pulling away from the geotextile. Geotextile shall be free of defects or flaws that significantly affect its physical and/or filtering properties.

G. Fabric shall be securely fastened to stakes a minimum of 42 inches long and made of hardwood with a minimum dimension of 1½ inch by 1½ inch normal size such that a 6 to 8 inch length of fabric is unattached at the bottom for anchorage in soil. Metal stakes may be used instead of wooden stakes. Metal stakes shall be round, “U,” “T,” “L,” or “C” shaped with a minimum weight of 0.5 pounds per foot. Stakes shall be spaced not greater than ten feet apart. When required, wire or another type of support shall be constructed between the geotextile fabric and the posts to improve the load carrying capacity of the silt fence.

2.2 CATCH BASIN INSERT

A. Manufactured “bag type” catch basin insert of woven polypropylene geotextile with integral lifting loops or straps conforming to the following:

1. Mechanical and Physical Properties of Catch Basin Insert

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Grab Tensile Strength	ASTM D 4632	Pounds	315
Grab Elongation (Max percent)	ASTM D 4632	Percent (%)	30
Trapezoidal Tear	ASTM D 4533	Pounds	40x50 (min)
Puncture	ASTM D 4833	Pounds	135 (min)
Mullen Burst	ASTM D 3786	psi	420 (min)
Permittivity	ASTM D 4491	gal/min/sq ft	0.7
Flow Rate	ASTM D 4491	gal/min/ft2	50-200
Apparent Opening Size	ASTM D 4751	(U.S. Sieve)	20-40
UV Resistance (at 500 hours)	ASTM D 4355	% strength retained	80 (min)

Note: Catch basin inserts for catch basins with curb openings shall be equipped with integral curb deflector.

2.3 STRAW MULCH

A. Straw mulch shall be comprised of threshold straw of oats, wheat, barely, or rye that is free from noxious weeds, mold, or other objectionable material. Straw mulch shall contain at least 50 percent by weight of material to be 10-in or longer. Straw shall be in an air-dry condition and suitable for placement with blower equipment. Straw mulch shall be utilized on all newly graded areas with slopes exceeding 5% to protect areas against washouts and erosion unless other erosion control measures are provided.

2.4 FILTER BERM COMPOST

A. Where establishing vegetation is not planned, compost shall be a decomposed, weed free organic matter source derived from agricultural, food, or industrial residuals; biosolids (treated sewage sludge); yard trimmings; or source-separated or mixed solid waste. Compost shall possess a moisture content of 30 to 60% and a organic matter content of 25 to 100%. The maximum particle length shall be 6″, and 100% passing a 3″, 90 to 100% passing a 1″, 70% to 100% passing a 3/4″, and 30% to 75% passing a 1/4″ screen. However, no more than 50% passing a 1/4″ screen in high rainfall/flow rate situations.

B. Where establishing vegetation is planned, compost shall be use a well decomposed, stable, weed free organic matter source derived from agricultural, food, or industrial residuals; biosolids (treated sewage sludge); yard trimmings; or source-separated or mixed solid waste. Compost shall possess a moisture content of 30 to 60%, a pH of 6.0 to 8.5 and an organic matter content of 25 to 65%. The maximum particle length shall be 6″, and 100% passing a 3″, 90 to 100% passing a 1″, 70% to 100% passing a 3/4″, and 30% to 75% passing a 1/4″ screen. However, no more than 60% passing a 1/4″ in high rainfall/flow rate situations. It shall contain no substances

toxic to plants, shall possess no objectionable odors, and shall not resemble the raw material from which it was derived.

2.5 COMPOST SOIL BLANKET

A. Compost soil blankets may be utilized on slopes of up to 2:1.

B. Slightly scarify slopes and remove large clods, rocks, stumps, roots larger than 2 inches in diameter and debris on slopes, where vegetation is to be established. This soil preparation step may be eliminated where approved by the Landscape Architect/Designer, or where seeding or planting isn't planned. Track (compact) slope using a bulldozer before applying compost.

C. Apply compost at the following rates:

Compost Application Rates

Annual Rainfall/Flow Rate	Total Precipitation & Rainfall Erosivity Index	Application Rate for Slopes to be Vegetated (Note 1)	Application Rate for Slopes not being Unvegetated
Low	1″–25″ & 20–90	½″–¾ ″	1″–1½″
Average	26″–50″ & 91–200	¾″–1″	1½″–2″
High	51″ and above, & 201 and above	1″–2″	2″–4″

D. Lower application rates indicated for slopes to be vegetated should only be used in conjunction with seeding, and for compost blankets applied during the prescribed planting season for the particular region.

E. Compost shall be uniformly applied using an approved spreader unit, including bulldozers, side discharge manure spreaders, etc. Track (compact) the compost layer using a bulldozer or other appropriate equipment. (This step may be eliminated where impractical or where deemed unnecessary by the Landscape Architect/Designer.) Alternatively, apply compost using a pneumatic (blower) unit, or other unit that propels the product directly at the soil surface, thereby preventing water from moving between the soil-compost interface. Thorough watering may be used to improve settling of the compost. Apply compost layer approximately 3 feet (90 cm) over the top of the slope, or overlap it into existing vegetation.

F. On highly unstable soils, use compost in conjunction with appropriate structural measures.

G. Dry or hydraulic seeding may be completed following compost application, as required, or during the compost application itself, where a pneumatic unit is used to apply the compost.

2.6 STONE CHECK DAM

A. Stone shall be graded as follows:

Gradation of Stone for Check Dam (ConnDOT M.01.01 Grading No. 3)

Sieve	Percent Passing by Weight
2 1/2″	100
2″	90–100

Sieve	Percent Passing by Weight
1 1/2″	35–70
1	0–15
1/2″	0–5

Stone shall be sound, tough, durable, angular, not subject to disintegration, on exposure to water, or weathering, be chemically stable and shall be suitable in all other respects for the purpose intended.

B. Geotextile may be used under the stone to provide a stable foundation and to facilitate removal of the stone.

2.7 EROSION CONTROL SEED MIXTURE

Erosion Control Seed

Species (Note 1)	Application Rate, Pounds Per Acre	Application rate, Pounds Per 1,000 sf	Optimum Seed Depth, inches (Note 2)	Optimum Seeding Dates (Note 3)
Annual ryegrass Lolium multiflorum	40	1.00	0.5	3/1–6/15 and 8/1–10/15
Perennial ryegrass Lolium perenne	40	1.00	0.5	3/15–7/1 and 8/1–10/15
Winter Rye Secale cereale	120	3.00	1.00	4/5–7/1 and 8/15–10/15
Oats Avena sativa	86	2	1	3/1–6/15 and 8/1–9/15
Winter Wheat Triticum aestivum	120	3	1	4/15–7/1 and 8/15–10/15
Millet Echinochloa crusgalli	20	.5	1	5/15–7/15
Sudangrass Sorghum sudanese	30	.7	1	5/15–8/1
Buckwheat Fagopyrum esculentum	15	.4	1	4/1–9/15
Weeping lovegrass Eragostis curbula	5	.2	.25	6/1–7/1
ConnDOT All Purpose Mix	150	3.4	.5	3/1–6/15 and 8/1–10/15

Notes:

1 – Listed species may be used in combinations to obtain a broader time spectrum. If used in combinations, reduce each species planting rate by 20% of that listed

2 – Seed at twice the indicated depth for sandy soils.

3 – May be planted throughout summer if soil moisture is adequate or can be irrigated. Fall seeding may be extended 15 days in the coastal towns

2.8 EROSION CONTROL MATTING

A. Temporary Erosion Control Blanket shall be 1) Curlex® Excelsior Blanket, as manufactured by American Excelsior Company, 2) ERO-MAT® V75S(FD), as manufactured by Verdyol Plant Research, Ltd., or 3) Landlok® S2 RD, as manufactured by SI® Geosolutions, or 4) approved equal.

B. Degradable Erosion Control Fabric Netting shall be Landlok® 407 GR, as manufactured by 1) SI® Geosolutions, or 2) GeoJute® as manufactured by Belton Industries, Inc., or 3) BioNet® S150BN™ Double Net Straw Blanket, as manufactured by North American Green, or 4) approved equal.

C. Long-Term and Non-degradable Turf Reinforcement Mats shall be 1) Pyramat®, as manufactured by SI® Geosolutions, or 2) Recyclex® Turf Reinforcement Matting, as manufactured by American Excelsior Company, or 3) Vmax3 C350™, as manufactured by North American Green, or 4) approved equal.

D. Erosion control matting shall be secured with staples or an alternative attachment device such as geotextile pins or plastic pegs as recommended by the manufacturer. The Contractor shall submit a sample of the alternative attachment device for the Engineer’s approval prior to installation.

PART 3 - EXECUTION

3.1 GENERAL

A. Install erosion and sedimentation control measures as shown on the Drawings prior to any site disturbance.

B. No work shall be started until erosion control schedules and installation have been accepted by Engineer.

C. Engineer has the authority to control the surface area of each material exposed by construction operations and to direct Contractor to immediately provide permanent or temporary pollution control measures to prevent contamination of adjacent watercourses or other areas of water impoundment. Every effort shall be made by Contractor to prevent erosion on the site and abutting properties or areas.

D. Contractor shall construct all permanent erosion and sediment control features at the earliest practical time as outlined in the accepted schedule. Temporary erosion and sediment control measures shall be used to correct conditions that develop during construction, which were unforeseen, but are needed prior to installation of permanent control features, or that are needed temporarily to control erosion or sedimentation which develops during construction operations.

E. Contractor shall limit as necessary the surface area of the earth material exposed to sufficiently maintain and protect the slopes to prevent pollution. Where erosion is likely to be a problem, clearing and grubbing operations shall be scheduled and performed so that grading operations and permanent erosion and sediment control features can follow immediately thereafter, if conditions permit; otherwise, temporary control measures will be required between successive construction stages.

F. Erosion control measures shall be maintained by Contractor, and he shall remove such installations only upon completion of the work and the site is stabilized or when authorized to do so by Engineer.

G. Contractor shall operate all equipment and perform all construction operations so as to minimize pollution. Contractor shall cease any of his operations, which will increase pollution during rainstorms.

H. Failure by Contractor to control erosion, pollution, and siltation shall be cause for the Engineer to employ outside assistance to provide the necessary corrective measures. The cost of such assistance, including engineering costs, will be charged to Contractor and appropriate deductions made to Contractor's payment.

3.2 HAY BALES

A. Hay bales shall be positioned as indicated on the Drawings and/or as necessary to prevent off site movement of sediment produced by, or as a result of, construction activities, or as direct by the Engineer.

B. Hay bales shall be utilized on all catch basins and drainage facilities on the Project Site to prevent the entry of sediments or other debris. Maintain such protection throughout execution of the work until such drainage facilities have been abandoned/removed.

C. Bales shall be placed lengthwise with ends of adjacent bales tightly abutting one another to form a continuous barrier. Bales shall be entrenched to a depth of 4 inches and backfilled, with the backfill placed toward the potential source of runoff and sediment. All bales shall be installed so that bindings are oriented around the sides rather than along the tops and bottoms. Each bale shall be anchored with a minimum of two stakes, driving the first stake in each bale towards the previously laid bale to drive the bales together. Stakes must be driven a minimum of 18 inches into the ground. Loose hay shall be inserted between bales as required to prevent water from escaping between the bales.

3.3 GEOTEXTILE SILT FENCE

A. Install a filter fabric silt fence prior to construction and remove after full surface restoration has been achieved. Install silt fence as indicated on the Drawings and/or as necessary to prevent off site movement of sediment produced by, or as a result of, construction activities.

B. Install as follows:

1. Hand shovel excavate a small trench a minimum of six inches wide by six inches deep on the upslope side of the desired fence line location.
2. Unroll the siltation fence system, position the post in the back of the trench (downhill side), and hammer the post at least 12 inches into the original ground.
3. Fabric rolls shall be spliced at posts. The fabric shall be overlapped six inches, folded over, and securely fastened to posts.
4. Lay the bottom 6 inches of the fabric into the trench to prevent undermining by storm water run-off.
5. Backfill the trench and compact. Compaction is necessary to prevent the run-off from eroding the backfill.

6. For slope and swale installations, extend the ends of the trench sufficiently up slope such that the bottom end of the fence will be higher than the top of the lowest portion of the fence.

3.4 CATCH BASIN INLET SEDIMENT CONTROL

A. Install catch basin inlet sediment control devices in each exiting catch basin as long as it remains in use in accordance with manufacturer's guidelines at the locations shown on the Drawings.

B. A catch basin sediment filter shall be installed and changed/cleaned per the manufacturer's recommendations, or as directed by the Engineer, during construction.

C. New catch basins shall have a filter installed immediately upon completion of construction. In addition, a hay bale, or similar, barrier shall be installed around the new basin and maintained in place until binder is placed or disturbed areas draining to it are stabilized.

D. Catch basins with curb openings shall have filter fabric covering the opening and the edges of the fabric shall be secured. A filter boom shall also be placed over the opening.

3.5 TEMPORARY SEDIMENT BASINS

A. Temporary sedimentation basins shall be employed as required during construction. Sedimentation shall be periodically removed from the basins and from behind erosion and sedimentation control devices. The Contractor shall direct all possible site runoff to the temporary sedimentation basins.

B. The temporary sedimentation basins shall be maintained from the start of construction until construction of the permanent detention basins is completed and perimeter areas are stabilized.

3.6 TEMPORARY MULCHING

A. Apply temporary mulch to areas where rough grading has been completed but final grading is not anticipated to begin within 30 calendar days of the completion of rough grading or where final grading has been completed but seeding is not anticipated for 20 days.

1. Straw/Hay Mulch

    a. Exposure Period: 6 months

    b. Application Method: By hand or machine

    c. Application Rate: 110 lbs/1,000 square feet.

2. Bark Chips/Shredded Bark

    a. Exposure Period: Less than one year

    b. Application Method: By hand or machine

    c. Application Rate: 6 cubic yards /1,000 square feet.

3.7 TEMPORARY EROSION CONTROL MATS

A. Erosion control mats shall be furnished, installed, maintained, and later removed in ditches or swales, on embankment slopes, and excavation slopes at the locations shown on the Drawings in accordance with the manufacturer's recommendations.

B. All areas shall be smooth graded and compacted. Remove all rocks, dirt clods, vegetation, and other obstructions that may cause damage to the mats.

C. Unroll mats parallel to the direction of water flow and lay flat against the ground. Overlap roll ends 1–2 feet with upslope mat on the top to prevent uplift of mat end by water flow. Overlay adjacent edges of mat by six inches. Extend mat 2–3 feet above the crest of steep slopes and anchor by excavating a 6-inch-deep trench, and secure end of mat in trench, backfill and compact. Secure mat to the ground using staples or pins furnished by manufacturer of mat.

D. When no longer required, as determined by the Engineer, temporary erosion control mats shall become the property of the Contractor and be removed and properly disposed.

E. Ground disturbances, including holes and depressions caused by the installation and removal of the temporary erosion control blanket shall be backfilled and repaired.

3.8 INSPECTIONS AND MAINTENANCE

A. Contractor is responsible to maintain the sediment and erosion control features at all times throughout the project duration and until the completion certification and approval has been issued.

B. Regular erosion and sediment control system inspections shall be conducted by Contractor throughout the project duration. At a minimum, Contractor shall conduct daily inspections and maintain erosion control systems in good operating condition. Report the results of the inspection and the recommended maintenance and/or repair requirements to Engineer.

C. Additional inspections may be required and/or directed prior to, or immediately following, a storm event >0.1 inches. Repairs shall be made as necessary.

D. In the event that the sedimentation and erosion control measures employed by Contractor prove to be inadequate as determined by the Engineer, Contractor shall adjust operations to the extent necessary to prevent erosion and sediment transport.

E. Surface water shall be pumped to maintain excavations free of water. Comply with applicable requirements of the Connecticut Department of Environmental Protection, specifically those requirements related to the management of stormwater and dewatering wastewaters associated with construction activities.

F. Hay bales and/or silt fences.

1. Remove accumulated sediment once it builds up to one-half of the height of the bale or fabric.
2. Replace damaged or degraded bales as necessary or when directed by the Engineer.
3. Replace damaged fabric, or patch with a 2-ft minimum overlap. Overlaps may only be made at fence posts.
4. Make other repairs as necessary to ensure that the bales/fence is filtering all runoff.

G. Erosion Control Mats shall be inspected at least once a week. Areas where the mat has become dislodged from the soil surface or become torn shall be re-graded and re-seeded as necessary and the mat re-installed. When repetitive failures occur at the same location review conditions and modify erosion control measures to reduce failure rate. Temporary erosion control blanket damaged during the progress of work or resulting from the Contractor's vehicles, equipment, or operations shall be repaired or replaced at the expense of the Contractor.

H. Clean catch basin inlet sediment control devices in accordance with manufacturer's guidelines.

I. Any catch basins that collect sediment as a result of Contractor's work shall be thoroughly cleaned out by Contractor.

END OF SECTION 015713

SECTION 015714 – TEMPORARY DUST CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Furnishing and spreading water, calcium chloride, and/or mulch on the subgrade, or in other areas of a Project Site or associated off-site areas, for the purpose of controlling dust emissions.

B. The requirements set forth in this section of the specifications apply to all phases and areas of construction.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Regulations of Connecticut State Agencies (RCSA)

1. RCSA Section 22a-174-1 through 43, Abatement of Air Pollution.

C. ASTM International (ASTM)

1. ASTM D98, Standard Specification for Calcium Chloride.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material

manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 2 - PRODUCTS

2.1 MATERIALS

A. Only water, calcium chloride, and mulch are approved for dust control. No asphalt or petroleum-based products may be utilized for dust control.

B. Water used shall be clean, non-polluted water obtained from sources approved by Engineer.

C. Calcium chloride, ASTM D98. Calcium chloride in pellet form and flake form shall be acceptable.

1. Calcium chloride shall be packaged in moisture proof bags or in airtight drums with the manufacturer, name of product, net weight, and percentage of calcium chloride guaranteed by the manufacturer legibly marked on each container.
2. Engineer may reject calcium chloride failing to meet the requirements of the aforementioned specifications or which has become caked or sticky in shipment.

D. Mulch

1. Straw mulch: Threshold straw of oats, wheat, barely, or rye that is free from noxious weeds, mold or other objectionable material. Straw mulch shall contain at least 50 percent by weight of material to be 10-in or longer.
2. Wood chips: Processed tree trimmings free of trash or other physical contaminants such as metal and plastic.

PART 3 - EXECUTION

3.1 GENERAL

A. Dust control shall be the responsibility of Contractor and dust control operations shall meet the requirements of the State of Connecticut Department of Environmental Protection.

B. Construction sequencing shall be organized and conducted in a manner to leave existing pavement or ground coverings in place until just prior to earth excavation for the purpose of minimizing the migration of dust beyond the Project Limits into the surrounding area.

C. Engineer reserves the right to conduct active dust monitoring using visual methods and may utilize particulate measurement equipment during the course of the work. If the amount of fugitive dust and/or particulate generated during the work is deemed unacceptable in the Engineer's judgment or exceeds baseline Project Site conditions at Engineer's monitoring locations, Engineer may require Contractor to stop work and implement corrective measures. No claim for delay will be considered for work stoppage based upon the results of Engineer's active dust monitoring results.

D. Stockpiled materials from which particle have the potential of becoming airborne shall be securely covered with a temporary waterproof covering made of polyethylene, polypropylene, hypalon, or approved equal. The covers must be in place at all times when work with the stockpiles is not occurring.

E. Subcontractor shall sweep all adjacent roads and neighboring parking lots and driveways that are impacted by the work. Whenever dirt is tracked from the site it shall be cleaned as necessary to prevent it from becoming a nuisance or hazard. At a minimum, adjacent streets shall be swept once per week.

3.2 WATER

A. The application of water shall be under the control of Engineer at all times. It shall be applied only at the locations, and at such times, and in the amount as may be directed by Engineer. Quantities of water wasted or applied without authorization will not be paid for.

B. Use of water will not be permitted when it will result in, or create, hazardous or objectionable conditions such as ice, flooding or pollution.

C. Contractor shall have available and maintain in an operable condition at all times, sufficient equipment for the purpose of applying water for dust control.

D. Watering equipment shall consist of pipelines, tanks, tank trucks, distributors, pumps, meters, hose or other devices, approved by Engineer, which are capable of applying a uniform spread of water over the surface. A suitable device for a positive shut-off and for regulating the flow of water shall be located so as to permit positive operator control.

E. Applications of water for dust suppression include, but are not necessarily limited to, the following:

1. Demolition activities, material handling, material processing, and loading.
2. Earthwork.
3. Open excavation faces and dust-prone areas of the work.
4. Temporary access roads and roadway surfaces within and around the Project Site.

3.3 CALCIUM CHLORIDE

A. Calcium chloride shall be applied only at the locations, at such times and in the amount as may be directed by the Engineer and only in areas that will not be adversely affected by the application.

B. Calcium chloride shall be uniformly applied at the rate of one and one-half (1½) pounds per square yard (lb/yd2) or at any other rate as directed by Engineer. Application shall be by means of a mechanical spreader, or other approved methods. The number and frequency of applications shall be to Engineer's satisfaction.

3.4 MULCH FOR DUST CONTROL

A. Coordinate the use of mulch for dust control with erosion and sedimentation control measures.

B. Straw mulch shall be applied at a rate of 100 pounds per 1,000 square feet (100 lb/1,000 ft2).

C. Wood chips or wood mulch shall be applied at such a rate as to form a layer one (1) inch thick.

3.5 OTHER DUST CONTROL MEASURES

A. A temporary seed mixture may be spread in lieu of, or in addition to mulch over areas where the suspension of grading work in disturbed areas is expected to be more than 30 calendar days and as directed by Engineer.

END OF SECTION 015714

SECTION 015723 - TEMPORARY STORMWATER POLLUTION CONTROL

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The Contractor, Subcontractors, and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.01A, entitled “Related Documents.”

1.02 SUMMARY

A. This Section includes:

1. Compliance with the General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities (DEEP-WPED-GP-015) (hereinafter “Stormwater General Permit”) including the Stormwater Pollution Control Plan (SWPCP).

1.03 PERMIT CONDITIONS

A. Contractor and Subcontractors are bound to comply with permits obtained for the project, whether such permits are obtained by Owner, Engineer, Contractor, or Subcontractor for the work of the project. Such permits will affect performance of the work, and Contractor and Subcontractors are bound to comply with requirements of such permit and representations contained in permit application as though Contractor and Subcontractor were the Permittee, permit-holder, or registrant. Requirements and conditions set forth in Owner or Engineer-obtained project-related permits and permit applications shall be binding on Contractor and Subcontractors just as any Specification would be.

1.04 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include

documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.05 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Regulations of Connecticut State Agencies (RCSA)

1. 22a-315-10 through 19, Soil and Water Conservation

C. Connecticut Department of Energy and Environmental Protection (DEEP)

1. General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities (DEEP-WPED-GP-015).
2. Connecticut Guidelines for Soil Erosion and Sediment Control, DEP Bulletin 34, State of Connecticut Council on Soil and Water Conservation, 2002.

1.06 SUBMITTALS

A. General: Contractor shall maintain copies of all permit-related documents at the Project Site and shall make them available during construction, and provide copies to the Engineer.

B. Inspection reports: Provide copies of inspection reports to Owner and applicable Permittee.

C. Additional information as required by the DEEP deemed necessary to evaluate the consistency of the subject activity with the requirements for authorization under the Stormwater General Permit.

D. Documents or correspondences between Contractor and DEEP, local authorities, wetland agencies, etc. including notices of violation, enforcement actions, or proposed fines by regulatory agencies.

E. Notice of Termination forms prescribed and provided by DEEP.

1.07 QUALITY ASSURANCE

A. The conditions of the Stormwater General Permit, the SWPCP, and other conditions of approval or authorizations shall become part of the Contract Documents.

B. Use adequate personnel who are trained and experienced in the necessary protocols and techniques, and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section.

C. Use equipment of adequate size, capacity and quantity to accomplish the management of all wastewaters under this Section.

PART 2 - PRODUCTS– NOT USED

PART 3 - EXECUTION

3.01 GENERAL

A. Notify Permittee, Owner, and Engineer immediately upon request from any regulatory agency to enter, inspect, sample, monitor, or otherwise access the project site or Contractor's records pertaining to the General Permit, erosion and sedimentation control, or other water pollution control.

3.02 STORMWATER GENERAL PERMIT

A. Maintain compliance with the Stormwater General Permit at all times.

B. Comply with required provisions of the SWPCP at all times.

C. Cooperate with the Permittee, Owner, and Engineer during all inspections and monitoring. Take corrective action within required time-frames if deficiencies are noted.

D. Contractor shall maintain a rain gauge on the Project Site that meets the requirements of the Stormwater General Permit.

E. All work shall be conducted in compliance with all conditions of the General Permit, SWPCP, and Section 01 5713 – Temporary Erosion and Sedimentation Controls.

3.03 VIOLATIONS

A. Penalties: Contractor shall be responsible for penalties assessed on Contractor or the Owner as a result of Contractor's failure to comply with the requirements of the Stormwater General Permit, SWPCP, or with the applicable provisions of the Federal, State, and local regulations and requirements.

B. Penalties as used in this section shall include fines, penalties, and damages, whether proposed, assessed, or levied against the Contractor or the Owner, by governmental agencies or as a result of citizen suits. Penalties shall also include payments made or costs incurred in settlement for alleged violations of applicable laws, regulations, or requirements. Costs incurred could include sums spent instead of penalties, in mitigation or to remediate or correct violations.

END OF SECTION

SECTION 016000 - PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General product requirements.

B. Transportation, handling, storage and protection.

C. Product option requirements.

D. Substitution limitations.

E. Procedures for Owner-supplied products.

F. Maintenance materials, including extra materials, spare parts, tools, and software.

1.2 RELATED REQUIREMENTS

A. Section 011000 - Summary: Identification of Owner-supplied products.

B. Section 012500 - Substitution Procedures: Substitutions made after Contract award.

C. Section 014000 - Quality Requirements: Product quality monitoring.

D. Section 016116 - Volatile Organic Compound (VOC) Content Restrictions: Requirements for VOC-restricted product categories.

E. Section 017419 - Construction Waste Management and Disposal: Waste disposal requirements potentially affecting product selection, packaging and substitutions.

F. Section 018113 - Sustainable Design Requirements - CTHPB: Requirements for CTHPB compliance.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Proposed Products List: Submit list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.

1. Submit within 15 days after date of Notice to Proceed.
2. For products specified only by reference standards, list applicable reference standards.

C. Product Data Submittals: Submit manufacturer's standard published data. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information specific to this Project.

D. Shop Drawing Submittals: Prepared specifically for this Project; indicate utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.

E. Sample Submittals: Illustrate functional and aesthetic characteristics of the product, with integral parts and attachment devices. Coordinate sample submittals for interfacing work.

1. For selection from standard finishes, submit samples of the full range of the manufacturer's standard colors, textures, and patterns.

1.4 SUSTAINABLE DESIGN SUBMITTALS

A. See Section 018113 for product requirements and procedures necessary for achievement of targeted sustainability certification.

B. Building Product Disclosure Requirements: Submit the following information:

1. Environmental Product Declaration: For each product, where available.
2. Health Product Declaration: For each product, where available.

PART 2 PRODUCTS

2.1 NEW PRODUCTS

A. Provide new products unless specifically required or permitted by Contract Documents.

B. See Section 014000 - Quality Requirements, for additional source quality control requirements.

C. Use of products having any of the following characteristics is not permitted:

1. Made using or containing CFC's or HCFC's.
2. Containing lead, cadmium, or asbestos.

D. Where all other criteria are met, give preference to products that:

1. Are extracted, harvested, and/or manufactured closer to the location of the project.
2. Have longer documented life span under normal use.
3. Result in less construction waste. See Section 017419
4. Are made of recycled materials.
5. If made of wood, are made of sustainably harvested wood, wood chips, or wood fiber.
6. Are Cradle-to-Cradle Certified.
7. Have a published Environmental Product Declaration (EPD).
8. Have a published Health Product Declaration (HPD).

2.2 PRODUCT SELECTIONS

A. General:

1. Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements for comparable products to obtain approval for use of an unnamed product.
2. Submit additional documentation, when requested by Architect, to establish equivalency of proposed products. Evaluation of "comparable products" and "or equal" products are by the Architect, whose determination is final.

B. Definitions:

1. Basis-of-Design (BOD) Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "Basis of Design," including make or model number or other designation. In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating comparable products of additional manufacturers.
2. Comparable Product: Product that is demonstrated and approved by Architect through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

C. Conditions for Consideration of Comparable Products: Architect will consider Contractor's request for comparable products when the following conditions are satisfied. If the following conditions are not satisfied, Architect may either require a Substitution Request or return the comparable product request without action, except to record noncompliance with these requirements:

1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant product qualities include attributes such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
2. Evidence that proposed product provides specified warranty.
3. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
4. Samples, if requested.
5. Submittal Requirements: Approval by the Architect of Contractor's request for use of comparable product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.

D. Product Selection Options:

1. Products Specified by Reference Standards or by Description Only:
    a. Use any product meeting those standards or description.
2. Products Specified by Naming One or More Manufacturers without a Provision for Substitutions (closed spec):
    a. Use a product of one of the listed manufacturers and meeting specifications.

b. No comparable products or substitutions will be allowed (closed spec).

3. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions:

a. Use a product of one of the listed manufacturers and meeting specifications.

b. Submit a comparable product for consideration of an unnamed product.

c. Submit a request for substitution for an unnamed product that does not meet specifications or is not determined to be comparable.

4. Products Specified by Naming a Basis of Design with or without Other Named Manufacturers without a Provision for Substitutions (closed spec):

a. Use the Basis of Design product.

b. Use a product of one of the listed manufacturers, if applicable, and meeting specifications.

c. No comparable products or substitutions will be allowed (closed spec).

5. Products Specified by Naming a Basis of Design with a Provision for Substitutions:

a. Use the Basis of Design product.

b. Use a product of one of the listed manufacturers, if applicable, and meeting specifications.

c. Submit a comparable product for consideration of an unnamed product.

d. Submit a request for substitution for an unnamed product that does not meet specifications or is not determined to be comparable.

2.3 MAINTENANCE MATERIALS (ATTIC STOCK)

A. Furnish extra materials, spare parts, tools, and software of types and in quantities specified in individual specification Sections.

B. Deliver and place in location as directed; obtain receipt prior to final payment.

PART 3 EXECUTION

3.1 SUBSTITUTION LIMITATIONS

A. See Section 012500 - Substitution Procedures, for procedural requirements for proposed substitutions.

B. Architect may consider requests for substitutions when one or more of the following conditions exist, as determined by Architect. If one or more of the following conditions are determined not to exist, Architect may not consider request further, and may take no action except to record the request and its non-compliance. Consideration may be given if substitution request:

1. Offers Owner substantial advantage in cost, time, energy conservation, or other consideration, after deducting additional responsibilities Owner must assume as the result.
2. Does not require extensive modification of Contract Documents.
3. Is consistent with intent of Contract Documents, and will produce intended work results.
4. Is fully documented and properly submitted.
5. Will not adversely affect Contractor's construction schedule.
6. Resolves specified Product being unable to receive required approval by Authority Having Jurisdiction (AHJ), and substitution has received such approval prior to submission.
7. Resolves incompatibility of specified Product with other related Products, and substitution is compatible with related Products.
8. Resolves non-coordination of specified Product with other related Products, and substitution is coordinated with related Products.
9. Provides specified warranty when specified Product cannot be provided with specified warranty.
10. Is proposed for a Product that, through no fault of Contractor, becomes unavailable or unsuitable due to regulatory change.
11. Will be considered if a Product cannot be provided within the Contract Time; Architect will not consider substitution if Product cannot be provided as the result of Contractor's failure to schedule and coordinate the Work as required by Contract Documents.
12. Has been coordinated with and among all affected Subcontractors and other portions of the Work, and is acceptable to all affected Subcontractors.

3.2 OWNER-SUPPLIED PRODUCTS

A. See Section 011000 - Summary for identification of Owner-supplied products.

B. Owner's Responsibilities:

1. Arrange for and deliver Owner reviewed shop drawings, product data, and samples, to Contractor.
2. Arrange and pay for product delivery to site.
3. On delivery, inspect products jointly with Contractor.
4. Submit claims for transportation damage and replace damaged, defective, or deficient items.
5. Arrange for manufacturers' warranties, inspections, and service.

C. Contractor's Responsibilities:

1. Designate submittals and delivery date for each product in progress schedule.
2. Review Owner reviewed shop drawings, product data, and samples.
3. Receive and unload products at site; inspect for completeness or damage jointly with Owner.
4. Handle, store, install and finish products.
5. Provide installation inspections required by jurisdictional authorities.

6. Repair or replace items damaged after receipt.

3.3 TRANSPORTATION AND HANDLING

A. Package products for shipment in manner to prevent damage; for equipment, package to avoid loss of factory calibration.

B. If special precautions are required, attach instructions prominently and legibly on outside of packaging.

C. Coordinate schedule of product delivery to designated prepared areas in order to minimize site storage time and potential damage to stored materials.

D. Transport and handle products in accordance with manufacturer's instructions.

E. Transport materials in covered trucks to prevent contamination of product and littering of surrounding areas.

F. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

G. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage, and to minimize handling.

H. Arrange for the return of packing materials, such as wood pallets, where economically feasible.

3.4 STORAGE AND PROTECTION

A. Provide protection of stored materials and products against theft, casualty, or deterioration.

B. Designate receiving/storage areas for incoming products so that they are delivered according to installation schedule and placed convenient to work area in order to minimize waste due to excessive materials handling and misapplication. See Section 017419.

1. Structural Loading Limitations: Handle and store products and materials so as not to exceed static and dynamic load-bearing capacities of project floor and roof areas.

C. Store and protect products in accordance with manufacturers' instructions.

D. Store with seals and labels intact and legible.

E. Arrange storage of materials and products to allow for visual inspection for the purpose of determination of quantities, amounts, and unit counts.

F. Store sensitive products in weathertight, climate-controlled enclosures in an environment favorable to product.

G. For exterior storage of fabricated products, place on sloped supports above ground.

H. Provide bonded off-site storage and protection when site does not permit on-site storage or protection.

I. Protect products from damage or deterioration due to construction operations, weather, precipitation, humidity, temperature, sunlight and ultraviolet light, dirt, dust, and other contaminants.

J. Comply with manufacturer's warranty conditions, if any.

K. Do not store products directly on the ground.

L. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

M. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

N. Prevent contact with material that may cause corrosion, discoloration, or staining.

O. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

P. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

END OF SECTION

This page intentionally left blank

SECTION 016116 - VOLATILE ORGANIC COMPOUND (VOC) CONTENT RESTRICTIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements for Indoor-Emissions-Restricted products.

B. Requirements for VOC-Content-Restricted products.

1.2 RELATED REQUIREMENTS

A. Section 018113 - Sustainable Design Requirements - CTHPB: Procedures for reporting emissions and VOC content data.

B. Section 016117 - Accessory Material VOC Content Certification Form: Form for reporting emissions and VOC content.

1.3 DEFINITIONS

A. Indoor-Emissions-Restricted Products: All products in the following product categories, whether specified or not:

1. Interior paints and coatings applied on site.
2. Interior adhesives and sealants applied on site, including flooring adhesives.
3. Flooring.
4. Composite wood and solid wood flooring.
5. Wall coverings.
6. Acoustic ceiling tiles and wall panels.
7. Other products when specifically stated in the specifications.

B. VOC-Content-Restricted Products: All products in the following product categories, whether specified or not:

1. Interior paints and coatings applied on site.
2. Interior adhesives and sealants applied on site, including flooring adhesives.
3. Other products when specifically stated in the specifications.

C. Interior of Building: Anywhere inside the exterior weather barrier or air barrier.

D. Adhesives: All gunnable, trowelable, liquid-applied, and aerosol adhesives, whether specified or not; including flooring adhesives, resilient base adhesives, and pipe jointing adhesives.

E. Sealants: All gunnable, trowelable, and liquid-applied joint sealants and sealant primers, whether specified or not; including firestopping sealants and duct joint sealers.

F. Inherently Non-Emitting Materials: Products composed wholly of minerals or metals, unless they include organic-based surface coatings, binders, or sealants; and specifically the following:

1. Stone.
2. Concrete.
3. Clay brick.
4. Metals that are plated, anodized, or powder-coated.
5. Glass.
6. Ceramics.
7. Solid wood flooring that is unfinished and untreated.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. See Section 018113 - Sustainable Design Requirements - CTHPB for sustainability submittal requirements.

C. See Section 016117 - Accessory Material VOC Content Certification Form: Form for reporting emissions and VOC content.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 FIELD QUALITY CONTROL

A. Owner reserves the right to reject non-compliant products, whether installed or not, and require their removal and replacement with compliant products at no extra cost to Owner.

B. Additional costs to restore indoor air quality due to installation of non-compliant products will be borne by Contractor.

END OF SECTION

SECTION 016117 - ACCESSORY MATERIAL VOC CONTENT CERTIFICATION FORM

*** ATTACH THIS FORM TO EVERY SUBMITTAL ***

1.1 PROJECT NAME: _____

1.2 USE OF THIS FORM:

A. Because installers are permitted to choose accessory materials suitable for the applicable installation, there is a possibility that such accessory materials might contain VOC content in excess of that permitted, especially where such materials have not been explicitly specified.

B. Contractor is required to obtain and submit this form from each installer of work on this project.

C. For each product category listed, circle the correct words in brackets: [HAS] or [HAS NOT].

D. Attach this form product data and MSDS sheet for each accessory material used.

1.3 VOC CONTENT RESTRICTIONS ARE SPECIFIED IN SECTION 016116.

1.4 PRODUCT CERTIFICATION

A. I certify that the installation work of my firm on this project:

1. [HAS] [HAS NOT] required the use of any ADHESIVES.
2. [HAS] [HAS NOT] required the use of any JOINT SEALANTS.
3. [HAS] [HAS NOT] required the use of any PAINTS OR COATINGS.
4. [HAS] [HAS NOT] required the use of any COMPOSITE WOOD or AGRIFIBER PRODUCTS.

B. Product data and MSDS sheets are attached.

1.5 CERTIFIED BY: (INSTALLER/MANUFACTURER/SUPPLIER FIRM)

A. Firm Name: _____

B. Print Name: _____

C. Signature: _____

D. Title: _____ (officer of company)

E. Date: _____

END OF SECTION

This page intentionally left blank

SECTION 017000 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Examination, preparation, and general installation procedures.

B. Pre-installation meetings.

C. Cutting and patching.

D. Surveying for laying out the work.

E. Cleaning and protection.

F. Starting of systems and equipment.

G. Demonstration and instruction of Owner personnel.

H. Closeout procedures, including Contractor's Correction Punch List, except payment procedures.

I. General requirements for maintenance service.

1.2 RELATED REQUIREMENTS

A. Section 013000 - Administrative Requirements: Submittals procedures.

B. Section 014000 - Quality Requirements: Testing and inspection procedures.

C. Section 017123 - Field Engineering: Additional requirements for field engineering and surveying work.

D. Section 017419 - Construction Waste Management and Disposal: Additional procedures for trash/waste removal, recycling, salvage, and reuse.

E. Section 017800 - Closeout Submittals: Project record documents, operation and maintenance data, warranties, and bonds.

F. Section 017900 - Demonstration and Training: Demonstration of products and systems to be commissioned and where indicated in specific specification sections

G. Section 078400 - Firestopping.

1.3 DEFINITIONS

A. Verify, Field Verify, or Drawing Abbreviation: Use on Drawings or in specifications is intended to alert Contractor that indicated measurement or description of work may not be fully determined without comparing verified dimension in larger context or other dependent measurements due to specific product, actual versus nominal dimensions, or measurements of existing conditions.

1. Notify Architect of discrepancies between dimensions shown and field layout or measurements.

1.4 REFERENCE STANDARDS

A. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Cutting and Patching: Submit written request in advance of cutting or alteration that affects:

1. Structural integrity of any element of Project.
2. Integrity of weather exposed or moisture resistant element.
3. Efficiency, maintenance, or safety of any operational element.
4. Visual qualities of sight exposed elements.
5. Work of Owner or separate Contractor.
6. Include in Request:

a. Identification of Project.

b. Location and description of affected work.

c. Necessity for cutting or alteration.

d. Description of proposed work and products to be used.

e. Alternatives to cutting and patching.

f. Effect on work of Owner or separate Contractor, if applicable.

g. Written permission of affected separate Contractor, if applicable.

h. Date and time work will be executed.

C. Project Record Documents: Accurately record actual locations of capped and active utilities.

1.6 QUALIFICATIONS

A. For surveying work, employ a land surveyor registered in the State in which the Project is located and acceptable to Architect. Submit evidence of surveyor's Errors and Omissions insurance coverage in the form of an Insurance Certificate. Employ only individual(s) trained and experienced in collecting and recording accurate data relevant to ongoing construction activities,

B. For field engineering, employ a professional engineer of the discipline required for specific service on Project, licensed in the State in which the Project is located. Employ only individual(s) trained and experienced in establishing and maintaining horizontal and vertical control points necessary for laying out construction work on project of similar size, scope and/or complexity.

C. For design of temporary shoring and bracing, employ a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.7 PROJECT CONDITIONS

A. Use of explosives is not permitted without written permission from Owner.

B. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

C. Protect site from puddling or running water. Provide water barriers as required to protect site from soil erosion.

D. Perform dewatering activities, as required, for the duration of the project.

E. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

F. Dust Control: Execute work by methods to minimize raising dust from construction operations. Provide positive means to prevent air-borne dust from dispersing into atmosphere and over adjacent property.

1. Provide dust-proof enclosures to prevent entry of dust generated outdoors.

G. Erosion and Sediment Control: Plan and execute work by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.

1. Minimize amount of bare soil exposed at one time.
2. Provide temporary measures such as berms, dikes, and drains, to prevent water flow.
3. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
4. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.

H. Noise Control: Provide methods, means, and facilities to minimize noise produced by construction operations.

1. Limit conduct of especially noisy work to the hours of 8 am to 5 pm.

I. Pest Control: Provide methods, means, and facilities to prevent pests and insects from damaging the work.

J. Rodent Control: Provide methods, means, and facilities to prevent rodents from accessing or invading premises.

K. Pollution Control: Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations. Comply with federal, state, and local regulations.

1.8 COORDINATION

A. Coordinate scheduling, submittals, and work of the various Sections of the Project Manual to ensure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.

B. Notify affected utility companies and comply with their requirements.

C. Verify that utility requirements and characteristics of new operating equipment are compatible with building utilities. Coordinate work of various Sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.

D. Coordinate space requirements, supports, and installation of mechanical and electrical work that are indicated diagrammatically on Drawings. Follow routing indicated for pipes, ducts, and conduit, as closely as practicable; place runs parallel with lines of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

E. In finished areas except as otherwise indicated, conceal pipes, ducts, and wiring within the construction. Coordinate locations of fixtures and outlets with finish elements.

F. Coordinate completion and clean-up of work of separate Sections.

G. After Owner occupancy of premises, coordinate access to site for correction of defective work and work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

PART 2 PRODUCTS

2.1 PATCHING MATERIALS

A. New Materials: As specified in product Sections; match existing products and work for patching and extending work.

B. Type and Quality of Existing Products: Determine by inspecting and testing products where necessary, referring to existing work as a standard.

C. Product Substitution: For any proposed change in materials, submit request for substitution described in Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that existing site conditions and substrate surfaces are acceptable for subsequent work. Start of work means acceptance of existing conditions.

B. Verify that existing substrate is capable of structural support or attachment of new work being applied or attached.

C. Examine and verify specific conditions described in individual specification Sections.

D. Take field measurements before confirming product orders or beginning fabrication, to minimize waste due to over-ordering or misfabrication.

E. Verify that utility services are available, of the correct characteristics, and in the correct locations.

F. Prior to Cutting: Examine existing conditions prior to commencing work, including elements subject to damage or movement during cutting and patching. After uncovering existing work, assess conditions affecting performance of work. Beginning of cutting or patching means acceptance of existing conditions.

3.2 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.

B. Seal cracks or openings of substrate prior to applying next material or substance.

C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

3.3 PRE-INSTALLATION MEETINGS

A. When required in individual specification Sections, convene a pre-installation meeting at the site prior to commencing work of the Section.

B. Require attendance of parties directly affecting, or affected by, work of the specific Section.

C. Notify Architect minimum 7 calendar days in advance of proposed meeting date.

D. Prepare agenda and preside at meeting:

1. Review conditions of examination, preparation and installation procedures.
2. Review coordination with related work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.4 LAYING OUT THE WORK

A. Verify locations of survey control points prior to starting work.

B. Promptly notify Architect of any discrepancies discovered.

C. Locate and protect survey control and reference points.

D. Control datum for survey is that indicated on Drawings.

E. Protect survey control points prior to starting site work; preserve permanent reference points during construction.

F. Promptly report to Architect the loss or destruction of any reference point or relocation required because of changes in grades or other reasons.

G. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Architect.

H. Utilize recognized engineering survey practices.

I. Establish a minimum of two permanent bench marks on site, referenced to established control points. Record locations, with horizontal and vertical data, on project record documents.

J. Establish elevations, lines and levels. Locate and lay out by instrumentation and similar appropriate means:

1. Site improvements including pavements; stakes for grading, fill and topsoil placement; utility locations, slopes, and invert elevations.
2. Grid or axis for structures.
3. Building foundation, column locations, ground floor elevations.

K. Periodically verify layouts by same means.

L. Maintain a complete and accurate log of control and survey work as it progresses.

M. On completion of foundation walls and major site improvements, prepare a certified survey illustrating dimensions, locations, angles, and elevations of construction and site work.

3.5 GENERAL INSTALLATION REQUIREMENTS

A. In addition to compliance with regulatory requirements, conduct construction operations in compliance with NFPA 241, including applicable recommendations in Appendix A.

B. Install products as specified in individual Sections, in accordance with manufacturer's instructions and recommendations, and so as to avoid waste due to necessity for replacement.

C. Make vertical elements plumb and horizontal elements level, unless otherwise indicated.

D. Install equipment and fittings plumb and level, neatly aligned with adjacent vertical and horizontal lines, unless otherwise indicated.

E. Make consistent texture on surfaces, with seamless transitions, unless otherwise indicated.

F. Make neat transitions between different surfaces, maintaining texture and appearance.

3.6 CUTTING AND PATCHING

A. Whenever possible, execute the work by methods that avoid cutting or patching.

B. Perform whatever cutting and patching is necessary to:

1. Complete the work.
2. Fit products together to integrate with other work.
3. Provide openings for penetration of mechanical, electrical, and other services.
4. Match work that has been cut to adjacent work.
5. Repair areas adjacent to cuts to required condition.
6. Repair new work damaged by subsequent work.
7. Remove samples of installed work for testing when requested.
8. Remove and replace defective and non-complying work.

C. Execute work by methods that avoid damage to other work and that will provide appropriate surfaces to receive patching and finishing. In existing work, minimize damage and restore to original condition.

D. Employ original installer to perform cutting for weather exposed and moisture resistant elements, and sight exposed surfaces.

E. Cut rigid materials, resulting in clean and neat edges, using masonry saw or core drill. Cutting rigid materials using chisels, impact or pneumatic tools is not allowed without prior approval.

F. Restore work with new products in accordance with requirements of Contract Documents.

G. Fit work air tight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.

H. At penetrations of fire rated walls, partitions, ceiling, or floor construction, completely seal voids with fire rated material in accordance with Section 078400, to full thickness of the penetrated element.

I. Patching:

1. Finish patched surfaces to match finish that existed prior to patching. On continuous surfaces, refinish to nearest intersection or natural break. For an assembly, refinish entire unit.
2. Match color, texture, and appearance.
3. Repair patched surfaces that are damaged, lifted, discolored, or showing other imperfections due to patching work. If defects are due to condition of substrate, repair substrate prior to repairing finish.

3.7 PROGRESS CLEANING

A. General: Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.8 PROTECTION OF INSTALLED WORK

A. Protect installed work from damage by construction operations.

B. Provide special protection where specified in individual specification Sections.

C. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

D. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

E. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

F. Protect work from spilled liquids. If work is exposed to spilled liquids, immediately remove protective coverings, dry out work, and replace protective coverings.

G. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

1. Keep waterproofed and roofed surfaces clean and free of debris that could cause damage to surfaces and membranes, particularly sharp objects including fasteners, wire cut-offs, and similar items.

H. Prohibit traffic from landscaped areas.

I. Remove protective coverings when no longer needed; reuse or recycle coverings if possible.

J. Failure to protect installed and existing work may result in withholding of payments to Contractor as determined by Architect. Damage resulting from failure to protect installed and existing work must be fully repaired or replaced as applicable to the satisfaction of Architect at no additional cost to Owner.

3.9 SYSTEM STARTUP

A. Coordinate schedule for start-up of various equipment and systems.

B. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions that may cause damage.

C. Verify tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.

D. Verify that wiring and support components for equipment are complete and tested.

E. Execute start-up under supervision of applicable Contractor personnel and manufacturer's representative in accordance with manufacturers' instructions.

F. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

G. Submit a written report that equipment or system has been properly installed and is functioning correctly.

3.10 DEMONSTRATION AND INSTRUCTION

A. See Section 017900 - Demonstration and Training.

3.11 ADJUSTING

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

3.12 FINAL & GENERAL CLEANING

A. General: Provide weekly and final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: The contractor must maintain a clean and safe site. The contractor is responsible for weekly cleaning in the construction and surrounding area impacted by construction. Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:

a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.

b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.

d. Remove tools, construction equipment, machinery, and surplus material from Project site.

e. Remove snow and ice to provide safe access to building.

f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

h. HEPA vacuum all spaces prior to occupancy.

i. Vacuum carpet and similar soft surfaces with a HEPA vacuum, removing debris and excess nap; shampoo if visible soil or stains remain.

j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.

k. Remove labels that are not permanent.

l. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

m. Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.

n. Wipe surfaces of mechanical and electrical equipment, elevator equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

o. Replace parts subject to unusual operating conditions.

p. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

q. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

r. Clean ducts, blowers, and coils if units were operated without filters during construction.

s. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

t. Leave Project clean and ready for occupancy.

C. Construction Waste Disposal: Comply with waste disposal requirements in Division 01 Section "Construction Waste Management and Disposal."

D. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Project site and dispose of lawfully.

3.13 CLOSEOUT PROCEDURES

A. Make submittals that are required by governing or other authorities.

1. Provide copies to Architect and Owner.

B. Notify Architect in writing when work is considered ready for Architect's Substantial Completion inspection.

1. Prerequisite for Substantial Completion: In addition to definition of Substantial Completion in the General Conditions or Agreement, Substantial Completion is not considered achieved until Certificate of Occupancy is issued by primary jurisdictional authority, allowing Owner to fully occupy or utilize building and associated facilities for intended use in all respects.

2. Submittals Prior to Substantial Completion: Submit Closeout Documents a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion.

a. Closeout Documents: As specified in Section 017800 - Closeout Submittals.

3. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

a. Advise Owner of pending insurance changeover requirements.

b. Complete startup and testing of systems and equipment.

c. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 - Demonstration and Training.

d. Advise Owner of changeover in heat and other utilities.

e. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.

f. Complete final cleaning requirements, including touchup painting.

C. Submit written certification containing Contractor's Correction Punch List, that Contract Documents have been reviewed, work has been inspected, and that work is complete in accordance with Contract Documents and ready for Architect's Substantial Completion inspection.

D. Conduct Substantial Completion inspection and create Final Correction Punch List containing Architect's and Contractor's comprehensive list of items identified to be completed or corrected and submit to Architect.

E. Correct items of work listed in Final Correction Punch List and comply with requirements for access to Owner-occupied areas.

F. Accompany Owner and Architect on Contractor's preliminary final inspection.

G. Notify Architect when work is considered finally complete and ready for Architect's Substantial Completion final inspection.

H. Complete items of work determined by Architect listed in executed Certificate of Substantial Completion.

3.14 MAINTENANCE

A. Provide service and maintenance of components indicated in specification Sections.

B. Maintenance Period: As indicated in specification Sections or, if not indicated, not less than one year from the Date of Substantial Completion or the length of the specified warranty, whichever is longer.

C. Examine system components at a frequency consistent with reliable operation. Clean, adjust, and lubricate as required.

D. Include systematic examination, adjustment, and lubrication of components. Repair or replace parts whenever required. Use parts produced by the manufacturer of the original component.

E. Maintenance service shall not be assigned or transferred to any agent or subcontractor without prior written consent of Owner.

END OF SECTION

SECTION 017123 - FIELD ENGINEERING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Field engineering services by Contractor.

1.2 DESCRIPTION OF SERVICES

A. Specific services listed in this section are in addition to, and do not supersede, general Execution and Closeout Requirements.

B. Sole responsibility for establishing all locations, dimensions and levels of items of work.

C. Sole responsibility for provision of all materials required to establish and maintain benchmarks and control points, including batter boards, grade stakes, structure elevation stakes, and other items.

D. Having a skilled instrument person(s) available on short notice when necessary for laying out the work.

E. Keeping a transit, theodolite, or TST (total station theodolite with electronic distance measurement device); leveling instrument; and related implements such as survey rods and other measurement devices, at the project site at all times.

F. Provision of facilities and assistance necessary for Architect to check lines and grade points placed by Contractor.

1. Performance of excavation or embankment work until after all cross-sectioning necessary for determining payment quantities for Unit Price work have been completed and accepted by Architect.

G. Preparation and maintenance of daily reports of activity on the work. Submission of reports containing key progress indicators and job conditions to Architect.

1. Number employees at the Site for each of Contractor's subcontractors.
2. Major equipment and materials installed as part of the work.
3. Major construction equipment utilized.
4. Location of areas in which construction was performed.
5. Materials and equipment received.
6. Work performed, including field quality control measures and testing.
7. Weather conditions.
8. Safety.
9. Delays encountered, amount of delay incurred, and the reasons for the delay.
10. Instructions received from Architect or Owner, if any.

H. Preparation and maintenance of professional-quality, accurate, well organized, legible notes of all measurements and calculations made while surveying and laying out the work.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Submit in addition to items required in Section 017000 - Execution and Closeout Requirements.

C. Informational Submittals: Submit the following:

1. Field Engineering: Submit daily reports, with content as indicated in this section.

1.4 QUALITY ASSURANCE

A. Field Engineer's Qualifications: As established in Section 017000 - Execution and Closeout Requirements.

B. Use adequate number of skilled and thoroughly-trained workers to perform the work of this section in a timely and comprehensive manner.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. Notify Owner’s Representative and Architect of any discrepancies immediately in writing before proceeding to lay out the work. Locate and protect existing benchmarks and base line. Preserve permanent reference points during construction.

B. Existing Utilities and Equipment: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify existing conditions.

3.2 FIELD ENGINEERING

A. Maintain field office files, drawings, specifications, and record documents.

B. Coordinate field engineering services with Contractor's subcontractors, installers, and suppliers as appropriate.

C. Prepare layout and coordination drawings for construction operations.

D. Check and coordinate the work for conflicts and interferences, and immediately advise Architect and Owner of all discrepancies of which Contractor is aware.

E. Cooperate as required with Architect and Owner in observing the work and performing field inspections.

F. Review and coordinate work on a regular basis with shop drawings and Contractor's other submittals.

G. Check the location, line and grade of every major element as the work progresses. Notify the Architect when deviations from required lines or grades exceed allowable tolerances. Include in such notifications a thorough explanation of the problem, and a proposed plan and schedule for remedying the deviation. Do not proceed with remedial work without Owner’s concurrence of the remediation plan.

H. Check all formwork, reinforcing, inserts, structural steel, bolts, sleeves, piping, other materials and equipment for compliance with shop drawings and Contract Documents requirements.

I. Check all bracing and shoring for structural integrity and compliance with designs prepared by the Contractor.

3.3 SUPPORT AND BRACING

A. General requirements: Design all support and bracing systems, if required. Provide for attachment to portions of the building structure capable of bearing the loads imposed. Design systems to not overstress the building structure.

3.4 RECORDS

A. Maintain at the Site a complete and accurate log of control and survey work as it progresses.

1. Organize and record survey data in accordance with recognized professional surveying standards, Laws and Regulations, and prevailing standards of practice in the State in which the Project is located. Record Contractor's surveyor's original field notes, computations, and other surveying data in Contractor-furnished hard-bound field books. Contractor is solely responsible for completeness and accuracy of survey work, and completeness and accuracy of survey records, including field books. Survey records,(including field books) may be rejected by Owner due to failure to organize and maintain survey records in a manner that allows reasonable and independent verification of calculations, and/or allows identification of elevations, dimensions, and grades of the work.
2. Illegible notes or data, and erasures on any page of field books, are unacceptable. Do not submit copied notes or data. Corrections by ruling or lining out errors will be unacceptable unless initialed by the surveyor. Violation of these requirements may require re-surveying the data questioned by Architect.

END OF SECTION

This page intentionally left blank

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 GENERAL

1.1 WASTE MANAGEMENT REQUIREMENTS

A. Owner requires that this project generate the least amount of trash and waste possible.

1. The end-of-project recycling rate shall equal, at minimum, 50% (by weight) with a target of at least 75%, of the total waste from construction and miscellaneous demolition.

B. Employ processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors.

C. Minimize trash/waste disposal in landfills; reuse, salvage, or recycle as much waste as economically feasible.

D. Required Recycling, Salvage, and Reuse: The following may not be disposed of in landfills or by incineration:

1. Aluminum and plastic beverage containers.
2. Corrugated cardboard.
3. Wood pallets.
4. Clean Dimensional Wood: May be used as blocking or furring.
5. Concrete.
6. Concrete Masonry Units.
7. Metals, including packaging banding, metal studs, sheet metal, structural steel, piping, reinforcing bars, door frames, and other items made of steel, iron, galvanized steel, stainless steel, aluminum, copper, zinc, lead, brass, and bronze.
8. Glass.
9. Gypsum drywall and plaster products.
10. Plastic buckets.
11. Carpet, carpet cushion, carpet tile, and carpet remnants. Verify that specified carpet manufacturer conducts acceptable reclamation program.
12. Paint.
13. Plastics.
14. Rigid foam insulation.

E. Submit monthly (with payment application) Waste Disposal Reports in the form of individual haul tickets or tipping fee receipts; all landfill disposal, recycling, salvage, and reuse must be reported regardless of to whom the cost or savings accrues; use the same units of measure on all reports.

F. Develop and follow a Waste Management Plan designed to implement these requirements.

G. Methods of trash/waste disposal that are not acceptable are:

1. Burning on the project site.
2. Burying on the project site.
3. Dumping or burying on other property, public or private.
4. Other illegal dumping or burying.
5. Incineration, either on- or off-site.

H. Regulatory Requirements: Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, state and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

1.2 RELATED REQUIREMENTS

A. Section 016000 - Product Requirements: Waste prevention requirements related to delivery, storage, and handling.

B. Section 017000 - Execution and Closeout Requirements: Trash/waste prevention procedures related to cutting and patching, installation, protection, and cleaning.

C. Section 018113 - Sustainable Design Requirements - CTHPB: Procedures for tracking and reporting waste reduction progress.

D. Section 311000 - Site Clearing: Handling and disposal of land clearing debris.

1.3 DEFINITIONS

A. Clean: Untreated and unpainted; not contaminated with oils, solvents, caulk, or the like.

B. Construction and Demolition Waste: Solid wastes typically including building materials, packaging, trash, debris, and rubble resulting from construction, remodeling, repair and demolition operations.

1. This definition also includes trash and waste generated by construction workers and Contractor's personnel while engaged in the work and on lunch and other breaks, including but not limited to items such as lunch bags, food wrappers, drinking cups, and similar trash and waste.

C. Hazardous: Exhibiting the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity or reactivity.

D. Nonhazardous: Exhibiting none of the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity, or reactivity.

E. Nontoxic: Neither immediately poisonous to humans nor poisonous after a long period of exposure.

F. Recyclable: The ability of a product or material to be recovered at the end of its life cycle and remanufactured into a new product for reuse by others.

G. Recycle: To remove a waste material from the project site to another site for remanufacture into a new product for reuse by others.

H. Recycling: The process of sorting, cleansing, treating and reconstituting solid waste and other discarded materials for the purpose of using the altered form. Recycling does not include burning, incinerating, or thermally destroying waste.

I. Return: To give back reusable items or unused products to vendors for credit.

J. Reuse: To reuse a construction waste material in some manner on the project site.

K. Salvage: To remove a waste material from the project site to another site for resale or reuse by others.

L. Sediment: Soil and other debris that has been eroded and transported by storm or well production run-off water.

M. Source Separation: The act of keeping different types of waste materials separate beginning from the first time they become waste.

N. Toxic: Poisonous to humans either immediately or after a long period of exposure.

O. Trash: Any product or material unable to be reused, returned, recycled, or salvaged.

P. Waste: Extra material or material that has reached the end of its useful life in its intended use. Waste includes salvageable, returnable, recyclable, and reusable material.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Submit Waste Management Plan within 10 calendar days after receipt of Notice of Award of Bid, or prior to any trash or waste removal, whichever occurs sooner; submit projection of all trash and waste that will require disposal and alternatives to landfilling.

C. Waste Management Plan: Include the following information:

1. Analysis of the trash and waste projected to be generated during the entire project construction cycle, including types and quantities.
2. Landfill Options: The name, address, and telephone number of the landfill(s) where trash/waste will be disposed of, the applicable landfill tipping fee(s), and the projected cost of disposing of all project trash/waste in the landfill(s).
3. Landfill Alternatives: List all waste materials that will be diverted from landfills by reuse, salvage, or recycling.
    a. List each material proposed to be salvaged, reused, or recycled.
    b. List the local market for each material.
    c. State the estimated net cost, versus landfill disposal.
4. Meetings: Describe regular meetings to be held to address waste prevention, reduction, recycling, salvage, reuse, and disposal.

5. Materials Handling Procedures: Describe the means by which materials to be diverted from landfills will be protected from contamination and prepared for acceptance by designated facilities; include separation procedures for recyclables, storage, and packaging.
6. Transportation: Identify the destination and means of transportation of materials to be recycled; i.e. whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler.

D. Waste Disposal Reports: Submit at specified intervals, with details of quantities of trash and waste, means of disposal or reuse, and costs; show both totals to date and since last report.

1. Submit updated Report and supporting weigh tickets with each Application for Progress Payment; failure to submit Report will delay payment.
2. Submit Report on a form acceptable to Owner.
3. Landfill Disposal: Include the following information:
    a. Identification of material.
    b. Amount, in tons or cubic yards, of trash/waste material from the project disposed of in landfills.
    c. State the identity of landfills, total amount of tipping fees paid to landfill, and total disposal cost.
    d. Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
4. Recycled and Salvaged Materials: Include the following information for each:
    a. Identification of material, including those retrieved by installer for use on other projects.
    b. Amount, in tons or cubic yards, date removed from the project site, and receiving party.
    c. Transportation cost, amount paid or received for the material, and the net total cost or savings of salvage or recycling each material.
    d. Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
    e. Certification by receiving party that materials will not be disposed of in landfills or by incineration.
5. Material Reused on Project: Include the following information for each:
    a. Identification of material and how it was used in the project.
    b. Amount, in tons or cubic yards.
    c. Include weight tickets as evidence of quantity.
6. Other Disposal Methods: Include information similar to that described above, as appropriate to disposal method.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 WASTE MANAGEMENT PLAN IMPLEMENTATION

A. Manager: Designate an on-site person or persons responsible for instructing workers and overseeing and documenting results of the Waste Management Plan.

B. Communication: Distribute copies of the Waste Management Plan to job site foreman, each subcontractor, Owner, and Architect.

C. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the project.

D. Meetings: Discuss trash/waste management goals and issues at project meetings.

1. Prebid meeting.
2. Preconstruction meeting.
3. Regular job-site meetings.
4. Job safety meetings.

E. Facilities: Provide specific facilities for separation and storage of materials for recycling, salvage, reuse, return, and trash disposal, for use by all contractors and installers.

1. As a minimum, provide:

a. Separate area for storage of materials to be reused on-site, such as wood cut-offs for blocking.

b. Separate dumpsters for each category of recyclable, if required by recycling company.

c. Recycling bins at worker lunch area.

2. Provide containers as required.
3. Provide temporary enclosures around piles of separated materials to be recycled or salvaged.
4. Provide materials for barriers and enclosures that are nonhazardous, recyclable, or reusable to the maximum extent possible; reuse project construction waste materials if possible.
5. Locate enclosures out of the way of construction traffic.
6. Provide adequate space for pick-up and delivery and convenience to subcontractors.
7. If an enclosed area is not provided, clearly lay out and label a specific area on-site.
8. Keep recycling and trash/waste bin areas neat and clean and clearly marked in order to avoid contamination of materials.

F. Hazardous Wastes: Separate, store, and dispose of hazardous wastes according to applicable regulations.

G. Recycling: Separate, store, protect, and handle at the site identified recyclable waste products in order to prevent contamination of materials and to maximize recyclability of identified materials. Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials.

H. Reuse of Materials On-Site: Set aside, sort, and protect separated products in preparation for reuse.

I. Salvage: Set aside, sort, and protect products to be salvaged for reuse off-site.

END OF SECTION

SECTION 017701 – HAZARDOUS MATERIALS CONTRACT CLOSEOUT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. Section includes the administrative and procedural requirements for hazardous materials contract close out documentation.

B. Related Sections:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 012200:	Hazardous Materials Unit Prices
3.	Section 011600:	Hazardous Materials Scheduling and Phasing
4.	Section 020750:	Selective Demolition for Hazardous Materials Abatement
5.	Section 020800:	Asbestos Abatement
6.	Section 020820:	Universal Waste Reclamation
7.	Section 020900:	Lead Paint Awareness
8.	Section 021100:	PCB Remediation

1.3 FINAL CLEANING

A. Unless otherwise specified under Sections of this Specification, the Hazardous Materials Abatement Contractor (HMAC) shall perform final cleaning operations as herein specified prior to final inspection.

B. Maintain the project site free from accumulations of waste, debris and rubbish caused by operations. At the completion of the work, remove waste materials, rubbish, tools, equipment, machinery and surplus materials, and clean all sight-exposed surfaces; leave the project clean and ready for work of other trades.

C. Cleaning shall include all surfaces, interior and exterior, in which the HMAC has had access.

D. Use only those materials that will not create hazards to health or property.

E. Patch or repair any damage created by the HMAC during the work to equal or better condition.

1.4 ABATEMENT CLOSEOUT DOCUMENTS

A. Submit to the Owner/Consultant, final completed hard copies, via mail, all asbestos Waste Shipment Records (WSR) signed by all transporters and the designated disposal site owner/operator. WSRs shall be submitted to the Owner's Consultant within thirty-five (35) calendar days from shipment of waste from Site.

B. Submit to the Owner/Consultant, final completed hard copies, via mail, Certificates of Recycling of all universal waste items, signed by all transporters and the designated disposal site owner/operator. Manifests shall be submitted to Owner's Consultant within thirty-five (35) calendar days from shipment of waste from Site.

C. Submit to the Owner/Consultant, final completed hard copies, via mail, Waste Manifest for all presumed PCB-containing materials, signed by all transporters and the designated disposal site owner/operator. Manifests shall be submitted to Owner's Consultant within thirty-five (35) calendar days from shipment of waste from Site.

D. Submit to the Owner/Consultant, final completed hard copies, via mail, all Hazardous Lead Waste Manifests for all lead-based paint waste, signed by all transporters and the designated disposal site owner/operator. Manifests shall be submitted to Owner's Consultant within thirty-five (35) calendar days from shipment of waste from Site.

E. Refer to each hazardous materials abatement section for specific post project submittal requirements. Provide one (1) legible hard copy submittal on white 8 ½" x 11" paper.

F. Final payment will be withheld until receipt of all the above documentations to Owner's/Consultant's satisfaction.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017701

SECTION 017800 - CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Project record documents.

B. Operation and maintenance data.

C. Warranties and bonds.

1.2 RELATED REQUIREMENTS

A. Section 013000 - Administrative Requirements: Submittals procedures, shop drawings, product data, and samples.

B. Section 017000 - Execution and Closeout Requirements: Contract closeout procedures.

C. Individual Product Sections: Specific requirements for operation and maintenance data.

D. Individual Product Sections: Warranties required for specific products or Work.

1.3 SUBMITTALS

A. Project Record Documents: Submit documents to Architect with claim for final Application for Payment.

B. Operation and Maintenance Data:

1. For equipment, or component parts of equipment put into service during construction and operated by Owner, submit completed documents within ten days after acceptance.
2. Submit one copy of completed documents 15 days prior to final inspection. This copy will be reviewed and returned after final inspection, with Architect comments. Revise content of all document sets as required prior to final submission.
3. Submit two sets of revised final documents in final form within 10 days after final inspection.

C. Warranties and Bonds:

1. For equipment or component parts of equipment put into service during construction with Owner's permission, submit documents within 10 days after acceptance.
2. Make other submittals within 10 days after Date of Substantial Completion, prior to final Application for Payment.
3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within 10 days after acceptance, listing the date of acceptance as the beginning of the warranty period.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PROJECT RECORD DOCUMENTS

A. Maintain on site one set of the following record documents; record actual revisions to the Work:
   1. Drawings.
   2. Specifications.
   3. Addenda.
   4. Change Orders and other modifications to the Contract.
   5. Reviewed shop drawings, product data, and samples.
   6. Manufacturer's instruction for assembly, installation, and adjusting.

B. Ensure entries are complete and accurate, enabling future reference by Owner.

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress.

E. Specifications: Legibly mark and record at each product Section description of actual products installed, including the following:
   1. Manufacturer's name and product model and number.
   2. Product substitutions or alternates utilized.
   3. Changes made by Addenda and modifications.

F. Record Drawings and Shop Drawings:
   1. Legibly mark each item to record actual construction including:
      a. Measured depths of foundations in relation to finish first floor datum.
      b. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
      c. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
      d. Field changes of dimension and detail.
      e. Details not on original Contract Drawings.
   2. Format Requirements:
      a. Submit Record Drawings in physical and digital formats.
         1) Acceptable digital formats include marked up versions of the digital drawings, or scanned copies of hand-made mark ups on drawings.

3.2 OPERATION AND MAINTENANCE DATA

A. Source Data: For each product or system, list names, addresses and telephone numbers of Subcontractors and suppliers, including local source of supplies and replacement parts.

B. Product Data: Mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.

C. Drawings: Supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams.

D. Typed Text: As required to supplement product data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.

E. For Each Product, Applied Material, and Finish:

1. Product data, with catalog number, size, composition, and color and texture designations.
2. Information for re-ordering custom manufactured products, if any.

F. Instructions for Care and Maintenance: Manufacturer's recommendations for cleaning agents and methods, precautions against detrimental cleaning agents and methods, and recommended schedule for cleaning and maintenance.

G. Moisture protection and weather-exposed products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.

H. Additional information as specified in individual product specification sections.

3.3 OPERATION AND MAINTENANCE DATA FOR EQUIPMENT AND SYSTEMS

A. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

B. Provide Contractor's coordination drawings, with color coded piping diagrams as installed.

C. Provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.

D. Provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.

E. Include test and balancing reports.

3.4 ASSEMBLY OF OPERATION AND MAINTENANCE MANUALS

A. Assemble operation and maintenance data into electronic files for Owner's personnel use, with data arranged in the same sequence as, and identified by, the specification Sections.

1. Where systems involve more than one specification Section, provide separate electronic bookmarked tab for each system.

B. Binders: Commercial quality, 8-1/2 by 11 inch three D side ring binders with durable plastic covers; 2 inch maximum ring size. When multiple binders are used, correlate data into related consistent groupings.

C. Cover: Identify each binder with typed or printed title OPERATION AND MAINTENANCE INSTRUCTIONS; identify title of Project; identify subject matter of contents.

D. Project Directory: Title and address of Project; names, addresses, and telephone numbers of Architect, Consultants, Contractor and subcontractors, with names of responsible parties.

E. Tables of Contents: List every item separated by a divider, using the same identification as on the divider tab; where multiple volumes are required, include all volumes Tables of Contents in each volume, with the current volume clearly identified.

F. Dividers: Provide tabbed dividers for each separate product and system; identify the contents on the divider tab; immediately following the divider tab include a description of product and major component parts of equipment.

G. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages.

H. Arrangement of Contents: Organize each volume in parts as follows:

1. Project Directory.
2. Table of Contents, of all volumes, and of this volume.
3. Operation and Maintenance Data: Arranged by system, then by product category.
    a. Source data.
    b. Product data, shop drawings, and other submittals.
    c. Operation and maintenance data.
    d. Field quality control data.
    e. Electronic scans warranties and bonds.
4. Design Data: To allow for addition of design data furnished by Architect or others, provide a bookmarked divider page labeled "Design Data" and allow for insertion of additional electronic data, if applicable.

3.5 WARRANTIES AND BONDS

A. Obtain warranties and bonds, executed in duplicate by responsible Subcontractors, suppliers, and manufacturers, within 10 days after completion of the applicable item of work. Except for items put into use with Owner's permission, leave date of beginning of time of warranty until Date of Substantial completion is determined.

1. Warranties must clearly state that warranty commences on Date of Substantial Completion, and the actual Date of Substantial Completion according to the Contract must be clearly stated on the warranty form.

B. Verify that documents are in proper form, contain full information, and are notarized.

C. Co-execute submittals when required.

D. Retain warranties and bonds until time specified for submittal.

END OF SECTION

This page intentionally left blank

SECTION 017900 - DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.1 SUMMARY

A. Demonstration of products and systems where indicated in specific specification Sections.

B. Training of Owner personnel in operation and maintenance is required for:
   1. All software-operated systems.
   2. HVAC systems and equipment.
   3. Plumbing equipment.
   4. Electrical systems and equipment.
   5. Conveying systems.
   6. Landscape irrigation.
   7. Items specified in individual product Sections.

C. Training of Owner personnel in care, cleaning, maintenance, and repair is required for:
   1. Finishes, including flooring, wall finishes, ceiling finishes.
   2. Fixtures and fittings.
   3. Items specified in individual product Sections.

1.2 RELATED REQUIREMENTS

A. Section 017800 - Closeout Submittals: Operation and maintenance manuals.

B. Individual Specification Sections: Additional requirements for demonstration and training.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Training Plan: Owner will designate personnel to be trained; tailor training to needs and skill-level of attendees.
   1. Submit not less than four weeks prior to start of training.
   2. Revise and resubmit until acceptable.
   3. Provide an overall schedule showing all training sessions.
   4. Include at least the following for each training session:
      a. Identification, date, time, and duration.
      b. Description of products and/or systems to be covered.

c. Name of firm and person conducting training; include qualifications.

d. Intended audience, such as job description.

e. Objectives of training and suggested methods of ensuring adequate training.

f. Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.

g. Media to be used, such as slides, hand-outs, etc.

h. Training equipment required, such as projector, projection screen, etc., to be provided by Contractor.

C. Training Manuals: Provide training manual for each attendee; allow for minimum of two attendees per training session.

1. Include applicable portion of O&M manuals.

2. Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.

3. Provide one extra copy of each training manual to be included with operation and maintenance data.

D. Training Reports:

1. Identification of each training session, date, time, and duration.

2. Sign-in sheet showing names and job titles of attendees.

3. List of attendee questions and written answers given, including copies of and references to supporting documentation required for clarification; include answers to questions that could not be answered in original training session.

E. Video Recordings: Submit digital video recording of each demonstration and training session for Owner's subsequent use.

1. Format: DVD Disc or accepted alternative media.

2. Label each disc and container with session identification and date.

1.4 QUALITY ASSURANCE

A. Instructor Qualifications: Familiar with design, operation, maintenance and troubleshooting of the relevant products and systems.

1. Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.

2. Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 DEMONSTRATION - GENERAL

A. Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this Section, unless approved in advance by Owner.

B. Demonstration may be combined with Owner personnel training if applicable.

C. Operating Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.

1. Perform demonstrations not less than two weeks prior to Substantial Completion.

2. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.

D. Non-Operating Products: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.

1. Perform demonstrations not less than two weeks prior to Substantial Completion.

3.2 TRAINING - GENERAL

A. Conduct training on-site unless otherwise indicated.

B. Owner will provide classroom and seating at no cost to Contractor.

C. Provide training in minimum two hour segments.

D. Training schedule will be subject to availability of Owner's personnel to be trained; re-schedule training sessions as required by Owner; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.

E. Review of Facility Policy on Operation and Maintenance Data: During training discuss:

1. The location of the O&M manuals and procedures for use and preservation; backup copies.

2. Typical contents and organization of all manuals, including explanatory information, system narratives, and product specific information.

3. Typical uses of the O&M manuals.

F. Product- and System-Specific Training:

1. Review the applicable O&M manuals.

2. For systems, provide an overview of system operation, design parameters and constraints, and operational strategies.

3. Review instructions for proper operation in all modes, including start-up, shut-down, seasonal changeover and emergency procedures, and for maintenance, including preventative maintenance.
4. Provide hands-on training on all operational modes possible and preventive maintenance.
5. Emphasize safe and proper operating requirements; discuss relevant health and safety issues and emergency procedures.
6. Discuss common troubleshooting problems and solutions.
7. Discuss any peculiarities of equipment installation or operation.
8. Discuss warranties and guarantees, including procedures necessary to avoid voiding coverage.
9. Review recommended tools and spare parts inventory suggestions of manufacturers.
10. Review spare parts and tools required to be furnished by Contractor.
11. Review spare parts suppliers and sources and procurement procedures.

G. Be prepared to answer questions raised by training attendees; if unable to answer during training session, provide written response within three days.

END OF SECTION

SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS - CTHPB

PART 1 GENERAL

1.1 SUMMARY

A. Section includes general requirements and procedures for compliance with certain Connecticut High Performance Building Standard Guidelines (CTHPB) prerequisites and credits needed for Project to comply with the CTHPB standard.

1. The Owner requires the Contractor to implement practices and procedures to meet the Project's environmental goals, which include compliance with the CTHPB standard. Specific project goals which may impact this and the other sections of this specification include: use of recycled-content materials; use of locally-manufactured materials; use of low-emitting materials; use of certified wood products; construction waste recycling; and the implementation of a construction indoor air quality management plan. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated CTHPB Performance Criteria.
2. Other CTHPB prerequisites and credits needed to comply with the CTHPB Standard depend on material selections and may not be specifically identified as CTHPB requirements. Compliance with requirements needed to comply with CTHPB Standard prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
3. Additional CTHPB Standard prerequisites and credits needed to achieve CTHPB compliance depend on Architect's design and other aspects of Project that are not part of the Work of the Contract.
4. A copy of the CTHPB Standard checklist is attached at the end of this Section for information only.

1.2 DEFINITIONS

A. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates shall include evidence that manufacturer is certified for chain of custody by an FSC-FSC-accredited certification body.

B. CTHPB: Connecticut High Performance Building Standard.

C. Rapidly Renewable Materials: Materials made from plants that are typically harvested within a 10-year or shorter cycle. Rapidly renewable materials include products made from bamboo, cotton, flax, jute, straw, sunflower seed hulls, vegetable oils, or wool.

D. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.

E. Regionally Extracted and Manufactured Materials: Regionally manufactured materials made from raw materials that are extracted, harvested, or recovered within a radius of 500 miles from Project site.

F. Recycled Content: The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

1. "Postconsumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.

2. "Preconsumer" material is defined as material diverted from the waste stream during the manufacturing process.

a. Excluded is reutilization of materials, such as rework, regrind, or “home” scrap, generated in a process and capable of being reclaimed within the same process that generated it.

3. The percentage by weight of constituents that have been recovered or otherwise diverted from the solid waste stream, either during the manufacturing process (pre-consumer), or after consumer use (post-consumer).

G. Environmental Product Declarations (EPDs): Comprehensive standardized reports that quantify the environmental impact of a product and are developed after a product life cycle assessment (LCA) is conducted, which are based on applicable product category rules (PCRs). EPDs are created and verified per ISO 14025 and are based on LCAs compliant with ISO 14040 and ISO 14044.

1.3 PRECONSTRUCTION MEETINGS

A. Preconstruction Conference: Review CTHPB requirements and action plans for meeting requirements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Respond to questions and requests from Architect regarding CTHPB credits that are the responsibility of the Contractor, that depend on product selection or product qualities, or that depend on Contractor's procedures.

B. Assign a Construction CTHPB Coordinator to review and process CTHPB submittals before sending them to Architect. This person shall be familiar with the CTHPB process and be familiar with what is required for supporting documentation in the CTHPB submittals.

1.5 SUBMITTALS

A. General: Submit additional sustainable design submittals required by other Specification Sections.

B. CTHPB submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated CTHPB requirements.

C. Detailed Submittal Requirements: The items below define the information and documents to be provided for each type of CTHPB Submittal.

1. CTHPB Compliance Documentation: Information to be supplied for this form (blank copy provided as Attachment A to this Section) shall include some or all of the following items, as identified in each specification section:

a. Product name and manufacturer

b. Cost breakdowns for the materials included in the contractor or sub-contractor's scope of work. Cost reporting shall include:

1) The total cost for the contractor's work.

2) Itemized material costs (excluding the contractor's labor, equipment, overhead and profit).

c. The percentages (by weight) of pre-consumer and post-consumer recycled content in the supplied product(s).

d. The percentages (by weight) of regional material content in the supplied product.

e. The percentage (by weight) of rapidly renewable content in the supplied products.

f. The percentage of FSC certified wood content in the supplied products. Calculate percentage by weight, volume and cost. Use whichever provides the highest percentage of FSC content.

g. The percentage (by weight) of salvaged content in the supplied products

h. If applicable, indication that product has been certified as low-VOC by SCS – Indoor Advantage Gold or the GREENGUARD Certification Program.

2. CRF Back-Up Documentation: These documents are used to validate the information provided on the CRF (except cost data). For each material listed on the CRF, provide documentation to certify the material's Sustainable Building attributes, as applicable:

a. Recycled content: Provide published product literature or letter of certification on the manufacturer's letterhead certifying the amounts of post-consumer and/or post-industrial content. For concrete, provide concrete mix designs and volumes to verify the percentage of recycled material included, by weight and by cost.

b. Regional manufacturing (within 500 mile radius): Provide published product literature or letter of certification on the manufacturer's letterhead indicating the city/state where the manufacturing plant is located and the direct distance in miles from the project site.

c. Regional raw materials (within 500 mile radius):

1) Provide published product literature or letter of certification on the manufacturer's letterhead indicating the city/state from which each of the raw materials in the product were extracted, harvested or recovered, and the direct distance in miles from the project site.

2) If only some of the raw materials for a particular product or assembly originate within a 500 mile radius of the subproject site, provide the percentage (by weight) that these materials comprise in the complete product.

d. FSC Certified Wood:

1) Provide vendor invoices for each FSC wood product or assembly. Invoices shall include chain-of-custody certificate numbers and itemized costs for all certified products.

2) For assemblies, provide the percentage (by cost and by weight) of the assembly that is FSC-certified wood.

e. Rapidly renewable resources: Provide published product literature or letter of certification on the manufacturer's letterhead indicating the rapidly renewable content in the installed product.

f. VOC content: Provide manufacturer's published product literature or stated in a letter of certification on the manufacturer's letterhead that the product has been certified as low-VOC by either SCS – Indoor Advantage Gold or the GREENGUARD certification program.

D. CTHPB Action Plans: Provide preliminary submittals within 30 days of date established for the Notice to Proceed indicating how the following requirements will be met:

1. Construction Waste Management: Waste management plan complying with Division 01 Section "Construction Waste Management and Disposal."
2. Recycled Content: List of proposed materials with recycled content. Indicate cost, post-consumer recycled content, and pre-consumer recycled content for each product having recycled content.
3. Local or Regional Content: List of proposed regionally manufactured materials and regionally extracted and manufactured materials.
4. Certified Wood Products: List of proposed certified wood products. Indicate each product containing certified wood, including its source and cost of certified wood products.
5. Construction indoor-air-quality management plan – During Construction.
6. Construction indoor-air-quality management plan - Before Occupancy

E. CTHPB Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with CTHPB action plans for the following:

1. Construction Waste Management: Waste reduction progress reports complying with Division 01 Section "Construction Waste Management and Disposal."
2. Recycled Content.
3. Local or Regional Content: Regionally manufactured materials and regionally extracted and manufactured materials.
4. Certified wood products.

F. Additional CTHPB Documentation Submittals:

1. Construction Activity Pollution Prevention: Provide supporting documentation of erosion and sedimentation control measures on site with:
    a. Photographs
    b. Maintenance Logs
    c. Meeting Minutes
    d. Field Sketches and Shop Submittals
2. Reduce Outdoor Light Pollution: Product data for interior and exterior lighting fixtures that stop direct-beam illumination from leaving the building site.
3. Reduce Potable Water Use: Product data for plumbing fixtures indicating water consumption.
4. CIAQ Plan – During Construction:
    a. Construction indoor-air-quality management plan.
    b. Product data for temporary filtration media.
    c. Product data for filtration media used during occupancy.
    d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the indoor-air-quality management measures, such as protection of ducts and on-site stored or installed absorptive materials.
5. CIAQ Plan – Before Occupancy:
    a. Signed statement describing the building air flush-out procedures including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.
    b. Product data for filtration media used during flush-out and during occupancy.
    c. Report from testing and inspecting agency indicating results of indoor-air-quality testing and documentation showing compliance with indoor-air-quality testing procedures and requirements.

PART 2 PRODUCTS

2.1 RECYCLED CONTENT OF MATERIALS

A. A. Provide building materials with recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 20 percent of cost of materials used for Project.
    1. Cost of recycled content of an item shall be determined by adding the percentage (by weight) of post-consumer recycled content and one-half the percentage (by weight) of pre-consumer recycled content and multiplying by cost of the item.

2. Do not include plumbing, mechanical and electrical components, and specialty items such as elevators and equipment in the calculation.

3. Recycled content of materials shall be defined according to the Federal Trade Commission's "Guide for the Use of Environmental Marketing Claims" 16 CFR 260.7 (e).

2.2 REGIONAL MATERIALS

A. Provide a minimum of 20 percent of building materials (by cost) that are regionally extracted and manufactured materials.

2.3 CERTIFIED WOOD

A. Provide a minimum of 50 percent (by cost) of wood-based materials that are produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

B. Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:

1. Rough carpentry.
2. Miscellaneous carpentry.
3. Heavy timber construction.
4. Finish carpentry.
5. Architectural woodwork.
6. Wood paneling.
7. Wood veneer wall covering.
8. Wood flooring.
9. Wood cabinets.

2.4 LOW-EMITTING MATERIALS REQUIREMENTS

A. The following materials shall be certified as low-VOC products by either the Scientific Certification Systems – Indoor Advantage Gold system or GREENGUARD Certification Program:

1. Adhesives and sealants used in the interior of the building
2. Acoustic ceiling tiles and wall panels
3. Interior paints
4. Wall coverings
5. Carpet systems and associated adhesives
6. Composite and solid wood flooring
7. Resilient flooring and associated adhesives

B. All composite wood and agrifiber products used within the shell of the building shall meet the testing and product requirements of the California Department of Health Services Standard Practice for the Testing of Volatile Organic Emissions From Various Sources Using Small-Scale Environmental Chambers, including 2004 Addenda.

PART 3 EXECUTION

3.1 REFRIGERANT REMOVAL

A. Remove CFC-based refrigerants from existing HVAC&R equipment indicated to remain and replace with refrigerants that are not CFC based. Replace or adjust existing equipment to accommodate new refrigerant as described in Division 23 Sections.

3.2 NONSMOKING BUILDING

A. Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes during any phase of construction.

1. Follow protocol of project owner if smoking policy is more stringent.

3.3 CONSTRUCTION WASTE MANAGEMENT

A. Comply with Section 017419 - Construction Waste Management and Disposal and Construction Waste Management Plan.

3.4 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

A. Comply with requirements in Division 01 Sections “Indoor Air Quality Requirements” and “Construction Indoor Air Quality (IAQ) Program.”

3.5 ATTACHMENTS

A. CTHPB Compliance Manual - Appendix C

B. Environmental Materials Reporting Form - Appendix D

C. CTHPB Compliance Checklist - Schools - Appendix E

END OF SECTION

SECTION 020750 – SELECTIVE DEMOLITION FOR HAZARDOUS MATERIALS ABATEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. The Hazardous Materials Abatement Contractor (HMAC) shall be responsible for performing selective demolition, as directed by the Owner’s Consultant/Construction Manager, to determine the presence of concealed materials throughout the work area(s) and to access known hazardous materials scheduled for removal.

B. The HMAC shall refer to Architect’s demolition plans and specifications to determine extent of selective demolition required. Items that are scheduled to remain shall be protected by the HMAC. Items that are scheduled for removal and reinstallation shall be removed by the HMAC and turned over to the Construction Manager. All returned items shall be fully decontaminated of asbestos debris.

C. Related Sections:
1. Section 011001: Hazardous Materials General Conditions
2. Section 012200: Hazardous Materials Unit Pricing
3. Section 011600: Hazardous Materials Scheduling and Phasing
4. Section 017701: Hazardous Materials Contract Closeout
5. Section 020800: Asbestos Abatement
6. Section 020820: Universal Waste Reclamation
7. Section 020900: Lead Paint Awareness
8. Section 021100: PCB Remediation

D. The HMAC shall open up specified pipe chases for exploratory inspection of plumbing walls in select areas of the building. The HMAC shall remove masonry walls where required to access asbestos-containing thermal system insulation throughout building. Demolition work to be performed within negative pressure enclosures if asbestos-containing materials may be impacted.

E. The HMAC shall perform selective demolition of all suspended ceilings. The suspended ceiling systems, including ceiling tiles, grids and support wires shall be removed by the HMAC to access all thermal system insulation and expansion joint caulk.

F. The HMAC shall remove all window air conditioning units, where present. Properly reclaim refrigerant from all AC units prior to disposal or recycling. Provide refrigerant reclamation certificates for reclaimed refrigerant.

G. The HMAC shall remove all counters, shelving, cabinets, and all associated mechanical, electrical, and plumbing equipment and fixtures to access asbestos-containing flooring materials and expansion joint caulks. Temporarily support all conduit, piping, and fixtures that cannot be fully removed and protect against contamination and damage.

1.3 PROJECT CONDITIONS

A. Occupancy:
1. Areas of the building in which selective demolition will occur will be unoccupied during work.
2. No students or children under the age of 18 will be present within the school building during this work.

B. Existing Conditions:
1. After the project has begun, the HMAC is responsible for the condition of the structures to be selectively demolished and surfaces to remain.
2. Unforeseen Conditions: Should unforeseen conditions be encountered that affect design or function of project, investigate and fully submit an accurate, detailed, written report to the office of the Architect/Consultant. While awaiting a response, reschedule operations if necessary to avoid delay of overall project.

C. Work under this project may be performed in phases to accommodate Owner's/Architect's requirements and remaining construction phases. Coordinate abatement schedule and operations with the Owner/Architect/Consultant and other trades.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that all utilities have been disconnected and sealed.

B. Insofar as is practicable, arrange operations to reveal unknown or concealed conditions for examination and verification before removal or demolition.

C. Verify actual conditions to determine, in advance, whether removal or demolition of any element will result in structural deficiency, overloading, failure, or unplanned collapse.
1. Demolish and remove connections to all electrical, gas and plumbing fixtures required to remove asbestos-containing materials.
2. Demolish all building materials as required to access asbestos, lead-based paint, and presumed PCB containing materials for abatement and remediation. Selective demolition that impacts asbestos-containing materials shall be performed with engineering controls in place.

3.2 PREPARATION

A. Traffic: Do not obstruct walks or public ways without the written permission of governing authorities and of the Owner. Where routes are permitted to be closed, provide alternate routes if required.

B. Protection:
1. Provide for the protection of persons passing around or through the area of demolition.
2. Perform demolition so as to prevent damage to adjacent improvements and facilities to remain.
3. Protect walls, floors, and other new or existing work from damage during demolition operations and abatement work.

3.3 POLLUTION CONTROLS

A. Control as much as practicable the spread of dust and dirt.

B. Observe environmental regulations.

C. Do not allow water usage that results in freezing or flooding.

D. Do not allow adjacent improvements to remain to become soiled by demolition operations.

3.4 DEMOLITION - GENERAL

A. Remove: Items indicated to be removed shall be removed by the HMAC.

B. Existing to Remain: Construction or items indicated to remain shall be protected against damage during demolition operations. Where practical, and with the Construction Manager's permission, the HMAC may elect to remove items to a suitable storage location during demolition and then properly clean and reinstall the items.

C. Perform work in a systematic manner.

D. Demolish and remove existing structures only to the extent required, as indicated in the Contract Documents.

E. Perform selective demolition using methods that are least likely to damage work to remain and which will provide proper surfaces for patching.

F. Remove debris daily.

G. Use any methods permitted by governing regulations and the requirements of the Contract Documents.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

A. Promptly dispose of materials resulting from demolition operations. Non-contaminated material may be disposed of as construction waste. Do not allow materials to accumulate on site.

B. All rubbish and waste material from the Work shall be neatly stacked or kept in suitable containers and removed from the premises daily. The premises shall be kept clean and in an orderly condition at all times to the satisfaction of the Owner and the Consultant.

C. Transport materials resulting from demolition operations and legally dispose of off-site.

D. Off-site disposal location shall not be within one-half mile of any portion of the project site or within sight of the project site.

E. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

F. All disposal containers, receptacles, dumpsters shall be properly labeled and sealed from the onset of waste accumulation. Exterior waste containers shall be locked.

3.6 CLEANING

A. Throughout the abatement and remediation period, the HMAC shall maintain the building and

Site free of rubbish, debris, surplus materials, and other items not required for the Work. Remove such material from the site daily to prevent accumulations. Remove all construction debris from work areas, and remove all hazardous waste and asbestos waste as required by the most current federal, state, and local regulations and the requirements of the specifications.

END OF SECTION 020750

SECTION 020800 – ASBESTOS ABATEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. The work specified herein covers the proper worker protection, work area preparation, removal procedures, disposal requirements, and post abatement re-occupancy air testing for the abatement of asbestos-containing building components associated with the demolition work at the Edgewood Pre-K Academy located at 345 Mix Street in Bristol, Connecticut (Site).

1. Hazardous Building Materials Abatement Plans HM-1 through HM-3

1.3 GENERAL PROVISIONS

A. The Edgewood Pre-K Academy located at 345 Mix Street in Bristol, CT (the "Site") consists of an approximately 44,500 square foot single story steel framed masonry building. The original building was constructed in 1956-1957 with two additions added to the original structure in 1963-1965 and 1985-1987. The building will be renovated as new under a State of Connecticut Office of Grants Administration (OGA) grant.

B. Asbestos containing material (ACM) testing has identified materials within the building that contain asbestos. The work covered in this section includes the minimum procedures that shall be employed during the abatement of the ACM.

C. The abatement project may be divided into phases that are to be coordinated with the overall phasing of the renovation project. Refer to the Construction Manager's phasing plans for additional information. It is the Hazardous Materials Abatement Contractor's (HMAC) responsibility to become familiar with the phasing plan for the project and to include the required remobilization fees to support the phasing. The HMAC shall comply with the overall project schedule established by the Construction Manager. Modifications or changes to the project phasing shall not be grounds for a change order.

D. The facility meets the definition of a school under the USEPA Asbestos Hazard Emergency Response Act (AHERA) 40 CFR 763 Subpart E and the Asbestos-Containing Materials in Schools Rule 19a-333-1 to Section 19a-333-13 of the Regulations of Connecticut State Agencies. Asbestos abatement may not be performed while children under the age of eighteen

(18) are within the school building without prior approval from the State of Connecticut Department of Public Health.

E. It is anticipated that the building will be vacant and no students under the age of eighteen (18) will be present during the asbestos abatement work.

F. Mr. Chris Liberti of Eagle Environmental, Inc. is the designer of this Specification. Mr. Liberti is a State of Connecticut Department of Public Health (CTDPH) Licensed Asbestos Project Designer (License #000261).

1.4 PROJECT DESCRIPTION

A. The work to be performed includes but is not limited to the proper removal, handling, and disposal of all regulate asbestos-containing materials (ACM) present within the building. Detailed descriptions of materials and locations of ACM scheduled for removal are shown on Table I below and on the Hazardous Building Materials Abatement Plans HM-1 through HM-4.

B. The asbestos abatement work includes but is not limited to the abatement of interior friable and non-friable ACM and the abatement of exterior non-friable ACM associated with the building specified for demolition.

C. The asbestos abatement work shall include all selective demolition to access concealed ACM within masonry walls and above solid ceilings.

D. The Base Bid asbestos abatement work shall include but not be limited to the ACM identified in the following Table 1 - Table of ACM. The Table provides information on the magnitude of the project. It is the sole responsibility of the Hazardous Materials Abatement Contractor (HMAC) to visit the site, review the Contract Documents and determine the quantities of ACM to be removed when developing their bid. Locations and estimated quantities of specific items noted in paragraph A above include:

TABLE I – BASE BID - TABLE OF ACM

Roof 1, Roof 3, Roof 5, Roof 6	Cement board at raised wall (to Roof 2)	210 SF	HM-3	14
Roof 1, Roof 2, Roof 3, Roof 5, Roof 6	Silver paint at raised penetrations, skylight bases, expansion joints and roof wall junctions	1,300 SF	HM-3	15
Roof 3, Roof 5, Roof 6	Caulk at top of cement board	65 LF	HM-3	16

E. All asbestos-containing materials shall be removed and disposed of as combination regulated asbestos and presumed polychlorinated biphenyls (PCB) Bulk Product Waste >50 ppm. Thermal system insulation may be removed and segregated for disposal as friable asbestos waste. Refer to Section 021100 PCB Remediation for additional removal and disposal requirements. All asbestos-containing caulks and window glazing compounds shall be removed and disposed of as combination regulated asbestos and presumed polychlorinated biphenyls (PCB) Bulk Product Waste >50 ppm. Refer to Section 021100 PCB Remediation for additional removal and disposal requirements.

F. The HMAC shall determine the quantities of asbestos-containing materials requiring removal prior to submission of their Bid. Any discrepancies must be submitted in writing in RFI format to the Architect or Owner's Consultant for interpretation prior to submission of their Bid. The quantities provided above are estimates only.

G. The HMAC shall not perform any work that raises dust or creates emissions without proper engineering controls in place. Work of this project shall be performed in a manner that protects the occupied spaces of the building from fugitive dust, emissions, gross debris, waste, materials, etc.

H. The HMAC shall be responsible for select wall and ceiling demolition, the removal of counters, cabinets, fixtures, electrical, mechanical, plumbing systems, and miscellaneous items to facilitate asbestos removal. Refer to Section 020750 Selective Demolition for Hazardous Materials Abatement for additional requirements.

I. The HMAC is directed to review Section 020900 Lead Paint Awareness for additional requirements affecting the work of this Section.

J. The pipe tunnels are defined as confined spaces under U.S. Department of Labor's Occupational Safety and Health Administration's (OSHA) confined space Standard. The HMAC shall assess the potential hazards in the pipe tunnels for determination of they are a permitted or non-permitted confined space. The HMAC shall develop a site-specific confined space entry program to ensure compliance with the OSHA's confined space Standard.

K. The tunnel configuration depicted on HM-1 may vary from actual field conditions. The pipe tunnel floors and walls consist of poured concrete and are of varying widths. The pipe tunnels contain mechanical and plumbing piping, waste lines, electrical conduit, and minimal lighting. The HMAC shall provide temporary lighting to complete the work of this project.

L. The AAC shall install carbon monoxide detectors at the entrance to each pipe tunnel.

M. Asbestos-containing mudded pipe fitting insulation has been identified throughout the original building and the 1965-1967 addition. The mudded pipe fitting insulation is associated with fiberglass domestic water lines and heating lines. The fittings are located above suspended

ceilings, within masonry plumbing walls and throughout the tunnels. Localized areas of damage pipe fitting insulation has been identified within the tunnels.

N. It is anticipated that all asbestos-containing materials shall be removed from the interior, facades and roofs during the building renovation project.

1.5 QUALITY ASSURANCE

A. The HMAC shall be licensed by the State of Connecticut Department of Public Health (DPH) to perform asbestos abatement.

B. The Asbestos Abatement Supervisor(s) and Asbestos Abatement Workers shall be accredited in accordance with EPA regulation 40 CFR Part 763, subpart E, Appendix C; and shall be licensed by the State of Connecticut Department of Public Health.

1.6 APPLICABLE CODES

A. The HMAC shall be solely responsible for conducting this project and supervising all work in a manner that will be in conformance with all federal, state and local regulations and guidelines pertaining to asbestos abatement. Specifically, the HMAC shall comply with the requirements of the following:
1. USEPA AHERA Regulation (40 CFR 763 Final Rule and Notice);
2. USEPA NESHAP Regulations (40 CFR 61, Subpart M);
3. OSHA Asbestos Regulations (29 CFR 1910.1001 and 1926.1101);
4. Connecticut DEEP Regulations (Section 22a-209-8 (I) and Section 22a-220 of the Connecticut General Statutes);
5. Connecticut DPH Standards for Asbestos Abatement Sections 19a-332a-1 to 19a-332a-16;
6. Connecticut DPH Asbestos-Containing-Materials in Schools Regulations (19a-333-1 through 19a-333-13);
7. Connecticut DPH Licensure and Training Requirements Section 20-440-1 to Section 20-440-9.
8. Connecticut Basic Building Code (BOCA);
9. Connecticut Fire Safety Code (NFPA);
10. Local health and safety codes, ordinances or regulations pertaining to asbestos remediation and all national codes and standards including ASTM, ANSI, and Underwriter's Laboratories.

1.7 EXEMPTIONS

A. This project was designed by a State of Connecticut Department of Public Health licensed Asbestos Abatement Designer. Any deviation from these specifications requires the written approval and authorization from the Designer.

B. Any deviations from CTDPH Standards for Asbestos Abatement Sections 19a-332a-1 through 19a-332a-16 must be requested in writing and must be approved in writing by CTDPH.

1.8 NOTIFICATIONS, POSTINGS AND PERMITS

A. The HMAC shall make the following notifications and provide the submittals to the following agencies prior to the commencement of removal work. This notification is required ten (10) days (10 calendar days for CTDPH and 10 business days for USEPA) prior to the start of the abatement project:

1. State of Connecticut
   Department of Public Health
   Indoor Air Program, MS #12 AIR
   410 Capitol Avenue
   P.O. Box 340308
   Hartford, CT 06134-0308
2. USEPA New England Headquarters
   5 Post Office Square, Suite 100
   Boston, Massachusetts 02109-3912

B. The minimum information included in the notification includes:
   1. Name and address of building owner/operator
   2. Building location
   3. Building size, age, and use
   4. Amount of friable asbestos
   5. Work schedule, including proposed start and completion date
   6. Asbestos removal procedures to be used
   7. Name and location of disposal site for generated asbestos waste, residue, and debris

C. Ten day notifications shall be posted for each individual building and phase of the project.

1.9 WORK SITE SAFETY PLAN

A. The HMAC shall establish a set of emergency procedures and shall post them in a conspicuous place at the work site. The safety plan should include provisions for the following:
   1. Evacuation of injured workers.
   2. Emergency and fire exit routes from all work areas.
   3. Emergency first aid treatment.
   4. Local telephone numbers for emergency services including ambulance, fire, and police.
   5. A method to notify workers in the event of a fire or other emergency requiring evacuation of the building.
   6. 24 hour site security program.

B. The HMAC is responsible for training all workers in these procedures.

1.10 ALTERNATIVE WORK PRACTICES (AWP)

A. No AWPs have been developed for this project.

B. Any deviations from these specifications require the written approval and authorization from the Owner and the Owner’s Consultant.

C. Any deviations from CTDPH Standards for Asbestos Abatement Sections 19a-332a-1 through 19a-332a-16 must be requested in writing by the designer of record for the project and must be approved in writing by CTDPH.

1.11 RE-OCCUPANCY CLEARANCE

A. Re-occupancy air sampling will be required within all interior work areas prior to the removal of containment barriers and engineering controls. Make up air into the work area must be free of demolition dust to ensure samples can be analyzed.

B. The HMAC shall work with the Construction Manager to coordinate activities outside the abatement work area to ensure dusty conditions that may impact the ability to analyze clearance samples are not created.

C. The Owner shall be responsible for payment of the sampling and analysis of initial final air clearance samples only. The HMAC shall be responsible for payment of all costs associated with the collection and analysis of additional final air clearance samples for areas that failed the initial test. This shall also include the laboratory charges for preparation of slides for samples that are “overloaded” and become unreadable.

D. Phase Contrast Microscopy (PCM) air samples will be analyzed by the Owner’s Consultant. Transmission Electron Microscopy (TEM) air samples will be analyzed by an outside laboratory on a twenty-four (24) hour turn-around time. The turnaround starts once the samples are received at the laboratory.

1.12 CONTROL OVER REMOVAL WORK

A. All HMAC work procedures shall be monitored by the HMAC’s “Competent Person” to ensure that areas outside the designated work locations do not become contaminated. The following controls shall be implemented each working day to help ensure this:
1. Prior to work on any given day, the HMAC’s designated "Competent Person" shall evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination enclosure systems.

B. The HMAC shall maintain control of and be responsible for access to all work areas to ensure the following requirements:
1. Nonessential personnel are prohibited from entering the area;
2. All authorized personnel entering the work area shall sign the work area entry log at the entrance to each work area;
3. All authorized personnel entering the work area shall read the "worker protection procedures" which are posted at the entry points to the enclosure system, and shall be equipped with properly fitted respirators and protective clothing;
4. All personnel who are exiting from the decontamination enclosure system shall be properly decontaminated;
5. Asbestos waste that is taken out of the work area must be properly bagged and labeled in accordance with these specifications. The surface of the bags shall be decontaminated. Asbestos waste leaving the enclosure system must be transported off site or immediately placed in locked, posted temporary storage on site, and be removed within 24 hours of the project conclusion.
6. Any material, equipment, or supplies that are brought out of the decontamination enclosure system shall be cleaned and decontaminated by wet cleaning and/or HEPA vacuuming of all surfaces.

1.13 SITE SECURITY

A. The HMAC shall be responsible for the security of regulated areas. Post asbestos abatement warning signs at entrances to the work area including the waste load out and worker decontamination chamber. The HMAC shall have a supervisor monitoring the entrance of the worker decontamination chamber during abatement work.

B. The HMAC shall be responsible for the security of regulated areas. Post asbestos abatement warning signs at entrances to the work area including the waste load out and worker decontamination chamber. The HMAC shall have a supervisor monitoring the entrance of the worker decontamination chamber during abatement work.

C. The supervisor shall maintain a work area access log for each work area. The access log shall document each person that enters the work area, the time entered, and the time exited. Copies of the work area access logs shall be provided to the Owner’s Consultant during the course of

the project.

D. Although the Site building will be vacant, the school campus will be under full or partial occupancy at the time of this project. The HMAC shall maintain all signage and barriers as defined in the Variance Approval for each phase of work.

E. The HMAC shall use only those entrances and exits to the building established for contractors' use.

1.14 PERSONNEL PROTECTION

A. Prior to commencing work, instruct all workers in all aspects of personnel protection, work procedures, emergency procedures use of equipment including procedures unique to this project.

B. Respiratory protection shall meet the requirements of OSHA as required in 29 CFR 1910.134, 29 CFR 1926.11, 29 CFR 1926.62 and the requirements of the CTDPH Standards for Asbestos Abatement (19a-332a-1 through 16). A formal respiratory protection program must be implemented in accordance with 29 CFR 1926.1101 and 29 CFR 1910.134. The HMAC shall conduct exposure assessment air sampling, analysis and reporting to ensure the workers are using appropriate respiratory protection.

C. The HMAC shall provide appropriate respiratory protection for each worker and ensure usage during potential asbestos exposure.

D. The HMAC shall provide respirators from among those approved as being acceptable for protection by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part II.

E. The HMAC shall provide an adequate supply of filter for respirators in use.

F. Minimum respiratory protection shall be as follows:

Air borne Asbestos Level:	Required Respirator:
Not in excess of 1 f/cc (10 x PEL)	Half mask air purifying or otherwise as required respirator other than a disposable respirator, equipped with HEPA P 100 filters.
Not in excess of 5 f/cc (50 x PEL)	Full facepiece air purifying respirator equipped with HEPA P 100 filters.
Not in excess of 10 f/cc (100 x PEL)	Any powered air purifying respirator equipped with HEPA P 100 filters, or any supplied air respirator operated in continuous flow mode.
Not in excess of 100 f/cc (1000 x PEL)	Full facepiece supplied air respirator operated in pressure demand mode.
Greater than 100 f/cc (1000 x PEL)	Full facepiece supplied air respirator operated in pressure demand mode, equipped with an auxiliary positive pressure self-contained breathing apparatus.

Notes:

1. Respirators assigned for higher airborne fiber concentrations may be used at lower concentrations.

2. A high efficiency filter means a filter that is at least 99.97 percent efficient against mono-dispersed particles of 0.3 micrometers in diameter or larger.
3. In addition to the selection criteria in paragraph 1.15F, the HMAC shall provide a tight-fitting powered air purifying respirator equipped with high efficiency filters or a full facepiece supplied air respirator operated in the pressure demand mode equipped with HEPA egress cartridges or an auxiliary positive pressure self- contained breathing apparatus for all employees within the regulated area where Class I work is being performed for which a negative exposure assessment has not been produced and the exposure assessment indicates the exposure level will not exceed 1 f/cc as an 8-hour time weighted average. A full facepiece supplied air respirator operated in the pressure demand mode equipped with an auxiliary positive pressure self-contained breathing apparatus shall be provided under such conditions if the exposure assessment indicates exposure levels above 1 f/cc as an 8 hour time weighted average.
4. If compresses air is used for supplied air respirators, this air will meet the requirements for grade D breathing air as described by the Compresses Gas association commodity Specification G-7.1-1966. The compressor will be equipped with the necessary safety devices and sorbends/filters, and be situated to avoid entry of contaminated air. In addition, the compressor will be equipped with alarms to indicate failure or overheating, and additional alarms for indicating the presence of carbon monoxide. Air line couplings will be incompatible with outlets for other gas system to prevent inadvertent servicing of air line respirators with non-respirable gases.

G. The HMAC shall provide and require all workers to wear protective clothing in Work Areas where asbestos fiber concentration exceeds permissible limits established by the OSHA or where contamination exists. Protective clothing shall include impervious coveralls with elastic wrists and ankles, head covering, gloves and foot coverings.

H. The HMAC shall ensure that all authorized persons entering contaminated areas are equipped with proper respirators and protective clothing.

1.15 WORKER PROTECTION PROCEDURES

A. The HMAC shall monitor airborne asbestos concentrations in the workers' breathing zone to establish conditions and work procedures for maintaining compliance with OSHA Regulations 29 CFR 1910.1001 and 1926.1001.

B. The HMAC’s air sampling professional shall document all air sampling results and provide all air sampling reports as soon as feasible. OSHA air monitoring results shall be posted at a conspicuous location at the job site.

C. All personnel air sampling shall be conducted in accordance with methods described in OSHA standards 29 CFR 1910.1001 and 1926.1101.

1.16 SUBMITTALS

A. The HMAC will submit one hard copy of the following submittals to the Owner's Consultant ten (10) calendar days prior to the commencement of removal work:
1. HMAC’s construction schedule
2. Shop drawings showing work area configuration with decontamination facility and negative air exhaust locations
3. Waste generator label to be used including facility address, Owner’s information and name of HMAC
4. Waste shipment and disposal form to be used with generator information completed
5. Waste hauling contractor and associated licenses

6. Asbestos abatement training (initial and current refresher), licenses, medical and respirator fit-test records of each employee who may be on the project site
7. Copies of all notifications and permits, if required
8. Copies of the written respirator plan compliant with the most current issue of OSHA 1910.134
9. Copies of all SDS sheets for materials to be used on Site
10. Work Site Safety Plan
11. Negative Exposure Assessment, if any
12. HMAC's State of Connecticut Asbestos Contractor license
13. State and EPA Asbestos Notifications
14. Site-specific confined space entry program

B. If rental equipment will be utilized during abatement activities, the HMAC shall provide written acknowledgement to the rental equipment provider and copy the Owner's Consultant stating that equipment will be used during hazardous material removal and will be thoroughly decontaminated prior to being returned.

C. The HMAC will submit the following to the Consultant during the work:
1. Results of all personal air sampling
2. Certificate of training (initial and current certification), medical, and fit-test records for new employees to start work (24 hours in advance of work)
3. HMAC site logs and containment access logs
4. Revised Notifications, if any

D. The following shall be submitted to the Consultant at the completion of work:
1. Completed copies of Waste Shipment Records (WSR).
2. Remaining personal air sampling results and work area access control logs.

1.17 DEFINITIONS

A. ABATEMENT - Procedures to control fiber release from asbestos-containing materials; includes removal, encapsulation, and enclosure.

B. AIRLOCK - A system for permitting ingress and egress while assuring air movement to a contaminated area from an uncontaminated area. Two curtained doorways spaced a minimum of six feet apart can form an airlock.

C. AIR MONITORING - The process of measuring the fiber concentration of an area or of a person.

D. AIR SAMPLING PROFESSIONAL – A licensed professional capable of developing air sampling protocols and conducting air monitoring and analysis. This individual should be an industrial hygienist, an environmental scientist, or an engineer with experience in asbestos air monitoring and worker protection equipment and procedures. This individual should have demonstrated proficiency in conducting air sample collection in accordance with 29 CFR 1910.1001 and 1926.1101.

E. ADEQUATELY WETTED - means sufficiently mixed or coated with water, amended or an aqueous solution; or the use of removal encapsulant to prevent dust emissions.

F. AMENDED WATER - Water to which a surfactant has been added.

G. ASBESTOS - The name given to a number of naturally occurring fibrous silicates. This includes the serpentine forms and the amphiboles and includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite, or any of these forms that have been chemically altered.

H. ASBESTOS ABATEMENT - Means the removal, encapsulation, enclosure, renovation, or repair of asbestos-containing materials except activities that are related to the removal or repair of asbestos cement pipe and are performed by employees of a water company as defined in Section 25-32a of the Connecticut General Statutes.

I. ASBESTOS ABATEMENT SITE SUPERVISOR - Means any licensed individual who is employed or engaged by an HMAC to supervise an asbestos abatement project.

J. ASBESTOS ABATEMENT WORKER - Means any employee of an HMAC who engages in asbestos abatement.

K. ASBESTOS CONSULTANT - Any person who engages in any activity directly involved with asbestos consultation services and who has been issued a certificate by the commissioner and a license by the department.

L. ASBESTOS CONTAINING MATERIAL (ACM) - A material composed of asbestos of any type and in an amount greater than one percent be weight, either alone or mixed with other fibrous or nonfibrous material.

M. ASBESTOS CONTRACTOR - Any person or entity engaged in asbestos abatement whose employees actually perform asbestos abatement work.

N. ASBESTOS CONTROL AREA - An area where asbestos abatement operations are performed which is isolated by physical boundaries to prevent the spread of asbestos dust, fibers, or debris.

O. ASBESTOS FIBERS - Those particles with a length greater than five (5) microns and a length to diameter ratio of 3: 1 or greater.

P. ASBESTOS PERMISSIBLE EXPOSURE LIMIT (PEL) - The maximum airborne concentration of asbestos fibers to which an employee is allowed to be exposed. The current level established by OSHA is 0.1 fibers per cubic centimeter of air as an eight (8) hour time weighted average and 1.0 fibers/cc averaged over a sampling period of 30 minutes as an excursion limit. The HMAC is responsible for maintaining work areas in a manner that this standard is not exceeded.

Q. ASBESTOS PROJECT MONITOR - The licensed asbestos consultant who is certified as a project monitor and who functions as an on-site representative of the facility Owner or other persons by over-seeing the activities of the asbestos abatement contractor.

R. AUTHORIZED VISITOR - Any person authorized by the Owner to enter the building.

S. BUILDING OWNER - For this Contract only, the building Owner is the Bristol Public Schools.

T. CLEAN ROOM - An uncontaminated area or room, which is a part of the workers' decontamination enclosure with provisions for storage of workers' street clothes and protective equipment.

U. CLEARANCE SAMPLING - Final air sampling performed aggressively after the completion of the abatement project in a regulated area. Five (5) air samples collected by the asbestos abatement project monitor inside the work area, and having a fiber concentration of less than 0.010 fibers/cc of air will denote acceptable clearance sampling by Phase Contrast Microscopy. Five air samples collected by the asbestos abatement project monitor having an average asbestos concentration of less than 70 asbestos structures mm/sq. will denote acceptable clearance sampling for Transmission Electron Microscopy.

V. COMMISSIONER - Means the Commissioner of the Connecticut Department of Health Services or his/her authorized agent.

W. COMPETENT PERSON - A representative of the HMAC who is capable of identifying an asbestos hazard and who has the authority to take prompt corrective measures to eliminate the hazard during asbestos removal.

X. CONFINED SPACE - A work zone where access and egress are restricted, a potential for gaseous vapors to accumulate exist, or a potential for low oxygen content exists.

Y. DECONTAMINATION ENCLOSURE SYSTEM - A series of connected areas, with curtained doorways between any two adjacent areas, for the decontamination of workers and equipment. A decontamination enclosure system always contains at least one airlock and is adjacent and connected to the regulated area, where possible.

Z. DEPARTMENT - The Department of Public Health.

AA. EPA - Means the U.S. Environmental Protection Agency.

BB. ENCAPSULANT - A liquid material that can be applied to asbestos-containing material that controls the possible release of asbestos fibers from the materials by either creating a membrane over the surface (bridging encapsulant) or penetrating the material and binding its components together (penetrating encapsulant).

CC. ENCAPSULATION - A specified asbestos remediation strategy involving the application of an encapsulant to asbestos containing materials to control the release of asbestos fibers into the air.

DD. EQUIPMENT DECONTAMINATION ENCLOSURE - That portion of a decontamination enclosure system designed for controlling the transfer of materials and equipment, typically consisting of a washroom and a holding area.

EE. EQUIPMENT ROOM - A contaminated area or a room, which is part of the workers' decontamination enclosure with, provisions for storage of contaminated clothing and equipment.

FF. FACILITY - Means any private or public building or structure including but not limited to those used for institutional, residential (including single family homes), commercial or industrial purposes and vessels while ashore or in dry-dock.

GG. FIXED OBJECT - A unit of equipment or furniture in the work areas which cannot be removed from the work area.

HH. FRIABLE ASBESTOS MATERIAL - Any material that contains more than 1% asbestos by weight, that can be crumbled, pulverized or reduced to powder by hand pressure.

II. GLOVE BAG - An impervious plastic bag-like enclosure affixed around asbestos containing material, with glove-like appendages through which materials and tools may be handled.

JJ. HAZARDOUS MATERIALS ABATEMENT CONTRACTOR (HMAC) - Means the Asbestos Contractor, Lead Based Paint Abatement Contractor and or PCB/DEHP and Mercury Vapor Lighting Removal Contractor.

KK. HEPA FILTER - A high efficiency particulate air (HEPA) filter in compliance with ANSI Z9.2-1979.

LL. HEPA VACUUM EQUIPMENT - Vacuum equipment with a HEPA filter system for filtering the effluent air from the unit.

MM. HOLDING AREA - An air-locked chamber in the equipment decontamination enclosure located between the washroom and an uncontaminated area.

NN. INSPECTOR (ASBESTOS ABATEMENT PROJECT MONITOR)- An individual, retained by the Building Owner, who is a "qualified asbestos abatement project monitor" as defined by the State of Connecticut Department of Public Health, and who will be responsible for monitoring the HMAC during the asbestos abatement project.

OO. MOVABLE OBJECT - A unit of equipment or furniture in the work area, which can be removed from the work area.

PP. NEGATIVE AIR FILTRATION EQUIPMENT - A portable local exhaust system equipped with HEPA filtration used to create negative pressure in a regulated area (negative with respect to adjacent unregulated areas) and capable of maintaining a constant, low velocity air flow into regulated areas from adjacent unregulated areas.

QQ. OWNER'S REPRESENTATIVE -The Asbestos Consultant for the project.

RR. NESHAPS - National Emissions Standard for Hazardous Air Pollutants regulations enforced by the EPA.

SS. PLASTICIZE - To cover floors and walls with plastic sheeting as specified herein.

TT. SEPARATION BARRIER - A rigid barrier sealed with two (2) layers of six (6) mil polyethylene sheeting installed between an occupied area and the asbestos abatement work area.

UU. SHOWER ROOM - A room between the clean room and the equipment room in the workers' decontamination enclosure with hot/cold running water and suitably arranged for employee showering during decontamination. The shower room is located in an airlock between the contaminated area and the clean area.

VV. STRIPPING - Removing asbestos materials from any structural member, pipe surface, HVAC, or other equipment.

WW. WASHROOM - A room between the work area and the holding area in the equipment decontamination enclosure with provisions for storage of contaminated clothing and equipment.

XX. WET CLEANING - The process of reducing asbestos contamination from building surfaces and objects by using cloths, mops, or other cleaning tools, which have been dampened by amended water, and by then disposing of these cleaning items as asbestos contaminated waste.

YY. WORK AREA - Designated rooms, spaces, or areas of the project in which asbestos abatement actions are occurring and which may become contaminated as a result of such abatement actions. The work area must be totally self-contained by sealing, plasticizing and equipping the area with a decontamination enclosure system.

ZZ. WORKER DECONTAMINATION ENCLOSURE SYSTEM - That portion of a decontamination enclosure system designated for controlled passage of workers, other personnel, and authorized visitors, typically consisting of a clean room, a shower room, and an equipment room.

AAA. WORK STOPPAGE CLEANUP PROCEDURE - A process following the issuance of a written

stop work order, whereby the HMAC thoroughly cleans and decontaminates the work area, the decontamination enclosure system, and any other areas of the building affected by the removal project, to the satisfaction of the Asbestos Project Monitor.

BBB. WORK ZONE - The area of the decontamination enclosure system where asbestos is being removed.

1.18 PRECONSTRUCTION MEETING

A. The HMAC shall be required to attend a preconstruction meeting with his/her site supervisor, any subcontractor they employ on site for the purpose of reviewing the contract requirements.

PART 2 - MATERIALS AND EQUIPMENT

2.1 MATERIALS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with asbestos shall be decontaminated or disposed of as asbestos waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to job site with factory label indicating 4 or 6 mil.

D. Polyethylene disposable bags shall be true six (6) mil with preprinted labels.

E. Tape shall be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheets to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

F. Surfactant (wetting agent) - shall consist of fifty (50) percent polyoxyethylene ether and fifty (50) percent polyoxyethylene ester, or equivalent, and shall be mixed with water to provide a concentration of one (1) ounce surfactant to five (5) gallons of water or as directed by manufacturer.

G. Impermeable containers are to be used to receive and retain any asbestos-containing or contaminated materials until disposal at an acceptable disposal site. (The containers shall be labeled in accordance with OSHA Standard 29 CFR 1926-1101.) Containers must be both air and watertight.

H. Labels and signs, as required by OSHA Standard 29 CFR 1926.1001 will be used.

I. Encapsulant shall be bridging or penetrating type which has been found acceptable to Eagle Environmental. Usage shall be in accordance with manufacturer’s printed technical data.

J. Disposal labels shall be preprinted on self-adhesive labels with the generator name, abatement site and HMAC's name and address. Labels shall not be photocopied and applied with spray adhesive.

2.2 TOOLS AND EQUIPMENT

A. Provide suitable tools for asbestos removal, encapsulation and enclosure.

B. The HMAC shall have air monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

C. The HMAC shall have available sufficient inventory on site for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape, and air filters.

D. The HMAC shall provide temporary electrical power sources such as generators (when required).

E. The HMAC shall have available shower stalls and sufficient hose length and a drain system equipped with 5-micron filters.

F. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of 0.02 inches of water within the enclosure with respect to the outside area. Equipment shall be checked for proper operation by smoke tubes or a differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.

G. Vacuum units, of suitable size and capacities for project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all monodispersed particles of 0.3 micrometers in diameter or larger.

H. The HMAC will have reserve exhaust air filtration system units in order to maintain negative air filtration in the event that a unit malfunctions during use.

I. The HMAC shall have available and use recording manometers to monitor pressure differential between the work area and occupied areas of the building. A minimum negative pressure differential of 0.02 inches of water column shall be maintained.

J. The HMAC shall have available spray equipment capable of mixing a wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with asbestos.

K. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where asbestos-containing materials may be disturbed.

PART 3 - EXECUTION

3.1 INTERIOR WORK AREA PREPARATION - GENERAL

A. Provide GFCI devices, temporary power, and temporary lighting installed in compliance with the applicable electrical codes. All temporary installations are to be made by a licensed electrician.

B. Shut down electrical power, including receptacles and light fixtures. Lock and tag out circuits associated with the electrical components in the work area(s). Under no circumstances during the abatement and ceiling demolition procedures will lighting fixtures be permitted to be energized.

C. Shut down and/or isolate heating, cooling, and ventilation air systems or zones to prevent contamination and fiber dispersal to other areas of the structure. Lock and tag out circuits associated with heating and cooling units. During the work, vents within the work area shall be sealed with duct tape and polyethylene sheeting.

D. Where asbestos abatement work will be performed under an approved variance, ensure the construction of temporary rigid fire rated barriers within interior spaces of the building, to isolate the construction area from the occupied spaces of the school building, and exterior fencing, where required, are established by the Construction Manager prior to the work. No work area preparation shall be permitted until the construction barriers and fencing are fully installed. Temporary barriers shall be made air tight and shall extend from the floor to the ceiling deck, above suspended ceiling. Personnel decontamination systems shall be established on the work area side of the temporary rigid barrier. Temporary barriers shall contain a locking door to allow ingress and egress through the barrier.

E. Seal off all openings, including but not limited to windows, corridors, doorways, skylights, ducts, grills, diffuser, and any other penetration of the work areas, with polyethylene sheeting minimum of six (6) mils thick sealed with duct tape. This includes doorways and corridors which will not be used for passage during work areas and occupied areas. Install 5 micron water filtration socks in all floor drains prior to sealing.

F. Establish worker decontamination facility, containment barriers and negative air filtration prior to conducting pre-cleaning activities or selective demolition where ACM will be affected. Pre-clean fixed objects within the work areas, using HEPA vacuum equipment and/or wet cleaning methods as appropriate, and enclose with minimum six (6) mil plastic sheeting sealed with duct tape.

G. Pre-clean movable objects within the work areas, using HEPA vacuum equipment and wet cleaning methods as appropriate. Do not use methods that raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters.

H. After HEPA vacuum pre-cleaning, conduct work area preparation in accordance with this Specification section.

I. Where fixed walls are not used, one layer of six (6) mil polyethylene sheeting will be applied to a rigid framework of wood, metal, or PVC as the primary isolation barrier.

J. Install two (2) layers of four (4) mil polyethylene wall sheeting over all wall surfaces and isolation barriers (where wall materials are not being removed as ACM) or as identified in an approved AWP. All overlaps shall be sealed with tape.

K. Cover all floors in the work area with two (2) layers of six (6)-mil polyethylene sheeting (where flooring materials are not being removed as ACM) or as identified in an approved AWP. Extend the polyethylene flooring a minimum of twelve (12) inches up the walls. Ensure that the wall sheeting overlaps the floor sheeting from the top.

L. Maintain emergency and fire exits from the work area, or establish alternative exits satisfactory to fire officials.

M. Create pressure differential between work areas and occupied areas by the use of acceptable negative air pressure equipment. The HMAC shall ensure required negative air pressure is obtained throughout the containment and the total volume of air within the work area is changed every fifteen (15) minutes.

N. Install and maintain a manometer for each negative pressure enclosure where Class I work will be performed.

O. Post all approaches to each work area with Asbestos Warning signs. Warning signs shall be of size and type that are easily readable and are visible from all approaches to the work areas.

3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM

A. The HMAC shall establish contiguous to each work area, a personnel decontamination system consisting of equipment room, shower room and clean room in series. Access between the contaminated and uncontaminated areas shall be through this decontamination enclosure only. The decontamination system shall be constructed of two (2) layers of six (6)-mil polyethylene sheeting. Pre-fabricated "pop-up" decontamination chambers will not be permitted on this project.

B. Access between rooms in decontamination system shall be through double flap-curtained openings. Clean room, shower room and equipment room within decontamination system shall be completely sealed ensuring that the sole source of air flow through this area originates from uncontaminated areas outside the work area.

C. The shower unit shall be equipped with an adequate supply of warm water. A shower filtration pump containing two (2) 5-micron sock filters or the best available technology shall be installed to filter shower water. Filtered shower water shall be discharged into sanitation drains and shall not be discharged into storm drains or onto floor or ground surfaces.

D. The shower room shall have soap and an adequate supply of drying towels. Provide an adequate number of shower units in accordance with OSHA 29 CFR 1926.1101.

E. Each personnel decontamination system shall be established on two layers of polyethylene sheeting to protect floor finishes from water damage.

F. Each personnel decontamination system shall have a water supply that can be turned off from outside the work area. Water shall be turned off to the personnel decontamination system at the end of each shift.

G. If the decontamination system will be constructed on the exterior of the building, the entire unit shall be constructed of a solid frame and sturdy wall and ceiling system to prevent unauthorized entry and to keep out the weather. The entrance to the decontamination system shall be lockable and vented to allow for adequate make-up air into containment. The unit shall have a change area for the workers to change into street clothes before exiting.

3.3 REMOTE PERSONNEL DECONTAMINATION SYSTEM

A. The HMAC shall establish a remote personnel decontamination system where contiguous decontamination systems are not feasible. The use of such remote decontamination unit must be indicated in the State Notification. Access between the contaminated and uncontaminated areas shall be through this decontamination enclosure only. The decontamination system shall be constructed of two layers of six (6)-mil polyethylene sheeting. Pre-fabricated "pop-up" decontamination chambers will not be permitted on this project.

B. Access between rooms in decontamination system shall be through double flap-curtained openings. Clean room, shower room and equipment room within decontamination system shall be completely sealed ensuring that the sole source of air flow through this area originates from uncontaminated areas outside the work area.

C. The shower unit shall be equipped with an adequate supply of warm water. A shower filtration pump containing two (2) 5-micron sock filters or the best available technology shall be installed to filter shower water. Filtered shower water shall be discharged into sanitation drains and shall not be discharged into storm drains or onto floor or ground surfaces.

D. The shower room shall have soap and an adequate supply of drying towels. Provide an

adequate number of shower units in accordance with OSHA 29 CFR 1926.1101.

E. When a remote personnel decontamination system is utilized, two (2) contiguous chambers shall be attached to the work area consisting of an equipment room (for workers to remove asbestos contaminated work suits) and a change room (for workers to don a clean work suit prior to proceeding to the remote personnel decontamination system).

3.4 WASTE LOAD OUT SYSTEMS

A. The HMAC shall establish waste load out systems, where feasible, attached to the work areas. Waste load out systems shall consist of a minimum of two (2) chambers that are of suitable size for transporting waste out of the work area. Waste load out systems shall be constructed of two (2) layers of six (6)-mil polyethylene sheeting.

B. Where waste load out systems are not feasible, the HMAC shall remove waste through the personnel decontamination system.

C. Access between rooms in the waste load out system shall be through double flap-curtained openings. The waste load out system shall be used for decontaminating waste containers, bags, bundles, etc. prior to removal from the work area and transporting waste from the work area to the non-work area.

D. Persons working inside the contaminated work area are not permitted to pass from the work area to the non-work area through the waste load out system. Persons inside the contaminated work area shall not be permitted to enter into the clean area of the waste load out system.

E. The waste load out system shall remain sealed at all times except during decontamination of waste containers and transport of waste from the work area to the non-work area.

F. Asbestos waste shall remain within the construction area of each phase and shall not be transported through occupied areas of the building.

G. Asbestos waste shall be transported out of the work area at the completion of each shift. Asbestos waste shall not be transported through the building during normal school hours.

3.5 EXTERIOR WORK AREA PREPARATION – NON-FRIABLE ASBESTOS CONTAINING MATERIALS

A. Where exterior non-friable ACM is to be removed outdoors, post asbestos abatement warning signs and erect temporary barricades to create regulated areas. Regulated areas should be kept clear of any persons not fully trained and protected against potential exposure to asbestos fibers.

B. Exterior work areas shall be regulated with four-foot high orange construction fencing staked in place. Warning tape shall not be permitted in place of construction fencing. The fencing shall be established around the entire exterior work area leaving no openings in the fence other than at a single access point into the work area.

C. Post asbestos warning signs at twenty (20) foot intervals around the entire exterior regulated work area.

D. Establish temporary water service to support the work of this project. All temporary water service connections shall be made by a licensed plumber.

E. Comply with all OSHA requirements for all work including roof and caulk removal work.

F. Install single six (6)-mil drop cloths extending a minimum of ten (10) feet from the exterior wall of the building. Extend polyethylene sheeting outward from the base of the structure in order to collect debris when working from higher elevations. Install single six (6)-mil isolation barriers over any louver, vent, or penetration into the building interior within or directly adjacent to the regulated area.

G. Maintain an operable remote worker decontamination system adjacent to the work area during exterior abatement work.

H. Maintain a work area access log at each exterior regulated work area. Access to the regulated area shall be established at a designated location.

3.6 ASBESTOS REMOVAL PROCEDURE - GENERAL

A. The HMAC shall have a designated "Competent Person" on the job at all times to ensure establishment of a proper enclosure system and proper work practices throughout the project. At a minimum, the HMAC Competent Person shall perform or supervise the following duties, as applicable:
1. Ensure the integrity of the containment or enclosure.
2. Set up procedures to control entry to and exit from the enclosure.
3. Supervise employee exposure monitoring.
4. Ensure that employees set up, use and remove engineering controls, use work practices and personal protective equipment in compliance with OSHA regulations.
5. Ensure that employees use the worker decontamination facilities and observe decontamination procedures.
6. Ensure the requirements of the Technical Specification are fulfilled.
7. Ensure the HMAC is in compliance with all applicable asbestos regulations.

B. Abatement work will not commence until all work area preparation is completed in accordance with this technical specification section.

C. Spray asbestos materials with amended water using airless spray equipment or apply removal wetting agent to reduce the release of fibers during removal operation.

D. Spraying of amended water shall be adequate enough to allow the ACM to absorb the water. Actual removal of ACM shall not be allowed until all ACM has become adequately wet.

E. Do not create any visible emissions during asbestos removal. Ensure all ACM is adequately wet prior to removal.

F. Fill disposal containers as removal proceeds. Seal filled containers before moving to waste load out system. Wet clean each container thoroughly, double bag, drum or use other approved containerization methods and apply a caution label before moving to holding area.

G. Remove and containerize all visible accumulations of asbestos-containing and/or asbestos-contaminated debris.

H. Solidify all liquid waste prior to containerization for disposal.

I. Wastes containing sharp edges including but not limited to metal lath, floor tiles, boiler components, etc. shall be placed in reinforced nylon or burlap bags prior to placing into six mil disposal bags or double lined drums.

J. Sealed disposal containers and all equipment used in the work area shall be included in the cleanup and shall be removed from work areas, via the waste load out system at an appropriate

time in the cleaning sequence.

K. The HMAC shall remove from each containment all abated asbestos containing materials at the end of each work shift.

L. At any time during asbestos removal, should the competent person suspect contamination of areas outside the work area(s), they shall cause to stop all abatement work until steps to decontaminate these areas and eliminate causes of such contamination are completed. Unprotected individuals shall be prohibited from entering suspected contaminated areas until air sampling and visual inspections certify decontamination.

M. Immediately seal openings between work area and non-work that may be exposed during abatement activities.

N. All asbestos waste removed during a shift must be packaged in sealed containers by the end of each shift. At no time shall asbestos-containing materials be allowed to dry out while awaiting waste packaging.

O. The HMAC's Supervisor shall perform a final visual inspection of each work area to determine completeness of abatement and cleaning work prior to requesting a final visual inspection from the Owner's Consultant.

P. Upon acceptance of the work area by the Owner's Consultant, the HMAC shall apply an even coating of bridging encapsulant with airless spray equipment to all exposed surfaces contained within the work area. Apply encapsulant in accordance with manufacturer's recommendation.

Q. Re-occupancy air monitoring shall be performed within each interior abatement work area. Containment barriers shall not be removed until re-occupancy air clearance results are on site.

R. After successful re-occupancy air testing, the HMAC shall removal all containment barriers and dispose of as asbestos-contaminated waste. Negative air filtration equipment shall remain in operation during containment removal.

S. The HMAC shall perform a post tear down inspection and perform any necessary final cleaning of the work area.

T. Negative air equipment shall be properly shut down by concurrently sealing the intake with polyethylene sheeting and turning the power off to the equipment. At no time shall negative air intakes be unsealed while the equipment is not in operation.

3.7 WASTE PACKAGING AND REMOVAL PROCEDURE

A. The HMAC shall strictly adhere to the requirements of this section for ACM waste packaging and transporting waste from the work area enclosure to the disposal dumpster.

B. Waste disposal bags and drums shall be affixed with pre-printed OSHA warning labels, DOT labels and NESHAP labels.

C. Each container of ACM waste shall be made adequately wet prior to sealing the container. Bags shall be sealed immediately following additional wetting procedures. Bags of ACM waste shall not be permitted to remain unsealed while in the work area enclosure.

D. Each bag of ACM waste shall be double-bagged during waste load out procedures. The following waste load out procedure shall be strictly adhered to:
1. Wet wipe inner bag or drum to remove all ACM contamination. Ensure the inner bag is

sealed.

2. Transport bag or drum to the equipment room located in the worker decontamination enclosure.
3. One (1) worker, equipped with personal protective equipment, shall be inside the clean room of the worker decontamination enclosure.
4. The worker in the clean room of the decontamination enclosure shall open a six-mil disposal bag and hold it open inside the shower room where the inner bag containing the ACM waste shall be placed.
5. The outer bag shall be sealed with duct tape inside the shower room.
6. The double bagged or drummed waste shall be removed from the decontamination enclosure and waste generator labels shall be immediately affixed to the outer bag or drum.
7. Waste generator labels shall be printed self-adhering labels and shall contain the Owner's name, the site location address, and the HMAC's name.
8. The properly labeled waste shall be transported directly to the lined waste container.
9. The waste container shall be double lined with six (6)-mil polyethylene sheeting.
10. OSHA warning signs shall be secured to the waste container prior to any loading and unloading operations.
11. The waste container shall be kept locked at all times other than loading and unloading.

3.8 MINIMUM SPECIFIC ASBESTOS REMOVAL PROCEDURE – THERMAL SYSTEM INSULATION

A. Prior to the removal of any thermal system insulation, the HMAC shall ensure the work area is prepped in accordance with the requirements of Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.

B. Depending on containment configurations, the tunnels may meet the definition of a confined space under the US Department of Labor Occupational Safety and Health Administration (OSHA). Prior to any work within the tunnels, the HMAC shall submit a site-specific confined space entry program and implement all safety procedures. The HMAC shall be responsible for performing confined space entry procedures and monitoring in accordance with all OSHA regulations, if applicable.

C. Isolated areas of damaged fitting insulation have been identified within the pipe tunnels. All engineering controls shall be in place prior to the start of precleaning activities within the tunnels.

D. Minimum specific requirements relative to the removal of thermal system insulation, including mudded pipe fitting cement, are as follows.
1. Prior to starting any removal activities, the HMAC shall perform all required demolition to access all thermal system insulation within each work area. This shall include the removal of built-in cabinets, sheetrock and plaster walls, ceilings, masonry block, plumbing fixtures, etc. to access thermal system insulation for removal.
2. The selective demolition shall be performed following the completion of work area preparation in accordance with the requirements of Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL but prior to the start of any asbestos removal work. During demolition, the HMAC shall confirm the presence and condition of thermal system insulation within walls and above ceilings and shall not damage the ACM. If damaged ACM is encountered, the remaining wall/ceiling system shall be removed and disposed of as ACM. Demolition debris not contaminated by ACM may be removed from work area as construction debris prior to the start of asbestos removal work. Install additional isolation barriers and wall poly as necessary following cabinet demolition.
3. No asbestos abatement or the removal of fiberglass insulation from pipe lengths shall be

performed prior to the completion of all selective demolition. Should asbestos abatement commence prior to the completion of all selective demolition, the materials removed during selective demolition shall be disposed of as friable asbestos waste at the HMAC's expense.

4. Following wall/ceiling demolition, install additional isolation barriers and wall/floor sheeting, where required, to complete work area preparations. Pre-clean all surfaces by HEPA vacuuming and wet wiping surfaces prior to installation of barriers.
5. Utilizing an airless sprayer, the HMAC shall adequately wet all thermal system insulation. Thermal system insulation shall include pipe insulation, pipe fittings, contaminated fiberglass insulation on pipes, residual insulation in penetrations and debris on ground, if identified during demolition.
6. Large pieces of thermal system insulation and contaminated materials shall be reduced to manageable sections and made wet prior to packaging for disposal.
7. The HMAC shall cut banding, remove thermal system insulation in sections and package for disposal. Ensure material is adequately wet prior to sealing disposal bag.
8. Remove all thermal system insulation debris from masonry walls and floor penetrations.
9. Remove all visible residues from pipes, fittings and ducts using nylon scrub pads. Wire brushes are prohibited.
10. Remove fiberglass insulation a minimum of 4-inches from each side of mudded fitting and dispose of as asbestos waste.
11. Clean all lengths of pipes, ducts, fittings, hangars, saddles, supports, threads and adjacent masonry until they are free of visible residue.
12. Where pipes and ducts enter/exit walls, ceilings, floors, remove all insulation from penetrations and HEPA vacuum all penetrations.
13. Remove asbestos waste from work area enclosure in conformance with Part 3.7 WASTE PACKAGING AND REMOVAL PROCEDURES.

3.9 MINIMUM SPECIFIC REMOVAL PROCEDURE – FLOORING

A. Provide selective demolition to remove walls, cabinets, suspended ceilings systems, millwork, bookshelves, wood platforms, base cove with non-asbestos adhesives, miscellaneous fixtures or furniture and other restrictive molding to access all floor area.

B. Within select areas of the building, multiple layers of flooring have been identified. Removal of all layers of flooring and mastic down to structural concrete, whether individual layered flooring components are shown on abatement plan drawings, is included in the base work. Dispose of all layers of flooring as asbestos waste.

C. The HMAC shall examine all walls and demolish sections of walls and wall plates to access asbestos-containing flooring materials underneath.

D. Minimum specific requirements relative to the removal of asbestos-containing non-friable flooring and sanitary base and associated adhesives are as follows:
1. Prior to the removal of any non-friable flooring products, the HMAC shall ensure the work area is prepped in accordance with the requirements of Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.
2. The HMAC shall continuously mist the non-friable flooring products with amended water, removal encapsulant, or detergent solution, so that entire surface is wet. Do not allow wetting agent to puddle, or run off to other areas. If removal encapsulant is used, use in strict accordance with the manufacturer's instructions.
3. Carpet applied to asbestos-containing flooring shall be removed and disposed of as asbestos waste.
4. Continuously mist floor in area where flooring is being removed. Wet any debris generated as necessary to keep continuously wet.

5. Continuously pick up flooring materials and place in lined drums or in nylon mesh bags. Place nylon mesh bags into six (6)-mil thick disposal bags with pre-printed OSHA warning labels. Ensure that all waste is placed in six (6)-mil disposal bags during waste load out operations.
6. Following removal of carpet and floor tiles, there will be a layer of adhesive remaining on the concrete floors. The adhesives shall be removed using blastract, manual scraping methods or grinder with a dust collection device fitted with a HEPA filtration system. One (1) worker shall be dedicated to continuously misting work area during blastract and grinder use.
7. The waste captured by blastrac operations and grinders, if used, shall be removed from the blastrac hopper and vacuums, wetted and disposed of as friable asbestos waste.
8. Manually remove adhesives from all imperfections, seams, cracks, gaps, or other spaces in floor which is not removed during blastrac or grinding operations.
9. All liquid wastes shall be solidified once packaged for disposal. No liquid wastes shall be permitted to leave the Site in liquid form.
10. Remove asbestos waste from work area enclosure in conformance with Part 3.7 – WASTE PACKAGING AND REMOVAL PROCEDURES.

E. Final clean all floor and exposed wall surfaces so no visible residue remains.

3.10 MINIMUM SPECIFIC ASBESTOS REMOVAL PROCEDURE – INTERIOR CAULKS

A. The HMAC shall perform all selective demolition of wall covering, counters, cabinets, ceiling grids, and mechanical systems to access caulks.

B. Prior to the removal of any caulk, the HMAC shall ensure the work area is prepped in accordance with the requirements of Section 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.

C. Removal procedure shall include the following:
1. The HMAC shall continuously mist the caulks with amended water, removal encapsulant, or detergent solution, so that entire surface is wet. Do not allow wetting agent to puddle or run off to other areas. If removal encapsulant is used, use in strict accordance with the manufacturer’s instructions.
2. Remove caulk using manual techniques. Remove all backer rod material in contact with caulk and dispose of as asbestos contaminated waste. Do not damage substrates scheduled to remain.
3. Continuously mist area where materials are being removed. Wet any debris generated as necessary to keep continuously wet.
4. Continuously pick up debris and place into six (6)-mil thick disposal bags with pre-printed OSHA warning labels. Ensure that all waste is placed in six (6)-mil disposal bags during waste load out operations.
5. Following caulk removal, remove all residual caulk and residues from behind framing or within wall depressions, mortar seams, and divots in masonry substrate.
6. All liquid wastes shall be solidified once packaged for disposal. No liquid wastes shall be permitted to leave the Site in liquid form.

D. Remove waste from area in conformance with Part 3.7 – WASTE PACKAGING AND REMOVAL PROCEDURES.

3.11 MINIMUM SPECIFIC ASBESTOS REMOVAL PROCEDURE – INTACT REMOVAL OF DOORS, GASKETS, VALVE PACKING, DUCT FLANGE SEALANT

A. Minimum specific requirements relative to the removal of doors with window glazing compound, gaskets, and valve packing:

1. The HMAC may remove the components following CTDPH guideline dated April 7, 2003 for “intact removal of non-friable ACM”.
2. The HMAC shall remove doors by unscrewing hinges and dispose of entire door and associated window sash as asbestos waste. Doors shall not be reduced in size. Doors with window sash and associated asbestos-containing glazing compound shall be disposed of as asbestos and presumed PCB Bulk Product Waste >50 ppm.
3. The HMAC shall confirm all plumbing disconnects are performed and systems drained prior to the removal of any sink, gasket or valve.
4. Valves, gaskets and ducts flanges may be removed intact by cutting pipe on either side of bolted connections or either side of flange and disposing of entire valve, gasket and flange as asbestos waste. The HMAC shall provide a hot-works permit if required by General Contractor if pipes will be torch cut.
5. Remove fasteners and stops to allow for window sash to be pulled out of the opening without any disturbance to the window sash and associated glazing compound. Do not break glass.
6. Removed items shall be misted with amended water, removal encapsulant, or detergent solution and immediately packaged for disposal in leak tight containers.
7. Properly label all packages and transport immediately to waste disposal container.

B. If asbestos-containing materials will be disturbed during component removal, material shall be removed utilizing full containment work procedures defined in Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.

3.12 MINIMUM SPECIFIC REMOVAL PROCEDURE – EXTERIOR NON-FRIABLE ROOF FLASHING CEMENTS, SILVER PAINT

A. Prior to the removal of any exterior non-friable roofing materials, the HMAC shall ensure the work area is prepped in accordance with the requirements of Part 3.5 EXTERIOR WORK AREA PREPARATION – NON FRIABLE ASBESTOS CONTAINING MATERIALS and Part 3.3 REMOTE PERSONNEL DECONTAMINATION SYSTEM..

B. The HMAC shall confirm all locations and full extents of roofing material demolition with the Construction Manager prior to the start of removal activities. Coordinate removal of roofing materials with interior work to prevent water from penetrating the building while still occupied.

C. Remove exterior non-friable ACM utilizing methods that do not cause the material to become friable. Cutting, sanding, and abrading of roofing materials is strictly prohibited.

D. The asbestos-containing silver paint has been identified on penetrations, skylight bases, expansion joints, and roof wall junctions. All silver paint and associated substrates shall be included in the abatement scope of work.

E. Wet and remove all silver paint and roof flashing cement from brick and metal substrates or remove substrate in its entirety. Place directly in six (6)-mil disposal bags and transport to the appropriate waste container.

F. Remove all silver paint and roof flashing materials down to bare substrate where indicated for removal.

G. Continuously mist material during removal. Keep debris wet and provide immediate cleanup following removal operation. Do not create visible emissions during removal operations.

H. All roofing materials removed shall be lowered to the ground and placed in the appropriate waste container by the end of each shift for disposal as asbestos waste.

3.13 MINIMUM SPECIFIC ASBESTOS REMOVAL PROCEDURE – EXTERIOR CAULK

A. Prior to the removal of any exterior caulk or framing components, the HMAC shall ensure the work area is prepared in accordance with the requirements of Part 3.5 EXTERIOR WORK AREA PREPARATION and Part 3.3 REMOTE PERSONNEL DECONTAMINATION SYSTEM.

B. All layers of caulk shall be removed from window openings, vents, door casing, expansion joints, wall junctions, soffits, and under windowsills and disposed of as asbestos waste and presumed PCB Bulk Product Waste >50 ppm. Removal of replacement window sashes and door casings may be required to access all caulks from openings.

C. Wet exterior caulk and remove utilizing hand tools or caulk removal equipment.

D. Remove caulk from all head, sill, and side jambs of each opening and from all surfaces within each window opening including under metal windowsills where indicated.

E. Remove vent, window, and door frames if scheduled for demolition and as required to access all caulk concealed behind frames. Do not damage substrates scheduled to remain.

F. Remove all backer rod material in contact with caulk and dispose of as asbestos contaminated waste.

G. Vents, expansion joints, window and door frames that are removed from openings may be properly packaged and disposed of as contaminated asbestos waste or cleaned for disposal as non-hazardous construction debris. Components to be disposed of as non-hazardous construction debris shall be cleaned of all caulk residues then thoroughly cleaned by wet wiping and HEPA vacuuming techniques within regulated area. Once dry, all components shall be subjected to a visual inspection by the Owner's Consultant prior to being removed from the work area.

H. Final clean openings by wet scrubbing substrates to remove caulk residue. Utilize nylon brushes to remove caulk from masonry. Removal of caulk by mechanical methods is prohibited. Remove all caulk and caulk residue from remaining substrate(s) until no visible residue is present.

I. If any exterior asbestos containing material will become friable during removal activities, the work area shall be prepared in accordance with Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.

J. Each window and door opening and expansion joint shall be visually inspected by the HMAC Site Supervisor and Asbestos Project Monitor to determine the completeness of the work. The HMAC shall continue to clean the openings until no visible caulk residues are observed.

3.14 MINIMUM SPECIFIC REMOVAL PROCEDURE – EXTERIOR CEMENT BOARD PANELS

A. Removal procedures that render the ACM friable shall be performed within a negative pressure enclosure as identified in Part 3.1 INTERIOR WORK AREA PREPARATION – GENERAL and Part 3.2 CONTIGUOUS PERSONNEL DECONTAMINATION SYSTEM.

B. Prior to the removal of any exterior cement board panels, the HMAC shall ensure the work area is prepared in accordance with the requirements of Part 3.5 EXTERIOR WORK AREA PREPARATION and Part 3.3 REMOTE PERSONNEL DECONTAMINATION SYSTEM.

C. The HMAC shall sufficiently wet materials with removal encapsulant, amended water, or a

detergent solution prior to the start of removal.

D. The cement board panels shall not be saw cut or damaged; the cement board panels shall remain intact and non-friable during removal procedures.

E. Remove all cement board panels scheduled for removal and associated flashing cements and caulk from substrates. Do not damage substrates scheduled to remain.

F. Asbestos-containing cement board panels must be removed in manageable sections. Materials that have been removed shall not be dropped or thrown to the ground. Materials shall be carried or passed to the ground by hand, prior to being properly packaged as asbestos waste.

G. Upon being lowered, unwrapped material shall be transferred to a closed receptacle in such manner so as to preclude the dispersion of dust.

H. All ACM shall be placed directly into disposal bags or shall be transferred to the lined asbestos disposal dumpster. Do not allow waste to accumulate in work areas. All waste shall be removed from the roof at the end if each work shift.

I. The HMAC shall ensure that no visible emissions are generated during any portion of the abatement operation.

3.15 SPECIFIC REQUIREMENTS – SPOT REMOVAL GLOVEBAG

A. Where less than three (3) linear/square feet of ACM is to be removed by glovebag operation, post asbestos abatement warning signs and erect temporary barricades to create regulated areas. Regulated areas should be kept clear of any persons not fully trained and protected against exposure.

B. Provide GFCI devices and temporary power installed in compliance with the applicable electrical codes.

C. Pre-clean surfaces contaminated with ACM, using HEPA vacuum equipment or wet wiping as appropriate. Where friable asbestos containing materials are present, establish worker decontamination facility, isolation barriers and negative air filtration prior to conducting pre-cleaning activities.

D. Install one layer of six (6) mil polyethylene sheeting on the ground below the work inside the regulated area. All overlaps shall be sealed with tape or spray adhesive.

E. Install six (6) mil glovebag in accordance with OSHA 1926.1101.

F. Post all approaches to each work area with asbestos warning signs. Warning signs shall be of size and type that are easily readable and are visible from all approaches to the work areas.

G. A minimum of two (2) workers will be required to perform glovebag removal activities. Perform removal in accordance with OSHA 1926.1101.

H. All applicable OSHA requirements and glovebag manufacturer’s recommendations shall be met during glove bag operations. In the case where a glovebag is not feasible, the Contractor will need to build a full negative pressure containment of sufficient size and follow all regulations as it pertains to removal.
   1. Mix the surfactant with water in the garden sprayer, following the manufacturer's directions.

2. Have each employee put on a HEPA filtered respirator approved for asbestos and check the fit using the positive/negative fit check.
3. Have each employee put on a disposable full-body suit. Remember, the hood goes over the respirator straps.
4. Check closely the integrity of the glove bag to be used. Check all seams, gloves, sleeves, and glove openings. OSHA requires the bottom of the bag to be seamless.
5. Attach glovebag with required tools per manufacturer's instructions.
6. Using the smoke tube and aspirator bulb, test 10% of glovebags by placing the tube into the water porthole (two-inch opening to glove bag), and fill the bag with smoke and squeeze it. If leaks are found, they should be taped closed using duct tape, and the bag should be retested with smoke.
7. Insert the wand from the water sprayer through the water porthole.
8. Insert the hose end from a HEPA vacuum into the upper portion of the glove bag.
9. Wet with removal encapsulant and remove the pipe/cork insulation. Scrub remaining pipes with nylon pads to remove all asbestos residue.
10. If the section of pipe is covered with an aluminum jacket, remove it first using the wire cutters to cut any bands and the tin snips to remove the aluminum. It is important to fold the sharp edges in to prevent cutting the bag when placing it in the bottom.
11. When the work is complete, spray the pipe and upper portion of the bag and clean; push all residue into the bottom of the bag with the other waste material. Be very thorough. Use adequate water.
12. Put all tools, after washing them off in the bag, in one of the sleeves of glove bag and turn it inside out, drawing it outside of the bag. Twist the sleeve tightly several times to seal it and tape it several tight turns with duct tape. Cut through the middle of the duct tape and remove the sleeve. Put the sleeve in the next glove bag or put it in a bucket of water to decontaminate the tools after cutting the sleeve open.
13. Turn on the HEPA vacuum and collapse the bag completely. Remove the vacuum nozzle, seal the hole with duct tape, twist the bag tightly several times in the middle, and tape it to keep the material in the bottom during removal of the glove bag from the pipe.
14. Slip a disposal bag over the glove bag (still attached to the pipe).
15. Remove the tape securing the ends and slit open the top of the glove bag and carefully fold it down into the disposal bag. Double bag and gooseneck waste materials.
16. Each glovebag shall pass a visual inspection by the Owner's Consultant prior to bag removal.

3.16 FINAL CLEANING AND ENCAPSULATION

A. Upon completion of gross removal of all ACM specified for removal, the HMAC shall begin final cleaning of the effected work area. The HMAC shall HEPA vacuum and wet wipe all surfaces contained within the work area.

B. Final cleaning shall include but not be limited to the removal of all visible asbestos residue from all surfaces within the work area. A visible asbestos residue includes but is not limited to any asbestos debris, water staining with visible particulate matter or discoloration, dirt, dust, grime, any particulate or liquid matter, mastic, or adhesive.

C. All tools or equipment that are not necessary for final cleaning shall be decontaminated or bagged and removed from the work area enclosure.

D. The HMAC shall begin final cleaning procedures at the furthest and highest most points from the personnel decontamination unit and move towards the unit. The HMAC shall ensure that all exposed building components and or surfaces are thoroughly HEPA vacuumed and wet wiped.

E. The HMAC shall HEPA vacuum and wet wipe any component specified to remain inside the work area enclosure. All loose debris within the work area shall be HEPA vacuumed or

otherwise collected for disposal.

F. The HMAC shall thoroughly wet wipe all polyethylene sheeting inside the work area enclosure.

G. Remove and replace all pre-filters on negative air filtration equipment. Decontaminate all negative air filtration equipment including wheels.

H. Remove all waste from Equipment Room in Decontamination System. Decontaminate entire personnel decontamination facility. Pump standing water from shower basin through filtration system.

I. Once all surfaces and components within the work area have been thoroughly cleaned, AND THE WORK AREA IS DRY, the HMAC's Competent Person shall perform a visual inspection of all surfaces and components within the work area enclosure. The HMAC's Competent Person shall sign off on the work area stating that all abatement has been completed for that portion of work and that the work area has met the no visible residue criteria.

J. The HMAC's Competent Person shall then request a final visual inspection to be performed by the Owner's Consultant. The Owner's Consultant shall visually inspect all surfaces and components in the work area for residual debris and or dust. Work areas must be dry for final visual inspection. Inspections will not be performed in work areas where there is standing water or wet surfaces. Additional cleaning shall be performed at the HMAC's expense if the Owner's Consultant identifies visual debris and/or dust during the visual inspection. Additional cleaning shall be performed until the work area meets the no visible residue/dust criteria.

K. Upon acceptance of the work area by the Owner's Consultant, the HMAC shall apply an even layer of bridging encapsulant to all surfaces contained within the work area. The Owner's Consultant shall verify the completeness of work area encapsulation.

3.17 EXTERIOR WORK AREAS FINAL CLEANING

A. Upon completion of gross removal of all ACM specified for removal, the HMAC shall begin final cleaning of the effected work area. The HMAC shall wet debris that has accumulated on the drop cloths. And shall roll up the drop cloths ensuring that all debris is contained within the polyethylene sheeting.

B. The HMAC shall HEPA vacuum and wet wipe surrounding surfaces contained within the work area. Clean all substrates under drop clothes of all debris.

C. The HMAC shall begin final cleaning procedures at the furthest and highest most within the regulated work area. The HMAC shall ensure that all exposed building components and or surfaces contained within the work area are thoroughly HEPA vacuumed and wet wiped.

D. Exterior work areas shall not be deregulated until a final visual inspection has been performed by the Asbestos Supervisor and Asbestos Project Monitor.

3.18 DISPOSAL OF ASBESTOS AND ASBESTOS CONTAMINATED WASTE

A. All disposal of asbestos containing and or asbestos contaminated material must be in compliance with requirements of the State of Connecticut Department of Energy and Environmental Protection, State of Connecticut Department of Public Health and the USEPA NESHAP regulations.

B. All ACM shall be properly packaged, labeled, and disposed of as asbestos and presumed PCB Bulk Product Waste >50 ppm.

C. Disposal approvals shall be obtained from the CTDEEP before commencing asbestos removal if waste will be disposed of in Connecticut.

D. Waste container storage locations shall be pre-approved by the Owner and Owner's Consultant.

E. A copy of approved disposal authorization shall be provided to the Owner and Owner's Consultant and any required federal, state or local agencies.

F. Copies of all landfill receipts will be retained by the Owner's Consultant as part of the project file. The receipts will be signed by the landfill operator on receipt, and the quantity of asbestos debris leaving the job site and arriving at the landfill acknowledged.

G. All asbestos debris shall be transported in covered, sealed vans, boxes or dumpsters, which are physically isolated from the driver by an airtight barrier. All vehicles must be properly licensed to meet United States Department of Transportation (USDOT) requirements.

H. Friable ACM waste shall be placed in double lined enclosed waste containers equipped with a lockable hasp. Waste containers shall be posted with OSHA warning signs during loading and unloading.

I. All liquid waste generated during the work shall be solidified. At no time will liquid wastes be permitted to be stored on site. Liquid waste generated during this project shall be solidified prior to the end of each work shift.

J. Completed Waste Shipment Records (WSR) signed by the landfill must be returned to the Owner or Owner's Consultant no later than 45 days from the time the waste was transported off-site. Completed waste shipment records that are not received by the Owner within 35 days shall require the HMAC to begin tracking the waste. The HMAC must notify the Owner of intentions on tracking the waste.

K. The HMAC must take appropriate actions as outlined in 40 CFR Part 61 NESHAP regulations when completed WSR are not forwarded to the Owner or Owner's Consultant within 45 days from the time the waste was transported off-site.

3.19 RE-OCCUPANCY AIR CLEARANCE MONITORING

A. After the presealant visual inspection has passed and all surfaces in the abatement area have dried, re-occupancy air clearance monitoring will be performed. The primary and secondary barriers, worker decontamination enclosure, and negative air filtration units shall remain in place. At no time shall tools, ladders, vacuums or waste remain inside the work area enclosure during final air clearance sampling.

B. Once the work area has dried, the Owner's Consultant shall collect aggressive re-occupancy air clearance samples. Aggressive air monitoring will be used. Selection of the locations of the air samples shall be the responsibility of the Owner's Consultant. Air monitoring volumes shall be sufficient to provide a detection limit of 0.010 f/cc (fiber per cubic centimeter of air) using NIOSH-7400 method by Phase Contrast Microscopy (PCM) or 0.005 s/mm^2 (structures per square millimeter) using Tranmission Electron Microscopy (TEM) method.

C. Areas that do not comply with the re-occupancy air clearance criteria shall continue to be cleaned by and at the HMAC's expense until the specified re-occupancy air clearance criteria is achieved as evidenced by results of air testing as previously specified.

D. Laboratories conducting analysis of final air clearance samples shall be approved by the State of Connecticut Department of Health.

3.20 OWNER'S CONSULTANT RESPONSIBILITY

A. The Owner has retained the services of Eagle Environmental, Inc. to monitor this project. The Owner's Consultant shall collect and analyze air samples to ascertain the integrity of controls, which protect the building from asbestos contamination. Independently, the HMAC shall monitor air quality within the work area to ascertain the protection of employees and to comply with OSHA regulations.

B. During phases of work to be performed while school is in session, the Owner's Consultant shall perform additional background air sampling with same-day sample analysis as required by the Variance approval.

C. The Owner's Consultant shall collect and analyze air samples during a minimum of two (2) time periods:
   1. Abatement Period: The Asbestos Abatement Project Monitor shall collect samples on a daily basis during the work period. A sufficient number of background samples shall be taken outside of the work area, at the exhaust of the negative pressure filtration equipment, and outside of the building to evaluate the degree of cleanliness or contamination of the building during asbestos removal. Additional samples may be taken inside the work area and decontamination enclosure system, at the discretion of the Asbestos Abatement Project Monitor.

      a. The Asbestos Abatement Project Monitor shall provide a continual evaluation of the air quality of the building during asbestos abatement, using his/her best professional judgments in respect to the State Department of Public Health guideline of 0.010 f/cc or the background air quality established during the pre-abatement period, whichever is higher.
      b. If the Asbestos Abatement Project Monitor determines that the building air quality has become contaminated from the project, he/she shall immediately inform the HMAC to cease all removal operations and implement a work stoppage clean up procedure. The HMAC shall conduct a thorough cleanup of areas of the building designated by the Asbestos Abatement Project Monitor. No further asbestos abatement work shall take place until the Asbestos Abatement Project Monitor has determined that the building's air has been decontaminated.
      c. Abatement air samples shall be collected for a minimum period of ninety minutes at a minimum flow rate of 12 liters per minute, or as required to obtain a volume of 1,000 liters. Samples shall be analyzed by phase contrast microscopy (PCM) using the NIOSH 7400 protocol.
   2. Re-occupancy Clearance Period: The Asbestos Abatement Project Monitor shall conduct air sampling following the final cleanup phase of the project, once the "no visible residue" criterion as established by the site supervisor and the Asbestos Abatement Project Monitor has been met.

      a. Phase Contrast Microscopy (PCM) - For work areas containing less than 260 linear feet or 160 square feet of ACM, post abatement analysis of the samples to determine if reoccupancy clearance standards have been met shall be conducted by PCM. A minimum of five (5) samples shall be collected inside each containment utilizing aggressive methods to comply with State of Connecticut DPH Standard for Asbestos Abatement sections 19a-332a-12, and 19a-332a-13. The project shall be considered complete when the results of samples collected in the work area and analyzed by phase contrast microscopy using the most current National Institute for Occupational Safety and Health (NIOSH) method 7400, to show that the concentration of fibers for <u>each</u> of the five samples is less than or equal to a limit of quantification for PCM (0.010 fibers per cubic centimeter of air).
      b. Transmission Electron Microscopy (TEM) - For work areas containing greater than

260 linear feet or 160 square feet of ACM, post abatement analysis of the samples to determine if reoccupancy clearance standards have been met shall be conducted by TEM. A minimum of five (5) samples shall be collected inside containment utilizing aggressive methods to comply with State of Connecticut DPH Standard for Asbestos Abatement sections 19a-332a-12, and 19a-332a-13. An asbestos abatement project shall be considered complete when the average concentration of asbestos fibers of five air samples collected within the work area and analyzed by the TEM method in Appendix A of 40 CFR Part 763 subpart E is less than 70.0 structures per square millimeter (s/mm^2) of filter surface or is not statistically significantly different, as determined by the Z-test calculation found in Appendix A of 40 CFR Part 763, subpart E, from the average asbestos concentration of five air samples collected at the same time outside the work area and analyzed in the same manner, and the average asbestos concentration of the three field blanks described in Appendix A of 40 CFR Part 763, subpart E, is below the filter background level, as defined in Appendix A of 40 CFR Part 763 subpart E, of 70 s/mm^2.

3. Elevated fiber counts: If elevated fiber counts exceeding the establish pre-abatement level or 0.01 f/cc are recorded, the cause for such elevated readings shall be investigated. If necessary, the HMAC shall be responsible for cleaning the affected area and will provide additional support to lower the air born fiber levels. All cost incurred by the HMAC for the decontamination work shall be borne by the HMAC.

C. Inspections shall be conducted by the Owner's Consultant throughout the progress of the abatement project. Inspections shall be conducted in order to document the progress of the abatement work as well as the procedures and practices employed by the HMAC. The Asbestos Abatement Project Monitor shall perform the following inspections during the course of abatement activities.

1. Precommencement Inspection: Precommencement inspections shall be performed at the time requested by the HMAC. The Asbestos Abatement Project Monitor shall be informed 24 hours prior to the time the inspection is needed. During the course of the precommencement inspection, the Asbestos Abatement Project Monitor shall inspect the containment. This shall include, but not be limited to, inspection of barrier integrity, the worker decontamination, facility, negative air filtration equipment etc. If during the course of the precommencement inspection, deficiencies are found, the HMAC shall perform the necessary adjustments in order to obtain compliance.
2. Work Area Inspections: Work area inspections shall be conducted on a daily basis at the discretion of the Asbestos Abatement Project Monitor. During the course of the work area inspections, the Asbestos Abatement Project Monitor shall observe the HMAC removal procedures, verify barrier integrity, monitor negative air filtration devices, assess project progress, and inform the HMAC of specific remedial activities if deficiencies are noted.
3. Presealant Inspection: Upon the request of the HMAC, The Asbestos Abatement Project Monitor shall conduct a presealant inspection. The presealant inspection shall be conducted after completion of the initial final cleaning procedures, but prior to work area encapsulation. The presealant inspection shall verify that all ACM and residual debris have been removed from the work area. If, during the course of the presealant inspection, the Asbestos Abatement Project Monitor identifies residual dust or debris, the HMAC shall comply with the request of the Asbestos Abatement Project Monitor, in order to render the area is free of visible residue.
4. Final Visual Inspection: Following receipt of acceptable reoccupancy air monitoring results and concurrent with removal of the work area containment, the Asbestos Abatement Project Monitor shall conduct a final visual inspection. If residual dust or debris is identified during the course of the final inspection, the HMAC shall comply with the request of the Asbestos Abatement Project Monitor, in order to render the area free of

visible residue.

END OF SECTION 020800

SECTION 020820 – UNIVERSAL WASTE RECLAMATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”.

1.2 SUMMARY

A. Section includes the requirements for the proper procedural and submittal requirements for the removal and reclamation of universal wastes from the Site building.

B. Related Sections:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 011600:	Hazardous Materials Scheduling and Phasing
3.	Section 012200:	Hazardous Materials Unit Prices
4.	Section 017701:	Hazardous Materials Contract Closeout
5.	Section 020750:	Selective Demolition for Hazardous Materials Abatement
6.	Section 020800:	Asbestos Abatement
7.	Section 020900:	Lead Paint Awareness
8.	Section 021100:	PCB Remediation

1.3 GENERAL PROVISIONS

A. The Edgewood Pre-K Academy located at 345 Mix Street in Bristol, CT (the “Site”) consists of an approximately 44,500 square foot single story steel framed masonry building. The original building was constructed in 1956-1957 with two additions added to the original structure in 1963-1965 and 1985-1987. The building will be renovated under a State of Connecticut Office of School Construction Grants & Review (OSCG&R) grant.

B. The reclamation of universal waste products as defined by the State of Connecticut Department of Energy and Environmental Protection (CTDEEP) will be performed in conjunction with the renovation project within the building.

1.4 PROJECT DESCRIPTION

A. The Hazardous Materials Abatement Contractor (HMAC) shall furnish all labor, materials, facilities, equipment, services, employee training and testing, permits and agreements, and waste transport, incineration, and reclamation necessary to perform the work required for universal waste removal and reclamation in accordance with these specifications; EPA, OSHA, NIOSH, State of Connecticut regulations, and other applicable federal, state and local government regulations. Whenever there is a conflict or overlap of the above references, the most stringent provisions are applicable.

B. Collection and reclamation of inert gases in lamp products: The HMAC is responsible for disassembling all interior and exterior light fixtures and removing the associated lamps from the fixtures for proper reclamation. All straight fluorescent light tubes, U-shaped fluorescent light tubes and compact fluorescent light bulbs that will be impacted by the renovation project within the building shall be properly removed, packaged, and transported for reclamation. Remove for reclamation approximately 5,644 linear feet of fluorescent light tubes, 42 U-shaped fluorescent tubes, and 2 compact fluorescent light bulbs.

C. Collection, reclamation and incineration of light ballasts and capacitors: The lighting ballasts within the building are primarily electronic ballasts and may be recycled. The HMAC shall include the collection, reclamation, and incineration of approximately 287 PCB or DEHP lighting ballasts and 1 capacitor identified within the building. The HMAC is responsible for removing ballasts and capacitors that are assumed to contain PCB or DEHP. All ballasts and capacitors that will be impacted by the renovation project shall be properly removed, packaged and transported for disposal.

D. Collection and recycling of lead-acid batteries from emergency light systems, fire alarms and exit signs: The HMAC shall remove and dispose/recycle approximately 94 batteries that will be impacted by the renovation project within the building.

E. Collection and reclamation of refrigerants: The HMAC is responsible for removing the Freon tanks from approximately 20 portable air conditioning units, refrigeration units, water fountains, and roof top HVAC units that will be impacted by the renovation project and shall be properly removed and reclaimed.

F. Collection and recycling of used electronics: The HMAC shall remove and dispose/recycle all remaining used electronics within the building. Used electronics shall include, but not be limited to: computers, televisions, monitors, printers, smart boards, projectors, electronic clocks, server panels, and other electronic devices.

G. Work under this project may be performed in phases to accommodate Owner's requirements and construction phases. Coordinate reclamation schedule and operations with the Construction Manager and Owner's Consultant, and other trades.

1.5 APPLICABLE CODES

A. State Regulations
1. Section 22a-449(c)-113 - Regulations of Connecticut State Agencies (RCSA) for disposal of ballast.
2. Section 22a-465 – Regulation of Connecticut State Agencies for remediation of PCB Bulk Remediation Waste.

B. Federal Regulations
1. 29 CFR 1910.120 – Hazardous Waste Operations and Emergency Response
2. 29 CFR 1910.134 – Respiratory Protection
3. 40 CFR 263 – Standards applicable to Transporters of Hazardous Waste
4. 40 CFR 264 – Standards for Owners and Operators of Hazardous Waste Treatment, Storage and Disposal Facilities
5. 40 CFR 268 – Land Disposal Restrictions
6. 40 CFR Part 700 - Toxic Substance Control Act (TSCA)
7. 40 CFR Part 761 – PCB Manufacturing, Processing, Distribution in Commerce and Use Prohibition.

1.6 DEFINITIONS: WHERE APPLICABLE OR STATED, TERMS SHALL HAVE THE FOLLOWING DEFINITIONS:

A. Universal Waste shall mean batteries, Mercury-containing thermostats, certain pesticides, lamps (including but not limited to fluorescent, neon and mercury vapor lamps), and used electronics.

B. Large Quantity Generator means a handler can accumulate 5000 kilograms or more of universal waste at any time.

C. Small Quantity Generator means a handler can accumulate not more than 5000 kilograms or more of universal waste at any time.

D. Handler means the Generator of the universal waste product.

1.7 GENERAL REQUIREMENTS

A. The HMAC is subject to approval by the Owner's Consultant and all regulatory agencies with jurisdiction over this work, and may be rejected based on criteria established.

B. The Owner's Consultant requires that documentation be provided for all aspects of work detailing the bidder's qualifications and prior experience on the following criteria:

C. Workers handling universal waste must be informed by their employer of the proper handling and emergency procedures appropriate to the type(s) of universal waste handled at the facility.

PART 2 - PRODUCTS

2.1 TRANSPORTATION AND STORAGE CONTAINERS AND LABELING

A. All containers for universal waste must be closed, structurally sound, compatible with the contents of the universal waste, and must be capable of preventing leakage, spillage or damage that could cause leakage.

B. All universal waste products must be stored in a container and the container shall be properly labeled. Appropriate labeling is as follows.
1. Universal waste lamps (each lamp) or the container or package in which such lamps are contained must be labeled or marked clearly with any of the following: "Universal Waste - Lamp(s)" or "Waste Lamp(s), or "Used Lamp(s)".
2. Universal waste used electronics (each piece of equipment) or the container; package or pallet in which the used electronics are contained must be labeled or marked clearly with any of the following: "Universal Waste - used electronics" or "Waste Used Electronics, or "Used Electronics".

PART 3 - EXECUTION

3.1 BALLAST AND CAPACITOR REMOVAL

A. The HMAC shall retrieve light ballasts and capacitors and immediately package for reclamation.

B. If the ballasts are found to be leaking, contaminated light fixtures shall be disposed of as DEHP contaminated materials.

C. Workers shall don chemically resistant gloves as exterior surfaces may contain trace quantities of DEHP or PCB.

D. If a leaking ballast or capacitor is detected during removal, workers shall immediately don chemically resistant protective suits, (i.e. Tyvek), to reduce skin contact with DEHP or PCBs.

E. HMAC shall have on hand spill containment and absorbent materials in the event a spillage of DEHP-containing fluids occurs. Provide appropriate polyethylene sheeting to protect concrete floor and other surfaces from any spillage.

F. All protective equipment (gloves, suits) and materials contaminated during cleanup of ballasts

shall be disposed of as DEHP contaminated waste along with the ballast.

G. All protective equipment (gloves, suits) and materials contaminated during cleanup of capacitors shall be disposed of as PCBs contaminated waste along with the capacitor.

H. All ballasts and capacitors shall be placed in DOT-approved barrels for subsequent transport immediately upon removal. Barrels shall be properly labeled to identify contents and handling hazards.

I. Use new 17C 55-gallon open head steel drums that have been approved for transporting hazardous materials. Used or reconditioned drums may be used only if they have been properly cleaned, tested, and labeled.

J. Drums shall be prepared by placing one to three inches of absorbent material in the bottom of the drum.

K. Drums shall be packed so as to not exceed a total weight of 900 pounds. If proper handling equipment is not available, half fill the drums so that manual handling is possible.

3.2 INERT GAS RECLAMATION

A. All lighting shall be packaged and transported in accordance with the reclamation facilities requirements.

B. Provide Reclamation Certificates following work.

3.3 RECYCLING OF LEAD ACID BATTERIES

A. Disassemble fixtures and remove lead acid batteries.

B. Package, store and ship batteries in approved containers from recycling facility.

C. Provide Reclamation Certificates following work.

3.4 RECLAMIMNG FREON REFRIGERANT

A. Disassemble the fixture and remove the refrigerant tanks

B. Package, store and ship the tanks to facility to reclaim Freon.

C. Provide Reclamation Certificates following work.

END OF SECTION 020820

SECTION 020900 – LEAD PAINT AWARENESS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. The work specified herein covers the proper worker protection, work area preparation, removal and disposal, and post renovation cleaning of lead-based paint coated building components associated with the renovation work at the Edgewood Pre-K Academy located at 345 Mix Street in Bristol, Connecticut (Site). Work covered under this Section does not constitute lead-based paint abatement in accordance with the State of Connecticut Department of Public Health (CTDPH) Lead Poisoning Prevention and Control Regulation.

B. Related Sections:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 011600:	Hazardous Materials Scheduling and Phasing
3.	Section 012200:	Hazardous Materials Unit Prices
4.	Section 017701:	Hazardous Materials Contract Closeout
5.	Section 020750:	Selective Demolition for Hazardous Materials Abatement
6.	Section 020800:	Asbestos Abatement
7.	Section 020820:	Universal Waste Reclamation
8.	Section 021100:	PCB Remediation

C. Lead-based paint screening of the building has identified lead-based paint on certain components and surfaces, which will be affected by this project. Lead-based paint is a paint or surface coating containing equal to or greater than 1.0 mg/cm2 of lead.

D. All contractors performing paint disturbing tasks where surface coatings with any measurable amount of lead shall also comply with the OSHA Lead in Construction Standard 29 CFR 1926.62.

E. This building will be occupied by pre-kindergarten aged children under the age of six (6) years old. All contractors performing work on confirmed lead-based painted surfaces shall be certified by the United States Environmental Protection Agency (USEPA) as a Renovation, Repair and Painting (RRP) contractor.

F. All lead-based paint disturbing task shall be performed in accordance with the USEPA RRP Rule 40 CFR 745 subpart E.

1.3 PROJECT DESCRIPTION

A. The Edgewood Pre-K Academy located at 345 Mix Street in Bristol, CT (the "Site") consists of an approximately 44,500 square foot single story steel framed masonry building. The original building was constructed in 1956-1957 with two additions added to the original structure in 1963-1965 and 1985-1987. The building will be Renovated As New into the Pre-K Edgewood Academy.

B. The Hazardous Materials Abatement Contractor (HMAC) performing work that disturbs painted

surfaces identified in this Section shall be in compliance with the USEPA Renovation, Repair and Paint Rule as prescribed by Title 40 CFR Part 745.80 Subpart E, including but not limited to USEPA RRP Firm Certification, USEPA RRP Renovator Certification, Disclosure and Notification, Placement of Warning Signs, Lead-Safe Work Practice, Cleaning and Post-Remediation Dust Clearance.

C. Certain building components were determined to contain levels of lead in paint that may cause worker exposure during renovation and demolition work. Any disturbance to paint coatings with any measurable amount of lead resulting from manual demolition or work necessary to facilitate the renovations shall be conducted in accordance with this Specification and all applicable OSHA regulations.

D. Components within the original building that were determined to contain high levels of lead-based paint (>1.0 mg/cm^2) include but are not limited to the following:
1. Ceramic wall tile
2. Metal columns
3. Metal panels in window walls
4. Concrete masonry units (CMU)
5. Metal door stops
6. Wood soffits/fascia boards

E. Components within the 1963-1965 addition that were determined to contain high levels of lead-based paint (>1.0 mg/cm^2) include but are not limited to the following:
1. Ceramic wall tiles and glazed block

F. The list of leaded components is not intended to provide a comprehensive inventory of leaded surfaces in the school but rather to give the HMAC information to support preparation of an OSHA lead compliance plan for the project. OSHA does not set a numerical value for lead concentrations in surface coatings to which the OSHA Lead in Construction Standard would not apply. Rather they rely on exposure monitoring during tasks that disturb paint with any measurable amount of lead to determine if that specific task will create exposure above OSHA's defined Action Level (AL) or Permissible Exposure Limit (PEL).

G. Any painted surfaces that were not tested but will be impacted shall be assumed to be coated with lead-based paint.

H. The personnel performing lead-based paint removal work shall be trained in accordance with the Department of Labor's Occupational Safety and Health Administration (OSHA) Title 29 CFR 1926.62. Lead in Construction Standard. This Specification is intended to provide general information pertaining to lead in surface coatings at the site and to assist the HMAC in complying with applicable worker protection and disposal laws. It is the sole responsibility of the HMAC to comply with all OSHA worker protection laws and disposal laws.

I. All painted, varnished, shellacked, stained, primed or otherwise coated surfaces should be assumed to contain lead above 0.0 mg/cm^2. Trades performing work that impact any painted, varnished, shellacked, stained, primed or otherwise coated surface must comply with the requirements of OSHA Title 29 CFR 1926.62 Lead in Construction Standard.

J. The HMAC should assume that building components that were not tested but that are like in color and construction date have similar lead paint levels as the components that were tested in that room. In accordance with OSHA Title29 CFR 1926.62, the HMAC must assume certain exposure levels for certain tasks in the absence of testing or personal exposure monitoring data. It is the sole responsibility of the HMAC to comply with OSHA Title 29 CFR 1926.62 for all tasks that disturb paint, varnish, shellac, stain, or other surface coatings.

K. All components and surfaces with a surface coating that will be impacted by the work of this project shall be covered by this Specification.

L. Metal components removed from the building must be recycled in an approved recycling facility that accepts metal coated with lead-based paint.

M. All painted wood components specified for removal and disposal in this Specification and on Plans HM-1 through HM-3 shall be disposed of as hazardous lead waste (D008).

N. Toxicity Characteristic Leachate Procedure (TCLP) testing of the 1956-1957 Original Building wood soffit/fascia board demolition waste stream was 13.8 mg/L characterizing the painted wood as hazardous lead waste. The Owner's Consultant shall perform TCLP testing of ceramic wall tile and CMU coated with lead for disposal characterization. For the purpose of this Specification, ceramic wall tiles and CMU shall be disposed of as non-hazardous solid waste. The HMAC shall comply with all applicable requirements regarding disposal and recycling of metal components coated with lead-based paint.

1.4 SCOPE OF WORK

A. The HMAC shall properly remove and dispose of all lead-based painted surfaces and components that will be impacted by the work of this project. Refer to drawings HM-1 through HM-3 for additional information on the scope and locations of the work.

LOCATION	COMPONENTS/SURFACE	TASK	SHEET NO.
Exterior Facades	Wood Soffit and Fascia	Remove and Dispose as Hazardous Lead Waste	HM-3
1-08 and Exterior at Entry	Steel Columns	Liquid Encapsulate	HM-2
1-04,1-06	CMU Walls (Side A – Corridor Side)	Remove and Dispose as Non-Hazardous Solid Waste	HM-2
1-63	CMU Walls	Remove and Dispose as Non-Hazardous Solid Waste	HM-2
1-53, 1-57, 1-76, 1-77	Ceramic Wall Tile and Glazed Block Walls	Remove and Dispose as Non-Hazardous Solid Waste	HM-2
1-04	Metal Door Frames	Remove and Recycle	HM-2
Exterior Facades	Metal Panels in Window Walls	Remove and Recycle	HM-2

B. The HMAC shall remove all wood soffit and facia boards from the exterior facades located under metal enclosures and dispose of as hazardous lead waste. Exterior work area preparation as identified within this Section shall be in place prior to the removal of any metal or wood components on the exterior of the building.

C. The HMAC shall liquid encapsulate all exposed portions of interior and exterior steel columns with a CT DPH approved encapsulant.

D. The HMAC shall remove all painted masonry walls and ceramic wall tiles identified within bathrooms and dispose of as non-hazardous solid waste.

E. The HMAC shall remove all metal panels associated with perimeter window walls and recycle at

a facility that will accept metal coated with lead-based paint.

1.5 EPA RENOVATE, REPAIR AND REPAINTING RULE

A. The HMAC must apply, pay the fee, and become an EPA Certified HMAC/RRP firm.

B. The HMAC must ensure that all renovators working on the project are EPA certified renovators or trained by a certified EPA renovator. Renovators can become certified by successfully attending an Eight (8) hour HMAC/RRP EPA accredited training course.

C. The HMAC must provide the administration with a copy of EPA's Renovate Right: Important Lead Hazard Information for Families, Child Care Providers and Schools pamphlet no earlier than sixty (60) days prior to the date renovation activities are to be performed.

D. The HMAC must assume that all painted surfaces contain toxic levels of lead-based paint unless inspected by a licensed lead inspector/risk assessor and proven otherwise. Surfaces described in Section 1.2 of this Specification are known surfaces painted with lead-based paint.

E. The HMAC is required to ensure renovators minimize lead paint/dust exposure by performing activities in a lead safe manner.

F. The HMAC shall ensure all sub-contractors performing renovation activities on known or assumed lead-based paint above the EPA de minimus level are EPA RRP certified firms and employees are EPA certified renovators or trained by a certified EPA RRP renovator. The HMAC shall document the firm's and renovator's certification numbers.

G. The HMAC shall provide the Owner's representative with documentation to include:
1. The RRP Contractor's EPA Contractor Firm Certification Number.
2. The RRP Contractor's EPA Renovator's Certification Number.
3. Documentation that all other non-certified employees have been trained in RRP practices by an EPA RRP Certified Renovator.

H. The HMAC is required to keep all documents for a minimum of three (3) years.

1.6 APPLICABLE CODES

A. The HMAC shall be solely responsible for conducting this project and supervising all work in a manner which will be in conformance with all federal, state, and local regulations and guidelines pertaining to lead paint abatement. Specifically, the HMAC shall comply with the requirements of the following:
1. Occupational Safety and Health Administration: OSHA

a. Title 29 CFR 1910 General Industry Standards
b. Title 29 CFR 1910.1025 Lead Standard for General Inventory
c. Title 29 CFR 1910.134 Respiratory Protection
d. Title 29 CFR 1910.1200 Hazard Communication
e. Title 29 CFR 1910.245 Specifications for Accident Prevention (Sign and Tags)
f. Title 29 CFR 1926.62 Lead in Construction Final Rule

2. State of Connecticut Department of Energy and Environmental Protection: DEEP

a. Guidance for the management and disposal of lead contaminated materials generated in the renovation and demolition industries.

b. All applicable hazardous solid waste disposal regulations.

3. USEPA

a. Title 40 CFR 745.100 - .119 Final Rule
b. Title 40 CFR 745 Subpart E
c. Title 40 CFR Part 261 United States Environmental Protection Agency

1.7 DEFINITIONS

A. “Action level” means employee exposure, without regard to the use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air (30 ug/m (3)) calculated as an 8-hour time-weighted average (TWA).

B. "Biological monitoring" means the analysis of a person's blood and/or urine, to determine the level of lead contamination in the body.

C. “Competent person” means one who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions and who has authorization to take prompt corrective measures to eliminate them.

D. “Containment” means the process of erecting polyethylene barriers to control dust and debris emissions which is intended to keep adjacent areas and environment free of contamination.

E. "HMAC" means the primary hazardous materials abatement contractor and all sub-contractors performing the lead removal work.

F. “Exposure assessment” means the process of collecting and analyzing personal air samples to determine a worker’s potential to be exposed to contaminants and to determine the level of respiratory and personal protective equipment that would be suitable to prevent exposure from occurring.

G. HEPA (High Efficiency Particulate Air) means a type of filtering system capable of filtering out particles of 0.3 microns or greater diameter from a body of air at 99.97% efficiency or greater.

H. "High phosphate detergent" is detergent that contains at least five (5%) percent tri-sodium phosphate (TSP).

I. “Lead” means metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.

J. PEL (Permissible exposure limit) means the maximum allowable airborne concentration a worker can be exposed to over an eight (8) hour work shift without having to don respiratory and personal protective equipment. The OSHA PEL is 50 ug/m^3.

K. RCRA (Resource Conservation Recovery Act): The EPA enforced act, which establishes regulatory levels for hazardous chemicals. There are eight (8) heavy metals of concern for disposal: Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium and Silver.

L. Standard means the OSHA Lead in Construction Standard Title 29 CFR 1926.62.

M. Toxicity Characteristic Leachate Procedure: Is the EPA required sample preparation and analysis for determining the hazard characteristic of a waste generated at a lead removal site.

1.8 FEES, PERMITS AND LICENSES

A. The HMAC shall comply with the provisions of all permits or applications required by the work specified, as well as make all submittals required under those auspices.

B. The HMAC shall make notifications to the local Police Department and Fire Department regarding the project.

1.9 SEQUENCING AND SCHEDULING

A. The HMAC shall extend full cooperation to Owner in all matters involving the use of Owner's facilities. At no time shall the HMAC cause or allow to be caused conditions that may cause risk or hazards to the general public or conditions that might impair safe use of the facility.

B. This project shall be performed under several construction phases while the school is unoccupied. All lead renovation activities shall be strictly coordinated with each phase of work and the HMAC shall ensure that unsafe conditions do not arise out of the performance of their work.

C. The HMAC shall submit a time-line schedule, not date specific, to Owner and Owner’s Consultant for integration into the overall project schedule. Coordinate the work of this section with the needs of the Owner and Construction Manager. The phasing and scheduling of this project will be at the discretion of the Construction Manager and shall not proceed in any area without the express consent of the Construction Manager.

D. The HMAC shall coordinate their work with the progress of the work of other trades so that the work shall be completed as soon as conditions permit. Work under this project may be performed in phases to accommodate Owner’s requirements and construction phases. Coordinate schedule and operations with the Construction Manager and Owner’s Consultant and other trades.

E. Schedule initial assessment work in areas where the work will not cause an exposure potential to unprotected individuals.

1.10 SUBMITTALS

A. This Section specifies administrative and procedural requirements for submittals required for performance of the Work.

B. The HMAC shall provide the following pre-project submittals prior to initiating work at the Site:
1. Copies of all notifications, permits, applications, licenses and like documents required by federal, state and local regulations obtained or submitted in proper fashion.
2. Copies of medical records for each employee to be used on the project.
3. Record of successful respirator fit testing performed by a qualified individual within the previous year, for each employee to be used on this project.
4. Proposed respiratory protection program for employees throughout all phases of the job, including make, model, and NIOSH approval numbers of respirators to be used.
5. Chain-of-Command of responsibility at work site including supervisors, foremen, and competent person, their names, resumes and certificates of training.
6. List of all supervisors and workers intended to be assigned to the project.
7. Disposal facility permits for hazardous lead waste.
8. Safety Data Sheets (SDS) on all materials and chemicals to be used on the project.

C. The HMAC shall provide the following post-project submittals at the completion of the work on site:

1. Copies of completed hazardous and non-hazardous waste manifests.
2. Copies of work area access logs.
3. Copies of supervisor log
4. Copies of all OSHA Compliance air sampling results.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to job site with factory label indicating 6 mil.

D. Polyethylene disposable bags shall be six (6) mil with pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.

E. Tape shall be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

F. Impermeable containers are to be used to received and retain any lead containing or contaminated materials until disposal at an acceptable disposal site. (The containers shall be labeled in accordance with EPA and DOT standards.)

G. HEPA filtered exhaust systems shall be used during any dust generating deleading operations.

H. Other materials such as lumber, nails and hardware necessary to construct and dismantle the decontamination enclosures and the barriers that isolate the work area shall be provided as appropriate for the work.

PART 3 - EXECUTION

3.1 INITIAL EXPOSURE ASSESSMENT

A. In order to comply with the requirements of OSHA Title 29 CFR 1926.62 Lead in Construction regulation, an initial exposure assessment must be performed for each activity that disturbs lead paint covered building materials. If the results of the initial exposure assessment are less than the “Action Level” for lead dust exposure of 30 micrograms per cubic meter of air, the employer is not obligated to comply with most requirements of the regulation. If the results of the initial exposure assessment are greater than the Action Level for lead dust exposure, all requirements of the Standard apply.
   1. The Scope of this Section applies to all construction work where an employee may be occupationally exposed to lead. All construction work excluded from the general industry standard for lead Title 29 CFR 1910.1025(a) (2) is covered by this section. This includes but is not limited to the following.

      a. Demolition or salvage of structures where lead or materials containing lead is present;

b. Removal or encapsulation of materials containing lead;
c. New construction, alteration, repair, or renovation of structures, substrates, or portions thereof that contain lead, or materials containing lead;
d. Lead contamination cleanup; and
e. Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed.

B. The HMAC shall assume that the employee is being exposed above the Permissible Exposure Level (PEL) until an initial exposure assessment has been completed for each lead related task being performed.

C. For the purpose of the initial exposure assessment, employee exposure is that exposure which would occur if the employee were not using a respirator.

D. The employer shall collect personal air samples representative of a full shift including at least one sample for each job classification in each work area for each shift or for the shift with the highest exposure level.

E. Until the employer performs an initial exposure assessment as required by the Standard, the employer shall provide appropriate respiratory protection, appropriate personal protective equipment, clean change areas, hand washing facilities, biological monitoring, training under Title 29 CFR 1926.59, Hazard Communication; Title 29 CFR 1926.62 – Lead, Title 29 CFR 1926.21, Safety Training and Education.

F. Where the employer has objective data, demonstrating that a particular product or material containing lead or a specific process, operation or activity involving lead cannot result in employee exposure to lead at or above the Action Level during processing, use or handling, the employer may rely upon such data instead of implementing initial monitoring.

3.2 LEAD-BASED PAINT COMPLIANCE PLAN

A. The HMAC shall be required to submit a lead-based paint compliance plan to the Owner detailing how the HMAC will maintain compliance with this Specification.

B. The HMAC shall describe the work procedures within the compliance plan that will be utilized to prevent contamination to the work site and surrounding environment.

C. The HMAC shall describe the work procedures and engineering controls that will be implemented to ensure that workers are not exposed above OSHA's PEL for lead dust exposure.

D. The HMAC shall describe how compliance with the hazardous waste disposal regulations will be met.

3.3 WORKER HYGIENE PRACTICES

A. Workers shall don protective gear prior to entering work area including respirators, disposable coveralls, and footwear. No street clothes shall be permitted to be worn under protective clothing. The HMAC shall provide a clean area for workers to store street clothes and personal belongings.

B. Eye protection, head protection, and ear protection shall be provided to each worker.

C. While leaving respirators on, workers shall remove all gross contamination, debris, and dust from disposable coveralls and remove coveralls and footwear and place in hazardous waste disposal

bag prior to leaving work area.

D. The HMAC establish a wash station in close proximity to the work area where workers shall decontaminate their person. The wash station shall be supplied with warm water and soap and an ample supply of drying towels. Wash water shall be tested for proper disposal.

E. All equipment used by workers inside the work area shall be wet wiped or bagged for later decontamination before removal from the work area.

F. The HMAC is responsible for using safe procedures to avoid electrical hazards. All temporary electrical wiring will be protected by GFIs.

3.3 DUST GENERATING ACTIVITIES – COMPONENTS REMOVAL WORK AREA PREPARATION

A. Refer to Section 020800 Asbestos Abatement for additional work area preparation requirements where asbestos-containing materials will be abated concurrently with lead-related work.

B. The HMAC shall establish a clean area outside the lead demolition work areas for workers to change into protective clothing and store personal belongings.

C. When dust generating activities are undertaken, the work area shall be isolated from other trades by double flapped curtain doorways. The HMAC shall utilize double flapped curtain doorways for separation of the work area from the non-work area. All ingress to the work area shall be through the double flapped curtain doorways.

D. All HVAC vents and grills shall also be sealed with a single layer of six (6)-mil polyethylene sheeting sealed with duct tape.

E. Windows to the outside of the building shall remain shut during demolition activities. Window openings and penetrations to the outside of the building shall be sealed with a single layer of six (6)-mil polyethylene sheeting.

F. Floors shall be covered with two (2) layers of six (6)-mil polyethylene sheeting.

G. Install six (6)-mil polyethylene drop cloths on the exterior of the building to catch paint chips dislodged during component removal. Drop cloths shall extend a minimum of ten (10) feet from the base of the building.

H. Regulate exterior work areas with orange construction fencing to prevent unauthorized access.

I. The HMAC shall post lead hazard warning signs in accordance with OSHA Title 29 CFR 1926.62. It shall be the sole responsibility of the HMAC to ensure that only authorized personnel are permitted to enter the work area. A work area access log shall be maintained at the entrance to the work area. Authorized personnel shall sign in and out of the work area containment.

3.4 NON-DUST ACTIVITIES – WORK AREA PREPARATION

A. The HMAC shall establish a clean area outside the abatement areas for workers to change into protective clothing and store personal belongings.

B. When activities are undertaken that do not readily create dust, the work area shall be isolated from other trades by barrier caution tape. A buffer zone of a minimum of ten (10) feet is recommended between lead demolition activities and general trades work.

C. The HMAC shall post lead hazard warning signs in accordance with OSHA Title 29 CFR 1926.62. It shall be the sole responsibility of the HMAC to ensure that only authorized personnel are permitted to enter the work area. A work area access log shall be maintained at the entrance to the work area. Authorized personnel shall sign in and out of the work area containment.

D. Install a six (6)-mil polyethylene drop cloths under non-dust generating work activities.

3.5 PERSONAL PROTECTION

A. Eye protection, head protection, and ear protection shall be provided to each worker.

B. Workers shall utilize disposal protective coveralls while performing lead disturbing tasks. Street clothes shall not be permitted to be worn under their protective coveralls.

C. The HMAC's Competent Person shall assign respiratory protection to each work area based on personal exposure monitoring data. Workers shall utilize respiratory protection in accordance with the HMAC's Respiratory Protection Program.

D. Disposable gloves shall be utilized during all lead disturbing tasks, waste packaging and waste management activities.

E. Shoe coverings shall be utilized while working in the regulated work area.

F. The HMAC shall establish a wash station in close proximity to the work area where workers shall decontaminate their person. The wash station shall be supplied with warm water and soap and an ample supply of drying towels. Wash water shall be tested for proper disposal.

G. All equipment used by workers inside the work area shall be wet wiped or bagged for later decontamination before removal from work area.

H. The HMAC is responsible for using safe procedures to avoid electrical hazards. All temporary electrical wiring will be protected by GFIs.

3.6 PROHIBITED ACTIVITIES

A. The HMAC shall be prohibited from the following:
1. Sanding lead-based painted components without HEPA dust collection devices and appropriate engineering controls.
2. Open flame paint removal.
3. Torch cutting steel components without removing the paint and primer
4. Welding to steel components without removing the paint and primer.
5. Rivet busting without appropriate engineering controls.
6. Creating visible dust or fumes during lead-based paint disturbance.
7. Eating, drinking, smoking, or applying cosmetics within the work area.

3.7 COMPONENT REMOVAL

A. Prior to any component removal, the HMAC shall perform work area preparation in accordance with Part 3.3 DUST GENERATING ACTIVITIES – COMPONENT REMOVAL WORK AREA PREPARATION.

B. The HMAC shall perform the work in a careful manner to avoid damaging surfaces scheduled to

remain.

C. The HMAC shall remove components in whole parts to the best extent feasible. The HMAC shall refer to other Specification Sections affecting the work of this Section.

D. Use hand tools and pry bars to carefully remove wood chair rails and door stops attached to walls. Place removed components directly into hazardous waste storage containers.

E. Remove all trim components, chalkboards, whiteboards, cabinets, shelving, mechanical, electrical, plumbing equipment, etc. where necessary to access walls for removal.

F. Segregate lead-contaminated waste for proper disposal.

G. Wet components to control visible dust emissions during removal.

H. The HMAC shall confirm all plumbing disconnects have been made prior to the removal of any ceramic sink, toilet, or fountain.

I. HEPA vacuum and wet clean work area at the completion of component removal activities. Each work area will be subject to a final visual inspection by the Owner's Consultant.

3.8 LIQUID ENCAPSULATION

A. Components containing lead coatings, and which are scheduled to remain, shall be prepared for liquid encapsulation by the HMAC.

B. Degloss surface by cleaning with a lead cleaning detergent to remove dirt, grime, grease, etc.

C. Remove all loose paint by wet scraping surface utilizing manual scraping techniques. Do not gouge, mar, or otherwise damage surfaces to remain.

D. Feather raised edges by lightly sanding with appropriate grit sandpaper.

E. Apply a CT DPH approved liquid encapsulant to the surface. Apply in accordance with manufacturer recommendations.

F. Final clean entire work area in accordance with Part 3.9 CLEANING.

3.9 FINAL CLEANING

A. The HMAC shall ensure that all tools and materials are adequately cleaned at the completion of each shift.

B. The HMAC shall remove all gross waste from the work area prior to conducting final cleaning operations.

C. All small debris shall be picked up, placed in clear polyethylene disposal bags, and transported to the appropriate waste container.

D. The HMAC shall thoroughly HEPA vacuum all flat surfaces and components including polyethylene sheeting within and or adjacent to the work area.

E. The HMAC shall remove polyethylene sheeting from floors and non-moveable objects following

the initial cleaning. Polyethylene sheeting shall be folded inwards from the corners and folded upon itself.

F. The following final cleaning shall be conducted following removal of polyethylene sheeting:

1. HEPA vacuum floors and horizontal surfaces.
2. Wet clean floors and horizontal surfaces with a lead cleaning detergent.
3. Conduct second HEPA vacuuming on floors and horizontal surfaces.
4. Repeat steps 1 through 3.

G. The HMAC shall dispose of the polyethylene sheeting. The Owner's Representative shall perform a visual inspection of the polyethylene sheeting to determine adequacy of cleaning procedures prior to removal.

H. The HMAC shall HEPA vacuum all exterior surfaces including ground surfaces, concrete, window sills, concrete walkways, asphalt etc.

I. The HMAC shall continue to clean the work area until the clearance standards are met.

3.10 DISPOSAL OF WASTE MATERIALS

A. All materials, whether hazardous or non-hazardous, shall be disposed of in accordance with all laws and the provisions of any or all applicable federal, state, county, or local regulations and guidelines. It shall be the sole responsibility of the HMAC to assure compliance with all laws and regulations relating to this disposal.

B. The HMAC is responsible for performing and paying for all additional waste characterization testing, waste profiling and all other information required by their selected landfill for each shipment of waste.

C. The HMAC shall dispose of the following waste streams:
1. Painted concrete masonry walls: Non-hazardous solid waste.
2. Ceramic wall tiles and glazed block walls: Non-hazardous solid waste.
3. Metal components: Recycle in an approved facility that accepts lead-based paint.
4. Exterior wood soffit: Hazardous lead waste
5. Paint chips from structural steel and wood soffits: Hazardous lead waste

C. The HMAC shall perform the following:
1. All secondary waste materials generated during lead hazard reduction, i.e. disposable clothing, polyethylene sheeting, wastewater, etc., shall have confirmatory TCLP testing to determine waste characterization. This testing shall be performed and paid for by the HMAC. Results shall be furnished to the Owner's representative.
2. The HMAC shall comply with the requirements for small quantity generators (generates between one hundred (100) kg and one thousand (1000) kg of hazardous waste in a month or accumulates no more than one thousand (1000) kg of hazardous waste on-Site at any one time and stores waste for no greater than ninety (90) days).
3. The HMAC shall ensure that all hazardous waste generated is sent off-Site to permitted hazardous waste treatment, storage, or disposal facilities (TSDF).
4. The HMAC shall use DEEP permitted transporters for transport of hazardous waste.
5. The HMAC shall apply for a temporary EPA identification number. Hazardous waste manifests must be utilized which bear this I.D. number.
6. The HMAC shall comply with hazardous waste containerization requirements including but not limited to maintaining the containers in good condition, keeping containers closed and

locked while in storage, properly labeling and dating containers, and using containers which are DEEP approved for over the road use.

7. The HMAC shall develop a written inspection schedule to inspect any containers of hazardous waste at least weekly.
8. The HMAC shall designate an emergency coordinator who will be responsible for coordinating emergency response measures. Basic emergency information must be listed in writing, and posted next to the on-Site telephone. This information must include the name and number of the emergency coordinator.
9. The HMAC shall develop a written contingency plan for the Site, which describe actions personnel will take in response to fires or other emergencies that may result in a release of hazardous waste constituents. The plan must meet certain content requirements and copies of the plan must be submitted to certain local emergency response officials.
10. The HMAC must provide written notification to local fire departments and/or police regarding the location, nature, and duration of the lead-removal project, and regarding the type and quantity of hazardous waste that may be stored at the Site.
11. The HMAC must train their employees in hazardous waste management. They must maintain certain documentation regarding their training program, including the names, job titles, and job descriptions of the employees involved with hazardous waste management, a written description of the training that is given, and records documenting that employees have been trained. Annual updates of training must also be given.
12. The HMAC may not store hazardous waste on-Site for greater than ninety (90) days without a TSDF permit.
13. Before leaving the Site for the last time, the HMAC must remove any remaining hazardous waste and must decontaminate any equipment, storage areas, structures, soil, etc. contaminated as a result of the removal or storage of the hazardous waste generated at the Site.

3.11 REOCCUPANCY INSPECTION AND CLEARANCE SAMPLING

A. A visual inspection by Eagle's CT DPH licensed lead inspector shall be conducted at the completion of lead removal work to determine compliance with this Specification. The HMAC shall notify Eagle Environmental, Inc. a minimum of forty-eight (48) hours before the visual inspection.

B. One (1) dust wipe sample shall be collected from the floor, a representative window sill and window well in each room or area where lead hazard reduction work was conducted.

C. One (1) dust wipe sample shall be collected from outside each work area.

D. The following criteria must be met for final clearance dust wipe samples where lead hazard reduction work and interim control work is performed:
   1. Floors: < 5 µg/ft²
   2. Window Sills: < 10 µg/ft²
   3. Window Well: < 100 µg/ft²

E. The initial sampling costs shall be incurred by the Owner. Additional sample collection and analysis costs shall be incurred by the HMAC or for failed sample results.

END OF SECTION 020900

SECTION 021100 – PCB REMEDIATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. The work specified herein covers the proper worker protection, work area preparation, removal procedures, disposal requirements, and post abatement visual inspections for the removal of materials presumed to contain polychlorinated biphenyls (PCB) greater than fifty parts per million (>50 ppm) associated with the demolition work at the Edgewood Pre-K Academy located at 345 Mix Street in Bristol, Connecticut (Site).

B. Related Section:

1.	Section 011001:	Hazardous Materials General Conditions
2.	Section 011600:	Hazardous Materials Scheduling and Phasing
3.	Section 012200:	Hazardous Materials Unit Prices
4.	Section 017701:	Hazardous Materials Contract Closeout
5.	Section 020750:	Selective Demolition for Hazardous Materials Abatement
6.	Section 020800:	Asbestos Abatement
7.	Section 020820:	Universal Waste Reclamation
8.	Section 020900:	Lead Paint Awareness

1.3 GENERAL PROVISIONS

A. The Edgewood Pre-K Academy located at 345 Mix Street in Bristol, CT (the "Site") consists of an approximately 44,500 square foot single story steel framed masonry building. The original building was constructed in 1956-1957 with two additions added to the original structure in 1963-1965 and 1985-1987.

B. A presumptive approach for managing building materials for disposal as presumed Polychlorinated Biphenyl (PCB) Bulk Product Waste >50 ppm is included in the project. The work covered in this section includes the minimum procedures that shall be employed during the remediation of presumed PCB Bulk Product Waste.

C. The project may be separated into phases that are to be coordinated with the overall phasing of the renovation project. Refer to the Construction Manager's phasing plans for additional information. It is the Hazardous Materials Abatement Contractor's (HMAC) responsibility to become familiar with the phasing plan for the project and to include the required remobilization fees to support the phasing. The HMAC shall comply with the overall project schedule established by the Construction Manager. Modifications or changes to the project phasing shall not be grounds for a change order.

D. The HMAC shall remove all specified asbestos containing materials as identified in Section 020800 Asbestos Abatement and on drawings HM-1 through HM-3 and dispose of as regulated asbestos waste and presumed PCB containing waste >50 ppm.

E. The cleanup and disposal of the presumed PCB Bulk Product Waste shall be performed in

accordance with the Toxic Substances Control Act (TSCA) 40 CFR §761.62(b) *disposal in a solid waste* landfill.

F. The suspect materials at the Site have been analyzed for asbestos or lead-based paint only. No PCB testing shall be performed by the HMAC without written authorization from the Owner and the Owner's Consultant. If unauthorized testing is performed, the HMAC accepts all responsibility and costs associated with the removal of additional materials not in the Project Scope of Work if dictated by state and federal regulations.

1.4 PROJECT DESCRIPTION

A. Materials that will be encountered with this Project are defined as presumed PCB Bulk Product Waste.

B. Certain asbestos-containing materials that will be impacted by the renovation project shall be disposed of as combination regulated asbestos waste and presumed PCB Bulk Product Waste >50 ppm. Refer to Section 020800 Asbestos Abatement for scope of asbestos removal and additional requirements for work area preparation, removal, and disposal. The asbestos-containing materials that shall be removed and disposed of as presumed PCB Bulk Product Waste include but are not limited to the following materials:
1. Interior caulk at interior door and partition window frames, steel columns, and masonry wall junctions ~2,155 LF
2. Interior window glazing compound at metal sashes – black (partition windows, sidelights, transom windows) ~178 Each
3. Interior window glazing compound at metal sashes in metal doors ~11 Each
4. 9"x9" Floor tiles and associated mastic - ~24,650 SF
5. Duct flange sealant – black ~10 LF
6. Pipe flange gaskets ~30 Each
7. Pipe valve packing ~12 Each
8. Exterior expansion joint caulks ~130 LF
9. Caulk at wood soffit – beige ~35 LF
10. Top layer edge flashing cement ~1570 SF
11. Tar at roof drain pans ~95 SF
12. Cement board at raised wall (to Roof 2) ~210 SF
13. Silver paint at raised penetrations, skylight bases, expansion joints and roof wall junctions ~1,300 SF
14. Caulk at top of cement board ~65 LF

C. Non-asbestos materials that will be impacted by the renovation project shall be removed and disposed of as presumed PCB Bulk Product Waste >50 ppm. The materials that shall be removed and disposed of as presumed PCB Bulk Product Waste include but are not limited to the following materials:
1. Residual original caulk at door frames and window perimeters under newer window/door systems and newer caulks ~ 310 LF

D. Certain surfaces and components that will be impacted under this scope of work have been coated with lead-based paint. The HMAC shall refer to Section 020900 Lead Paint Awareness for additional requirements for work area preparation, removal, and disposal.

E. PCB remediation that includes asbestos abatement work shall not be performed while students or children under the age of 18 are present within the building.

F. Waste Dispositions:

1. The HMAC shall remove and dispose of the presumed PCB Bulk Product Waste under

§761.62(b)(i), *disposal in a solid waste landfill.* The waste shall be disposed of in a non-hazardous waste landfill permitted by the State in which it is disposed to accept the waste under§761.62(b)(i) and asbestos.

G. Remediation Plans:
1. Hazardous Materials Abatement Plans HM-1 through HM-3.

1.4 GENERAL REQUIREMENTS

A. The HMAC shall furnish all labor, materials, facilities, equipment, installation services, employee training, notifications, permits, licenses, certifications, agreements, and incidentals necessary to perform the specified work. Work shall be performed in accordance with the Contract Documents, the latest regulations from the Occupational Safety and Health Administration (OSHA), the EPA, the State of Connecticut, and all other applicable federal, state, and local agencies. Whenever the requirements of the above references conflict or overlap, the more stringent provision shall apply.

B. All project personnel engaged in the remediation work covered under this section shall be trained with forty (40) hours of hazardous waste operations training.

C. The HMAC shall provide a Project Health and Safety Officer with forty (40) hour OSHA Hazwoper training and an additional eight (8) hours of supervisor training in hazardous waste site operations as described in 29 CFR 1910. The supervisor shall be on site at all times during remediation work.

D. The HMAC shall be required to attend a preconstruction meeting with his/her site supervisor and subcontractor they employ on site for the purpose of reviewing the contract requirements.

1.5 GENERAL SCOPE OF WORK

A. The HMAC shall be responsible for the removal and disposal of presumed PCB Bulk Product Waste where identified materials will be impacted under the overall scope of the demolition project.

B. The HMAC shall be responsible for decontaminating all tools and equipment used in the remediation work. Tools shall be decontaminated using the methods prescribed by 40 CFR 761 Subpart S. The HMAC shall capture all decontamination fluids and handle them in accordance with this Specification.

C. The HMAC shall be responsible for disposal of all disposable clean-up materials (i.e. used PPE, used containment barriers, etc.) in accordance with this Specification.

1.6 SUBMITTALS

The following documents shall be submitted to the Owner’s Consultant prior to the start of the Project:

A. Training Documentation:
1. Documentation of 40- Hour HAZWOPER and 8-Hour Supervisor Training for the designated on-Site Health and Safety Officer and 8-hour PCB Awareness Training for all engaged personnel.
2. Respirator fit-test records of each employee who may be on the project site,
3. Medical records for use of respiratory protection for each employee who may be on the project site.

B. Work Plan: A written work plan that details the means and methods to be used for the removal and disposal of scheduled materials, waste container staging, ground protection, and the HMAC's plan to protect workers and prevent waste migration from work areas. The work plan shall include the following elements:
   1. Floor plans indicating the proposed work areas and containment barriers, and signage for all presumed PCB Bulk Product Waste removal work as outlined in this Specification;
   2. Specific procedures to be used to remove and dispose of scheduled items and decontamination of equipment, and tools;
   3. Detailed plans and procedures for removal of scheduled materials from in situ positions, transport of the materials to waste containers, reduction of waste materials for disposal requirements;
   4. Detailed plans and procedures to ensure that further contamination of the Site does not occur as the result of remediation procedures;
   5. Detailed procedures for personnel and equipment decontamination including procedures for the capture and containment of decontamination fluids.
   6. A detailed proposed schedule for all remediation and disposal activities.

C. Presumed PCB Bulk Product Waste Disposal Plan: A written plan that details the HMAC's plan for transportation and disposal of all wastes generated during the project. The Disposal Plan shall identify:
   1. Waste packaging, labeling, placarding, and manifesting procedures,
   2. A list of anticipated waste profiling procedures and samples and identification of the firms that will collect and analyze the samples.
   3. The name, address, 24-hour contact number, and EPA TSCA Approval (if applicable) for the proposed treatment or disposal facilities to which wastes generated during the project will be transported.
   4. The name, address, contact person(s) and state-specific permit numbers for proposed waste transporters.
   5. A site plan indicating where waste disposal containers will be staged and how they will be labeled and secured.
   6. The route(s) by which the waste will be transported to the designated disposal facility, and states or territories through which the waste will pass if the waste is to be disposed of outside of the State of Connecticut.
   7. Safety Data Sheets: Safety Data Sheets (OSHA Form 174 or equivalent) and manufacturer's information shall be provided for all chemicals and materials to be used during the project including decontamination fluids.

D. Health and Safety Plan
   1. The HMAC is responsible and liable for the health and safety of all on-site personnel and the off-site community affected by the Project. All on-site workers or other persons entering the abatement work areas, decontamination areas or waste handling and staging areas shall be knowledgeable of and comply with the requirements of the site-specific Health and Safety Plan (HASP) at all times. The HMAC's HASP shall comply with all applicable federal, state, and local regulations protecting human health and the environment from the hazards posed by the work to be performed under this project.
   2. The HASP shall carry the endorsement and signature of a health and safety professional.
   3. The HMAC shall not initiate on-site work in the contaminated areas until the HASP has been finalized and reviewed and accepted by the Owner’s Consultant.
   4. Consistent disregard for the provisions of the HASP shall be deemed as sufficient cause for immediate stoppage of work and termination of the Contract or any Subcontracts without compromise or prejudice to the rights of the Owner or the Architect.
   5. Any discrepancies between the HMAC's HASP and these specifications or federal and state regulations shall be resolved in favor of the more stringent requirements that provide the highest degree of protection to the project personnel and the surrounding community and environment, as determined by the Owner’s Consultant.
   6. In addition to exposure concerns of hazardous materials, other health and safety

considerations will apply to the work. The HMAC shall be responsible for recognizing such hazards and shall be responsible for the health and safety of HMAC employees at all times. It is the HMAC's responsibility to comply with all applicable health and safety regulations.

7. The HMAC shall prepare and submit a site-specific HASP to the Owner's Consultant a minimum of ten (10) business days prior to commencement of abatement work. The HASP shall govern all work conducted at the Site during the remediation of caulk; waste handling, sampling, and management; and waste transportation.
8. At a minimum, the HASP shall address the requirements set forth in 29 CFR 1910.120, as further outlined below:

    a. Health and Safety Organization
    b. Site Description and Hazard Assessment
    c. Training (HAZWOPER)
    d. Medical Surveillance
    e. Work Areas
    f. Personal Protective Equipment
    g. Personal Hygiene and Decontamination
    h. Standard Operating Procedures and Engineering Controls
    i. Emergency Equipment and First Aid Provisions
    j. Equipment Decontamination
    k. Air Monitoring
    l. Telephone List
    m. Emergency Response and Evacuation Procedures and Routes
    n. Site Control
    o. Permit-Required Confined Space Procedures (If Applicable)
    p. Spill Containment Plan
    q. Heat and Cold Stress
    r. Record Keeping
    s. Community Protection Plan

9. The HASP shall be reviewed by all persons prior to entry into the abatement, decontamination, or waste staging areas, whether a representative of the HMAC, Owner, Architect/Engineer, Environmental Consultant, sub-HMACs, waste transporter or Federal, State, or local regulatory agency. Such review shall be acknowledged and documented by the HMAC's Health and Safety Officer by obtaining the name, signature and affiliation of all persons reviewing the HASP.
10. The HASP shall be maintained so as to be readily accessible and reviewable by all site personnel throughout the duration of the-abatement project and until all waste materials are removed from the site and disposed of at the appropriate disposal facility.
11. The HMAC's on-site Health and Safety Officer shall be responsible for ensuring that project personnel and site visitors are informed of and comply with the provisions of the HASP at all times during the project.

E. The following documents shall be submitted to the Owner's Consultant within seven (7) calendar days following removal of waste from the Site:
    1. Waste Profile Sheets
    2. Pre-Disposal Analysis Test Results (if testing is conducted)
    3. Manifests signed by the disposal facility
    4. Tipping Receipts provided by the disposal facility
    5. Certification of Final Disposal signed by the responsible disposal facility official.

1.7 APPLICABLE STANDARDS AND REGULATIONS

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by basic designation only. Where a conflict or overlap

among regulations and/or these specifications exist, the most stringent requirements shall apply. The Owner's Consultant will determine which requirements are most stringent.

1. AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI)

   a. ANSI.Z89.1 Personnel Protective Equipment-Protective Headwear for Industrial Workers-Requirements (Latest Revision)

2. CODE OF FEDERAL REGULATIONS (CFR) U.S. DEPARTMENT OF LABOR, OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION(OSHA)

   a. 29 CFR Subpart D Walking -Working Surface
   b. 29 CFR 1910.120 Hazardous Waste Operations and Emergency Response
   c. 29 CFR 1910.134 Respiratory Protection Standard
   d. 29 CFR 1910.1200 Hazard Communication
   e. 29 CFR 1926.20 General Health and Safety Provisions
   f. 29 CFR 1926.57 Ventilation
   g. 29 CFR 1926.59 Hazard Communication Program
   h. 29 CFR 1926.62 Lead Exposure in Construction
   i. 29 CFR 1926.65 Hazardous Waste Operations and Emergency Response
   j. 29 CFR 1926.95 Criteria for Personal Protective Equipment
   k. 29 CFR 1926, Subpart H Materials Handling, Storage, Use and Disposal
   l. 29 CFR 1926, Subpart L Scaffolding
   m. 29 CFR 1926, Subpart M Fall Protection
   n. 29 CFR 1926, Subpart X Ladders
   o. 29 CFR 1926, Subpart Z Toxic and Hazardous Substances

3. U.S. ENVIRONMENTAL PROTECTION AGANECY (US EPA)

   a. 40 CFR 50.6 National Primary and Secondary Ambient Air Quality Standards for Particulate Matter
   b. 40 CFR 260 Hazardous Waste Management System: General
   c. 40 CFR 261 Identification and Listing of Hazardous Waste
   d. 40 CFR 262 Standards Applicable to Generators of Hazardous Waste
   e. 40 CFR 263 Standards Applicable to Transporters of Hazardous Waste
   f. 40 CFR 264 Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   g. 40 CFR 265 Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   h. 40 CFR 268 Land Disposal Restrictions
   i. 40 CFR 700 Toxic Substances Control Act (TSCA)
   j. 40 CFR 761 PCBs Manufacturing, Processing, Distribution in Commerce and Use Prohibitions

4. U.S. DEPARTMENT OF TRANSPORTATION (DOT)

   a. 49 CFR 105 Hazardous Materials Program. Definitions and General Procedures
   b. 49 CFR 171 General Information, Regulations and Definitions
   c. 49 CFR 172 Hazardous Material Tables. Special Provisions, Hazardous Materials Communications Emergency Response Information and Training Requirements
   d. 49 CFR 173 Shippers-General Requirements for Shipments and Packaging
   e. 49 CFR 177 Carriage by Public Highway
   f. 49 CFR 178 Specifications for Packaging

5. NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH (NIOSH)

   a. Publication Number 87-10B Respiratory Decision Logic NIOSH/OSHA Booklet 3142 Lead in Construction
   b. Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities (NIOSH Publication 85-115)

6. U.S. DEPARTMENT OF LABOR, OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA)

   a. PUB 3126 Working with Lead in the Construction Industry
   b. 29 CFR 1910, Subpart I, Appendix B-Non-Mandatory Compliance Guidelines for Hazard Assessment and Personal Protective Equipment Selection

7. REGULATIONS OF CONNECTICUT STATE AGENCIES (RCSA)

   a. Hazardous Waste 22a-449(c)-100 through 119
   b. Hazardous Waste Transporter Permits 22a-449(c)-11
   c. Permit Fees for Hazardous Waste Materials Management 22a-454-1

8. UNITED STATES ENVIRONMENTAL PROTECTION AGENCY GUIDANCE

   a. Polychlorinated Biphenyl (PCB) Site Revitalization Guidance Under the Toxic Substances Control Act

1.8 POSTING AND RECORD MAINTENANCE REQUIREMENTS

A. The following items shall be conspicuously displayed proximate to but outside of abatement work areas. The HMAC shall assure that the posted regulations are not altered, defaced, or covered by other materials.

B. Exit Routes
   1. Emergency exit procedures and routes

C. Emergency Phone Numbers
   1. A list Indicating the telephone numbers and locations of the local hospital(s); the local emergency squad; the local fire department; the local police department; the Poison Control Center; Chemical Transportation Emergency Center (CHEMTREC); the Connecticut State Department of Public Health's office; the HMAC (on-site and after hours numbers); and the environmental consultant (on-site and after hours numbers).

D. Warning Signs
   1. Warning signs shall be posted in English and in the language of any workers on-site who do not speak English, and be of sufficient size to be clearly legible and display the following:

WARNING:
HAZARDOUS WASTE WORK AREA
PRESUMED PCBs-POISON
NO SMOKING, EATING OR DRINKING
AUTHORIZED PERSONNEL ONLY
PROTECTIVE CLOTHING IS REQUIRED IN THIS AREA

E. Items Available On-Site
   1. The HMAC shall maintain the following items on-site and available for review by all employees and authorized visitors:

a. The HMAC's Work Plan
b. The HMAC's Disposal Plan
c. The Project Health and Safely Plan (HASP)
d. Certificates of Training for all workers and the project Supervisor
e. Copies of applicable codes, standards, and publications
f. Safety Data Sheets (SDS) for all chemicals used during the project.
g. Copies of the HMAC's written hazard communication, respiratory protection, and confined space entry programs.

1.9 WORK ZONES

A. The HMAC shall establish and clearly identify work zones in the field. Access by equipment, site personnel, and the public to the work areas shall be limited as follows:
1. Abatement Zone - The Abatement Zone(s) shall consist of all areas where remediation, waste handling and staging activities are ongoing and the immediately surrounding locale or other areas where contamination could occur. Outdoor Abatement Zones shall be visibly delineated with orange construction fencing at a minimum and restricted from access by all persons except those directly necessary to the completion of the respective remediation tasks. Indoor Abatement Zones shall be delineated with one (1) layer of 6-mil polyethylene sheeting isolation barriers, two (2) layers of 6-mil polyethylene sheeting on floors and two (2) layers of 4-mil polyethylene sheeting on walls, maintained under negative pressure with HEPA filtered exhaust systems, posted with warning signs and restricted from access by all persons except those directly necessary to the completion of the respective remediation tasks. The Abatement Zones shall be relocated and delineated as necessary as work progresses from one portion of the project Site to another, to limit access to each remediation area and to minimize risk of exposure to site workers and the general public. Prior to relocation, areas shall be visually inspected by the Owner's Consultant to confirm completion of work. Access shall be controlled at the periphery of the Abatement Zones to regulate the flow of personnel and equipment into and out of each zone and to help verify that proper procedures for entering and exiting are followed. All persons within the Abatement Zones shall have all the required training and wear the appropriate level of protection established in the HASP. Refer to Section 020800 Asbestos Abatement for additional requirements that will affect the Abatement Zone construction and re-occupancy air testing during asbestos-containing material removal performed concurrently with PCB remediation.
2. Decontamination Zone - The Decontamination Zone is the transition zone between the remediation area and the "clean" Support Zone, and is intended to reduce the potential for contaminant dispersal from the Abatement Zone to clean areas of the site. The Decontamination Zone shall consist of a buffer area surrounding each Abatement Zone through which the transfer of equipment, materials, personnel, and containerized waste products will occur and in which decontamination of equipment, personnel, and clothing will occur. The Decontamination Zones shall be clearly delineated with caution tape at a minimum and labeled with signage as provided in Part 1.8 of this Section. All emergency response and first aid equipment shall be readily maintained in these Zones. All protective equipment and clothing shall be removed or decontaminated in the Decontamination Zone prior to exiting the Support Zone.
3. Support Zone - The Support Zone will consist of the area outside the Decontamination Zones and the remainder of the project site. Administrative and other support functions and any activities that by nature need not be conducted in the Abatement or Decontamination Zone related to the project shall occur in the Support Zone. Access to the Abatement and Decontamination Zones shall be controlled by the Health and Safety Officer and limited to those persons necessary to complete the remediation work and who have reviewed and signed the HASP.

1.10 PERSONAL PROTECTIVE EQUIPMENT

A. The HMAC shall be responsible for determining and provide the appropriate level of personal protective equipment in accordance with applicable regulations and standards necessary to protect the HMAC's employees and the general public from all hazards present.

B. The HMAC shall provide all employees with the appropriate safety equipment and protective clothing to ensure an appropriate level of protection for each task, taking into consideration the chemical, physical, ergonomic, and biological hazards posed by the Site and work activities.

C. The HMAC shall establish criteria for the selection and use of personal protective equipment (PPE) in the HASP.

D. The PPE to be utilized for the project shall be selected based upon the potential hazards associated with the project site and the work to be performed. Appropriate protective clothing shall be worn at all times within the Abatement Zone.

E. The HMAC shall provide the appropriate level of respiratory protection to all field personnel engaged in activities where respiratory hazards exist or there is a potential for such hazard to exit.

F. The HMAC shall provide, as necessary, protective coveralls, disposable gloves and other protective clothing for all personnel that will be actively involved in abatement activities or waste handling activities or otherwise present in the Abatement Zones. Coveralls shall be of Tyvek or equivalent material. Should the potential for exposure to liquids exist, splash-resistant disposable suits shall be provided and utilized.

G. Protective coveralls, and other protective clothing shall be donned and removed within the Decontamination Zone and shall be disposed of at the end of each day. Ripped coveralls shall be immediately replaced after appropriate decontamination has been completed to the satisfaction of the Health and Safety Officer. Protective clothing shall not be worn outside of the Decontamination Zone.

H. Hard Hats, protective eyewear, rubber boots and/or other non-skid footwear shall be provided by the HMAC as required for workers and authorized visitors, Safety shoes and hard hats shall be in conformance with ANSI Z89.1 (1969) and ANSI 241.1 (1967), respectively.

I. All contaminated protective clothing, respirator cartridges and disposable protective items shall be placed into proper containers to be provided by the HMAC for transport and proper disposal in accordance with 40 CFR 262.

1.11 EMERGENCY EQUIPMENT AND FIRST AID REQUIREMENTS

A. The HMAC shall provide and maintain at the site, at a minimum, the following Emergency and First Aid Equipment:
   1. Fire Extinguishers-a minimum of one (1) fire extinguisher shall be supplied and maintained at the site by the HMAC throughout the duration of the project. Each extinguisher shall be a minimum of a 20-pound Class ABC dry fire extinguisher with Underwriters Laboratory approval per 29 CFR 1910.157.
   2. First Aid Kit-a minimum of one (1) first aid kit meeting the requirements of 29 CFR 1910.151 shall be supplied and maintained at the site by the HMAC throughout the duration of the project.
   3. Communications (either cellular or radio) shall be provided by the HMAC for use by site personnel at all times during the project.

B. The Health and Safety Officer shall be notified immediately in the event of personal injury, potential exposure to contaminants, or other emergency. The Health and Safety Officer shall then immediately notify the Owner's Consultant of same.

C. If a member of the work crew demonstrates symptoms of heat or cold stress, injury, chemical exposure or other similar issue, another team member present within the delineated Abatement Zone (i.e., suitably equipped with appropriate PPE provisions) should remove the affected person from the delineated work site and signal/communicate to the Health and Safety Officer of the incident. Precautions should be taken to avoid exposure of other individuals to contaminated media.

D. An evaluation of the person's condition shall be made by the Health and Safety Officer, to determine the appropriate course of action to administer first aid or other emergency response provision. The Health and Safety Officer shall assess the seriousness of the injury, give first aid treatment if appropriate, and arrange for appropriate emergency response from outside emergency services, it warranted.

E. If soiled clothing cannot be removed, the injured person will be wrapped in a blanket while transported from the Site.

F. The Health and Safety Officer shall monitor the affected person to determine whether there are symptoms resulting from the exposure or injury. If there is a visible manifestation of exposure such as skin irritation, the affected party shall be referred to a medical facility for treatment and evaluation as to whether the manifestation may be indicative of a delayed or acute exposure, a secondary response to exposure such as skin infection or occupational dermatitis. All incidents of injuries and/or obvious chemical exposure shall be evaluated by the Health and Safety Officer and the Owner's Consultant to determine whether modifications to work practices and/or protective provisions are warranted.

1.12 STANDARD SAFETY AND HEALTH PROCEDURES AND ENGINEERING CONTROLS

A. The following provisions shall be employed to promote overall safety, personnel hygiene, and personnel decontamination:
   1. Each HMAC or subcontractor shall ensure that all safety equipment and protective clothing to be utilized by its personnel is maintained in a clean and readily accessible manner at the Site.
   2. All prescription eyeglasses in use on this project shall be safety glasses conforming to ANSI Standard Z87.1. No contact lenses shall be allowed on the site.
   3. Prior to exiling the delineated Decontamination Zone(s), all personnel shall remove protective clothing, and place disposable items in appropriate disposal containers to be dedicated to that purpose. Following removal of PPE, personnel shall thoroughly wash and rinse their face, hands, arms, and other exposed areas with soap and tap water wash and subsequent tap water rinse. A fresh supply of tap water shall be provided at the site on each working day by the HMAC for this purpose.
   4. All PPE used on site shall be decontaminated or disposed of at the end of each work day. Discarded PPE shall be placed in the appropriate waste stream.
   5. Respirators, if necessary, shall be dedicated to each employee, and not interchanged between workers without cleaning and sanitizing.
   6. Eating, drinking, chewing gum or tobacco, smoking, and any other practice that increases the likelihood of hand to mouth contact shall be prohibited within the delineated abatement and decontamination work zones. Prior to performing these activities, each employee shall thoroughly cleanse their face, hands, arms, and other exposed areas,
   7. All personnel shall thoroughly cleanse their face, hands, arms, and other exposed areas prior to using toilet facilities.

8. No alcohol, tobacco, illegal drugs, weapons, or firearms will be allowed on the Site at any time.
9. All personnel that are on non-prescription (i.e., over-the-counter) or prescription medication of any kind shall notify the Health and Safety Officer prior to conducting work at the site. The Health and Safety Officer will make a determination as to whether such individuals will be allowed to work on the Site, and, if so, in what capacity. The Health and Safety Officer may require signed documentation from the Individual's personal physician stating what limitations may be posed by the medication or condition that may apply to that individual's work activities.
10. Contact with potentially contaminated surfaces should be avoided, if possible. Field personnel should minimize walking through standing water/puddles, mud or other wet or discolored surfaces; kneeling on ground; and placing equipment, materials, or food on ground or other potentially contaminated surface.
11. The use of the "Buddy System"` shall be employed at all times while conducting work at the site. Each employee shall frequently monitor other workers for signs of heat stress or chemical exposure or fatigue; periodically examine others PPE for signs of wear or damage; routinely communicate with others; and notify the Site Safety Officer in the case of an emergency.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. All materials shall be delivered in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with asbestos shall be decontaminated or disposed of as asbestos waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating six-mil.

D. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheets to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

E. All proper labeling and placards for waste receptacles shall be maintained on site in a sufficient quantity to support the project.

F. Pre-printed caution tape shall be maintained on site in a sufficient quantity to support the project.

G. 6-mil polyethylene glove bags.

H. Non-chlorinated organic solvent.

I. Appropriate labels and signage.

J. Appropriate waste containers.

2.2 TOOLS AND EQUIPMENT

A. Provide suitable tools for caulk and glazing removal.

B. The HMAC shall have air monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

C. The HMAC shall have available sufficient inventory on site for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape, and air filters.

D. The HMAC shall provide temporary electrical power sources such as generators (when required).

E. Vacuum units and negative pressure exhaust fans of suitable size and capacities for project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all mono-dispersed particles of 0.3 micrometers in diameter or larger.

PART 3 - EXECUTION

3.1 SEQUENCE OF SITE WORK

A. The HMAC shall coordinate all remediation and disposal activities with the Building Owner (or Owner's Representative) and the General Contractor.

B. If there will be changes to the initial schedule or sequencing, the HMAC shall inform the Owner's Consultant in writing and confirm all dates on submitted schedules.

C. The HMAC shall coordinate all work with the General Contractor and confirm weatherization or security requirements of the building following remediation activities.

D. Public access to the building shall not be restricted by the work.

3.2 WORK AREA PREPARATION – GENERAL

A. The HMAC shall isolate Abatement Zones, Decontamination Zones and Support Zones as described in this Section and install appropriate signage to work areas from non-work areas within the building and on the building exterior to prevent air exchange and unauthorized entry into the work areas.

B. Prior to commencement of presumed PCB-containing materials abatement activities at each work area, a containment system shall be constructed by the HMAC to capture and contain all materials removed during the abatement.

C. For exterior abatement areas, install polyethylene drop cloths a minimum of 6-mils thick to protect ground and/or roof from PCB contamination. Drop cloths shall extend a minimum of ten (10) feet in all directions from the location of PCB removal activities, or further as required by Site conditions, to prevent presumed PCB-containing materials from contaminating the ground. Weigh down corners of drop cloths and seal to building below windows to collect all debris. Do not apply spray adhesive to building components scheduled to remain. Install isolation barriers at all openings to the interior of the building to prevent PCB-containing materials from entering the building.

D. For the removal of presumed PCB-containing materials on the interior to the building, establish Interior Abatement Zones, Decontamination Zones and Support Zones as described in this Section. Create pressure differential between work areas and occupied areas by the use of acceptable negative air pressure equipment. The HMAC shall ensure the required negative air pressure is obtained throughout the containment and the total volume of air within the work area is changed every fifteen (15) minutes. Do not apply spray adhesive to building components scheduled to remain.

E. Post all approaches to each work area with PCB warning signs. Warning signs shall be of size and type that are easily readable and are visible from all approaches to the work areas.

F. Establish water to control dust during abatement and demolition activities.

G. All debris generated during operations including but not limited to visible caulks, door casing, block walls, asbestos-containing materials being removed concurrently with PCB remediation, dust and debris shall be HEPA vacuumed continuously throughout the work shift and at the end of the work shift to avoid accumulation. Any tears or rips that occur in polyethylene barriers or ground covers or tarps shall be repaired or removed and replaced with new protections.

H. Ladders, scaffolding, or lifts utilized in the remediation shall be properly decontaminated as addressed in the HMAC's work plan prior to removal from the work area.

I. Abrasive actions performed on contaminated materials and masonry shall not be allowed unless performed within an Interior Abatement Zone negative pressure enclosure.

J. All working surfaces of tools and equipment that contacts contaminated material shall be decontaminated using the methods prescribed by 40 CFR 761 Subpart S prior to removal from the regulated area.

3.3 PREPARATION OF ABATEMENT ZONES

A. For interior work areas, the HMAC shall establish Abatement Zones, Decontamination Zones, and Support Zones in accordance with Part 1.9 of this Specification and the following:
   1. The HMAC shall establish a negative pressure enclosure of sufficient size to contain the work area.
   2. Provide GFCI devices, temporary power, and temporary lighting installed in compliance with the applicable electrical codes. All temporary installations are to be done by a licensed electrician.
   3. Shut down electrical power, including receptacles and light fixtures. Lock and tag out circuits associated with the electrical components in the work area(s).
   4. Shut down and isolate heating, cooling, and ventilation air systems to prevent contamination or particle dispersal to other areas of the structure. Lock and tag out circuits associated with heating and cooling units. During the work, vents within the work area shall be sealed with duct tape and polyethylene sheeting.
   5. Seal off all openings, including but not limited to operable windows, corridors, doorways, skylights, ducts, grills, diffusers, and any other penetration of the work areas, with two (2) layers polyethylene sheeting minimum of 6-mils thick sealed with duct tape. In addition to the polyethylene sheeting, place hard barriers at doorways and corridors which will not be used for passage between Abatement Zones and non-abatement areas. Seal all floor drains.
   6. Cover all floors that are not in the scope of remediation within the Abatement Zone with a minimum of two (2) layers of 6-mil polyethylene sheeting or as defined in the approved Alternative Work Practice if removal being performed concurrently with asbestos abatement. Cover all walls that are not in the scope of remediation within the Abatement Zone with a minimum of two (2) layers of 4-mil polyethylene sheeting or as defined in the approved Alternative Work Practice if removal performed concurrently with asbestos abatement.
   7. Maintain emergency and fire exits from the work area, or establish alternative exits satisfactory to fire officials.
   8. Create pressure differential between Abatement Zones and non-abatement areas by the use of acceptable negative air pressure equipment. The HMAC shall ensure required negative air pressure is obtained throughout the containment and the total volume of air within the work area is changed every fifteen (15) minutes.
   9. Post all approaches to each work area with appropriate warning signs. Warning signs shall

be of size and type that are easily readable and are visible from all approaches to the work areas.

10. Install drop cloths to facilitate the cleanup.

B. For exterior work areas, the HMAC shall establish Abatement Zones, Decontamination Zones, and Support Zones in accordance with Part 1.9 of this Specification and the following:

1. Intact or Outdoor Remediation: A Negative Pressure Enclosure (NPE) will not be required in the Abatement Zones for the remediation if the window sashes are removed intact or (isolated) outdoors and for exterior caulk, roofing and flashing material removal utilizing techniques that do not create visible dust.
2. All approaches to work areas shall be restricted with barriers (i.e. orange construction fencing) and properly posted with signage.
3. The HMAC shall establish the Abatement Zone, Decontamination Zone and Support Zone in accordance with Part 1.9 of this Specification. The boundaries of the three (3) zones shall be designated and segregated by orange construction fencing and posted with proper signage at a minimum.
4. To ensure that exterior work will not contaminate interior areas of the building, exterior abatement zones shall be isolated from the interior areas of the building with isolation barriers consisting of two (2) layers of six (6) mil polyethylene sheeting or equivalent to prevent accidental entry and air exchange into the building. Within each exterior Abatement Zone, openings into the building interior such as door and window openings shall be securely sealed. The sheeting shall be sturdy enough to withstand inclement weather conditions. Utilize wood framing or hard barriers as necessary to support the sheeting.
5. Where necessary, weather screens shall be constructed to prevent the dispersion of particulate or debris due to wind or rain. The construction and placement of the weather screens shall be addressed in the HMAC's Work Plan.
6. Where necessary, ground cover and erosion controls shall be established to prevent the migration of remediation dust or debris due to water from rain or remediation activities. The construction and placement of the ground cover and erosion controls shall be addressed in the HMAC's Work Plan.
7. Catch basins within remediation work zones shall be sealed to prevent solids or liquids from entering.

3.4 DECONTAMINATION ENCLOSURE SYSTEMS

A. The HMAC shall establish a personnel and equipment decontamination system contiguous to each work area. Access between the contaminated and uncontaminated areas shall be through this decontamination enclosure only. The decontamination system shall be constructed of two (2) layers of 6-mil polyethylene sheeting.

B. Equipment to be utilized in connection with the presumed PCB-containing materials removal, waste collection or that will or may come in direct contact with the site contaminants shall be decontaminated prior to leaving the Site to prevent migration of the contaminated residues from the project Site.

C. All non-disposable equipment and tools employed in the course of the project will be decontaminated at the conclusion of each work day through the following sequence:

1. Initial tap water rinse, to remove gross debris
2. Tap water and organic solvent (i.e. Hexane) wash
3. Tap water rinse
4. Second tap water and Alconox, or equivalent, wash
5. Second tap water rinse

D. The wash water and decontamination liquids shall be captured and containerized in 55-gallon barrels for off-site disposal.

3.5 REMOVAL OF INTERIOR PRESUMED PCB CONTAINING MATERIALS >50 PPM

A. Prior to the removal of any PCB-containing materials, the HMAC shall ensure that the work areas are established in accordance with this Specification and Section 020800 Asbestos Abatement and the approved Alternative Work Practice (where applicable).

B. Control dust at all times during removal activities. Utilize shrouded equipment with HEPA filtered dust collection devices when feasible. No removal work shall be permitted without required engineering controls in place.

C. PCB containing building materials shall be fully removed from the substrate to which they are attached. Manual and mechanical methods of removal shall be utilized as appropriate for each material.

D. Remove all asbestos-containing materials and immediately containerized for proper disposal as combination regulated asbestos waste and presumed PCB Bulk Product Waste >50 ppm as applicable.

E. Remove all non-asbestos caulks from walls where identified for removal and immediately containerized for proper disposal as presumed PCB Bulk Product Waste >50 ppm as applicable.

F. Remove caulk using manual techniques. Remove all backer rod material in contact with caulk and dispose of as asbestos contaminated waste and presumed PCB Bulk Product Waste >50 ppm. Do not damage substrates scheduled to remain.

G. Floor tile adhesives shall be removed using blastract, manual scraping methods or grinder with a dust collection device fitted with a HEPA filtration system. One (1) worker shall be dedicated to continuously misting work area during blastract and grinder use. The waste captured by blastrac operations and grinders, if used, shall be removed from the blastrac hopper and vacuums, wetted and disposed of as friable asbestos waste and presumed PCB Bulk Product Waste >50 ppm.

H. Manually remove adhesives from all imperfections, seams, cracks, gaps, or other spaces in floor which is not removed during blastrac or grinding operations.

I. Valves, gaskets and ducts flanges shall be removed either intact or utilizing full containment procedures then disposed of as asbestos waste and presumed PCB Bulk Product Waste >50 ppm.

J. Following removal of the materials, final clean the work area in accordance with Part 3.7 FINAL CLEANING.

3.6 REMOVAL OF EXTERIOR PRESUMED PCB CONTAINING MATERIALS >50 PPM

A. Remove all exterior asbestos-containing and presumed PCB-containing door caulk within areas of renovation. Dispose of caulk as asbestos waste and presumed PCB Bulk Product Waste >50 ppm.

B. Remove all exterior asbestos-containing and presumed PCB-containing roofing materials including edge flashing cements, tar at roof drain pans, and silver paint from roofs. Dispose of roofing materials as asbestos waste and presumed PCB Bulk Product Waste >50 ppm.

C. Remove all exterior non-asbestos and presumed PCB-containing door caulk and window caulk within areas of renovation. Dispose of caulks as presumed PCB Bulk Product Waste >50 ppm.

D. Minimum specific requirements relative to the removal of exterior caulk and glazing compounds are as follows:
   1. Establish Exterior Abatement Zones, Decontamination Zones and Support Zones as defined in this Section. Refer to Section 020800 for additional requirements for asbestos-

containing caulk and roofing material removal.

2. Prior to any caulk removal, HEPA vacuum all loose caulk from caulk lines and window panes.
3. Continuously mist the caulk and roofing materials with amended water, removal encapsulant, or detergent solution, so that entire surface is wet. Do not allow wetting agent to puddle, or run off to other areas. If removal encapsulant is used, use in strict accordance with the manufacturer's instructions.
4. Do not damage any masonry scheduled to remain.
5. Remove all caulk from wood soffits prior to the removal of wood for disposal as hazardous lead waste. Wood shall be decontaminated per Part 3.4 DECONTAMINATION ENCLOSURE SYSTEMS prior to proper packaging and disposal as hazardous lead waste. Decontaminated components shall be visually inspected by the Owner's Consultant prior to removal from work area.
6. Remove all caulk and caulk residues from wood and masonry surfaces in its entirety.
7. Remove all roofing materials and residues from substrates.
8. Containerize caulk, roofing, and all associated debris in a minimum of two (2) layers of 6-mil polyethylene sheeting and label according to proper waste profile.

E. Abrasive actions performed on caulks, roofing and masonry shall not be allowed unless performed within an Interior Abatement Zone negative pressure enclosure.

F. Following removal of all caulk and roofing materials, final clean the work area in accordance with Part 3.7 FINAL CLEANING.

3.7 FINAL CLEANING

A. Following the gross removal of all presumed PCB-containing materials and debris, each work area shall be final cleaned. Final cleaning shall include all tools, equipment, polyethylene sheeting and exposed substrates within the work area.

B. Final cleaning of floor, roof, horizontal edges, brick mortar joints, and ground surfaces shall also be required ten (10) feet in all directions from exterior of the contiguous decontamination facility.

C. Following exterior removal activities, all ground surfaces shall be thoroughly cleaned at the completion of the demolition work. Asphalt and concrete walk ways and the sections of concrete flooring shall be HEPA vacuumed.

D. Final cleaning shall include vacuuming of all surfaces within each work area with a High Efficiency Particulate Air (HEPA) filtered vacuum.

E. Following HEPA vacuuming of the work area, the HMAC shall utilize a non-chlorinated solvent cleaner such as but not limited to Hexane, Naphtha or Terpene to wipe all surfaces including but not limited to tools, equipment, polyethylene sheeting, masonry walls, concrete floors and sidewalks, metal components and exposed substrates.

F. Perform a second cleaning utilizing Alconox cleaner or equivalent.

G. Within Interior Abatement Zones, remove all pre and secondary HEPA filters and properly dispose of as PCB remediation waste.

H. Upon completion of the final work area cleaning, a visual inspection of each work area shall be conducted by the HMAC's Site Supervisor for visible evidence of residual caulk, dust, and debris. Following the Site Supervisor's visual inspection, the Owner's Consultant shall perform a thorough final visual inspection of the work area. The visual inspection shall provide verification that remediation work has been completed in accordance with this specification. Work areas

shall remain regulated until successful completion of final visual inspection by Owner's Consultant.

I. Any surface exhibiting evidence of contamination, dust or debris, or incomplete abatement of specified components or materials shall be re-cleaned by the HMAC at no cost to the Owner. Visible residue, dust, debris, incomplete cleaning, or removal will be cause for the HMAC to continue performing removal work or cleaning within the work area.

J. Post remediation verification sampling to be performed at the Owner's discretion.

3.8 ON-SITE WASTE MANAGEMENT

A. It is incumbent upon the HMAC to select the appropriate landfill that will accept the waste stream(s) of this Project. Disposal under this option does not require EPA approval. In the case that PCB Bulk Product Waste >50 ppm is disposed of at a non-hazardous waste landfill permitted by a state, the generator of the waste will send written notice to the landfill at least 15 days prior to shipment of the waste stating that the waste contains PCBs at concentrations greater than 50 ppm as described in 40 CFR 761.62(b)(4)(ii) and leaches PCBs at <10 ug/L as described in 40 CFR 761.62(b)(1)(ii).

B. The HMAC shall comply with their selected landfill's requirement(s) for other disposal characterization at their own cost.

C. Waste Storage Zones will be established to provide a secure location for temporary waste storage. Transport Zones will be established to provide a route from Work Zones to Storage Zones. Waste Storage Zones will be isolated with six (6) foot chain link fence. Waste Storage Zones will be strategically located to minimize waste transport from the Work Zones.

D. Wastes generated during decontamination activities will also be properly disposed of at an off-Site facility. Non-liquid cleaning materials and PPE waste at any concentration, including rags, mops, gloves, Tyvek suits, respirator cartridges and similar materials resulting from cleanup activities, must be disposed of in an appropriate waste facility (i.e., state municipal solid waste, state non-municipal non-hazardous waste, federal hazardous waste landfill, or a federally approved PCB disposal facility. Waste water produced during the work from wet cleaning or misting may also be regulated for disposal. Water confirmed to contain PCBs will be managed in accordance with 40 CFR part 761.61(a)(4)(iv). Water not confirmed to contain PCBs (because not tested) will be disposed of at a TSCA approved facility (40 CFR part 761.61(b)(1)) following filtration for asbestos.

E. The HMAC will maintain an on-site waste tracking log that records information related to each shipment of waste from the Site. The waste tracking log will include at a minimum the following components:
1. Shipment number
2. Waste shipment record number
3. Shipment date
4. Estimated volume in cubic yards
5. Landfill name

F. Copies of waste shipment records shall be maintained on site in the HMAC's log book. Executed waste shipment records (signed by the landfill accepting the waste) shall be returned to the Consultant for inclusion into the final report. Copies of these forms will be maintained in accordance with 40 CFR 761 subpart K (PCB Waste Disposal Records and Reports).

G. Solid Hazardous Wastes
1. All solid waste material containment system components, used personnel protective equipment, and other solid wastes generated during the work, shall be placed directly in

appropriate waste receptacles immediately upon removal from its in-situ position. Suitable waste receptacles may consist of roll-off containers or CTDOT-approved 55-gallon barrels.

2. If roll-off containers are to be utilized for containerization of the abatement wastes, the following shall apply:

    a. All roll off containers or other similar vessels utilized shall be leak-tight and lined with 6-mil polyethylene sheeting or equivalent impermeable lining, and equipped with a secured and impermeable cover.
    b. The impermeable cover shall remain securely in place at all times when material is not being actively placed in the vessels. The HMAC shall be responsible for ensuring that the cover remains securely intact until the container is removed from the site.

3. If 55-Gallon barrels are to be utilized for waste containerization, the barrels shall consist of suitable DOT-approved 55-gallon barrels that are leak-tight and free of corrosion, perforations, punctures, or other damage. All barrels shall be securely covered and sealed at the conclusion of each work day. The waste containers shall remain staged at the Site with a secure impermeable cover in place until the materials are transported from the Site to be delivered to the designated disposal facility.
4. A waste roll off and barrel staging area shall be designated prior to initiation of the abatement work, and approved by the Owner's Consultant.

H. Decontamination Fluids and Liquid Waste Materials

1. All working surfaces of tools and equipment that contacts contaminated materials shall be decontaminated using the methods prescribed by §40 CFR 761 Subpart S.
2. Under no circumstances shall decontamination fluids or liquid wastes be discharged to the ground surface or subsurface at the site.
3. Liquid materials, including equipment or personal decontamination fluids or similar liquids generated during excavation work at the site shall be placed directly into appropriately sized and sealed vessels immediately upon generation.
4. Acceptable vessels for the storage of groundwater or liquid wastes may include DOT approved 55-gallon barrels, steel or polyethylene tanks, fractioning tanks, or tank trucks. All proposed vessels shall be compatible with the intended liquid contents.
5. Container staging areas shall be designated prior to initiation of the removal work and approved by the Owner's Consultant.
6. All storage vessels to be used in the containerization and transportation of liquid waste materials shall be free of corrosion, perforations, punctures, or other condition that may impair its ability to securely contain liquid.
7. Temporary staging of liquid waste vessels at the site shall be in a manner that will prevent freezing of contained liquids. Should the potential exist for liquid containers to freeze during exterior storage at the site, arrangements shall be made with the Owner's Consultant to identify and utilize an appropriate alternate storage location acceptable to the Owner's Consultant.
8. All liquid storage vessels utilized and staged at the site shall be stored in an area on the property that will not interfere with facility operations or normal flow of vehicle or pedestrian traffic, and in a manner that will minimize the potential for tipping, vandalism, or damage by vehicular traffic.
9. Liquid Wastes generated as a result of the remediation work and equipment or personnel decontamination shall be profiled and if necessary, burned in a high temperature incinerator in accordance with §761.60 or managed (treated) in accordance with §761.60 if necessary.
10. All characterization of waste, testing, analytical fees for disposal purposes shall be borne by the HMAC.

I. Labeling of Waste Containers

1. All waste containers and temporary waste storage areas shall be labeled in accordance with §761.40 and §761.45.

2. All waste containers must be labeled with the name of the waste contained; the date on which the first material was placed in the vessel; and the last date at which addition of waste occurred.
3. All waste containers containing presumed PCB-containing materials, presumed PCB-containing debris, containment system components, used personnel protective equipment, personal and equipment wash water and decontamination fluids, or other wastes generated during the abatement work shall be labeled as follows:

   HAZARDOUS WASTE-Federal law prohibits improper disposal.
   If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.
   Generator's Name: _____
   _____
   _____
   _____
   Manifest Document No.:

4. Such marking must be durable, in English and printed on or affixed to the surface of the package or on a label, tag or sign; displayed on a background of sharply contrasting color; unobscured by labels or attachments and located away from any other marking (such as advertising) that could substantially reduce its effectiveness.

3.9 WASTE TRANSPORTATION AND DISPOSAL

A. All waste packaging, labeling and transportation activities shall be performed in accordance with applicable State of Connecticut and US Department of Transportation Regulations at 49 CFR Parts 171. 172, 173, 177, and 178, and any and all other applicable federal, state, and local laws and regulations.

B. All hazardous wastes shall be shipped using state-specific standard manifest documents. The HMAC shall supply and complete the manifest documents in accordance with all applicable state and federal regulations. All manifest documents shall be signed by a representative of the Owner and appropriate copies shall be provided to the Owner's Consultant prior to removing the waste from the Site.

C. All Connecticut Regulated Waste shall be shipped using state-specific waste shipment records.

D. The HMAC or their designated waste disposal subcontractor providing waste transportation services shall possess a valid Waste Hauler's Permit issued by the State of Connecticut Department of Energy and Environmental Protection (CTDEEP). In addition, if the waste is to be transported and disposed of out of Connecticut State, applicable permits for those states or territories through which the waste will be transported and for where it will be disposed will be required. It is the responsibility of the HMAC to identify the appropriate disposal facility and associated travel route(s) and to identify the pertinent permits that will be required and to provide copies of the applicable permits to the Owner’s Consultant prior to removing the waste from the site.

E. The HMAC is responsible for all testing, analytical fees or other services required by their designated landfill necessary to generate waste profiles.

F. The waste disposal classifications for PCB materials generated during this project are as follows:
   1. All thermal system insulation and dust captured by blastrac and vacuums shall be disposed of as presumed PCB Bulk Product Waste > 50 ppm and friable asbestos waste.
   2. All remaining asbestos-containing materials shall be disposed of as presumed PCB Bulk Product Waste > 50 ppm and non-friable asbestos waste.

3. All non-asbestos caulks shall be disposed of as presumed PCB Bulk Product Waste > 50 ppm.
4. All HMAC PPE shall be segregated and disposed of as PCB Remediation Waste.
5. All liquid wastes generated as a result of the remediation work and equipment or personnel decontamination shall be profiled and if necessary, burned in a high temperature incinerator in accordance with §761.60 or managed (treated) in accordance with §761.60 if necessary.

3.10 CERTIFICATION OF ABATEMENT WORK

A. The HMAC shall certify in writing to the Owner's Consultant that all remediation work and waste disposal has been completed in accordance with this specification and all applicable federal and state regulations.

B. The HMAC shall certify in writing to the Owner's Consultant that each piece of equipment used in the Abatement Zones, or which has come in or potential come into contact with caulk and window glazing compounds has been decontaminated in accordance with 40 CFR 761 Subpart S prior to removal from the Site.

3.11 OWNER'S CONSULTANT POST ABATEMENT CERTIFICATION

A. At the completion of abatement work, the Owner's Consultant will perform visual inspections within each work area.

B. The Consultant may perform surface verification wipe sampling and substrate sampling as necessary. Surface wipes and substrate sampling shall be collected in random locations from the interior surfaces. The frequency of such samples shall be determined by the Consultant. Containment barriers shall remain in place until successful verification sampling is performed, and clearance criteria is achieved.

C. Areas that do not meet the required clearance criteria shall be re-cleaned and or resealed at no additional cost to the owner. Clearance criteria for wipe samples shall be < 1 µg tested surfaces. Clearance criteria for substrate core samples on porous materials shall be <1.0 ppm. Clearance sampling will be performed at the Consultant's discretion.

END OF SECTION 021100

SECTION 023219 – EXPLORATORY EXCAVATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes:

1. Excavation of test pits where it may be necessary to locate or examine soils, groundwater, drains, pipes, rock, utilities, subsurface structures, or any other obstacles or subsurface conditions.
2. Stockpiling, management, and disposal of surplus or unsuitable material.
3. Backfilling and compacting of test pits with suitable material.

B. Exploratory excavations shall be conducted where shown on the Drawings, where directed or approved by Engineer, and as Contractor may deem necessary to locate or examine subsurface conditions as part of his work.

C. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

D. Contractor is responsible for all health and safety.

1.3 PAYMENT

A. Exploratory excavation work conducted by Contractor for his use shall be considered incidental work and shall be included in Contractor’s base price for the project. Contractor shall be responsible for any required backfilling with suitable materials, disposal of unsuitable excavated materials, and restoration of the excavation area.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. United States Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

1.6 SAFETY

A. Contractor shall conduct all excavation activities in conformance with applicable regulations, including those relating to warning signs, excavation safety, sheeting, shoring, and stabilization.

B. Contractor shall provide and maintain barricades, signs, lights, etc., required for the protection of personnel, materials and property. Temporary barricades, etc. shall conform all applicable codes and regulations, and shall be lighted at night with lanterns, flares and reflectorized paint as required for safety. Adapt barricades, signs, lights, etc. to evolving site conditions throughout the progress of the work.

C. Provide other safety devices as required, including adaptation of such safety devices to changing site conditions, to prevent unauthorized entry to construction areas and open excavations. Provide warning signs and other temporary construction safety devices necessary for proper completion of the work in compliance with applicable safety regulations.

D. Contractor shall properly design and furnish all labor, materials, equipment, and tools necessary to construct permanent or temporary excavation support systems, including, but not necessarily limited to, sheet piling, trench shields, trench boxes, timber trench shoring, pneumatic/hydraulic shoring, steel sheeting or sheeting using other materials, sloping, and benching.

E. Any time an excavation is to remain open, at a minimum, provide full enclosure with safety barriers and fencing, warning signs, and additional safety control measures as appropriate for the condition.

1.7 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

B. Utility Mark-out

1. Prior to commencing work, comply with utility mark-out requirements of the Call-Before-You-Dig System (1-800-922-4455).
2. Verify the location of all subsurface utilities marked through the Call-Before-You-Dig System.
3. Not all subsurface facilities or structures will be identified through the Call-Before-You-Dig System. Confirm the location of other subsurface utilities and other subsurface facilities or structures prior to commencing work. Field-mark utilities as required.

C. Utility Coordination

1. Inform all utility owners of the necessity of test pit work. Prove reasonable advance notice to allow for coordination.
2. Coordinate the excavation of all test pits with the respective utility owners having facilities in the vicinity of the test pit location.
3. If so desired by the respective utility owners, all or part of the work under this Section may be accomplished by their crews and/or supervised by them.

D. Utility Protection

1. Safeguard and protect from damage any utility to remain in service. Before excavating near any utility, notify the utility owner, coordinate protective work, and comply with the utility owners' requirements.
2. Where utilities are encountered, notify Engineer and document location and type of utility before proceeding with work in such area.
3. When uncharted or incorrectly charted piping or utilities are encountered during excavation, stop work and notify Engineer immediately. Cooperate with the utility owners in maintaining their utilities in operation prior to resuming work.

E. Retaining Structures

1. Provide bracing, shoring, sheeting, sheet piling, underpinning or other retaining structures necessary to guard against any movement or settlement of existing or new construction, utilities, paving, light standards, piping or conduit. Assume responsibility for the strength and adequacy of retaining structures, and for the safety and support of construction, utilities or paving, and for any movement, settlement or damage thereto.

1.8 SEQUENCING

A. If test pits are required during the work to evaluate unforeseen conditions, notify Engineer as soon as the need for such work is known.

B. Notify Engineer and/or utility companies of any conflicts or other conditions observed which may require design revisions, relocations, and/or adjustment. No work shall be started within areas

where conflicts or other conditions are observed which require design revisions, relocations, and/or adjustment until authorized by Engineer.

PART 2 - PRODUCTS – NOT USED

2.1 SOILS

A. Refer to Section 31 2310 – Earthwork.

PART 3 - EXECUTION

3.1 EXCAVATION

A. Test pit excavation and backfill shall comply with applicable provisions of earthwork and excavation as indicated in other applicable Specification Sections.

B. Excavation of test pits shall be accomplished by such means as are required to ensure that underground utilities or structures which may be encountered are not damaged.

C. Contractor shall measure and record the size, configuration, exact horizontal and vertical location of all utilities, pipes or other conditions/obstacles encountered.

D. Contractor shall be solely responsible for any damages incurred during excavation operations. Any such damages shall be repaired or replaced by Contractor to the satisfaction of the facility owner/operator, responsible/administering agency, and/or Engineer. Whether repair and/or replacement is Conducted by Contractor or must be conducted by owner/operator or responsible/administering agency, any and all costs thereof, including those costs associated with planning, coordination and owner/operator or responsible/administering agency personnel, shall be borne by Contractor.

E. Where an existing pavement has been removed for test pit excavation, the surface shall be restored in accordance with the Drawings and Specifications. In all other areas, the surface of test pit areas shall be backfilled and the surface restored to a condition equal to original, unless otherwise indicated by Engineer.

END OF SECTION 023219

SECTION 024119 - SELECTIVE DEMOLITION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Selective demolition of building elements for alteration purposes, excluding removal of hazardous materials and toxic substances.

B. Salvage of existing items to be reused or turned over to Owner.

C. Abandonment and removal of existing utilities and utility structures.

1.2 RELATED REQUIREMENTS

A. Section 003100 - Available Project Information: Existing building survey conducted by Owner; information about known hazardous materials.

B. Section 020750 - Selective Demolition for Hazardous Materials Abatement.

C. Section 020800 - Asbestos Abatement.

D. Section 020820 - Universal Waste Reclamation.

E. Section 020900 - Lead Paint Awareness.

F. Section 021100 - PCB Remediation.

G. Section 023219 - Exploratory Excavations.

H. Section 024123 - Site Demolition: Selective demolition of existing site elements.

I. Section 042000 - Unit Masonry : Salvage and reuse of existing facing brick.

1.3 DEFINITIONS

A. Demolition (Demo): Dismantle, raze, destroy or wreck any building or structure or any part thereof.

B. Remove: Detach or dismantle items from existing construction and dispose of them off site, unless items are indicated to be salvaged or reinstalled.

C. Remove and Salvage: Detach or dismantle items from existing construction in a manner to prevent damage. Clean, package, label and deliver salvaged items to Owner in ready-for-reuse condition.

D. Remove and Reinstall: Detach or dismantle items from existing construction in a manner to prevent damage. Clean and prepare for reuse and reinstall where indicated.

E. Existing to Remain: Designation for existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

1.4 REFERENCE STANDARDS

A. 29 CFR 1926 - Safety and Health Regulations for Construction.

B. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate work with utility companies; notify before starting work and comply with their requirements; obtain required permits.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Site Plan:

1. Indicate vegetation to be protected.
2. Areas for temporary and permanent placement of removed materials.
3. Location of dumpsters and traffic pattern for waste hauling.
4. Proposed site access.

C. Demolition Plan: Submit demolition plan as required by OSHA and local AHJs.

1. Indicate extent of demolition, removal sequencing, bracing and shoring, and location and construction of barricades and fences.
2. Demolition firm qualifications.

D. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.

1.7 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Company specializing in the type of work required.

1. Minimum of five years of documented experience.

PART 2 PRODUCTS

2.1 MATERIALS

A. Fill Material: As specified in Section 312310 - Earthwork.

PART 3 EXECUTION

3.1 DEMOLITION

A. Remove portions of existing buildings as indicated on Drawings.

B. Remove other items as specifically indicated on Drawings.

C. Remove items specifically indicated for salvage, relocation, and recycling.

3.2 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.

1. Obtain required permits.
2. Comply with applicable requirements of NFPA 241.
3. Use of explosives is not permitted.
4. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
5. Provide, erect, and maintain temporary barriers and security devices.
6. Use physical barriers to prevent access to areas that could be hazardous to workers or the public.
7. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
8. Do not close or obstruct roadways or sidewalks without permits from authority having jurisdiction.
9. Conduct operations to minimize obstruction of public and private entrances and exits. Do not obstruct required exits at any time. Protect persons using entrances and exits from removal operations.
10. Obtain written permission from owners of adjacent properties when demolition equipment will traverse, infringe upon, or limit access to their property.

B. Do not begin removal until receipt of notification to proceed from Owner.

C. Do not begin removal until existing elements to be salvaged or relocated have been removed.

D. Protect existing structures and other elements to remain in place and not removed.

1. Provide bracing and shoring.
2. Prevent movement or settlement of adjacent structures.
3. Stop work immediately if adjacent structures appear to be in danger.

E. Minimize production of dust due to demolition operations. Do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

F. Hazardous Materials - Comply with the following requirements:

1. 29 CFR 1926 and state and local regulations.
2. Section 020750 - Selective Demolition for Hazardous Materials Abatement.

G. Perform demolition in a manner that maximizes salvage and recycling of materials.

1. Comply with requirements of Section 017419 - Construction Waste Management and Disposal.
2. Dismantle existing construction and separate materials.
3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

H. Salvage and Reuse of Existing Paving: If existing concrete and asphalt paving is to be salvaged for use in earthwork, separate usable paving materials from other foreign and deleterious materials and stockpile for processing and reuse as specified in 312300.

3.3 EXISTING UTILITIES

A. Protect existing utilities to remain from damage.

B. Do not disrupt public utilities without permit from authority having jurisdiction.

C. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner.

D. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner.

E. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

F. Unused underground piping may be abandoned in place, provided it is completely drained and capped; remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

G. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone. Identify and mark, in same manner as other utilities to remain, utilities to be reconnected.

3.4 SELECTIVE DEMOLITION FOR ALTERATIONS

A. Existing construction and utilities indicated on drawings are based on casual field observation and existing record documents only.

1. Verify construction and utility arrangements are as indicated.
2. Report discrepancies to Architect before disturbing existing installation.
3. Beginning of demolition work constitutes acceptance of existing conditions that would be apparent upon examination prior to starting demolition.

B. Maintain weatherproof exterior building enclosure, except for interruptions required for replacement or modifications; prevent water and humidity damage.

C. Maintain building security; take care to prevent unauthorized entry.

D. Remove existing work as indicated and required to accomplish new work.

1. Remove rotted wood, corroded metals, and deteriorated masonry and concrete; replace with new construction indicated.
2. Remove items indicated on drawings.
3. Core Drilling: Core drill slabs as required to install new items as detailed on Drawings. If required based on existing slab conditions, employ methods of detecting existing tensioned and un-tensioned reinforcing, and other embedded items, so as not to damage existing facilities and equipment.
4. Powder-Actuated Fasteners and Post-installed Anchors: Verify existing slab conditions employing methods of detection specified for core drilling; locate fasteners and anchors to avoid structural damage to existing slabs and existing tensioned reinforcing.

E. Services (Including but not limited to HVAC, Plumbing, Electrical, and Telecommunications): Remove existing systems and equipment as indicated.

1. Maintain existing active systems to remain in operation, and maintain access to equipment and operational components.
2. Where existing active systems serve occupied facilities but are to be replaced with new services, maintain existing systems in service until new systems are complete and ready for service.
3. Verify that abandoned services serve only abandoned facilities before removal.
4. Remove abandoned pipe, ducts, conduits, and equipment, including those above accessible ceilings. Remove back to source of supply where possible, otherwise cap stub and tag with identification.

F. Protect existing work to remain.

1. Prevent movement of structure. Provide shoring and bracing as required.
2. Perform cutting to accomplish removal work neatly and as specified for cutting new work.
3. Repair adjacent construction and finishes damaged during removal work.
4. Patch to match new work.

3.5 DEBRIS AND WASTE REMOVAL

A. Remove debris, junk, and trash from site.

B. Remove from site all materials not to be reused on site; do not burn or bury.

C. Leave site in clean condition, ready for subsequent work.

D. Clean up spillage and wind-blown debris from public and private lands.

END OF SECTION

This page intentionally left blank

SECTION 024123 – SITE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. General Site Demolition.
2. Demolition of site structures, retaining walls, signage, light standards, foundations and appurtenances, pavement, curbing, and similar site improvements.
3. Filling of voids and excavations resulting from site demolition.

B. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. State of Connecticut.

1. State of Connecticut Solid Waste Management Regulations, Section 22a-209 including any amendments thereto.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.

3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DEFINITIONS

A. Demolition: Any operation including the dismantling or wrecking of a structure, assembly, appurtenance, or any portion thereof, including major and minor components, parts, and systems. Demolition shall be inclusive of the removal, handing, processing, segregation, loading, and proper off-site disposition of materials. Demolition shall be interpreted as complete and total removal unless otherwise indicated. The term Remove shall be synonymous with Demolition.

B. Bulky Waste: Land clearing debris and non-contaminated or hazardous waste material resulting directly from demolition activities other than Clean Fill, including such materials as tree stumps, tree tops, concrete, wood, brick, plaster, roofing materials, wallboard, metals, carpeting, insulation, furniture, and furnishings. Bulky Waste shall include Construction and Demolition Debris and Construction and Demolition Waste.

1.6 SAFETY

A. Conduct the work of this Section in conformance with applicable regulations, including those relating to warning signs, excavation safety, sheeting, shoring, and stabilization.

B. Provide and maintain barricades, signs, lights, etc., required for the protection of personnel, materials and property. Temporary barricades, etc. shall conform all applicable codes and regulations, and shall be lighted at night with lanterns, flares and reflectorized paint as required for safety. Adapt barricades, signs, lights, etc. to evolving site conditions throughout the progress of the work.

C. Provide other safety devices as required, including adaptation of such safety devices to changing site conditions, to prevent unauthorized entry to construction areas and open excavations. Provide warning signs and other temporary construction safety devices necessary for proper completion of the work in compliance with applicable safety regulations.

D. Contractor shall properly design and furnish all labor, materials, equipment, and tools necessary to construct permanent or temporary excavation support systems, including, but not necessarily limited to, sheet piling, trench shields, trench boxes, timber trench shoring, pneumatic/hydraulic shoring, steel sheeting or sheeting using other materials, sloping, and benching.

E. Any time an excavation is to remain open, at a minimum, provide full enclosure with safety barriers and fencing, warning signs, and additional safety control measures as appropriate for the condition.

1.7 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

A. Utility Mark-out

1. Prior to commencing work, comply with utility mark-out requirements of the Call-Before-You-Dig System (1-800-922-4455).
2. Verify the location of all subsurface utilities marked through the Call-Before-You-Dig System.
3. Not all subsurface facilities or structures will be identified through the Call-Before-You-Dig System. Confirm the location of other subsurface utilities and other subsurface facilities or structures prior to commencing work. Field-mark utilities as required.

B. Utility Coordination

1. Inform all utility owners of the necessity of test pit work. Provide reasonable advance notice to allow for coordination.
2. Coordinate the excavation of all test pits with the respective utility owners having facilities in the vicinity of the test pit location.
3. If so desired by the respective utility owners, all or part of the work under this Section may be accomplished by their crews and/or supervised by them.

1.8 REGULATORY REQUIREMENTS

A. Comply with all applicable federal, state, and local safety and health requirements regarding all aspects of the work. Do not proceed until all permits or other approvals are secured.

B. Contractor is bound to comply with any project-related permits or approval obtained by Owner, including all requirements of such permit and representations contained in permit application as though Contractor were the permittee. Requirements and conditions set forth in Owner-obtained project-related permits and permit applications shall be binding on Contractor just as any Specification would be.

C. Do not close or obstruct roadways, sidewalks, hydrants, or other infrastructure without permits or authorization from local municipal authorities or other authorities having jurisdiction.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 IDENTIFICATION OF EXISTING FEATURES

A. Prior to commencing construction activities, Contractor shall identify and delineate those areas or specific improvements that are not to be disturbed. Areas or specific improvements within the Limits of Work/Contract Limits and general work areas which are not to be disturbed shall be clearly marked or fenced. Monuments and markers shall be protected before construction operations commence. Contractor's personnel shall be knowledgeable of the purpose for marking and/or protecting designated areas, specific improvements, monuments, and markers at the Project Site.

3.2 PROTECTION OF EXISTING FEATURES

A. General

1. All areas or specific improvements, including but not limited to vegetation, utilities, poles, wires, fences, curbs, monuments/property-line markers, and other structures, which must be preserved in place without being temporarily or permanently relocated shall be carefully supported and otherwise protected from damage by Contractor.
2. As excavation/demolition work approaches underground structures, digging by machinery shall be discontinued and the excavation shall be done by means of hand tools.

B. Pavements

1. On paved surfaces to remain, Contractor shall not use or operate heavy equipment, other power-operated equipment, or store tools, equipment, or materials which may mar, cut, or otherwise damage such surfaces. If there is no alternative to the operation of heavy equipment, other power-operated equipment, or storage of tools, equipment, or materials on paved surfaces to remain, Contractor shall take all measures necessary to protect such surfaces.
2. All surfaces, which have been damaged by Contractor's operations, shall be restored to a condition at least equal to that in which they were found immediately prior to the beginning of construction operations. Such restoration shall meet the approval of Engineer and may include repair or complete replacement at Contractor's expense.

C. Planted Areas

1. All planted areas, including lawn/turf areas and landscaped areas, which have been damaged by Contractor's operations, shall be restored to a condition at least equal to that in which they were found immediately prior to the beginning of construction operations.

D. Utilities

1. Locate and identify existing utilities that are to remain and protect them from damage. Provide protection as required such as marking, blocking, bracing, stabilizing, supporting, and retaining.
2. Before excavating near any utility, notify the utility owner, coordinate protective work, and comply with the utility owners' requirements.

3. All utility services shall be supported by suitable means so that the services shall not fail when tamping and settling occurs.
4. Where known utilities are encountered, notify Engineer and document location and type of utility before proceeding with work in such area.
5. When uncharted or incorrectly charted utilities are encountered, stop work and notify Engineer. Cooperate with the utility owners in maintaining their utilities in operation prior to resuming work.

E. Retaining Structures: Provide bracing, shoring, sheeting, sheet piling, underpinning or other retaining structures necessary to guard against any movement or settlement of existing or new construction, utility systems, paving, or other improvements. Contractor assumes responsibility for the strength and adequacy of retaining structures, and for the safety and support of construction, utilities or paving, and for any movement, settlement or damage thereto.

3.3 SITE DEMOLITION

A. Conduct site demolition as shown on the Drawings.

B. Conduct site demolition operations in a manner that will prevent damage to adjacent structures, utilities, pavements and other facilities to remain.

C. Remove from the site and properly dispose of all materials resulting from site demolition operations.

3.4 DUST CONTROL

A. Implement fugitive dust suppression to prevent unacceptable levels of dust resulting from site demolition operations or other activities required by the Contract Documents. It shall be the Contractor’s responsibility to supervise fugitive dust control measures and to monitor airborne particulate matter. Comply with applicable provisions of Section 01 5714 – Temporary Dust Control.

3.5 REPLACEMENT

A. In case of damage, Contractor shall notify the appropriate party so that proper steps may be taken to repair any and all damage done. When the Owner does not wish to make the repairs themselves, all damage shall be repaired by Contractor, or, if not promptly done by him, Engineer may have the repairs made at the expense of Contractor.

B. Contractor shall patch, repair and/or replace all adjacent materials and surfaces damaged through the prosecution of work at no expense to Owner. All repair and replacement work shall match the existing in-kind. Final acceptance of said work shall be at the sole judgment of Owner.

END OF SECTION 024123

SECTION 026123 – HANDLING, TRANSPORT AND DISPOSAL OF EXCAVATED SOIL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SUMMARY

A. Section includes the following:
1. Furnish all labor, materials, equipment, and incidentals necessary to properly excavate, segregate, handle, dewater (if needed), stabilize, load, transport and dispose of excavated soil/sediment materials located within the Limits of Work. The scope of work for excavation of soils includes excavation of utilities associated with building upgrades. Decontamination stations shall be capable of eliminating the dispersion of dust and mud caused by vehicles exiting the site. Project activities anticipated to result in excavation and handling of soil. Decommissioning of the transformer room is not covered under this scope of work and would be addressed by the utility as part of decommissioning of the transformer room.
2. Project activities anticipated to result in excavation of soil/sediment covered under this Section includes, but are not limited to installation of sub-surface stormwater drainage, site utilities, driveway, parking lot area, trenching for below grade mechanical/plumbing piping systems within the boiler room and hallways, site grading, and restoration. Removal of existing pavement and associated base material are not covered by this Section.
3. Environmental soil quality will be classified into three (3) categories for the purpose of this Project[1] and the soil classification terminology is used throughout this Specification. It is incumbent upon the Contractor to handle, manage, transport, place, stockpile and dispose of soil in accordance with the soil classifications and requirements of this Section and associated Specifications referenced in Part 1.2 (B) RELATED SECTIONS. The soil classifications are as follows:
a. Contaminated Soil[1,2]: Soil exhibiting detectable concentrations of contaminants, above pertinent release based clean-up criteria (RCBR) limits
b. Polluted Soil[1]: Soil exhibiting detectable concentrations of contaminants and metals concentrations above typical background levels, but at concentrations below pertinent current RCBR criteria limits.
c. Uncontaminated/Clean Soil[1]: Soil exhibiting no detectable concentrations of contaminants or detectable concentrations of contaminants, including metals concentrations, below typical background levels

[1]Note: The classifications provided above were developed for this Project. The Project-specific classifications differ from classifications for contaminated soil, polluted soil and clean fill used by the Connecticut Department of Energy and Environmental Protection (CTDEEP) and shall not be used interchangeably with Project-specific terminology.
[2] Includes uninvestigated soils with no testing. With appropriate analytical testing/ characterization, soils may be re-classified as polluted or uncontaminated with the approval of the Owner / Environmental Consultant.

4. Limited soil sampling was completed within the proposed utility trench in selected areas on the exterior of the Site to collect initial data to assess the environmental soil quality of soil that may be impacted during the Work. Refer to Drawings REM-1A and REM-1B for identification of soil classifications. A copy of soil preconstruction soil testing information is provided.

5. The Contractor shall include in their Base Bid the removal and disposal of 565 tons of polluted soils from exterior trenching throughout the Site.
6. The Contractor shall include in their Base Bid the removal and disposal of 15 tons of contaminated soils from the boiler room below the slab.
7. The Contractor shall include in their Base Bid the removal and disposal of 20 tons of polluted soils from below the slabs in the corridors.
8. Dispose of excess polluted and contaminated soil beyond quantities provided (if identified) utilizing unit prices for each soil classification at licensed and permitted disposal facilities per this specification.
9. The Contractor could encounter asphalt, concrete and other bulky debris during excavations and general site work. Asphalt and bulky debris including but not limited to masonry and other miscellaneous debris shall be segregated from soil for solid waste disposal. The Contractor shall account for segregation and disposal of solid waste in their Bid. Volumes of waste disposed by the receiving facility will be documented and provided to the Consultant/ Owner's Representative.
10. If groundwater is encountered and required to be removed to complete construction activities, the Contractor shall perform all dewatering and temporarily store in a frac tank(s) and sampled by the Owners Representative/ Consultant. Water not meeting applicable discharge criteria shall be trucked for treatment and disposal. Sampling data shall be used to determine appropriate processing of dewatering liquids. If significant amount of water is encountered, then water may be discharged to sanitary sewer under a Dewatering and Remediation Wastewater to Surface Water and Groundwater (D2R GP) with approval of the Owner/ Owner's Representative and once agency approval is issued.
11. If encountered, all dewatering and discharging of uncontaminated water shall be included in the Contractor's Base Bid. Trucking and disposal of contaminated water, if encountered, will be compensated at the corresponding unit price. Adjustments to the Contract will be made with an add/deduct unit price for actual quantity of contaminated water disposal.
12. The Contractor shall perform disposal characterization sampling and analytical testing of the excavated material, including dewatering liquids, as required by the permitted disposal facility at no additional cost to the Owner.
13. The Owner will be the Generator and will sign all disposal facility waste profiles for Material Shipping and Hazardous, Non-Hazardous Waste Manifests (manifest), and/or Material Shipping Record Log (MSRL) as the Generator. All paperwork required for work under this Section shall be prepared by the Contractor and approved by the Owner's Representative/Consultant.
14. The Contractor shall coordinate truck traffic (staging, queuing, and transportation) with the City of Bristol prior to the start of excavation.

B. Related Sections:
1. Section 01 57 05: Environmental Protection
2. Section 01 57 13: Temporary Erosion & Sedimentary Controls
3. Section 01 57 14: Temporary Dust Control
4. Section 31 23 10: Earthwork

C. Related Drawings
1. REM-1A and REM-1B

1.3 RESPONSIBILITIES

A. The Contractor shall be responsible for the following:
1. Performing all disposal characterization sampling of all materials to be disposed of.
2. Submitting the daily logs summarizing excavating activities to the Owner's Representative/Consultant.

3. Identifying and providing a list of proposed treatment, recycling, and disposal facilities for all excavated material to be reviewed and approved by the Consultant and Owner prior to shipment of excavated materials.
4. Dewatering excavated material to reduce the weight/moisture content as necessary to meet or exceed treatment/recycling/disposal facility acceptance criteria.
5. Management of storm and ground water through the temporary placement into frac tank(s) for disposal/discharge testing (if needed).
6. Discharging of all un-contaminated water in accordance with project specifications.
7. Collection, transport and disposal of all contaminated storm and groundwater (if encountered).
8. Stabilizing, as necessary, the excavated soil/sediment with materials that do not increase the weight of the soil/sediment by more than 10 percent.
9. Transporting excavated material to the approved soil/sediment treatment, recycling, or disposal facility.
10. Transporting excavated material for on-site placement (if specifications permit)
11. Stockpiling soil in approved Waste Storage Areas (WSA), as necessary, for further disposal characterization.
12. Furnishing, operating, and maintaining equipment decontamination stations for the duration of soil excavation work.
13. Developing and implementing site-specific emergency response and health and safety protocols and procedures.
14. Demonstrating to the Owner's Representative/Consultant for each shipment of material transported to a treatment/recycling/disposal facility that the Contractor has selected the least costly means of disposal. This demonstration shall be made prior to shipment.
15. Submitting weight slips, completed MSRLs, manifests and other shipping documents to the Owner's Representative/Consultant within fourteen (14) calendar days of shipment to a treatment/recycling/disposal facility.
16. Advising the Owner's Representative/Consultant at least three (3) working days in advance of the schedule for off-site disposal of excavated material.
17. Preparing the necessary documents to transport and dispose of excavated material. These documents include, but are not limited to, waste profiles, MSRLs and manifests.
18. Submitting the executed transportation and disposal documents to the appropriate local, State and Federal agencies as well as the Owner's Representative/Consultant.
19. Keeping records, including daily logs and photographs, of all waste streams, stockpiles, and excavated materials for the purposes of tracking points of origin.
20. Developing and implementing dust/odor control measures and air monitoring in accordance with applicable state regulations (e.g.22a-174-18 and 22a-174-23).

B. Owner's Responsibilities:
1. The Owner will review and approve the proposed facilities selection of off-site treatment/recycling/disposal facilities.
2. The Owner will be the designated Generator for excavated material identified for off-site treatment/recycling/disposal.
3. The Owner will review and approve all paperwork and manifests.
4. The Owner's Representative/Consultant will perform visual inspection of excavated soil to evaluate the limits of excavation and may collect confirmation samples to confirm remediation limits. The Owner's Representative/Consultant shall collect and have analyzed samples collected from stormwater and groundwater within the frac tank (if needed)
5. If impacted groundwater is encountered, the Owner's Representative/Consultant shall collect and have analyzed samples collected from stormwater and groundwater within the frac tank. The Owner's Representative/ Consultant will complete sampling for discharge to sanitary sewer under Dewatering and Remediation Wastewater to Surface Water and Groundwater (D2R GP) obtained.

1.4 SUBMITTALS

A. Submit to the Owner's Representative/Consultant, for review, and in accordance with the requirements of the general specifications, the information required by Paragraph 1.4 B., no more than one (1) calendar day after issuance of the Notice to Proceed.

B. The Contractor shall submit the following information in an Excavated Materials Management Plan (EMMP):
   1. A schedule detailing the proposed sequence of work.
   2. The Contractor shall develop a stockpile disposal characterization sampling program to facilitate the direct loading of excavating material following dewatering.
   3. All pertinent information relating to the transport of excavated material. The information, at a minimum, shall include.
      a. Name and address of all transporters.
      b. Transporter identification number (USEPA) and expiration date.
      c. Proof of permit, license, or authorization to transport excavated material in all affected states.
      d. Details of containers to be used for transporting excavated material. Refer to Paragraph 2.1 B. of this Section
      e. Dust control measures.

   4. The Contractor shall identify each waste stream and propose an appropriate permitted disposal facility that will accept the excavated material and dewatering liquids. The Contractor shall submit to the Owner's Representative/Consultant, approvals or letters of intent and facility information for each facility proposed, within fourteen (14) calendar days of issuance of the Notice to Proceed. For each facility, the Contractor shall submit the following information:
      a. General Information
         a. Facility Name
         b. Facility Address
         c. Name of Contact Person
         d. Title of Contact Person
         e. Telephone Number of Contact Person
         f. Permit Number

      b. The Contractor shall provide information from the facility specifying the volume of material that can be accepted from the site on a weekly and a total basis. Dewatering liquids volumes will be estimated and coordinated with the sewage treatment system operator (as applicable).
      c. The Contractor shall provide written confirmation from the facility that they are permitted to accept and will accept the classified material of the general quality and quantity described by these Specifications.
      d. The Contractor shall provide a listing of all current and valid facility permits, licenses, letters of approval, and other authorizations to operate that they hold, pertaining to the receipt and management of the soils, dewatering liquids or materials specified in this contract.
      e. The Contractor shall submit a complete list of the disposal facility's permitted allowable contaminant levels and physical characteristic requirements for excavated material and list any required regulatory approvals for individual waste streams.
      f. Copies of pre-characterization analytical testing results.
      g. The Contractor shall submit the facility approval(s) for the specified volumes of waste from the disposal facility once received.

C. Laboratory results for all samples collected and/or analyzed by the Contractor shall be tabulated and compared to applicable permitted facility acceptance standards by the Contractor and

subsequently submitted to the Owner's Representative/Consultant within two (2) working days of receipt. The results shall include all Chain-of-Custody forms and all documentation provided by the laboratory.

1.5 REFERENCES

A. All regulations cited and those of other governing agencies in their most recent version are applicable. This Section refers to many requirements found in these references, but in no way is intended to cite or reiterate all provisions therein or elsewhere. It is the Contractor's responsibility to know, understand, and abide by all such regulations and common practices. Other provisions contained in these references may from time to time during the execution of this Contract be enforced by the Owner's Representative/Consultant. In the event of a conflict, the most stringent regulations shall govern. The following documents and/or publications are made part of this Section by reference herein::

1. "Hazardous Waste Operations and Emergency Response," Federal Occupational Safety and Health Act (OSHA), 29 CFR 1910.120.

1.6 DEFINITIONS

A. Contaminated Soil[1,2]: Soil exhibiting exceedances of pertinent contaminant concentration limits in the current RBCRs.

B. Excavated Material: All soil/sediment excavated from within the Limit of Work.

C. Excavated Debris: All asphalt, brick, concrete, rock, trash, and all other debris material excavated from within the Limit of Work.

D. Polluted Soil[1]: Soil exhibiting detectable concentrations of contaminants, including metals concentrations above typical background levels, but at concentrations below current RBCR criteria limits.

E. Uncontaminated/Clean Soil[1]: Soil exhibiting no detectable concentrations of contaminants or detectable concentrations of contaminants, including metals concentrations, below typical background levels.

F. Uninvestigated Soil[2] Soil within areas that have not been investigated. These soils are considered contaminated for bidding purposes.

[1]Note: The classifications provided above were developed for this Project. The Project-specific classifications differ from classifications for contaminated soil, polluted soil and clean fill used by the CTDEEP and shall not be used interchangeably with Project-specific terminology.
[2] Includes uninvestigated soils with no testing. With appropriate analytical testing/ characterization, soils may be re-classified as polluted or uncontaminated with the approval of the owner / environmental consultant.

PART 2 - PRODUCTS

2.1 GENERAL

A. All Contractor personnel shall wear personal protective equipment and protective clothing consistent with the levels of protection for this Work as provided in the Contractor's Health and Safety Plan.

B. Containers used for hauling the excavated material shall be constructed of steel, in good condition and designed for the intended purpose of safe, secure storage of materials during loading and transport to an approved facility. The containers shall have a secure cover, which will prevent the release of material from the truck during transportation. The container and covers shall be approved by the Owner's Representative/Consultant prior to mobilization of trucks/containers. The containers shall be approved by and labeled in accordance with the U.S Department of Transportation (DOT). The containers shall be sift proof and water resistant in accordance with the DOT regulation

2.2 STOCKPILE SHEETING

A. Minimum 6-mil polyethylene sheeting shall be used for short-term covering of stockpiles. For stockpiles anticipated to remain in place for greater than 30 days, stockpile cover sheeting shall be nylon-reinforced polyethylene (NRPE) or minimum 20-mil polyethylene sheeting.

B. NRPE sheeting shall conform to the following specifications:
   1. The membrane shall be manufactured of new, first quality product designed and manufactured specifically for the intended use.
   2. The material shall be 10-mil polyethylene reinforced with a non-woven grid of high strength nylon cord.
   3. The material shall be ultra-violet resistant and cold crack resistant to -40 degrees Fahrenheit.
   4. The materials shall be manufactured in a minimum 12-foot seamless width. Labels on the roll shall identify the thickness, length width and manufacturer's mark number.

2.3 EQUIPMENT AND VEHICLE DECONTAMINATION PAD

A. A decontamination pad shall be constructed of reinforced concrete or bituminous concrete to withstand an HS-20 loading. The decontamination pad shall be of minimum length to accommodate one 18-wheel dump truck, and a minimum area to accommodate the largest piece of equipment to be used in the excavation. The pad shall have a six-inch containment berm and provisions for collection, storage, and disposal of decontamination water.

2.4 DEWATERING PAD

A. If required, Dewatering of excavated soil shall be performed by stockpiling excavated saturated soil/sediment on a 10-mil NRPE or a 20-mil (minimum) HDPE lined and bermed pad to facilitate gravity drainage of water to a lined collection sump.

B. Complete dewatering (if required for construction) in accordance with project specifications.

2.5 EQUIPMENT STAGING AREAS

A. Equipment staging areas shall be constructed of 8-oz. non-woven geotextile fabric over existing ground surface followed by twelve (12) inches of compacted base course.

PART 3 - PRODUCTS

3.1 GENERAL

A. The Contractor shall handle and convey all materials to perform the site work described in this Contract.

B. The Contractor shall perform disposal characterization sampling and analytical testing of the excavated material and dewatering liquids as required by the permitted disposal facility at no additional cost to the Owner.

C. The Owner shall have final approval over all disposal options.

3.2 DEWATERING/STABILIZATION

A. Contractor shall dewater excavated material to reduce the weight/moisture content and to meet treatment/recycling/disposal facility acceptance criteria (e.g., paint filter test). Soil/sediment dewatering shall be performed by stockpiling excavated soil on a HDPE lined and bermed pad in accordance with Paragraph 2.4. Collected water shall be conveyed to an on-Site frac tank for testing prior to discharge or disposal. The Contractor is responsible for determining and obtaining the applicable General Permit based on site construction activities.

B. The Contractor shall stabilize, if necessary, the excavated material to pass the paint filter test for transport. Stabilization agents shall not be allowed, which increase the weight of the material by more than 10 percent.

C. The Contractor shall perform any additional disposal characterization sampling and analytical testing of the excavated material as required by the permitted disposal facility at no additional cost to the Owner.

D. Based upon all analytical results, transport and dispose of the excavated material as specified in this Section.

E. The Owner shall have final approval over all disposal options.

F. Complete dewatering (if required for construction) in accordance with project specifications.

3.3 STOCKPILE DISPOSAL CHARACTERIZATION SAMPLING

A. The Contractor shall be responsible for sampling and characterizing stockpiles of dewatered excavated material for the purpose of obtaining approvals from the disposal facility. The Contractor shall provide the Owner's Representative/Consultant with a minimum of two (2) working days' notice prior to sampling and shall not sample unless Owner's Representative/Consultant's approval is received.

B. Submit a copy of all chemical analyses and a tabulated summary of the data in final laboratory report in PDF and (Excel format) to the Owner's Representative/Consultant within two (2) working days of receipt of the laboratory report.

C. Take samples in such a manner as not to cause any cross-contamination. All sampling equipment shall be decontaminated between usage.

D. All analyses shall be performed by a laboratory certified for such analyses by the State in which the material is to be disposed of and in accordance with the disposal facility operating permit requirements.

E. The Owner's Representative/Consultant may stop the Contractor's work in a particular location at any time in order to have samples taken and analyzed. If necessary, the Contractor shall assist the Owner's Representative/Consultant in collecting samples. The work shall not resume in that area until required by the Owner's Representative/Consultant. Stoppage of work for this reason, or until laboratory results are delivered to the Owner's Representative/Consultant, shall not be a cause for the Contractor to request additional compensation or an extension of time to the Contract or to other intermediate Contract deadlines.

F. The Contractor shall not backfill an excavation until the Owner's Representative/Consultant has given approval to do so.

3.4 TEMPORARY STOCKPILING OF EXCAVATED MATERIALS

A. All excavated material shall be stored in a secure manner to prevent exposure to humans and the environment.

B. Stockpiled or consolidated excavated material shall not be placed near sensitive human health receptors such as public and private water supply wells or sensitive environmental receptors.

C. All excavated material shall be stored at the Site of generation. The material shall be placed entirely on sheeting as defined in Section 2.2 and shall be covered at the end of each day's work with the same material or so as to minimize the infiltration of precipitation, volatilization of contaminants and erosion of the stockpile. Any sheeting used shall be properly secured and possess the necessary physical strength to resist being torn by the wind and other elements.

D. The stockpiles shall be bermed around the edges to minimize infiltration of stormwater or exfiltration of leachate.

E. Any failure of materials or procedures used in employing the base layer or cover layer shall be immediately repaired, replaced, or re-secured so as to minimize precipitation infiltration, volatilization, and erosion/runoff of the excavated material.

F. Movement and/or aeration of excavated material shall be limited to those activities that are necessary to manage such stockpiles.

G. Disposal of material that is contaminated as a result of careless handling or use of unauthorized procedures shall be at the Contractor's expense. Delays of Work resulting from temporary storage of excavated material, regardless of the classification, shall be at no additional cost to the Owner.

H. Excess excavated material shall be disposed of site within 90 calendar days of excavation and in accordance with the CTDEEP timeframes provided in the Contaminated Soil and/or Sediment Management (Staging and Transfer" General Permit).

I. The stockpiles shall be clearly labeled and securely barricaded from contact with workers and the general public.

3.5 MANAGEMENT OF EXCAVATED MATERIAL

A. The Contractor shall provide a soil management system to manage material between excavation, stockpiling, sampling, testing and final disposition.
   1. Include in the system the identification of the source of material (i.e., station, offset), depth, date of excavation and stockpile identification and location.
   2. Submit to the Owner's Representative/Consultant for review of the management plan. This plan shall include all proposed daily log sheets.
   3. Provide to the Owner's Representative/Consultant, on a daily basis, copies of field records documenting the location of stockpiled material in the system and stockpile identification data.
   4. Each stockpile shall be identified with a suitable weatherproof sign attached to a stake driven into or directly adjacent to each pile.

B. The contractor shall take all measures necessary to avoid comingling different classifications of soil. Were polluted soil or contaminated soil is located on the top horizon, strip polluted soil and stockpile prior to performing deeper excavations where contaminated or uncontaminated soil is present at a deeper horizon.

C. Isolate pockets of solid waste and/or other environmentally impacted material, where identified, and remove and stockpile or relocate to WSA for characterization sampling. Solid waste materials such as brick, concrete, metal, wood shall be segregated from soils and disposed of as solid waste.

3.6 DEBRIS DECONTAMINATION

A. As required by designated disposal facilities, the Contractor shall be responsible for decontaminating any debris shown to be contaminated by sampling at no additional cost to the Owner. The decontamination means and methods shall be included in the EMMP submitted to the Owner's Representative/Consultant 14 calendar days after issuance of Notice to Proceed.

3.7 DISPOSAL FACILITY CATEGORIES

A. The Contractor shall transport the material for off-site reuse, recycling, or disposal at a permitted facility based on the following categories:

1. Soil Reclamation Facility: Excavated material that meets the definition of "polluted soil" and/ or "contaminated soils" in the Connecticut Remediation Standard Regulations shall be submitted to a site that has received State approval to accept the materials.
2. Authorized Beneficial Use Material: Excavated material that meets the definition of "polluted soil" in the Connecticut Remediation Standard Regulations and is shipped to a site that has received State approval to accept such material under a Beneficial Use Determination. Approval from the Owner's Representative/Consultant and Owner are required prior to use of this disposal option.
3. Non-RCRA In-State Landfill: Excavated material (if encountered) that meets the destination state's solid and hazardous waste regulations and the receiving facility's operating permit(s). This includes material shipped for reuse as daily cover, intermediate cover, and pre-cap contouring material or material shipped for disposal. This also includes material designated as a "special solid waste". Approval from the Owner's Representative/Consultant and Owner are required prior to use of this disposal option
4. Thermal Desorption Facility: Excavated material (if encountered) that meets the destination facility requirements for petroleum impacted soils or soils amenable to thermal desorption technology.
5. Non-RCRA Out-of-State Unlined and Lined Landfill Material: Excavated material (if encountered) that meets the destination state's solid and hazardous waste regulations and the receiving facility's operating permit(s). This includes material shipped for reuse as daily cover, intermediate cover, and pre-cap contouring material or material shipped for disposal. This also includes material designated as a "special solid waste". Approval from the Owner's Representative/Consultant and Owner are required prior to use of this disposal option.
6. RCRA Hazardous Waste Facility: Excavated material (if encountered) that is identified as characteristic hazardous waste shall be shipped to a permitted waste disposal facility using licensed waste haulers. Approval from the Owner's Representative/Consultant and Owner are required prior to use of this disposal option.

B. Material shall be transported under an MSRL or a non-hazardous waste Bill of Lading. If hazardous waste is encountered, a Uniform Hazardous Waste Manifest will be used.

C. Material shipped to any recycling/disposal facility shall meet the selected facility's chemical and physical acceptance criteria. Selected facilities shall be established, fully operational, appropriately insured, and be operating in compliance with all applicable local, State, and Federal regulations.

3.8 WEIGHT AND MEASUREMENT

A. The Contractor shall provide certified tare and gross weight slips for each load received at the accepted Facility and these shall be attached to each returned manifest.

3.9 WASTE PROFILES AND MANIFESTS

A. The Contractor shall prepare and submit to the Owner's Representative/Consultant for review all waste profile applications and questionnaires and coordinate with disposal facilities and all Federal and State Environmental Agencies.

B. The Contractor shall prepare all Hazardous Waste Manifests, MSRLs, and non- Hazardous Waste Manifests, Bill of Lading and shipping records with all applicable analytical backup, notification, and control forms

C. The Contractor shall also provide certified tare and gross weight slips for each load received at the designated facility which shall be attached to each returned manifest.

D. The Contractor shall furnish all Generator copies of each Hazardous Waste Manifest or Bill of Lading to the Owner for submittal to the appropriate regulatory agencies and to retain for the Owner's records.

E. The Contractor shall submit to the Owner's Representative/Consultant, prior to receiving progress payment, documentation certifying that all materials were transported to, accepted, and disposed of, at the selected disposal facility. The documentation shall include the following, as a minimum.
   1. Documentation shall be provided for each load from the site to the disposal facility, including all manifests, MSRLs and any other transfer documentation as applicable
   2. All documentation for each load shall be tracked by the original manifest/ MSRL document number that was assigned by the Owner's Representative/Consultant at the site.

F. EPA ID number shall be provided by the Owner if transport of material characterized as RCRA hazardous waste becomes necessary.

3.10 TRANSPORT OF EXCAVATED MATERIAL/DEBRIS

A. The Contractor shall not be permitted to transport materials off-site until all storage, disposal, or recycling facility documentation has been received, reviewed, and approved by the Owner's Representative/Consultant

B. The Contractor shall transport materials from the site to the storage, disposal, reuse or recycling facility in accordance with all United State Department of Transportation (DOT), USEPA, and applicable State and local regulations

C. The Hauler(s) shall be licensed in all states affected by transport

D. The Contractor shall be responsible for ensuring that free liquid is properly transported. "Wet material" shall not be loaded for transport. The Contractor shall dewater "wet material", and properly dispose of collected liquid from dewatering, in accordance with local, State, and Federal regulations. The Contractor shall dispose of any free liquids that may result during transportation at no additional cost to the Owner.

E. All excavated material transported upon public roadways shall be covered to minimize fugitive dust, and where necessary truck tire and undercarriage decontamination shall be employed to minimize tracking of soils onto public roadways

F. The Contractor shall coordinate truck traffic (staging, queuing, and transportation) with the City of Bridgeport prior to the start of excavation.

3.11 DISPOSAL

A. Dispose of excavated materials at an approved facility in accordance with all Federal, State and local regulations

B. The Contractor shall perform analyses on the material as necessary to fulfill any disposal testing requirements of the approved Facility.
   1. The Contractor shall bear all costs incurred in sampling and analyses for those tests required by the facility in excess of those performed by the Owner's Representative/Consultant
   2. The Contractor shall submit a copy of all sampling analyses to the Owner's Representative/Consultant within two (2) calendar days of receipt of the laboratory report. Analytical data shall be kept confidential, distributed to the Owner's Representative/Consultant and Owner only

C. The Contractor shall provide to the Owner's Representative/Consultant copies of all weight slips, both tare and gross, for every load weighed and disposed of at the approved facility. The slips shall be tracked by the original manifest document number that was assigned by the Owner's Representative/Consultant at the site. The Owner's Representative/Consultant shall make progress payments after receipt of these weight slips.

D. Dispose of impacted soils within timeframes provided by applicable regulatory guidance.

3.12 ON-SITE PLACEMENT OF SOIL

A. On-site reuse of soils shall be limited to soils that are determined to be geotechnically suitable for reuse and meet the definition of polluted and/or uncontaminated/clean/ natural soil in the RSRs/ RBCRs. No on-site soil reuse is permitted without prior approval and authorization from the Owner

B. The Contractor shall strip, excavate, or otherwise remove soil for stockpiling into designated soil classifications. Stockpiles shall be identified and labeled based on soil classification in accordance with this Specification.

C. Location(s) of stockpiles shall be coordinated with the Owners Representative/Consultant and Construction Manager and shall be maintained in accordance with this Section.

D. Place soil on-Site at locations designated by the Architect and in accordance with the soil classifications. Grade, level, pitch and compact in accordance with project Specifications.

E. Placed soil shall be free of brick, masonry, rocks, metal, etc. and shall meet CTDEEP RBCR and background metals concentration criteria.

F. Place soil in designated areas and develop soil horizon to specified depth

END OF SECTION 026123

SECTION 031000 - CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Openings for other work.

C. Form accessories.

D. Form stripping.

1.2 RELATED DOCUMENTS

A. The general provisions of the contract, including General and Supplementary Conditions and Division 1, General Requirements apply to the work specified in this section. Note also all Addenda.

1.3 DESCRIPTION OF WORK

A. A. Provide all labor, materials, equipment and appliances to furnish and install all concrete formwork.

1.4 RELATED REQUIREMENTS

A. Section 032000 - Concrete Reinforcing.

B. Section 033000 - Cast-in-Place Concrete.

C. Section 051200 - Structural Steel Framing: Placement of embedded steel anchors and plates in cast-in-place concrete.

1.5 REFERENCE STANDARDS

A. ACI 117 - Specification for Tolerances for Concrete Construction and Materials.

B. ACI 301 - Specifications for Concrete Construction.

C. ACI 318 - Building Code Requirements for Structural Concrete.

D. ACI 347R - Guide to Formwork for Concrete.

1.6 QUALITY ASSURANCE

A. All materials and work shall conform to the requirements of all standards, codes, and recommended practices required in this section. In conflicts between standards, required standards, and this specification, the more stringent requirements shall govern.

PART 2 PRODUCTS

2.1 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.

2.2 WOOD FORM MATERIALS

A. Form Materials: At the discretion of the Contractor.

B. For unexposed surfaces and rough work, undressed lumber may be used. Lumber once used in forms shall have nails withdrawn, and surfaces to be I contact with concrete shall be thoroughly cleaned before being used again.

2.3 FORMWORK ACCESSORIES

A. Form ties and spreaders shall be of such type as to leave no metal closer than ¾” from exposed concrete surfaces and 1 ½” from unexposed surfaces, below grade.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.

1. Do not use materials containing diesel oil or petroleum-based compounds.

2. Composition: Colorless, reactive, water-based compound.

C. Dowel Sleeves: Plastic sleeve and nailable plastic base for smooth, round, steel load-transfer dowels.

D. Expansion joints - premolded expansion joint filler shall conform to one of the following:

1. ASTM D 1751 “Standard Specificaions for Preformed Expansion Joint Fillers for Concrete paving and Structural Construction” (Nonextruding and resilient bitumious types).

2. ASTM D 1752 “Standard Specifications for Preformed Expansion Joint Fillers for Concrete Paving and Structural construction” (Nonextruding and resilient nonbituminous types).

E. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

F. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 051200.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.

3.2 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Construction Joints, when not shown on working drawings, shall be made and located to least impair the strength of the structure.

1. All reinforcement shall be continued across joints and keys shall be provided.

D. Expansion Joints - premolded expansion joint filler shall be placed along edges of slab on grade where abuttng foundation walls, and at all other locations as detailed.

E. Control joints shall be as shown on the working drawings and as directed by the Architect.

1. Contraction joints may be formed, tooled or sawed approximately equal to ¼ the thickness of the member.

F. Forms shall be erected with sufficient strength, bracing and ties as to remain in correct position during and after depositing of concrete. They shall be substantially free from surface defects and sufficiently tight to prevent leakage of mortar.

G. Forms, if oiled, shall be coated with a non-staining mineral oil or other approved material and allowed to dry before placing of reinforcing steel.

H. Erect formwork to produce concrete members conforming to the following dimensional tolerances:

1. Variation in cross-sectional dimensions of columns and beams and in thickness of slabs and walls shall not exceed minus ¼", nor plus ½".

3.3 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

3.4 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Provide formed openings where required for items to be embedded in passing through concrete work.

B. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

C. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

3.5 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean formed cavities of debris prior to placing concrete.

1. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.6 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. All forms, except permanent metal forms, shall be removed when he concrete is thoroughly hardened. Forms for walls shall be left in place for a minimum of three days.

C. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

D. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION 031000

SECTION 032000 - CONCRETE REINFORCING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Supports and accessories for steel reinforcement.

1.2 DESCRIPTION OF WORK

A. Furnish and erect in place all reinforcing steel and welded wire fabric as indicated on Drawings. In-clude all splices, ties, supports, and other accessories required to properly place and secure all reinforc-ing during placing of concrete.

1.3 RELATED REQUIREMENTS

A. Section 031000 - Concrete Forming and Accessories.

B. Section 033000 - Cast-in-Place Concrete.

C. Section 042000 - Unit Masonry: Reinforcement for masonry.

1.4 REFERENCE STANDARDS

A. ACI 301 - Specifications for Concrete Construction.

B. ACI 318 - Building Code Requirements for Structural Concrete.

C. ACI SP-66 - ACI Detailing Manual.

D. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

E. ASTM A704/A704M - Standard Specification for Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement.

F. ASTM A706/A706M - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.

G. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

H. AWS D1.4/D1.4M - Structural Welding Code - Steel Reinforcing Bars.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI SP-66. Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.

1. Contractor shall prepare detailed drawings showing dimensions, bar schedules, bending details and placing diagrams and details, for all reinforcement. Drawings shall be submitted for approval and no reinforcement shall be placed before drawings are approved.

PART 2 PRODUCTS

2.1 REINFORCEMENT

A. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi).

B. Reinforcing Steel: ASTM A706/A706M, deformed low-alloy steel bars.

C. Stirrup Steel: ASTM A1064/A1064M steel wire, unfinished.

D. Reinforcement Accessories:

1. Tie Wire: Annealed, minimum 16 gauge, 0.0508 inch.

2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.

2.2 RE-BAR SPLICING:

A. Coupler Systems: Mechanical devices for splicing reinforcing bars; capable of developing full steel reinforcing design strength in tension and compression.

2.3 FABRICATION

A. Welding of reinforcement is permitted only with the specific approval of Engineer. Perform welding in accordance with AWS D1.4/D1.4M.

PART 3 EXECUTION

3.1 FABRICATION AND SITE STORAGE

A. Reinforcing shall be accurately formed to dimensions on drawings details, and schedules within the following tolerances:

1. Sheared Length ….……+ or - 1 inch

2. Stirrups, Ties and Spirals…….....+ or - ½ inch

3. All other bends……..+ or - 1 inch

B. Fabrication shall not commence until details and schedules have been approved by the Architect.

C. Reinforcement shall be bent cold and shall not be straightened or rebent in a manner than will injure the materials. Bars with bends or kinks not shown on Drawings shall not be used. Bars shall be stored on site, off of the ground and separated by individual groups that shall be tagged for ease of identification. Bundles shall be securely wrapped to prevent separation prior to placement.

3.2 PLACEMENT

A. Place, support and secure reinforcement against displacement. Do not deviate from required position.

B. Do not displace or damage vapor barrier.

C. Accommodate placement of formed openings.

D. Welded wire fabric shall be lapped 8” at ends and sides and the upper layer shall be placed within 1” of the top of the slab and to be held in place by high chairs at 4’-0” o/c maximum, this includes welded wire fabric in slabs-on-grade.

E. Metal reinforcement shall have a protection of concrete not less than the following:

1. Three inches (3”) at sides and on bottoms of footings.

2. Two inches (2”) where concrete is exposed to weather or to the ground after removal of forms for bars larger than #5 and one and one-half inches (1 ½”) for #5 bars and smaller.

3. One and one-half inches (1 ½”) in columns, beams and girders not exposed to the weather.

4. Three fourths inch (3/4”) in slabs, joists and walls not exposed to the weather.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 014000 - Quality Requirements, will inspect installed reinforcement for compliance with contract documents before concrete placement.

END OF SECTION 032000

This page intentionally left blank

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section. Note also all Addenda.

1.2 DESCRIPTION OF WORK

A. This contract includes all labor, materials, equipment and appliances necessary to complete all cast-in-place concrete as indicated on the drawings or hereinafter specified.

B. Anchor bolts, leveling plates, sleeves, inserts, hangers, etc. furnished under other divisions and required to be cast into the concrete shall be set by this Contractor where required.

C. Provide all concrete bases, curbs, mats, pads, trenches, slots, openings, etc., as required by any or all of the drawings; Architectural, Site, Structural, Plumbing, Heating and Ventilating, and Electrical, and to accommodate equipment or work of all the divisions of these specifications.

1.3 RELATED REQUIREMENTS:

A. Section 031000 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 032000 - Concrete Reinforcing.

C. Section 079200 - Joint Sealants: Products and installation for sealants and joint fillers for saw cut joints and isolation joints in slabs.

1.4 REFERENCE STANDARDS

A. ACI 117 - Specification for Tolerances for Concrete Construction and Materials.

B. ACI 211.1 - Selecting Proportions for Normal-Density and High Density-Concrete - Guide.

C. ACI 301 - Specifications for Concrete Construction.

D. ACI 302.1R - Guide to Concrete Floor and Slab Construction.

E. ACI 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete.

F. ACI 306R - Guide to Cold Weather Concreting.

G. ACI 308R - Guide to External Curing of Concrete.

H. ACI 318 - Building Code Requirements for Structural Concrete.

I. ASTM A184/A184M - Standard Specification for Welded Deformed Steel Bar Mats for Concrete Reinforcement.

J. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

K. ASTM A706/A706M - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.

L. ASTM A775/A775M - Standard Specification for Epoxy-Coated Steel Reinforcing Bars.

M. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

N. ASTM C33/C33M - Standard Specification for Concrete Aggregates.

O. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.

P. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete.

Q. ASTM C143/C143M - Standard Test Method for Slump of Hydraulic-Cement Concrete.

R. ASTM C150/C150M - Standard Specification for Portland Cement.

S. ASTM C171 - Standard Specification for Sheet Materials for Curing Concrete.

T. ASTM C172/C172M - Standard Practice for Sampling Freshly Mixed Concrete.

U. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete.

V. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete.

W. ASTM C476 - Standard Specification for Grout for Masonry.

X. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete.

Y. ASTM C595/C595M - Standard Specification for Blended Hydraulic Cements.

Z. ASTM C618 - Standard Specification for Coal Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.

AA. ASTM C881/C881M - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.

BB. ASTM C989/C989M - Standard Specification for Slag Cement for Use in Concrete and Mortars.

CC. ASTM C1059/C1059M - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete.

DD. ASTM C1116/C1116M - Standard Specification for Fiber-Reinforced Concrete.

EE. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures.

FF. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete.

GG. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

HH. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

II. COE CRD-C 513 - Handbook for Concrete and Cement Corps of Engineers Specifications for Rubber Waterstops.

1.5 ACTION SUBMITTALS

1.6 SUBMITTALS

A. Mix Design: Submit proposed concrete mix design.

1. Indicate proposed mix design complies with requirements of ACI 301, Section 4 - Concrete Mixtures.

2. Indicate proposed mix design complies with requirements of ACI 318, Chapter 5 - Concrete Quality, Mixing and Placing.

B. Submit copies of fine and coarse aggregate sieve analysis showing conformance to this specification.

C. Submit copies of specifications for each product proposed for use as listed in Part 2 of this section.

D. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

E. Sustainable Design Submittal: If any fly ash, ground granulated blast furnace slag, silica fume, rice hull ash, or other waste material is used in mix designs to replace Portland cement, submit the total volume of concrete cast in place, mix design(s) used showing the quantity of portland cement replaced, reports showing successful cylinder testing, and temperature on day of pour if cold weather mix is used.

F. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials and aggregates

2. Admixtures

3. Form materials and form-release agents

4. Steel reinforcement and accessories

5. Curing compounds

6. Bonding agents

7. Vapor retarders

8. Joint-filler strips

1.7 QUALITY ASSURANCE

A. Materials and work shall conform to the requirements of all standards, codes, and recommended practices required in this section. In conflicts between standards, required standards and this specification and the local building code, the more stringent requirements shall govern.

B. Perform work of this section in accordance with ACI 301 and ACI 318.

C. Testing and Inspection:

1. Materials and operations shall be tested and inspected as work progresses. Failure to detect defective work shall not prevent rejection when defect is discovered, nor shall it obligate the Architect for final acceptance.

2. The following testing services shall be performed by the designated agency, paid for by the Owner:

a. Secure composite samples in accordance with “Method of Sampling Fresh Concrete” ASTM C172/C172M.

b. Test Specimens in accordance with “Method of Test for Compressive Strength of Cylindrical Concrete Specimens” ASTM C39/C39M . Two specimens shall be tested at 28 days for acceptance and one shall be tested at 7 days for information.

c. Determine slump for each strength test and whenever consistency of concrete appears to vary, using “Method of Test for Slump of Portland Cement Concrete” ASTM C143/C143M.

d. Determine total air content of normal-weight concrete sample for each strength test in accordance with “Method of Test for Air Content of Freshly Mixed Concrete by the Pressure Method” ASTM C231/C231M.

D. Evaluation and Acceptance:

1. The strength level of the concrete will be considered satisfactory if 90% of the strength test results and the averages of all sets of three consecutive strength test results equal or exceed specified strength and no individual test result is below specified strength by more than 500 psi.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 PRODUCTS

2.1 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 032000.

B. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi).

1. Type: Deformed billet-steel bars.

C. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M, deformed

D. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M, unless otherwise indicated.

E. Plain-Steel Welded Wire Fabric: ASTM A185/A185M, fabricated from galvanized steel wire into flat sheets.

F. Deformed-Steel Welded Wire Fabric: ASTM A497/497M, flat sheet.

2.2 CONCRETE MATERIALS

A. Portland Cement: ASTM C150/C150M, gray/white, Type I - Normal.

B. Blended Hydraulic Cement: ASTM C595/C595M.

C. Fly Ash: ASTM C618, Class C or F.

D. Calcined Pozzolan: ASTM C618, Class N.

E. Silica Fume: ASTM C1240, amorphous silica, proportioned in accordance with ACI 211.1.

F. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M , Grade 100 or 120.

G. Fine and Coarse Aggregates: ASTM C33/C33M.

H. Normal-Weight Aggregate: ASTM C33/C33M, uniformly graded, and as follows:

I. Lightweight Aggregate: ASTM C330/C330M.

2.3 ADMIXTURES

A. General: Admixtures certified by manufacturer to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material and to be compatible with other admixtures and cementitious materials. Do not use admixtures containing calcium chloride.

B. Chemical Admixture: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete.

C. Air Entrainment Admixture: ASTM C260/C260M, MB-AE 10 or MB-VR.

D. High Range Water Reducing and Retarding Admixture: ASTM C494/C494M Type G.

E. High Range Water Reducing Admixture: ASTM C494/C494M Type F.

F. Water Reducing and Accelerating Admixture: ASTM C494/C494M Type E.

G. Water Reducing and Retarding Admixture: ASTM C494/C494M Type D.

H. Accelerating Admixture: ASTM C494/C494M Type C.

I. Retarding Admixture: ASTM C494/C494M Type B.

J. Plasticizing and Retarding Admixture: ASTM C1017/C1017M Type II

K. Water Reducing Admixture: ASTM C494/C494M Type A.

2.4 ACCESSORY MATERIALS

A. Underslab Vapor Retarder: Sheet material complying with ASTM E1745, Class A; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs. The use of single ply polyethylene is prohibited.

1. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.

2. Joints shall be lapped a minimum of 6 inches, and all breaks or holes shall be patched prior to pouring the concrete.

3. Manufacturer of selected product must provide documentation that clearly illustrates submitted water vapor retarder product meets or exceeds the above requirements in accordance with ASTM E1745 and ASTM F710 .

2.5 BONDING AND JOINTING PRODUCTS

A. Latex Bonding Agent: Non-redispersable acrylic emulsion or styrene butadiene, complying with ASTM C1059/C1059M, Type II.

B. Epoxy Bonding System:

1. Complying with ASTM C881/C881M and of Type required for specific application.

2. Adhesive: Two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class and grade to suit requirements, and as follows:

a. Types I and II, nonload bearing, for bonding hardened or freshly mixed concrete to hardened concrete

C. Waterstops, Chemical-Resistant: Thermoplastic elastomer rubber waterstops, , for embedding in concrete to prevent passage of fluids through joints; resistant to oils, solvents, and chemicals. Factory fabricate corners, intersections, and directional changes. No recycled or reclaimed material or pigments allowed.

D. Waterstops: Synthetic rubber; swells to 1000 percent of original size in clean water.

1. Configuration: As indicated on drawings.

2. Size: As indicated on drawings.

E. Self-Expanding Strip Waterstops: Manufactured rectangular or trapezoidal strip

1. Butyl rubber with sodium bentonite or other hydrophilic material for adhesive bonding to concrete, 3/4 by 1 inch (19 by 25 mm).

2. Bentonite-free hydrophilic polymer-modified chloroprene rubber, for adhesive bonding to concrete. 3/8 by 3/4 inch (10 by 19 mm).

3. Products: Subject to compliance with requirements, products that may be incorporated into the work include, but are not limited to, the following:

   a. Volclay Waterstop-RX; Colloid Environmental Technologies Co.

   b. Conseal CS-231; Concrete Sealants Inc.

   c. Swellseal Joint; De Neef Construction Chemicals (U.S.) Inc.

   d. Hydrotite; Greenstreak.

   e. Mirastop; Mirafi Moisture Protection, Div. of Royal Ten Cate (USA), Inc.

   f. Adeka Ultra Seal; Mitsubishi International Corporation.

   g. Superstop; Progress Unlimited Inc.

F. Slab Isolation Joint Filler: 1/2 inch thick, height equal to slab thickness, with removable top section that will form 1/2 inch deep sealant pocket after removal.

G. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.

2.6 CURING MATERIALS

A. Evaporation Reducer: Waterborne, monomolecular-film-forming compound that reduces rapid moisture loss caused by high temperature, low humidity, and high winds; intended for application immediately after concrete placement.

B. Curing Compound, Naturally Dissipating: Clear, water-based, liquid membrane-forming compound; complying with ASTM C309. Type 1, Class B.

2.7 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI 211.1 recommendations.

1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

B. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI 301. Required average strength above specified strength shall be determined in accordance with ACI 318 “Building Code Requirements for Structural Concrete” and evaluations of compressive strength results of field concrete shall be in accordance with ACI 214R “Guide to Evaluation of Strength Test Results of Concrete”.

1. Trial mixtures:

    a. When the ready-mix producer does not have a record of past performance, the combination of materials and the proportions selected shall be selected from trial mixes having proportions and consistencies suitable for the work based on ACI 211.1 (Latest Edition), using at least three different water-cement ratios which will produce a range of strengths encompassing those required.

C. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended or required by manufacturer.

D. Normal Weight Concrete:

1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,000 pounds per square inch.

2. Maximum Water-Cement Ratio:

    a. 0.50 for concrete required to have low water permeability.

    b. 0.45 for concrete exposed to deicers or subject to freezing and thawing while moist.

    c. 0.40 for corrosion protection of steel reinforcement in concrete exposed to chlorides from deicing chemicals, salt, saltwater, brackish water, seawater, or spray from these sources.

3. Maximum Aggregate Size: Shall not exceed 1/3 the thickness of slabs and 1/5 the narrower dimension between form.

2.8 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings:

1. Minimum Compressive Strength: 4000 psi (27.6 MPa at 28 days.

2. Slump Limit: 5 inches (125 mm) for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch (25 mm).

3. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.

4. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 1-inch (25-mm) nominal maximum aggregate size.

B. Foundation Walls:

1. Minimum Compressive Strength: 4000 psi (27.6 MPa at 28 days.

2. Slump Limit: 4 inches (100 mm) for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch (25 mm).

3. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.

4. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 1-inch (25-mm) nominal maximum aggregate size.

C. Slabs-on-Grade:

1. Minimum Compressive Strength: 3500 psi (24.1 MPa) at 28 days.

2. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

3. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

D. Suspended Slabs (Tunnel Slab Replacement):

1. Minimum Compressive Strength:4000 psi (27.6 MPa at 28 days.

2. Minimum Cementitious Materials Content: 470 lb/cu.yd. (279 kg/cu.m)

3. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

4. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

2.9 MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C94/C94M and ASTM C1116/C1116M, and furnish batch ticket information.

B. Adding Water: If concrete arrives on-site with slump less than suitable for placement, do not add water that exceeds the maximum water-cement ratio or exceeds the maximum permissible slump.

PART 3 EXECUTION

3.1 PREPARATION

A. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning and applying bonding agent in according to bonding agent manufacturer's instructions.

1. Use epoxy bonding system for bonding to damp surfaces, for structural load-bearing applications, and where curing under humid conditions is required.

2. Use latex bonding agent only for non-load-bearing applications.

3.2 PLACING CONCRETE

A. Place concrete in accordance with ACI 304R.

B. Place concrete for floor slabs in accordance with ACI 302.1R.

C. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed.

D. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.

E. Cold-Weather Placement: Comply with ACI 306R and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40ºF (4.4ºC) for three successive days, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature at not less than 50ºF (10ºC) and not more than 80ºF (27ºC) for the required curing time.

a. Water heated to above 100ºF shall be combined with the aggregates before cement is added. Cement shall not be added to water or aggregated having a temperature greater than 100ºF.

b. Temperature of concrete delivered at the job site shall conform to the following minimum:

Air Temperature	Concrete Temperature
30 to 45ºF	55 to 90ºF
0 to 30ºF	60 to 90ºF
Below 0ºF	65 to 90ºF

F. Hot-Weather Placement: Comply with ACI 301 (ACI 301 SI), ACI 305R, and as follows:

1. Maintain concrete temperature below 90ºF (32ºC) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete

3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.3 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Rough-Formed finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections 1/4 inch or more in height.

C. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections 1/4 inch or more in height.

D. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive until producing a uniform color and texture, not more than 24 hours after form removal. Do not apply cement grout other than that created by the rubbing process.

3.4 FINISHING FLOORS AND SLABS

A. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

B. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

3.5 CURING AND PROTECTION

A. Comply with requirements of ACI 308R, ACI 306R, for cold-weather protection, and ACI 301 (ACI 301 SI) for hot-weather protection during curing. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

C. Curing Methods:

1. Initial Curing: Start as soon as free water has disappeared and before surface is dry. Keep continuously moist for not less than 7 days using water ponding, water-saturated sand, water-fog spray, saturated burlap, polyethylene film, or waterproof curing paper.

a. Polyethylene Film or Curing Paper: Cover surface immediately after finishing. Joints shall be lapped 12 inches and all joints taped securely. Repair all rips and tears until end of curing period.

3.6 CONCRETE SURFACE REPAIRS

A. Defective Concrete:

1. Test Results: The testing agency shall report test results in writing to Engineer and Contractor within 24 hours of test.

2. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

3. Repair or replacement of defective concrete will be determined by the Engineer. Remove and replace concrete that cannot be repaired and patched. The cost of additional testing shall be borne by Contractor when defective concrete is identified.

4. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Engineer for each individual area.

3.7 FIELD QUALITY CONTROL

A. A qualified independent testing and inspecting agency will perform field quality control tests and prepare test reports, as specified in Section 014000 - Quality Requirements.

B. Inspections:

1. Steel reinforcement placement.

2. Steel reinforcement welding.

3. Verification of use of required design mixture.

4. Concrete placement, including conveying and depositing.

5. Curing procedures and maintenance of curing temperature.

6. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:

1. Slump: Perform one slump test at each point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change. Follow procedures of ASTM C143/C143M.

2. Compressive Strength Tests: ASTM C39/C39M, for each test, mold and cure three concrete test cylinders. Obtain test samples for every 100 cubic yards or less of each class of concrete placed.

3.8 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

B. Concrete shall be protected from damage. Damaged concrete shall be replaced at the Contractor's expense.

END OF SECTION 033000

SECTION 033200 – SITE CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes

1. Site cast-in-place concrete, including but not necessarily limited to, pavements, slabs, decorative surfaces, sidewalks, ramps, driveways, curbing, pads, bases, retaining walls, and thrust blocks.
2. All facilities, labor, materials, tools, equipment, appliances, transportation, supervision, and related work necessary to complete the Work shown on the Drawings and as specified herein.

B. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. ASTM International (ASTM)

1. ASTM A615 – Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
2. ASTM A706 – Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement
3. ASTM A767 – Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement
4. ASTM A775 – Standard Specification for Epoxy-Coated Steel Reinforcing Bars.
5. ASTM A996 – Standard Specification for Rail-Steel and Axle-Steel Deformed Bars or Concrete Reinforcement.
6. ASTM A1064 – Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

7. ASTM C29 – Standard Test Method for Bulk Density (“Unit Weight”) and Voids in Aggregate
8. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field.
9. ASTM C33 – Standard Specification for Concrete Aggregates.
10. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
11. ASTM C42 – Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
12. ASTM C70 – Standard Test Method for Surface Moisture in Fine Aggregate.
13. ASTM C94 – Standard Specification for Ready-Mixed Concrete.
14. ASTM C117 – Standard Test Method for Materials Finer than 75-um (No. 200) Sieve in Mineral Aggregates by Washing.
15. ASTM C127 – Standard Test Method for Density, Relative Density (Specific Gravity), and Absorption of Coarse Aggregate.
16. ASTM C128 – Standard Test Method for Density, Relative Density (Specific Gravity), and Absorption of Fine Aggregate.
17. ASTM C136 – Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
18. ASTM C138 – Standard Test Method for Density (“Unit Weight”), Yield, and Air Content (Gravimetric) of Concrete.
19. ASTM C143 – Standard Test Method for Slump of Hydraulic-Cement Concrete.
20. ASTM C150 – Standard Specification for Portland Cement.
21. ASTM C156 – Standard Test Method for Water Retention by Concrete Curing Materials.
22. ASTM C171 – Standard Specification for Sheet Materials for Curing Concrete.
23. ASTM C172 – Standard Practice for Sampling Freshly Mixed Concrete.
24. ASTM C173 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
25. ASTM C192 – Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory.
26. ASTM C231 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
27. ASTM C233 – Standard Test Method for Air-Entraining Admixtures for Concrete.
28. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.
29. ASTM C309 – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
30. ASTM C311 – Standard Methods of Sampling and Testing Fly Ash and Natural Pozzolans for Use as a Mineral Admixture in Portland Cement Concrete.
31. ASTM C387 – Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
32. ASTM C494 – Standard Specification for Chemical Admixtures for Concrete.
33. ASTM C566 – Standard Test Method for Total Evaporable Moisture Content of Aggregate by Drying.
34. ASTM C595 – Standard Specification for Blended Hydraulic Cements.
35. ASTM A 615 – Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
36. ASTM C618 – Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
37. ASTM C685 – Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing.
38. ASTM C171 – Standard Specification for Sheet Materials for Curing Concrete.
39. ASTM C803 – Standard Test Method for Penetration Resistance of Hardened Concrete.
40. ASTM C920 – Standard Specification for Elastomeric Joint Sealants.
41. ASTM C979 – Standard Specification for Pigments for Integrally Colored Concrete.
42. ASTM C989 – Ground Granulated Blast-Furnace Slag for Use in Concrete Mortars.

43. ASTM C1064 – Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete.
44. ASTM A1078 – Standard Specification for Epoxy-Coated Steel Dowels for Concrete Pavement.
45. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
46. ASTM D1752 – Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction.
47. ASTM D2628 – Standard Specification for Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements.
48. ASTM D4397 – Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.

2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. For each type of specially furnished concrete provide a description of methods and the sequence of placement.
B. Manufacturer’s catalog data for the following items shall include printed instructions for admixtures, bonding agents, epoxy-resin adhesive binders, waterstops, and liquid chemical hardeners:
   1. Concrete Aggregates.
   2. Portland Cement.
   3. Ready-Mix Concrete.
   4. Form Facing Materials.
   5. Reinforcement Materials.
   6. Joint Materials.
   7. Water-Vapor Barrier Subgrade Cover.
   8. Bonding Materials.
   9. Finish Materials.
   10. Concrete Curing Materials.
   11. Form release agent.
   12. Concrete coloring additive.
   13. Elastomeric joint sealant.
   14. Preformed joint filler

C. Submit samples of the following:

   1. Preformed joint filler.
   2. Manufacturer’s color charts showing full range of colors available.
   3. Cured samples of elastomeric join sealants in the color(s) selected.
   4. Stamping pattern samples.
   5. Color samples and mock-ups for decorative concrete.

D. Design Data

1. Mix Design data for each class of Ready-Mix Concrete shall be submitted at least 15 calendar days prior to start of specified work.
2. Mix Design data for each type of integrally-colored concrete mix called-for shall be submitted at least 15 calendar days prior to start of specified work.

E. Test Reports

1. Submit test reports for all testing conducted under this Section.

F. Certificates

1. Submit certificates for the following:

   a. Concrete Design Mixes.
   b. Concrete Aggregates.
   c. Welding Procedures. Welding Procedures shall be in accordance with AWS D1.4/D1.4M. Certificates for Welder Qualifications shall be in accordance with the paragraph entitled, “Qualifications for Welding Work,” of this section.
   d. Mill certificates for Steel Bar.

2. Certificates for concrete shall contain project name, title/number, date, name of Contractor, name of concrete testing service, source of concrete aggregates, material manufacturer, brand name of manufactured materials, material name, values as specified for each material, and test results.

G. Manufacturer’s Instructions

1. Installation instructions shall indicate the manufacturer’s recommended method and sequence of installation for the following items:

   a. Admixtures
   b. Bonding Materials
   c. Waterstops
   d. Liquid Chemical Hardener

1.6 QUALITY ASSURANCE

A. Dimensions, locations, and details of equipment pads, anchors, supports, and similar features indicated on the Drawings are approximate. Manufacturer’s approved shop drawings of equipment to be supported, anchored, or contained thereby shall be consulted for exact location, size and details.

B. Obtain each specified material from same source and maintain high degree of consistency in workmanship throughout Project.

C. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

D. Welder qualifications: Welder qualifications shall be verified in accordance with AWS D1.4/D1.4M or under an equivalent qualification test approved in advance. Welders shall be permitted to do only the type of welding for which each is specifically qualified.

E. Concrete testing: Concrete testing shall be performed by an approved Testing Agency/Testing Laboratory experienced in sampling and testing of concrete. Testing Agency/Testing Laboratory shall meet the requirements of ASTM E329.

1.7 MOCKUPS

A. Where mockups are called-for, comply with the following:

1. At location on the Project Site selected by Engineer, place and finish 100 square foot mockup section for examination. Mockup to be constructed by the installer who will actually perform the work for the Project.
2. For accurate color, the quantity of concrete mixed to produce the sample should not be less than 3 cubic yards (or not less than 1/3 the capacity of the mixing drum on the ready-mix truck) and should always be in full cubic yard increments. Excess material shall be discarded according to local regulations.
3. For colored concrete, record the amount of integral colorant, dray colorant, or chemical stain needed per square foot of application to establish coverage rates for the work.
4. Provide a mockup sample panel for each type of colored and stamped concrete.
5. Construct mockup using processes and techniques intended for use on permanent work, including curing procedures. Include samples of control construction, and expansion joints in sample panels.
6. Retain samples of cements, sands, aggregates and color additives used in mockup for comparison with materials used in remaining work.
7. Accepted mockup provides visual standard for all work.
8. Mockup shall remain through completion of work for use as a quality standard for finished work.
9. Provide suitable protections to preclude damage to mockup.
10. Remove mockup when directed.

1.8 TESTING

A. Owner will retain a testing entity to perform observation and testing of the work under this Section. The testing entity’s presence does not constitute supervision or direction of Contractor’s work. Neither the presence of the testing entity nor any observations and testing performed by him, nor any notice or failure to give notice shall excuse Contractor from conformance with these Specifications or from defects discovered in his work.

B. Testing shall include sampling and testing concrete materials proposed for use in the work and testing the design mix for each class of concrete.

C. Tests will be required to determine whether the concrete being produced complies with the standard of quality and strength as specified.

D. Concrete Replacement: Failure of any test or to follow proper installation procedures will require that the concrete be removed and properly replaced at the Contractor’s expense.

1.9 DELIVERY, STORAGE AND HANDLING

A. Schedule delivery of concrete to provide consistent mix times from batching until discharge. Mix times shall meet manufacturers’ written recommendations.

B. Packaged materials shall be delivered to the project site in their original, unopened package or container bearing label clearly identifying manufacturer's name, brand name, material, weight or volume, and other pertinent information. Packaged materials shall be stored in their original, unbroken package or container in a weather-tight and dry place until ready for use in the work.

C. Unpackaged aggregates shall be stored to avoid excessive segregation, contamination with other materials or other size aggregates, or freezing.

D. Reinforcement and other metal items shall be protected from corrosion and shall be kept free from ice, grease, and other coatings that would destroy or reduce bond.

E. Colored Admixture: Comply with manufacturer's instructions. Deliver colored admixtures in original, unopened packaging. Store in dry condition.

1.10 PROJECT CONDITIONS

A. Environmental Requirements

1. Avoid placing concrete if rain, snow, or frost is forecast within 24-hours.
2. Protect fresh concrete from rain, moisture, and freezing.
3. Schedule placement to minimize exposure to wind and hot sun before curing materials are applied.

PART 2 - PRODUCTS

2.1 PORTLAND CEMENT

A. Cement: ASTM C 150. One brand and type of cement shall be used for formed concrete having exposed-to-view finished surfaces.

B. Unless otherwise specified, cement shall be Type IA.

2.2 READY-MIX CONCRETE

A. Ready Mix Concrete: Portland Cement Concrete, air-entrained, ASTM C94.

1. Compressive Strength:

a. Unless otherwise indicated, minimum compressive strength at 28 days shall be 4,000 psi minimum.
b. Sidewalks, stairs and landings, pedestrian and vehicle ramps, and curbing: Minimum compressive strength at 28 days shall be 4,500 psi minimum.

2. Water/cement ratio: Maximum 0.45.
3. Air content by volume: 6 percent ± 1 percent, ASTM C231 (primary method) or ASTM C173 (secondary method).
4. Slump: no less than 2 inches, not greater than 4 inches, ASTM C143.
5. Standard Color: Natural grey.
6. Colored Concrete: See the Article "Integral Colorant" herein if applicable.

B. Aggregate
   1. Coarse aggregate: ASTM C33. Broken stone or gravel consisting of clean durable fragments of uniform quality throughout. It shall be free from soft, disintegrated pieces, mud, dirt, organic or other injurious material. Coarse aggregate of a size retained on a 1-inch square opening sieve shall not contain more than 8% of flat or elongated pieces, whose longest dimension exceeds five times their maximum thickness.
   2. Fine aggregate: ASTM C33. Sand consisting of clean, hard, durable, uncoated particles of quartz or other rock, free from lumps of clay, soft or flaky material, loam, organic or other injurious material. Fine aggregate shall contain not more than 3% of material finer than a #200 sieve, ASTM C117.

C. Water: Potable quality.

D. Admixtures

   1. Concrete shall contain a water reducing agent, ASTM C494, to minimize cement and water content of the concrete mix at the specified slump.
   2. Air-Entraining Admixtures: ASTM C260.
   3. Pozzolan: Fly ash or other pozzolans used as admixtures shall conform to ASTM C618, Class C or Class F with 4 percent maximum loss on ignition. Pozzolan may be used to replace a maximum of 15 percent (15 %) of cement by weight.
   4. No calcium chloride or admixtures containing calcium chloride shall be added to the concrete. No admixtures other than those specified shall be used in the concrete without the specific written permission of Engineer in each case.
   5. Integral color admixture: Mineral oxide pigments per manufacturer.

2.3 FORMS

A. Forms shall be substantially built and adequately braced so as to withstand the liquid weight of concrete without deforming. All linings, studding, walling and bracing shall be such as to prevent bulging, spreading, or loss of true alignment while pouring and displacement of concrete while setting.

B. All edge forms for sidewalk pavements, curbs and gutters shall be of sufficient rigidity and adequately braced to accurately maintain line and grade. Form work shall be designed so that sections may be fastened together to prevent vertical or horizontal movement of ends.

C. Forms for curved sections shall be so constructed and placed that the finish surface of walls and edge of sidewalks, curbs and gutters will not deviated appreciably from the arc of the curve.

D. Exposed vertical and horizontal edges of the concrete in structures shall be chamfered as indicated on the Drawings by the placing of moldings in the forms.

E. Forms for Exposed Finish: Plywood, metal, metal-framed plywood faced, or other acceptable panel materials. Form work materials shall produce a smooth, continuous, straight, and level surface.

   1. Plywood shall be APA A-A, A-B or A-C, Class 1, Exterior Grade. Thickness shall be as required to prevent movement or deformation but shall not be less than 5/8″ thick.

F. Forms for Non-Exposed Finish: Plywood, metal, metal-framed plywood faced, or other acceptable panel materials. Form work materials shall produce a generally smooth, continuous, straight, and

level surface. Grain patterns or similar imperfections are acceptable. Lumber shall be dressed on at least two edges and one side.

1. Plywood shall be at least B-B, Class 1, Exterior Grade. Thickness shall be as required to prevent movement or deformation but shall not be less than 5/8″ thick.

G. Cylindrical Forms: Sonotube Fibre Forms, wax-impregnated strippable forms or ABS or PVC plastic reusable forms.

H. Form Ties: Provide prefabricated, adjustable length galvanized steel snap-off ties, with brackets, cones, corner locks and other accessories as necessary.

I. Form Release Agent: Commercial formulation compounds that will not bond with, stain or adversely affect concrete.

2.4 REINFORCEMENT MATERIALS

A. Reinforcing Bars: ASTM A 615, Grade 60 unless otherwise indicated.

B. Galvanized Reinforcing Bars: ASTM A 767, Class II with galvanizing before fabrication.

C. Weldable Reinforcing Bars: ASTM A 706, Grade 60 unless otherwise indicated. Maximum carbon content shall be 0.55 percent.

D. Epoxy-Coated Reinforcing Bars: ASTM A 775, Grade 60 unless otherwise indicated.

E. Steel Wire: ASTM A 82, 16 gauge or heavier black annealed wire.

1. Ties for epoxy-coated bars shall be vinyl-coated or epoxy-coated.
2. Ties for zinc-coated bars shall be zinc-coated.

F. Welded Wire Reinforcement (WWR)

1. Sidewalks: Plain wire, ASTM A1064 as indicated on the Drawings.
2. Concrete Pavement: Plain wire, ASTM A1064 as indicated on the Drawings.

G. Supports for Reinforcement

1. Supports shall include bolsters, chairs, spacers, and other devices necessary for proper spacing, supporting, and fastening reinforcing bars and wire reinforcement in-place. Conform with CRSI Manual of Standard Practice for corrosion-resistant, plastic-protected wire, epoxy-coated, or stainless-steel supports.
2. For exposed-to-view concrete surfaces and where support legs are in contact with forms, provide supports with plastic protection (CRSI, Class1) or stainless steel protection (CRSI, Class 2).

H. Dowel Bars: Plain (smooth) high-chrome steel bar, ASTM A615 Grade 60 with full-length plastic sleeve as a combined unit, dimensions as indicated on the Drawings.

1. Where epoxy-coated dowels are called for: ASTM A1078.

I. Bar/Dowel Adhesive: Two component (1:1 ratio), 100% solids, high modulus, moisture-insensitive structural epoxy gel designed specifically for bonding bars, dowels, and bolts in concrete.

2.5 JOINT MATERIALS

A. Preformed Joint Filler Strips

1. Where no joint sealant is called-for: Nonextruding and resilient bituminous type conforming to ASTM D 1751, 1/2 inch thick, one piece for the full depth and width of the joint.
2. Where joint sealant is called-for: Nonextruding and resilient nonbituminous type conforming to ASTM D 1752, Type I (sponge rubber) or Type II (cork), 1/2 inch thick, allowance for sealant at top and extending for the full depth and width of the joint.

B. Joint Sealant Compound, ASTM C920

1. Self-Leveling (Type SL; Grade “P”)

a. Cold-applied and self-leveling, Type S or Type M elastomeric polymer sealant.

2. Gun-Grade (Non-Sage; Grade “NS”)

a. One-component (Type S) high-performance moisture-curing polyurethane sealant specifically formulated for bonding to masonry and concrete.

3. Traffic Bound areas: T sealant.
4. Non-Traffic Bound areas: NT sealant.
5. Color: As approved by Engineer.
6. Backer material: ASTM D5249, closed cell.

2.6 DETECTABLE WARNING PANEL

A. Surface-mount, UV-stabilized, polymer composite panel as indicated on the Drawings. Fasteners, adhesives, and sealants per manufacturer’s requirements. Panel shall comply with Connecticut Building Code/ADA Guidelines.

1. Color: As approved by Engineer.

B. Duralast Detectable Warning Plate with Black Asphaltic Coating, Product Number 00700570 as manufactured by East Jordan Iron Works, 301 Spring Street, East Jordan, MI or approved equal.

2.7 CONCRETE BONDING MATERIALS

A. Aqueous-phase, film-forming, nonoxidizing, freeze and thaw-resistant compound suitable for brush or spray application conforming to ASTM C 932.

B. Epoxy-Resin Adhesive Binder: Two-component, penetrating high solids, epoxy-based primer/bond coat, 100% solids, moisture-tolerant, ASTM C-881, Types I, II, and V, Grade-2, Class C and AASHTO M-235.

2.8 CONCRETE CURING MATERIALS

A. Curing shall be by moist curing (preferred) or by use of curing compound. Sodium Silicate curing compounds shall be used where required by the weather, approved construction schedules and construction that is not adaptable to damp curing.

B. Curing compound shall be a resin-base, white pigmented compound, ASTM C309, Type 2.

C. Curing compounds shall contain a fugitive dye or when hot weather conditions dictate, a fugitive heat reflecting pigment.

D. Moisture-Retaining Cover:

1. Waterproof paper, ASTM C 171, regular or white.
2. Polyethylene sheeting, ASTM C 171.
3. Polyethylene-coated burlap consisting of a laminate of burlap and a white opaque polyethylene film permanently bonded to the burlap. Burlap: ASTM C 171, Class 3. Polyethylene film: ASTM C 171.
4. When tested for water retention in accordance with ASTM C 156, weight of water lost 72 hours after application of moisture retaining covering material shall not exceed 0.039 gram per square centimeter of the mortar specimen surface.

E. Water: Potable Quality.

F. Membrane-Forming Curing Compound

1. Liquid type, ASTM C 309, Type 1, clear, Type 2, white, pigmented.

2.9 BOND BREAKER

A. Asphalt felt conforming to ASTM D2626, Type I or 6-mil polyethylene sheeting, ASTM D4397.

2.10 SEALER

A. Consolideck® Saltguard® silane/siloxane water repellent and chloride screen as manufactured by Prosoco, Inc., 3741 Greenway Circle, Lawrence, KS 66046, or approved equal.

2.11 COLORED CONCRETE

A. Integral Colorant

1. Colored, water-reducing admixture containing no calcium chloride with coloring agents that are limeproof and ultra-violet resistant. Admixture shall conform to the requirements of ACI 303.1, ASTM C979 and ASTM C494 and shall be dispensed at the batch plant.
2. Curing and Sealing Compound: ASTM C309. Clear, non-yellowing, solvent-borne, membrane-forming with low-gloss finish.
3. Compound shall be of same manufacturer as colored admixture, for use with integrally colored concrete.

B. Dry Colorants

1. Pigmented Mineral Dry-Shake Color Hardener: ASTM C 979, factory-packaged dry combination of Portland cement, graded quartz aggregate, non-fading finely-ground mineral oxide coloring pigments, and plasticizing admixture.
2. Pigmented-Powder Release Agent: Factory-packaged, nonfading finely-ground, streak free, colored powder that facilitates release of stamps and texture rollers from colored concrete and imparts a secondary accent color.

C. Stains

1. Reactive Chemical Concrete Stain: Reactive, water-based solution of metallic salts which react with calcium hydroxide in cured concrete substrates to produce permanent variegated or translucent color effects. Zero VOC content.

D. Colors

1. Cement: Color shall be white.
2. Sand: Color shall be locally available natural sand.
3. Aggregate concrete producer's standard aggregate complying with specifications.
4. Color of admixture, dry colorant, or stain: As indicated on the Drawings or selected by Engineer.

2.12 STAMPED AND TEXTURED CONCRETE

A. Furnish tools and stamping equipment as recommended by the stamping system manufacturer and as approved by Engineer. Use stamping equipment and materials from a single manufacturer throughout the entire project.

B. Surface-Applied Products
1. Dry-shake color hardener: Blend of cement, fine aggregate, and pigments for surface color and abrasion resistance.
2. Release agent
3. Sealer: Compatible with decorative finish.

C. Stamp Mats: Semi-rigid polyurethane mats with projected texture and ridged underside capable of imprinting texture and joint patterns to plastic concrete.

1. Pattern: As indicated on the Drawings.

D. Stencils: Moisture-resistant paper stencils, designed for use on plastic concrete.

1. Pattern: As indicated on the Drawings.

E. Texture Rollers: Manually controlled, abrasion-resistant polyurethane rollers capable of imprinting texture on plastic concrete.

1. Pattern: As indicated on the Drawings.

F. Accessory Stamp Tools: Aluminum detailing tools capable of imprinting joints and dressing stamped joints of plastic concrete.

PART 3 - EXECUTION

3.1 GENERAL

A. Verify site conditions before proceeding with the work. Field check the accuracy of the Drawings and inspect structures, utilities, and other site features prior to start of work and notify Engineer in writing, of any hazardous conditions and/or discrepancies.

B. Provide construction techniques in accordance with applicable provisions of ACI 224R, ACI 224.3R, and ACI 302.1R-04.

C. Engineer shall be notified of concrete placement sufficiently in advance of start of operation to allow their representative to complete preliminary inspection of the Work, including subgrade, forms, and reinforcing steel, if used.

D. Adjacent work, etc., shall be protected from stain and damage during entire operation. Damaged and stained areas shall be replaced or repaired to equal their original conditions at the contractor's expense. No concrete walks shall be poured after 12 noon unless a guard is visibly stationed nearby to prevent graffiti. Contractor shall be responsible for replacing any graffiti if he fails to provide adequate protection.

E. Concrete surface shall be protected from traffic or damage until surfaces have hardened sufficiently. If necessary, 1/2-inch thick plywood sheets shall be used to protect exposed surfaces.

F. Retempering of concrete is not permitted.

G. Contractor is responsible for the protection and resetting of all existing utility covers/castings to finish grade; as well as, setting all new utility covers/castings to finish grade prior to placement of concrete. The repair of any settlement, or protrusion above finish grade, shall be the responsibility of Contractor at no additional cost to Owner.

3.2 PREPARATION OF SUBGRADE

A. Compact and bring area to required subgrade elevation in accordance with Section 31 2310 – Earthwork. Provide for final fine grading, and compaction of areas as required to form a firm, uniform, accurate and unyielding subgrade at required elevations and to required lines.

B. Existing subgrade material, which will not readily compact as required, shall be removed and replaced with satisfactory materials in accordance with Section 31 2310 – Earthwork.

C. Subgrade of areas to receive concrete shall be recompacted as required to bring the top 8 inches of material, immediately below the base course, to a compaction at optimum moisture content of at least 95 percent (95%) of maximum density, as determined by ASTM D1557. Subgrade compaction shall extend for a distance of at least 1 foot beyond pavement edge.

D. Materials shall not be stored or stockpiled on subgrade.

E. Disposal of debris and other material excavated under this section, and material unsuitable for, or in excess of requirements for, completing work of this section shall be disposed of off-site.

F. Prepared subgrade shall be inspected and approved by Engineer Representative before installation of the gravel base course. Disturbance to subgrade caused by inspection procedures shall be repaired under this Section of the Specification.

3.3 AGGREGATE BASE COURSE

A. Prepare aggregate base course for concrete in accordance with Section 31 2310 – Earthwork and as shown on the Drawings.

B. Width of base course shall be greater than or equal to the width of concrete surface, if continuous lateral support is provided during rolling. The width of base course shall extend at least 2 x base thickness beyond the edge of the course above, if it is not so supported.

C. Aggregate shall be applied in lifts less than or equal to 6 inches thick, compacted measure. Each lift shall be separately compacted to specified density.

1. Material shall be placed adjacent to wall, manhole, catch basin, and other structures only after they have been set to required grade and level.
2. The base shall be wetted and rolled or tamped after the spreading of each lift.
3. Rolling shall begin at the sides and progress to the center of crowned areas, and shall begin on the low side and progress toward the high side of sloped areas. Rolling shall continue until material does not creep or wave ahead of roller wheels.
4. Surface irregularities, which exceed 1/2-inch, as measured by means of a 10-foot long straightedge, shall be replaced and properly re-compacted.

D. Density: Base course shall be compacted at optimum moisture content to not less than 95 percent of maximum density as determined by ASTM D1557.

E. Subgrade and base course shall be kept clean and uncontaminated. Less select materials shall not be permitted to become mixed with gravel. Materials spilled outside pavement lines shall be removed and the area repaired.

F. Portions of subgrade, or of construction above, which become contaminated, softened, or dislodged by the passing of traffic, or otherwise injured, shall be cleaned, replaced, or otherwise repaired to conform to the requirements of this specification before proceeding with the next operation.

3.4 FORMS

A. Forms shall be securely staked, braced and held firmly to the required line and grade and shall be sufficiently tight to prevent leakage of mortar. All forms shall be cleaned and oiled or wetted before concrete is placed against them.

B. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

C. Complete and approve formwork. Remove debris and foreign material from interior of forms before start of concrete placing.

D. Set edge forms or bulkheads and intermediate screed strips for slabs to obtain indicated elevations and contours in finished slab surface and must be strong enough to support vibrating bridge screeds or roller pipe screeds if nature of specified slab finish requires use of such equipment. Align concrete surface to elevation of screed strips by use of strike-off templates or approved compacting-type screeds.

E. The maximum cross slope for sidewalks shall be 2.0 percent, sloped towards the gutter. Verify formwork prior to concrete placement. Make corrections as required and bring discrepancies to attention of Engineer.

3.5 JOINTS

A. Locate joints as located on the Drawings, as shown on Engineer-approved joint plan. Conform with applicable sections of ACI 224.3R.

B. Construction Joints: Effected at the end of a pour, lift, or at the end of a day's concrete placement. This type of joint is a plane surface between two distinct sections of concrete.

1. Construction Joints shall be ½ inch wide and full-depth of slab.
2. Joint filler: Unless otherwise specified, Construction Joints shall be constructed with joint filler. Joint filler shall extend the full depth of the slab and shall extend the full length of the joint. Use of multiple pieces of joint material of lesser dimensions to make up required depth and width of joint will not be permitted.
3. Where joints are to receive filler, recess joint filler 1/4-inch below finish surface or as otherwise indicated on the Drawings.
4. Where called-for on the Drawings, install dowels at Construction Joints.

C. Isolation Joints: Installed at intersections of structures on any type including but not limited to buildings, walks with steps, pre-cast concrete curb, light foundations, walls, pads, slabs at footings, or other structures. Isolation Joints shall not be required where concrete flatwork abuts granite curbing.

1. Isolation Joints shall be ½ inch wide.
2. Joint Filler: All Isolation Joints shall be constructed with joint filler. Joint filler shall extend the full depth of the slab and shall extend the full length of the joint. Use of multiple pieces of joint material of lesser dimensions to make up required depth and width of joint will not be permitted.
3. Where joints are to receive filler, recess joint filler 1/4-inch below finish surface or as otherwise indicated on the Drawings.

D. Control/Contraction Joints: Installed to form a weakened plane in a concrete member to provide a reduction in member thickness for the purpose of controlling shrinkage stresses to that specific area. Control/Contraction Joints shall be synonymous with "Dummy Joints."

1. Control/Contraction Joints shall be tooled or saw-cut.

a. Tooled joints: Tool-form joint into the concrete 1 inch in depth, but in no case less than 25 percent of slab depth. Joint width shall be 1/4-inch. Each side of tooled joint shall be dressed to match final overall slab finish. Joint shall be made after concrete is finished and when the surface is stiff enough to support the weight of workmen without damage to the slab, but before the slab has achieved its final set.

1) Where tooled joints are to receive joint sealant, provide 1/2-inch wide tooled joint and install backer rod material to create 1/4-inch recess below finished surface.

b. Saw-cut joints: Saw-cut joint into concrete 1 inch in depth, but in no case less than 25 percent of slab depth. Joint width shall be 1/8-inch. Cut joint using rotary saw within 4 to 12 hours after the concrete has been finished.

3.6 STEEL REINFORCEMENT

A. Install steel reinforcement as shown on the Drawings.

1. Welded Wire Reinforcement: Where WWR is called-for, install material in the upper 30 to 40 percent (30%–40%) of the overall slab thickness, or at the nearest depth below top of slab as required to achieve a minimum of 2-inches of cover.

B. Before being placed in position, reinforcing for reinforced concrete shall be thoroughly cleaned of loose mill and rust scale, dirt, ice, and other foreign material, which may reduce the bond between the concrete and reinforcing. Where there is a delay in placing concrete after reinforcement is in place, bars shall be re-inspected and cleaned when necessary.

C. Any bar showing cracks after bending shall be discarded.

D. Minimum Cover: 2 inches, except where concrete is cast against and permanently exposed to earth minimum cover shall be 3 inches.

E. For slab-type construction, welded wire reinforcement and reinforcing bars shall be elevated off the base material by use of supports as specified herein. Adjacent sheets of welded wire reinforcing shall lap 6 inches.

F. Joints

1. Construction Joints: Reinforcement shall not continue through construction joints. Allow for 2-inches of cover at end of slab. Where called-for on the Drawings, install pins at Construction Joints per detail.
2. Isolation Joints/Expansion Joints: Allow for 2-inches of cover at end of slab.
3. Control/Contraction Joints: Cut at least one-half of reinforcement at joints.

G. Reinforcing shall be securely wired in the position called for, and shall be maintained in that position until concrete is placed and compacted.

3.7 PLACEMENT

A. Before placing concrete, forms and the space to be occupied by the concrete shall be thoroughly cleaned, and reinforcing steel and embedded metal shall be free from dirt, oil, mill scale, loose rust, paint, and other material which might tend to reduce bond.

B. Existing concrete, earth, forms, and other water-permeable material against which new concrete is to be placed and shall be thoroughly damp when concrete is placed. There shall be no free water on the surface.

C. Concrete shall arrive at the job site in a timely manner so that no additional water will be required to produce the desired slump. When conditions develop that require the addition of water to produce the desired slump, permission of the Engineer must be obtained. The concrete shall be transported from the mixer to its place of deposit by a method that will prevent segregation or loss of material.

D. Concrete, which has set, or partially set, before placement shall not be employed.

E. Existing concrete, earth, and other water-permeable material against which new concrete is to be placed shall be thoroughly damp when concrete is placed. There shall be no free water on surface.

F. Concrete shall be thoroughly spaded and tamped to secure a solid and homogeneous mass, thoroughly worked around reinforcement and into corners of forms.

G. When joining fresh concrete to concrete which has attained full set, the latter shall be cleaned of foreign matter, and mortar scum and laitance shall be removed by chipping and washing. Clean, roughened base surface shall be saturated with water, but shall have no free water on surface. A coat of 1:1 cement-sand grout, approximately 1/8-inch thick shall be well scrubbed into thoroughly dampened concrete base. New concrete shall be placed immediately, before grout has dried or set.

3.8 STAMPED OR TEXTURED CONCRETE

A. Construct concrete as recommended by the stamping system manufacturer. Apply pigmented release agent to tools and forms in accordance with the stamping system manufacturer's specifications. Place concrete and screed to the specified grade. Float the surface and evenly apply dry shake color hardener according to manufacturer's specifications.

B. Imprint the surface of the plastic concrete with the forms to obtain the specified pattern. The pigmented release agent will serve as the curing agent. Do not clean the surface until adequate curing has been obtained, as recommended by the stamping system manufacturer.

C. Saw cut all joints one-quarter inch wide and one-inch-deep, following the joint patterns illustrated in the typical sections, or as directed by the Engineer. Seal all joints, including expansion joints and sawed joints, with color-matched joint sealant, as recommended by the stamping system manufacturer. Apply two coats of low-lustre, matte finish clear surface sealer to the finished decorative concrete as recommended by the stamping system manufacturer.

D. Take steps to avoid the contamination of adjacent surfaces while placing and finishing colored, stamped concrete; clean all surfaces that do get contaminated. Areas that were not properly protected and/or cannot be cleaned to the satisfaction of the Engineer must be removed and replaced. All costs associated with this removal and replacement will be borne by the Contractor.

3.9 FINISHING

A. Concrete flatwork surfaces shall be screened off and finished true to line and grade, and free of hollows and bumps. Surface shall be dense, smooth, and at exact level and slope required.

1. Finished concrete surface for concrete subbase shall be woodfloated to a slightly rough surface. Surface shall not deviate more than 1/4-inch in 10 feet.
2. Finished concrete surface for concrete pavement, walks, and pads shall be wood-floated and steel troweled to a smooth surface. Surface shall not deviate more than 1/8-inch in 10 feet.

B. Unless otherwise indicated, horizontal surfaces of concrete surfaces, which will be exposed, shall be given a light broomed finish, with direction of grooves in concrete surface perpendicular to length of concrete band, slab or pad. After concrete has set sufficiently to prevent coarse aggregate from being torn from the surface, but before it has completely set, brooms shall be drawn across it to produce a pattern of small parallel grooves. Broomed surface shall be uniform, with no smooth, unduly rough or porous spots, or other irregularities. Coarse aggregate shall not be dislodged by the brooming operation.

C. Immediately following finishing operations, arises at edges and both sides of expansion joints shall be rounded to a ¼ inch radius. Control joints to be tooled shall be scored into slab surface with scoring tool. Adjacent edges of control joint shall be same time be finished to a ¼ inch radius.

D. Where finishing is performed before the end of the curing period, concrete shall not be permitted to dry out, and shall be kept continuously moist from time of placing until end of curing period, or until curing membrane is applied.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view and to receive a rubbed finish.
2. After repairing and patching, areas to receive spray applied stain finish shall receive one of the following surface preparations;

a. Power washing with a minimum of 3000 psi pressure.
b. Sand blasting to open concrete only, not to the degree of seeing exposed aggregate.

C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:

1. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix one part portland cement to one and one-half parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
2. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 CURING

A. Cure in accordance with ACI 308R.

B. Concrete shall be kept continuously damp from time of placement until the end of the specified curing period.

C. Water shall not be applied to curing concrete within 24 hours after initial placement. Any water shall be applied only to maintain damp conditions. Do not add water during floating and troweling operations.

D. Between finishing operations, the surface shall be protected from rapid drying by covering with a material specified herein. Surface shall be damp when the covering is placed over it, and shall be kept damp by means of fine-spray of water, applied as often as necessary to prevent drying after the initial 24-hour cure period.

E. Concrete surfaces shall be cured by completely covering them with curing paper or an application of a curing compound.

1. Concrete cured using waterproof paper shall be completely covered with paper with seams lapped and sealed with tape. Concrete surface shall not be allowed to become moistened between 24 and 36 hours after placing concrete. During curing period surface shall be checked frequently, and sprayed with water as often as necessary to prevent drying, but not earlier than 24 hours after placing concrete.
2. If concrete is cured with a curing compound, the compound shall be applied at a rate of 200 square feet per gallon, in two applications perpendicular to each other.
3. Curing period shall be seven days minimum. Full-strength shall be considered after 28 days.

F. Only if additional protection is required, the surface should remain uncovered for at least 4 days, after which time new and unwrinkled non-staining reinforced waterproof Kraft curing paper may be used.

G. Integrally Colored Concrete: Cure using a curing compound specific for integrally colored concrete according to manufacturer's instructions using manufacturer's recommended application techniques. Apply curing and sealing compound at consistent time for each pour to maintain close color consistency.

3.12 COLD WEATHER CONCRETING

A. Comply with ACI 306R Guide to Cold Weather Concreting.

B. Materials for concrete shall be heated for concrete, which is mixed, placed or cured when the mean daily temperature is below 40 degrees F or is expected to fall below 40 degrees F within 72 hours. The concrete, after placement, shall be protected by covering, heat, or both.

C. Details of handling and protecting concrete during freezing weather shall be subject to the approval of Engineer.

3.13 HOT WEATHER CONCRETING

A. Comply with ACI 305R: Guide to Hot Weather Concreting.

B. Concrete just placed shall be protected from the direct rays of the sun and the forms and reinforcement just prior to placement shall be sprinkled with cold water. Every effort shall be made to minimize delays that will result in excessive mixing of the concrete after arrival on the job.

C. During periods of excessively hot weather (95□F, or above), ingredients in the concrete shall be cooled insofar as possible and cold mixing water shall be used to maintain the temperature of the concrete at permissible levels all in accordance with the provisions of ACI 305R. Any concrete with a temperature below 95□F, when ready for placement, will not be acceptable, and will be rejected.

D. Temperature records shall be maintained throughout the period of hot weather giving air temperature, general weather conditions (calm, windy, clear, cloudy, etc.) and relative humidity. Records shall include checks on temperature of concrete as delivered and after placing in forms. Data should be correlated with the progress of the Work so that conditions surrounding the construction of any part of the structure can be ascertained.

3.14 PROTECTION

A. Concrete surface shall be protected from traffic or damage until surfaces have hardened sufficiently. If necessary, ½ inch thick plywood sheets shall be used to protect the exposed surface.

3.15 CLEAN UP

A. Remove all debris, residuals, and materials at the conclusion of the work. Dispose of all materials in accordance with applicable waste management regulations.

END OF SECTION 033200

SECTION 033511 - CONCRETE FLOOR FINISHES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Low-gloss sealer.

1.3 RELATED REQUIREMENTS

A. Section 033000 - Cast-in-Place Concrete: Finishing of concrete surface to tolerance; floating, troweling, and similar operations; curing.

B. Section 090561 - Common Work Results For Flooring Preparation.

1.4 REFERENCE STANDARDS

A. ANSI A326.3 - American National Standard Test Method for Measuring Dynamic Coefficient of Friction of Hard Surface Flooring Materials.

B. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

C. ASTM C1315 - Standard Specification for Liqud Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with concrete floor placement and concrete floor curing.

B. Preinstallation Meeting:

1. Convene one week before starting work of this Section.
2. Conduct a review of procedures required to produce specified results.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's published data on each finishing product, including information on compatibility of different products and limitations.

C. Selection Samples: Provide color samples for Architect selection representative of range of colors within installation.

1. Joint filler material.

D. Maintenance Data: Provide data on maintenance and renewal of applied finishes.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least 3 years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least 3 years of documented experience and approved by manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's sealed packaging, including application instructions.

B. Store materials to comply with manufacturer’s written instructions to prevent deterioration from moisture or other detrimental effects.

1.9 FIELD CONDITIONS

A. Maintain light level equivalent to a minimum 200 W light source at 8 feet above the floor surface over each 20 foot square area of floor being finished.

B. Do not finish floors until interior heating system is operational.

C. Maintain ambient temperature of 50 degrees F minimum.

1.10 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Extended Correction Period: Correct defective work within 2-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MATERIALS, GENERAL

A. Where multiple products are applied to the same concrete surface, verify compatibility with manufacturers.

2.2 COATINGS

A. Low-Gloss Clear Coating: Transparent, nonyellowing, acrylic-polymer-based coating.
   1. Composition: Water-based.
      a. Solids Content: 20 percent, minimum, when measured by volume.
      b. Acceptable Products:
         1) Dayton Superior Corporation; Hydroseal 18: www
         2) Euclid Chemical Company; AQUA-CURE VOX: www.euclidchemical.com/.
         3) Laticrete; L&M LUMISEAL FX: www.laticrete.com/.
         4) Substitutions: See Section 016000 - Product Requirements.

2.3 RELATED MATERIALS

A. Neutralizing Agent: Tri-sodium phosphate.

B. Joint Filler: Semi-rigid, 2 component, self-leveling, 100% solids polyurea:
   1. Durometer Shore A hardness: 80 minimum.
   2. Color as selected by Architect from manufacturer's full range.
   3. Acceptable Manufacturers:
      a. Euclid Chemical.
      b. Hi-Tech Systems.
      c. Metzger/McGuire.
      d. Substitutions: See Section 016000 - Product Requirements.

C. Water: Potable.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that floor surfaces are acceptable to receive the work of this Section.

B. Verify that flaws in concrete have been patched and joints filled with methods and materials suitable for further finishes.

C. Do not proceed until unsatisfactory conditions are corrected.

3.2 GENERAL

A. Apply materials in accordance with manufacturer's instructions.

B. Prepare surfaces as required by finishing system manufacturer.

3.3 COATING APPLICATION

A. Verify that surface is free of previous coatings, sealers, curing compounds, water repellents, laitance, efflorescence, fats, oils, grease, wax, soluble salts, residues from cleaning agents, and other impediments to adhesion.

B. Verify that water vapor emission from concrete and relative humidity in concrete are within limits established by coating manufacturer.

C. Protect adjacent non-coated areas from drips, overflow, and overspray; immediately remove excess material.

D. Apply coatings in accordance with manufacturer's instructions, matching approved mock-ups for color, special effects, sealing and workmanship.

1. Use application materials, methods, and procedures required by coating manufacturer to establish and maintain specified warranty.

3.4 PROTECTION

A. Protect installed concrete floor finishes from subsequent construction operations.

B. Do not permit traffic over unprotected floor surface.

END OF SECTION

SECTION 040100 - MASONRY RESTORATION AND CLEANING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Repair of damaged masonry.

B. Repointing mortar joints. Extent and location of repointing on various locations is as shown on Drawings.

C. Cleaning of existing masonry surfaces. Extent of cleaning on various locations is as shown on Drawings.

1.3 RELATED REQUIREMENTS

A. Section 012100 - Allowances.

B. Section 012200.1 - Unit Prices.

C. Section 042000 - Unit Masonry: New masonry work.

1.4 SUMMARY AND SCOPE OF WORK

A. Work Included:

1. Brick Replacement: Removal of existing brick, cleaning of surrounding area, provision of new brick unit, mortar as needed, and tooling of joint.
2. Repointing: Removal of old mortar, cleaning of joint, addition of new mortar, and tooling of joint.
3. Brick Cleaning: Protection of surrounding non-masonry surfaces from cleaning products, preconditioning of the masonry with clean water, application of chemical cleaning products and working time, manual scrubbing, rinsing with appropriate pressure spray, and neutralization of cleaner products when required.

1.5 PRICE AND PAYMENT PROCEDURES

A. Allowances and Unit Prices:

1. See Sections 012100 - Allowances and 012200.1 - Unit Prices, for additional price requirements.

1.6 REFERENCE STANDARDS

A. ACI 530/530.1/ERTA - Building Code Requirements and Specification for Masonry Structures and Related Commentaries; American Concrete Institute International; 2011.

B. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar.

C. ASTM C150/C150M - Standard Specification for Portland Cement.

D. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes.

E. ASTM C270 - Standard Specification for Mortar for Unit Masonry.

F. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.

1.7 DEFINITIONS

A. Extra Low-Pressure Spray:

1. Pressure: Up to 100 psi.
2. Flow Rate: 4 to 6 gpm.

B. Low-Pressure Spray:

1. Pressure: 100 psi to 400 psi.
2. Flow Rate: 4 to 6 gpm.

C. Medium-Pressure Spray:

1. Pressure: 400 to 800 psi.
2. Flow Rate: 4 to 6 gpm.

D. Hot Water: Water heated to a temperature of 140 to 160 deg F.

E. pH Neutral: Materials having a pH value between 6.7 and 7.5.

F. Rebuilding (Setting) Mortar: Mortar used to set and anchor masonry in a structure, distinct from pointing mortar installed after masonry is set in place.

1.8 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this Section.

1. Require attendance of parties directly affecting work of this Section. At a minimum, require attendance by Contractor, Architect, Masonry Subcontractor, and Owner's Representative.
2. Review conditions of installation, installation procedures, and coordination with related work.
3. Review methods and procedures related to cleaning masonry.

1.9 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on cleaning compounds and cleaning solutions.

C. Selection Samples: For each type of masonry and mortar, submit four samples to illustrate matching color, texture, and extremes of color range.

D. Manufacturer's Instructions: For cleaning materials, indicate special procedures, and conditions requiring special attention.

1.10 MORTAR ANALYSIS

A. Mortar sampling and analysis shall be performed by an approved testing company with at least five years of documented experience in testing of historic mortar.

B. Take at least three samples from each exposure (north, south, east, and west) of every type of masonry that will be re-pointed. Samples shall be taken, to the extent possible, from clean mortar. Samples shall be taken from areas that do not appear, visually, to have been repointed.

C. Provide a written report identifying at a minimum; sample numbers, location, type of joint, hardness, color, aggregate shape, aggregate gradation, color of fines, color of sands, and percentages of lime, fines, sands, cements, and any other materials.

1.11 QUALITY ASSURANCE

A. Work shall be done by qualified skilled masons experienced in preservation masonry and methods having a minimum of three years of documented experience.

B. Comply with ACI 530.1-13. Contractor shall have a copy of this document available for reference on the job site.

C. Warranty: A warranty is required for a period of two years for full installation including mortar and accessories.

1. Obtain masonry and mortar ingredients of uniform quality, including color for exposed materials, from one manufacturer for each cementitious component and from one source and producer for each aggregate.

1.12 MOCK-UP

A. Comply with general mock-up requirements specified in Section 014000.

B. Masonry Repair: Prepare sample areas for each type of masonry material indicated to have repair work performed. If not otherwise indicated, size each mock-up area 4 feet by 4 feet.

1. Locate where directed.

2. Acceptable panel and procedures employed will become the standard for work of this Section.

3. Mock-up may remain as part of the Work.

C. Repointing Mock-up: Rake out joints in two separate masonry wall areas, each two joints high by 2 feet wide, for each type of repointing required.

1. Locate where directed.
2. Acceptable panel and procedures employed will become the standard for work of this Section.
3. Mock-up may remain as part of the Work.
4. Repointing shall match existing mortar in color, texture, and tooling, and meeting the properties required in the mortar analysis for each type of historic masonry repair on the project.

D. Masonry Cleaning Mock-up: Clean a 5 ft by 5 ft panel of wall to determine extent of cleaning. Mock-up shall include examples of each type of masonry on the project.

1. Repeat, using different cleaning methods for up to three different panels.
2. Locate where directed.
3. Acceptable panel and procedures employed will become the standard for work of this Section.
4. Mock-up may remain as part of the Work.

1.13 DELIVERY, STORAGE, AND HANDLING

A. Deliver masonry materials neatly stacked and tied on pallets. Store clear of ground with adequate waterproof covering.

1.14 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

B. Do not blast clean or use process creating dust and dirt when wind is over 10 mph.

PART 2 PRODUCTS

2.1 MASONRY MATERIALS

A. Salvaged Brick: Face brick obtained from this building, resulting form cutting of new openings, and other selective demolition.

B. Replacement and Restoration Masonry Units: Match existing as closely as possible; materials subject to approval of Architect.

2.2 MORTAR MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type II; color as required to produce approved color sample.

1. Not more than 0.60 percent alkali.

2. Hydrated Lime: ASTM C207, Type S.

3. Mortar Aggregate: ASTM C144.

   a. Match size, texture, and gradation of existing mortar sand as closely as possible. Blend several sands if necessary to achieve suitable match.

   b. Color: Natural sand or ground marble, granite, or other sound stone of color necessary to produce required mortar color.

   c. Provide sand with rounded edges.

4. Mortar Pigments: ASTM C 979/C 979M, compounded for use in mortar mixes, and having a record of satisfactory performance in masonry mortars.

   a. Acceptable Manufacturers:

      1) Davis Colors.

      2) Lambert Corporation.

      3) Solomon Colors, Inc.

5. Admixtures:

   a. No calcium chloride or admixtures containing calcium chloride shall be used in the mortar.

   b. No air-entraining admixtures or material containing air-entraining admixtures shall be used in the mortar.

   c. No antifreeze compounds or other substances shall be added to the mortar.

   d. No corrosion-promoting admixtures shall be used in the mortar.

   e. Water shall be clean, potable and free of deleterious amounts of acids, alkalis or organic materials.

   f. No admixtures shall be used without written approval.

2.3 MORTAR MIXES

A. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.

1. Pointing Mortar: Type N unless otherwise indicated; with cementitious material limited to portland cement and lime. Add mortar pigments to produce mortar colors required.

2. Match existing as closely as possible; materials subject to approval of Architect.

2.4 MANUFACTURED REPAIR MATERIALS

A. Patching Compound: Factory-mixed cementitious product that is custom manufactured for patching masonry.

1. Use formulation that is equal to vapor and water permeability of masonry, exhibits low shrinkage, has lower modulus of elasticity than the masonry being repaired, and develops high bond strength to all surfaces.
2. Match colors and textures to masonry being patched. Provide sufficient number of colors to enable matching the color, texture, and variation of each type of unit.
3. Acceptable Manufacturers:
    a. Cathedral Stone Products, Inc.
    b. Conproco Corporation.
    c. Edison Coatings, Inc.

2.5 PAINT REMOVERS

A. Low-Odor, Solvent-Type Paste Paint Remover: Manufacturer's standard low-odor, water-rinsable, solvent-type paste, gel, or foamed emulsion formulation for removing paint from masonry; containing no methanol or methylene chloride.
    1. Products:
        a. American Building Restoration Products, Inc.; Super Bio Strip Gel.
        b. Cathedral Stone Products, Inc.; S-305.
        c. Dumond Chemicals, Inc; Smart Strip Pro.
        d. PROSOCO, Inc; Enviro Klean SafStrip 8.

2.6 SEALANT AND TAR REMOVERS

A. Manufacturer's standard heavy duty solvent Asphalt & Tar Remover for removal of deposits of roofing asphalt, tar and caulking stains.
    1. Products:
        a. American Building Restoration Products, Inc; TR-7 Tar & Mastic Remover
        b. PROSOCO, Inc.; Sure Klean® Asphalt & Tar Remover; Dicone NC9
        c. Dumond Chemicals, Inc; Smart Strip.
        d. Cathedral Stone Products, Inc.; S-301.
        e. American Sealants Inc., ASI 0240 Adhesive Cleaner and Remover

2.7 CLEANING MATERIALS

A. Water: Potable.

B. Select cleaning materials from among the following, to be determined by testing. Select the mildest product in each group that produces the desired cleaning effect.

C. Mild Cleaning Treatments:

1. Detergent Solution, Job Mixed: Solution prepared by mixing 2 cups of tetrasodium pyrophosphate (TSPP), 1/2 cup of laundry detergent, and 20 quarts of hot water for every 5 gal. of solution required.

a. Products:

1) Cathedral Stone Products, Inc.; MasonRE B.

2) Price Research, Ltd.; Price Marble Cleaner-Gel.

3) PROSOCO, Inc; ReKlaim Cleaner.

2. Nonacidic Gel Cleaner: Manufacturer's standard gel formulation, with pH between 6 and 9, that contains detergents with chelating agents and is specifically formulated for cleaning masonry surfaces.

a. Products:

1) Cathedral Stone Products, Inc.; MasonRE B.

2) Price Research, Ltd.; Price Marble Cleaner-Gel.

3) PROSOCO, Inc; Sure Klean 942 Limestone and Marble Cleaner.

3. Nonacidic Liquid Cleaner: Manufacturer's standard mildly alkaline liquid cleaner formulated for removing mold, mildew, and other organic soiling from ordinary building materials, including polished stone, brick, aluminum, plastics, and wood.

a. Products:

1) Cathedral Stone Products, Inc.; Bio-

2) D2 Biological Solutions, Inc.; D2 Biological Solution.

3) Diedrich Technologies, Inc.; a Hohmann & Barnard company; 910 PM Polished Marble/Granite Cleaner.

4) Dumond Chemicals, Inc; Safe n' Easy Architectural Cleaner/Restorer; Safe n' Easy Limestone Cleaner.

5) Price Research, Ltd.; Price Non-Acid Masonry Cleaner.

6) PROSOCO, Inc; Enviro Klean 2010 AllSurface Cleaner; Enviro Klean ReVive.

D. Rust Stain Remover:

1. Products:

a. American Building Restoration Products, Inc.; ABR 50 Rust Remover.

b. Dumond Chemicals, Inc.; Safe 'n Easy Masonry Rust Remover.

c. Cathedral Stone Products, Inc.; Light Duty Rust Remover; Heavy Duty Rust Remover.

E. Mold, Mildew, and Algae Remover:

1. Job Mixed: Solution prepared by mixing 2 cups of tetrasodium pyrophosphate (TSPP), 5 quarts of 5 percent sodium hypochlorite (bleach), and 15 quarts of hot water for every 5 gal. of solution required.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces to be cleaned, restored, and repointed are ready for work of this Section.

B. Prior to commencing work, inspect conditions, installations, and verify that the surfaces to receive the work are sound, proper and complete to the point that the work may be properly commenced.

3.2 PREPARATION

A. Protect surrounding elements from damage due to restoration procedures.

B. Carefully remove and store removable items located in areas to be restored, including fixtures, fittings, finish hardware, and accessories; reinstall upon completion.

C. Cover existing landscaping with tarpaulins or similar covers.

D. Close off adjacent occupied areas with dust proof and weatherproof partitions.

E. When using cleaning methods that involve water or other liquids, install drainage devices to prevent runoff over adjacent surfaces unless those surfaces are impervious to damage from runoff.

3.3 REBUILDING

A. Cut out damaged and deteriorated masonry with care in a manner to prevent damage to any adjacent remaining materials.

B. Support structure as necessary in advance of cutting out units.

C. Cut away loose or unsound adjoining masonry to provide firm and solid bearing for new work.

D. Maintain flashing, reinforcement, lintels, and adjoining construction in an undamaged condition.

E. Notify Architect of unforeseen detrimental conditions, including voids, cracks, bulges, loose masonry units in existing backup, rotted wood, rusted metal, and other deteriorated items.

F. Where bricks can be salvaged and reused, remove in an undamaged condition as many whole bricks as possible. Remove mortar and sealant from surfaces of removed units.

G. Clean masonry surrounding removal areas by removing mortar, dust, and loose particles in preparation for brick replacement.

H. Replace removed damaged brick with other removed brick in good condition, where possible, matching existing brick. Do not use broken units unless they can be cut to usable size.

I. Install replacement brick into bonding and coursing pattern of existing brick. If cutting is required, use a motor-driven saw designed to cut masonry with clean, sharp, unchipped edges. Maintain joint width for replacement units to match existing joints.

J. Tool exposed mortar joints in repaired areas to match joints of surrounding existing brickwork.

K. Curing: Cure mortar by maintaining in thoroughly damp condition for at least 72 consecutive hours.

3.4 MASONRY PATCHING

A. Patch the following bricks unless another type of repair or replacement is indicated:

1. Units indicated to be patched.
2. Units with holes.
3. Units with chipped edges or corners. Patch chipped edges or corners measuring more than 3/4 inch in least dimension.

B. Remove all loose mortar and masonry prior to installation of the repair materials. “Sound” masonry with a hammer to verify its integrity. If necessary, cut away an additional 1/2” of the substrate to ensure the surface to be repaired is solid and stable. Remove any sealant residue.

C. Cut the edges of the repair area to provide a minimum depth of 1/4”. The edges of the repair should be square cut. Do not allow any feathered edges in the repair area.

D. Clean all dust from surface and pores of the substrate, using clean water and a scrub brush.

E. Apply the mortar mix using a trowel to place and compress the mortar into the repair ensuring not to leave any voids. Follow manufacturer's written instructions.

F. Finish to match existing masonry finish.

G. Follow manufacturer's curing procedures.

3.5 REPOINTING

A. Perform repointing prior to cleaning masonry surfaces.

B. Cut out loose or disintegrated mortar in joints to minimum of 2-1/2 times the joint width or 1/2 inch, whichever is greater, until sound mortar is reached.

C. Use power tools only after test cuts determine no damage to masonry units will result. Power tools are only allowed when testing is complete, and used only in the presence and under supervision of a qualified preservation architect.

D. Do not damage masonry units.

E. When cutting is complete, remove dust and loose material by brushing.

F. Premoisten joint and apply mortar. Pack tightly in maximum 1/4 inch layers. Form a smooth, compact concave or flush joint to match existing. Mortar shall be pre-hydrated before use, and shall be installed before lapsed time of 1 hour of initial mixing. If temperatures are above 80 degrees, ½ hour is the limit. Discard all dry stiff mortar not used within the limit. Do not re-temper. Dampen the raked joint to a SSD condition to avoid reduction of bond strength of the mortar. Do not allow excessive water in the joint. Install the mortar in 2 or 3 states, compacting mortar of approximately ¼-inch thickness thoroughly into the joint. Allow each compacted layer to stiffen to thumbprint hardness before adding succeeding layers. Match the existing mortar joint profile. Strike joint to profile when final layer is thumbprint hard.

G. Moist cure for 72 hours.

3.6 CLEANING - GENERAL

A. Immediately remove stains, efflorescence, or other excess resulting from the work of this Section.

B. Remove excess mortar, smears, and droppings as work proceeds and upon completion.

C. Proceed with cleaning in an orderly manner; work from bottom to top of each scaffold width and from one end of each elevation to the other. Ensure that dirty residues and rinse water do not wash over dry, cleaned surfaces.

D. Water-Spray Application Method: Unless otherwise indicated, hold spray nozzle at least 6 inches from masonry surface, and apply water in horizontal back-and-forth sweeping motion, overlapping previous strokes to produce uniform coverage.

E. Chemical-Cleaner Application Methods: Apply chemical cleaners to masonry surfaces according to chemical-cleaner manufacturer's written instructions; use brush or spray application. Do not spray apply at pressures exceeding 50 psi. Do not allow chemicals to remain on surface for periods longer than those indicated or recommended in writing by manufacturer.

F. Rinse off chemical residue and soil by working upward from bottom to top of each treated area at each stage or scaffold setting. Periodically during each rinse, test pH of rinse water running off of cleaned area to determine that chemical cleaner is completely removed.

1. Apply neutralizing agent and repeat rinse if necessary to produce tested pH of between 6.7 and 7.5.

G. Clean surrounding surfaces.

3.7 CLEANING

A. Provide enclosures, barricades, and other temporary construction as required to protect adjacent work from damage.

B. Clean surfaces of dirt or other contamination using the gentlest method that is effective.

1. Try the gentlest method first, then, if not clean enough, use a less gentle method taking care to watch for impending damage.

2. Clean out cracks and voids using same methods.

C. The following are acceptable cleaning methods, in order from gentlest to less gentle:

1. Vegetation Removal: Remove plant, moss, and vegetation, and, if necessary, scrub surfaces with mild detergents to dissolve and remove roots.
2. Preliminary Cleaning: Before beginning general cleaning, remove extraneous substances that are resistant to planned cleaning methods. Extraneous substances include paint, caulking, asphalt, and tar.
3. Water washing using low-pressure, maximum of 100 psi, and, if necessary, brushes with natural or synthetic bristles.
4. Increasing the water washing pressure to maximum of 400 psi.
5. Adding detergent to washing water; with final water rinse to remove residual detergent.
6. Steam-generated low-pressure hot-water washing.
7. Nonacidic gel or liquid cleaning agent applied for the least amount of time that is effective, followed by low pressure hot water rinse.

D. Do not use any of the following cleaning methods, unless otherwise indicated:

1. Brushes with wire bristles, grinding with abrasives, solvents, hydrochloric or muriatic acid, sodium hydroxide, caustic soda, or lye.
2. Soap or detergent that is not non-ionic.
3. Water washing pressure to over 400 psi.
4. Acidic cleaning agents.
5. Abrasive blasting.

SECTION 042000 - UNIT MASONRY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Concrete block.

B. Clay facing brick.

C. Mortar and grout.

D. Reinforcement and anchorage.

E. Flashings.

F. Lintels.

G. Accessories.

1.3 RELATED REQUIREMENTS

A. Section 055000 - Metal Fabrications: Loose steel lintels.

B. Section 072100 - Thermal Insulation: Insulation for cavity spaces.

C. Section 079200 - Joint Sealants: Sealing control and expansion joints.

1.4 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

C. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

D. ASTM A580/A580M - Standard Specification for Stainless Steel Wire.

E. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

F. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.

G. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement.

H. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

I. ASTM C67/C67M - Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile.

J. ASTM C90 - Standard Specification for Dry-Cast Loadbearing Concrete Masonry Units.

K. ASTM C91/C91M - Standard Specification for Masonry Cement.

L. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar.

M. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes.

N. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made from Clay or Shale).

O. ASTM C270 - Standard Specification for Mortar for Unit Masonry.

P. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.

Q. ASTM C476 - Standard Specification for Grout for Masonry.

R. ASTM C595/C595M - Standard Specification for Blended Hydraulic Cements.

S. ASTM C780 - Standard Test Methods for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.

T. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete.

U. ASTM C1019 - Standard Test Method for Sampling and Testing Grout.

V. ASTM C1384 - Standard Specification for Admixtures for Masonry Mortars.

W. ASTM C1611 - Standard Test Method for Slump Flow of Self-Consolidating Concrete.

X. ASTM C1714/C1714M - Standard Specification for Preblended Dry Mortar Mix for Unit Masonry.

Y. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

Z. ASTM D1056 - Standard Specification for Flexible Cellular Materials—Sponge or Expanded Rubber.

AA. BIA Technical Notes No. 7 - Water Penetration Resistance – Design and Detailing.

BB. BIA Technical Notes No. 13 - Ceramic Glazed Brick Exterior Walls.

CC. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

DD. UL (FRD) - Fire Resistance Directory.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting two weeks before starting work of this section; require attendance by all relevant installers.

1. Required participants:

a. Owner.

b. Architect.

c. Contractor.

d. Project Superintendent.

e. Mason Contractor Foreman.

f. Structural Masonry Special Inspector.

g. Testing Agency.

2. Agenda:

a. Mock-up requirements.

b. Schedule and sequencing.

c. Requirements for testing and special inspections.

d. Hot and cold weather construction procedures.

e. Typical and atypical details.

f. Locations of movement joints.

g. Storage and staging.

h. Temporary bracing.

i. Coordination with other trades.

j. Coordination of foundation dowel locations.

k. Protection of adjacent construction.

l. Compatibility of admixtures.

m. Cleaning procedures.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for masonry units, mortar, masonry accessories, and reinforcement and anchorage accessories.

C. Shop Drawings: Indicate pertinent dimensions, materials, anchorage, sizes and accessories.

1. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315.

D. Samples: Submit two samples of each type of decorative masonry unit to illustrate color, texture, and extremes of color range.

E. Samples: Submit two samples of each pigmented mortar color.

F. Mix Designs: For each type of mortar and grout. Include description of types and proportions of ingredients.

G. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.

1. For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

J. Masonry Cleaning Plan: Include products and techniques for each masonry product of assembly and combined masonry assembly.

1.7 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.

B. Fire Rated Assemblies: Comply with applicable code for specified requirements for fire rated masonry construction.

1. Fire rated concrete masonry units shall be in compliance when the masonry has been certified through the equivalent thickness method contained in Chapter 3 of ACI 216.1 for concrete masonry and Chapter 5 for effects of finish materials.

C. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section with minimum three years of documented experience.

D. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.8 MOCK-UPS

A. Integrated Exterior Mock-up: Construct an exterior masonry wall demonstrating aesthetics and workmanship with masonry veneers stepped back so that each detail is visible for inspection. Include masonry veneer, mortar, accessories, structural backup, reinforcement, wall openings, flashings (with lap joint, corner, and end dam), weather barrier, and wall insulation in mock-up.

1. Minimum Size: 8 by 8 foot.
2. Locate where directed.
3. Mock-up may remain as part of work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

B. Store materials and accessories on elevated platforms in dry location. Keep materials covered with weatherproof sheeting secured from wind. Minimize condensation in shrinkage-wrapped pallets of units.

1.10 FIELD CONDITIONS

A. During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress. Extend cover a minimum of 24 inches down both sides of walls and hold securely in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after constructing masonry walls or columns.

C. Hot and Cold Weather Requirements: Compy with TMS 402/602.

PART 2 PRODUCTS

2.1 CONCRETE MASONRY UNITS (CMU)

A. Acceptable Manufacturers:
1. Best Block: www.bestblock.com.
2. Cemex: www.cemexusa.com.
3. Fendt Builder's Supply, Inc.: www.fendtproducts.com.
4. Grand Blanc: www.grandblanccementproducts.com.
5. National Block Company: www.nationalblock.com.
6. Superior Block Co. Inc.: www.superiorblock.com.
7. Substitutions: See Section 01 6000 - Product requirements.

B. Concrete Block: Comply with referenced standards and as follows:
1. Size: Standard units with nominal face dimensions of 16 by 8 inches and nominal depths as indicated on drawings for specific locations.
2. Special Shapes: Provide nonstandard blocks configured for lintels and jambs.
   a. Provide bullnose units for outside corners.
3. Load-Bearing Units: ASTM C90, normal weight.

a. Hollow block, as indicated.

b. Unit Compressive Strength: 2,000 psi minimum.

2.2 BRICK UNITS

A. Manufacturers:

1. Basis of Design: Glen-Gery: www.glengery.com.

B. Other Acceptable Manufacturers:

1. Belden Brick: www.beldenbrick.com/#sle.
2. Endicott Clay Products Co: www.endicott.com/#sle.
3. General Shale Brick: www.generalshale.com/#sle.
4. Substitutions: See section 016000 - Product Requirements.

C. Facing Brick for New Construction:

1. Series and Style: Roman Maximus
2. Color: Black
3. Texture: Manufacturer's standard.
4. Quantity Distribution of Sizes:

a. 70%: Roman Maximus length; 3-5/8” x 1-5/8” x 23-5/8”; solids.

b. 15%: random lengths.

c. 15%: Roman size; 3-5/8” x 1-5/8” x 11-5/8”; cored brick for use on corners when covered headers are needed.

5. Bond Pattern: Sicilian.

D. Facing Brick: ASTM C216, Type FBS Smooth, Grade SW.

E. Facing Brick to Match Existing Construction: ASTM C216

1. Series and Style: Hanley Classics; Extruded.
2. Color: Rome Grey.
3. Texture: Wirecut.

F. Facing Brick: ASTM C216, Type FBS Smooth, Grade SW.

1. Efflorescence: Provide brick rated “not effloresced” when tested according to ASTM C67/C67M.
2. Surface Coating: Brick with colors or textures produced by application of organic coatings shall withstand 50 cycles of freezing and thawing per ASTM C67/C67M with no observable difference in applied finish when viewed from 10 feet.
3. Provide brick units from single runs and factory blended for specified color range.
4. Color and texture: As indicated on drawings.
5. Actual size: Modular: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8 inches long.

6. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn to produce equivalent effect.

2.3 MORTAR AND GROUT MATERIALS

A. Masonry Cement: ASTM C91/C91M.

1. Colored Mortar: Premixed cement as required to match Architect's color sample.

B. Mortar Cement: ASTM C1329.

1. Colored Mortar: Premixed cement as required to match Architect's color sample.

C. Portland Cement-Lime Mix: Packaged blend of Portland cement and hydrated lime containing no other ingredients.

1. Blended Hydraulic Cement: ASTM C595/C595M, Type IL or Type IIL, except Type IIIL may be used for cold-weather construction.
2. Cement Color: Color as required to produce approved color sample.

D. Hydrated Lime: ASTM C207, Type S.

E. Mortar Aggregate: ASTM C144.

F. Grout Aggregate: ASTM C404.

G. Pigments for Colored Mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C979/C979M.

1. Color(s): As selected by Architect from manufacturer's full range.
2. Manufacturers:

a. Davis Colors, a division of Venator Materials PLC: www.daviscolors.com/#sle.

b. Lambert Corporation: www.lambertusa.com/#sle.

c. Solomon Colors, Inc: www.solomoncolors.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

H. Water: Clean and potable.

I. Admixtures: Comply with ASTM C1384 to enhance set retarding, set accelerating, bond, and workability.

J. Packaged Dry Material for Mortar for Unit Masonry: Premixed Portland cement, hydrated lime, and sand; complying with ASTM C1714/C1714M and capable of producing mortar of the specified strength in accordance with ASTM C270 with the addition of water only.

1. Color: Mineral pigments added as required to produce approved color sample.

K. Packaged Dry Material for Grout for Masonry: Premixed cementitious materials and dried aggregates; capable of producing grout of the specified strength in accordance with ASTM C476 with the addition of water only.

1. Do not use water-repellent materials or admixture or air-entraining admixture when grout will be in contact with reinforcement.
2. Type: Coarse.

2.4 REINFORCEMENT AND ANCHORAGE

A. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi), deformed billet bars; uncoated.

B. Single Wythe Joint Reinforcement: ASTM A951/A951M.
1. Type: Ladder.
2. Material:
a. Interior Walls: ASTM A1064/A1064M steel wire, mill galvanized to 16 CFR 1201 Class 3.
b. Exterior Walls: ASTM A1064/A1064M steel wire, hot dip galvanized after fabrication to 16 CFR 1201 Class B.
3. Size: 0.1483 inch side rods with 0.1483 inch cross rods; width as required to provide not less than 5/8 inch of mortar coverage on each exposure.

C. Adjustable Multiple Wythe Joint Reinforcement: ASTM A951/A951M.
1. Type: Ladder, with adjustable ties spaced at 16 in on center.
2. Material: Same as required for single wythe reinforcement.
3. Size: 0.1483 inch side rods with 0.1483 inch cross rods and adjustable components of 0.1875 inchwire, width of components as required to provide not less than 5/8 inch of mortar coverage from each masonry face.
4. Vertical adjustment: Not more than 1 1/4 inches.
5. Insulation Clips: Provide clips at tabs or ties designed to secure insulation against outer face of inner wythe of masonry.

D. Ties and Anchors - General: Provide ties and anchors, hot dip galvanized to ASTM A 153/A 153M, Class B, except as follows.
1. Provide stainless steel ties and anchors in swimming pool, seating area, locker room, checmical storage rooms.
2. Provide stainless steel ties and anchors in rooms subject to high humidity or wetting.

E. Flexible Anchors for Connecting to Structure: 2-piece anchors that permit differential movement between masonry and building frame, sized to provide not less than 5/8 inch of mortar coverage from masonry face.
1. Steel frame: Crimped wire anchors for welding to frame, 0.25 inch thick, with trapezoidal wire ties 0.1875 inch thick.

F. Masonry Veneer Anchors for Stud Back-up with Continuous Insulation: 2-piece anchors that permit differential movement between masonry veneer and structural backup.
1. Anchor plates: Not less than 0.075 inch thick, designed for fastening to structural backup through sheathing by two fasteners.
2. Wire ties: Manufacturer's standard shape, 0.1875 inch thick.

3. Vertical adjustment: Not less than 1-1/4 inches.
4. Acceptable Products:
    a. Hohmann & Barnard, Inc.; HB-213.
    b. Blok Lok BL-407 with insulation washers.
    c. Wirebond; 2407 Adjustable Veneer Anchor with insulation washers.
    d. Wirebond; RJ-711 Adjustable Veneer Anchor.
    e. Substitutions: See Section 01 6000 - Product Requirements.

G. Masonry Veneer Anchors for CMU or Concrete Back-up with Continuous Insulation: 2-piece anchors that permit differential movement between masonry veneer and structural backup.
1. Anchor plates: Not less than 0.075 inch thick, designed for fastening to structural backup through sheathing by two fasteners.
2. Wire ties: Manufacturer's standard shape, 0.1875 inch thick.
3. Vertical adjustment: Not less than 1-1/4 inches.
4. Acceptable Products:
    a. Hohmann & Barnard, Inc.; HB-5213.
    b. Blok Lok BL-407 with insulation washers.
    c. Wirebond; 2407 Adjustable Veneer Anchor with insulation washers.
    d. Wirebond; RJ-711 Adjustable Veneer Anchor.
    e. Substitutions: See Section 01 6000 - Product Requirements.

2.5 FLASHINGS

A. Combination Non-Asphaltic Flashing Materials - Stainless Steel:
1. Stainless Steel Flashing - Self-adhering: ASTM A240/A240M; 2 mil type 304 stainless steel sheet with 8 mil of butyl adhesive and a removable release liner.
    a. Manufacturers:
        1) Hohmann & Barnard, Inc; Mighty-Flash SA: www.h-b.com/#sle.
        2) STS Coatings, Inc; Wall Guardian Self Adhering Stainless Steel Flashing: www.stscoatings.com/#sle.
        3) VaproShield, LLC; Vapro-SS-Flashing: www.vaproshield.com/#sle.
        4) WIRE-BOND; BOND-N-FLASH S.A.: www.wirebond.com/#sle.
        5) York Flashings; York 304: www.yorkflashings.com/#sle.
        6) Substitutions: See Section 016000 - Product Requirements.

B. Termination Bars: Stainless steel; compatible with membrane and adhesives.

1. Type: Provide flanged type for continuous sealant along top edge.

C. Drip Edge: Stainless steel; Type 304, 0.0156 inches thick.

1. Type at Lintels, Shelf Angles, and All Locations Except at Grade: Drip edge extending at least 3 inches horizontally into masonry and 1/2 inch out from exterior face of masonry with outer edge bent down 45 degrees and hemmed.
2. Type at Grade: Drip edge extending at least 3 inches horizontally into masonry and outer edge bent 180 degrees flush with face of masonry.
3. Sealant Between Layers of Sheet Metal: One-part, non-skinning butyl sealant.

D. Adhesives, Primers, Sealants, and Seam Tapes for Flexible Membrane Flashing Systems: As recommended by flashing manufacturer; compatible with membrane and adhesives.

2.6 ACCESSORIES

A. Preformed Control Joints: Rubber or polyvinyl chloride material. Provide with corner and tee accessories, fused joints.

B. Joint Filler: Closed cell rubber, neoprene or polyurethane; oversized 50 percent to joint width; self expanding; in maximum lengths available.

1. Complying with ASTM D1056, Grade 2A1.

C. Cavity Mortar Control: Semi-rigid polyethylene or polyester mesh panels, sized to thickness of wall cavity, and designed to prevent mortar droppings from clogging weeps and cavity vents and allow proper cavity drainage.

1. Mortar Diverter: Semi-rigid mesh designed for installation at flashing locations.

a. Manufacturers:

1) Advanced Building Products, Inc; Mortar Break DT: www.advancedbuildingproducts.com/#sle.

2) Hohmann & Barnard, Inc.; Mortar Trap: www.h-b.com

3) Mortar Net Solutions; MortarNet: www.mortarnet.com/#sle.

4) WIRE-BOND; Cavity Net DT: www.wirebond.com/#sle.

5) York Flashings; Weep-Net: www.yorkflashings.com/#sle.

6) Substitutions: See Section 016000 - Product Requirements.

D. Building Paper: ASTM D226/D226M, Type I ("No.15") asphalt felt.

E. Weeps:

1. Type: Molded PVC grilles, insect resistant.
2. Color(s): As selected by Architect from manufacturer's full range.
3. Manufacturers:

a. Advanced Building Products, Inc; Mortar Maze Cell Vent: www.advancedbuildingproducts.com/#sle.

b. Blok-Lok Limited; CELLVENT: www.blok-lok.com/#sle.

c. Hohmann & Barnard, Inc; QV Quadro-Vent: www.h-b.com/#sle.

d. Mortar Net Solutions; CellVent: www.mortarnet.com/#sle.

e. WIRE-BOND; Cell Vent: www.wirebond.com/#sle.

f. Substitutions: See Section 016000 - Product Requirements.

F. Grout Retainer: Mesh screen, width 1 inch less than masonry unit width. Use at bottom of open bottom unit to retain grout without use of special shaped CMUs and without breaking mortar bond.

G. Cavity Vents:

1. Color(s): As selected by Architect from manufacturer's full range.
2. Manufacturers:

a. Blok-Lok Limited: www.blok-lok.com/#sle.

b. Hohmann & Barnard, Inc: www.h-b.com/#sle.

c. Mortar Net Solutions; CellVent: www.mortarnet.com/#sle.

d. WIRE-BOND: www.wirebond.com/#sle.

e. Substitutions: See Section 016000 - Product Requirements.

H. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

2.7 LINTELS

A. Steel Lintels: Specified in Section 055000.

B. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMU matching adjacent CMU in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure lintels before handling and installing. Temporarily support build-in-place lintels until cured.

1. Use masonry lintels in concrete masonry unit walls where lintel is exposed, and as specified in Structural Drawings.

2.8 MORTAR AND GROUT MIXING

A. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.

1. Masonry below grade and in contact with earth: Type M.
2. Exterior, loadbearing masonry: Type S.
3. Exterior, non-loadbearing masonry: Type S.

4. Masonry Veneers: Type N.
5. Interior, loadbearing masonry: Type S.
6. Interior, non-loadbearing masonry: Type N.

B. Colored Mortar: Proportion selected pigments and other ingredients to match Architect's sample, without exceeding manufacturer's recommended pigment-to-cement ratio.

C. Grout: ASTM C476; consistency required to fill completely volumes indicated for grouting; fine grout for spaces with smallest horizontal dimension of 2 inches or less; coarse grout for spaces with smallest horizontal dimension greater than 2 inches.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.
1. Inspect concrete foundations for compliance with tolerances of TMS 602.
2. Verify reinforcing dowels are positioned in accordance with drawings

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

D. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare foundation surface for adequate masonry bond.

B. Direct and coordinate placement of metal anchors supplied for installation under other sections.

C. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.

3.3 FACE BRICK REMOVAL AND SALVAGE

A. At locations indicated, remove existing face brick and salvage for reuse. Carefully remove entire units from joint to joint, without damaging units or surrounding masonry.

B. Support and protect remaining masonry that surrounds removal area.

C. Remove in an undamaged condition as many whole existing face brick units as possible.
1. Remove mortar, loose particles, and soil from face brick and glazed brick by cleaning with hand chisels, brushes, and water.
2. Store salvaged face brick for reuse, as indicated.

D. Clean surrounding removal areas by removing mortar, dust, and loose particles in preparation for replacement.

3.4 COLD AND HOT WEATHER REQUIREMENTS

A. Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

3.5 COURSING

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

C. Concrete Masonry Units:

1. Bond: Running.
2. Mortar Joints: Concave.

D. Brick Units:

1. Bond: As indicated for different locations.
2. Mortar Joints: Concave.

3.6 PLACING AND BONDING

A. Use full-size units without cutting where possible. Where cutting is required, provide clean, sharp, unchipped edges. Allow units to dry before laying. Install cut units with cut surfaces concealed.

B. Lay solid masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

C. Lay hollow masonry units with face shell bedding on head and bed joints.

D. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

E. Interlock intersections and external corners.

F. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

G. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.

H. Cut mortar joints flush where wall tile is scheduled, cavity insulation vapor barrier adhesive is applied, or bitumen dampproofing is applied and at locations where required by the work of other Sections.

I. Isolate masonry partitions from vertical structural framing members with a control joint as indicated.

J. Isolate top joint of masonry partitions from horizontal structural framing members and slabs or decks with compressible joint filler.

3.7 WEEPS/CAVITY VENTS

A. Install weeps in veneer and cavity walls at 24 inches on center horizontally on top of through-wall flashing above shelf angles and lintels, at bottom of walls, and where indicated.

3.8 CAVITY MORTAR CONTROL

A. Do not permit mortar to drop or accumulate into cavity air space or to plug weep/cavity vents.

B. Install cavity mortar diverter at base of cavity and at other flashing locations as recommended by manufacturer to prevent mortar droppings from blocking weep/cavity vents.

3.9 REINFORCEMENT AND ANCHORAGE - CMU

A. Unless otherwise indicated on drawings or specified under specific wall type, install horizontal joint reinforcement 16 inches on center, except as follows.

B. Place masonry joint reinforcement in first horizontal joints above and below openings. Extend minimum 16 inches each side of opening.

C. Place continuous joint reinforcement in first and second joint below top of walls.

D. Place continuous reinforcement around corners.

E. Embed longitudinal wires of joint reinforcement in mortar joint with at least 5/8 inch mortar cover on each side.

F. Lap joint reinforcement ends minimum 12 inches.

G. Reinforce stack bonded unit joint corners and intersections with strap anchors 16 inches on center.

H. Fasten anchors to structural framing and embed in masonry joints as masonry is laid. Unless otherwise indicated on drawings or closer spacing is indicated under specific wall type, space anchors at maximum of 24 inches horizontally and 16 inches vertically.

I. Embed ties and anchors in mortar joint and extend into masonry unit a minimum of 1-1/2 inches with at least 5/8 inch mortar cover to the outside face of the anchor.

3.10 REINFORCEMENT AND ANCHORAGE - MASONRY VENEER

A. At horizontal changes between non-cementitious masonry (clay, natural stone, calcium silicate) and cementitious masonry (CMU) provide horizontal joint reinforcement complying with CMHA TEK 05-02A, unless otherwise detailed with bond break material, slip plane, or thru-wall flashing.

B. Secure veneer anchors to back-up substrates and embed into masonry veneer at maximum 16 inches on center vertically and 24 inches on center horizontally.

3.11 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.

1. Extend flashings full width at such interruptions and at least 6 inches, minimum, into adjacent masonry or turn up flashing ends at least 2 inches, minimum, to form watertight pan at nonmasonry construction.

a. Remove or cover protrusions or sharp edges that could puncture flashings.

b. Seal lapped ends and penetrations of flashing before covering with mortar.

B. Terminate flashing up 8 inches minimum on vertical surface of backing and extending minimum 6 inches above top of cavity drainage material:

1. Install vertical leg of flashing over air and water-resistive barriers oper manufacturer’s directions.

2. Roll laps in self-adhering flashing, leaving no fish-mouths, and apply manufacturer’s mastic at exposed cut edges.

3. Anchor vertical leg of flashing into backing with a termination bar and continous sealant along top edge.

4. Extend self-adhering flashings to within 3/4 inch of exterior face of masonry and adhere to top of stainless steel drip edge.

C. Install flashing in accordance with manufacturer's instructions and BIA Technical Notes No. 7.

D. Where dowels, reinforcing bars and fastening devices penetrate flashing, seal penetration with sealing compound.

3.12 LINTELS

A. Install loose steel lintels over openings where indicated.

B. Install reinforced unit masonry lintels over openings where steel or precast concrete lintels are not scheduled.

1. Place reinforcing as indicated on drawings.

2. Do not splice reinforcing bars.

3. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

4. Place and consolidate grout fill without displacing reinforcing.

5. Allow masonry lintels to attain specified strength before removing temporary supports.

C. Maintain minimum 8 inch bearing on each side of opening.

3.13 GROUTED COMPONENTS

A. Comply with consolidation requirements and grout pour height and grout lift height limitations of TMS 602.

B. Reinforce bond beams as indicated on drawings.

C. Lap splices minimum 24 bar diameters.

D. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

E. Place and consolidate grout fill without displacing reinforcing.

F. Grout solid all hollow concrete unit masonry located below grade and at other locations indicated.

G. At bearing locations, fill masonry cores with grout for a minimum 8 inches either side of opening.

3.14 CONTROL AND EXPANSION JOINTS

A. Size as indicated on Drawings; if not shown, 3/8 inch wide.

B. Do not continue horizontal joint reinforcement through control or expansion joints.

C. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

D. If control joint locations are not indicated on drawings, locate control joints in CMU walls complying with the NCMA TEK note recommendations and at wall height changes; within ten feet of corners; at wall thickness changes; at bond beam breaks; at abutments of columns and walls; at abutment of cold garages to warm basements or walls; at openings in walls such as doors and windows; and at intervals in continuous walls not exceeding 20 feet in length, unless more restrictive spacing is recommended in the NCMA TEK notes.

E. Locate expansion joints in masonry veneers as indicated on drawings and in compliance with the Brick Industry Association Technical Notes.

1. If expansion joints are not indicated on drawings, request Architect clarification.

3.15 BUILT-IN WORK

A. As work progresses, install built-in metal door frames and other items to be built into the work and furnished under other sections.

B. Install built-in items plumb, level, and true to line.

C. Bed anchors of metal door frames in adjacent mortar joints. Fill frame voids solid with grout.

1. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.

D. Do not build into masonry construction organic materials that are subject to deterioration.

3.16 TOLERANCES

A. Install masonry within the site tolerances found in TMS 402/602.

B. Maximum Variation from Alignment of Columns: 1/4 inch.

C. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

D. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.

E. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.

F. Maximum Variation from Level Coursing: 1/8 inch in 3 ft and 1/4 inch in 10 ft; 1/2 inch in 30 ft.

G. Maximum Variation of Mortar Joint Thickness: Head joint, minus 1/8 inch, plus 1/8 inch.

H. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

3.17 CUTTING AND FITTING

A. Cut and fit for chases, pipes, conduit, sleeves, and grounds. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.18 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow testing agencies and inspectors access to work areas as needed. Retesting of materials that fail to comply with specified requirements shall be done at Contractor’s expense.

1. See Structural Drawings for additional requirements.

B. Grout: Compressive strength tests per ASTM C1019. Form grout specimens using units used for this project. Do not use cardboard forms unless written approval is obtained based on comparative preconstruction testing performed with units used for this project.

C. Self-Consolidating Grout: Compressive strength tests per ASTM C1019 and slump flow and visual stability index (VSI) per ASTM C1611.

D. Mortar Tests: Test each type of mortar in accordance with ASTM C780, Annex 4.

3.19 CLEANING

A. Remove excess mortar and mortar droppings.

B. Replace defective mortar. Match adjacent work.

C. Clean masonry using materials approved in Masonry Cleaning Plan. Use cleaning procedures so as not to damage masonry surfaces and consistent with the quality standards established in an approved mock-up or on an inconspicuous area of new masonry as determined by Architect.

D. Use non-metallic tools in cleaning operations.

3.20 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

B. Protect sills, ledges, and projections from mortar droppings. Protect base of wall from mortar and mud splashes.

C. Replace damaged and defective work at no cost to Owner.

END OF SECTION

SECTION 050513.1 – SHOP APPLIED COATINGS FOR METAL (SITE/CIVIL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Factory-applied powder prime-coat and powder-coated finish for the following fabrications including, but not limited to:

1. Steel bollards.

1.3 REFERENCE STANDARDS

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements

of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 29 CFR 1926, SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION.

A. American Architectural Manufactures Association

1. AAMA 2605 – High Performance Exterior

B. American Welding Society

1. D1.1/D1.1M:2006, Structural Welding Code - Steel

C. ASTM International (ASTM).

1. ASTM A385 - Practice for Providing High-Quality Zinc Coatings (Hot-Dip).
2. ASTM A780 - Practice for Repair of Damaged Hot-Dip Galvanized Coatings.
3. ASTM B117 - Practice for Operating Salt Spray Apparatus.
4. ASTM D523 - Standard Test Method for Specular Gloss
5. ASTM D1640 - Standard Test Methods for Drying, Curing, or Film Formation of Organic Coatings at Room Temperature.
6. ASTM D1654 - Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments.
7. ASTM D2244 - Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
8. ASTM D2967 - Standard Test Method for Corner Coverage of Powder Coatings.
9. ASTM D3363 - Test Method for Film Hardness by Pencil Test.
10. ASTM D4585 - Practice for Testing Water Resistance of Coatings Using Controlled Condensation.
11. ASTM D5861 - Standard Guide for Significance of Particle Size Measurements of Coating Powders.

D. National Association of Architectural Metal Manufacturers (NAAMM).

1. “Pipe Railing Manual, Including Round Tube"

E. Master Painters Institute (MPI)

1.01 SUBMITTALS

F. Shop Drawings

1. Submit shop drawings of metal components to be finished, showing sizes, details of fabrication and construction, bends and radii, handrail brackets, locations of hardware, anchors, and accessories, and installation details. Shop Drawings shall be submitted to Engineer for approval prior to ordering materials.
2. Submit manufacturers' product data of coating system and powder coating product.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section.

1.7 WARRANTY

A. Coating Warranty: Coating Applicator's warranty in which Applicator agrees to repair finish or replace coated items that demonstrate deterioration of shop-applied finishes within warranty period indicated.

1. Exposed Coating: Deterioration includes but is not limited to:

a. Color fading per ASTM D2244.
b. Peeling, cracking, or cracking of coating adhesion to metal.

B. Warranty Period: 10 Years from date of Substantial Completion.

1.8 DELIVERY, STORAGE AND HANDLING

A. Supply: Component materials must be supplied in consistent quality in appearance and physical properties.

B. Materials shall be wrapped or otherwise packaged for shipment and storage as appropriate.

C. Store materials to avoid damage from moisture, abrasion, and other construction activities.

PART 2 - PRODUCTS

2.1 STEEL BOLLARDS AND RAILINGS

A. Bollards and railings shall receive a duplex coating of powder primer and powder coat finish.

B. Galvanizing

1. Hot dip galvanized, ASTM F 1083. Type "A" internal and external surfaces, ASTM F1043.
2. Safeguarding against steel embrittlement: conform with applicable requirements of ASTM A143.
3. Safeguarding against warpage and distortion of steel members: conform with applicable requirements of ASTM A384.
4. Shop galvanized metalwork necessitating field welding which in any manner removes original galvanizing shall be restored by galvanizing repair in accordance with ASTM A780.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Review product manufacturer's special instructions for surface preparation, application, temperature, re-coat times, and product limitations.

B. Do not begin finishing until substrates have been properly prepared.

C. Ensure that surfaces to receive paint are dry immediately prior to application.

D. Examine surfaces to receive coatings for surface imperfections and contaminants that could impair performance or appearance of coatings, including but not limited to, loose primer, rust, scale, oil, grease, mildew, algae, or fungus, stains or marks, cracks, indentations, or abrasions.

E. Correct conditions that could impair performance or appearance of coatings in accordance with specified surface preparation procedures before proceeding with coating application.

F. If substrate preparation is the responsibility of another installer, notify Landscape Architect of unsatisfactory preparation before proceeding. Commencement of work constitutes acceptance of conditions.

3.2 SURFACE PREPARATION

A. Steel: Should be cleaned by the surface preparations described below.

1. Near White Metal Blast Cleaning, SSPC-SP10 or NACE 2: Remove all rust scale, mill scale, previous coating, etc., leaving only light stains from rust, mill scale, and small specks of previous coating. Random staining shall be limited to no more than 5% of each area of surface (a unit of area is defined as 9 square inches).

B. Following White-Metal Blast Cleaning, pretreat surfaces to receive coatings using applicator’s proprietary wash coat process including chemical conversion and five stage wash.

3.3 APPLICATION

A. Apply coatings in accordance with manufacturer’s instructions to uniform surface free from blemishes.

B. Electrostatically apply powder coating to 2 to 4 mil thickness.

C. After application polymerize coatings at 400 degrees F for 20 minutes.

3.4 POLYESTER POWDER COATING

A. Polyester Powder Primer: Electrostatically applied zinc-rich primer powder coating, heat cured to chemically bond primer to metal substrate.

B. Polyester Powder Coating: Electrostatically applied colored polyester powder coating heat cured to chemically bond finish to primer substrate.

1. Minimum hardness measured in accordance with ASTM D3363: 2H.
2. Direct impact resistance tested in accordance with ASTM D2794: Withstand 160 inch-pounds.
3. Salt spray resistance tested in accordance with ASTM B117: No undercutting, rusting, or blistering after 500 hours in 5 percent salt spray at 95 degrees F and 95 percent relative humidity and after 1000 hours less than [3/16 inch] [5 mm] undercutting.
4. Weatherability tested in accordance with ASTM D822: No film failure and 88 percent gloss retention after 1 year exposure in South Florida with test panels tilted at 45 degrees.

C. Color: Black (Federal Standard 27038) ASTM D 7803, 2 mil minimum finish coat thickness.

D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

END OF SECTION 050513.1

SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Structural steel framing members.

B. Structural steel support members, suspension cables, sag rods, and struts.

C. Base plates, shear stud connectors and expansion joint plates.

D. Grouting under base plates.

1.2 DESCRIPTION OF WORK

A. This contract includes all labor, materials, equipment and appliances necessary to complete all structural steel as indicated or scheduled on the drawings or hereafter specified.

B. See drawings and schedules for type, location, quantity and details of structural steel required to complete work. Anchor bolts and other incidental items of structural steel to be built into concrete or masonry shall be furnished to respective trades at the proper time and shall include details for their installation.

1.3 RELATED REQUIREMENTS

A. Division 03 - Concrete

B. Section 051213 - Architecturally-Exposed Structural Steel Framing: Additional requirements for structural steel members designated as architecturally-exposed structural steel (AESS).

C. Section 053100 - Steel Decking: Support framing for small openings in deck.

D. Section 055000 - Metal Fabrications: Steel fabrications affecting structural steel work. For steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other steel items not defined as structural steel.

1.4 REFERENCE STANDARDS

A. AISC (MAN) - Steel Construction Manual.

B. AISC 207 - Standard for Certification Programs.

C. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.

D. AISC 360 - Specification for Structural Steel Buildings.

E. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

F. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

G. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

H. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

I. ASTM A529/A529M - Standard Specification for High-Strength Carbon-Manganese Steel of Structural Quality.

J. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric).

K. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

L. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

M. ASTM A992/A992M - Standard Specification for Structural Steel Shapes.

N. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film.

O. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments.

P. ASTM E165/E165M - Standard Practice for Liquid Penetrant Testing for General Industry.

Q. ASTM E709 - Standard Guide for Magnetic Particle Testing.

R. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions.

S. ASTM F959/F959M - Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners, Inch and Metric Series.

T. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

U. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

V. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

W. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

X. AWS D1.1/D1.1M - Structural Welding Code - Steel.

Y. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172.

Z. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections.

AA. SSPC-SP 2 - Hand Tool Cleaning.

BB. SSPC-SP 3 - Power Tool Cleaning.

CC. SSPC-SP 6 - Commercial Blast Cleaning.

1.5 DEFINITIONS

A. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

1.6 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturer's written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Contractor shall submit for approval copies of all erection drawings.

a. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.

b. Indicate welded connections with AWS A2.4 welding symbols, distinguishing between shop and field welds. Indicate size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.

c. Indicated type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.

d. Indicate locations and dimensions of protected zones.

2. Approval will be for sizes, and locations of principal members only.

3. Connections, as well as any errors in dimensions shown on shop drawings, shall be the responsibility of the contractor. After approval, additional copies shall be furnished for distribution and use in the field.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, include the following:

1. Power source (constant current or constant voltage).

2. Electrode manufacturer and trade name, for demand critical welds.

D. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats..

F. Materials Test Reports: Submit independent test results or engineered performance analysis of structural thermal-break pad performance in bearing or slip-critical connections where shear and moment loads are applied.

G. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

H. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.

1.8 QUALITY ASSURANCE

A. Design, fabricate, and erect structural steel members in accordance with AISC (MAN) "Steel Construction Manual" and the latest edition of AISC "Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings."

B. Maintain one copy of each document on site.

C. Fabricator: Company specializing in performing the work of this section with minimum _____ years of documented experience.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and no more than 12 months before start of scheduled welding work.

E. Fabricator Qualifications:

1. Fabricator is a member of American Institute of Steel Construction, Inc. (AISC). Is certified in the AISC Quality Certification Program and is designated as an AISC-Certified Plant, Category STD, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172).

a. Fabricator shall be registered with and approved by authorities having jurisdiction.

2. Experienced in fabricating structural steel similar to that indicated for this Project and with a record of successful in-service performance.

3. Sufficient production capacity to fabricate structural steel without delaying the work.

F. Installer Qualifications:

1. A qualified installer who participates in the AISC Quality Certification Program and is designated as an AISC-Certified Erector, Category ACSE.

2. Should be a company specializing in performing the work of this section with minimum _____ years of documented experience.

G. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

H. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

B. Store fasteners in a protected place in sealed container with manufacturer's labels intact.

1. Clean and relubricate bolts and nuts that become dry or rusty before use.

2. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F1852 fasteners and for retesting fasteners after lubrication.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Connections: Provide details of simple shear connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer, to withstand loads indicated and comply with other information and restrictions indicated.

B. Moment Connections: Type PR, partially restrained.

C. Construction: Combined system of moment frame and shear walls.

2.2 MATERIALS

A. Steel Angles and Plates: ASTM A36/A36M.

B. Steel W Shapes and Tees: ASTM A992/A992M, ASTM A572/A572M Grade 50 (345), ASTM A529/A529M Grade 50 (345), or ASTM A913/A913M Grade 50 (345).

1. All structural wide flange steel shall be new and domestic.

C. Channels, Angles, M-Shapes: ASTM A36/A36M, ASTM A572/A572M Grade 50 (345), ASTM A529/A529M Grade 50 (345), or ASTM A913/A913M Grade 50 (345).

D. Plate and Bar: ASTM A36/A36M, ASTM A572/A572M Grade 50 (345), ASTM A529/A529M Grade 50 (345).

E. Rolled Steel Structural Shapes: ASTM A992/A992M.

F. Cold-Formed Structural Tubing: ASTM A500/A500M, Grade C.

G. Pipe: ASTM A53/A53M, Grade B, Type S.

H. Suspension Cable: _____ wire rope.

I. Sag Rods: ASTM A36/A36M.

J. High-Strength Structural Bolts, Nuts, and Washers:

1. ASTM F3125/F3125M, Type 1, heavy-hex steel structural bolts or tension-control, bolt-nut-washer assemblies with splined ends; ASTM A563, Grade C, (ASTM A563M, Class 8S) heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.

a. Direct-Tension Indicators: ASTM F959/F959M, Type 325/Type 8.8, compressible-washer type with plain finish.

K. Tension Control, High-Strength Bolt-Nut-Washer Assemblies:

1. ASTM F3125/F3125M, twist-off type, heavy-hex head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon steel nuts, and hardened carbon-steel washers.

a. Finish: Plain.

L. Headed Anchor Rods: ASTM F1554, Grade 36, straight.

1. Nuts: ASTM A563 (ASTM A563M) heavy-hex carbon steel.

2. Plate Washers: ASTM A36/A36M carbon steel.

3. Finish: Plain

M. Threaded Rods: ASTM A36/A36M.

1. Nuts: ASTM A563 (ASTM A563M) heavy-hex carbon steel.

2. Washers: ASTM F436 (ASTM F436M), Type 1, hardened carbon steel.

3. Finish: Plain.

N. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

1. Welding electrodes shall conform to the latest edition of the American Welding Society "Specifications for Iron and Steel Arc-Welding Electrodes."

O. Grout: ASTM C1107/C1107M; Non-shrink, factory-packaged, metallic aggregate, mixed with water to consistency suitable for application and a 30-minute working time. Premixed compound consisting of aggregate, cement, water reducing and plasticizing agents.

1. Minimum Compressive Strength at 48 Hours: 2,000 pounds per square inch.

2. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch.

P. Primer:

1. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2. Types:

a. SSPC-Paint 25, Type I, zinc oxide, alkyd, linseed oil primer.

b. SSPC-Paint 25 BCS, Type I, zinc oxide, alkyd, linseed oil primer.

c. SSPC-Paint 23, latex primer.

d. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

3. Galvanizing Repair Paint: MPI #18, MPI #19, or SSPC-Paint 20.

4. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

5. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

2.3 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Continuously seal joined members by continuous welds. Grind exposed welds smooth.

C. Fabricate connections for bolt, nut, and washer connectors.

D. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.

E. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

F. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

G. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.

H. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

I. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP3, "Power Tool Cleaning."

J. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.

2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.

3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.4 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld connections: Comply with AWS D1.1/D1.1M and AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.5 FINISH

A. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare structural component surfaces in accordance with SSPC-SP 2.

B. Shop Priming:

1. Shop prime structural steel surfaces except the following:

a. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50 mm).

b. Surfaces to be field welded.

c. Surfaces of high-strength bolted, slip-critical connections.

d. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).

e. Galvanized surfaces.

f. Surfaces enclosed in interior construction.

2.6 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. High-Strength Bolts: Provide testing and verification of shop-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts," testing at least ____ percent of bolts at each connection.

C. Welded Connections: Visually inspect all shop-welded connections according to AWS D1.1/D1.1M and test at least ____ percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709.

D. Prepare test and inspection reports.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated, and in compliance with AISC 303 and AISC 360.

B. All connections shall be AISC standard framing connections, which will fully develop strength of beams. All connections shall be of sufficient strength to carry the reactions in accordance with AISC specifications. Connections shall not be for less 10 kips for welded and bolted connections.

C. Baseplates (Bearing Plates and Leveling Plates): Clean concrete- and masonry-bearing surfaces of bond-reducing materials and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.

2. Weld plate washers to top of baseplate.

3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.

4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

D. Provide 1/4" steel leveling plates under all steel column bearings.

E. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

F. Splice members only where indicated.

G. All reaction points shall be properly fastened by anchors, anchor bolts, or other approved devices.

H. Field weld components indicated on shop drawings.

1. All welding, both shop and field, shall be performed only by qualified welders. Qualifications shall be on the basis of test as set up by the American Welding Society.

2. The shop and field welds shall be subject to approval by the Engineer and Owner's testing agency.

I. Do not field cut or alter structural members without approval of Engineer.

J. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

K. All punching and drilling of the steel required for the attachment of other materials shall be done under this contract.

L. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

M. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

N. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

O. All columns welded to steel base or cap plates shall be milled or give full bearing over cross section.

P. Provide angle framing to support deck at all openings.

Q. This contractor is responsible for the correct fittings, schedules, and design of efficient details. They shall notify the Contractor of any information or templates required for coordination of the work of other trades with the structural steel. Coordination of the work of all other trades with the structural steel is the Contractor's sole responsibility.

R. Fabrication of any material or the performing of any work prior to the approval of shop drawings will be entirely at the risk of this contractor.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M and AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.

2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.

3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," for mill material.

3.5 PAINTING

A. All structural steel shall receive one shop coat of paint as specified, and applied according to the manufacturer's specifications.

B. Prior to painting, all steel shall be thoroughly cleaned of all loose rust, scale, oil, soil, dust or other foreign matter in accordance with steel structures painting council surface preparation specifications No. 3, "Power Tool Cleaning."

C. Do not shop paint areas adjacent to field welds for a distance of 2" on either side of such welds. Such areas shall be field painted as soon as possible.

D. All field welds, bolts, and abrasions to the shop coat on all structural steel shall be touched up with the same paint used for the shop coat.

E. For finish coat on exposed surfaces, refer to other sections of the Specification.

3.6 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

3.7 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.

2. Verify weld materials and inspect welds.

3. Verify connection materials and inspect high-strength bolted connections.

B. Welded Connections: Visually inspect all field-welded connections according to AWS D1.1/D1.1M and test at least ____ percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709. Performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.

3.8 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A780/A780M.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

END OF SECTION 051200

This page intentionally left blank

SECTION 053100 - STEEL DECKING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The general provisions of the contract, including General and Supplementary General conditions and Division 1, General Requirements apply to the work specified in this section. Note also all Addenda.

1.2 DESCRIPTION OF WORK

A. This contract includes all labor, materials, equipment, and appliances to complete all steel floor form as indicated or scheduled on the drawings or hereafter specified.

1.3 RELATED REQUIREMENTS

A. Section 033000 - Cast-in-Place Concrete: Concrete topping over metal deck.

B. Section 042000 - Unit Masonry: Placement of anchors for bearing plates embedded in unit masonry assemblies.

C. Section 051200 - Structural Steel Framing: Placement of embedded steel anchors for bearing plates in cast-in-place concrete.

D. Section 055000 - Metal Fabrications: Steel angle concrete stops at deck edges.

1.4 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

E. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.

F. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

G. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

H. AWS D1.1/D1.1M - Structural Welding Code - Steel.

I. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel.

J. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems.

K. ICC-ES AC70 - Acceptance Criteria for Power-Actuated Fasteners Driven into Concrete, Steel and Masonry Elements.

L. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks.

M. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

N. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic").

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittals procedures.

B. Product Data: Provide deck profile characteristics, dimensions, structural properties, and finishes for each type of deck, accessory, and product indicated.

C. Shop Drawings: Indicate deck plan, types of deck panels, support locations, projections, openings, reinforcement, anchorage details, pans, special jointing, accessories, and pertinent details.

D. Certificates: Certify that products furnished meet or exceed specified requirements. Product certificate required for each type of steel deck.

E. Submit manufacturer's installation instructions.

F. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

1.6 QUALITY ASSURANCE

A. Design deck layout, spans, fastening, and joints under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

C. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.3/D1.3M and dated no more than 12 months before start of scheduled welding work.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Cut plastic wrap to encourage ventilation.

C. Separate sheets and store deck on dry wood sleepers; slope for positive drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

2.2 STEEL DECK

A. All Deck Types: Select and design metal deck in accordance with SDI Design Manual.

1. Calculate to structural working stress design and structural properties specified.

2. Maximum Vertical Deflection of Floor Deck: 1/360 of span.

3. Maximum Vertical Deflection of Roof Deck: 1/240 of span.

4. Maximum Vertical Deflection of Form Deck: 1/360 of span.

B. Roof Deck: Non-composite type, fluted steel sheet. Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:

1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), Grade 33 (230) minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.

2. Galvanized and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 33 (230), G60 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard, baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.

3. Primer: Shop coat of manufacturer's standard primer paint over cleaned and phosphatized substrate.

4. Minimum Base Metal Thickness: 20 gauge, 0.0359 inch.

5. Nominal Height: 1-1/2 inch.

6. Profile: Fluted; SDI WR.

a. Deck Profile: Type WR, wide rib.

7. Side Joints: Interlocking seam.

8. End Joints: Overlapped, welded.

9. Minimum Yield Strength: 33 KSI.

C. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete. Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 33 (230), G60 (Z180) zinc coating.
2. Primer: Shop coat of manufacturer's standard primer paint over cleaned and phosphatized substrate.
3. Span Design: Simple.
4. Minimum Base Metal Thickness: 18 gauge, 0.0474 inch.
5. Nominal Height: 1-1/2 inches.
6. Profile: Fluted; SDI NR.
7. Formed Sheet Width: 36 inch.
8. Side Joints: Interlocking seam.
9. End Joints: Overlapped, welded.
10. Minimum Yield Strength: 33 KSI.

D. Metal Form Deck: Corrugated sheet steel, with provision for ventilation of concrete:

1. Minimum Base Metal Thickness: 20 gauge, ___ inch.
2. Nominal Height: 1 1/2 inch.
3. Formed Sheet Width: 24 inch.
4. Side Joints: Overlapped, welded.
5. End Joints: Overlapped, welded.
6. Minimum Yield Strength: 33 KSI.

2.3 ACCESSORY MATERIALS

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Bearing Plates and Angles: ASTM A36/A36M steel, galvanized per ASTM A123/A123M.

C. Stud Shear Connectors: Made from ASTM A108 Grade 1015 bars.

D. Welding Materials: AWS D1.1/D1.1M.

E. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.

1. Design Requirements: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

F. Mechanical Fasteners: Steel; Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

1. Design Requirements for Sidelap Connections: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

a. No. 10 minimum diameter.

2. Fasteners for Steel Roof Decks Protected with Waterproofing Membrane: ASTM B633, SC1, Type III zinc electroplate.

3. Fasteners for Exposed Steel Roof Deck Application: Manufacturer's standard stainless steel with bonded neoprene washer.

G. Side-Lap Fasteners: corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No.10 (4.8-mm) minimum diameter.

H. Weld Washers: Mild steel, uncoated, shaped to fit deck rib, 3/4 inch outside diameter, 0.0598 inch (1.52 mm) thick, with factory-punched hole of 3/8-inch (9.5-mm) minimum diameter.

I. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

J. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, complying with VOC limitations of authorities having jurisdiction.

K. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

2.4 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, girder fillers, and cover plates, 20 gauge, 0.0359 inch thick sheet steel; of profile and size as indicated; finished same as deck,

1. Minimum yield strength of 33,000 PSI.

B. Roof Sump Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight.

C. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck, with 3-inch- (76-mm-) wide flanges and level recessed pans of 1-1/2-inch (38-mm) minimum depth. For drains, cut holes in the field.

D. Floor Drain Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below floor deck surface, bearing flange 3 inches wide, sealed watertight.

E. Galvanized Repair Paint: ASTM A780/A780M.

F. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

G. All steel deck and accessories shall be thoroughly cleaned of all grease, oil, and dirt after fabrication.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

B. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

C. Proceed with installation only after unsatisfactory conditions have been corrected

3.2 INSTALLATION

A. Erect metal deck panels and accessories in accordance with SDI Design Manual and manufacturer's instructions. Align and level.

B. Locate deck bundles to prevent overloading of supporting members.

C. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

D. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

E. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

F. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

G. On concrete and masonry surfaces provide minimum 4 inch bearing.

H. On steel supports provide minimum 1-1/2 inch bearing.

I. Steel form shall extend over 3 or more spans, unless shown otherwise on the drawings.

J. Fasten deck to steel support members at ends and intermediate supports at 12 inches on center maximum, parallel with the deck flute and at each transverse flute using methods specified.

1. Welding: Use fusion welds through weld washers.

2. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

K. Clinch lock seam side laps.

L. At mechanically fastened male/female side laps fasten at 24 inches on center maximum.

M. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.

N. At welded male/female side laps weld at 18 inches on center maximum.

O. Weld deck in accordance with AWS D1.3/D1.3M.

P. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.

Q. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.

R. Close openings above walls and partitions perpendicular to deck flutes with single row of foam cell closures.

S. Place metal cant strips in position and fusion weld.

T. Roof-Deck Installation:

1. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches (38 mm) long, and as follows:

    a. Weld Diameter: 5/8 inch (16 mm), nominal.

    b. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds As indicated.

    c. Weld Washers: Install weld washers at each weld location.

2. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 18 inches (457 mm), as as follows:

    a. Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel screws.

    b. Mechanically clinch or button punch.

    c. Fasten with a minimum of 1-1/2-inch- (38-mm-) long welds.

3. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches (38 mm), with end joints as follows:

    a. End Joints: Lapped 2 inches (51 mm) minimum or butted at Contractor's option.

4. Roof Sump Pans and Sump Plates: Position roof drain pans with flange bearing on top surface of deck. Install over openings provided in roof deck and weld flanges to top of deck. Space welds not more than 12 inches (305 mm) apart with at least one weld at each corner.

a. Install reinforcing channels or zees in ribs to span between supports and weld.

5. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld to substrate to provide a complete deck installation.

   a. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

6. Flexible Closure Strips: Install flexible closures strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

U. Floor-Deck Installation:

1. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

   a. Weld Diameter: 5/8 inch (16 mm), nominal.

   b. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 inches (305 mm) apart, but not more than 18 inches (457 mm) apart

   c. Weld Washers: Install weld washers at each weld location.

2. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or 36 inches (914 mm), and as follows:

   a. Mechanically fasten with self-drilling, No.10 (4.8-mm-) diameter or larger, carbon-steel screws.

   b. Mechanically clinch or button punch.

   c. Fasten with a minimum of 1-1/2-inch- (38-mm-) long welds.

3. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches (38 mm), with end joints as follows:

   a. End Joints: Lapped or butted at Contractor's option.

4. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

5. Floor Drain Pans: Position floor drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

6. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

V. Weld stud shear connectors through steel deck to structural members below.

W. After welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.

D. Remove and replace work that does not comply with specified requirements.

3.4 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 099123 "Interior Painting."

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION 053100

This page intentionally left blank

SECTION 054000 - COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formed steel stud exterior wall and interior wall framing.

B. Formed steel joist and purlin framing and bridging.

1.2 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members.

B. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing.

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

D. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

E. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

F. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

G. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

H. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.

I. ICC (IBC) - International Building Code.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on cold-formed steel structural members; include material descriptions and base steel thickness.

C. Product Data: Provide manufacturer's data on factory-made connectors and mechanical fasteners, showing compliance with requirements.

D. Product Data: For lateral-force resisting systems, provide product data sheets on hold-down, showing compliance with requirements.

E. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.

1. Indicate stud and ceiling joist layout.

2. Describe method for securing studs to tracks and for bolted framing connections.

F. Design Data:

1. Shop drawings signed and sealed by a professional structural engineer.

2. Design calculations sufficient to demonstrate compliance with design criteria; signed and sealed by a professional structural engineer.

3. Details and calculations for factory-made connectors, signed and sealed by a professional structural engineer.

G. Inspection Reports: Provide material verification Inspection Reports in accordance with requirements of AISI S240.

1.4 QUALITY ASSURANCE

A. Designer Qualifications: Design framing system under direct supervision of a professional structural engineer experienced in designing this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Design Requirements: Design cold-formed framing systems, components and connectors to withstand specified design loads in compliance with ICC (IBC), ASCE 7, AISI S100, and AISI S240.

B. Design Criteria: As follows:

1. Roof Live Loads:

a. Minimum Uniformly Distributed: 20 psf.

b. Minimum Concentrated: _____ psf.

c. Snow Load: 30 psf.

2. Wind Loads: 29.0 psf positive and -38.0 psf negative. (Walls Zone 5)

[29.0] psf positive and [-31.6] psf negative. (Walls Zone 4)

3. Live load deflection meeting the following, unless otherwise indicated:

a. Roofs: Maximum vertical deflection under live load of 1/240 of span.

b. Exterior Walls: Maximum horizontal deflection under wind load of 1/360 of span. Areas providing back up to brick veneer are required to mee 1/600 of span deflection limit.

4. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.

5. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

2.2 MATERIALS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

2.3 STRUCTURAL FRAMING COMPONENTS

A. Wall Studs and Track Sections: AISI S240; c-shaped studs and u-shaped track sections in stud-matching nominal width and compatible height.

1. Structural Grade: As required to meet design criteria.

B. Jamb Studs: AISI S240; manufactured, engineered, c-shaped with wide flanges, designed to replace conventional double-stud framing at openings.

1. Structural Grade: As required to meet design criteria.

C. Headers: AISI S240; manufactured, engineered one-member or two-member assemblies, with wide flanges, designed to replace conventional box or nested header framing at openings.

1. Structural Grade: As required to meet design criteria.

2. Jamb Mounting Clips: Manufacturer's standard.

2.4 LATERAL FORCE-RESISTING SYSTEMS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

1. Structural Grade: As required to meet design criteria.

B. Curtain Wall Studs and Girts:

1. Thickness and Depth: Depth as indicated on the drawings; thickness and structural grade as required to meet design criteria.

2.5 CONNECTIONS

A. Performance Requirements: Provide connections in compliance with requirements of AISI S240.

B. Structural Performance: Maintain load and movement capacity required by applicable building code and specified design criteria.

C. Movement Connections: Provide mechanical anchorage devices that accommodate movement using slotted holes, shouldered screws or screws and anti-friction or stepped bushings, while maintaining structural performance of framing. Provide movement connections where indicated on drawings.

1. Where top of stud wall terminates below structural floor or roof, connect studs to structure in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.

D. Bridging Connections: Provide mechanical load-transferring devices that accommodate wind load torsion and weak axis buckling induced by axial compression loads. Provide bridging connectors where indicated on the drawings.

2.6 MISCELLANEOUS CONNECTIONS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot-dip galvanized per ASTM A153/A153M.

B. Anchorage Devices: Powder actuated.

C. Welding: Comply with AWS D1.1/D1.1M.

2.7 ACCESSORIES

A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.

B. Galvanizing Repair: Touch up bare steel with zinc-rich paint in compliance with ASTM A780/A780M.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.2 INSTALLATION - GENERAL

A. Install structural members and connections in compliance with ASTM C1007.

3.3 INSTALLATION OF STUDS

A. Install wall studs plumb and level.

B. Install load-bearing studs full length in one piece. Splicing of studs is not permitted.

C. Install load-bearing studs; brace, and reinforce to develop full strength and achieve design requirements.

D. Install intermediate studs above and below openings to align with wall stud spacing.

E. Provide deflection allowance in stud track, directly below horizontal building framing at non-loadbearing framing.

F. Install framing between studs for attachment of mechanical and electrical items, and to prevent stud rotation.

3.4 INSTALLATION OF JOISTS AND PURLINS

3.5 INSTALLATION OF WALL SHEATHING

A. Install wall sheathing with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using self-tapping screws.

3.6 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Provide material verification inspections in accordance with requirements of AISI S240.

C. Provide inspections for welding, mechanical fastening, and cold-formed steel light-frame construction in accordance with requirements of AISI S240.

3.7 TOLERANCES

A. Studs - Vertical Alignment (Plumbness): 1/960 of span or 1/8 inch in 10 ft, in accordance with ASTM C1007.

B. Studs - Maximum Variation from True Position: 1/8 inch in accordance with ASTM C1007.

C. Stud Spacing: 1/8 inch from the designated spacing, provided that the cumulative error does not exceed the requirements of the finishing materials in accordance with ASTM C1007.

END OF SECTION 054000

This page intentionally left blank

SECTION 055000 - METAL FABRICATIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Shop fabricated steel items, including:

1. Steel framing and supports for mechanical and electrical equipment.
2. Steel framing and supports for applications where framing and supports are not specified in other Sections.
3. Access ladders.
4. Bollards.
5. Loose steel lintels.
6. Slotted channel framing (Unistrut).
7. Embed plates.

1.3 RELATED REQUIREMENTS

A. Section 042000 - Unit Masonry: Placement of metal fabrications in masonry.

B. Section 055100 - Metal Stairs.

C. Section 055213 - Pipe and Tube Railings.

D. Section 077200 - Roof Accessories: Roof hatches requiring ladder access.

E. Section 099113 - Exterior Painting: Paint finish.

F. Section 099123 - Interior Painting: Paint finish.

G. Section 099600 - High-Performance Coatings: Exposed exterior steel surfaces identified to receive high performance coatings.

1.4 REFERENCE STANDARDS

A. ANSI A14.3 - American National Standard for Ladders -- Fixed -- Safety Requirements.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

G. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

J. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

K. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel.

M. AWS D1.2/D1.2M - Structural Welding Code - Aluminum.

N. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172.

O. NOMMA - National Ornamental & Miscellaneous Metals Association; www.nomma.org.

P. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

Q. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

2. Coordinate installation of anchorages and steel weld plates and angles for casting into concrete. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.

a. Include the following, as applicable:

1) Design criteria.

2) Engineering analysis depicting stresses and deflections.

3) Member sizes and gauges.

4) Details of connections.

5) Support reactions.

6) Bracing requirements.

3. Provide shop drawings for the following:

a. Steel framing and supports.

b. Ladders.

C. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

E. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

F. Designer's Qualification Statement.

G. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.7 QUALITY ASSURANCE

A. Designer Qualifications: Design indicated fabrication items under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.2/D1.2M and dated no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications: A qualified steel fabricator that is accredited by IAS AC172.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer registered in the project State to design metal fabrications complying with performance requirements and design criteria indicated.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 MATERIALS - STEEL

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than the following:

1. W-Shapes: 60 percent.
2. Channels, Angles: 60 percent.
3. Plate and Bar: 25 percent.
4. Cold-Formed Hollow Structural Sections: 25 percent.
5. Steel Pipe: 25 percent.
6. All Other Steel Materials: 25 percent.

B. Steel Channel, Angle, and Plate Sections: ASTM A36/A36M.

C. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

D. Plates: ASTM A283/A283M.

E. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

F. Slotted Channel Framing: ASTM A653/A653M, Grade 33.

G. Slotted Channel Fittings: ASTM A1011/A1011M.

H. Fasteners: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening stainless steel.
2. Dissimilar Metals: Type 304 stainless-steel fasteners.
3. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed.

I. Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

J. Bolts and Nuts (Weathering Conditions): Regular hexagon-head bolts, ASTM A 325, Type 3; with hex nuts, ASTM A 563, Grade C3; and, where indicated, flat washers.

K. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers; Alloy Group 1.

L. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

M. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

N. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized.

O. Post-Installed Anchors: Torque-controlled expansion anchors.

1. Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
2. Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

P. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

Q. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

1. Basis of Design Product: Subject to the requirements provide Sherwin-Williams Alkyd Universal Metal Primer, Kem Kromik B-50 Series or a comparable approved product of one of the following:

a. AkzoNobel; International Paints/Devoe Coatings.

b. Benjamin Moore & Co.

c. PPG Architectural Finishes, Inc.

R. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type II - Organic, complying with VOC limitations of authorities having jurisdiction.

1. Minimum Zinc Content: 95 percent.
2. Basis of Design:

a. ZRC Galvilite Galvanizing Repair Compound cold galvanizing compound.

S. Epoxy Zinc-Rich Primer: Compatible with topcoat.

1. Basis of Design: Provide Sherwin-Williams Zinc Clad IV or a comparable approved product of one of the following:

a. AkzoNobel; International Paints/Devoe Coatings.

b. Benjamin Moore & Co.

c. PPG Architectural Finishes, Inc.

T. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

U. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.3 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Form exposed work with accurate angles and surfaces and straight edges.

D. Continuously seal joined members by continuous welds.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

E. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

1. Comply with NOMMA voluntary guidelines for joint finishes; Finish #2 - completely sanded joint, some undercutting and pinholes acceptable.

F. Provide for thermal expansion/contraction of exterior metal railings and similar linear fabrications exceeding 30 feet in running length; and not closer than 24 inches from corners and intersections.

G. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

H. Furnish components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

I. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

J. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

2.4 FABRICATED ITEMS

A. Provide and install items shown on Drawings with anchorage and attachments necessary for installation. The following is a list of principal items only. Refer to Drawing details for items not specifically scheduled.

B. Ladders: Steel ladders, other than elevator pit ladders; in compliance with ANSI A14.3; with mounting brackets and attachments; prime paint finish.

1. Rungs: One inch diameter solid round bar spaced 12 inches on center; corrugated, dimpled, kerfed, or coated for slip-resistance.
2. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
3. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
4. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted steel brackets.

C. Bollards: Size as indicated in drawings, standard steel pipe, minimum wall thickness 0.280 inches; concrete filled, crowned cap, as detailed; finish as specified.

1. Bollards in Slab on Grade: Penetration depth below top of slab to equal detailed height; core hole in slab on grade 3 inches larger than bollard diameter, and fill joint at slab with a non-shrink grout; prime paint finish.
2. Color: Paint Safety Yellow or as specified by Owner requirements.

D. Lintels: As detailed; galvanized finish.

1. Paint finish as specified in Section 099113 - Exterior Painting for exterior steel.

E. Slotted Channel Framing: Fabricate channels and fittings from structural steel complying with the referenced standards; hot-dipped galvanized per ASTM A653, Grade G90 finish.

F. Embed Plates: Fabricate embed plates for casting into concrete, and masonry construction as detailed on Drawings. Weld anchors to plates to provide full transfer of design loads and stresses. Test embed plate assemblies prior to installation under provisions of Section 051200 - Structural Steel Framing and Structural Drawings.

2.5 FINISHES - STEEL

A. Unless otherwise recommended by finish coating manufacturer, prepare surfaces to be shop primed in accordance with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning" for exterior items and items indicated to receive zinc-rich primer. For other items, prepare to SSPC-SP 3, "Power Tool Cleaning."

B. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

C. Prime paint all steel items, unless otherwise specified.

1. Exceptions: Galvanize items to be embedded in concrete, items to be embedded in masonry, and miscellaneous framing and supports on exterior of building.

2. Exceptions: Do not prime surfaces in direct contact with concrete, where field welding is required, and items to be covered with sprayed fireproofing.

D. Prime Painting: One coat.

1. Shop prime with universal shop primer unless zinc-rich primer is indicated.

2. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

E. Galvanizing of Structural Steel Members: Galvanize after fabrication to ASTM A123/A123M requirements. Provide minimum 1.7 oz/sq ft galvanized coating.

F. Galvanizing of Non-structural Items: Galvanize after fabrication to ASTM A123/A123M requirements. Provide minimum 1.7 oz/sq ft galvanized coating.

2.6 FABRICATION TOLERANCES

A. Squareness: 1/8 inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch.

C. Maximum Misalignment of Adjacent Members: 1/16 inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16 inch in 48 inches.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Furnish setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.3 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Field weld components indicated on Drawings.

D. Perform field welding in accordance with AWS D1.1/D1.1M.

E. Obtain approval prior to site cutting or making adjustments not scheduled.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

END OF SECTION

This page intentionally left blank

SECTION 055100 - METAL STAIRS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Stairs with grating treads.

B. Structural steel stair framing and supports.

C. Design engineering for stair assemblies, and anchorage to supporting structure.

1.3 RELATED REQUIREMENTS

A. Section 055213 - Pipe and Tube Railings: Railings for the stairs specified in this section.

B. Section 099123 - Interior Painting: Paint finish.

1.4 REFERENCE STANDARDS

A. AISC 207 - Standard for Certification Programs.

B. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

F. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

G. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

H. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

I. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength.

J. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

K. AWS D1.1/D1.1M - Structural Welding Code - Steel.

L. NAAMM AMP 510 - Metal Stairs Manual.

M. NAAMM MBG 531 - Metal Bar Grating Manual.

N. NAAMM MBG 532 - Heavy Duty Metal Bar Grating Manual.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

C. Design Data: As required by authorities having jurisdiction.

1. Design Calculations: Submit design calculations sealed by a registered Professional Engineer licensed in the State in which the Project is located.

D. Designer's Qualification Statement.

E. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is certified under AISC 207.

F. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.6 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.7 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and dated no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications:

1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 207.

2. A company specializing in manufacturing products specified in this Section, with not less than ten years of documented experience.

PART 2 PRODUCTS

2.1 METAL STAIRS - GENERAL

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.

1. Regulatory Requirements: Provide stairs and railings that comply with most stringent requirements of local, state, and federal regulations; where requirements of Contract Documents exceed those of regulations, comply with Contract Documents.

2. Handrails: Comply with applicable accessibility requirements of ADA Standards.

3. Structural Design: Provide complete stair and railing assemblies that comply with the applicable local code.

a. Stair Capacity: Uniform live load of 100 lb/sq ft and a concentrated load of 300 lb.

b. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.

4. Dimensions: As indicated on drawings.

5. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.

6. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.

7. Separate dissimilar metals using paint or permanent tape.

C. Metal Jointing and Finish Quality Levels:

1. Service: Exposed joints tight with face surfaces aligned; underside of stair not covered by soffit is not considered exposed to view.

a. Welded Joints: Welded on back side wherever possible.

b. Welds Exposed to View: Ground smooth; not required to be flush.

c. Bolts Exposed to View: Countersunk flat or oval head bolts; no exposed nuts or screw threads.

d. Metal Surfaces to be Painted: Sanded smooth, suitable for satin or matte finish.

D. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

E. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.2 METAL STAIRS WITH GRATING TREADS

A. Jointing and Finish Quality Level: Service, as defined above.

B. Risers: Open.

C. Treads: Steel bar grating.

1. Grating Type: Welded.
2. Bearing Bar Depth: 3/4 inch, minimum.
3. Top Surface: Standard.
4. Nosing: Checkered plate.
5. Nosing Width: 1-1/4 inch, minimum.
6. Anchorage to Stringers: End plates welded to grating, bolted to stringers.

D. Stringers: Rolled steel channels.

1. Stringer Depth: 12 inches, minimum.
2. End Closure: Sheet steel, 14 gauge, 0.075 inch minimum; welded across ends.

E. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

F. Finish: Galvanized after fabrication.

2.3 HANDRAILS AND GUARDS

A. Railings and Guards: See Section 055213 - Pipe and Tube Railings.

2.4 MATERIALS

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A500/A500M or ASTM A501/A501M structural tubing, round and shapes as indicated.

C. Steel Plates: ASTM A6/A6M or ASTM A283/A283M.

D. Gratings: Bar gratings that comply with NAAMM MBG 531 or NAAMM MBG 532, whichever applies based on bar sizes.

2.5 ACCESSORIES

A. Factory Fabricated Stair Nosing:

1. Materials: Extruded aluminum, alloy type 6063-T5, mill finish.

a. Tread Abrasive Filler: Virgin grain aluminum oxide epoxy-bonded to tread base.

b. Tread Type: Full abrasive.

c. Width: 3 inches.

d. Nosing Types: Long nose for steel pan stairs.

e. Color: As selected by Architect from Manufacturer's standard options.

2. Acceptable Manufacturers:

a. Nystrom.

b. Balco.

c. Wooster Products, Inc..

d. Substitutions: See Section 016000 - Product Requirements.

B. Steel Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1.

C. Steel Bolts, Nuts, and Washers: Galvanized to ASTM A153/A153M where connecting galvanized components.

D. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

E. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

F. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.

2.6 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Galvanizing: Hot-dip galvanize to minimum requirements of ASTM A123/A123M.

1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. When field welding is required, clean and strip primed steel items to bare metal.

B. Supply items required to be cast into concrete and embedded in masonry with setting templates.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Provide anchors, plates and angles required for connecting stairs to structure.

C. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

D. Provide welded field joints where specifically indicated on Drawings. Perform field welding in accordance with AWS D1.1/D1.1M.

E. Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.

F. Obtain approval prior to site cutting or creating adjustments not scheduled.

G. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

END OF SECTION

SECTION 055213 - PIPE AND TUBE RAILINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Wall mounted handrails.

B. Guardrails.

C. Structural design of railing systems.

1.3 RELATED REQUIREMENTS

A. Section 055100 - Metal Stairs: Attachment plates for handrails specified in this section.

B. Section 061000 - Rough Carpentry: Placement of backing plates in stud wall construction.

C. Section 099123 - Interior Painting: Paint finish.

1.4 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. AISC 207 - Standard for Certification Programs.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

F. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings.

G. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

H. AWS D1.1/D1.1M - Structural Welding Code - Steel.

I. NOMMA - National Ornamental & Miscellaneous Metals Association; www.nomma.org.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

C. Samples: Submit two, 12 inch long samples of handrail. Submit two samples of elbow, wall bracket, and end stop.

D. Designer's Qualification Statement.

E. Fabricator's Qualification Statement.

F. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.6 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.

C. Fabricator Qualifications:

1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 207.

2. A company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect mechanical finishes on exposed surfaces from damage.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.1 RAILINGS - GENERAL REQUIREMENTS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Design, fabricate, and test railing assemblies in accordance with the most stringent requirements of applicable local code.

C. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of 50 pounds per linear foot applied to the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.

D. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of 200 pounds applied at any point on the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.

E. Guardrail Infill Loads: Concentrated load of 50 pounds per linear foot applied horizontally on an area of 1 sq. ft.

F. Allow for expansion and contraction of members and building movement without damage to connections or members.

G. Dimensions: See Drawings for configurations and heights.

1. Grip Rails: 1-1/2 inches nominal diameter, round, unless otherwise indicated in Drawings.

H. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

1. For anchorage to concrete, provide inserts to be cast into concrete, for bolting anchors.
2. For anchorage to masonry, provide brackets to be embedded in masonry, for bolting anchors.
3. For anchorage to stud walls, provide backing plates, for bolting anchors.

I. Provide welding fittings to join lengths, seal open ends, and conceal exposed mounting bolts and nuts, including but not limited to elbows, T-shapes, splice connectors, flanges, escutcheons, and wall brackets.

J. Interconnect members by butt-welding, with coped joints and flush radiused bends, wall returns at ends of wall mounted rails, and closed ends.

1. Provide expansion joints at maximum 75 feet on center, or as recommended by fabricator for indicated conditions.

2.2 STEEL RAILING SYSTEM

A. Steel Tube: ASTM A500/A500M Grade B cold-formed structural tubing.

B. Steel Pipe: ASTM A53/A53M Grade B Schedule 40, galvanized finish.

C. Welding Fittings: Factory- or shop-welded from matching pipe or tube; seams continuously welded; joints and seams ground smooth.

D. Straight Splice Connectors: Steel concealed spigots.

E. Galvanizing: In accordance with requirements of ASTM A123/A123M.

F. Touch-Up Primer for Galvanized Surfaces: Manufacturer's recommended primer, complying with VOC limitations specified in Section 016116.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction and compatible with paints specified to be used over it.

2.3 MISCELLANEOUS MATERIALS

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107 and specifically recommended by manufacturer for interior and exterior applications.

2.4 FASTENERS

A. General: Provide the following:

1. Steel Railings (uncoated): Plated steel fasteners complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 for zinc coating.

2. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

C. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.

2.5 FABRICATION

A. Accurately form components to suit specific project conditions and for proper connection to building structure.

B. Fit and shop assemble components in largest practical sizes for delivery to site.

C. Fabricate components with joints tightly fitted and secured.

D. Welded Joints:

1. Carbon Steel: Perform welding in accordance with AWS D1.1/D1.1M.

2. Interior Components: Continuously seal joined pieces by continuous welds.

3. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

   a. Comply with NOMMA voluntary guidelines for joint finishes; Finish #2 - completely sanded joint, some undercutting and pinholes acceptable.

E. Changes in Direction: Form by bending or by inserting prefabricated elbow fittings.

1. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

F. Close exposed ends of railing members with prefabricated end fittings.

2.6 STEEL AND IRON FINISHES

A. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

B. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated interior railings with primer compatible with paint systems specified in Section 099123 - Interior Painting.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation as work of other sections.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects, with tight joints.

C. Install railings in compliance with ADA Standards for accessible design at applicable locations.

D. Anchor railings securely to structure.

E. Field weld anchors as indicated on shop drawings. Touch-up welds with primer. Grind welds smooth.

F. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

3.4 ANCHORING POSTS

A. Anchor posts to steel by welding to steel supporting members, unless otherwise indicated.

B. Use stainless steel sleeves preset and anchored into concrete for installing posts. Provide sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.

1. Cover anchorage joint with flange of same metal as post, attached to post with set screws.

C. For removable railing posts, fabricate slip-fit sockets from stainless-steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.

1. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.

3.5 ATTACHING RAILINGS

A. Attach railings to wall with wall brackets. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

B. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface.

C. Secure wall brackets to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.

3.6 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per floor level, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

3.7 CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

3.8 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

3.9 SCHEDULE

A. Interior Railings: Shop primed and field painted per Section 099123 - Interior Painting.

END OF SECTION

This page intentionally left blank

SECTION 061000 - ROUGH CARPENTRY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Nonstructural dimension lumber framing.

B. Roofing nailers.

C. Preservative treated wood materials.

D. Fire retardant treated wood materials.

E. Communications and electrical room mounting boards.

F. Concealed wood blocking, nailers, and supports.

G. Miscellaneous wood nailers, furring, and grounds.

1.3 RELATED REQUIREMENTS

A. Section 061600 - {\t\#1000342}Exterior wall sheathing.

1.4 REFERENCE STANDARDS

A. ASTM C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing.

B. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing.

C. ASTM D3498 - Standard Specification for Adhesives for Field-Gluing Wood Structural Panels (Plywood or Oriented Strand Board) to Wood Based Floor System Framing.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. AWPA U1 - Use Category System: User Specification for Treated Wood.

F. PS 1 - Structural Plywood.

G. PS 20 - American Softwood Lumber Standard.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate installation of rough carpentry members specified in other Sections.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide technical data on wood preservative materials and construction panels.

C. Manufacturer's Certificate: Certify that wood products supplied for rough carpentry meet or exceed specified requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Dimension Lumber: Comply with PS 20 and requirements of specified grading agencies.

1. If no species is specified, provide species graded by the agency specified; if no grading agency is specified, provide lumber graded by grading agency meeting the specified requirements.

2. Grading Agency: Grading agency whose rules are approved by the Board of Review, American Lumber Standard Committee at www.alsc.org, and who provides grading service for the species and grade specified; provide lumber stamped with grade mark unless otherwise indicated.

3. Lumber of other species or grades is acceptable provided structural and appearance characteristics are equivalent to or better than products specified.

B. Grade Stamps: Provide each piece of lumber and each panel product stamped showing grade and trademark of grading agency under which it is produced.

1. Additional Stamps: Stamped showing specified requirements for fire-retardant and preservative treatments as specified.

2.2 DIMENSION LUMBER

A. Wood Blocking, Nailers, Grounds, and Furring:

1. Lumber: S4S, No. 2 or Standard Grade.

2. Boards: Standard or No. 3.

2.3 CONSTRUCTION PANELS

A. Exterior Sheathing Board: Specified in Section 061600 - Sheathing.

B. Communications and Electrical Room Mounting Boards: PS 1 A-D plywood, or medium density fiberboard; 3/4 inch 3/4 inch thick; flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with ASTM E84.

C. Blocking Applications:

1. Backing Plate: Proprietary fire-retardant treated wood blocking:

a. ClarkDietrich; Danback Fire-Retardant Treated Wood Backing Plate.

2. Plywood Blocking/Nailers - Concealed From View But Located Within Exterior Enclosure: PS 1, C-C Plugged or better, Exterior grade.

3. Plywood Blocking/Nailers - Other Locations: PS 1, C-D Plugged or better.

2.4 ACCESSORIES

A. Fasteners and Anchors:

1. Metal and Finish: Hot-dipped galvanized steel complying with ASTM A153/A153M for high humidity and preservative-treated wood locations, unfinished steel elsewhere.

2. Anchors: Toggle bolt type for anchorage to hollow masonry.

B. Construction Adhesives: Adhesives complying with ASTM C557 or ASTM D3498.

2.5 FACTORY WOOD TREATMENT - GENERAL

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

1. Fire-Retardant Treated Wood: Mark each piece of wood with producer's stamp indicating compliance with specified requirements, and also stamped "Kiln Dried After Treatment" ("KDAT").

2. Preservative-Treated Wood: Provide lumber and plywood marked or stamped by an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards, and also stamped "Kiln Dried After Treatment" ("KDAT").

2.6 FIRE RETARDANT TREATMENT (FRT)

A. Exterior Type: AWPA U1, Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.

1. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
2. Applications:
    a. Treat all exterior rough carpentry items.
    b. Do not use treated wood in direct contact with the ground.

B. Interior Type: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes.
1. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
2. Applications:
    a. Treat all interior rough carpentry items.
    b. Do not use treated wood in applications exposed to weather or where the wood may become wet.

2.7 PRESERVATIVE TREATMENT (PT)

A. Preservative Pressure Treatment of Lumber Above Grade: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative.
1. Kiln dry lumber after treatment to maximum moisture content of 19 percent.
2. Applications:
    a. Treat lumber exposed to weather.
    b. Treat lumber in contact with flashing or waterproofing.
    c. Treat lumber in contact with masonry or concrete.
    d. Treat lumber less than 18 inches above grade.
    e. Treat lumber in other locations as indicated.

PART 3 EXECUTION

3.1 INSTALLATION - GENERAL

A. Select material sizes to minimize waste.

B. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including shims, bracing, and blocking.

C. Where treated wood is used on interior, provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.2 BLOCKING, NAILERS, AND SUPPORTS

A. Provide framing and blocking members as indicated or as required to support finishes, fixtures, specialty items, and trim.

B. In walls, provide blocking attached to studs as backing and support for wall-mounted items, unless item can be securely fastened to two or more studs or other method of support is explicitly indicated.

C. Where ceiling-mounting is indicated, provide blocking and supplementary supports above ceiling, unless other method of support is explicitly indicated.

D. Provide the following specific nonstructural framing and blocking:

1. Cabinets and shelf supports.
2. Wall brackets.
3. Handrails.
4. Grab bars.
5. Towel and bath accessories.
6. Wall-mounted door stops.
7. Chalkboards and marker boards.
8. Wall paneling and trim.
9. Joints of rigid wall coverings that occur between studs.
10. Other locations as detailed on Drawings.

3.3 INSTALLATION OF CONSTRUCTION PANELS

A. Communications and Electrical Room Mounting Boards: Secure with screws to studs with edges over firm bearing; space fasteners at maximum 24 inches on center on all edges and into studs in field of board.

1. At fire-rated walls, install board over wall board indicated as part of the fire-rated assembly.
2. Install adjacent boards without gaps.
3. Size and Location: As indicated on Drawings or as required for equipment mounting.

3.4 TOLERANCES

A. Framing Members: 1/4 inch from true position, maximum.

B. Variation from Plane, Other than Floors: 1/4 inch in 10 feet maximum, and 1/4 inch in 30 feet maximum.

3.5 CLEANING

A. Prevent sawdust and wood shavings from entering the storm drainage system.

END OF SECTION

SECTION 061600 - SHEATHING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Exterior wall sheathing.

B. Sheathing joint and penetration treatment.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Wood panels for miscellaneous blocking and mounting boards.

B. Section 092900 - Gypsum Board: Interior gypsum panels.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: For each type of process and factory-fabricated product.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 PRODUCTS

2.1 WALL SHEATHING

A. Glass Mat Faced Sheathing: Glass mat faced gypsum substrate as defined in ASTM C1177/C1177M.

1. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
2. Fungal Resistance: No fungal growth when tested in accordance with ASTM G21.

3. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
4. Core Type: Type X, as indicated.
5. Thickness: 5/8 inch.
6. Edges: Square.
7. Products:
    a. USG Corporation; Securock Regular and Firecode X Sheathing.
    b. Georgia-Pacific Gypsum; DensGlass Fireguard Sheathing.
    c. CertainTeed Corporation; GlasRoc Type X Exterior Sheathing.
    d. National Gypsum Company; Gold Bond eXP Sheathing.
    e. Substitutions: See Section 016000 - Product Requirements.

2.2 PARAPET WALL SHEATHING (BACK SIDE)

A. Same as cover board listed in Division 07 roofing section.

2.3 ROOF COVER BOARD

A. See Division 07 roofing section.

2.4 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
    1. Provide non-corrosive fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

C. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
    1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C 1002.
    2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.

2.5 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. As recommended by air barrier manufacturer.

PART 3 EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:

1. ICC-ES evaluation report for fastener.

D. Coordinate sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

F. Wall Sheathing: Secure with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using screws.

G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 GYPSUM SHEATHING INSTALLATION

A. Comply with ASTM C1280, GA-253, and with manufacturer's written instructions.

1. Fasten gypsum sheathing to framing with screws with edges butted tight unless otherwise indicated.

2. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.

3. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Seal sheathing joints according to sheathing manufacturer's written instructions.

1. Coordinate finishing requirements with Air Barriers specified in Division 07.

2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

END OF SECTION

SECTION 062200 - FLEXIBLE WOOD TAMBOUR PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2

1.3 SECTION INCLUDES

A. Flexible wood tambour panels of the following types:

1. Solid wood tambours for transparent finish.

1.4 RELATED REQUIREMENTS

A. Section 099123 - Interior Painting: Field finishing.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate work with plumbing rough-in, electrical rough-in, and installation of associated and adjacent components.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data:

1. Provide data for each type of product.

C. Shop Drawings: Indicate layout of pattern and configuration, including details of perimeter conditions and mounting.

D. Samples: Two samples, in manufacturer's standard size, illustrating tambour profile and specified finish.

E. Manufacturer's Instructions: Provide manufacturer's installation instructions.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with minimum 3 years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified, with minimum 3 years of documented experience.

C. Basis of Design: Specifications are based on products by specified basis of design manufacturer. Products manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements; and provided that deviations in design, performance, composition, color, and profile are minor, and do not detract substantially from the indicated design intent.

1.8 MOCK-UPS

A. See Section 014000 - Quality Requirements for additional requirements.

B. Construct mock-up of tambour panels, full size, illustrating wood grain and specified finish.

1. Locate where directed.
2. Mock-up may remain as part of work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and products in unopened factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install panels until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of the construction period.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Manufacturers and products as scheduled on drawings.

B. Other Acceptable Manufacturers:

1. Moulding, Corbels & More : www.mouldings.com.
2. Surfacing Solution: www.surfacingsolution.com.
3. Substitutions: See Section 016000 - Product Requirements.

2.2 SOLID WOOD TAMBOUR PANELS

A. Tambour Panels: Solid wood tambours on flexible backing.

1. Wood Species: Maple.

a. For Transparent Finish: As scheduled.

2. Profile: Fluted.
3. Slat Width: 1.25 inches.
4. Mounting Method: Direct applied with adhesive.
5. Finish: Factory-primed for field finish.

2.3 ACCESSORIES

A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific panel and substrate application indicated and as recommended in writing by panel manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dirt and bond breaking substances prior to beginning installation.

B. Acclimatize panels at the installation site for a minimum of 48 hours prior to installation.

3.3 INSTALLATION

A. Install products in strict accordance with manufacturer’s instructions, approved submittals and in proper relationship to adjacent construction.

1. Roll tambour panels in accordance with manufacturer’s instructions to properly space slats.
2. Follow manufacturer’s recommendations for adhesives and mounting devices.
3. Replace damaged or defaced products prior to Substantial Completion.

3.4 FINISHING

A. See Section 099123 - Interior Painting for field-finishing of wood tambours.

3.5 CLEANING

A. Clean surfaces to remove soiling, stains, dust, and dirt using materials acceptable to manufacturer.

B. Leave installation area clean and free of residue and debris resulting from work of this Section.

END OF SECTION

SECTION 064000 - ARCHITECTURAL WOODWORK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Wood casework with laminate cladding.

B. Cabinet and drawer hardware.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry.

B. Section 090000 - Finish Schedule.

C. Section 123600 - Countertops.

1.4 REFERENCE STANDARDS

A. ANSI A208.1 - American National Standard for Particleboard.

B. ANSI A208.2 - Medium Density Fiberboard (MDF) for Interior Applications.

C. ANSI/AWI 0400 - Factory Finishing.

D. ANSI/AWI 0620 - Finish Carpentry/Installation.

E. ANSI/AWI 0641 - Architectural Wood Casework.

F. AWI 200 - Care and Storage.

G. AWI 300 - Materials.

H. BHMA A156.9 - Cabinet Hardware.

I. BHMA A156.18 - Materials and Finishes.

J. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood.

K. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

L. PS 1 - Structural Plywood.

M. PS 20 - American Softwood Lumber Standard.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate schedule of climate-controlled rooms with schedule of storage of wood and wood-based materials requiring climate-controlled environments.
2. Coordinate work of this section with installation of wood blocking, wood backing, metal strapping, and other anchorage that provides casework backing and structural support.
3. Coordinate work of this section with rough-in plumbing and rough-in electrical integrally-related with casework.
4. Field verify critical dimensions and clearances prior to fabrication of woodwork items; assure that field conditions are as required to comply with indicated design requirements.
    a. Where field measurements cannot be made without delaying work, establish required dimensions and maintain those dimensions for fabrication of woodwork.
5. Coordinate cabinet spacing and clearances to ensure that doors and drawers do not conflict with each other.
6. Coordinate cabinet opening and spacing requirements with approved appliances and plumbing fixtures.

B. Preinstallation Meeting: Convene preinstallation meeting not less than one week prior to completion of framing behind casework; require attendance of contractor, framing contractor, and casework installer.

1. Review locations of casework backing and structural support.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer's published, product descriptive data for each panel material, finish, and hardware.

C. Shop Drawings:

1. General: Provide each sheet sequentially numbered and dated.
    a. Shop drawings are required to be generated as separate digital drawings specific to this Project, not utilizing Architect's digital drawing files in any manner.
    b. Show all adjacent construction including abutting walls, columns and similar elements affecting woodwork installation.
2. AWI QCP Program Requirements:
    a. Aesthetic Grade: Identify specified grade and indicate compliance.
    b. Performance Duty Level: Identify specified duty level and indicate compliance.
    c. Identification of Materials: Include material lists or schedules.

d. Reference Plans: Casework locations in relative context of building floor plans.

e. Plans and Elevations: Plan and elevation views of each assembly type.

f. Detailed Sections: Dimensioned section views of each casework configuration.

1) Include appropriate locations for casework wall anchorage.

2) Drawing Scale: 1-1/2 inch = 1 foot, minimum.

g. Details: Dimensioned casework assembly details with material thicknesses.

D. Samples:

1. Woodwork: Submit actual samples of architectural woodwork construction, minimum 12 inches square, illustrating each proposed cabinet and woodwork substrate and finish.

2. Hardware: For each hinge, pull, and cabinet lock type, submit one sample, full-size, indicating specified finish.

E. Fabricator's qualification statement.

F. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.

1.7 QUALITY ASSURANCE

A. Fabricator/Installer Qualifications: Firm specializing in fabricating and installing products specified in this section with minimum five years of documented experience; with qualifications indicating ability to comply with requirements of this section.

1. Woodworking company with at least one project in past five years with value of casework within 20 percent of casework cost for this project.

2. Single Source Responsibility: Provide fabrication and installation from single woodworking company.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in original packaging materials bearing product identification. Deliver woodwork items to installation areas only after clean, well ventilated, and temperature-controlled installation areas are available. Do not deliver woodwork items to installation areas until painting and similar operations are complete in those areas.

B. Store products prior to installation on flat, level, clean surfaces; elevate products above floors and protect from sunlight.

C. Store products in interior rooms with completed wet work and overhead work.

D. Relative Humidity Conditions for Storing Wood and Wood-Based Products:

1. Maintain relative humidity between 25 and 45 percent.

E. For products other than wood and wood-based products, store and handle in accordance with manufacturer's documented instructions.

F. Handle materials and products to prevent damage to edges, ends, or surfaces.

1.9 FIELD CONDITIONS

A. Ambient Conditions for Acclimation, Installation, and Post-Installation of Wood-Based Products:

1. Acclimation Period Prior to Installation: 72 hours minimum, inside installation environment.
2. Temperature Conditions During Acclimation, Installation, and Post-Installation: Maintain temperature between 60 degrees F and 90 degrees F.
3. Relative Humidity Conditions During Acclimation, Installation, and Post-Installation: Maintain relative humidity between 25 and 45 percent.

B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Single Source Responsibility: Provide and install this work from single fabricator.

2.2 ARCHITECTURAL WOODWORK

A. Provide architectural woodwork components in sizes and profiles as indicated on drawings.

B. Scribed Fillers:

1. Finish and Materials: Same materials and finish as exposed surfaces.

2.3 PERFORMANCE REQUIREMENTS

A. Architectural Woodwork Institute (AWI) Performance Requirements:

1. Comply with AWI 300, ANSI/AWI 0641, ANSI/AWI 0400, and ANSI/AWI 0620 as applicable for specified casework finish, aesthetic grade, and performance duty level.
    a. Aesthetic Grade: Premium.
    b. Product Performance Duty Level: Duty Level 2.
2. Panel and Material Thicknesses: Provide panels and materials as required to meet specified performance duty level, subject to minimum thickness requirements of AWI 300 and ANSI/AWI 0641 and flatness requirements indicated below.
3. Panel Flatness: Provide panels with maximum variation from flat in 12 inches as measured diagonally across panel.
    a. Premium Grade: Plus or minus 0.063 inch maximum.

4. Cabinet Door Flatness:

    a. Comply with specified performance requirements.

2.4 OTHER ARCHITECTURAL WOODWORK ITEMS

A. Wardrobe and Mail-Sorter:

1. Aesthetic Grade: Premium Grade.
2. Performance Grade: Duty Level 2 - Commercial.
3. Exposed Surfaces: HPDL finish, color as scheduled .

B. Bench Seating:

1. Aesthetic Grade: Premium Grade.
2. Performance Grade: Duty Level 2 - Commercial.
3. Exposed Surfaces: HPVA HP-1 Grade A, Maple, plain sliced, book-matched.
4. Cushions:

    a. Foam Padding: Commercial quality, fire-retardant, high-resiliency polyurethane foam; 1.8 to 2.1 pcf density; 28 to 32 percent indentation force deflection; thickness and configurations as indicated on Drawings.

    b. Fabric: Treated for stain and soil resistance, flame retardant treated complying with NFPA 701.

    c. Tailoring: Straight stitch seams, straight and neatly tailored.

    d. Fabric Colors and Patterns: As scheduled.

    e. Inspection: Allow for inspection by Architect during manufacturing process and after final assembly.

2.5 WOOD VENEER PANELS

A. Description: Panels consisting of wood face veneers applied to cores; panel layup with face ply, back ply, and core of either single layer or odd number of inner plies, to produce balanced construction panel; comply with HPVA HP-1.

1. Panels subject to size limitations, minimum thickness requirements, and fabrication tolerances of specified aesthetic grade and performance duty level in accordance with AWI 300 and ANSI/AWI 0641.

B. Hardwood Face Veneers Intended to Receive Transparent Finish:

1. Species and Cut: As specified in this section with wood casework for transparent finish.
2. Face Veneer Grade: As specified in this section with wood casework intended for transparent finish; associated with applicable surface exposures and specified performance requirements.
3. Face Veneer Special Characteristics: In accordance with specified aesthetic grade.

C. Softwood Face Veneers Intended to Receive Transparent Finish:

1. Species and Cut: As specified in this section with wood casework for transparent finish.
2. Face Veneer Grade: As specified in this section with wood casework intended for transparent finish; associated with applicable surface exposures and specified performance requirements.
3. Face Veneer Special Characteristics: In accordance with specified aesthetic grade.

D. Back: Comply with backer requirements of AWI 300.

E. Panel Cores for Ben:

1. Veneer Core; for Bench Seating.
   a. Plies: 7-ply.
   b. Thickness: 3/4 inch.
2. Particleboard (PTB); for Wardrobe and Mail-Sorter.

2.6 PANEL CORES

A. Particleboard (PTB):

1. Description: Composite panel composed of cellulosic particles, additives, and bonding system; comply with ANSI A208.1.
2. Grade and Thickness: As required to meet performance requirements.

B. Medium Density Fiberboard (MDF):

1. Description: Composite panel composed of cellulosic fibers, additives, and bonding system cured under heat and pressure; comply with ANSI A208.2.
2. Grade and Thickness: As required to meet performance requirements.

2.7 CONCEALED CABINET BASE COMPONENTS

A. Cabinet Base Toe-Kick Subfronts:

1. Materials and Size: Fabricator's choice subject to requirements of ANSI/AWI 0641.

B. Cabinet Base Blocking and Stretchers:

1. Materials and Size: Fabricator's choice subject to requirements of ANSI/AWI 0641.

C. Cabinet Base Sleepers:

1. Materials and Size: Fabricator's choice subject to requirements of ANSI/AWI 0641.

2.8 WOOD AND WOOD-BASED MATERIALS

A. AWI 200 Wood Moisture Content Requirements:

1. Climate Zone 2: Between 6 and 10 percent.

B. AWI 300 General Requirements for Wood.

1. Provide wood that is sound, free of decay, shake, pith, wane, and warp.
2. Provide wood in accordance with AWI 300.

C. Plywood: Comply with PS 1.

D. Wood Boards: Comply with PS 20.

E. Wood Anchoring Strips:

1. Materials and Size: Fabricator's choice subject to requirements of ANSI/AWI 0641.

2.9 CABINET AND DRAWER HARDWARE

A. Hinges, Number of Hinges for Each Cabinet Door:

1. Door Heights Under 48 inches: Not less than two hinges per door.
2. Door Heights Between 48 inches and 84 inches: Not less than three hinges per door.
3. Door Heights Greater than 84 inches: Not less than four hinges per door.

B. Hinges, Self-Closing, Integrated Damper Hinges:

1. Description: Self-closing hinges with integrated damper mechanisms.
2. Comply with BHMA A156.9, B01712.
3. Features: Provide soft-closing integrated damper hinges.
4. Opening Range: Between 115 to 150 to degrees.
    a. At 90 degree inside corner conditions, provide restriction clips to limit the opening of cabinet doors to no more than 86 degrees to prevent damage to adjacent surfaces.
5. Manufacturers:
    a. Blum, Inc: www.blum.com/#sle.
    b. Grass America Inc: www.grassusa.com/#sle.
    c. Hettich America, LP; Sensys: www.hettich.com/#sle.
    d. Sugatsune America, Inc: www.sugatsune.com/#sle.
    e. Titus Cabinet Hardware: www.titusplus.com/us/en/#sle.
    f. Substitutions: See Section 016000 - Product Requirements.

C. Cabinet Door and Drawer Pulls: Provide one at each door and drawer.

1. Description: Back-mounted pulls.
2. Comply with specified performance requirements.
3. Design: As indicated on drawings.
4. Basis of Design: As indicated in Section 090000 - Finish Schedule.

D. Shelf Rests:
   1. Description: Metal shelf rests for installation into prepared holes in substrate.
   2. Comply with specified performance requirements.
   3. Material and Finish: Steel with nickel-plated finish.
   4. Products:
      a. Knape & Vogt Manufacturing Company: www.knapeandvogt.com/#sle.
      b. Sugatsune America, Inc: www.sugatsune.com/#sle.
      c. Substitutions: See Section 016000 - Product Requirements.

E. Drawer Slides:
   1. Description: Hardware units that suspend drawers and provide controlled drawer sliding.
   2. Comply with BHMA A156.9, Heavy Duty Grade 1HD-100.
   3. Features: Self-closing and soft-closing.
   4. Mounting: Side-mounted.
   5. Travel: Full extension.
   6. Acceptab:
      a. Accuride International, Inc: www.accuride.com/#sle.
      b. Blum, Inc: www.blum.com/#sle.
      c. Grass America Inc: www.grassusa.com/#sle.
      d. Knape & Vogt Manufacturing Company: www.knapeandvogt.com/#sle.
      e. Sugatsune America, Inc: www.sugatsune.com/#sle.
      f. Titus Cabinet Hardware: www.titusplus.com/us/en/#sle.
      g. Substitutions: See Section 016000 - Product Requirements.

F. Cabinet Door and Drawer Silencers:
   1. Description: Self-adhesive rubber silencers.
   2. Doors, Quantity: One silencer at top and bottom of closing edge of each door.
   3. Drawers, Quantity: One silencer at back side of each drawer front cover.

G. Cabinet Door Keyed Locks with Dead Bolts:
   1. Description: Keyed cylinder locks for securing cabinet doors.
   2. Keying Action: Key projects and retracts dead bolts.
   3. Mounting: Half-mortised into back of door.
   4. Interchangeable Cores: Provide interchangeable cores.
   5. Keying: Coordinate with Owner's standard keying system.

6. Material and Finish: Match finish of pulls.

H. Garment Hooks; Mounted in W

1. Description: Devices with one or more arms projecting from attachment bases; for hanging garments.
2. Mounting: Surface mounted.
3. Material and Finish: BHMA A156.18, 627 or 628 satin aluminum.

2.10 CASEWORK ACCESSORY COMPONENTS

A. Grommets: Plastic, with matching slotted caps; round.

1. Shape: Round.
2. Inside Diameter: 1-1/2 inches.
3. Color: As selected by Architect.

2.11 FABRICATION

A. Shop-fabricate casework to dimensions, profiles, and details indicated on drawings.

B. Fabricate to maximum extents plausible, including doors, drawers, and hardware; fabricate units in sizes transportable through building openings.

C. When necessary to cut and fit on site, provide materials with sufficient allowance for cutting.

D. Matching Wood Grain: Comply with requirements of quality standard for specified Grade

E. Provide cutouts for plumbing fixtures; verify locations of cutouts from on-site dimensions. Sand and seal cut edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify casework and materials required for installation have been delivered, handled and stored as specified.

B. Verify wood blocking and backing that provides casework structural support is installed as indicated on drawings.

C. Verify location and sizes of rough-in plumbing and rough-in electrical associated with work of this section.

D. Verify location and sizes of cutouts for appliances and special equipment to be mounted in or adjacent to casework.

E. Verify critical clearances and dimensions prior to installation of woodwork items.

3.2 PREPARATION

A. Acclimate casework to environments indicated for installation.

3.3 INSTALLATION

A. Install work in accordance with AWI/AWMAC/WI (AWS) requirements for grade indicated.

B. Install work of this section rigid, plumb, and level and in accordance with fabricator's documented instructions.

1. Align and secure adjoining cabinet units with fasteners in concealed locations.

C. Install cabinet hardware in accordance with hardware manufacturer's documented instructions using hardware manufacturer's furnished fasteners.

D. Install scribe fillers to close gaps between casework and adjacent walls.

E. Secure full height cabinets, shelving units, and similar casework items exceeding 60 inches in height to floor using appropriate angles and anchorages.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/8 inch in 96 inches.

B. Maximum Variation From Level: 1/8 inch in 96 inches.

3.5 ADJUSTING

A. Adjust hardware for smooth operation in accordance with hardware manufacturer's documented instructions.

3.6 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. Clean woodwork, casework, counters, shelves, hardware, fittings, and fixtures.

3.7 PROTECTION

A. Protect installed woodwork from subsequent construction operations.

END OF SECTION

SECTION 066420 - DECORATIVE ARCHITECTURAL PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fabricated architectural panels.

B. Mounting and suspension system.

C. Hardware and attachment accessories.

1.3 RELATED REQUIREMENTS

A. Section 064100 - Architectural Wood Casework: Shop fabricated custom cabinet work.

1.4 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the work with installation of associated and adjacent components.

B. Sequencing: Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data:

1. Provide data on panel specified panel products.

C. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.

1. Minimum Scale of Detail Drawings: 1-1/2 inch to 1 foot.

D. Samples: Submit two samples of each specified panel product, 6 x 6 inch in size illustrating panel features and colors.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this Section with minimum five years of documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect work from moisture and mechanical damage.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer:

1. 3-Form: www.3-form.com.

B. Other Acceptable Manufacturers:

1. Heartland Collection; CIELO System with matching aluminum trim extrusions: https://www.heartlandcollection.us/.
2. Substitutions: See Section 016000 - Product Requirements.

2.2 DECORATIVE ARCHITECTURAL PANELS

A. Panels:

1. Thickness: 1/2 inch.
2. Sizes and Configurations: As indicated on Drawings.
3. Fire Resistance: ASTM E84; flame spread 35 maximum, smoke development index 15 maximum.
4. Surface Burning Characteristics: Provide materials having fire and smoke properties as required by applicable code.
5. Color and Pattern: As indicated on Drawings.

2.3 FASTENINGS

A. Stand-Off Hardware: Satin stainless steel, multi-purpose mounting hardware system; MPB-Series manufacturted by Doug Mockett & Company, Inc.; www.mockett.com.

1. Caps and Stand-Off Barrels: 1/2 inch diameter.
2. Screw Connectors: Sized to suit indicated applications; supplied by hardware manufacturer.

B. Concealed Joint Fasteners: Threaded steel.

2.4 ACCESSORIES

A. Adhesive: Type recommended by panel manufacturer.

B. Aluminum Edge Trim: Extruded shapes; smooth surface finish; for inside corners, outside corners, panel joints, and panel edges. Finish and color to match wall panels.

2.5 FABRICATION

A. Shop fabricate panels for delivery to site to the greatest extent possible.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify adequacy of backing and substrate.

B. Verify mechanical, electrical, and building items affecting work of this Section are placed and ready to receive this work.

3.2 INSTALLATION

A. Set and secure materials and components in place, plumb and level.

B. Carefully scribe work abutting other components, with maximum gaps of 1/32 inch. Do not use additional overlay trim to conceal larger gaps.

3.3 TOLERANCES

A. Maximum Variation from True Position: 1/16 inch.

B. Maximum Offset from True Alignment with Abutting Materials: 1/32 inch.

END OF SECTION

This page intentionally left blank

SECTION 068316 - FIBERGLASS REINFORCED PANELING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fiberglass reinforced plastic panels.

B. Accessories and trim.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

1.4 REFERENCE STANDARDS

A. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

B. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

C. ASTM D5319 - Standard Specification for Glass-Fiber Reinforced Polyester Wall and Ceiling Panels.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ISO 846 - Plastics - Evaluation of the Action of Microorganisms.

F. ISO 2812-1 - Paints and Varnishes -- Determination of Resistance to Liquids -- Part 1: Immersion in Liquids Other than Water.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Samples: Submit two samples 4 by 4 inch in size illustrating material and surface design of panels.

1.6 QUALITY ASSURANCE

A. Basis of Design: Specifications are based on panel types by specified basis of design manufacturer and product(s). Panel types manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements; and provided that deviations in design, weight, and profile are minor, and do not detract substantially from the indicated design intent.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store panels flat, indoors, on a clean, dry surface. Remove packaging and allow panels to acclimate to room temperature for 48 hours prior to installation.

1.8 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 PANEL SYSTEMS

A. Wall Panels:

1. Panel Size: As indicated on Drawings.
2. Panel Thickness: 0.09 inch.
3. Surface Texture: As scheduled.
4. Color: As scheduled.
5. Attachment Method: Adhesive only, with trim and sealant in joints.

2.3 MATERIALS

A. Panels: Fiberglass reinforced plastic (FRP), complying with ASTM D5319.

1. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with ASTM E84.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

3. Impact Strength: Greater than 6 ft lb force per inch, when tested in accordance with ASTM D256.
4. Chemical Cleanability: Excellent chemical resistance to common cleaners and detergents when tested in accordance with ISO 2812-1.
5. Biological Resistance: Rating of 0, when tested in accordance with ISO 846.

B. Trim: Vinyl; color coordinating with panel.

C. Adhesive: Type recommended by panel manufacturer.

D. Sealant: Silicone; color matching panel.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions and substrate flatness before starting work.

B. Verify that substrate conditions are ready to receive the work of this section.

3.2 INSTALLATION - WALLS

A. Install panels in accordance with manufacturer's instructions.

B. Cut and drill panels with carbide tipped saw blades, drill bits, or snips.

C. Apply adhesive to the back side of the panel using trowel as recommended by adhesive manufacturer.

D. Apply panels to wall with seams plumb and pattern aligned with adjoining panels.

E. Install panels with manufacturer's recommended gap for panel field and corner joints.

F. Place trim on panel before fastening edges, as required.

G. Fill channels in trim with sealant before attaching to panel.

H. Install trim with adhesive and screws or nails, as required.

I. Seal gaps at floor, ceiling, and between panels with applicable sealant to prevent moisture intrusion.

J. Remove excess sealant after paneling is installed and prior to curing.

3.3 CLEANING

A. Remove excess sealant materials from finish surfaces and clean as recommended by panel manufacturer.

3.4 PROTECTION

A. Protect installed materials from damage due to subsequent construction operations.

END OF SECTION

SECTION 070553 - FIRE AND SMOKE ASSEMBLY IDENTIFICATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Identification markings for fire and smoke rated partitions, and fire rated walls.

1.3 RELATED REQUIREMENTS

A. Section 099123 - Interior Painting: Paint finish.

1.4 REFERENCE STANDARDS

A. ICC (IBC) - International Building Code.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed product literature for each type of marking, indicating font, foreground and background colors, wording, and overall dimensions.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years of documented experience.

1.7 FIELD CONDITIONS

A. Do not install adhered markings when ambient temperature is lower than recommended by label or sign manufacturer.

B. Do not install painted markings when ambient temperature is lower than recommended by coating manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Fire Wall Signs, Inc.: www.firewallsigns.com.
2. Safety Supply Warehouse, Inc.: www.safetysupplywarehouse.com.
3. SmartSign: www.smartsign.com.
4. Substitutions: See Section 016000 - Product Requirements.

2.2 FIRE AND SMOKE ASSEMBLY IDENTIFICATION

A. Either adhered or applied (painted) identification signage may be used at Contractor's option.

B. Regulatory Requirements: Where there is an accessible concealed floor, floor-ceiling or attic space, fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall required to have protected openings or penetrations, comply with "Marking and Identification" requirements of "Fire-Resistance Ratings and Fire Tests" chapter of ICC (IBC), and, minimally the following:

1. Within accessible concealed spaces, locate identification signage within 15 feet of the end of each wall and at intervals not exceeding 30 feet measured horizontally along the wall or partition.
2. Include lettering not less than 3 inches in height with a minimum 3/8-inch stroke in a contrasting color incorporating the suggested wording, “FIRE AND/OR SMOKE BARRIER—PROTECT ALL OPENINGS,” or other similar wording.

C. Adhered Fire and Smoke Assembly Identification Signs: Printed vinyl sign with factory applied adhesive backing.

D. Applied Fire and Smoke Assembly Identification: Identification markings applied to partition with paint and a code compliant stencil. See Section 099123 for products.

E. Languages: Provide all markings in English.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.2 PREPARATION

A. See Section 099123 for substrate preparation for painted markings.

3.3 INSTALLATION

A. Locate markings as required by the adopted building code and authorities having jurisdiction.

B. Install adhered markings in accordance with manufacturer's instructions.

C. Install applied markings in accordance with Section 099123.

D. Install neatly, with horizontal edges level.

E. Protect from damage until Date of Substantial Completion; repair or replace damaged markings.

END OF SECTION

This page intentionally left blank

SECTION 072100 - THERMAL INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Board insulation{CH#304679} at {CH#304680}.

B. Batt insulation in exterior framed wall construction.

C. Batt insulation for filling perimeter window and door shim spaces and crevices in exterior wall and roof.

D. Continuous rigid insulation.

1.3 RELATED REQUIREMENTS

A. Section 072726 - Fluid-Applied Air Barriers: Separate air barrier materials.

B. Section 072119 - Foamed-In-Place Insulation Insulation specified as part of the total building thermal envelope.

C. Section 075323 - Ethylene-Propylene-Diene-Monomer Roofing (EPDM): Insulation specified as part of roofing system.

D. Section 092900 - Gypsum Board: Acoustic insulation for interior stud cavities.

1.4 DEFINITIONS

A. Mineral Fiber Material Composition: Insulation referred to as mineral fiber block, board, and blanket insulation is composed of fibers from mineral based substances such as rock, slag, or glass and processed from the molten state into fibrous form.

1. Based on type of insulation substance, the material will be referred to as a mineral fiber when having a rock or slag base, and glass fiber with a glass or silica sand base, also considered a mineral.
2. Insulation blankets are flexible units consisting of felted, bonded, or unbonded fibers formed into rolls or flat cut pieces referred to as batts; rolls are simply longer versions of batts.
3. For additional information about mineral fiber and the various classification types, refer to the following reference standards; ASTM C553, ASTM C612, ASTM C665, and ASTM C726.

1.5 REFERENCE STANDARDS

A. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.

B. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.

C. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

D. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

E. ASTM C726 - Standard Specification for Mineral Wool Roof Insulation Board.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

G. ASTM E136 - Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750 Degrees C.

H. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on product characteristics, performance criteria, and product limitations.

C. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.

1.7 QUALITY ASSURANCE

A. Thicknesses specified are for the thermal conductivity (k-value at 75 degrees F) specified for each material. Provide adjusted thicknesses for approved use of substituted materials with different thermal conductivity ratings. Where insulation is specified to have a specific "R" value, furnish manufacturer's standard thickness required to equal or exceed the specified value.

1.8 MOCK-UP

A. Comply with general mock-up requirements specified in Section 014000.

B. Integrated Exterior Mock-up: Provide a mock-up for evaluation of workmanship, including insulation products, insulation fasteners and attachments, and board joint treatments.

1. Coordinate with mock-up requirements specified in other sections.
2. Locate where directed.
3. Mock-up may remain as part of the Work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Do not allow insulation materials to become wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage, and protection during installation.

B. Protect plastic insulation from exposure to direct sunlight.

C. Do not deliver plastic insulation materials to the project site ahead of time of installation. Protect at all times against ignition. Complete the installation and concealment of plastic materials as soon as possible in each area of work.

1.10 FIELD CONDITIONS

A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 PRODUCTS

2.1 APPLICATIONS

A. Continuous Wall Insulation: Extruded polystyrene (XPS) board.

B. Insulation in Framed Construction: Batt insulation with no vapor retarder.

2.2 INSULATION MATERIALS

A. Where units are included in fire rated wall, ceiling, or floor construction, provide insulation units which have been tested and rated as required for the indicated assembly.

2.3 FOAM BOARD INSULATION MATERIALS

A. Extruded Polystyrene (XPS) Board Insulation: Comply with ASTM C578 with either natural skin or cut cell surfaces.

1. Type and Compressive Resistance: Type IV, 25 psi (173 kPa), minimum.
2. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
3. Type and Thermal Resistance, R-value: Type IV, 5.0 (0.88), minimum, per 1 inch thickness at 75 degrees F mean temperature.
4. Complies with fire resistance requirements specified as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
5. Board Thickness: As indicated on Drawings.
6. Board Edges: Square.
7. Water Absorption for Insulation Materials in Ground Contact: Type IV, 0.3 percent by volume, maximum, by total immersion, when tested in accordance with ASTM C272.
8. Acceptable Manufacturers:

a. Dow Chemical Company; STYROFOAM Extruded Polystyrene Insulation (XPS): www.dow.com/#sle.

b. Kingspan Insulation LLC; GreenGuard GG25-LG XPS Insulation Board: www.kingspan.com/#sle.

c. Owens Corning Corporation; FOAMULAR Extruded Polystyrene (XPS) Insulation: www.ocbuildingspec.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

2.4 BATT INSULATION MATERIALS

A. Flexible Glass Fiber Blanket Thermal Insulation: Preformed insulation, complying with ASTM C665; friction fit for filling miscellaneous voids to maintain thermal control layer continuity.

1. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84.
2. Smoke Developed Index: 50 or less, when tested in accordance with ASTM E84.
3. Combustibility: Non-combustible, when tested in accordance with ASTM E136, except for facing, if any.
4. Thermal Resistance: As indicated in Drawings.
5. Facing: Provide the following types:

a. Facing: Unfaced.

6. Acceptable Manufacturers:

a. CertainTeed Corporation: www.certainteed.com/#sle.

b. Johns Manville: www.jm.com/#sle.

c. Owens Corning Corporation: www.ocbuildingspec.com/#sle.

2.5 ACCESSORIES

A. Insulation Fasteners: Appropriate for purpose intendedand approved by insulation manufacturer.

1. Length as required for thickness of insulation material and penetration of structural backing or framing as indicated, with metal or plastic washers.
2. Acceptable Manufacturers:

a. Hilti: www.hilti.com.

b. Trufast: www.trufast.com.

c. McMaster-Carr: www.mcmaster.com.

B. Protection Board for Below Grade Insulation: Cementitious, 1/4 inch thick.

C. Adhesive: Type recommended by insulation manufacturer for indicated applications.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation.

B. Verify substrate surfaces are flat, free of honeycomb, fins, or irregularities.

3.2 INSTALLATION, GENERAL

A. Install insulation to maintain continuity of thermal protection to building elements and spaces.

3.3 BOARD INSTALLATION AT EXTERIOR WALLS

A. Install corrosion resistant impaling pins or other mechanical insulation retention devices, minimum 6 per board or as otherwise recommended by insulation manufacturer, in accordance with insulation manufacturer's written recommendations.

B. Exterior Walls Behind Veneers and Claddings: Install boards tight to substrate without gaps between boards on walls.

1. Install in running bond pattern.
2. Butt edges and ends tightly to adjacent boards and protrusions.

C. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

D. Insulation Behind Masonry Veneer: See Section 042000 - Unit Masonry for veneer anchors.

3.4 BATT INSULATION INSTALLATION

A. Installation - General:

1. Install insulation at locations indicated and in accordance with manufacturer's instructions.
2. Install in exterior micellaneous wall and ceiling cavity spaces without gaps or voids. Do not compress insulation.
3. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.
4. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation.
5. Keep insulation minimum 3 inches from heat emitting devices such as recessed light fixtures, and minimum 2 inches from sidewalls of chimneys and vents.

3.5 PROTECTION

A. Do not permit installed insulation to be damaged prior to its concealment.

END OF SECTION

SECTION 072119 - FOAMED-IN-PLACE INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Foamed-in-place insulation.

1.3 REFERENCE STANDARDS

A. ASTM D1622/D1622M - Standard Test Method for Apparent Density of Rigid Cellular Plastics.

B. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

E. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

F. FM 4880 - Examination Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials.

G. NFPA 275 - Standard Method of Fire Tests for the Evaluation of Thermal Barriers.

H. NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

I. UL 1040 - Standard for Safety Fire Test of Insulated Wall Construction.

J. UL 1715 - Standard for Safety Fire Test of Interior Finish Material.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this section.

1. Agenda:

a. Materials approved for use and their compatibility.

b. Coordination with substrate preparation.

c. Coordination with installation of adjacent and covering materials.

d. Sequence of construction.

e. Field testing.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide product description, insulation properties, and preparation requirements.

C. Certificates: Certify that products of this Section meet or exceed specified requirements.

D. Manufacturer's Installation Instructions: Indicate special procedures,substrate preparation requirements, and perimeter conditions requiring special attention.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

B. Applicator Qualifications: Company specializing in performing work of the type specified, and approved by manufacturer.

1.7 FIELD CONDITIONS

A. Do not apply foam when temperature is below that specified by the manufacturer for ambient air and substrate.

B. Do not apply foam when temperature is within 5 degrees F of dew point.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers - Closed Cell Foam:

1. Carlisle Spray Foam Insulation; SealTite Pro Closed Cell: www.carlislesfi.com/#sle.
2. Henry Company; Permax 2.0: www.henry.com/#sle.
3. Huntsman Building Solutions; HeatLok HFO: www.huntsmanbuildingsolutions.com/#sle.
4. Johns Manville; JM Corbond III Closed Cell Spray Polyurethane Foam: www.jm.com/#sle.
5. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Provide continuity of thermal barrier and air barrier seal at building enclosure elements in conjunction with air seal materials; see Division 07 section for Air Barriers and Insulated Metal Panels.

2.3 MATERIALS

A. Foamed-In-Place Insulation: Medium-density, rigid or semi-rigid, closed cell polyurethane foam; foamed on-site, using blowing agent of water or non-ozone-depleting gas.

1. Applications: As indicated on drawings.
2. Thickness: As indicated on drawings.
3. Regulatory Requirements: Comply with applicable code for flame and smoke, concealment, and fire protection requirements.

a. Thermal Barrier: Provide 15-minute thermal barrier of 1/2 inch gypsum board or equivalent material complying with NFPA 275 test method, or foamed-in-place insulation that complies with FM 4880, NFPA 286, UL 1040, or UL 1715.

4. Density In Place: Minimum 2.0 lb/cu ft.; ASTM D1622/D1622M.
5. Thermal Resistance: R-value of 6.4, minimum, per 1 inch thickness at 75 degrees F mean temperature when tested in accordance with ASTM C518.
6. Water Vapor Permeance: 1.1 perms, nominal, per 1 inch thickness, when tested at intended thickness in accordance with ASTM E96/E96M.
7. Water Absorption: Less than 2 percent by volume, maximum, when tested in accordance with ASTM D2842.
8. Air Permeance: 0.004 cfm per square foot, maximum, when tested at intended thickness in accordance with ASTM E2178 at 1.57 psf.
9. Closed Cell Content: At least 90 percent.
10. Surface Burning Characteristics: Flame spread/smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.

2.4 ACCESSORIES

A. Primer: As required by insulation manufacturer.

B. Transition Membrane: Self-adhering type, with 2 mil thick type 304 stainless steel sheet with 8 mil butyl adhesive and a removable release liner

1. Application: Where indicated on drawings or where otherwise required as a transition membrane between spray foam and adjacent air-sealing materials or systems.
2. Products:

a. Momentive Performance Materials, Inc/GE Construction Sealants; GE Elemax SS Flashing: www.siliconeforbuilding.com.

b. VaproShield; Vapro-SS Flashing: www.vaproshield.com.

c. York Manufacturing, Inc.; York 304 SA: www.yorkmfg.com.

d. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify work within construction spaces or crevices is complete before insulation application.

B. Verify that surfaces are clean, dry, and free of matter that may inhibit adhesion.

3.2 PREPARATION

A. Mask and protect adjacent surfaces from over spray or dusting.

B. Apply primer in accordance with manufacturer's instructions.

3.3 APPLICATION

A. Apply insulation in accordance with manufacturer's instructions.

B. Apply insulation by spray method, to a uniform monolithic density without voids and shadowing. Screed away excess foam to produce smooth and uniformly textured exposed surfaces.

C. Apply to a uniform minimum thickness.

D. Comply with manufacturer's written requirements for recommended thickness of each pass and cooling between passes.

E. Apply protective coating monolithically, without voids to fully cover foam insulation.

F. Patch damaged areas.

G. Where applied to voids and gaps assure space for expansion to avoid pressure on adjacent materials that may bind operable parts or void applicable warranties of opening components.

H. Trim excess away for applied trim or remove as required for continuous sealant bead.

3.4 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Field inspections and tests will be performed by an independent testing agency.

C. Inspection will include verification of insulation thickness and density.

3.5 PROTECTION

A. Do not permit subsequent construction work to disturb applied insulation.

END OF SECTION

This page intentionally left blank

SECTION 072726 - FLUID-APPLIED AIR BARRIERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fluid-applied air barriers.

1.3 RELATED REQUIREMENTS

A. Section 061600 - Sheathing: Substrates requiring prep for air barrier installation.

B. Section 072119 - Foamed-In-Place Insulation.

C. Section 074213.19 - Insulated Metal Wall Panels.

1.4 DEFINITIONS

A. Air Barrier: Airtight barrier made of material that is virtually air impermeable with water vapor permeance as specified, having sealed seams and sealed joints to adjacent surfaces.

1.5 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.

B. ASTM D751 - Standard Test Methods for Coated Fabrics.

C. ASTM D903 - Standard Test Method for Peel or Stripping Strength of Adhesive Bonds.

D. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

G. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

H. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation with adjacent flashings and weather barriers for compatibility and continuity of those systems.
2. Coordinate installation of flashings at openings with Sections that specify window, door, and other opening installations.
3. Do not install air barrier material before the roof assembly has been sufficiently installed to prevent a buildup of water in the interior of the building.

B. Preinstallation Meeting: Conduct a preinstallation meeting at least two weeks prior to the start of the work of this Section.

1. Agenda shall include quality standards set by approved mock-up, sequence of construction, coordination with substrate preparation, air barrier materials approved for use, compatibility of materials, coordination with installation of adjacent and covering materials, and details of construction.
2. Attendance is required by Contractor, Architect, Installer, and representatives of related trades including covering materials, substrate materials and adjacent materials.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on material characteristics, performance criteria, limitations, and manufacturer's standard flashing and termination details.

C. Shop Drawings of Mock-Up: Provide drawings of proposed mock-up showing plans, elevations, large scale details, and air barrier transitions and terminations.

D. Shop Drawings: Provide drawings of project-specific flashing, termination, and special joint conditions based on manufacturer's standard details; minimum scale 1-1/2 inch equals 1 foot.

1. Show extent of air barrier assemblies and details of all typical conditions, intersections with other envelope assemblies and materials, membrane counter-flashings, and details showing how gaps in the construction will be bridged, how inside and outside corners are negotiated, how materials that cover the materials are secured with air-tight condition maintained, and how miscellaneous penetrations such as conduits, pipes, electric boxes and similar items are sealed.

E. Compatibility: Submit letter from primary material manufacturer stating that materials proposed for use are permanently chemically compatible and adhesively compatible with adjacent materials proposed for use.

F. Manufacturer's Installation Instructions: Indicate preparation, installation methods, and storage and handling criteria.

G. Field Test Results: Submit test results for tests described in the Field Quality Control article, including retesting if intitial results are not satisfactory.

H. Manufacturer's qualification statement.

I. Installer's qualification statement.

J. Testing agency qualification statement.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

B. Manufacturer Qualification: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture, and use secondary materials approved in writing by primary material manufacturer.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

D. System Compatibility: Confirm that selected weather barrier system components are compatible with each other as as system and are also compatible with substrate surfaces, opening materials, other adjacent flashings and weather barrier materials, and joint sealants.

E. Basis of Design: Specifications are based on primary systems by specified basis of design manufacturer. Primary systems manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements; and provided that deviations in design, weight, and performance are minor, and do not detract substantially from the indicated design intent.

1.9 MOCK-UPS

A. Integrated Exterior Mock-up: Construct mock-up representative of primary air barrier assemblies, including backup wall and typical openings, flashings, and penetrations. Use materials and accessories proposed for use in the exterior wall assembly.

1. Mock-ups shall be suitable for field quality control testing.
2. Locate where directed.
3. Mock-up may remain as part of work.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Handle materials in accordance with material manufacturer’s recommendations.

1.11 FIELD CONDITIONS

A. Maintain temperature and humidity recommended by materials manufacturers before, during, and after installation.

B. Do not install air barrier in snow, rain, fog, or mist. Do not install air barrier when the temperature of substrate surfaces and surrounding air temperatures are below those recommended by the manufacturer.

1.12 WARRANTY

A. Material Warranty: Provide material manufacturer's standard product warranty, for a minimum five years from date of Substantial Completion.

B. Installation Warranty: Provide a two (2) year installation warranty from date of Substantial Completion, including all accessories and materials of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of attachment, loss of adhesion and failure to cure properly.

PART 2 PRODUCTS

2.1 AIR BARRIER MATERIALS (AIR IMPERMEABLE AND WATER VAPOR IMPERMEABLE)

A. Fluid Applied Air and Vapor Barrier:

1. Dry Film Thickness (DFT): As recommended by manufacturer for each substrate surface profile type.

   a. Smooth Surfaces: 36 mils.

   b. Rough Surfaces: 54 mils.

2. Air Permeance: 0.0013 cfm/sq ft, maximum, when tested in accordance with ASTM E2178.

3. Water Vapor Permeance: 0.03 perm, maximum, when tested in accordance with ASTM E96/E96M using Procedure A - Desiccant Method, at 73.4 degrees F.

4. Water Penetration Resistance Around Nails: Pass, when tested in accordance with ASTM D1970/D1970M.

5. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to 180 days of weather exposure.

6. Elongation: 250 percent, minimum, when tested in accordance with ASTM D412.

7. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A when tested in accordance with ASTM E84.

8. Complies with NFPA 285 requirements for wall assembly.

9. Seam and Perimeter Tape: As recommended by sheet manufacturer.

10. Acceptable Products:

    a. Basis of Design: Henry Company; Air-Bloc 16MR: www.henry.com.

11. Acceptable Manufacturers:

    a. Carlisle Coatings and Waterproofing, Inc: www.carlisleccw.com/#sle.

    b. GCP Applied Technologies: www.gcpat.com/#sle.

c. Polyglass: www.polyglass.com.

d. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.

e. W.R. Meadows, Inc.: www.wrmeadows.com.

f. Substitutions: See Section 016000 - Product Requirements.

2.2 ACCESSORIES

A. Sealants, Tapes, and Accessories for Sealing Air Barrier and Adjacent Substrates: As indicated or in compliance with air barrier manufacturer's installation instructions, and as required for a complete and air-tight installation.

1. All accessory materials shall have air and water vapor permeance performance matching that of the primary air barrier system.

B. Sealant for Cracks and Joints In Substrates: Resilient elastomeric joint sealant compatible with substrate and air barrier materials.

1. Application: Apply at 30 to 40 mil, 0.030 to 0.040 inch, nominal thickness.
2. Elongation: 400 percent, minimum, measured in accordance with ASTM D412.
3. Peel Adhesion: 28 lb/inch, minimum, when tested in accordance with ASTM D903.
4. Hydrostatic Head Pressure: Resists head pressure of 57 feet, maximum, when tested in accordance with ASTM D751.
5. Comply with NFPA 285 requirements for wall assembly.

C. Primer: As recommended by primary air barrier membrane manufacturer.

D. Flexible Flashing: Self-adhesive sheet flashing complying with ASTM D1970/D1970M, except slip resistance requirement waived if not installed on roof.

1. Thickness: 40 mil, 0.040 inch, nominal; exception from ASTM D1970/D1970M.
2. Width: 4 inches, minimum.
3. Water Vapor Permeance: Matching that of primary air barrier, when tested in accordance with ASTM E96/E96M Procedure A (Desiccant Method) at 73.4 degrees F.

E. Preformed Transition Membrane: Semirigid silicone or polyester composition, tapered edges, ribbed back, tear resistant.

1. Products:

a. Dow; DOWSIL Silicone Transition Strip and System: www.dow.com/#sle.

b. Henry Company; Moistop Corner Shield: www.henry.com/#sle.

c. Momentive Performance Materials, Inc/GE Silicones; RF100 Reinforcing Fabric: www.siliconeforbuilding.com/#sle.

d. Tremco Commercial Sealants & Waterproofing; ProGlaze ETA System 1: www.tremcosealants.com/#sle.

e. Substitutions: See Section 016000 - Product Requirements.

F. Stainless Steel Flashing: Flexible flashing with 2 mil, 0.002 inch thick Type 304 stainless steel sheet, 8 mil, 0.008 inch of butyl adhesive and siliconized release liner.

1. Width: 6 inches wide, minimum.
2. Overlap joints at least 2 inches.
3. Products:

a. Hohmann & Barnard, Inc.; Mighty-Flash SA Stainless Flashing: www.h-b.com.

b. Momentive Performance Materials, Inc/GE Silicones; GE Elemax SS Flashing: www.siliconeforbuilding.com/#sle.

c. STS Coatings, Inc; Wall Guardian Self Adhering Stainless Steel Flashing: www.stscoatings.com/#sle.

d. VaproShield, LLC; VAPRO-SS FLASHING: www.vaproshield.com/#sle.

e. York Manufacturing, Inc; York 304 SA: www.yorkmfg.com/#sle.

f. Substitutions: See Section 016000 - Product Requirements.

G. Liquid Flashing: One part, fast curing, nonsag, elastomeric, gun grade, trowelable.

H. Thinners and Cleaners: As recommended by material manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces and conditions are ready for work of this section.

B. Ensure that the following conditions are met:

1. Surfaces are sound, dry, even, and free of excess mortar or other contaminants.
2. Inspect substrates to be smooth without large voids or sharp protrusions.

C. Verify substrate is visibly dry and free of moisture.

D. Verify sealants are compatible with membrane proposed for use.

E. Where existing conditions are responsibility of another installer, notify Architect of unsatisfactory conditions.

F. Do not proceed with this work until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove projections, protruding fasteners, and loose or foreign matter that might interfere with proper installation.

B. Clean and prime substrate surfaces to receive adhesives, sealants, and air barrier materials in accordance with manufacturer's installation instructions.

C. Protection from spray-applied materials:

1. Mask and cover adjacent areas to protect from over-spray.

2. Ensure any required foam stop or back up materials are in place to prevent over-spray and achieve complete seal.

3.3 INSTALLATION

A. Install materials in accordance with manufacturer's installation instructions.

B. Air Barriers: Install continuous airtight barrier over surfaces indicated, with sealed seams and with sealed joints to adjacent surfaces.

C. Apply sealants and adhesives within recommended temperature range in accordance with manufacturer's installation instructions.

D. Refer to air barrier manufacturer's detail drawings for installation procedures including:

1. Changes in substrate.

2. Control joints.

3. Crack treatments.

4. Inside and outside corners.

5. Penetrations.

6. Rough openings.

7. Sheathing joints.

3.4 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Do not cover installed air barriers until required inspections have been completed.

C. Obtain approval of installation procedures from air barrier manufacturer based on a mock-up installed in place, prior to proceeding with remainder of installation.

D. Take digital photographs of each portion of installation prior to covering up air barriers.

E. Provide field testing of installed air barrier system by independent laboratory during the construction process. Perform the following:

1. Air and Water Infiltration - Test Chamber: Test in accordance with requirements specified in glazing system sections for air and water leakage. Deficiencies include air leakage beyond values specified, uncontrolled water leakage, unsatisfactory workmanship.

a. Coordinate with Section 084413 for installation of glazing system as part of tested assembly.

b. Mock-up Testing: Perform test of mock-up prior to installation of insulation, cladding and trim but after installation of all fasteners, brackets, supports for cladding and trim, and other penetrating elements.

c. Building Testing: Perform tests on building prior to installation of cladding and trim but after installation of all fasteners for cladding and trim and after installation of other penetrating elements. Perform testing at 10%, 50%, and 70% completion of air barrier installation.

2. Membrane Adhesion: Test in accordance with ABAA T0002-2019 using a type II pull tester except that the membrane shall be cut through to separate the material attached to the disc from the surrounding material. Perform test after curing period recommended by the material manufacturer. Record mode of failure and area where the material failed. When the air barrier material manufacturer has established a minimum adhesion level for the product on the particular substrate, the inspection report shall indicate whether this requirement has been met. Where the material manufacturer has not declared a minimum adhesion value for their product/substrate combination, the value shall simply be recorded.

a. Mock-up Testing: Perform test of mock-up at three locations.

b. Building Testing: Perform tests on building at three locations. Perform testing at 10%, 50%, and 70% completion of air barrier installation.

3. Air Barrier Assembly Testing - Bubble Gun: Test in accordance with ASTM E1186.

a. Mock-up Testing: Perform three tests on sheathing seams and at each type of bracket, clip, and masonry tie.

b. Building Testing: Perform three tests on sheathing seams and at each type of bracket, clip, and masonry tie. Perform testing at 10%, 50%, and 70% completion of air barrier installation.

F. If the testing and/or inspections reveal any defects or deficiencies, promptly remove and replace defective work, and retest until satisfactory results are obtained at no additional cost to the Owner.

G. Repair air barrier and other materials damaged from field testing.

3.5 PROTECTION

A. Protect air barrier materials from damage during installation and the remainder of the construction period, according to material manufacturer's written instructions.

B. Do not leave materials exposed to weather longer than recommended by manufacturer.

END OF SECTION

SECTION 074213.19 - INSULATED METAL WALL PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Factory-assembled metal panel system for walls, with trim, related flashings and accessory components.

1.3 RELATED REQUIREMENTS

A. Section 072100 - Thermal Insulation.

B. Section 072119 - Foamed-In-Place Insulation.

C. Section 072726 - Fluid-Applied Air Barriers: Air barrier materials.

1.4 REFERENCE STANDARDS

A. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document).

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

D. FM 4880 - Examination Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with placement of anchors.
2. Coordinate installation of air barrier seals to adjacent system.

B. Preinstallation Meeting: Convene one week before starting work of this Section.

1. Require attendance by the installer and relevant sub-contractors.
2. Review scheduling of wall system manufacturer's representative site inspection visits.

3. Review in detail truck transportation, parking, vertical transportation, schedule, personnel, installation of adjacent materials and substrate.

4. Review procedures for protection of work and other construction.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer documentation on tested structural, thermal, and fire resistance capabilities of assembled panel.

C. Shop Drawings: Indicate dimensions, panel profile and layout, spans, joints, construction details, methods of anchorage, and method and sequence of installation.

D. Samples: Submit two samples of panel, 12 by 12 inch in size illustrating finish color, sheen, and texture.

E. Design and Performance Data: Indicate panel profile and dimensions.

F. Manufacturer's qualification statement.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing work of this Section with minimum five years experience.

C. Basis of Design: Specifications are based on wall panel types by specified basis of design manufacturer. Wall panel types manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements, and provided that deviations in design, composition, and profile are minor, and do not detract substantially from the indicated design intent.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

B. Store pre-finished material off ground with weather protection to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials that could cause discoloration or staining.

1.9 FIELD CONDITIONS

A. Do not install panels when air temperature or relative humidity are outside manufacturer's limits.

1.10 WARRANTY

A. Correct defective materials within a twenty year period after Date of Substantial Completion for degradation of panel finish, including color fading caused by exposure to weather.

B. Correct defective work within a two year period after Date of Substantial Completion, including defects in water tightness and integrity of seals for insulated metal wall panels.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer:

1. Kingspan; QuadCore Optimo: www.kingspan.com/us/en/.

B. Other Acceptable Manufacturers:

1. Centria: www.centria.com.
2. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE / DESIGN CRITERIA

A. Metal Panel System: Factory-assembled metal panel system, with trim, related flashings and accessory components.

1. Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.
2. Accommodate tolerances of building structural framing.
3. Provide continuity of thermal barrier and air barrier seal at building enclosure elements in conjunction with air seal materials; see Division 07 section for Air Barriers and Foamed-in-Place Insulation.

B. Performance Requirements:

1. Thermal Performance: Provide thermal resistance through entire system; R-value as indicated on drawings.
2. Structural Performance: Design and size to withstand all dead loads and wind loads caused by positive and negative wind pressure acting normal to plane of panel.

a. Verify structural performance in accordance with ASTM E330/E330M, using test pressure 1.5 times design wind pressure, with 10 seconds duration of maximum load.

b. Design Wind Loads: Calculated in accordance with applicable code and as required by ASCE 7 and Structural Drawings.

c. Maximum Allowable Deflection of Panel: 1/180 of span.

3. Fire Resistance: Class 1 fire rated, without height limitation, when tested in accordance with FM 4880.

4. Water Penetration, Static Pressure: No uncontrolled water penetration when tested in accordance with ASTM E331 at minimum 15 psf pressure differential for a two (2) hour duration.
5. Water Penetration, Dynamic Pressure: No uncontrolled water penetration when tested in accordance with AAMA 501.1 at a minimum static differential pressure of 12 lb. /sq. ft.
6. Movement: Accommodate the movement caused by the following without damage to system, components, or deterioration of seals:
    a. Normal movement between system components.
    b. Seasonal temperature cycling.
    c. Deflection of structural support framing,

2.3 COMPONENTS

A. Panels: Exterior and interior metal sheet skin, factory-assembled, with foamed in place insulation; exterior and interior sheet interlocking at edges, utilizing no glues or adhesives, with factory sealed tongue-and-groove and pressure-equalized rainscreen-designed joinery, attached to supports using concealed fasteners. Laminated panels are unacceptable.
    1. Panel Width: 30 inch.
    2. Profile: As indicated; horizontal panels.
    3. Panel Thickness: As indicated on drawings.
    4. Exterior Sheet: Pre-finished galvanized steel, 24 gage, 0.0276 inch minimum base metal thickness.
        a. Texture: Non-embossed, smooth.
    5. Interior Sheet: Galvanized steel, pre-finished, 26 gage, 0.0217 inch minimum base metal thickness.
        a. Texture: Non-embossed.
    6. Panel Edge Profile: Tongue and groove, for flush seam.
    7. Panel Joint Reveal: 1/8 inch.
    8. Panel Lengths: As detailed.
    9. Exterior Finish: Polyvinylidene fluoride (PVDF) coating; two-coat 1.0 mil,
        a. Color: As selected by Architect from manufacturer's full range.
    10. Interior Finish: Silicone polyester coating; manufacturer's standard color.

B. Trim, Closure Pieces, Flashings, and Infills: Same material, thickness and finish as exterior sheets; factory-fabricated to required profiles; fabricated in longest practicable lengths.

2.4 MATERIALS

A. Precoated Galvanized Steel Sheet: ASTM A653/A653M, Commercial Steel (CS) or Forming Steel (FS), with G90/Z275 coating; continuous-coil-coated with epoxy, acrylic, or polyurethane primer coat, polyvinyl fluoride (PVF) top coat, and polyester washcoat for panel back.

B. Foamed-in-Place Insulation: Polyisocyanurate type.

1. Density: 2.2 lb/cu ft, minimum, when tested in accordance with ASTM D1622/D1622M.

2.5 SECONDARY METAL FRAMING

A. Miscellaneous Framing Components, General: Cold-formed metallic-coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.

B. Sill Channels: 16 gauge minimum.

C. Hat Channels: 16 gauge minimum, 7/8 inch or as otherwise shown in Drawings.

2.6 ACCESSORIES

A. General: Provide complete assembly incorporating panels, trim, sills, inside and outside corners, closures, and miscellaneous flashings. Provide manufacturer's factory-formed clips, shims, flashings, gaskets, tapes, closure strips, and caps for a complete installation. Fabricate accessories in accordance with SMACNA Manual.

B. Formed Flashing and Trim: Match material, thickness, and color of metal wall panel face sheets.

C. Extrusion Trim: Provide manufacturer-provided extruded trim for the following locations and as indicated on Drawings:

1. Base trim.
2. Coping.
3. Panel installation perimeter.
4. Opening perimeters.

D. Concealed Sealants: Non-curing butyl sealant or tape sealant.

E. Exposed Sealants: Type recommended by metal wall panel system manufacturer for application, meeting requirements of Division 07 Section "Joint Sealants."

F. Flashing Tape: 4-inch wide self-adhering butyl flashing tape.

G. Panel Attachment Clips: Concealed G-90 galvanized steel clip configured to prevent overdriving of fastener and crushing of foam core, with panel fasteners engaging both face and liner elements and mechanically attaching to panel supports. Clip configured also to be utilized without removing significant portions of the foam at each clip location.

H. Fasteners: Self-tapping screws, bolts, nuts, and other acceptable fasteners recommended by panel manufacturer. Where exposed fasteners cannot be avoided, supply corrosion-resistant fasteners with heads matching color of metal wall panels by means factory-applied coating.

I. Field Touch-up Paint: As recommended by panel manufacturer.

J. Bituminous Paint: Asphalt base.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that structural framing is ready to receive panel system.

B. Inspect for erection tolerances and other conditions that would adversely affect installation of metal wall panels.

C. Openings: Verify that windows, doors, louvers and other penetrations match layout on shop drawings.

D. Correct out of tolerance work and other deficient conditions prior to proceeding with panel installation.

3.2 PREPARATION

A. Protect surrounding areas and adjacent surfaces from damage during execution of this work.

B. Secondary Metal Framing: Install secondary metal framing components as indicated. Install secondary metal framing and other metal panel supports per ASTM C 754 and metal wall panel manufacturer's recommendations.

3.3 INSTALLATION

A. Install panel system on walls in accordance with manufacturer's instructions and approved shop drawings.

B. Protect panel surfaces in contact with cementitious materials and dissimilar metals with bituminous paint. Allow to dry prior to installation.

C. Permanently fasten panel system to structural supports; aligned, level, and plumb, within specified tolerances.

D. Locate panel joints over supports.

E. Provide for thermal and structural movement.

F. Use concealed fasteners unless otherwise approved by Architect.

G. Attach panels to metal framing using recommended clips, screws, fasteners, sealants, and adhesives indicated on approved shop drawings.

1. Fasteners for Steel Wall Panels: Stainless-steel for exterior locations and locations exposed to moisture; carbon steel for interior use only.
2. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as approved by manufacturer.
3. Fasten metal wall panels to supports with concealed clips at each joint at location, spacing, and with fasteners recommended by manufacturer. Install clips to supports with self-tapping fasteners.
4. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

H. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal wall panel assemblies.

3.4 ACCESSORY INSTALLATION

A. General: Install metal wall panel accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install related flashings and sheet metal trim per requirements of Division 07 Section "Sheet Metal Flashing and Trim."
2. Install components required for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
3. Comply with performance requirements and manufacturer's written installation instructions.
4. Provide concealed fasteners except where noted on approved shop drawings.
5. Set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

3.5 FIELD QUALITY CONTROL

A. The panel installer shall water test panel areas for each crew at least once during installation schedule and once at the conclusion of the installation.

B. Progress or check tests can be performed by the installer following test procedures noted in AAMA 501.2. No independent test agency need to be employed in this test phase. Results of this test phase is to be recorded and reported to the panel manufacturer.

3.6 TOLERANCES

A. Maximum Offset From True Alignment Between Adjacent Members Butting or In Line: 1/16 inch.

B. Maximum Variation from Plane or Location Indicated on Drawings: 1/4 inch.

3.7 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. Remove site cuttings from finish surfaces.

C. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

D. Upon completion of installation, thoroughly clean prefinished aluminum surfaces in accordance with AAMA 609 & 610.

3.8 PROTECTION

A. Replace damaged panels and accessories that cannot be repaired by finish touch-up or minor repair.

B. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 074293 - METAL SOFFIT PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Manufactured metal panels with related flashings and accessory components.

B. Subgirt framing assembly.

1.3 RELATED REQUIREMENTS

A. Section 054000 - Cold-Formed Metal Framing: Wall panel substrate.

B. Section 079200 - Joint Sealants: Sealing joints between metal wall panel system and adjacent construction.

1.4 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate placement of wall panel system anchorsand back-up support framing.

B. Preinstallation Meeting: Convene one week before starting work of this Section.

1. Require attendance by the installer and relevant sub-contractors.
2. Review storage and handling procedures.
3. Review procedures for protection of work and other construction.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data - Soffit System: Manufacturer's data sheets on each product to be used, including:

1. Physical characteristics of components shown on shop drawings.
2. Storage and handling requirements and recommendations.
3. Installation instructions and recommendations.

C. Shop Drawings: Show layout and elevations, dimensions and thickness of panels, connections, details and location of joints, sealants and gaskets, method of anchorage, number of anchors, supports, reinforcement, trim, flashings, and accessories.

1. Differentiate between shop and field fabrication.
2. Indicate substrates and adjacent work with which the wall system must be coordinated.
3. Include large-scale details of anchorages and connecting elements.
4. Include large-scale details or schematic, exploded or isometric diagrams to fully explain flashing at a scale of not less than 1-1/2 inches per 12 inches.
5. Include design engineer's stamp or seal on shop drawings for attachments and anchors.

D. Selection Samples: For each color specified, submit at least 5 color chips representing Architect's designated color range.

E. Verification Samples: Submit two samples of wall panel, 12 inch x 12 inch in size illustrating finish color, sheen, and texture.

F. Source Quality Control Submittals.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

1.7 QUALITY ASSURANCE

A. Design Engineer's Qualifications: Design structural supports and anchorages under direct supervision of a Structural Engineer experienced in design of this type of Work and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum five years of documented experience.

C. Installer Qualifications: Company specializing in installing the products specified in this Section with minimum three years of documented experience.

D. Basis of Design: Specifications are based on metal panel types by specified basis of design manufacturer. Wall panel types manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements, and provided that deviations in design, composition, and profile are minor, and do not detract substantially from the indicated design intent.

1.8 MOCK-UPS

1.9 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

C. Store prefinished material off the ground and protected from weather; prevent twisting, bending, or abrasion; provide ventilation; slope metal sheets to ensure proper drainage.

D. Prevent contact with materials that may cause discoloration or staining of products.

1.10 FIELD CONDITIONS

A. Do not install wall panels when air temperature or relative humidity are outside manufacturer's limits.

1.11 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Special Manufacturer’s Warranty: On manufacturer’s standard form, in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials and workmanship within two years from date of Substantial Completion.

C. Finish Warranty: Provide 20-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Morin Corporation: www.morincorp.com.

a. Formed Metal Soffit Panel System: Primo Soffit PS-12-2.

b. Flat Seam Concealed Fastener Metal Wall Panel System: Morin Concealed Fastener.

B. Acceptable Manufacturers:

1. ATAS International, Inc.: www.atas.com/#sle.
2. Berridge Manufacturing Company: www.berridge.com/#sle.
3. Englert, Inc: www.englertinc.com/#sle.

4. McElroy Metal: www.mcelroymetal.com/#sle.
5. Petersen Aluminum Corporation: www.pac-clad.com/#sle.
6. Centria: www.centria.com.
7. Substitutions: See Section 016000 - Product Requirements.

2.2 METAL SOFFIT PANEL SYSTEM

A. Soffit Panel System: Factory fabricated prefinished metal panel system, site assembled.

1. Design and size components to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of wall.
2. Design Pressure: In accordance with ASCE 7 and loads indicated on Structural Drawings.
3. Maximum Allowable Deflection of Panel: L/180 for length(L) of span.
4. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; and deflection of structural support framing.
5. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.
6. Fabrication: Formed true to shape, accurate in size, square, and free from distortion or defects; pieces of longest practical lengths.
7. Corners: Factory-fabricated in one continuous piece with minimum 2-inch returns.

B. Soffit Panels:

1. Profile: Style as indicated.
2. Material: Precoated steel sheet, 24 gauge minimum thickness.
3. Color: As selected by Architect from manufacturer's premium wood-look line.

C. Subgirt Framing Assembly: Profiles and configuration as required by system manufacturer to attach panel system to building.

1. 16 gauge, 0.0598 inch thick formed non-precoated steel sheet.

D. Internal and External Corners: Same material, thickness, and finish as exterior sheets; profile to suit system; shop cut and factory mitered to required angles. Mitered internal corners to be back braced with precoated sheet stock to maintain continuity of profile.

E. Expansion Joints: Same material, thickness and finish as exterior sheets; ___ gauge, ___ inch thick; manufacturer's standard brake formed type, of profile to suit system.

F. Trim, Closure Pieces, and Flashings: Same material and finish as exterior sheets; brake formed to required profiles.

1. See Section 076200.

2.3 MATERIALS

A. Select materials with surface flatness, smoothness, and lack of surface blemishes where exposed to view in finished system.

2.4 FINISHES

A. Fluoropolymer Coil Coating System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent PVDF resin, and at least 80 percent of coil coated metal surfaces having minimum total dry film thickness (DFT) of 0.9 mil, 0.0009 inch.

1. Panel Backside Finish: Where exposed to weathering (screenwall application), finish panel backside to match exposed surface finish.

2. Products:

a. Arkema, Inc; Kynar 500: www.arkema.com/#sle.

b. PPG; Duranar: www.ppgmetalcoatings.com/#sle.

c. Sherwin-Williams Company; Fluropon: www.coil.sherwin.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

2.5 ACCESSORIES

A. Concealed Sealants: Non-curing butyl sealant or tape sealant, see Section 079200

B. Exposed Sealant: Elastomeric; silicone, polyurethane, or silyl-terminated polyether/polyurethane.

C. Fasteners: Manufacturer's standard type to suit application; stainless steel.

1. Metal-to-Metal Fasteners: Self-drilling, self-tapping screws.

D. Field Touch-up Paint: As recommended by panel manufacturer.

E. Bituminous Paint: Asphalt base.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that building framing members are ready to receive panels.

B. Verify that air barrier has been installed over substrate completely and correctly.

C. Examine rough-in for components and systems penetrating wall panels to coordinate actual penetration locations relative to wall panel joint locations prior to installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install subgirts perpendicular to panel length and in a direction to promote drainage, securely fastened to substrates and shimmed and leveled to uniform plane. Space at 24 inches on center, maximum.

B. Remove protective strippable film prior to installation of panels.

C. Protect surrounding areas and adjacent surfaces from damage during execution of this work.

3.3 INSTALLATION

A. Install panels in accordance with manufacturer's instructions.

B. Fasten panels to structural supports; aligned, level, and plumb.

C. Locate joints over supports.

D. Provide expansion joints where indicated.

E. Use concealed fasteners unless otherwise indicated by Architect.

F. Comply with standards set forth in the Architectural Sheet Metal Manual published by SMACNA.

G. Install panels in such a manner that horizontal lines are true and level and vertical lines are plumb.

H. Install starter and edge trim before installing wall panels.

I. Attach panels using manufacturer’s standard clips and fasteners, spaced in accordance with approved shop drawings.

J. Install accessories with positive anchorage to building, weather tight mounting, provisions for thermal expansion, and coordinate installation with flashings and other components.

1. Install components required for a complete wall panel assembly including trim, flashings and other accessory items.

3.4 TOLERANCES

A. Offset From True Alignment Between Adjacent Members Abutting or In Line: 1/16 inch, maximum.

B. Maximum Variation from Plane or Location Indicated on Drawings: 1/8 inch.

3.5 CLEANING

A. Remove site cuttings from finish surfaces.

B. Remove protective material from wall panel surfaces.

C. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

3.6 PROTECTION

A. Protect metal wall panels until completion of project.

B. Touch-up, repair, or replace damaged wall panels or accessories before Date of Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 075323 - ETHYLENE-PROPYLENE-DIENE-MONOMER ROOFING (EPDM)

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. EPDM membrane roofing system and accessories.

B. Cover board.

C. Insulation.

D. Vapor retarder.

E. Deck sheathing.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Wood nailers associated with roofing and roof insulation.

B. Section 072726 - Fluid-Applied Air Barriers: Continuity of air barrier at roof and wall transitions.

1.4 DEFINITIONS

A. Roofing Terminology: Refer to ASTM D1079 for definition of terms related to roofing work not otherwise defined in section.

1.5 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures.

B. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

C. ASTM D1079 - Standard Terminology Relating to Roofing and Waterproofing.

D. ASTM D1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics.

E. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

F. ASTM D4637/D4637M - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane.

G. ASTM D4811/D4811M - Standard Specification for Nonvulcanized (Uncured) Rubber Sheet Used as Roof Flashing.

H. ASTM D5147/D5147M - Standard Test Methods for Sampling and Testing Modified Bituminous Sheet Material.

I. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

J. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials.

K. FM 4470 - Examination Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for Use in Class 1 and Noncombustible Roof Deck Construction.

L. NRCA (RM) - The NRCA Roofing Manual.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with installation of associated counter flashings and roof drainage components installed under other sections.
2. Coordinate installation with adjacent flashings and air barrier systems for compatibility and continuity.

B. Preinstallation Meeting: Convene one week before starting work of this section.

1. Agenda:

a. Sequence of construction.

b. Coordination with substrate preparation.

c. Roofing materials approved for use.

d. Compatibility of materials.

e. Coordination with installation of adjacent and covering materials.

f. Construction details.

2. Require attendance of parties directly influencing roofing work quality or affected by roofing work performance.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data:

1. Provide membrane manufacturer's printed data showing roofing system components comply with specified requirements and with membrane manufacturer's requirements and recommendations for system type specified; include data for each product used in conjunction with roofing membrane, including insulation and fasteners.
2. Provide documentation showing roofing system is UL classified or FM approved where UL or FM requirements are specified; include data itemizing classified or approved system components.

C. Shop Drawings: Indicate membrane manufacturer's standard details drawn to scale and customized for project for relevant conditions.

1. Include flashings, base tie-ins, roof edges, terminations, expansion joints, penetrations, and drains.
2. For tapered insulation, indicate project-specific layout, slopes, thicknesses, and dimensions.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Manufacturer's Instructions: Indicate installation of components; where instructions allow installation options, clearly indicate which option to use.

F. Preinstallation Notice: Provide copy of manufacturer's approved preinstallation notice.

G. Installer's qualification statement.

H. Executed warranty.

I. Specimen Warranty: Submit before starting work.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum twenty (20) years of documented experience.

B. Installer Qualifications: Company specializing in performing work of this section with minimum five years of documented experience installing specified system and having the following:

1. Trained and approved by manufacturer.
2. Capability to provide payment and performance bond to Owner.

C. Documents at Project Site: Maintain at project site one copy of manufacturer's installation instructions.

1.9 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Deliver products in manufacturer's original containers, dry and undamaged, with seals and labels intact and legible.

C. Store materials clear of ground and moisture with weather-protective covering.

D. Keep combustible materials away from ignition sources.

E. Ensure storage and staging of materials does not exceed static and dynamic loadbearing capacities of roof decking.

F. Protect foam insulation from direct exposure to sunlight.

1.10 FIELD CONDITIONS

A. Do not apply roofing membrane during unsuitable weather or when ambient conditions conflict with manufacturer's installation instructions.

B. Proceed with work so new roofing materials are not subject to construction traffic as work progresses.

C. Schedule applications so no partially completed sections of roof are left exposed at end of workday.

1.11 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Comply with warranty procedures required by manufacturer, including notifications, scheduling, and inspections.

C. Manufacturer Warranty: Full system warranty; 20-year limited warranty covering membrane, roof insulation, and membrane accessories.

1. Liability Limit: No dollar limitation.
2. Scope of Coverage: Repair leaks in roofing system caused by:

a. Ordinary wear and tear of elements.

b. Manufacturing defects in materials.

c. Defective workmanship used to install materials.

d. Damage due to winds up to 72 mph.

e. Hail up to 2 inches in diameter.

D. Metal Roof Edging System Warranty: Include edge metals in membrane manufacturer's full system warranty.

E. Metal Roof Edging System Finish Warranty: Provide 20-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Acceptable Manufacturers:
   1. Elevate: www.holcimelevate.com.
   2. Carlisle SynTec: www.carlisle-syntec.com.
   3. Johns Manville: www.jm.com.
   4. GAF: www.gaf.com.
   5. Versico: www.versico.com.

B. Insulation: Same manufacturer as roof membrane.

C. Substitutions: See Section 016000 - Product Requirements.

D. Source Limitations: Furnish products produced by single manufacturer.

2.2 EPDM MEMBRANE ROOFING SYSTEM

A. Description: EPDM single-ply membrane.
   1. Membrane Attachment: Fully adhered.
   2. Deck Slope: Flat; provide slope of 1/4 inch per foot by means of tapered insulation.
   3. Provide roofing system to withstand wind uplift forces calculated with ASCE 7 and as indicated in Drawings.
   4. Provide assembly having Underwriters Laboratories, Inc. (UL) Class B fire hazard classification.

B. Components, from Top of Roof Down:
   1. Membrane: Thickness as specified below.
   2. Cover Board: Cement Roof Board, 1/2 inch thick; mechanically fastened.
   3. Insulation:
      a. Maximum Board Thickness: 3 inches; use as many layers as necessary; stagger joints in adjacent layers.
      b. Tapered: Minimum slope as indicated on drawings; provide minimum R-value at thinnest point; place tapered layer on top or on bottom.
      c. Total System R-value: Minimum value as indicated in drawings.
      d. Top Layer: Polyisocyanurate foam board, noncomposite; cold adhesive attached.
      e. Bottom Layer: Polyisocyanurate foam board, noncomposite; cold adhesive attached.
      f. Crickets: Tapered insulation of same type as specified for top layer; slope as indicated on drawings.

4. Vapor Retarder: Self-adhering membrane.
5. Deck Sheathing: Cement Roof Board , 1/2 inch thick; mechanically fastened.

2.3 MEMBRANE MATERIALS

A. Roofing and Flashing Membrane: Cured synthetic single-ply membrane composed of EPDM with the following properties:
   1. Reinforcement: None; membrane complying with ASTM D4637/D4637M, Type I.
   2. Membrane and Flashing Color: White.
   3. Thickness: 90 mils, 0.09 inch
   4. Nominal Thickness Tolerance: Plus/minus 10 percent.
   5. Sheet Width: Provide widest available sheets to minimize field seaming.

B. Flashing Membrane: Self-curing, nonreinforced membrane composed of nonvulcanized EPDM rubber, complying with ASTM D4811/D4811M, Type II, with the following properties:
   1. Thickness: 55 mils, 0.055 inch.

C. Self-Adhesive Flashing Membrane: Semi-cured 45-mil, 0.045-inch EPDM membrane laminated to 35-mil, 0.035-inch EPDM tape adhesive.

D. Premolded Pipe Flashings: EPDM, molded for quick adaptation to different sized pipes.

E. Self-Adhesive Lap Splice Tape: 35 mil EPDM based, formulated for compatibility with EPDM membrane and high-solids primer.

F. Splice Adhesive: Manufacturer's recommended synthetic polymer-based, formulated for compatibility with EPDM membrane and metal surfaces.

G. Bonding Adhesive: Manufacturer's recommended bonding adhesive, formulated for compatibility with EPDM membrane and other substrate materials, including masonry, wood, and insulation facings.

H. Adhesive Primer: Manufacturer's recommended primer formulated for compatibility with EPDM membrane and tape adhesive.

I. Low-Rise Foam Adhesive: Manufacturer's recommended two-component, low-rise polyurethane adhesive designed to attach fleece-backed roofing membranes to variety of acceptable substrates.

J. Lap Sealant: Manufacturer's recommended lap sealant formulated for compatibility with primers and flashings.

K. AP Sealant: Manufacturer's recommended single-component, polyurethane, nonsag, moisture-curing sealant.

L. Seam Edge Treatment: Manufacturer's recommended EPDM rubber-based sealant, formulated for sealing exposed membrane edges at seams.

M. Pourable Sealer: Manufacturer's recommended two-part polyurethane, two-color for reliable mixing.

N. Water Block Seal: Manufacturer's recommended butyl rubber sealant for use between two surfaces, not exposed.

O. Metal Plates and Strips Used for Fastening Membrane and Insulation: Steel with galvalume coating; comply with FM 4470 criteria for corrosion resistance.

P. Termination Bars: Aluminum bars with integral caulk ledge; 1.3 inches wide by 0.1 inch thick.

Q. Roof Walkway Pads: EPDM, 0.3 inch thick and 30 by 30 inches with EPDM tape adhesive strips laminated to bottom.

2.4 COVER BOARDS

A. Cement Roof Cover Board: Non-Asbestos Fiber-Mat Reinforced Cementitious Backer Units, UL type designation “DCB”, complying with ASTM C1325.

1. Mold Resistance: Score of 10, tested in accordance with ASTM D3273.
2. Water Vapor Permeance: 5.84 perm, maximum, when tested in accordance with ASTM E96/E96M using Procedure B - Water Method.
3. Surface-Burning Characteristics: Flame spread index of 0 and smoke developed index of 0, tested in accordance with ASTM C518.
4. Flute Span-ability: 12 inches, tested in accordance with ASTM E661.
5. Thermal Value: R-0.39, tested in accordance with ASTM C518.
6. Compressive Strength: 1800 psi.
7. Thickness: 1/2 inch.
8. Weight: 2.4 psf.
9. Long Edges: Square.
10. Product:

    a. Basis of Design: USG; Securock Cement Board: www.usg.com/.

2.5 INSULATION

A. Polyisocyanurate Board Insulation: Closed-cell polyisocyanurate foam laminated to facers, complying with ASTM C1289, Type II, Class 1, with the following additional characteristics:

1. Compressive Strength: 20 psi when tested in accordance with ASTM D1621.
2. Ozone Depletion Potential: Zero; made without CFC- or HCFC-blowing agents.

B. Adhesive for Insulation Attachment: Type as required by roof membrane manufacturer for roofing system and warranty; use only adhesives furnished by roof membrane manufacturer.

2.6 VAPOR RETARDER MATERIALS

A. Self-Adhering Membrane Vapor Retarder: SBS-modified bitumen adhesive, factory-laminated to tri-laminate woven, high-density polyethylene top surface with release liner.

1. Thickness: 30 mils, 0.03 inch, minimum.

2. Low-Temperature Flexibility: 0.0325 inch at minus 30 degrees F when tested in accordance with ASTM D5147/D5147M.
3. Air Permeance: 0.004 cfm/sq ft, maximum, when tested in accordance with ASTM E2178.
4. Water Vapor Permeance: 0.04 perm, maximum, when tested in accordance with ASTM E96/E96M using Procedure B - Water Method.
5. Water Penetration Resistance around Nails: Pass, when tested in accordance with ASTM D1970/D1970M.

2.7 DECK SHEATHING

A. Cement Roof Deck Sheathing: Non-Asbestos Fiber-Mat Reinforced Cementitious Backer Units, UL type designation “DCB”, complying with ASTM C1325.
1. Mold Resistance: Score of 10, tested in accordance with ASTM D3273.
2. Water Vapor Permeance: 5.84 perm, maximum, when tested in accordance with ASTM E96/E96M using Procedure B - Water Method.
3. Surface-Burning Characteristics: Flame spread index of 0 and smoke developed index of 0, tested in accordance with ASTM C518.
4. Flute Span-ability: 12 inches, tested in accordance with ASTM E661.
5. Thermal Value: R-0.39, tested in accordance with ASTM C518.
6. Compressive Strength: 1800 psi.
7. Thickness: 1/2 inch.
8. Weight: 2.4 psf.
9. Long Edges: Square.
10. Product:
    a. Basis of Design: USG; Securock Cement Board: www.usg.com/.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine roof deck to determine deck is sufficiently rigid to support installers and mechanical equipment so deflection will not strain or rupture roof components or deform deck.

B. Verify surfaces and site conditions are ready to receive work. Correct defects in substrate before commencing with roofing work.

C. Examine roof substrate to verify adequate slope to drains.

D. Verify specifications and drawing details are workable and not in conflict with roofing manufacturer's recommendations and instructions; start of work constitutes acceptable project conditions and requirements.

E. Verify wood nailers are installed according to manufacturer's instructions.

3.2 PREPARATION - GENERAL

A. Take appropriate measures to ensure fumes from adhesive solvents are not drawn into building through air intakes.

B. Do not start work until preinstallation notice has been submitted to manufacturer.

C. Before proceeding, ensure roof surface is clean, dry, and smooth and free of sharp edges, fins, roughened surfaces, loose or foreign materials, oil, grease, and other materials that may damage membrane.

D. Fill surface voids in immediate substrate greater than 1/4-inch wide with fill material insulation approved by insulation and membrane manufacturers.

E. Protect adjacent construction, property, vehicles, and persons from damage related to roofing work; repair or restore damage caused by roofing work.

1. Protect from spills and overspray from bitumen, adhesives, sealants, and coatings.
2. Protect metal, glass, plastic, and painted surfaces from bitumen, adhesives, and sealants within range of windborne overspray.
3. Protect finished areas of roofing system from roofing-related work traffic and traffic by other trades.

3.3 INSTALLATION - GENERAL

A. Install roofing, insulation, flashings, and accessories in accordance with roofing manufacturer's published instructions and recommendations for specified roofing system. Where manufacturer provides no instructions or recommendations, follow NRCA (RM) written requirements and industry standards. Comply with federal, state, and local regulations.

B. Obtain relevant instructions and maintain copies at project site for duration of installation period.

C. Provide temporary closures to ensure moisture does not damage completed roofing. Use flashings, terminations, and temporary closures to provide watertight installation.

3.4 INSTALLATION - VAPOR RETARDER

A. Before installing insulation, install vapor retarder directly over deck.

B. Install vapor retarder in accordance with manufacturer's written instructions.

C. Ensure penetrations and edge conditions are sealed to prevent moisture and air drive into roofing system.

3.5 INSTALLATION - INSULATION

A. Install insulation in accordance with manufacturer's written instructions.

B. Install only as much insulation as can be covered with completed roofing system before end of day's work or before onset of inclement weather.

C. Lay roof insulation in courses parallel to roof edges.

D. Neatly and tightly fit insulation to penetrations, projections, and nailers, with gaps not greater than 1/4 inch. Fill gaps greater than 1/4 inch with acceptable insulation. Do not leave roofing membrane unsupported over space greater than 1/4 inch.

E. Cold Adhesive Attachment, All Layers: Apply in accordance with membrane manufacturer's instructions and recommendations; apply pressure to individual roof insulation boards to obtain maximum adhesive contact.

3.6 INSTALLATION - COVER BOARD

A. Install in accordance with membrane manufacturer's instructions and recommendations.

B. Cold Adhesive Attachment: Apply pressure to individual boards to obtain maximum adhesive contact.

3.7 INSTALLATION - SINGLE-PLY MEMBRANE

A. Beginning at low point of roof, place membrane without stretching over substrate and allow to relax before attachment or splicing. Refer to membrane manufacturer's guidelines for minimum relaxation time.

B. Lay out membrane pieces so field and flashing splices are installed to shed water.

C. Install membrane without wrinkles and without gaps or fishmouths in seams; bond and test seams and laps in accordance with membrane manufacturer's instructions and details.

D. Adhered Membrane: Bond membrane sheet to substrate using membrane manufacturer's recommended bonding material, application rate, and procedures.

E. Edge Securement: Secure membrane at locations where membrane terminates or goes through angle change greater than 2 in 12 inches using mechanically-fastened reinforced perimeter fastening strips, plates, or metal edging as indicated in drawings, or as recommended by roofing manufacturer.

1. Exceptions: Round pipe penetrations less than 18 inches in diameter and square penetrations less than 4 inches wide.

3.8 INSTALLATION - FLASHING AND ACCESSORIES

A. Install flashings, including laps, splices, joints, bonding, adhesion, and attachment, as required by membrane manufacturer's recommendations and details.

B. Install weathertight flashing at walls, curbs, parapets, curbs, skylights, and other vertical and sloped surfaces.

1. Extend flashing minimum 8 inches above membrane surface unless otherwise noted on drawings.

2. Use longest practical flashing pieces.

3. Evaluate substrate and overlay; adjust installation procedure in accordance with membrane manufacturer's recommendations.

4. Complete splices between flashing and main roof sheet with specified splice adhesive before adhering flashing to vertical surfaces.
5. Provide termination directly to vertical substrates with termination bars and as shown on roof drawings.

C. Roof Drains:

1. Taper insulation around drain to provide smooth transition from roof surface to drain. Use specified premanufactured tapered insulation with facer or suitable bonding surface to achieve slope; slope not to exceed manufacturer's recommendations.
2. Position membrane, then cut hole for roof drain to allow 1/2 to 3/4 inch of membrane to extend inside clamping ring past drain bolts.
3. Make round holes in membrane to align with clamping bolts; do not cut membrane back to bolt holes.
4. Apply sealant on top of drain bowl where clamping ring seats below membrane.
5. Install roof drain clamping ring and clamping bolts; tighten clamping bolts to achieve constant compression.

D. Flash penetrations passing through membrane; make flashing seals directly to penetration.

1. Pipes, Round Supports, and Similar Items: Flash with specified premolded pipe flashings wherever practical; otherwise, use specified self-curing elastomeric flashing.
2. Pipe Clusters and Unusual Shaped Penetrations: Provide penetration pocket at least 2 inches deep, with at least 1-inch clearance from penetration; fill with manufacturer's pourable sealer and slope to shed water.
3. Structural Steel Tubing: If corner radii are greater than 1/4 inch and longest side of tube does not exceed 12 inches, flash as for pipes; otherwise, provide standard curb with flashing.
4. Flexible and Moving Penetrations: Provide weathertight gooseneck set in sealant and secured to deck, flashed as recommended by manufacturer.
5. High-Temperature Surfaces: Protect elastomeric components from direct contact with hot surfaces using intermediate insulated sleeve as flashing substrate as recommended by membrane manufacturer when in-service temperature is or can be over 180 degrees F,

3.9 INSTALLATION - FINISHING AND WALKWAYS

A. Install walkways at access points to roof, around rooftop equipment requiring maintenance, and where indicated on drawings.

1. Do not install walkway pads within 10 feet of roof edge or perimeter.

B. Walkway Pads: Adhere to roofing membrane, spacing each pad at minimum of 1 inch and maximum of 3 inches from each other to allow for drainage.

1. If installation of walkway pads over field-fabricated splices or within 6 inches of splice edge cannot be avoided, adhere another layer of flashing over splice and extending beyond walkway pad minimum of 6 inches on either side.
2. Prime membrane, remove release paper on pad, press in place, and walk on pad to ensure adhesion.

3.10 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Inspection by Manufacturer: Provide final inspection of roofing system by technical representative employed by roofing system manufacturer to inspect installation for warranty purposes, not a sales person.

C. Perform corrections necessary for issuance of warranty.

D. Repair or replace building components and finished surfaces damaged or defaced due to work of this section; comply with recommendations of manufacturers of components and surfaces.

3.11 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. Clean contaminants generated by roofing work from building and surrounding areas, including bitumen, adhesives, sealants, and coatings.

C. Remove leftover materials, trash, debris, and equipment from project site and surrounding areas.

3.12 PROTECTION

A. Where construction traffic continues over finished roof panels, provide durable protection and replace or repair damaged roofing to original condition.

END OF SECTION

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fabricated sheet metal items, including flashings, counterflashings, and other items indicated in Schedule.

B. Sealants for joints within sheet metal fabrications.

1.3 RELATED REQUIREMENTS

A. Section 075323 - Ethylene-Propylene-Diene-Monomer Roofing (EPDM): Warranty requirements for sheet metal copings and edge metals.

1.4 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.

B. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

C. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

D. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

E. SMACNA (ASMM) - Architectural Sheet Metal Manual.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with roofing work for scheduling installation of counterflashing, rain drainage and similar items related to roofing.
2. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
3. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.
4. Coordinate with the work of Section 079200 for installation of related sealants.

B. Preinstallation Meeting: Convene one week before starting work of this Section.

1. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion.

2. Review preparation and installation procedures and coordinating and scheduling required with related work.

C. Sequencing: Do not proceed with installation of flashing and sheet metal work until substrate construction, cants, blocking, reglets, and other construction are ready to receive the work of this Section.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

C. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

1. Include identification of material, thickness, weight, and finish for each item and location in Project.

2. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.

3. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.

4. Include details of connections to adjoining work.

5. Detail formed flashing and trim at scale of not less than 1-1/2 inches per 12 inches.

1.7 QUALITY ASSURANCE

A. Perform work in accordance with SMACNA (ASMM) requirements and standard details, except as otherwise indicated.

B. Maintain one copy of each document on site.

C. Fabricator and Installer Qualifications: Company specializing in sheet metal work with five years of documented experience.

1.8 MOCK-UP

A. Comply with general mock-up requirements specified in Section 014000.

B. Integrated Exterior Mock-up: Build mock-up representative of sheet metal assemblies, including underlayments and accessories, for evaluation of aesthetics and workmanship. Mock-up shall be as detailed in Drawings.

1. Locate where directed.

2. Mock-up may remain as part of the Work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

B. Prevent contact with materials that could cause discoloration or staining.

C. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.10 WARRANTY

A. Correct defective Work within a five year period after Date of Substantial Completion. Defective work includes failure of watertightness or seals.

B. Provide 20 year manufacturer warranty for prefinished sheet metal materials. Warranty shall include degradation of metal finish.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Sheet Metal Assemblies:

1. Capable of withstanding structural movement and exposure to wind and weather without failure or permanent deformation.

a. Design Pressure: Conforming with ASCE 7 or as indicated on structural drawings, whichever is most restrictive.

2. Physically protect building elements and systems from damage that would permit water leakage into building enclosure assemblies under all weather conditions.

B. Sheet Metal Standards: Comply with SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Thermal Movements: Provide sheet metal flashing and trim that allows for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET MATERIALS

A. Pre-Finished Galvanized Steel: ASTM A653/A653M, with G90/Z275 zinc coating; minimum gage as scheduled, shop pre-coated with PVDF coating.

1. Exposed Coating: PVDF (Polyvinylidene Fluoride) Superior Performance Organic Finish, AAMA 621; multiple coat, thermally cured fluoropolymer finish system.

2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

B. Anodized Aluminum: ASTM B209 (ASTM B209M); minimum gage as scheduled; anodized finish of color as selected.

1. Clear Anodized Finish: AAMA 611, AA-M12C22A41, Class I, clear anodic coating not less than 0.7 mil, 0.0007 inch thick.

2. Color Anodized Finish: AAMA 611, AA-M12C22A42/44, Class I, integrally or electrolytically colored anodic coating not less than 0.7 mil, 0.0007 inch thick.

a. Color: As selected by Architect from manufacturer's standard colors.

C. Pre-Finished Aluminum: ASTM B209 (ASTM B209M), minimum gage as scheduled; shop pre-coated with with PVDF coating.

1. Exposed Coating: PVDF (Polyvinylidene Fluoride) Superior Performance Organic Finish, AAMA 2605; multiple coat, thermally cured fluoropolymer finish system.

2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

D. Stainless Steel: ASTM A240, Type 304 alloy, soft temper, fully annealed, minimum gage and finish as scheduled.

1. Finish: 2D (dull, cold rolled).

2.3 FABRICATION

A. Form sections true to shape, accurate in size, square, and free from distortion or defects.

B. Fabricate cleats and starter strips of same material as sheet, minimum 12 inches wide, one gage thickness heavier than exposed sheet, and interlocking with exposed sheet.

C. Hem exposed edges on underside 1/2 inch; miter and seam corners.

D. Fabricate corners from one piece with minimum 18-inch long legs; seam for rigidity, seal with sealant.

E. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

2.4 SEAMS AND JOINTS

A. Sealant Joints: Where movable, expansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.

B. Non-Moving Seams:

1. For metal greater than 0.040 inch thick, fabricate with butt seams with backup plates, fastened one side (SMACNA Figure 3-3, Type 19); seal with butyl sealant concealed within joint.

2. For metals 0.040 inch thick or less, fabricate with flat-lock seams (SMACNA Figure 3-2, Type 2); treat as follows:

a. Prepainted Steel and Aluminum: Form seams and seal with elastomeric sealant. Rivet joints where necessary for strength.

b. Unpainted Aluminum (includes mill finish and anodized: Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.

c. Other Metals: Tin edges to be seamed, form seams, and solder.

C. Moving Seams:

1. For metal greater than 0.040 inch thick: Form expansion joints of butt seams with backup plates fastened to substrate (SMACNA Figure 3-3, Type 18) with no fasteners exposed through covers. Seal seams with butyl sealant concealed within joints.

2. For metal 0.040 inch thick or less: Form expansion joints of intermeshing hooked flanges (SMACNA Figure 3-2, Type 1), not less than 1 inch deep, filled with butyl sealant concealed within joint.

D. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pretin edges of sheets to be soldered to a width of 1-1/2 inches except where pretinned surface would show in finished Work.

1. Do not solder prepainted metal sheet.

2.5 ROOF SHEET METAL FABRICATIONS

A. Counterflashings: Factory fabricated and finished sheet metal that overlaps top edges of base flashing by at least 4 inches, and designed to snap into thru-wall flashing or reglets with lapped joints. Provide spring action pressure at bottom edge against base flashings.

1. Type and Finish: See Sheet Metal Schedule.

B. Flashings for Metal Roofs: Fabricate miscellaneous metal flashings according to the following SMACNA (ASMM) details or as recommended by roofing manufacturer:

1. Roof Panel Penetrations with Crickets: Figure 8-3 (pipes and vents).

2. Curb Flashings: Figure 8-3.

3. Ridge Caps: Figure 6-17.

4. Ridge, Rake, and Valley Flashings: Figure 6-7.

5. Eave, Hip, and Cap Flashings: Figure 6-6.

C. Roof Equipment Support Flashing: Cover raised bases and equipment supports. Fabricate with seamed and soldered joints and corners. Extend flashings over roof base flashings 4 inches minimum, and fold back bottom edge 1/2 inch. Where metal is penetrated for bolt or other fastener connections, use 4 lb sheet lead washers 2 inches larger than fastener hole.

1. Comply with SMACNA (ASMM) Figure 8-11B.

2. Type and Finish: See Sheet Metal Schedule.

2.6 WALL SHEET METAL FABRICATIONS

A. Openings Flashing: Fabricate head, sill, jamb and similar flashings to extend 4 inches beyond wall openings. Form head and sill flashing with 2-inch-high end dams.

1. Type and Finish: See Sheet Metal Schedule.

2.7 ROOF DRAINAGE SHEET METAL FABRICATIONS

A. General: Form roof drainage sheet metal fabrications to profiles and sizes indicated and as required to properly collect and remove water. Fabricate complete with required connection pieces, expansion joints and strap anchors to maintain watertight joints.

B. Hanging Gutters: SMACNA (ASMM) Rectangular profile.

1. Comply with SMACNA (ASMM) Figure 1-12.

C. Downspouts: Rectangular profile.

1. Downspouts: Comply with SMACNA (ASMM) Figures 1-32.

D. Gutters and Downspouts: Size indicated on drawings.

E. Overflow Scuppers: Fabricate to SMACNA (ASMM) and as detailed on Drawings. Fabricate in two sections, with roof side flanges secured first, then outside flanges attached after insertion through wall opening. Form edges of outside flange with snap-lock flange to engage scupper receiver and to create spring action against the outer wall surface.

1. Collector / Conductor Heads: None.
2. Scuppers: Comply with SMACNA (ASMM) Figure 1-26.
3. Flood test scuppers prior to installation to verify suppers are leak-tight.

F. Accessories: Profiled to suit application.

1. Anchorage Devices: In accordance with SMACNA (ASMM) requirements.
2. Gutter Supports: Brackets.
3. Downspout Supports: Brackets.

G. Downspout Boots: Cast iron.

1. Acceptable Manufacturers:

a. EJ Group: www.ejco.com/.

b. J.R. Hoe: www.jrhoe.com/.

c. Mifab: www.mifab.com/.

d. Substitutions: See Section 01 6000 - Product Requirements.

2.8 FLASHING

A. Flashing Panels for Exterior Wall Penetrations: Premanufactured components and accessories as required to preserve integrity of building envelope; suitable for conduits and facade materials to be installed.

2.9 ACCESSORIES

A. Fasteners: Non-corrosive type.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.

a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.

b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.

c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

3. Fasteners for Zinc-Coated (Galvanized) and Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

B. Underlayment: ASTM D226/D226M, organic roofing felt, Type I, No. 15.

C. Synthetic Underlayment: Polyethylene or polypropylene sheet.

D. Self-Adhering, High-Temperature Sheet Underlayment: Minimum 30 mils thick, consisting of a slip- resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.

1. Thermal Stability: Stable after testing at 220 deg F; ASTM D 1970.

2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F; ASTM D 1970.

3. Acceptable Products:

a. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.

b. Grace Construction Products, a unit of W. R. Grace & Co.; Ultra.

c. Henry Company; Blueskin PE200 HT.

d. Metal-Fab Manufacturing, LLC; MetShield.

e. Owens Corning; WeatherLock Metal High Temperature Underlayment.

f. Polyguard Products, Inc.; Deck Guard HT.

g. Substitutions: See Section 016000 - Product Requirements.

E. Slip Sheet: Rosin sized building paper, 3 lb/100 sq. ft.minimum.

F. Primer Type: Zinc chromate.

G. Protective Backing Paint: Zinc molybdate alkyd.

H. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 15 mil dry film thickness per coat.

I. Concealed Sealants: Non-curing butyl sealant.

J. Exposed Sealants: ASTM C920; elastomeric sealant, with minimum movement capability as recommended by manufacturer for substrates to be sealed; color to match adjacent material.

K. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

L. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

M. Asphalt Roof Cement: ASTM D4586/D4586M, Type I, asbestos-free.

N. Solder: ASTM B32; Provide type as described:

1. For Stainless Steel: Grade Sn96, with acid flux of type recommended by stainless-steel sheet manufacturer.
2. For Zinc-Coated (Galvanized) Steel: Maximum lead content of 0.2 percent.

2.10 FINISHES

A. PVDF (Polyvinylidene Fluoride) Coating: Superior performance organic finish with minimum 70 percent PVDF fluoropolymer resin by weight, multiple coat, thermally cured finish system.

1. Acceptable Products:

a. PPG Metal Coatings; Duranar: www.ppgmetalcoatings.com/#sle.

b. Sherwin-Williams Company; SHER-NAR 5000: oem.sherwin-williams.com/#sle.

c. Valspar; Fluropon: www.valsparcoilextrusion.com/#sle.

d. Arkema; Kynar 500: www.americas.kynar.com.

e. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.

B. Verify roofing termination and base flashings are in place, sealed, and secure.

C. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Install surface mounted reglets true to lines and levels, and seal top of reglets with sealant.

3.3 UNDERLAYMENT INSTALLATION

A. Felt Underlayment: Install felt underlayment with adhesive for temporary anchorage to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

1. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.

B. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, according to manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal. Apply in shingle fashion to shed water, with lapped and taped joints of not less than 2 inches.

1. Do not use plastic underlayment where metals will be site soldered or where plastic sheet will be in direct contact with metal sheets exposed to solar daytime heating.

C. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

3.4 INSTALLATION - GENERAL

A. Comply with SMACNA Architectural Sheet Metal Manual.

B. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.

2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
4. Torch cutting of sheet metal flashing and trim is not permitted.
5. Do not use graphite pencils to mark metal surfaces.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by SMACNA.

1. Coat back side of uncoated aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where concealed flashing and trim will contact wood, ferrous metal, or cementitious construction.
2. Coat concealed surfaces of aluminum downspout that come into contact with dissimilar metals with two coats of clear lacquer.
3. Underlayment: Where installing metal directly on cementitious or wood substrates, install underlayment.

D. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet with no joints within 24 inches of corner or intersection.

E. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance, but in no case less than 1-1/4 inches for nails and 3/4 inch for wood screws in wood blocking or sheathing.

F. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

G. Seal joints as required for watertight construction.

1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

H. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets with solder to width of 1-1/2 inches; however, reduce pre-tinning where pre-tinned surface would show in completed Work.

1. Do not solder metallic-coated steel and aluminum sheet.
2. Do not use torches for soldering.
3. Heat surfaces to receive solder, and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

4. Stainless-Steel Soldering: Tin edges of uncoated sheets, using solder for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

I. Rivets: Rivet joints where necessary for strength.

3.5 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Recessed Reglet Flashings and Counterflashings: Insert flashings full depth into recessed reglet. Anchor by mechanical means, including driven wedges of lead or other compatible metal spaced at 12 inches on center. Seal joint with elastomeric sealant specified in Section 079200.

C. Surface Mounted Reglet Flashings and Counterflashings: Place surface mounted reglet not less than 9 inches above top of cant strip. Place sealant in preformed groove on back of reglet and on lap before installation. Secure reglet to wall with power driven pins through neoprene washers spaced not less than 16 inches on center. Fill top groove with elastomeric sealant specified in Section 079200. After roofing is installed, install snap-lock counterflashing.

1. Lap counterflashing end joints minimum 3 inches. Do not solder joints. Provide continuous counterflashings at angles and corners, and lap over roof base flashings minimum 4 inches, unless detailed otherwise.

D. Apply plastic cement compound between metal flashings and felt flashings.

E. Fit flashings tight in place; make corners square, surfaces true and straight in planes, and lines accurate to profiles.

F. Seal metal joints watertight.

G. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

3.6 INSTALLATION - WALL FLASHINGS

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

3.7 INSTALLATION - ROOF DRAINAGE FABRICATIONS

A. Install as recommended by SMACNA (ASMM). Join lengths with formed seams sealed watertight.

B. Slope gutters minimum 1/8 inch per foot.

C. Secure downspouts to wall with steel straps or concealed clamp supports, spaced not more than 8 feet oc. Fasten straps or clamps to building with non-corrosive expansion screws.

D. Set splash pad under each downspout, unless otherwise indicated to connect to underground drainage system.

3.8 INSTALLATION - PRE-FINISHED SHEET METAL

A. Take special care in the handling and installation to avoid damage to finish.

B. Remove protective film from each unit after installation, but not before adjacent construction is complete.

C. Touch up minor damage or defects to match factory finish. Replace units which are excessively damaged as determined by Architect.

3.9 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.10 SCHEDULE

A. General:

1. Where more than one metal material is scheduled, provide sheet metal as indicated on Drawings or, if not indicated, to match metal material of adjacent wall or roof material.
2. Unless otherwise indicated in drawings, where flashings are adjacent to metal wall and roof panel systems or aluminum glazing system frames, match adjacent metal finish and color.
3. Counterflashing and flashing receivers used in conjunction with premanufactured roof edge flashings shall be premanufactured by manufacturer of roof edge flashings. Other counterflashing and flashing receivers may be either premanufactured or shop fabricated.
4. Thicknesses shown are minimums. Increase thicknesses as required to comply with SPRI testing requirements and SMACNA recommendations and to meet performance requirements.
5. Visible is defined as "able to be seen from normal public areas." Provide factory finished materials in visible locations unless otherwise indicated.

B. Counterflashings, Visible:
   1. Aluminum: 0.025 inch.
   2. Prefinished Galvanized Steel: 0.0217 inch.
   3. Finish: PVDF

C. Counterflashings, Concealed:
   1. Stainless Steel: 0.0187 inch.
   2. Finish: 2D dull annealed.

D. Flashing Receivers, Visible:
   1. Prefinished Galvanized Steel: 0.0217 inch.
   2. Finish: PVDF

E. Flashing Receivers, Concealed:
   1. Stainless Steel: 0.0187 inch.
   2. Finish: 2D dull annealed.

F. Hanging Gutters with Girth up to 15 inches:
   1. Aluminum: 0.040 inch.
   2. Prefinished Galvanized Steel: 0.0217 inch.
   3. Finish: PVDF

G. Downspouts:
   1. Aluminum: 0.025 inch.
   2. Aluminum: 0.040 inch.
   3. Prefinished Galvanized Steel: 0.0276 inch.
   4. Finish: PVDF

H. Concealed Scuppers:
   1. Stainless Steel: 0.0187 inch.
   2. Finish: 2D dull annealed.

I. Visible Scuppers:
   1. Aluminum: 0.032 inch.
   2. Finish: PVDF

J. Miscellaneous Sheet Metal Fabrications, Trims, Flashings, and Top of Wall Closures, Visible:
   1. Aluminum: 0.040 inch thick.
   2. Prefinished Galvanized Sheet Steel: 0.0276 inch.
   3. Finish: PVDF

K. Openings Flashing in Frame Construction, Visible:
   1. Aluminum: 0.025 inch thick.

2. Prefinished Galvanized Sheet Steel: 0.0217 inch.
3. Finish: PVDF

L. Openings Flashing in Frame Construction, Concealed:
1. Stainless Steel: 0.0156 inch.
2. Finish: 2D dull annealed.

M. Aluminum Glazing Frame Flashing, Concealed:
1. Stainless Steel: 0.0187 inch.
2. Finish: 2D dull annealed.

N. Aluminum Glazing Frame Flashing, Visible:
1. Aluminum: 0.032 inch.
2. Finish: PVDF

O. Aluminum Glazing Frame Sill Extensions, Visible:
1. Aluminum: 0.040 inch.
2. Finish: PVDF

P. Equipment Support Cap Flashing, Roof Penetration Flashing, and Umbrella Flashing:
1. Stainless Steel: 0.0187 inch.
2. Finish: 2D dull annealed.

Q. Masonry Drip Edges:
1. As specified in Section 04 20 00 - Unit Masonry.
2. Stainless Steel: 0.0156 inch
3. Finish: 2D dull annealed.

END OF SECTION

SECTION 077100 - ROOF SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Roof edge flashings and copings.

1.3 RELATED REQUIREMENTS

A. Section 075323 - Ethylene-Propylene-Diene-Monomer Roofing (EPDM): Warranty requirements for sheet metal copings and edge metals.

B. Section 076200 - Sheet Metal Flashing and Trim: Custom and site-fabricated sheet metal fabrications.

C. Section 077200 - Roof Accessories: Manufactured curbs and roof hatches.

D. Section 079513 - Expansion Joint Cover Assemblies: Manufactured roof expansion joints.

1.4 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ANSI/SPRI/FM 4435/ES-1 - Test Standard for Edge Systems Used with Low Slope Roofing Systems.

C. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

D. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

E. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

F. NRCA (RM) - The NRCA Roofing Manual.

G. SMACNA (ASMM) - Architectural Sheet Metal Manual.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate installation of components of this Section with installation of roofing system.

2. Coordinate installation of sealants and roofing cement with work of this Section to ensure water tightness.

B. Preinstallation Meeting: Convene one week before starting work of this Section.

1. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion. Include the manufacturer's technical representative.

2. Review preparation and installation procedures and coordinating and scheduling required with related work.

C. Sequencing: Do not proceed with installation of flashing and sheet metal work until substrate construction, cants, blocking, reglets, and other construction are ready to receive the work of this Section.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

C. Shop Drawings: Indicate configuration and dimension of components, adjacent construction, required clearances and tolerances, and other affected work.

1. Include identification of material, thickness, weight, and finish for each item and location in Project.

2. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.

3. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.

4. Include details of connections to adjoining work.

5. Detail formed flashing and trim at scale of not less than 1-1/2 inches per 12 inches.

D. Selection Samples: Submit at least 5 color chips in architect's designated range for selection of metal finish and color.

E. Verification Samples: Submit two finish samples, 6 x 6 inch, illustrating finish and color.

F. Product Test Reports: For copings and edge metals, for tests performed by a qualified testing agency.

G. Manufacturer's Installation Instructions: Indicate special procedures, fasteners, supporting members, and perimeter conditions requiring special attention.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

B. Prevent contact with materials that could cause discoloration or staining.

C. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.8 WARRANTY

A. Correct defective Work within a five year period after Date of Substantial Completion. Defective work includes failure of watertightness or seals.

B. Roofing-System Warranty: Coordinate requirements with roofing system Section.

C. Provide 20 year manufacturer warranty for prefinished sheet metal materials. Warranty shall include degradation of metal finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers - Roof Edge Flashings and Copings:

1. Architectural Products Co: www.archprod.com/#sle.
2. ATAS International, Inc: www.atas.com/#sle.
3. Drexel Metals Inc: www.drexmet.com/#sle.
4. Hickman Edge Systems: www.hickmanedgesystems.com/#sle.
5. Metal-Era Inc: www.metalera.com/#sle.
6. Metal Roofing Systems, Inc: www.metalroofingsystems.biz/#sle.
7. Pac-Clad Petersen, a Carlisle Company: www.pac-clad.com.
8. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. General:

1. Capable of withstanding structural movement and exposure to wind and weather without failure or permanent deformation.

    a. Design Pressure: Conforming with ASCE 7 or as indicated on structural drawings, whichever is most restrictive.

2. Physically protect building elements and systems from damage that would permit water leakage into building enclosure assemblies under all weather conditions.

B. FM Approvals Listing: Manufacture and install copings and roof edge flashings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, matching Class specified for roofing. Identify materials with name of fabricator and design approved by FM Approvals.

C. Edge Metal Assemblies:

1. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1, RE-1, RE-2, and RE-3 as applicable to positive and negative design wind pressure as defined by SPRI ES-1.
2. Capable of withstanding structural movement, thermally induced movement, and exposure to wind and weather without failure or permanent deformation.
3. Physically protect roofing systems, roof accessories, and other building elements and systems from damage that would permit water leakage to building interior under all weather conditions.
4. Comply with roofing manufacturer's requirements for full system warranty.

D. Thermal Movements: Provide sheet metal flashing and trim that allows for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.3 ROOFING COMPONENTS

A. Where more than one material is scheduled, provide sheet metal as indicated on Drawings or, if not indicated, to match adjacent wall or roof material, unless otherwise indicated.

B. Unless otherwise indicated in drawings, where copings and flashings are adjacent to metal panel systems, match adjacent panel finish and color.

C. Roof Edge Flashings: Factory fabricated to sizes required; mitered corners; concealed fasteners.

1. Configuration: Fascia, and edge securement for roof membrane.
2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test methods RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable local building code.
3. Exposed Face Height: As indicated on drawings.
4. Material: Formed aluminum sheet, 0.040 inch thick, minimum.
5. Finish: 70 percent polyvinylidene fluoride (PVDF).
6. Color: To be selected by Architect from manufacturer's custom range.

D. Copings: Factory fabricated to sizes required; mitered corners; concealed fasteners.

1. Configuration: Concealed continuous hold down cleat at both legs; internal splice piece at joints of same material, thickness, and finish as cap; concealed stainless steel fasteners.
2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test method RE-3 to positive and negative design wind pressure as defined by applicable local building code.
3. Wall Width: As indicated on drawings.
4. Outside Face Height: As indicated on drawings.

5. Inside Face Height: As indicated on drawings.
6. Material: Formed aluminum sheet, 0.040 inch thick, minimum.
7. Finish: 70 percent polyvinylidene fluoride.
8. Color: To be selected by Architect from manufacturer's custom range.

2.4 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Superior Performance Coil Coating for Aluminum Sheets: PVDF (Polyvinylidene Fluoride) Organic Finish, AAMA 2605; multiple coat, thermally cured fluoropolymer finish system; color as indicated.

C. Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

2.5 ACCESSORIES

A. Fasteners: Non-corrosive type.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.

   a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.

   b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

B. Sealant for Joints in Linear Components: As recommended by component manufacturer.

C. Concealed Sealants: Non-curing butyl sealant.

D. Exposed Sealants: ASTM C920; elastomeric sealant, with minimum movement capability as recommended by manufacturer for substrates to be sealed; color to match adjacent material.

E. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

F. Adhesive for Anchoring to Roof Membrane: Compatible with roof membrane and approved by roof membrane manufacturer.

G. Asphalt Roof Cement: ASTM D4586/D4586M, Type I, asbestos-free.

H. Underlayment: ASTM D226/D226M, organic roofing felt, Type II (No. 30).

I. Self-Adhering, High-Temperature Sheet Underlayment: Minimum 30 mils thick, consisting of a slip- resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.

1. Thermal Stability: Stable after testing at 220 deg F; ASTM D 1970.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F; ASTM D 1970.
3. Products:
    a. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.
    b. Grace Construction Products, a unit of W. R. Grace & Co.; Ultra.
    c. Henry Company; Blueskin PE200 HT.
    d. Metal-Fab Manufacturing, LLC; MetShield.
    e. Owens Corning; WeatherLock Metal High Temperature Underlayment.
    f. Polyguard Products, Inc.; Deck Guard HT.

J. Slip Sheet: Rosin sized building paper, 3 lb/100 sq. ft.minimum.

K. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 15 mil dry film thickness per coat.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

3.3 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

1. Apply continuously under copings and roof edge specialties.
2. Coordinate application of self-adhering sheet underlayment under roof specialties with requirements for continuity with adjacent air barrier materials.

B. Felt Underlayment: Install felt underlayment with adhesive for temporary anchorage to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

C. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.

3.4 INSTALLATION

A. Install components in accordance with manufacturer's instructions and NRCA (RM) applicable requirements.

B. Anchor components securely.

1. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

2. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

C. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

D. Coordinate installation of sealants and roofing cement with work of this section to ensure water tightness.

E. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat back side of uncoated aluminum and stainless-steel roofing specialties with bituminous coating where concealed flashing and trim will contact wood, ferrous metal, or cementitious construction.

F. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.

1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections.

G. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint.

3.5 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films. Maintain sheet metal flashing and trim in clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 077200 - ROOF ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Roof curbs.

B. Equipment rails.

C. Roof penetrations mounting curbs.

D. Rooftop mounted guardrails.

E. Roof hatches.

F. Ladder safety equipment.

G. Non-penetrating pedestals.

1.3 RELATED REQUIREMENTS

A. Section 077100 - Roof Specialties: Other manufactured roof specialty items.

1.4 REFERENCE STANDARDS

A. 29 CFR 1910.23 - Ladders.

B. 29 CFR 1910.29 - Fall Protection Systems and Falling Object Protection - Criteria and Practices.

C. 29 CFR 1926.502 - Fall protection systems criteria and practices.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

E. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

G. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate with installation of roofing system and related flashings for weather tight installation.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used.

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Maintenance requirements.

C. Shop Drawings: Submit detailed layout developed for this Project. Show dimensioned location and number for each type of roof accessory.

1. Non-penetrating Rooftop Supports: Submit design calculations for loadings and spacings.
2. Submit shop drawings sealed and signed by a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

D. Warranty Documentation:

1. Submit manufacturer warranty.
2. Ensure that forms have been completed in Owner's name and registered with manufacturer.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store products under cover and elevated above grade.

1.8 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Extended Correction Period: Correct defective work within 5-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 ROOF CURBS

A. Acceptable Manufacturers:

1. Active Ventilation Products, Inc: www.roofvents.com/#sle.
2. AES Industries Inc.: www.aescurb.com.
3. The Pate Company: www.patecurbs.com.
4. LMCurbs: www.lmcurbs.com/#sle.
5. MKT Metal Manufacturing: www.mktduct.com/#sle.
6. Substitutions: See Section 016000 - Product Requirements.

B. Roof Curbs Mounting Assemblies: Factory fabricated hollow sheet metal construction, internally reinforced, and capable of supporting superimposed live and dead loads and designated equipment load with fully mitered and sealed corner joints welded or mechanically fastened, and integral counterflashing with top and edges formed to shed water.

1. Applications: Roof curbs used for roof penetrations/openings as indicated on drawings, HVAC units, exhaust fans, and duct openings.
2. Sheet Metal Material:

   a. Galvanized Steel: Hot-dip zinc coated steel sheet complying with ASTM A653/A653M, SS Grade 33; G60 coating designation; 18 gauge, 0.048 inch thick.

3. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to meet wind uplift requirements.
4. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
5. Metal Counterflashing: See Section 076200.
6. Roofing Cants: Provide integral sheet metal roofing cants dimensioned to begin slope at top of roofing system at 1:1 slope; minimum cant height 4 inches.

C. Curbs Adjacent to Roof Openings: Provide curb on each side of opening, with top of curb horizontal for equipment mounting.

1. Provide preservative treated wood nailers along top of curb.
2. Insulate inside curbs with 3 inch thick fiberglass insulation.
3. Height Above Finished Roof Surface: 12 inches, minimum.

D. Equipment Rail Curbs: Straight curbs on each side of equipment, with top of curbs horizontal and level with each other for equipment mounting.

1. Provide preservative treated wood nailers along top of rails.
2. Height Above Finished Roof Surface: 12 inches, minimum.

E. Pipe, Duct, or Conduit Mounting Curbs: Vertical posts, minimum 8 inches square unless otherwise indicated.

1. Provide preservative treated wood nailers over entire top surface, for supports that are provided by others.

2.2 ROOFTOP MOUNTED GUARDRAILS

A. Acceptable Manufacturers:

1. Babcock-Davis: www.babcockdavis.com/#sle.
2. Diversified Fall Protection: www.fallprotect.com.
3. EDGE Fall Protection: www.edgefallprotection.com/#sle.
4. Kattsafe: www.kattsafe.com.
5. Kee Safety: www.keesafety.com.
6. SafePro Safety Products: www.safeprosafety.com.
7. Safety Rail Company: www.safetyrailcompany.com/#sle.
8. Substitutions: See Section 016000 - Product Requirements.

B. Non-Penetrating Rooftop Mounted Guardrails:

1. Provide top and mid railings that comply with 29 CFR 1910.29.
2. Structural Load: 200 lb, minimum, in any direction with components in compliance with 29 CFR 1926.502.
3. Height: 42 inches, minimum.
4. Railings: 1-5/8 inches minimum outside diameter, hot-rolled, welded tubing, free of sharp edges and snag points.
5. Mounting Bases: 104 lb, Class 30, gray iron material cast to hold four receiver posts, with rubber pads on underside.
6. Receiver Posts: Provide with positive locking system for placement in receiver holes of mounting bases that allow rails to be mounted in any direction; provide drain holes in receiver posts.
7. Steel Surface Finish: Hot-dip zinc galvanized, with color of safety yellow.

2.3 ROOF HATCHES

A. Acceptable Manufacturers - Roof Access Hatches:

1. Acudor Products Inc.: www.acudor.com.
2. Babcock-Davis: www.babcockdavis.com.
3. Bilco Company: www.bilco.com/sle.
4. Dur-Red Products: www.dur-red.com/#sle.
5. Nystrom, Inc: www.nystrom.com/#sle.
6. Substitutions: See Section 016000 - Product Requirements.

B. Roof Hatches: Factory-assembled aluminum frame and cover, complete with operating and release hardware.

1. Style: Provide flat metal covers unless otherwise indicated.

2. Mounting: Provide frames and curbs suitable for mounting conditions as indicated on drawings.
3. Thermally Broken Hatches: Provide insulation within frame and cover.
4. Size: As indicated on drawings; single-leaf style unless otherwise indicated.
5. For Ladder Access: Single leaf; 36 by 36 inches.

C. Frames and Curbs: One-piece curb and frame with integral cap flashing to receive roof flashings; extended bottom flange to suit mounting.
1. Material: Mill finished aluminum, 11 gauge, 0.0907 inch thick.
2. Insulation: Manufacturer's standard; 3 inch rigid polyisocyanurate, located on inside hollow curb.
3. Curb Height: 12 inches from finished surface of roof, minimum.

D. Metal Covers: Flush, insulated, hollow metal construction.
1. Capable of supporting 40 psf live load.
2. Material: Mill finished aluminum; outer cover 11 gauge, 0.0907 inch thick, liner 0.04 inch thick.
3. Insulation: Manufacturer's standard 3 inch rigid polyisocyanurate.
4. Gasket: Neoprene, continuous around cover perimeter.

E. Hardware: Steel, zinc coated and chromate sealed, unless otherwise indicated or required by manufacturer.
1. Lifting Mechanisms: Compression or torsion spring operator with shock absorbers that automatically opens upon release of latch; capable of lifting covers despite 10 psf load.
2. Hinges: Heavy duty pintle type.
3. Hold open arm with vinyl-coated handle for manual release.
4. Latch: Upon closing, engage latch automatically and reset manual release.
5. Manual Release: Pull handle on interior.
6. Locking: Padlock hasp on interior.

2.4 LADDER SAFETY EQUIPMENT

A. Manufacturers:
1. Basis of Design: The BILCO Company; Type LU-1 Ladder Safety Post: www.bilco.com/.
2. Substitutions: See Section 016000 - Product Requirements.

B.

C. Ladder Safety Post: High strength steel square tubing system attached to ladder with adjustable mounting brackets; stainless steel spring balancing mechanism for controlled operation when raising and lowering the safety post; pull up loop at the upper end of the post; pre-assembled from the manufacturer.

D. Operation:
1. Tubular post locks automatically when fully extended.

2. Controlled upward and downward movement of post.
3. Release lever to allow the post to be returned to its lowered position.
4. Adjustable mounting brackets sufficient to fit rung spacing up to 14 inch on center and clamp brackets to accommodate ladder rungs up to 1-3/4 inch in diameter.

E. Hardware: Type 316 stainless steel.

F. Finish: Yellow powder coat steel.

2.5 NON-PENETRATING ROOFTOP SUPPORTS/ASSEMBLIES

A. Non-Penetrating Rooftop Support/Assemblies: Manufacturer-engineered and factory-fabricated, with pedestal bases that rest on top of roofing membrane, and not requiring any attachment to roof structure and not penetrating roofing assembly.
1. Design Loadings and Configurations: As required by applicable codes.
2. Height: Provide minimum clearance of 6 inches under supported items to top of roofing.
3. Support Spacing and Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
4. Steel Components: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.
5. Hardware, Bolts, Nuts, and Washers: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A153/A153M.

B. Safety Railing System: Roof hatch safety rail system mounted directly to curb without penetration of roofing system.
1. Railing Size: As indicated on drawings.
2. Railing: Comply with 29 CFR 1910.23 for ladder safety, with safety factor of two.
3. Self-Closing Gate: Comply with 29 CFR 1910.29 for safe egress and fall protection through hatch opening.
4. Posts and Rails: Galvanized steel tubing.
5. Gate: Same material as railing; automatic closing with latch.
6. Finish: Manufacturer's standard, factory-applied.

C. Pipe Supports: Provide attachment fixtures complying with MSS SP-58 and as indicated.
1. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports; corrosion resistant material.
2. See relevant piping system specification Section for additional requirements.

D. Duct Supports: Provide extruded aluminum supports and sized in accordance with diameter of supported ducts, and with base that is non-penetrating of roofing membrane.

E. Non-Penetrating Pedestals: Steel pedestals with square, round, or rectangular bases.
1. Bases: High density polypropylene.
2. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.

3. Steel Components: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using methods recommended by manufacturer for achieving acceptable results for applicable substrate under project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions, in manner that maintains roofing system weather-tight integrity.

B. Apply bituminous paint on surfaces of units in contact with cementitious materials or dissimilar metals.

3.4 ADJUSTING

A. Adjust hardware for smooth operation.

3.5 CLEANING

A. Clean installed work to like-new condition.

3.6 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 078400 - FIRESTOPPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Firestopping systems, materials, and accessories.

B. Firestopping at electrical junction boxes in fire-rated walls.

C. Firestopping of all membrane penetrations, through penetrations and joint applications within fire rated assemblies, whether indicated on Drawings or not, and other openings indicated.

D. Contractor's responsibility for determining required scope of firestopping system work, and for determining applicable tested/listed systems for the entire project, and for securing jurisdictional authority approval of firestopping systems.

1.3 RELATED REQUIREMENTS

A. Section 070553 - Fire and Smoke Assembly Identification.

1.4 DEFINITIONS

A. Firestopping: A material or combination of materials used to retain the continuity and integrity of fire- and smoke-rated construction by maintaining an effective barrier against the spread of flame, and to impede the passage of smoke, gases, and moisture through penetrations, blank openings, construction joints, and perimeter fire/smoke containment in or adjacent to fire-and smoke-rated wall, floor, ceiling, and other rated construction assemblies.

B. Assembly: Particular arrangement of materials specific to type of construction described or detailed in referenced UL or other approved design.

C. Fire-Resistance-Rated Barriers: Fire-resistance-rated fire walls, fire barriers, fire partitions, smoke barrier walls, rated floor/ceiling assemblies, and structural floors.

D. Through Penetration: Opening or foreign material passing through or into a fire-resistance-rated assembly or structural floor such that full thickness of rated materials is interrupted.

E. Membrane Penetration: An opening made through one side of a fire-resistance-rated assembly without passing completely through the assembly.

F. Fire-Resistant Joint System: Gaps between adjacent sections of fire-resistance-rated walls, exterior walls, top of wall and ceiling, structural floors or roof decks, and adjacent sections of structural floors. Where fire-resistance-rated walls meet non-rated wall or floor conditions, reference "Continuity Joint" conditions.

G. 3rd Party Tested Systems: Specific products and applications, classified and numbered by UL or other 3rd party approved testing agency in accordance with specific barrier base designs and through penetration applications.

H. Sleeve: Metal fabrication or pipe section extending through thickness of barrier used to permanently guard penetration in accordancew with tested systems.

I. VOC: Volatile organic compound(s).

1.5 REFERENCE STANDARDS

A. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

B. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

C. ASTM E1996 - Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

D. ASTM E1399 - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

F. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.

G. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems.

H. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-Story Test Apparatus.

I. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers.

J. ASTM E2837 - Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed between Rated Wall Assemblies and Nonrated Horizontal Assemblies.

K. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

L. ASTM E3038 - Standard Practice for Assessing and Qualifying Candidates as Inspectors of Firestop Systems and Fire-Resistive Joint Systems

M. IFC - International Firestop Council Recommended Guidelines for Evaluating Firestop Systems Engineering Judgements; current edition.

N. ITS (DIR) - Directory of Listed Products.

O. FCIA - Firestop Contractors International Association Manual of Practice; current edition.

P. FM (AG) - FM Approval Guide.

Q. FM 4991 - Approval Standard of Firestop Contractors.

R. SCAQMD 1168 - Adhesive and Sealant Applications.

S. UL (DIR) - Online Certifications Directory.

T. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

U. UL 1479 - Standard for Fire Tests of Penetration Firestops.

V. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems.

W. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Stage and coordinate installation of firestopping systems with affected trades and adjacent work in accordance with manufacturer's instructions.

B. Preinstallation Meeting: Convene one week before starting work of this Section. Notify Owner, who may request attendance by an independent consultant.

1. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion. Include the manufacturer's technical representative.
2. Review installation procedures and coordination required with related work, and conditions which could affect successful performance of the work.

C. Sequencing: Sequence work to permit firestopping materials to be installed after adjacent and surrounding work is complete.

1. Do not cover or conceal firestopping installations until Owner's inspection agency and jurisdictional authority have inspected each installation.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.

1. Use Firestopping Systems Schedule Form attached to the end of this Section, or other form approved by Architect.

C. Product Data: Provide data on product characteristics, performance ratings, and limitations.

D. Manufacturer's Installation Instructions: Indicate preparation and installation instructions.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Certificate from authority having jurisdiction indicating approval of materials used.

1.8 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the scheduled fire ratings when tested in accordance with methods indicated.

1. Listing in UL (FRD), FM (AG), or ITS (DIR) will be considered as constituting an acceptable test report.

2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.

3. Submission of actual test reports is required for assemblies for which none of the above substantiation exists.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this Section and:

1. Trained by firestop system manufacturer.

2. Meeting any of the three options below:

a. Approved by UL in accordance with "UL Solutions Qualified Firestop Contractor Program."

b. Approved by Factory Mutual Research Corporation under FM 4991

c. Meeting all three of the following criteria:

1) Verification of minimum five years documented experience installing work of this type.

2) Verification of at least five satisfactorily completed projects of comparable size and type.

3) Acceptable to the local authorities having jurisdiction (AHJ).

D. Obtain firestop systems for each type and condition of penetration from a single manufacturer; intermixing of system components for each type and condition of penetration by different manufacturers is not permitted.

E. Listed and tested assemblies and systems must be utilized, if they exist, before alternative systems requiring Engineering Judgement (EJ)/UL Technical Evaluation (UL TE) or Equivalent Fire Resistance Rated Assembly (EFRRA) will be considered. Comply with IFC and FCIA for EJ and EFRRA design and submittal requirements.

1.9 REGULATORY REQUIREMENTS

A. Comply with execution requirements of authority having jurisdiction including, if applicable, the requirement that all firestopping work be performed by a single qualified firm or subcontractor.

1.10 DELIVERY, STORAGE, AND PROTECTION

A. Deliver materials in original unopened containers identified with manufacturer's brand designation and applicable UL label.

B. Do not use damaged or expired materials.

1.11 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions. Maintain uniform temperature of minimum 40 degrees F prior to, during, and after installation of materials

B. Provide ventilation in areas where solvent-cured materials are being installed.

1.12 WARRANTY

A. Include agreement to repair or replace joint sealers which fail in joint adhesion, extrusion resistance, migration resistance, general durability, or apparent deterioration beyond manufacturer's printed limitations for stipulated warranty period from Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design - Floor, Wall, and Joint Systems:
   1. Specified Technologies Inc.: www.stifirestop.com/#sle.

B. Other Acceptable Manufacturers:
   1. 3M Fire Protection Products: www.3m.com/firestop.
   2. A/D Fire Protection Systems Inc.: www.adfire.com.
   3. GCP Applied Technologies: www.gcpat.com.
   4. Hilti, Inc: www.us.hilti.com/#sle.
   5. Nelson FireStop Products; _____: www.nelsonfirestop.com/#sle.
   6. RectorSeal, a CSW Industrials Company: www.rectorseal.com/firestop-solutions/#sle.
   7. Pecora Corporation: www.pecora.com.
   8. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.
   9. USG: www.usg.com.
   10. Substitutions: See Section 016000 - Product Requirements.

2.2 MATERIALS - GENERAL

A. Firestopping Materials: Any materials meeting requirements specified.
   1. Comply with ASTM E814, UL 1479, and UL 2079 as applicable to achieve indicated fire ratings.

B. Volatile Organic Compound (VOC) Content: Provide products having VOC content lower than that required by SCAQMD 1168.

C. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Provide type of materials as required for tested firestopping assembly.

D. Fire Ratings: Refer to Drawings for required systems and ratings.

2.3 FIRESTOPPING ASSEMBLY REQUIREMENTS

A. General: Use firestopping systems which are acceptable for those applications for which they are specifically designed. Use of other UL listed systems is Contractor's Option, subject to compliance with specified performance, regulatory, and quality assurance requirements.

1. Where there is no specific tested and classified firestop system for an indicated condition, obtain from the firestopping system manufacturer an Engineering Judgement (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA) according to IFC and FCIA.

B. Scope: Install firestopping at all locations requiring protected openings where piping, conduit, cables, sleeves, ductwork and similar items penetrate fire-resistive, fire-rated, and smoke assemblies, including but not limited to:

1. Penetrations through wall, floor, and roof assemblies, including empty openings and openings containing penetrations.
2. Membrane penetrations where items penetrate one side of the barrier assembly.
3. Joints between rated assemblies to allow independent movement.
4. Perimeter barriers between exterior wall assemblies and floor and roof assemblies.
5. Joints, through-penetrations, and membrane penetrations in smoke-rated assemblies.

C. Perimeter Fire Containment Firestopping: Use system that has been tested according to ASTM E2307 to have fire resistance F Rating equal to required fire rating of floor assembly.

1. Movement: Provide systems that have been tested to show movement capability as indicated.
2. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
3. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
4. Where floor assembly is not required to have a fire rating, provide systems that have been tested to show L Rating as indicated.

D. Head-of-Wall (HW) Joint System Firestopping at Joints Between Fire-Rated Wall Assemblies and Non-Rated Horizontal Assemblies: Use system that has been tested according to ASTM E2837 to have fire resistance F Rating equal to required fire rating of wall assembly.

E. Floor-to-Floor (FF), Floor-to-Wall (FW), Head-of-Wall (HW), and Wall-to-Wall (WW) Joints, Except Perimeter, Where Both Are Fire-Rated: Use system that has been tested according to ASTM E1966 or UL 2079 to have fire resistance F Rating equal to required fire rating of the assembly in which the joint occurs.

F. Through Penetration Firestopping: Use system that has been tested according to ASTM E814 to have fire resistance F Rating equal to required fire rating of penetrated assembly.

1. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.

3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.

G. Fire Rated Joint Systems: Integrity and indicated fire-resistance ratings as determined by UL 2079, ASTM E1399, or ASTM E1996 as applicable.

H. Fire Rated Construction: Maintain barrier and structural floor fire resistance ratings including resistance to cold smoke at all penetrations, connections with other surfaces and types of construction, at separations required to permit building movement and sound or vibration absorption, and at other construction gaps.

I. Smoke Barrier Construction: Maintain fire-resistance-rated wall and floor barrier and structural floor resistance in conformance with UL 1479 F & L ratings at all penetrations, connections with other surfaces and types of construction, at separations required to permit building movement and sound or vibration absorption, and at other construction gaps.

J. Other General Characteristics:
1. Surface Burning: ASTM E84 and UL 723; flame spread less than 25, smoke developed less than 450.
2. Air Leakage of Perimeter Firestopping Barriers and Penetrations: UL 2079; L-rating less than 2.0 cfm/sf or 5.0 cfm/lf as applicable to the type and location of joint.
3. Durability and Longevity: Permanent.
4. Side Effects During Installation: Non-toxic.
5. Side Effects Under Fire Exposure: Non-toxic.
6. Long Term Side Effects: None.

2.4 MATERIALS

A. Putty Compound: 100 percent solids intumescent or vinyl-type formulation, free of asbestos, silicones, solvents, halogens, PCB's, and inorganic fibers; flame spread/smoke developed rating 0/0 when tested in accordance with ASTM E84; paintable, not sensitive to freezing after set.

B. Sealant Compound: One-part intumescent, endothermic, ablative, or elastomeric acrylic water-based calking material required by applicable UL Design; flame spread/smoke developed rating 0/0 when tested in accordance with ASTM E84.

C. Spray-Applied Compound: Water-based, flexible coating which drys to form a flexible seal; tested in accordance with ASTM E1399, complying with wind sway and thermal category, 500 cycles at minimum 10 cycles/minute.

D. Foam Compound: Two-part, liquid-silicone elastomer formulated to foam in place when mixed; flame spread/smoke developed rating 0/0 when tested in accordance with ASTM E84.

E. Plastic Pipe Device: Intumescent strip material, factory or site fabricated in flexible metal collar with adjustable, screw-tightened stainless steel clamp; UL classified for use with PVC, CPVC, CCPVC, CCABS, PVDF, PP, PB, PEX, and FRPP plastic pipe.

F. Composite Sheet: Composite, intumescent sheet, designed for firestopping large openings in conjunction with other firestopping components, capable of being cut to size in the field and fabricated to fit required penetration openings.

G. Blanket Material: Refractory ceramic fiber blanket encapsulated with aluminum foil scrim complying with NFPA 96; widths and thicknesses required by applicable UL Design; specifically designed as a flexible, fireproof enclosure for kitchen exhaust ducts and fire-rated air ductwork.

H. Fire-Safing Insulation: ASTM C612, Type I; high-melt mineral fibers and resinous binders formed into blankets, density not less than 4.0 lbs/cu ft, tested for 3-hour fire containment for required depths and dimensions.

I. Firestopping Putty Pads: Non-hardening intumescent, putty pad formed to 7.25 x 7.25 x 3/16 inch or 9 x 9 x 3/16 inch self-adhering pads, 2-hour fire rating listed by UL.

J. EP Powershield Electrical Box Insert Pad: Intumescent, non-curing insert pad for protection of electrical switch and receptacle boxes to reduce horizontal separation to less than 24 inches.

2.5 ACCESSORIES

A. Provide necessary accessory materials specified in UL Design to achieve complete firestop system at each penetration. Include collars, sleeves, attachment devices, intumescent materials, and other items required.

B. Primers, Sleeves, Forms, and Accessories: Type required for tested assembly design, and as recommended by firestopping manufacturer for specific substrate surfaces.

C. Dam Material: Mineral fiberboard, mineral fiber matting, sheet metal, alumina silicate fire board, or other permanent material required as part of the firestopping system, or removable if not specifically required as part of the firestopping system.

D. Retainers: Impale type clips to support mineral fiber safing blankets.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify openings are ready to receive the work of this Section.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other materials that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install backing or damming materials required to arrest liquid material leakage.

3.3 INSTALLATION - GENERAL

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed firestopping until inspected by Owner's Independent Testing Agency or in accordance with ASTM E2174 or ASTM E2393 where applicable.

C. Apply firestopping materials in sufficient thicknesses to achieve scheduled fire ratings, to uniform density and texture.

D. Install firestop materials within annular spaces at openings which contain penetrating sleeves, piping, ductwork, conduit and other items requiring firestopping.

E. Remove dam material after firestopping material has cured only if dam material is not required as part of the firestopping system; otherwise dam material to remain permanently in place.

F. Do not cover installed firestopping until inspected by authorities having jurisdiction.

G. Install labeling required by code.

3.4 INSTALLATION - FIRE SAFING INSULATION

A. Install safing insulation to completely fill spaces between floor slab edges and spandrel construction as detailed.

B. Install safing insulation to completely fill voids between floor and roof deck flutes and top of wall construction where wall ratings are indicated.

C. Install and support safing insulation permanently in position with gaged metal to comply with tested fire assembly and applicable building code requirements.

3.5 INSTALLATION - FIRESTOPPING PADS

A. Install firestopping putty pads on back side of electrical junction boxes or EP Powershield Electrical Box (Insert Pads) in fire-rated walls where boxes are located in same stud space on opposite sides of same wall, and elsewhere required by jurisdictional authority and local fire department.

3.6 THROUGH-PENETRATION FIRESTOPPING IDENTIFICATION

A. Labeling: Identify firestopping systems with pre-printed metal or plastic labels in accordance with FM 4991. Attach label permanently to surfaces immediately adjacent to and within 6 inches of edge of firestop installation so that label will be visible to anyone seeking to remove penetrating items or firestop system.

1. Metal Labels: Use mechanical fasteners.

2. Plastic Labels: Use self-adhering type with adhesive capable of permanently bonding label to substrate and, in combination with label material, will result in partial destruction of label if removal is attempted.

B. Include following information on each label:

1. The words "Warning - Through-Penetration Firestop System - Do Not Disturb. Notify Building Management of Any Damage."
2. Installing contractor's name, address, and phone number.
3. Firestop system designation, including applicable testing and inspection agency.
4. Date of installation.
5. Firestop system manufacturer's name.
6. Installer's name.

C. Wall and Partition Identification: Refer to Section 070553 - Fire and Smoke Assembly Identification.

3.7 FIELD QUALITY CONTROL

A. Independent Testing and Inspection Agency: Inspection agency employed and paid by Owner, will examine penetration firestopping in accordance with ASTM E2174 and ASTM E2393.

B. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.

3.8 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.9 PROTECTION

A. Protect adjacent surfaces from damage by material installation.

FIRESTOPPING SYSTEMS SCHEDULE

Project: _____ Architect: _____

Number: _____ Date: _____

Contractor: _____ Contract for: _____

Subcontractor: _____ Contract for: _____

The following items require the attention of the Contractor for completion or correction. Submit separate form for each Subcontractor responsible for installing firestopping.
Add additional rows as required. Failure to include any items on this list does not alter the responsibility of the Contractor to complete all Work in accordance with the

Design Number (A)	Mfg's I.D. and Manufacturer (B)	Penetrating Item Description: Material, Size, Insulated, Combustible (C)	Annular Space / Opening (D)	Construction (E)	Fire Resistance Rating (F)	F-rating (G1)	T-rating (G2)	L-rating CFM/SF (G3)	W-rating (G4)
Through Penetrations - Horizontal Assemblies									
Through Penetrations - Wall and Partition Assemblies									
Membrane Penetrations - Wall and Partition Assemblies									

Design Number (A)	Mfg's I.D. and Manufacturer (B)	Joint Width Min. / Max. (D)	Adjacent Construction (both sides of joint) (E)	Fire Resistance Rating (F)	F-rating (G1)	T-rating (G2)	L-rating CFM/SF (G3)	W-rating (G4)
Fire-Resistant Joint Systems								

Firestopping Product Manufacturer(s):	

Provide information for proposed firestopping as follows:

(A) Indicate design number or other system designator assigned by FM (AG), ITS (DIR), UL (DIR), UL (FRD), or other testing laboratory acceptable to authorities having jurisdiction.

(B) Indicate manufacturer's system designator, if any. Include reference numbers and drawing numbers, if any.

(C) Identify the various types of penetrating items (i.e. pipe, vent, conduit, cable tray, etc.) and, for piping, indicate if dry (normally empty) or wet (normally filled) type. Include a material description (i.e. metal, plastic, EMT, etc.) and size (length by width or diameter). State whether the penetrating item is externally insulated or not. State whether the penetrating item is combustible or non-combustible.

(D) Indicate size limitations for annular space and/or opening and width limitations for joints.

(E) Identify the various types of construction being penetrated. Horizontal Assemblies include fire-resistance-rated floors, floor/ceiling assemblies, and ceiling membranes of roof/ceiling assemblies. Wall and Partition Assemblies include fire walls, fire-barrier walls, shaft enclosure walls, fire partitions, smoke-barrier walls, and smoke partitions.

1. Worded description of construction may be omitted if Architect's wall type designator is used (i.e. Wall 3A instead of metal stud & gypsum board).
2. For joints, indicate the types of construction at each side of joint beginning each joint with the following abbreviations:
   a. FF for Floor to Floor joints
   b. FW for Floor to Wall joints
   c. HW for Head of Wall joints
   d. WW for Wall to Wall joints
   e. CW for the Perimeter Fire Barrier System at the intersection of a fire-resistance-rated floor assembly and an exterior curtain wall assembly

(F) Identify the fire resistance rating of the assembly in minutes if less than one hour or hours if one hour or longer as indicated on the Drawings.

(G) System Ratings: Indicate the F-Rating, T-Rating, L-Rating, and W-Rating when installed and tested in accordance with standards specified.

END OF FORM 07 84 00.13

SECTION 079200 - JOINT SEALANTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Nonsag gunnable joint sealants.

B. Self-leveling pourable joint sealants.

C. Joint backings and accessories.

1.3 RELATED REQUIREMENTS

A. Section 092900 - Gypsum Board: Sealing acoustical and sound-rated walls and ceilings.

B. Section 093000 - Tiling: Sealant between tile and plumbing fixtures and at junctions with other materials and changes in plane.

1.4 REFERENCE STANDARDS

A. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer.

B. ASTM C794 - Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.

C. ASTM C834 - Standard Specification for Latex Sealants.

D. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

E. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

F. ASTM C1193 - Standard Guide for Use of Joint Sealants.

G. ASTM C1248 - Standard Test Method for Staining of Porous Substrate by Joint Sealants.

H. ASTM C1311 - Standard Specification for Solvent Release Sealants.

I. ASTM C1521 - Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints.

J. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness.

K. SCAQMD 1168 - Adhesive and Sealant Applications.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer's technical datasheets for each product to be used; include the following:

1. Physical characteristics, including movement capability, VOC content, hardness, cure time, and color availability.
2. List of backing materials approved for use with the specific product.
3. Backing material recommended by sealant manufacturer.
4. Substrates that product is known to satisfactorily adhere to and with which it is compatible.
5. Substrates the product should not be used on.
6. Substrates for which use of primer is required.
7. Substrates for which laboratory adhesion and/or compatibility testing is required.
8. Installation instructions, including precautions, limitations, and recommended backing materials and tools.
9. Sample product warranty.
10. Certification by manufacturer indicating that product complies with specification requirements.

C. Product Data for Accessory Products: Submit manufacturer's technical data sheet for each product to be used, including physical characteristics, installation instructions, and recommended tools.

D. Color Cards for Selection: Where sealant color is not specified, submit manufacturer's color cards showing standard colors available for selection.

E. Samples for Verification: Where custom sealant color is specified, obtain directions from Architect and submit at least two physical samples for verification of color of each required sealant.

F. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

G. Preconstruction Laboratory Test Reports: Submit at least four weeks prior to start of installation.

H. Preinstallation Field Adhesion Test Plan: Submit at least two weeks prior to start of installation.

I. Preinstallation Field Adhesion Test Reports: Submit filled out Preinstallation Field Adhesion Test Reports log within 10 days after completion of tests; include bagged test samples and photographic records.

J. Executed warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section and with at least three years of documented experience.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

D. Preconstruction Laboratory Testing: Arrange for sealant manufacturer(s) to test each combination of sealant, substrate, backing, and accessories.

1. Adhesion Testing: In accordance with ASTM C794.
2. Compatibility Testing: In accordance with ASTM C1087.
3. Stain Testing: In accordance with ASTM C1248; for porous substrates only.
4. Allow sufficient time for testing to avoid delaying the work.
5. Deliver sufficient samples to manufacturer for testing.
6. Report manufacturer's recommended corrective measures, if any, including primers or techniques not indicated in product data submittals.
7. Testing is not required if sealant manufacturer provides data showing previous testing, not older than 24 months, that shows satisfactory adhesion, lack of staining, and compatibility.

E. Preinstallation Field Adhesion Test Plan: Include destructive field adhesion testing of one sample of each combination of sealant type and substrate, except interior acrylic latex sealants, and include the following for each tested sample.

1. Identification of testing agency.
2. Name(s) of sealant manufacturer's field representatives who will be observing.
3. Preinstallation Field Adhesion Test Log Form: Include the following data fields, with known information filled out.

a. Substrate; if more than one type of substrate is involved in a single joint, provide two entries on form, for testing each sealant substrate side separately.

b. Test date.

c. Location on project.

d. Sealant used.

e. Stated movement capability of sealant.

f. Test method used.

g. Date of installation of field sample to be tested.

h. Date of test.

i. Copy of test method documents.

j. Age of sealant upon date of testing.

k. Test results, modeled after the sample form in the test method document.

l. Indicate use of photographic record of test.

F. Field Adhesion Test Procedures:

1. Allow sealants to fully cure as recommended by manufacturer before testing.
2. Have a copy of the test method document available during tests.
3. Take photographs or make video records of each test, with joint identification provided in the photos/videos; for example, provide small erasable whiteboard positioned next to joint.
4. Record the type of failure that occurred, other information required by test method, and the information required on the Field Quality Control Log.
5. When performing destructive tests, also inspect the opened joint for proper installation characteristics recommended by manufacturer, and report any deficiencies.
6. Deliver the samples removed during destructive tests in separate sealed plastic bags, identified with project, location, test date, and test results, to Owner.
7. If any combination of sealant type and substrate does not show evidence of minimum adhesion or shows cohesion failure before minimum adhesion, report results to Architect.

G. Nondestructive Field Adhesion Test: Test for adhesion in accordance with ASTM C1521, using Nondestructive Spot Method.

1. Record results on Field Quality Control Log.
2. Repair failed portions of joints.

H. Destructive Field Adhesion Test: Test for adhesion in accordance with ASTM C1521, using Destructive Tail Procedure.

1. Sample: At least 18 inches long.
2. Minimum Elongation Without Adhesive Failure: Consider the tail at rest, not under any elongation stress; multiply the stated movement capability of the sealant in percent by two; then multiply 1 inch by that percentage; if adhesion failure occurs before the 1-inch mark is that distance from the substrate, the test has failed.
3. If either adhesive or cohesive failure occurs before minimum elongation, take necessary measures to correct conditions and retest; record each modification to products or installation procedures.
4. Record results on Field Quality Control Log.
5. Repair failed portions of joints.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty for installed sealants and accessories that fail to achieve a watertight seal, exhibit loss of adhesion or cohesion, or do not cure. Complete forms in Owner's name and register with manufacturer.

C. Extended Correction Period: Correct defective work within 2-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 JOINT SEALANT APPLICATIONS

A. Scope:

1. Exterior Joints:

a. Seal open joints except open joints indicated on drawings as not to be sealed, including, but not limited to, the following:

1) Wall expansion and control joints.

2) Joints between doors, windows, and other frames or adjacent construction.

3) Joints between different exposed materials.

4) Weather sealing joints identified in manufacturer's standard details.

2. Interior Joints:

a. Do not seal interior joints indicated on drawings as not sealed.

b. Do not seal through-penetrations in sound-rated assemblies that are also fire-rated assemblies.

c. Seal open joints except open joints indicated on drawings as not to be sealed, including, but not limited to, the following:

1) Joints between plumbing fixtures and adjacent construction.

2) Joints between door frames and window frames and adjacent construction.

3) In sound-rated wall and ceiling assemblies, gaps at electrical outlets, wiring devices, and piping penetrations.

4) In sound-rated wall and ceiling assemblies, seal joints between wall assemblies and ceiling assemblies; between wall assemblies and other construction; between ceiling assemblies and other construction.

3. Do Not Seal:

a. Intentional weep holes in masonry.

b. Joints indicated to be covered with expansion joint cover assemblies.

c. Joints where sealant is specified to be furnished and installed by manufacturer of product to be sealed.

d. Joints where sealant installation is specified in other sections.

e. Joints between suspended ceilings and walls.

B. Type S - Exterior Joints: Use nonsag nonstaining silicone sealant, unless otherwise indicated.

1. Type B - Bedding sealant at thresholds and sills: Butyl rubber.
2. Type Bn - Lap Joints in Sheet Metal Fabrications: Butyl rubber, noncuring.
3. Type Bn - Lap Joints between Manufactured Metal Panels: Butyl rubber, noncuring.
4. Type Psl - Control and Expansion Joints in Concrete Paving: Self-leveling polyurethane sealant.

C. Type P - Interior Joints: Use nonsag polyurethane sealant, unless otherwise indicated.

1. Type L - Wall and Ceiling Joints in Nonwet Areas: Acrylic emulsion latex sealant.
2. Type Sm - Joints between plumbing fixtures and adjoining walls, floors, and counters: Mildew-resistant silicone sealant.
3. Type Sm - Joints between Tile in Wet Areas and Floors, Walls, and Ceilings: Mildew-resistant silicone sealant.
4. Type Esr - Narrow Control Joints in Interior Concrete Slabs: Self-leveling epoxy sealant.
5. Type Psl - Other Floor Joints: Self-leveling polyurethane traffic-grade sealant.

D. Definitions:

1. Interior Wet Areas: Bathrooms, restrooms, kitchens, food service areas, and food processing areas; fixtures in wet areas include plumbing fixtures, food service equipment, countertops, cabinets, and other similar items.
2. Sound-Rated Assemblies: Walls and ceilings identified as STC-rated, sound-rated, or acoustical.

E. Areas Where Tamper-Resistance is Required: As indicated on drawings.

2.2 JOINT SEALANTS - GENERAL

A. Sealants and Primers: Provide products having lower volatile organic compound (VOC) content than indicated in SCAQMD 1168.

B. Colors for Concealed Locations: Manufacturer's standard.

C. Colors for Locations Exposed to View: As selected by Architect from Manufacturer's Full Range, except as noted otherwsise.

D. Colors for Locations Adjacent to Brick Masonry: Custom color matched to brick and reviewed by Architect.

2.3 NONSAG JOINT SEALANTS

A. Type S - Non-Staining Silicone Sealant: ASTM C920, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.

1. Movement Capability: Plus and minus 50 percent, minimum.
2. Non-Staining To Porous Materials: Non-staining to light-colored natural stone, masonry, and marble when tested in accordance with ASTM C1248.
3. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
4. Color: To be selected by Architect from manufacturer's full range.
5. Products:

a. Dow; DOWSIL 790 Silicone Building Sealant: www.dow.com/#sle.

b. Momentive Performance Materials, Inc/GE Silicones; SCS9000 SilPruf NB - Non-Staining Silicone Weatherproofing Sealant: www.siliconeforbuilding.com/#sle.

c. Pecora Corporation; Pecora 864 NST (Non-Staining Technology): www.pecora.com/#sle.

d. Sika Corporation; Sikasil WS-295: www.usa.sika.com/#sle.

e. Tremco Commercial Sealants & Waterproofing; Spectrem 1: www.tremcosealants.com/#sle.

f. Substitutions: See Section 016000 - Product Requirements.

B. Type Sm - Mildew-Resistant Silicone Sealant: ASTM C920, Grade NS, Uses M and A; single component, mildew resistant; not expected to withstand continuous water immersion or traffic.

1. Color: To be selected by Architect from manufacturer's standard range.
2. Products:

a. Momentive Performance Materials, Inc/GE Silicones; SCS1700 Sanitary Sealant: www.siliconeforbuilding.com.

b. Pecora Corporation; 860: www.pecora.com.

c. Sika Corporation; Sikasil GP: www.usa.sika.com/#sle.

d. Dow Corning Corporation; 786-M.

e. Tremco Incorporated; Tremsil 200.

C. Type P - Polyurethane Sealant: ASTM C920, Grade NS, Uses M and A; single component; not expected to withstand continuous water immersion or traffic.

1. Movement Capability: Plus and minus 50 percent, minimum.
2. Hardness Range: 20 to 35, Shore A, when tested in accordance with ASTM C661.
3. Color: To be selected by Architect from manufacturer's standard range, except where noted otherwise in general sealant requirements listed in this section.
4. Service Temperature Range: Minus 40 to 180 degrees F.

5. Products:

   a. Pecora Corporation; Dynatrol I-XL: www.pecora.com.

   b. Sika Corporation; Sikaflex-1a: www.usa.sika.com/#sle.

   c. Tremco Incorporated; Dymonic FC.

D. Type L - Acrylic Emulsion Latex: Water-based; ASTM C834, single component, non-staining, non-bleeding, non-sagging; not intended for exterior use.

1. Color: To be selected by Architect from manufacturer's standard range.
2. Grade: ASTM C834; Grade 0 Degrees F (Minus 18 Degrees C).
3. Products:

   a. Momentive Performance Materials, Inc/GE
   Silicones; RCS20 Acoustical Latex Sealant: www.siliconeforbuilding.com.

   b. Pecora Corporation; AC-20+: www.pecora.com.

   c. Sherwin-Williams Company; 950A Siliconized Acrylic Latex Caulk: www.sherwin-williams.com/#sle.

   d. Tremco Commercial Sealants & Waterproofing; Tremflex 834: www.tremcosealants.com/#sle.

   e. BASF Building Systems; Sonolac.

E. Type B - Butyl Sealant: Solvent-based; ASTM C1311; single component, nonsag; not expected to withstand continuous water immersion or traffic.

1. Service Temperature Range: Minus 13 to 180 degrees F.
2. Products:

   a. Sherwin-Williams Company; Storm Blaster All Season Sealant: www.sherwin-williams.com/#sle.

   b. Pecora Corporation; BC-158.

   c. Tremco Incorporated; Tremco Butyl Sealant

F. Type Bn - Noncuring Butyl Sealant: Solvent-based, single component, nonsag, nonskinning, nonhardening, nonbleeding; nonvapor permeable; intended for fully concealed applications.

1. Products:

   a. Pecora Corporation; Pecora BA-98 Non-Skinning Butyl Sealant: www.pecora.com/#sle.

   b. Tremco Commercial Sealants & Waterproofing; Acoustical/Curtainwall Sealant: www.tremcosealants.com/#sle.

   c. Substitutions: See Section 016000 - Product Requirements.

2.4 SELF-LEVELING JOINT SEALANTS

A. Type Psl - Self-Leveling Polyurethane Sealant for Continuous Water Immersion: Polyurethane; ASTM C920, Grade P, Uses M and A; single component; explicitly approved by manufacturer for traffic exposure and continuous water immersion.

1. Hardness Range: 35 to 55, Shore A, when tested in accordance with ASTM C661.
2. Color: To be selected by Architect from manufacturer's standard range.
3. Service Temperature Range: Minus 40 to 180 degrees F.
4. Products:

a. Sika Corporation; Sikaflex-1c SL: www.usa.sika.com/#sle.

b. W. R. Meadows, Inc; POURTHANE SL: www.wrmeadows.com/#sle.

c. Tremco Incorporated; Vulkem 45SSL.

d. Pecora Corporation; NR-201.

e. Substitutions: See Section 016000 - Product Requirements.

B. Type Esr - Semi-Rigid Self-Leveling Epoxy Joint Filler: Epoxy or epoxy/polyurethane copolymer; intended for filling cracks and control joints not subject to significant movement; rigid enough to support concrete edges under traffic.

1. Composition: Multicomponent, 100 percent solids by weight.
2. Durometer Hardness: Minimum of 85 for Type A or 35 for Type D, after seven days when tested in accordance with ASTM D2240.
3. Color: To be selected by Architect from manufacturer's standard colors.
4. Joint Width, Minimum: 1/8 inch.
5. Joint Width, Maximum: 1/4 inch.
6. Products:

a. Adhesives Technology Corporation; CRACKBOND JF-90 HD: www.atcepoxy.com/#sle.

b. Euclid Chemical Company; EUCO 700: www.euclidchemical.com/#sle.

c. Mapei; Mapeiflex Joint Sealant EP 90/50: www.mapei.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

2.5 ACCESSORIES

A. Sealant Backing Materials, General: Materials placed in joint before applying sealants; assists sealant performance and service life by developing optimum sealant profile and preventing three-sided adhesion; type and size recommended by sealant manufacturer for compatibility with sealant, substrate, and application.

B. Backing Tape: Self-adhesive polyethylene tape with surface that sealant will not adhere to and recommended by tape and sealant manufacturers for specific application.

C. Masking Tape: Self-adhesive, nonabsorbent, nonstaining, removable without adhesive residue, and compatible with surfaces adjacent to joints and sealants.

D. Joint Cleaner: Noncorrosive and nonstaining type, type recommended by sealant manufacturer; compatible with joint forming materials.

E. Primers: Type recommended by sealant manufacturer to suit application; nonstaining.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joints are ready to receive work.

B. Verify that backing materials are compatible with sealants.

C. Verify that backer rods are of the correct size.

D. Preinstallation Adhesion Testing: Install a sample for each test location indicated in the test plan.

1. Test each sample as specified in PART 1 under QUALITY ASSURANCE article.
2. Notify Architect of date and time that tests will be performed, at least seven days in advance.
3. Arrange for sealant manufacturer's technical representative to be present during tests.
4. Record each test on Preinstallation Adhesion Test Log as indicated.
5. If any sample fails, review products and installation procedures, consult manufacturer, or take other measures that are necessary to ensure adhesion; retest in a different location; if unable to obtain satisfactory adhesion, report to Architect.
6. After completion of tests, remove remaining sample material and prepare joints for new sealant installation.

3.2 PREPARATION

A. Remove loose materials and foreign matter that could impair adhesion of sealant.

B. Clean joints, and prime as necessary, in accordance with manufacturer's instructions.

C. Perform preparation in accordance with manufacturer's instructions and ASTM C1193.

D. Mask elements and surfaces adjacent to joints from damage and disfigurement due to sealant work; be aware that sealant drips and smears may not be completely removable.

E. Concrete Floor Joints That Will Be Exposed in Completed Work: Test joint filler in an inconspicuous area to verify that it does not stain or discolor slab.

3.3 INSTALLATION

A. Install this work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.

B. Provide joint sealant installations complying with ASTM C1193.

C. Measure joint dimensions and size joint backers to achieve width-to-depth ratio, neck dimension, and surface bond area as recommended by manufacturer, except where specific dimensions are indicated.

D. Install bond breaker backing tape where backer rod cannot be used.

E. Install sealant free of air pockets, foreign embedded matter, ridges, and sags, and without getting sealant on adjacent surfaces.

F. Do not install sealant when ambient temperature is outside manufacturer's recommended temperature range, or will be outside that range during the entire curing period, unless manufacturer's approval is obtained and instructions are followed.

G. Nonsag Sealants: Tool surface concave, unless otherwise indicated; remove masking tape immediately after tooling sealant surface.

H. Concrete Floor Joint Filler: After full cure, shave joint filler flush with top of concrete slab.

3.4 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Perform field quality control inspection/testing as specified in PART 1 under QUALITY ASSURANCE article.

C. Non-Destructive Adhesion Testing: If there are any failures in first 100 linear feet, notify Architect immediately.

D. Destructive Adhesion Testing: If there are any failures in first 1,000 linear feet, notify Architect immediately.

E. Remove and replace failed portions of sealants using same materials and procedures as indicated for original installation.

F. Repair destructive test location damage immediately after evaluation and recording of results.

END OF SECTION

This page intentionally left blank

SECTION 079513 - EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Expansion joint cover assemblies for floor, wall, and ceiling surfaces.

1.3 RELATED REQUIREMENTS

A. Section 077100 - Roof Specialties: Roof expansion and control joint covers.

1.4 REFERENCE STANDARDS

A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

C. ASTM B308/B308M - Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.

D. ITS (DIR) - Directory of Listed Products.

E. UL (DIR) - Online Certifications Directory.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Installation Templates: For frames and anchors to be embedded in concrete or masonry, furnish templates to relevant installers; include installation instructions and tolerances.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide joint assembly profiles, profile dimensions, anchorage devices and available colors and finish.

C. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, affected adjacent construction and anchorage locations.

D. Samples: Submit two samples 6 inch long, illustrating profile, dimension, color, and finish selected.

E. Manufacturer's Installation Instructions: Indicate rough-in sizes and required tolerances for item placement.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. MM Systems Corp.: www.mmsystemscorp.com.
2. Substitutions: See Section 016000 - Product Requirements.

B. Acceptable Manufacturers:

1. BASF Watson Bowman Acme Corporation: www.wbacorp.com/#sle.
2. Construction Specialties, Inc.: www.c-sgroup.com/#sle.
3. EMSEAL Joint Systems, Ltd: www.emseal.com/#sle.
4. Inpro: www.inprocorp.com/#sle.
5. Balco: www.balcousa.com.
6. Substitutions: See Section 016000 - Product Requirements.

2.2 EXPANSION JOINT COVER ASSEMBLY APPLICATIONS

A. Interior Non-Fire-Rated Floor Joints Subject to Thermal Movement:

1. Basis of Design Product: X-U-2.

B. Interior Non-Fire-Rated Wall-to-Wall Inside Corner Joints Subject to Thermal Movement:

1. Basis of Design Product: FSWL-150.

C. Interior Non-Fire-Rated Wall-to-Wall Coplanar and Ceiling-to-Ceiling Coplanar Joints Subject to Thermal Movement:

1. Basis of Design Product: VSW-200.

D. Interior Non-Fire-Rated Wall-to-Ceiling Joints Subject to Thermal Movement:

1. Basis of Design Product: VSW-L-200.

E. Interior Non-Fire-Rated Suspended Acoustic Panel Ceiling-to-Ceiling Joints Subject to Thermal Movement:

1. Basis of Design Product: VSG-200.

F. Interior Non-Fire-Rated Suspended Acoustic Panel Ceiling-to-Wall Joints Subject to Thermal Movement:

1. Basis of Design Product: VSGL-200.

G. Exterior Wall Joints Subject to Thermal Movement:

1. Basis of Design Product: SCE.

a. Color: Custom to match adjacent brick masonry.

2.3 EXPANSION JOINT COVER ASSEMBLIES

A. Expansion Joint Cover Assemblies - General: Factory-fabricated and assembled; designed to completely fill joint openings, sealed to prevent passage of air, dust, water, smoke; suitable for traffic expected.

1. Joint Dimensions and Configurations: As indicated on Drawings.
2. Joint Cover Sizes: Selected to suit joint width and configuration, based on manufacturer's published recommendations and limitations.
3. Lengths: Provide covers in full lengths required; avoid splicing wherever possible.
4. Anchors, Fasteners, and Fittings: Provided by cover manufacturer.

B. Floor Joint Covers: Coordinate with indicated floor coverings.

1. If floor covering is not indicated, obtain instructions from Architect before proceeding.

C. Resilient Seal Type Covers: Having flat exposed surface without crevices that could collect dirt; designed to withstand expected movement without extrusion of seal from joint assembly; for floors, provide style that is flush with top of floor covering; for exterior joints, weathertight.

D. Sliding Cover Plate Type Covers: Provide plate with beveled edges and neat fit that does not collect dirt.

E. Covers In Gypsum Board Assemblies: Provide style with anchoring wings that can be completely covered by joint compound.

F. Covers In Fire Rated Assemblies: Provide cover assembly having fire rating equivalent to that of assembly into which it is installed.

1. Acceptable Evaluation Agencies: UL (DIR) and ITS (DIR).

2.4 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper; or ASTM B308/B308M, 6061 alloy, T6 temper.

1. Exposed Finish at Floors: Mill finish or natural anodized.
2. Exposed Finish at Walls and Ceilings: As selected by Architect from manufacturer's standard range of options, unless indicated otherwise.

B. Resilient Seals:

1. For Interior Walls and Ceilings: Pre-fabricated elastomeric material.
2. For Exterior Walls: Silicone.
3. Color: As selected by Architect from manufacturer's standard range, unless indicated otherwise.

C. Anchors and Fasteners: As recommended by cover manufacturer.

D. Ferrous Metal Anchors: Galvanized where embedded in concrete or in contact with cementitious materials.

E. Threaded Fasteners: Stainless steel.

F. Backing Paint for Aluminum Components in Contact with Cementitious Materials: Asphaltic type.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.

B. Verify that frames and anchors installed by others are in correct locations and suitable for installation of remainder of assembly.

3.2 INSTALLATION

A. Install components and accessories in accordance with manufacturer's instructions.

B. Align work plumb and level, flush with adjacent surfaces.

C. Rigidly anchor to substrate to prevent misalignment.

3.3 PROTECTION

A. Do not permit traffic over unprotected floor joint surfaces.

END OF SECTION

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Non-fire-rated hollow metal doors and frames.

B. Hollow metal frames for wood doors.

C. Fire-rated hollow metal doors and frames.

D. Hollow metal borrowed lites glazing frames.

1.3 RELATED REQUIREMENTS

A. Section 087100 - Door Hardware.

B. Section 088000 - Glazing.

C. Section 090000 - Finish Schedule.

D. Section 099123 - Interior Painting: Field painting.

1.4 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames and Frame Anchors.

C. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames.

D. ANSI/SDI A250.8 - Specifications for Standard Steel Doors and Frames (SDI-100).

E. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.

H. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

I. BHMA A156.115 - Hardware Preparation in Steel Doors and Frames.

J. ICC A117.1 - Accessible and Usable Buildings and Facilities.

K. ITS (DIR) - Directory of Listed Products.

L. NAAMM HMMA 830 - Hardware Selection for Hollow Metal Doors and Frames.

M. NAAMM HMMA 831 - Hardware Locations for Hollow Metal Doors and Frames.

N. NAAMM HMMA 840 - Guide Specifications for Receipt, Storage and Installation of Hollow Metal Doors and Frames.

O. NAAMM HMMA 861 - Guide Specifications for Commercial Hollow Metal Doors and Frames.

P. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

Q. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.

R. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames.

S. UL (DIR) - Online Certifications Directory.

T. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with wall construction for anchor placement.
2. Coordinate installation of hardware.
3. Coordinate installation of glazing.
4. Coordinate installation of electrical connections to electrical hardware items.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes; and one copy of referenced standards/guidelines.

C. Door Schedule: Provide schedule coordinated with numbering on drawings and hardware schedule. Indicate door types and openings receiving electrified hardware.

D. Shop Drawings: Details of each opening, showing elevations, glazing, frame profiles, and any indicated finish requirements.

E. Installation Instructions: Manufacturer's published instructions, including any special installation instructions relating to this project.

F. Manufacturer's Certificate: Certification that products meet or exceed specified requirements.

1.7 QUALITY ASSURANCE

A. Conform to requirements of ANSI A250.8 - SDI-100, and as supplemented in this Section.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

C. Manufacturer Qualifications: Provide hollow metal doors and frames from SDI Certified manufacturer: https://steeldoor.org/sdi-certified/#sle.

D. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

E. Maintain at project site copies of reference standards relating to installation of products specified.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with NAAMM HMMA 840 or ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.

B. Protect with resilient packaging; avoid humidity build-up under coverings; prevent corrosion and adverse effects on factory applied painted finish.

C. Inspect hollow metal products upon delivery for damage. Minor damage may be repaired provided refinishing is equal in all respects to new work and is acceptable to Architect; otherwise replace damaged items with new products as specified.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Ceco Door, an Assa Abloy Group company: www.assaabloydss.com/#sle.
2. Curries, an Assa Abloy Group company: www.assaabloydss.com.
3. Deansteel Manufacturing Company, Inc: www.deansteel.com/#sle.
4. Mesker, dormakaba Group: www.meskeropeningsgroup.com/#sle.
5. Republic Doors, an Allegion brand: www.republicdoor.com/#sle.
6. Steelcraft, an Allegion brand: www.allegion.com/#sle.

7. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Requirements for Hollow Metal Doors and Frames:

1. Steel Sheet: Comply with one or more of the following requirements; galvannealed steel complying with ASTM A653/A653M, cold-rolled steel complying with ASTM A1008/A1008M, or hot-rolled pickled and oiled (HRPO) steel complying with ASTM A1011/A1011M, commercial steel (CS) Type B, for each.
2. Accessibility: Comply with ICC A117.1 and ADA Standards.
3. Door Edge Profile: Manufacturers standard for application indicated.
4. Typical Door Face Sheets: Flush, unless otherwise indicated on Drawings.
5. Hardware Preparations, Selections and Locations: Comply with NAAMM HMMA 830 and NAAMM HMMA 831 or BHMA A156.115 and ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.
    a. Prepare doors and frames for hardware in accordance with templates provided under Section 087100 - Door Hardware.
6. Zinc Coating for Typical Interior: Provide metal components zinc-coated (galvanized) and/or zinc-iron alloy-coated (galvannealed) by the hot-dip process in accordance with ASTM A653/A653M, with manufacturer's standard coating thickness, unless noted otherwise for specific hollow metal doors and frames.
    a. Based on SDI Standards: A40/ZF120 (galvannealed) for exterior doors. Coating not required for typical interior door applications. Provide at least A60/ZF180 (galvannealed) for corrosive locations.

B. Combined Requirements: If a particular door and frame unit is indicated to comply with more than one type of requirement, comply with the specified requirements for each type; where two requirements conflict, comply with the most stringent.

2.3 HOLLOW METAL DOORS

A. Interior Doors, Non-Fire-Rated:

1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
    a. Level 2 - Heavy-duty.
    b. Physical Performance Level B, 500,000 cycles; in accordance with ANSI/SDI A250.4.
    c. Model 1 - Full Flush.
    d. Door Face Metal Thickness: 18 gauge, 0.042 inch, minimum.
2. Door Core Material: Manufacturers standard core material/construction and in compliance with requirements.
3. Door Thickness: 1-3/4 inches, nominal.
4. Door Finish: Factory primed and field finished.

B. Interior Doors, Fire-Rated:

1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).

a. Level 2 - Heavy-duty.

b. Physical Performance Level B 500 000 cycles; in accordance with ANSI/SDI A250.4.

c. Model 1 - Full Flush.

d. Door Face Metal Thickness: 18 gauge, 0.042 inch, minimum.

2. Fire Rating: As indicated on Door Schedule, tested in accordance with UL 10C and NFPA 252 ("positive pressure fire tests").

a. Temperature-Rise Rating (TRR) Across Door Thickness: In accordance with local building code and authorities having jurisdiction.

b. Provide units listed and labeled by UL (DIR) or ITS (DIR).

c. Attach fire rating label to each fire rated unit.

3. Door Core Material: Manufacturers standard core material/construction in compliance with requirements.

4. Door Thickness: 1-3/4 inches, nominal.

5. Door Finish: Factory primed and field finished.

2.4 HOLLOW METAL FRAMES

A. Comply with standards and/or custom guidelines as indicated for corresponding door in accordance with applicable door frame requirements.

B. Interior Door Frames, Non-Fire Rated: Full profile/continuously welded type.

1. Frame Metal Thickness: 16 gage, 0.053 inch, minimum, for doors up to 42 inches wide.

2. Frame Metal Thickness: 14 gage, 0.067 inch, minimum, for doors greater than 42 inches wide.

3. Frame Metal Thickness: 14 gage, 0.067 inch, minimum, for doors with continuous hinges, regardless of width.

4. Frame Finish: Factory primed and field finished.

C. Door Frames, Fire-Rated: Full profile/continuously welded type.

1. Fire Rating: Same as door, labeled.

2. Frame Metal Thickness: 16 gage, 0.053 inch, minimum.

3. Frame Finish: Factory primed and field finished.

D. Frames for Wood Doors: Comply with frame requirements in accordance with corresponding door.

1. Frame Metal Thickness: 16 gage, 0.053 inch, minimum.

E. Borrowed Lites Glazing Frames: Construction and face dimensions to match door frames, and as indicated on drawings.

1. Frame Metal Thickness: 18 gage, 0.042 inch, minimum.

F. Provide mortar guard boxes for hardware cut-outs in frames to be installed in masonry or to be grouted.

G. Frames in Masonry Walls: Size to suit masonry coursing with head member 4 inches high to fill opening without cutting masonry units.

H. Frames Wider than 48 inches: Reinforce with steel channel fitted tightly into frame head, flush with top.

2.5 FINISHES

A. Primer: Rust-inhibiting, complying with ANSI/SDI A250.10, door manufacturer's standard.

B. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15 mil, 0.015 inch dry film thickness (DFT) per coat; provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.6 ACCESSORIES

A. Glazing: As specified in Section 088000 and 088813.

B. Glazing Stops at Lites: Formed sheet steel, mitered or butted corners on secure side with non-removable stops on non-secure side.

1. Style: Flush.

C. Mechanical Fasteners for Concealed Metal-to-Metal Connections: Self-drilling, self-tapping, steel with electroplated zinc finish.

D. Silencers: Resilient rubber or vinyl, fitted into drilled hole; provide three on strike side of single door, three on center mullion of pairs, and two on head of pairs without center mullions.

E. Temporary Frame Spreaders: Provide for factory- or shop-assembled frames.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Verify that finished walls are in plane to ensure proper door alignment.

3.2 PREPARATION

A. Coat inside of frames to be installed in masonry or to be grouted, with bituminous coating, prior to installation.

3.3 INSTALLATION

A. Install doors and frames in accordance with manufacturer's instructions and related requirements of specified door and frame standards or custom guidelines indicated.

B. Install fire rated units in accordance with NFPA 80.

C. For frame installation, use concealed anchors where possible. Where exposed frame anchors are required, countersink fasteners, fill, and sand smooth.

D. Install door hardware as specified in Section 087100.

1. Comply with recommended practice for hardware placement of doors and frames in accordance with ANSI/SDI A250.6 or NAAMM HMMA 861.

E. Comply with glazing installation requirements of Section 088000.

F. Touch up damaged factory finishes.

3.4 TOLERANCES

A. Clearances Between Door and Frame: Comply with related requirements of specified frame standards or custom guidelines indicated in accordance with SDI 117 or NAAMM HMMA 861.

B. Maximum Diagonal Distortion: 1/16 inch measured with straight edge, corner to corner.

3.5 ADJUSTING

A. Adjust for smooth and balanced door movement.

3.6 SCHEDULE

A. Refer to Door and Frame Schedule on the drawings.

END OF SECTION

This page intentionally left blank

SECTION 081416 - FLUSH WOOD DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Flush wood doors.

1.3 RELATED REQUIREMENTS

A. Section 081113 - Hollow Metal Doors and Frames.

B. Section 087100 - Door Hardware.

C. Section 088000 - Glazing.

D. Section 088813 - Fire-Rated Glazing.

E. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

1.4 REFERENCE STANDARDS

A. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

B. ASTM E413 - Classification for Rating Sound Insulation.

C. AWI (QCP) - Quality Certification Program.

D. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards, 2nd Edition.

E. ITS (DIR) - Directory of Listed Products.

F. NEMA LD 3 - High-Pressure Decorative Laminates.

G. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

H. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives.

I. UL (DIR) - Online Certifications Directory.

J. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies.

K. WDMA I.S. 1A - Interior Architectural Wood Flush Doors.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with door opening construction, door frame and door hardware installation.
2. Coordinate installation of glazing.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Indicate door core materials and construction; veneer species, type and characteristics.

C. Door Schedule: Provide schedule coordinated with numbering on drawings and hardware schedule. Indicate door types and openings receiving electrified hardware.

D. Shop Drawings: Show doors and frames, elevations, sizes, types, swings, undercuts, beveling, blocking for hardware, factory machining, factory finishing, cutouts for glazing and other details.

1. Provide information as required by AWI/AWMAC/WI (AWS).
2. Include certification program label.

E. Verification Samples: Submit two samples of door veneer, 6 by 6 inch in size illustrating each finish and sheen.

F. Certificate: Submit labels and certificates required by quality assurance and quality control programs.

G. Test Reports: Show compliance with specified requirements for the following:

1. Sound-retardant doors and frames; sealed panel tests are not acceptable.

H. Specimen warranty.

I. Warranty, executed in Owner's name.

1.7 QUALITY ASSURANCE

A. Maintain one copy of the specified door quality standard on site for review during installation and finishing.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section, with not less than three years of documented experience.

1. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.

C. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than three years of documented experience.

D. Woodwork Quality Assurance Program:

1. Comply with AWI (QCP) woodwork association quality assurance service/program in accordance with requirements for work specified in this section; www.awiqcp.org/#sle.
2. Provide labels or certificates indicating that the installed work complies with AWI/AWMAC/WI (AWS) requirements for grade or grades specified.
3. Provide designated labels on shop drawings as required by quality assurance program.
4. Provide designated labels on installed products as required by quality assurance program.
5. Submit documentation upon completion of installation that verifies this work is in compliance with specified requirements.

E. Obtain all doors of each type specified from a single manufacturer to assure uniformity of appearance and construction.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Package, deliver and store doors in accordance with specified quality standard.

B. Accept doors on site in manufacturer's packaging, and inspect for damage.

C. Protect doors with resilient packaging sealed with heat shrunk plastic; do not store in damp or wet areas or areas where sunlight might bleach veneer; seal top and bottom edges with tinted sealer if stored more than one week, and break seal on site to permit ventilation.

1.9 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide manufacturer's warranty on interior doors for the life of the installation. Complete forms in Owner's name and register with manufacturer.

1. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers - High Pressure Decorative Laminate Faced Doors:

1. Basis of Design: VT Industries, Inc.; Heritage Collection: www.vtindustries.com.
2. Other Acceptable Manufacturers:

a. Eliason Corporation, a Division of Senneca Holdings: www.eliasoncorp.com/#sle.

b. Forte Opening Solutions: www.forteopenings.com/#sle.

c. Oregon Door: www.oregondoor.com/#sle.

d. Poncraft Door Co.: www.poncraft.com.

3. Substitutions: See Section 016000 - Product Requirements.

2.2 DOORS

A. Doors:

1. Quality Standard: Custom Grade, Extra Heavy Duty performance, in accordance with WDMA I.S. 1A.

2. High Pressure Decorative Laminate (HPDL) Faced Doors: 5-ply unless otherwise indicated.

B. Interior Doors: 1-3/4 inches thick unless otherwise indicated; flush construction.

1. Provide solid core doors at each location, unless otherwise noted.

2. Fire Rated Doors: Tested to ratings indicated on drawings in accordance with UL 10C - Positive Pressure; Underwriters Laboratories Inc (UL) or Intertek/Warnock Hersey (WHI) labeled without any visible seals when door is open.

3. Smoke and Draft Control Doors: In addition to required fire rating, provide flush wood door assemblies in compliance with WDMA I.S. 1A requirements for "S" label; no additional gasketing or edge sealing allowed.

4. Sound-Rated Doors: Minimum STC as indicated on drawings, calculated in accordance with ASTM E413, tested in accordance with ASTM E90.

5. High pressure decorative laminate (HPDL) finish as scheduled..

2.3 DOOR AND PANEL CORES

A. General Requirement: Provide door cores fully bonded to stiles and rails.

B. Non-Rated Solid Core and 20 Minute Rated Doors: Type structural composite lumber core (SCLC), structural composite lumber stiles and rails; plies and faces as indicated.

C. Fire-Rated Doors: Mineral core type, with fire resistant composite core (FD), plies and faces as indicated above; with core blocking as required to provide adequate anchorage of hardware without through-bolting.

D. Sound-Rated Doors: Equivalent to type, with particleboard core (PC) construction as required to achieve STC rating specified; plies and faces as indicated above.

2.4 DOOR FACINGS

A. High Pressure Decorative Laminate (HPDL) Facing for Fire Doors: NEMA LD 3, HGF; color as scheduled in Section 090000 - Finish Schedule ; textured, low gloss finish.

B. High Pressure Decorative Laminate (HPDL) Facing for Non-Fire-Rated Doors: NEMA LD 3, HGS; _____; textured, low gloss finish.

C. Facing Adhesive: Type I - waterproof.

2.5 DOOR CONSTRUCTION

A. Fabricate doors in accordance with door quality standard specified.

B. Cores Constructed with stiles and rails:

1. Provide solid blocks at lock edge and top of door for closer for hardware reinforcement.

a. Provide solid blocking for other throughbolted hardware.

2. Provide minimum 6 inch high solid wood top rail and minimum 16 inch high solid wood bottom rail, all doors; fire-resistant treated at fire-rated doors.

C. Stile Edges: PVC, full width of door sufficient to cover exposed edges of HPDL facing.

1. Thickness: 3 millimeter, minimum.

2. Color: Wood grain, as selected by Architect from manufacturer's full range.

D. Top and Bottom Rails: Factor sealed.

E. Glazed Openings: Non-removable stops on non-secure side; sizes and configurations as indicated on drawings.

F. Factory machine doors for hardware other than surface-mounted hardware, in accordance with hardware requirements and dimensions.

G. Factory fit doors for frame opening dimensions identified on shop drawings, with edge clearances in accordance with specified quality standard.

H. Provide edge clearances in accordance with the quality standard specified.

2.6 ACCESSORIES

A. Hollow Metal Door Frames: See Section 081113.

B. Glazing: See Section 088000.

C. Glazing Stops - Doors Up to and Including 20-minute Ratings: Wood, of same species as door facing, mitered corners; prepared for countersink style tamper proof screws.

1. Profile: Flush bead.

2. At doors with 20-minute fire protection ratings, provide wood beads and metal glazing clips approved for such use.

D. Glazing Stops - Doors with Ratings Exceeding 20-minutes: Wood veneer laminated to manufacturer's fire-rated glazing frame to maintain tested assembly rating.

1. Veneer Type and Finish: Match door veneer.

2. Fire Rating: As scheduled for applicable door assembly.

E. Fire Rated Glazing: See Section 088813.

F. Door Hardware: See Section 087100.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.

3.2 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and specified quality standard.

1. Install fire-rated doors in accordance with NFPA 80, ITS (DIR), and UL (DIR) requirements.

2. Install smoke and draft control doors in accordance with NFPA 105 requirements.

B. Factory-Finished Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.

C. Adjust width of non-rated doors by cutting equally on both jamb edges.

1. Trim maximum of 3/4 inch off bottom edges.

2. Trim fire-rated doors in strict compliance with fire rating limitations.

D. Use machine tools to cut or drill for hardware.

E. Coordinate installation of doors with installation of frames and hardware.

F. Coordinate installation of glazing.

3.3 TOLERANCES

A. Comply with specified quality standard for fit and clearance tolerances.

B. Comply with specified quality standard for telegraphing, warp, and squareness.

C. Maximum Undercut at Fire-Rated Doors: 3/4 inch clearance to non-combustible finish floor surface.

3.4 ADJUSTING

A. Adjust doors for smooth and balanced door movement.

B. Adjust closers for full closure.

C. Restore finish on all edges of shop finished doors before installation, if fitting or machining is required on site.

3.5 SCHEDULE

A. Refer to Door and Frame Schedule on the Drawings.

END OF SECTION

This page intentionally left blank

SECTION 081613 - FIBERGLASS DOORS AND FRAMES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fiberglass doors.

B. Fiberglass door frames.

1.3 RELATED REQUIREMENTS

A. Section 087100 - Door Hardware.

B. Section 088000 - Glazing.

1.4 REFERENCE STANDARDS

A. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.

B. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

E. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with door opening construction, door frame and door hardware installation.
2. Obtain hardware templates from hardware manufacturer prior to starting fabrication.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard details, installation instructions, hardware and anchor recommendations.

C. Shop Drawings: Indicate layout and profiles; include assembly methods.

1. Indicate product components, including hardware reinforcement locations and preparations, accessories, finish colors, patterns, and textures.

2. Indicate wall conditions, door and frame elevations, sections, materials, gauges, finishes, location of door hardware by dimension, and details of openings; use same reference numbers indicated on drawings to identify details and openings.

D. Selection Samples: Submit two complete sets of color chips, illustrating manufacturer's available finishes, colors, and textures.

E. Manufacturer's qualification statement.

F. Installer's qualification statement.

G. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer; include detailed terms of warranty.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer’s original, unopened, undamaged containers with identification labels intact.

B. Store materials in original packaging, under cover, protected from exposure to harmful weather conditions and from direct contact with water.

1. Store at temperature and humidity conditions recommended by manufacturer.

2. Do not use non-vented plastic or canvas shelters.

3. Immediately remove wet wrappers.

C. Store in position recommended by manufacturer, elevated minimum 4 inches above grade, with minimum 1/4 inch space between doors.

1.9 FIELD CONDITIONS

A. Do not install doors until structure is enclosed.

B. Maintain temperature and humidity at manufacturer's recommended levels during and after installation of doors.

1.10 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five (5) year manufacturer warranty covering materials and workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers - Laminated Fiberglass Doors:

1. Corrim Company: www.corrim.com/#sle.
2. Fib-R-Dor - Chase Doors, a Senneca Co.: www.fibrdor.com.
3. Special-Lite, Inc: www.special-lite.com/.
4. Substitutions: See Section 016000 - Product Requirements.

2.2 DOOR AND FRAME ASSEMBLIES

A. Door and Frame Assemblies: Factory-fabricated, prepared and machined for hardware.

1. Operation: Manual.
2. Screw-Holding Capacity: Tested to 890 pounds, minimum.
3. Surface Burning Characteristics: Flame spread index (FSI) of 0 to 25, Class A, and smoke developed index (SDI) of 450 or less, when tested in accordance with ASTM E84.
4. Flammability: Self-extinguishing when tested in accordance with ASTM D635.
5. Chemical Resistance: Resist degradation due to exposure to tap water and distilled water.

    a. Chlorine-treated moisture in air.
6. Sizes: As indicated on Drawings.
7. Clearance Between Door and Frame: 1/8 inch, maximum.
8. Clearance Between Bottom of Door and Finished Floor: 3/4 inch, maximum; not less than 1/4 inch clearance to threshold.

2.3 COMPONENTS

A. Doors: Fiberglass construction with reinforced core.

1. Type: As indicated on drawings, including swinging doors.
2. Thickness: 1-3/4 inch, nominal.
3. Core Material: Manufacturer's standard core material for application indicated.

4. Construction:

   a. Molded fiberglass shells with color gel coating, bonded into seamless unit; manufacturer's standard subframe and hardware reinforcements.

      1) Fill door panel with foam insulation.

5. Face Sheet Texture: Smooth.

6. Door Panel Configuration: Flush door.

7. Subframe and Reinforcements: Fiberglass pultrusions, polymer foam, stainless steel, or aluminum; no wood.

8. Waterproof Integrity: Provide factory fabricated edges, cut-outs, and hardware preparations of fiberglass reinforced plastic (FRP); provide cut-outs with joints sealed independently of glazing, louver inserts, or trim.

9. Hardware Preparations: Factory reinforce, machine, and prepare for door hardware including field installed items; provide solid blocking for each item; field cutting, drilling or tapping is not permitted; obtain manufacturer's hardware templates for preparation as necessary.

B. Frames: Profiles and dimensions as indicated on Drawings; same type and construction used in mechanical durability test for doors.

1. Profiles: 5-3/4 inches deep, 2 inches wide at jambs, and 2 inches wide at headers.

2. Door Stop: 5/8 inch wide, by 1-7/8 inches deep.

3. Non-Fire-Rated:

   a. Fiberglass reinforced plastic (FRP) with gel-coating matching doors.

4. Mullions: Fixed, fiberglass centerpost; 2 inches wide by 2-3/4 inches deep, nominal.

5. Corner Joints: Mitered with concealed corner blocks or angles of same material as frame; fiberglass and aluminum joined with screws; steel and stainless steel spot welded; sealed watertight with silicone sealant.

6. Hardware Cut-outs: Provide continuous backing or mortar guards of same material as frame, with watertight seal.

7. Frame Anchors: Stainless steel, Type 304; provide three anchors in each jamb for heights up to 84 inches with one additional anchor for each additional 24 inches in height.

8. Reinforcing: Provide manufacturer's standard reinforcing at hinge, strike, and closer locations.

2.4 PERFORMANCE REQUIREMENTS

A. Provide door assemblies that have been designed and fabricated in compliance with specified performance requirements.

B. Water Leakage: No uncontrolled leakage on interior face when tested in accordance with ASTM E331 at differential pressure of 7.5 psf.

C. Air Leakage: Maximum of 0.1 cfm per square foot at 6.27 psf differential pressure, when tested in accordance with ASTM E283.

D. Thermal Transmittance, Exterior Doors: AAMA 1503, U-value of 0.30, maximum, measured on exterior door in size required for this project.

2.5 FINISHES

A. Gel Coating: Ultraviolet (UV) stabilized polyester finish.

1. Thickness: Minimum 15 mils, 0.015 inch wet thickness, plus/minus 3 mils, 0.003 inch.
2. Color: As selected by Architect from manufacturer's standard line of colors.

2.6 HARDWARE

A. Door Hardware: See Section 087100.

2.7 ACCESSORIES

A. Stops for Glazing: Fiberglass, unless otherwise indicated or required by fire rating; provided by door manufacturer to fit factory made openings, with color and texture to match door; fasteners shall maintain waterproof integrity.

1. Glazed Openings: Provide removable stops on interior side.
2. Opening Sizes and Shapes: As indicated on Drawings.

B. Glazing: See Section 088000.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify actual dimensions of openings by field measurements before door fabrication; show recorded measurements on shop drawings.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

B. Clean and prepare substrate in accordance with manufacturer's directions.

C. Protect adjacent work and finish surfaces from damage during installation.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions; do not penetrate frames with anchors.

B. Set units plumb, level, and true-to-line, without warping or racking doors, and with specified clearances; anchor in place.

C. Set thresholds in continuous bed of sealant.

D. Separate aluminum and other metal surfaces from sources of corrosion of electrolytic action at points of contact with other materials.

E. Repair or replace damaged installed products.

3.4 ADJUSTING

A. Lubricate, test, and adjust doors to operate easily, free from warp, twist or distortion, and to fit watertight for entire perimeter.

B. Adjust hardware for smooth and quiet operation.

C. Adjust doors to fit snugly and close without sticking or binding.

3.5 CLEANING

A. Clean installed products in accordance with manufacturer’s instructions prior to owner’s acceptance.

3.6 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 083100 - ACCESS DOORS AND PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Wall- and ceiling-mounted access units.

1.3 RELATED REQUIREMENTS

A. Section 099123 - Interior Painting: Field paint finish.

1.4 REFERENCE STANDARDS

A. ITS (DIR) - Directory of Listed Products.

B. UL (FRD) - Fire Resistance Directory.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate installation with work of other trades, and obtain information on door sizes and exact locations from other trades.
2. Coordinate placement of rough-in openings with Architect in tiled walls and gypsum board ceilings.
3. Coordinate placement of access doors and panels with locations of toilet partitions and urinal screens so that doors or panels are not placed in conflict with partition or screen locations.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide sizes, types, finishes, hardware, scheduled locations, and details of adjoining work.

C. Product Schedule: Include types, locations, sizes, latching or locking provisions & other data pertinent to installation.

D. Manufacturer's Installation Instructions: Indicate installation requirements and rough-in dimensions.

E. Project Record Documents: Record actual locations of each access unit.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.

C. Basis of Design: Specifications are based on access door types and model numbers by the specified basis of design manufacturer. Access door types manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements; and provided that deviations in dimensions and profile are minor, and do not detract substantially from the indicated design intent.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Babcock-Davis: www.babcockdavis.com/sle.

a. Non-Fire-Rated Units: BNW Series, areas viewable by the public.

b. Non-Fire-Rated Units: BNT Series, back of house areas.

c. Fire-Rated Units: BIW Series, areas viewable by the public.

d. Fire-Rated Units: BIT Series, back of house areas.

B. Other Acceptable Manufacturers:

1. Acudor Products Inc.: www.acudor.com.
2. Bauco Access Panel Solutions: www.accesspanelsolutions.com.
3. J. L. Industries: www.jlindustries.com.
4. Karp Associates, Inc.: www.karpinc.com.
5. Larsen's Manufacturing Co.: www.larsensmfg.com.
6. Milcor by Commercial Products Group of Hart & Cooley, Inc.: www.milcorinc.com.
7. Substitutions: See Section 01 6000 - Product Requirements.

C. Wall- and Ceiling-Mounted Units: Factory-fabricated door and frame, fully assembled units with corner joints welded, filled and ground flush; square and without rack or warp; coordinate requirements with type of installation assembly being used for each unit.

1. Panel Material: Steel.

2. Style: As indicated.
    a. Public Areas: Use drywall bead type frame.
    b. Back of House Areas: Exposed frame.
3. Doors:
    a. Doors for Fire-Rated Units: Double-skinned hollow panel, 20 gage minimum thickness.
    b. Doors for Non-Fire-Rated Units: Single thickness with rolled or turned in edges, 16 gage minimum thickness.
4. Frames: 16 gauge, 0.0598 inch, minimum thickness.
5. Insulation for Rated Doors: Non-combustible mineral wool or glass fiber.
6. Units in Fire-Rated Assemblies: Fire rating as required by applicable code for fire-rated assembly that access doors are being installed.
    a. Provide products listed by ITS (DIR) or UL (FRD) as suitable for purpose indicated.
7. Finish: Primed.
8. Size: Fabricate access door frame assemblies to sizes indicated on drawings or, if not indicated, to smallest size which allows free access to concealed work requiring access. Obtain Architect’s approval for rectangular sizes.
    a. Where access to controls, etc. requiring one handed operation within arm's reach is required, provide 8 by 8 inches.
    b. Where access to controls, etc. requiring two-handed operation or rotation within arm's reach is required, provide 12 by 12 inches.
    c. Where upper body access is required (such as above ceilings or beyond arm’s length) provide 18 by 18 inches.
    d. Where full body access is required (such as entering a shaft) provide 24 by 24 inches.
9. Hardware:
    a. Hinge for Fire-Rated-Units: 175 degree steel hinges with non-removable pin.
    b. Hinges for Non-Fire-Rated Units: Concealed, constant force closure spring type.
    c. Latch/Lock: Tamperproof tool-operated cam latch.
    d. Number of Locks/Latches Required: As recommended by manufacturer for size of unit.
    e. Gasketing: Extruded neoprene, around perimeter of door panel.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that rough openings are correctly sized and located.

B. Begin installation only after substrates have been properly prepared, and if the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Review access panel locations during wall framing rough-in to confirm location is coordinated with interior wall finishes.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to proceeding with this work.

B. Prepare surfaces using methods recommended by manufacturer for applicable substrates in accordance with project conditions.

3.3 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Install frames plumb and level in openings, and secure units rigidly in place.

C. Position units to provide convenient access to concealed equipment when necessary.

D. Adjust hardware and panels for proper operation.

E. Remove and replace panels that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Aluminum-framed storefront, with vision glass.

B. Opaque Infill panels of metal.

C. Aluminum doors and frames.

D. Weatherstripping.

1.3 RELATED REQUIREMENTS

A. Section 079200 - Joint Sealants: Sealing joints between frames and adjacent construction.

B. Section 087100 - Door Hardware: Hardware items other than specified in this section.

C. Section 088000 - Glazing: Glass and glazing accessories.

1.4 REFERENCE STANDARDS

A. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

B. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.

C. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.

D. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

A. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

D. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).

G. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

H. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors.

I. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.

J. ASTM E2112 - Standard Practice for Installation of Exterior Windows, Doors and Skylights.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate air sealing of perimeter with adjacent air barrier materials.
2. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this Section; require attendance by all affected installers.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related work, expansion and contraction joint location and details, and field welding required.

D. Selection Samples: For each color specified, submit at least 5 color chips representing Architect's designated color range.

E. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

F. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

G. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.

H. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

I. Designer's qualification statement.

J. Manufacturer's qualification statement.

K. Installer's qualification statement.

L. Specimen warranty.

1.7 QUALITY ASSURANCE

A. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed at the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.

C. Installer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.

1.8 MOCK-UPS

A. See Section 014000 - Quality Requirements for additional requirements.

B. Integrated Exterior Mock-up: Provide mock-up including all components occurring on project. Construct to illustrate component assembly including glazing materials, weep drainage systems, flashings, attachments, anchors, and perimeter sealant for evaluation of workmanship and aesthetics.

1. Locate where directed.
2. Mock-up may remain as part of work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this Section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.10 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.11 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Correct defective Work within a two year period after Date of Substantial Completion.

C. Provide 20 year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Kawneer North America: www.kawneer.com.

a. Interior Frame Series: TriFab VG 451, center set glass.

b. Exterior Frame Series: TriFab VG 601T, front set glass.

c. Door Style: 500 Wide Stile.

B. Other Acceptable Manufacturers:

1. Boyd Aluminum: www.boydaluminum.com/#sle.
2. Manko Window Systems, Inc: www.mankowindows.com/#sle.
3. Oldcastle BuildingEnvelope: www.oldcastlebe.com/#sle.
4. Tubelite, Inc: www.tubeliteinc.com/#sle.
5. YKK AP America, Inc: www.ykkap.com/commercial/#sle.
6. Substitutions: See Section 016000 - Product Requirements.

2.2 ALUMINUM-FRAMED STOREFRONT

A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.

1. Finish: Superior performing organic coatings.

a. Factory finish all surfaces that will be exposed in completed assemblies.

b. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

c. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

2. Finish Color: As selected by Architect from manufacturer's standard line.

3. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.

4. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
5. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
6. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.
7. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
8. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
9. Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and heel bead of glazing compound.

2.3 PERFORMANCE REQUIREMENTS

A. Design Requirements: Design and size components to withstand the specified load requirements without damage or permanent set, when tested in accordance with ASTM E330/E330M, using loads 1.5 times the design wind loads and 10 second duration of maximum load.
   1. Design Wind Loads: Comply with requirements of applicable code.
   2. Member Deflection: Limit member deflection to L/175 of clear span, 3/4 inch total, or to flexure limit of glass in any direction, whichever is less, with full recovery of glazing materials.
   3. Provide reinforced mullion sections as may be required to comply with specified design requirements, for manufacturer's specified system.

B. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on interior face, when tested in accordance with ASTM E331 at pressure differential of 10 psf.
   1. Fastener Heads must be seated and sealed against sill flashing on any fasteners that penetrate through the sill flashing.

C. Air Leakage Laboratory Test: Maximum of 0.06 cu ft/min sq ft of wall area, when tested in accordance with ASTM E283 at 6.24 psf pressure differential across assembly.

D. Condensation Resistance Factor of Framing: 60, minimum, measured in accordance with AAMA 1503.

E. Overall U-factor Including Glazing: 0.40 Btu/(hr sq ft deg F), maximum.

2.4 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken at exterior applications, drainage holes and internal weep drainage system.
   1. Glazing Stops: Flush.

2. Cross-Section: 2 by 4-1/2 inch nominal dimension.
3. Corner Assemblies:
    a. 90-Degree Corners: Manufacturer's standard combination of two pocket corner extrusions.
    b. Corners Other Than 90 Degrees: Manufacturer's standard varying degree pocket corner extrusions with aluminum sheet metal fillers and closures.
4. Reinforced Mullions: As required or recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.

B. Glazing: See Section 088000.

C. Opaque Metal Infill Panels: Insulated, aluminum, with edges formed to fit glazing channel with gaskets.
1. Total Nominal Thickness: 4 inch.
2. Glazing Leg Nominal Thickness: 1 inch.
3. Glazing Bite: As required by manufacturer's
4. Face Sheet:
    a. Material: Aluminum.
    b. Thickness 0.032 inch.
    c. Texture: Smooth.
    d. Finish: Manufacturer's standard superior performing organic coating.
5. Face Substrate Layer: Cement Board.
6. Additional Core: 2# Density Polyisocyanurate insulation core with R-value of 6.0per inch, minimum.
7. Intermediate Substrate: Cement Board.
8. Intermediate Sheet: Same as Face Sheet.
9. Primary Core: 2# Density Polyisocyanurate insulation core with R-value of 6.0 per inch, minimum.
10. Back Substrate Layer: Gypsum Board.
11. Back Sheet:
    a. Material: Aluminum.
    b. Thickness 0.032 inch.
    c. Texture: Smooth.
    d. Finish: Manufacturer's standard superior performing organic coating.
12. Fabrication Tolerances: 0.8% of panel dimension length and width; and (+/-) 1/16" of panel thickness.

13. Thermal Performance:

    a. R-Value: 25.76, minimum.

    b. U-Value: 0.04, minimum.

14. Acceptable Products:

    a. Basis of Design: Mapes Architectural Panels; Mapes-R Plus Rabbet Edge Panels: www.mapespanels.com.

    b. Substitutions: See Section 016000 - Product Requirements.

D. Swing Doors: Glazed aluminum.

1. Thickness: 1-3/4 inches.
2. Top Rail: 5 inches wide.
3. Vertical Stiles: 5 inches wide.
4. Bottom Rail: 10 inches wide.
5. Glazing Stops: Manufacturer's standard snap-in glazing stops with gasketing; removable from inside.

2.5 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209/B209M.

C. Structural Steel Sections: ASTM A36/A36M; shop primed.

D. Fasteners: Stainless steel.

E. Exposed Flashings: Aluminum sheet, 20 gauge, 0.032 inch minimum thickness; finish to match framing members.

F. Concealed Flashings: Stainless steel, 26 gauge, 0.0187 inch minimum thickness.

G. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, compatible with flashing material.

H. Sealant for Setting Thresholds: Non-curing butyl type.

I. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

1. Size gaskets as required by manufacturer of glazing channel frame to provide proper pressure and bite on glazing units.

J. Glazing Accessories: See Section 088000.

2.6 ACCESSORIES

A. Reinforcement: Where fasteners screw-anchor into aluminum less than 1/8 inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive, pressed-in splined grommet nuts.

B. Brackets: High-strength aluminum brackets and reinforcements where possible; otherwise provide non-magnetic stainless steel or galvanized steel complying with ASTM A123/A123M.

C. Bituminous Coatings: Cold-applied asphalt mastic, compounded for 30 mil thickness per coat.

D. Internal System Sealants and Gaskets: As recommended by manufacturer for use within the framing system for fabrication, assembly, and installation. Use products which will remain permanently elastic, non-shrinking, and waterproof.

2.7 FINISHES

A. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

B. Touch-Up Materials: As recommended by coating manufacturer for field application.

2.8 HARDWARE

A. Door Hardware: As specified in Section 087100, except as specified in this Section.

B. Weatherstripping: Wool pile, continuous and replaceable; provide on all doors.

C. Reinforce components internally for door hardware .

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.

3.2 INSTALLATION

A. Install wall system in accordance with manufacturer's instructions.

1. Install storefronts in accordance with ASTM E2112.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight end and back dams.

G. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Set thresholds in bed of sealant and secure.

J. Install hardware using templates provided.

K. Install glass in accordance with Section 088000, using glazing method required to achieve performance criteria.

L. Install internal system sealants as installation progresses. Seal sill pan splices, end dams, water deflectors, and other components to ensure that proper water weepage paths are established and maintained within the system.

M. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.3 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch per 3 feet non-cumulative or 0.06 inch per 10 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

C. Location: Limit variation from plane or dimensioned location to 1/8 inch in 12 feet, non-cumulative, and 1/2 inch in overall length of member.

3.4 FIELD QUALITY CONTROL

A. Provide services of storefront manufacturer's field representative to observe for proper installation of system and submit report.

B. See Section 014000 - Quality Requirements for general testing and inspection requirements.

C. Water-Spray Test: Provide water spray quality test of installed storefront components in accordance with AAMA 501.2 during construction process and before installation of interior finishes.

1. Successful Test Result: No water leakage.

2. Perform a minimum of two tests in each designated area as directed by Architect.

3. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

D. Provide field testing of installed storefront system by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.

1. Mock-up Testing: Perform test of mock-up prior to installation of insulation, cladding and trim but after installation of all fasteners, brackets, supports for cladding and trim, and other penetrating elements.

2. Building Testing: Perform tests on building prior to installation of cladding and trim but after installation of all fasteners for cladding and trim and after installation of other penetrating elements. Perform testing at 10%, 50%, and 70% completion of air barrier installation.

   a. Perform a minimum of two tests of each type in each designated area as directed by Architect.

   b. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf.

   a. Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.

4. Field test for air leakage in accordance with ASTM E783 with uniform static air pressure difference of 1.57 psf.

   a. Maximum allowable rate of air leakage is 0.09 cfm/sq ft.

E. Repair or replace storefront components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.5 ADJUSTING

A. Adjust operating hardware for smooth operation.

3.6 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, and take care to remove dirt from corners and to wipe surfaces clean.

3.7 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 085653 - SECURITY WINDOWS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Security transaction windows.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.

B. SSPC-Paint 33 - Coal Tar Mastic Coating, Cold-Applied.

C. UL 752 - Standard for Bullet-Resisting Equipment.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's published data showing materials, construction details, dimensions of components, and finishes.

C. Shop Drawings: Drawings prepared specifically for this project, showing plans, elevations, sections, details of construction, anchorage to other work, hardware, and glazing.

1. For new work show required opening dimensions and allowance for field deviation.

D. Test Reports: Test reports for specific window model and glazing to be furnished, showing compliance with specified requirements; window and glazing may be tested separately, provided window test sample adequately simulates the glazing to be used.

1. Include testing agency qualifications.
2. For structural, forced entry, and ballistic tests, provide details on method of anchorage to test frame.

E. Samples for Selection of Applied Finishes: Color charts for factory finishes.

F. Coordination Drawings: For each window opening, show locations and details of items necessary to anchor windows that must be installed by others, in sufficient detail that installer of those items can do so correctly without reference to the actual window itself.

G. Manufacturer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Firm with at least 5 years experience in the manufacture of windows of the type specified and able to provide test reports showing that their standard manufactured products meet the specified requirements; custom designed products not acceptable.

B. Testing Agency Qualifications: Independent testing agency able to show experience in conducting tests of the type specified and:

1.6 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Provide manufacturer's warranty agreeing to repair or replace windows and window components that fail within three years after Date of Substantial Completion due to, but not limited to, the following:

1. Structural failure, failure of welds, and deterioration of metals and finishes beyond that expected under detention use and normal weathering.
2. Failure of glazing due to excessive deflection of supporting members under wind load.

PART 2 PRODUCTS

2.1 ASSEMBLIES

A. Security and Detention Windows:

1. Dimensions, profiles, features, and performance specified and indicated on drawings are required; do not deviate unless specifically approved by Architect under substitution procedures; see Section 016000.
2. Design to fit openings indicated on drawings; design to accommodate deviation of actual construction from dimensions indicated on drawings.
3. Fabricate frames and sash with corners mitered or coped full depth with concealed welded joints.
4. Design anchorages to provide performance equivalent to that required for window unit; provide anchorages at least equivalent to those by which the tested units were anchored to the test frame.
5. Separate dissimilar metals to prevent corrosion by galvanic action by painting contact surfaces with primer or with sealant or tape recommended by manufacturer for the purpose.
6. Weld components before finishing and in concealed locations, to greatest extent possible; minimize distortion and discoloration of finish; remove residue of welding; grind exposed welds smooth and finish to match.
7. Label units to indicate which side is which, such as inside/outside or secure/non-secure; use labels that are removable after installation but durable enough not to be lost during delivery, storage, handling, and installation.

2.2 SECURITY TRANSACTION WINDOWS

A. Security Transaction Windows with Deal Tray and Voice Port:

1. Location: Built within interior wall, as indicated on drawings.
2. Type of Use: Walk-up.
3. Ballistic Resistance: Tested to meet UL 752, Level 4.
4. Window Type: Fixed.
    a. Mounting: Projected from the wall surface.
    b. Window Size: As indicated on drawings.
    c. Size of Counter Space: Manufacturer's standard size.
    d. Counter Material: 18 gauge stainless steel with #4 finish.
    e. Frame Material: Aluminum.
        1) Finish: Natural anodized.
5. Glazing: Laminated type, clear, and ballistic resistant.
6. Communication: Standard talk-through portal.
7. Basis of Design Products:
    a. Total Security Solutions; Hole and Backer Transaction Window TSS-004 L/S: www.tssbulletproof.com/..
    b. Substitutions: See Section 016000 - Product Requirements.

2.3 ASSEMBLY COMPONENTS

A. Frame Anchors: Mild steel plates, shapes, or bars, concealed in completed construction; provide anchorage devices as necessary to securely fasten windows to adjacent construction; use security fasteners for exposed anchors.

1. Provide minimum of two anchors per side of window plus one additional anchor for each 18 inches or fraction thereof more than 36 inches in height or width.

B. Glazing Seals: Factory installed; molded EPDM or neoprene compressible gaskets and compression strips.

C. Security Fasteners: Operable only by tools produced by fastener manufacturer or manufacturer's licensee; head style appropriate to installation conditions, strength, and finish of materials being fastened; use countersunk heads wherever possible.

D. Deal Trays: Formed stainless steel, recessed into counter or sill for mounting under glazing frame.

1. Style: Plain curved recess welded into counter or sill.
2. Clear Opening Height: 1-1/2 inches.
3. Tray Dimensions: 12 by 8 inches, wide by deep.

E. Bituminous Paint: Cold-applied asbestos-free asphalt mastic, complying with SSPC-Paint 33; 30 mils, 0.030 inch minimum thickness per coat.

2.4 FINISHES

A. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils thick.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that window openings are ready for installation of windows.

B. Verify that correct embedded anchors are in place and in proper location; repair or replace anchors as required to achieve satisfactory installation.

C. Notify Architect if conditions are not suitable for installation of windows; do not proceed until conditions are satisfactory.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions and drawing details.

B. Install windows in correct orientation (inside/outside or secure/non-secure).

C. Anchor windows securely in manner so as to achieve performance specified.

D. Separate metal members from concrete and masonry using bituminous paint.

E. Set sill members and sill flashing in continuous bead of sealant.

3.3 CLEANING

A. Clean exposed surfaces promptly after installation without damaging finishes.

B. Remove and replace defective work.

3.4 CLOSEOUT ACTIVITIES

A. Demonstrate operation and maintenance to designated Owner personnel.

END OF SECTION

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Automatic operators.
4. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 01 Section "General Conditions".
2. Division 06 Section “Rough Carpentry”.
3. Division 06 Section “Finish Carpentry”.
4. Division 08 Section “Operations and Maintenance”.
5. Division 08 Section “Hollow Metal Doors and Frames”.
6. Division 08 Section “Flush Wood Doors”.
7. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.
8. Division 26 Section "Electrical”
9. Division 28 Section “Access Control Devices”.

D. Codes and References: Comply with the version adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. UL/ULC and CSA C22.2 - Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.
8. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:

    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

    a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
    b. Complete (risers, point-to-point) access control system block wiring diagrams.
    c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

1.4 CLOSEOUT SUBMITTALS

A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

1.5 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.6 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.7 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.8 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Hardware shall not have any visible manufacturer names on exposed materials, except cylinders, when the door is in a closed position.

2.2 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.
b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.
d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.

5. Manufacturers:

a. Hager Companies (HA) - BB Series, 5-knuckle.
b. Ives (IV) - 5BB Series, 5-knuckle.
c. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.3 CONTINUOUS HINGES

A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum

overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:.

    a. Hager Companies (HA).
    b. Ives (IV).
    c. Pemko (PE).

2.4 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
5. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Rockwood (RO).
    c. Trimco (TC).

B. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Pulls shall be provided with a 10” clearance from the finished floor on the push side to accommodate wheelchair accessibility.
5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets. When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
6. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Hiawatha, Inc. (HI).
    c. Rockwood (RO).

2.5 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

1. Manufacturers:

a. Match Existing, Field Verify.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Match Facility Standard.

C. Large Format Interchangeable Cores: Provide removable cores (LFIC) as specified, core insert, removable by use of a special key, and for use with only the core manufacturer's cylinder and door hardware.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

a. Establish new grand master ‘Y’ under Bristol board of Education system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Three (3).
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).
4. Construction Control Keys (where required): Two (2).
5. Permanent Control Keys (where required): Two (2).

F. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.6 KEY CONTROL

A. Key Control Software: Provide software that offers solutions for master key system design and management, key, key ring, and item issuance, cylinder and core pinning, personal records and inventories and building, door, and floor plans. Software shall come with the option for additional services that provide custom data integration, on-site and virtual training, consulting, technical support, and custom development.

1. Key Control: System shall manage all master key systems, keys, key rings, key holders and key requests. It shall provide total key control showing outstanding keys, overdue keys (with automatic notifications), key symbols, bittings, keyways, etc. and the ability to include all systems (multiple key manufacturers supported) and buildings in one database.
2. Master Keying: Software shall provide a comprehensive master key system generator compatible with multiplex systems (key sections, keyways, angles) along with a core pinning calculator. Master keying feature shall have automatic configurable key numbering and connection with key cutting machines.
3. Facility Management: Software shall reference every building, floor, and door of your facilities while identifying the operating keys of every door and generate control reports.
4. Available options shall include.

    a. Simple K Connect, cloud based access for cloud-hosted customers allowing platform access from any web browser with no installation required.
    b. Mobile Application for Key Deliveries: Display the list of keys issued, key policy, and capture the signature in the field.

5. Manufacturers:

    a. Medeco (MC) - Simple K.

B. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

    a. Lund Equipment (LU).
    b. MMF Industries (MM).
    c. Telkee (TK).

2.7 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ML2000 Series.

b. Sargent Manufacturing (SA) - 8200 Series.
c. Schlage (SC) - L9000 Series.

2.8 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.9 ELECTRIC STRIKES

A. Standard Electric Strikes: Electric strikes conforming to ANSI/BHMA A156.31, Grade 1, for use on non-rated or fire rated openings. Strikes shall be of stainless steel construction tested to a minimum of 1500 pounds of static strength and 70 foot-pounds of dynamic strength with a minimum endurance of 1 million operating cycles. Provide strikes with 12 or 24 VDC capability, fail-secure unless otherwise specified. Where specified provide latchbolt and latchbolt strike monitoring indicating both the position of the latchbolt and locked condition of the strike.

1. Manufacturers:

a. HES (HS) - 1500/1600 Series.

B. Surface Mounted Rim Electric Strikes: Surface mounted rim exit device electric strikes conforming to ANSI/BHMA A156.31, Grade 1, and UL Listed for both Burglary Resistance and for use on fire rated door assemblies. Construction includes internally mounted solenoid with two heavy-duty, stainless steel locking mechanisms operating independently to provide tamper resistance. Strikes tested for a minimum of 500,000 operating cycles. Provide strikes with 12 or 24 VDC capability supplied standard as fail-secure unless otherwise specified. Option available for latchbolt and latchbolt strike monitoring indicating both the position of the latchbolt and locked condition of the strike. Strike requires no cutting to the jamb prior to installation.

1. Manufacturers:

a. HES (HS) - 9400/9500/9600/9700/9800 Series.

C. Provide electric strikes with in-line power controller and surge suppressor by the same manufacturer as the strike with the combined products having a five year warranty.

2.10 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer’s catalog and template book for specific requirements.
4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

    a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

7. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
8. Rail Sizing: Provide exit device rails factory sized for proper door width application.
9. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide exit devices with functions and features as follows:

    a. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    b. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    c. No catch points: addition of applied deflectors or other added components are not allowed.
    d. No visible plastic.
    e. Heavy duty end caps with flush and overlapping options made of stainless steel, brass, or bronze with architectural finishes.

f. Constructed of all stainless steel.
g. Stainless steel pullman type latch with deadlock feature.
h. Narrow or wide style exterior trim as specified in the hardware sets.
i. Ten-year limited warranty for mechanical features.

2. Manufacturers:

a. Corbin Russwin Hardware (RU) - PED4000 / PED5000 Series.
b. Sargent Manufacturing (SA) - PE80 Series.
c. Von Duprin (VD) - 35A/98 XP Series.

2.11 SURFACE DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide sex bolt and security type fasteners. Machine screw threads only.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard..

1. Manufacturers:

a. Corbin Russwin Hardware (RU) - DC6000 Series.
b. Norton Rixson (NO) - 7500 Series.
c. Sargent Manufacturing (SA) - 351 Series.

2.12 ELECTROHYDRAULIC DOOR OPERATORS

A. Electrohydraulic Door Operators (High Traffic): Provide ANSI/BHMA A156.19 Certified Products Directory (CPD) listed low energy operators that meet ANSI/BHMA A156.4 requirements and are UL listed for use on fire rated doors and UL10C certified that comply with requirements for the Americans with Disabilities Act (ADA). Operators shall be verified by GreenCircle to offer energy savings of 19% when compared to similar products to accommodate openings up 250 pounds and 48" wide. Provide accessories such as custom templates, special mounting brackets, spacers and drop plates as needed for proper installation. Operators shall accommodate openings up to 200 pounds and 48" wide. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide operators with features as follows:

   a. Non-handed with push and pull side mounting.
   b. Operates as mechanical surface closer during close cycles, when door is opened manually or if power is off.
   c. Activation by push button, hands-free or radio frequency devices.
   d. On board electronics to collect usage and cycle count data to facilitate preventative maintenance/diagnostics.
   e. Two-year limited warranty.
   f. Wi-Fi interface where the operator is a secure, password protected WiFi hot spot with no connection to building's IT required.
      1) Simple setup with no app required.
      2) View status and make adjustments without removing the cover.
      3) Built-in logic to support single use restroom applications with no external relay boards, logic modules, position switches required.
   g. Mounting backplate to simplify and speed up installation.

2. Operators shall have the following functionality:

   a. Adjustable Hold Open: Amount of time a door will stay in the full open position after an activation.
   b. Blow Open for Smoke Ventilation: Door opens when signal is received from alarm system allowing air or smoke to flow through opening. Door will stay open until signal from alarm system is stopped.
   c. Infinite Hold Open: Door will hold open at set position until power is turned off.
   d. Obstruction Detection: Door closes if it hits an obstruction while opening; door will reverse to open position if it hits an obstruction while closing. Door will stop once it hits an obstruction and will rest against the obstruction until removed.
   e. Open Delay: Delays operator opening for locking hardware.
   f. Overload Safety Shut-Off: After two minutes of receiving a door activation signal, inverter times out and door closes to prevent motor/inverter damage.
   g. Presence Detector Input: Input for external sensor to detect presence at door open or close position only.
   h. Push & Go: As the door is manually opened, the operator "senses" movement and opens door to the full-open position.

i. Selector Mode Switch: Off disables the signal inputs unless Blow Open is activated, on activates the signal inputs, hold open activates the unit (unless Blow Closed is activated) to the hold open position.
j. Vestibule Delay: When the wall switch is pressed, first door in vestibule will open. Second door will open once vestibule door delay has expired. Delay is adjustable.

3. Manufacturers:

a. Norton Rixson (NO) - 6000 Series.

2.13 SURFACE MOUNTED CLOSER HOLDERS

A. Electromagnetic Door Holders: ANSI A156.15, Grade 1 electromagnetic door holder/releases with a minimum 25 to 40 pounds holding power and fail-safe operation; power failure releases door to close.

1. Manufacturers:

a. LCN Door Closers (LC) - SEM7800 Series.
b. Norton Rixson (NO) - 900 Series.
c. Sargent Manufacturing (SA) - 1560 Series.

2.14 DOOR STOPS AND HOLDERS

A. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

a. Burns Manufacturing (BU).
b. Ives (IV).
c. Rockwood (RO).

2.15 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. National Guard Products (NG).
2. Pemko (PE).
3. Reese Enterprises, Inc. (RE).

2.16 ELECTRONIC ACCESSORIES

A. Intelligent Switching Power Supplies: Provide the least number of power supplies at the appropriate amperage level sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.

1. Power supplies shall meet all functions and features as specified herein.

a. UL listed dual voltage 12 or 24 VDC field selectable continuous output.
b. Dedicated fast charger to prolong battery life with low battery cutoff to protect batteries from deep discharge.
c. Enhanced surge immunity for input/output protection
d. Separate, dedicated battery charging circuit to keep locks cooler.
e. Dual-color LED visual notification to prevent applying incorrect voltages to the power supply.
f. Instant auto-switch to battery on AC loss.
g. Expandable up to 16 outputs in the standard enclosure
h. Integrated fire alarm interface to allow main output shutdown or disconnect on a per output basis when using an R8 output module.
i. Network ready and remotely manage locks and connected devices when using an M8 managed output module on network models.
j. Lifetime replacement, no-fault, no questions asked warranty.

2. Manufacturers:

a. Life Safety Power (LP).
b. Securitron (SU) - AQL Series.

2.17 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine and wood screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.18 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.

E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Manufacturer’s Abbreviations:

1. MK - McKinney
2. PE - Pemko
3. RO - Rockwood
4. RU - Corbin Russwin
5. SA - SARGENT
6. HS - HES
7. NO - Norton Rixson
8. OT - Other
9. SU - Securitron

END OF SECTION 087100

SECTION 088000 - GLAZING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Insulating glass units.

B. Monolithic glazing units.

C. Plastic films.

D. Glazing compounds.

1.3 RELATED REQUIREMENTS

A. Section 079200 - Joint Sealants: Sealants for other than glazing purposes.

B. Section 081113 - Hollow Metal Doors and Frames : Frames for sidelites.

C. Section 081416 - Flush Wood Doors : Doors with glazed lites.

D. Section 084113 - Aluminum-Framed Entrances and Storefronts: Frames for storefront assemblies.

1.4 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

C. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.

D. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

E. ASTM C1036 - Standard Specification for Flat Glass.

F. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

G. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass.

H. ASTM C1193 - Standard Guide for Use of Joint Sealants.

I. ASTM C1376 - Standard Specification for Pyrolytic and Vacuum Deposition Coatings on Flat Glass.

J. ASTM E1300 - Standard Practice for Determining Load Resistance of Glass in Buildings.

K. ASTM E2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation.

L. ASTM F1233 - Standard Test Method for Security Glazing Materials And Systems.

M. GANA (GM) - GANA Glazing Manual.

N. GANA (LGRM) - Laminated Glazing Reference Manual.

O. GANA (SM) - GANA Sealant Manual.

P. IGMA TM-3000 - North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial & Residential Use.

Q. NFRC 100 - Procedure for Determining Fenestration Product U-factors.

R. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

S. NFRC 300 - Test Method for Determining the Solar Optical Properties of Glazing Materials and Systems.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this section; require attendance by each of the affected installers.

1. Discuss installation requirements and limitations, coordination with other affected installers, and special applications.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data on Each Glazing Type: Provide structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

D. Samples: Submit two samples 12 by 12 inch in size of insulating, laminated, and decorative glass units.

E. Certificate: Certify that products of this section meet or exceed specified requirements.

F. Product Test Reports: For coated glass, insulating glass and glazing sealants, for tests performed by a qualified testing agency.

1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

G. Preconstruction adhesion and compatibility test report.

H. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with GANA (GM), GANA (SM), GANA (LGRM), and IGMA TM-3000 for glazing installation methods.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum five years of documented experience.

1. Provide certified glass products through ANSI accredited certifications that include plant audits and independent laboratory performance testing.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years documented experience.

D. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

E. Provide each type of glass, primary sealant, and gasket from a single manufacturer with not less than five years documented experience in the production of required materials.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's instructions for shipping, handling, storing, and protection of glass and glazing materials. Exercise exceptional care to prevent edge damage to glass, and damage to coatings.

1.9 FIELD CONDITIONS

A. Do not install glazing when ambient temperature is less than 40 degrees F.

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

C. Install sealants only when ambient temperature conditions can be maintained at or above 40 degrees F during installation and 48 hours immediately following installation.

1.10 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Insulating Glass Units: Provide a ten (10) year manufacturer warranty to include coverage for seal failure, interpane dusting or misting, including providing products to replace failed units.

C. Laminated Glass: Provide a five (5) year manufacturer warranty to include coverage for delamination, including providing products to replace failed units.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Float Glass Manufacturers:

1. Cardinal Glass Industries: www.cardinalcorp.com/#sle.
2. Guardian Glass, LLC: www.guardianglass.com/#sle.
3. Pilkington North America Inc: www.pilkington.com/na/#sle.
4. Saint Gobain North America: www.saint-gobain.com/#sle.
5. Vitro Architectural Glass (formerly PPG Glass): www.vitroglazings.com/#sle.
6. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Provide type and thickness of exterior glazing assemblies to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of glass.

1. Design Pressure: Calculated in accordance with ASCE 7 and requirements in Structural Drawings.
2. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.
3. Where interior glazing is installed adjacent to a walking surface, the differential deflection of two adjacent unsupported edges shall not be greater than the thickness of the panels when a force of 50 pounds per linear foot is applied horizontally to one panel at any point up to 42 inches above the walking surface.
4. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths under specified design load.
5. Design glazing units to reliably perform and remain reliably engaged on all edges under all service and thermal stresses, including those associated with partial shading.
6. Limit center of glass deflection to the lesser of 3/4 inch or L/100 (where L is short side dimension of glass unit), or flexure limit of glass, whichever is less, with full recovery of glazing materials.
7. Assure and confirm compatibility of all materials in contact with each other.
8. Glass thicknesses listed are minimum.

B. Weather-Resistive Barrier Seals: Provide completed assemblies that maintain continuity of building enclosure water-resistive barrier, vapor retarder, and/or air barrier.

1. In conjunction with weather barrier related materials described in other sections, as follows:

a. Air Barriers: See Division 07

2. To utilize inner pane of multiple pane insulating glass units for continuity of vapor retarder and/or air barrier seal.

3. To maintain a continuous vapor retarder and/or air barrier throughout glazed assembly from glass pane to heel bead of glazing sealant.

C. Thermal and Optical Performance: Provide exterior glazing products with performance properties as indicated. Performance properties are in accordance with manufacturer's published data as determined with the following procedures and/or test methods:

1. Center of Glass U-Value: Comply with NFRC 100 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.

2. Center of Glass Solar Heat Gain Coefficient (SHGC): Comply with NFRC 200 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.

3. Solar Optical Properties: Comply with NFRC 300 test method.

2.3 GLASS MATERIALS

A. Float Glass: Provide float glass based glazing unless otherwise indicated.

1. Annealed Type: ASTM C1036, Type I - Transparent Flat, Class 1 - Clear, Quality - Q3.

2. Kind HS - Heat-Strengthened Type: Complies with ASTM C1048.

3. Kind FT - Fully Tempered Type: Complies with ASTM C1048.

4. Fully Tempered Safety Glass: Complies with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.

5. Impact Resistant Safety Glass: Complies with ANSI Z97.1 - Class B, or 16 CFR 1201 - Category II criteria.

6. Thicknesses: As indicated; provide greater thickness as required for exterior glazing wind load design.

B. Laminated Glass: Float glass laminated in accordance with ASTM C1172.

1. Laminated Safety Glass: Complies with ANSI Z97.1 - Class B or 16 CFR 1201 - Category II impact test requirements.

2.4 INSULATING GLASS UNITS

A. Manufacturers:

1. Glass: Any of the manufacturers specified for float glass.

2. Oldcastle BuildingEnvelope: www.obe.com.

3. Viracon, Apogee Enterprises, Inc: www.viracon.com/#sle.

4. Substitutions: See Section 016000 - Product Requirements.

B. Fabricator: Certified by glass manufacturer for type of glass, coating, and treatment involved and capable of providing specified warranty.

C. Insulating Glass Units - General: Types as indicated.

1. Durability: Certified by an independent testing agency to comply with ASTM E2190.
2. Coated Glass: Comply with requirements of ASTM C1376 for pyrolytic (hard-coat) or magnetic sputter vapor deposition (soft-coat) type coatings on flat glass; coated vision glass, Kind CV; coated overhead glass, Kind CO; or coated spandrel glass, Kind CS.
3. Metal-Edge Spacers: Aluminum, bent and soldered corners.
4. Spacer Color: Black.
5. Edge Seal:
    a. Dual-Sealed System: Provide polyisobutylene sealant as primary seal applied between spacer and glass panes, and silicone, polysulfide, or polyurethane sealant as secondary seal applied around perimeter.
    b. Color: Black.
6. Purge interpane space with dry air, hermetically sealed.

D. Type IG-1 - Insulating Glass Units: Vision glass, double glazed.

1. Applications: Exterior glazing unless otherwise indicated.
2. Space between lites filled with argon.
3. Outboard Lite: Fully tempered float glass, 1/4 inch thick, minimum.
    a. Tint: Clear.
    b. Coating: Low-E (passive type), on #2 surface.
        1) Basis of Design: Guardian Glass; SunGuard SNX 70+: www.guardianglass.com/.
4. Inboard Lite: Fully tempered float glass, 1/4 inch thick, minimum.
    a. Tint: Clear.
5. Total Thickness: 1 inch.
6. Thermal Transmittance (U-Value): 0.24, nominal.
7. Visible Light Transmittance (VLT): 66 percent, nominal.
8. Solar Heat Gain Coefficient (SHGC): 0.27, nominal.
9. Visible Light Reflectance, Outside: 14 percent, nominal.
10. Glazing Method: Dry glazing method, gasket glazing.

E. Type IG-2 - Insulating Glass Units: Spandrel glazing.

1. Applications: Exterior spandrel glazing unless otherwise indicated.
2. Space between lites filled with argon.
3. Outboard Lite: Heat-strengthened float glass, 1/4 inch thick, minimum.
    a. Tint: Clear.

b. Coating: Same as on vision units, on #2 surface.

4. Inboard Lite: Heat strengthened unless otherwise required to have tempered safety glazing for compliance with CPSC 16CFR 1201 float glass, 1/4 inch thick.

a. Tint: Clear.

b. Opacifier: Ceramic frit, on #4 surface.

c. Opacifier Color: To be selected by Architect from Manufacturer's standard range.

5. Total Thickness: 1 inch.

6. Thermal Transmittance (U-Value): 0.24, nominal.

7. Glazing Method: Dry glazing method, gasket glazing.

F. IG-3 Insulating Glass Units: Forced Entry Security Glazing.

1. Applications: Where indicated in Drawings.

2. Performance Criteria:

a. Attack Resistance Rating: HP White 5-aa1 rated for 12 minutes, minimum, with 12 pound sledge hammer.

b. Safety Glazing: Complies with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.

3. Space between lites filled with argon.

4. Outboard Lite: Fully tempered float glass, 1/4 inch thick, minimum.

a. Tint: Clear.

b. Coating: Low-E (passive type), on #2 surface.

1) Basis of Design: Solarban 60.

5. Inboard Lite: Manufacturer's proprietary bullet-resistant laminated glass product, clear, thickness as requried to meet performance criteria, with glass interior surface.

a. Thickness: 7/16 inch.

6. Total Thickness: 1-3/16 inch nominal.

a. Coordinate glazing unit overall thickness with framing manufacturer's size limitations.

7. Thermal Transmittance (U-Value): 0.23, nominal.

8. Solar Heat Gain Coefficient (SHGC): 0.38, nominal.

9. Glazing Method: As required to meet performance criteria.

10. Products:

a. Basis of Design: School Guard Glass SG5 IGU: www.schoolguardglass.com.

b. Other Acceptable Products:

1) CHILDGARD ACCESSGARD 2118.

2) Oldcastle BuildingEnvelope ArmorGarde Plus.

3) McGrory Glass DefendEd Plus Security Glazing.

4) Substitutions: See Section 016000 - Product Requirements.

2.5 MONOLITHIC GLAZING UNITS

A. General - Combined Requirements: If a particular glass unit is indicated to comply with more than one type of requirement, such as color, safety characteristics, or other requirements. Comply with all specified requirements for each type as scheduled on Drawings.

B. Type G-1 - Monolithic Safety Glazing: Non-fire-rated.

1. Applications:

a. Glazed lites in doors, except fire doors.

b. Glazed sidelights to doors, except in fire-rated walls and partitions.

c. Glazed view windows and panels in partitions enclosing athletic activity rooms, except in fire-rated walls and partitions.

d. Other locations required by applicable federal, state, and local codes and regulations.

e. Other locations indicated on drawings.

2. Glass Type: Fully tempered safety glass as specified.

3. Tint: Clear.

4. Thickness: 1/4 inch, nominal.

C. Type G-2 - Security Glazing: Laminated glass, 2-Ply.

1. Applications: Locations as indicated on drawings.

2. Tint: Clear.

3. Thickness: 9/16 inch.

4. Outer Lite: Tempered glass.

5. Interlayer: Typeand thickness as required to meet performance criteria.

6. Inside Lite: Tempered glass.

7. Performance Criteria:

a. Attack Resistance Rating: HP White 5-aa1 rated for 12 minutes, minimum, with 12 pound sledge hammer.

b. Forced Entry Resistance: Pass ASTM F1233 tests in compliance with Forced Entry Sequence of Testing, Class Achieved 1.4: Sledge Hammer, 25 impacts.

8. Basis of Design: School Guard Glass SG5: www.schoolguardglass.com.

a. Other Acceptable Manufacturers:

1) CHILDGARD ACCESSGARD 2118.

2) Oldcastle BuildingEnvelope ArmorGarde Plus.

3) McGrory Glass DefendEd Plus Security Glazing.

2.6 PLASTIC FILMS

A. Decorative Plastic Film: Polyester type; pressure-sensitive self-adhering.

1. Application: Locations as indicated on drawings.
2. Series Type: Pattern.
3. Color: As selected by Architect from manufacturer's full range of options.
4. Thickness Without Liner: 0.002 inch.
5. Width: 58 inch.
6. Visible Light Transmittance (VLT): 58 percent, nominal.
7. Acceptable Manufacturers:

a. Manufacturers and products specified on Drawings.

b. Substitutions: See Section 016000 - Product Requirements.

2.7 GLAZING COMPOUNDS

A. General Requirements:

1. Provide black exposed glazing accessory materials, unless specifically indicated otherwise.
2. Provide materials of hardness as recommended by manufacturer for required application and condition of installation in each case. Provide only compounds which are known to be fully compatible with surfaces contacted, including glass products, seals, and glazing channel surfaces.

B. Preformed Butyl Rubber Glazing Sealant: Tape or ribbon (coiled on release paper) of polymerized butyl, or mixture of butyl and polyisobutylene, compounded with inert fillers and pigments, solvent-based with minimum 95 percent solids, thread or fabric reinforcement, tack-free within 24 hours, paintable, non-staining.

C. Silicone Sealant: Single component; neutral curing; capable of water immersion without loss of properties; nonbleeding, nonstaining; ASTM C920 Type S, Grade NS, Class 25, Uses M, A, and G; with cured Shore A hardness range of 15 to 25; color as selected.

D. Manufacturers:

1. Bostik Inc: www.bostik-us.com/#sle.
2. Dow Corning Corporation: www.dowcorning.com/construction/#sle.
3. Master Builders Solutions: www.master-builders-solutions.com/en-us/#sle.
4. Momentive Performance Materials, Inc: www.momentive.com/#sle.
5. Pecora Corporation: www.pecora.com/#sle.

6. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.

2.8 ACCESSORIES

A. Setting Blocks: Silicone, with 80 to 90 Shore A durometer hardness; ASTM C864 Option II. Length of 0.1 inch for each square foot of glazing or minimum 4 inch by width of glazing rabbet space minus 1/16 inch by height to suit glazing method and pane weight and area.

B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness; ASTM C864 Option II. Minimum 3 inch long by one half the height of the glazing stop by thickness to suit application.

C. Glazing Gaskets: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.

1. Size gaskets as required by manufacturer of glazing channel frame to provide proper pressure and bite on glazing units.

D. Glazing Splines: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.

E. Glazing Clips: Manufacturer's standard type.

F. Cleaners, Primers and Sealers: Type recommended by glazing material manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that the minimum required face and edge clearances are being provided.

C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

D. Verify that sealing between joints of glass framing members has been completed effectively.

E. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry immediately before glazing. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.3 INSTALLATION, GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers, unless more stringent requirements are indicated, including those in glazing referenced standards.

B. Install glazing sealants in accordance with ASTM C1193, GANA (SM), and manufacturer's instructions.

C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

E. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

F. Prevent glass from contact with any contaminating substances that may be the result of construction operations such as, and not limited to the following; weld splatter, fire-safing, plastering, mortar droppings, and paint.

3.4 INSTALLATION - DRY GLAZING METHOD (GASKET GLAZING)

A. Application - Exterior and/or Interior Glazed: Set glazing infills from either the exterior or the interior of the building.

B. Place setting blocks at 1/4 points with edge block no more than 6 inch from corners.

C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.

D. Install removable stops without displacing glazing gasket; exert pressure for full continuous contact.

3.5 INSTALLATION - BUTT JOINT GLAZING METHOD (SEALANT ONLY)

A. Application - Exterior Glazed: Set glazing infills from exterior side of building.

B. Temporarily brace glass in position for duration of glazing process; mask edges of glass at adjoining glass edges and between glass edges and framing members.

C. Temporarily secure a small diameter nonadhering foamed rod on back side of joint.

D. Apply sealant to open side of joint in continuous operation; thoroughly fill joint without displacing foam rod, and then tool sealant surface smooth to concave profile.

E. Permit sealant to cure then remove foam backer rod, and then apply sealant to opposite side, tool smooth to concave profile.

F. Remove masking tape.

3.6 INSTALLATION - STRUCTURAL SILICONE GLAZING

A. Application - Field Glazed: Follow basic guidelines of structural silicone glazing for glazing application.

B. Provide design review of the glazing system and project details, adhesion testing, proper surface preparation, training and a quality service program.

C. Provide only structural silicone sealant, tested and manufactured for structural glazing.

3.7 INSTALLATION - PLASTIC FILM

A. Install plastic film with adhesive, applied in accordance with film manufacturer's instructions.

B. Place without air bubbles, creases or visible distortion.

C. Install film tight to perimeter of glass and carefully trim film with razor sharp knife. Provide 1/16 inch to 1/8 inch gap at perimeter of glazed panel unless otherwise required. Do not score the glass.

3.8 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Glass and Glazing product manufacturers to provide field surveillance of the installation of their products.

C. Monitor and report installation procedures and unacceptable conditions.

3.9 CLEANING

A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

B. Remove nonpermanent labels immediately after glazing installation is complete.

C. Clean glass and adjacent surfaces after sealants are fully cured.

D. Clean glass on both exposed surfaces not more than 4 days prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.10 PROTECTION

A. After installation, mark pane with an 'X' by using removable plastic tape or paste; do not mark heat absorbing or reflective glass units.

B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

END OF SECTION

SECTION 088300 - MIRRORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Glass mirrors.

1.3 RELATED REQUIREMENTS

A. Section 102800 - Toilet, Bath, and Laundry Accessories: Metal mirror frames.

1.4 REFERENCE STANDARDS

A. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.

B. ASTM C1036 - Standard Specification for Flat Glass.

C. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror.

D. GANA (GM) - GANA Glazing Manual.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data on Mirror Types: Submit structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. Product Data on Glazing Compounds: Submit chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

D. Samples: Submit two samples, 12 x 12 inch in size, illustrating mirrors design, edging, and coloration.

E. Manufacturer's Certificate: Certify that mirrors, meets or exceeds specified requirements.

F. Compatibiliy Letter: Provide compatibility letter from safety backing tape manufacturer that mastics and adhsives are compatible.

G. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with GANA (GM) for glazing installation methods.

1. Maintain one copy on project site.

B. Fabricate, store, transport, receive, install, and clean mirrors in accordance with manufacturer's recommendations.

1.7 FIELD CONDITIONS

A. Do not install mirrors when ambient temperature is less than 50 degrees F.

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.8 WARRANTY

A. Provide five year manufacturer warranty for reflective coating on mirrors and replacement of same.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Binswanger Mirror/ACI Distribution: www.binswangerglass.com.
2. Lenoir Mirror Co.: www.lenoirmirror.com.
3. Trulite Glass and Aluminum Solutions: www.trulite.com.
4. Walker Glass Company Ltd: www.walkerglass.com/#sle.
5. Guardian Glass Corp: www.guardianglass.com.
6. Virginia Glass Products Corporation: www.va-glass.com
7. Substitutions: See Section 016000 - Product Requirements.

2.2 MATERIALS

A. Mirror Design Criteria: Select materials and/or provide supports as required to limit mirror material deflection to 1/200, or to the flexure limit of glass, with full recovery of glazing materials, whichever is less.

B. Mirror Glass: Annealed float glass; ASTM C1036, Type 1 transparent flat, Class 1 clear, Quality Q1 (mirror select); silvering, protective coating and physical characteristics complying with ASTM C1503.

1. Thickness: 1/4 inch.
2. Edges: Flat polished.

a. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.

b. Require mirror manufacturer/fabricator to perform edge treatment and sealing in factory or shop immediately after cutting to final sizes.

3. Size: As noted on Drawings.

2.3 GLAZING COMPOUNDS

A. Mastic: Provide products compatible with safety backing tape.

1. Acceptable Products:

a. Gunther Premier Plus Mastic.

b. CRL; Heavy Bodied Mirror Mastic.

c. Palmer Products Corporation; Mirro-Mastic or SuperSet.

d. Substitutions: See Section 016000 - Product Requirements.

B. Silicone Sealant: ASTM C920, Type S, Grade NS, Class 25, Uses M and A; single component; chemical or solvent curing; non-bleeding, non-staining, cured Shore A hardness of 15 to 25; color as selected.

2.4 ACCESSORIES

A. Setting Blocks: Neoprene, 80 to 90 Shore A durometer hardness.

B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness.

C. Glazing Tape: Preformed butyl compound; 10 to 15 Shore A durometer hardness; on release paper.

D. Shatterproof Safety Backing: Adhesive coated film complying with 16CFR1201 for impact resistance.

1. Product: CRL White Category II Shatterproof Safety Tape for Mirrors.

E. Mirror Attachment Accessories: Stainless steel J-profile channels.

F. Channel Frame: One piece, J-channel frame, stainless steel, Type 430, satin finish, 1/2 inch by 1/2 inch by 3/8 inch deep with 90 degree mitered corners.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces of mirror frames or recesses are clean, free of obstructions, and ready for installation of mirrors.

3.2 PREPARATION

A. Install mirror backing tape in accordance with manufacturer's recommendations and free of bubbles, blisters, and other surface imperfections.

B. Clean contact surfaces with solvent and wipe dry.

C. For adhesively attached mirrors, ensure that walls are free of paint and wall coverings. If walls have been painted or papered, scratch or sand through surfacing to original surface.

D. Apply bond coat to wall surface per mastic manufacturer's instructions.

3.3 INSTALLATION

A. Install mirrors in accordance with manufacturer's recommendations.

B. Set mirrors plumb and level, and free of optical distortion.

C. Set mirrors with edge clearance free of surrounding construction including countertops or backsplashes.

D. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.

1. J-Channels: Provide setting blocks 1/8 inch thick by 4 inches long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch wide by 3/8 inch long at bottom channel.
2. Install mastic as follows:

    a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.

    b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.

    c. After mastic is applied, align mirrors and press into place while maintaining a minimum air space of 1/8 inch between back of mirrors and mounting surface.

3.4 CLEANING

A. Remove wet glazing materials from finish surfaces.

B. Remove labels after work is complete.

C. Clean mirrors and adjacent surfaces.

END OF SECTION

SECTION 088813 - FIRE-RATED GLAZING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fire-rated glazing units.

B. Glazing compounds.

1.3 RELATED REQUIREMENTS

A. Section 081416 - Flush Wood Doors: Glazed lites in doors.

1.4 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

C. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

E. ASTM C1193 - Standard Guide for Use of Joint Sealants.

F. GANA (GM) - GANA Glazing Manual.

G. GANA (SM) - GANA Sealant Manual.

H. ICC (IBC) - International Building Code.

I. ITS (DIR) - Directory of Listed Products.

J. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.

K. NFPA 257 - Standard on Fire Test for Window and Glass Block Assemblies.

L. UL (DIR) - Online Certifications Directory.

M. UL 9 - Standard for Fire Tests of Window Assemblies.

N. UL 10B - Standard for Fire Tests of Door Assemblies.

O. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene preinstallation meeting one week before starting work of this section; require attendance by each of affected installers.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data on Each Glazing Type: Provide structural, physical, and environmental characteristics, size limitations, special handling and installation requirements.

C. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

D. Certificate: Certify that products of this section meet or exceed specified requirements.

1.7 QUALITY ASSURANCE

A. Perform work in accordance with GANA (GM) for glazing installation methods. Maintain one copy on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

1.8 FIELD CONDITIONS

A. Ambient Conditions: Do not install glazing when ambient temperature is less than 40 degrees F.

B. Maintain minimum ambient temperature before, during, and 24 hours after installation of glazing compounds.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fully Tempered Safety Glass: Comply with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.

2.2 GLASS MATERIALS

A. Float Glass: Provide float glass based glazing unless otherwise indicated.

1. Kind FT - Fully Tempered Type: Comply with ASTM C1048.

2.3 GLAZING UNITS

A. Fire-Protection-Rated Glazing: Type, thickness, and configuration of glazing that contains flame, smoke, and does not block radiant heat, as required to achieve indicated fire rating period of 90 minutes or less.

1. Applications:

a. Glazing in fire-resistance-rated door assembly.

2. Glass Type: Specialty tempered float glass.

3. Provide products listed by ITS (DIR) or UL (DIR) and approved by authorities having jurisdiction.

4. Safety Glazing Certification: 16 CFR 1201 Category II.

5. Glazing Method: As required for fire rating.

6. Fire-Rating Period: As indicated on drawings.

7. Markings for Fire-Protection-Rated Glazing Assemblies: Provide permanent markings on fire-protection-rated glazing in compliance with ICC (IBC), local building code, and authorities having jurisdiction

a. "D" - meets fire door assembly criteria of NFPA 252, UL 10B, or UL 10C fire test standards.

b. "OH" - meets fire window assembly criteria, including hose stream test of NFPA 257 or UL 9 fire test standards.

c. "H" - meets fire door assembly hose stream test of NFPA 252, UL 10B, or UL 10C fire tests standards.

d. "XXX" - placeholder that represents fire-rating period, in minutes.

8. Acceptable Manufacturers:

a. SAFTIFIRST, a division of O'Keeffe's Inc: www.safti.com.

b. Technical Glass Products: www.fireglass.com.

c. Vetrotech North America: www.vetrotechusa.com.

d. Substitutions: See Section 016000 - Product Requirements.

2.4 ACCESSORIES

A. Setting Blocks: Calcium or aluminum silicate, with 80 to 90 Shore A durometer hardness; ASTM C864 Option II. Length of 0.1 inch for each square foot of glazing or minimum 4 inch by width of glazing rabbet space minus 1/16 inch by height to suit glazing method and pane weight and area.

B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness; ASTM C864 Option II. Continuous by one half the height of glazing stop by thickness to suit application, self adhesive on one face.

C. Glazing Tape: Flexible tape made from spun calcium-magnesium-silica fibers in binder; designed to remain stable at temperatures up to 2,012 degrees F.

1. Thickness: As recommended by framing manufacturer for glazing application.

D. Glazing Gaskets: Flexible intumescent seals.

E. Glazing Gaskets: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that minimum required face and edge clearances are provided.

C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

D. Verify that sealing between joints of glass framing members has been completed effectively.

E. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry immediately before glazing. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.3 INSTALLATION - GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers unless more stringent requirements are indicated, including those in referenced glazing standards.

B. Install glazing sealants in accordance with ASTM C1193, GANA (SM), and manufacturer's instructions.

C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

E. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

F. Prevent glass from contact with contaminating substances that may result from construction operations including, but not limited to weld spatter, fire-safing, plastering, mortar droppings, etc.

3.4 INSTALLATION - DRY GLAZING METHOD (TAPE AND TAPE)

A. Application - Interior Glazed: Set glazing infills from interior of building.

B. Cut glazing tape to length and set against permanent stops, projecting 1/16 inch above sightline.

C. Place setting blocks at 1/4 points with edge block no more than 6 inches from corners.

D. Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.

E. Place glazing tape on free perimeter of glazing in same manner described above.

F. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.

G. Carefully trim protruding tape with knife.

3.5 CLEANING

A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

B. Remove nonpermanent labels immediately after glazing installation is complete.

C. Clean glass and adjacent surfaces after sealants are fully cured.

D. Clean glass on both exposed surfaces not more than four days prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.6 PROTECTION

A. After installation, mark pane with 'X' by using removable plastic tape or paste.

B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

END OF SECTION

SECTION 089100 - LOUVERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Louvers, frames, and accessories.

1.3 RELATED REQUIREMENTS

A. Section 076200 - Sheet Metal Flashing and Trim.

B. Section 079200 - Joint Sealants: Sealing joints between frames and adjacent construction.

1.4 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. AMCA 500-L - Laboratory Methods of Testing Louvers for Rating.

C. AMCA 511 - Certified Ratings Program Product Rating Manual for Air Control Devices.

D. ASTM E2112 - Standard Practice for Installation of Exterior Windows, Doors and Skylights.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work of this Section with installation of exterior cladding materials.
2. Coordinate work of this Section with installation of mechanical ductwork .
3. Coordinate with installation of flashings by others.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

C. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, and tolerances; head, jamb and sill details; blade configuration, screens, blank-off areas required, and frames.

D. Verification Samples: Submit two samples 2 by 2 inches in size illustrating finish and color of exterior surfaces.

E. Test Reports: Independent agency reports showing compliance with specified performance criteria.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.7 DESIGN REQUIREMENTS

A. Design anchors and supports under direct supervision of a Professional Structural Engineer, registered in the State in which the Project is located.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this Section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

C. Basis of Design: Drawing details are based on profiles by specified basis of design manufacturer. Similar profiles by other acceptable manufacturers are permitted, subject to compliance with all specified performance characteristics, and provided that deviations in dimension, profile, and finish are minor, and do not detract from the indicated design intent.

1.9 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Provide five year manufacturer's warranty against distortion, metal degradation, and connection failures of louver components.

1. Finish: Include twenty year coverage against degradation of exterior finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Airolite Company; SCH601: www.airolite.com.

B. Other Acceptable Manufacturers:

1. Construction Specialties, Inc.: www.c-sgroup.com.
2. Greenheck: www.greenheck.com.

3. Industrial Louvers, Inc.: www.industriallouvers.com.
4. Pottorff: www.pottorff.com.
5. Ruskin: www.ruskin.com/#sle.
6. Substitutions: See Section 016000 - Product Requirements.

2.2 LOUVERS

A. Louvers: Factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with AMCA 511.

1. Structural Performance: Withstand the effects of gravity loads and specified wind loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
2. Wind Load Resistance: Design to resist positive and negative wind load of 25 psf minimum or as otherwise indicated in Structural Drawings without damage or permanent deformation.
3. Snow Load Resistance: Withstand snow loads as required by code.
4. Intake Louvers: Design to allow maximum of 0.01 oz/sq ft water penetration at calculated intake design velocity based on design air flow and actual free area, when tested in accordance with AMCA 500-L.
5. Drainable Blades: Continuous rain stop at front or rear of blade aligned with vertical gutter recessed into both jambs of frame.
6. Screens: Provide bird screens at intake louvers and exhaust louvers.
7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes, without buckling, opening of joints, overstressing of components, failure of connections, or other detrimental effects.

    a. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

B. Stationary Louvers: Horizontal blade, extruded aluminum construction.

1. Free Area: 45 percent, minimum.
2. Blades: Drainable.
3. Frame: 6 inches deep, channel profile; corner joints mitered.
4. Aluminum Thickness: Frame 12 gauge, 0.0808 inch minimum; blades 12 gauge, 0.0808 inch minimum.
5. Aluminum Finish: Superior performing organic coatings.

2.3 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M); manufacturer's standard alloy and temper.

2.4 FINISHES

A. Superior Performing Organic Coatings System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent PVDF resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

B. Primer: Zinc chromate, alkyd type.

C. Color: As selected from manufacturer's standard colors.

2.5 FABRICATION

A. Factory assemble louvers to minimize field splicing. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

C. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

D. Include supports, anchorages, and accessories required for complete assembly.

E. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.

F. Provide subsills made of same material as louvers and extended sills for recessed louvers.

G. Join frame members to each other and to fixed louver blades with fillet welds concealed from view unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.6 ACCESSORIES

A. Blank-Off Panels: Same material as louver, painted black on exterior side; provide where duct connected to louver is smaller than louver frame, sealing off louver area outside duct.

B. Screens: Frame of same material as louver, with reinforced corners; removable, screw attached; installed on inside face of louver frame.

C. Bird Screen: Interwoven wire mesh of aluminum, 14 gage, 0.0641 inch diameter wire, 1/2 inch open weave, diagonal design.

D. Fasteners and Anchors: Stainless steel.

E. Flashings: Of same material as louver frame, formed to required shape, single length in one piece per location.

F. Sealant for Setting Sills and Sill Flashing: Non-curing butyl type.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that prepared openings and flashings are ready to receive this work and opening dimensions are as indicated on shop drawings.

B. Verify that field measurements are as indicated.

3.2 INSTALLATION

A. Install louver assembly in accordance with manufacturer's instructions.

1. Comply with ASTM E2112 for installation of air barrier materials in conjunction with installation of louvers.

B. Install louvers level and plumb.

C. Set sill members and sill flashing in continuous bead of sealant.

D. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

E. Secure louver frames in openings with concealed fasteners.

3.3 CLEANING

A. Clean surfaces and components.

END OF SECTION

This page intentionally left blank

SECTION 090000 – FINISH SCHEDULE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section contains finish nomenclature with regard to project finishes and a Finish Schedule.

B. Related Sections are listed in Article 3.2 - Interior Finishes Color and Pattern List.

1.3 ABBREVIATIONS

A. Abbreviations for specific finishes are listed in the Interior Finishes Product List in Article 3.2. Other Abbreviations include:

ETR	Existing to Remain
EXP	Exposed
UNF	Unfinished
MANF	MANUFACTURER

1.4 SUBMITTALS

A. Refer to and comply with the requirements of each Related Section listed in Article 3.2 - Interior Finishes Product List for specific submittals of product data, samples, shop drawings, etc.

PART 2 – PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 FINISH NOTES

GENERAL NOTES

1. Refer to Article 3.2 - Color and Pattern List for definition of materials and substrates.
2. Two accent paint colors per room.
3. All interior finishes shall meet the requirements of the Connecticut fire safety code and shall be Class A.
4. See Reflected Ceiling Plans for ceiling heights and extent of ceiling types.
5. Use only manufacturers' required adhesives and sealants for all interior finishes. All adhesives used are to be environmentally safe and contain no solvents, alcohol, glycol, ammonia, carcinogens and must be a low VOC product.
6. Paint all exposed pipes, decking, hangers, fittings, wiremold, conduit, etc.
7. Doors to be Plastic Laminate faced; Finish: Wilsonart, Phantom Pearl.

FLOORING

1. All flooring to extend to meet wall and/or base of casework.
2. Flooring and base to extend into closets.
3. Provide Schluter metal transition strips at all floor transitions as scheduled in Section 3.2. Transitions to be ADA compliant. Finish: As scheduled.
4. Provide Schluter metal transition strips at all vertical terminations of tile wall terminations and backsplash tile terminations as scheduled in Section 3.2. Finish: As scheduled.
5. Provide coordinating Schluter JOLLY metal transition strips at all 90 degree corner tile wall transitions. Finish: As scheduled.
6. Provide Tarkett rubber transition strips at all floor transitions as scheduled in Section 3.2. Transitions to be ADA compliant. Finish: As scheduled.
7. Provide manufacturer approved underlayment for all flooring types called out in contract documents.
8. Refer to Floor Pattern & Finish Plans for extent of floor patterns.

MISCELLANEOUS

Finishes for Miscellaneous Items:

1. All plastic laminate to be horizontal grade.
2. Electrical Switches & Coverplates: Finish: TBD
3. Typical Bathroom Sinks: Adult Restrooms, Wall Mounted Sink: Refer to Plumbing Schedule; Child Restrooms: Custom Fabricated SS2 - Formica Solid Surface w/ Undermount Stainless Steel Basin; Refer to Detail Drawing for Construction.
4. Typical ADA Grab Bars: Finish: Stainless Steel
5. Typical Cabinets: to be plastic laminate, refer to finish schedule. Countertop and backsplash varies, refer to finish schedule..

6. Typical Cabinet Hardware: Richelieu, Style: Modern Metal Pull #8160, Size: 5-1/32" C-C, Finish: Brushed Nickel, Architect to select from manf.'s full range of finishes
7. Classroom Sink Countertop Bracket: Metal Bracket, Manf: Rakks, Style: Concealed EH Countertop Support Bracket EH-1818FM, 18" x 18" x 2"; Hidden In-Wall Flush Mount Heavy-Duty Aluminum Bracket for Floating Counters. Bracket should be screwed into blocking or studs at a minimum spacing of 48". 2" wide mounting surface provides extra support where counter sections join. Finish: Matte Silver Powder Coat. Use as necessary to provide countertop support. Note: Contractor to verify with weight & size of counter prior to ordering.
8. Reception Desk Countertop Bracket: Metal Bracket, Manf.: Rakks, Style: EHR-1818, 18" x 18" x 2" bracket should be screwed into blocking or studs at a minimum spacing of 48". 2" wide mounting surface provides extra support where counter sections join. Finish: TBD. Use as necessary to provide countertop support. Note: Contractor to verify with weight & size of counter prior to ordering.
9. Typical Exterior Windows: To have RS roller shades. Refer to finish schedule.
10 Typical Door Vision Lite Shutter: Manf.: Shelter Shutters, Style: Single Fold, Magnetic Vision Panel Covers, made from 4MM FR Corrugated Vinyl, ADA Accessible, Fire rated NFPA 701, ASTM E84 and UL 723, Finish: Black, Size: Refer to Door Schedule.
11. Typical Classroom Lockdown Shades: Manf.: School Safety Solutions, Style: Hideaway Helper Lockdown Shades, made from 100% PVC-backed blackout polyester with weighted hem bar and velcro release mechanism with extension strap, Fire rated NFPA 701, Finish: Black, Size: TBD.
11. Coat Hooks: Manf.: Richelieu, Style: Utility Hook 6513, Double hook 4-1/2", BP6513140, 22 lb. load capacity, Finish: Matte Nickel, Location: Typical on all Single Occupancy, Full Height Bathroom Doors - 1 per door.
12. Wall Corners: All exposed corners of vinyl wall covering (VWC) to have clear cornerguards. Manf: TBD, Style:TBD. Clear cornerguards to also be supplemented at exposed painted gypsum corners above WP wainscot at meal cart alcove as noted in finish plans.
13. Wainscot and Wall Covering Termination: All wall protection wainscot to be installed with aluminum J-Cap (JC12) at vertical termination (4'), aluminum Inside Corner (IC12)/Outside Corner (OC12) trim at respective conditions, and aluminum Divider Bar (DB12) where sheets meet.
14. Whiteboards. Manf.: AARCO, 350 High Performance Porcelain Markerboard, Color: High Gloss Bright White - Satin Silver Trim, Size: 48" x 72" Mounted in Portrait Orientation to include Deluxe Enclosed Box Tray with Molded End Caps along 48"W bottom, Qty. 1 per typical classrooms and resource rooms including: OT/PT. Refer to Interior Elevations for Location and Mounting Height.
15. Map Rail: Manf.: AARCO, 3" Cork Map Rail with Aluminum Frame, Color: Brown Rice - Size: 3" H x 10' W. Qty. 1 per typical classrooms and all smaller classroom/resource rooms including: OT/PT. Refer to Interior Elevations for Location and Mounting Height.
16. Tackboards. Manf.: AARCO, Cork Tackboard with Aluminum Frame. Color: Brown Rice - Size: 4' H x 6' W. Qty. 1 in Main Street Corridor by Entrance. Refer to Architectural Narrative. Refer to Interior Elevations for Location and Mounting Height.
17. Flags: Manf.: Liberty Flags, American Classroom Flags Economy (Pack of 12); Size 12" x 18" with Bracket Included. Flags: Qty 1 per typical classroom and OT/PT room. Wall Mounted; Refer to Interior Elevations for Location and Mounting Height. Mounting screws not included due to mounting surface conditions. Contractor to select and install appropriate screws for application.

Typical Adult Restrooms (Non-Wet Walls)	Subcontractor to review transition selection for compatibility; Substitutions to be reviewed by architect.		Rep: Joey Sonntag 413 768 0873

3.5 REVISIONS

A. This section has been revised as follows:
Rev. No. Date Revision

END OF SECTION

SECTION 090561 - COMMON WORK RESULTS FOR FLOORING PREPARATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. This section applies to floors identified in Contract Documents that are receiving the following types of floor coverings:

1. Resilient flooring.
2. Carpet tile.
3. Thin-set tile.
4. Other adhesively applied flooring.

B. Smoothing compound, leveling compound, and patching compound.

C. Preparation of concrete floor slabs for installation of floor coverings.

D. Testing of concrete floor slabs for moisture and alkalinity (pH).

E. Adhesive bond testing.

F. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.

1. Perform all specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.

G. Patching compound.

H. Remedial floor coatings.

1.3 RELATED REQUIREMENTS

A. Section 024119 - Selective Demolition : Removal of existing floor finishes on concrete slabs to be refinished.

B. Section 033000 - Cast-in-Place Concrete: Limitations on curing requirements for new concrete floor slabs.

1.4 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 50 mm [2 in.] Cube Specimens).

B. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

C. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters, and Gypsum Concrete.

D. ASTM C1315 - Standard Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete.

E. ASTM D4259 - Standard Practice for Preparation of Concrete by Abrasion Prior to Coating Application.

F. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

G. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

H. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

I. ASTM F2873 - Standard Practice for the Installation of Self-Leveling Underlayment and the Preparation of Surface to Receive Resilient Flooring.

J. RFCI (RWP) - Recommended Work Practices for Removal of Resilient Floor Coverings.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Smoothing Compound, Leveling Compound, Patching Compound, Adhesive, and Floor Covering Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:

1. Moisture and alkalinity (pH) limits and test methods.
2. Manufacturer’s required substrate surface absorption/porosity test methods.
3. Manufacturer’s required concrete surface profile (CSP).
4. Manufacturer's required bond/compatibility test procedure.

C. Remedial Materials Product Data: Manufacturer's published data on each product to be used for remediation.

1. Manufacturer's qualification statement.

2. Certificate: Manufacturer's certification of compatibility with types of flooring and adhesive applied over remedial product.
3. Test reports indicating compliance with specified performance requirements, performed by nationally recognized independent testing agency.
4. Manufacturer's installation instructions.
5. Specimen Warranty: Copy of warranty to be issued by coating manufacturer and certificate of underwriter's coverage of warranty.

D. Testing Agency's Report:
1. Description of areas tested; include floor plans and photographs if helpful.
2. Summary of conditions encountered.
3. Moisture and alkalinity (pH) test reports.
4. Copies of specified test methods.
5. Recommendations for remediation of unsatisfactory surfaces.
6. Product data for recommended remedial coating.
7. Submit report to Architect.
8. Submit report not more than two business days after conclusion of testing.

E. Adhesive Bond and Compatibility Test Report.

F. Floor Moisture Testing Technician Certificate: International Concrete Repair Institute (ICRI) Concrete Slab Moisture Testing Technician- Grade I certificate.

G. Copy of RFCI (RWP).

1.7 QUALITY ASSURANCE

A. Moisture and alkalinity (pH) testing shall be performed by an independent testing agency employed and paid by Contractor.

B. Contractor may perform adhesive and bond test with Contractor's own personnel or hire a testing agency.

C. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.
1. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Owner's project contact information.

D. Contractor's Responsibility Relating to Independent Agency Testing:
1. Provide access for and cooperate with testing agency.
2. Confirm date of start of testing at least 10 days prior to actual start.
3. Allow at least 4 business days on site for testing agency activities.
4. Achieve and maintain specified ambient conditions.
5. Notify Architect when specified ambient conditions have been achieved and when testing will start.

E. Floor Moisture Testing Technician Qualifications: International Concrete Repair Institute (ICRI) Concrete Slab Moisture Testing Technician Certification- Grade I.

F. Installer Qualifications: Company specializing in performing work of the type specified in this section, trained by or employed by coating manufacturer, and able to provide at least 3 project references showing at least 3 years' experience installing moisture emission coatings.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, handle, and protect products in accordance with manufacturer’s instructions and recommendations.

B. Deliver materials in manufacturer’s packaging; include installation instructions.

C. Keep materials from freezing.

1.9 FIELD CONDITIONS

A. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F or more than 85 degrees F.

B. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.

1.10 WARRANTY

A. Provide manufacturer's warranty covering flooring delamination failures for 10 years minimum.

1. Include cost of repair or removal of failed flooring, remediation with a moisture vapor impermeable surface coating, and replacement of flooring with comparable flooring system.

PART 2 PRODUCTS

2.1 MATERIALS

A. Self-Leveling Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:

1. Type: Cementitious moisture-, mildew-, and alkali-resistant.

2. Latex or polyvinyl acetate additions are permitted; gypsum content is prohibited.

3. Compressive Strength: Minimum 3000 psi after 28 days, tested per ASTM C109/C109M.

B. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:

1. Type: Cementitious moisture-, mildew-, and alkali-resistant compound and capable of being feathered to nothing at edges.
2. Latex or polyvinyl acetate additions are permitted; gypsum content is prohibited.
3. Compressive Strength: 3000 psi, minimum, after 28 days, when tested in accordance with ASTM C109/C109M or ASTM C472, whichever is appropriate.
4. Acceptable Manufacturers:
    a. ARDEX Engineered Cements; ARDEX Feather Finish: www.ardexamericas.com/#sle.
    b. TEC Specialty Products LLC; TEC Feather Edge Skim Coat: www.tecspecialty.com/#sle.
    c. LATICRETE International, Inc; SKIM LITE: www.laticrete.com/#sle.
    d. USG Corporation; Durock Brand Advanced Skim Coat Floor Patch: www.usg.com/#sle.
    e. Schonox HPS North America; Schonox SL Moisture Resistant Floor Patch and Skim Coat.
    f. Sika; Level SkimCoat.
    g. Mapei.
    h. Substitutions: See Section 016000 - Product Requirements.

C. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.

D. Remedial Floor Coating, Two-Component: Single-layer coating resistant to water vapor transmission meeting flooring manufacturer's emission limits, resistant to alkalinity (pH) level found, and suitable for flooring adhesion without further treatment.
1. Thickness: As required for application and in accordance with manufacturer's installation instructions.
2. Use product recommended by flooring manufacturer. In the absence of a recommendation from flooring manufacturer, use testing agency recommendation. In the absence of testing agnency recommendation, use one of the following systems.
3. Acceptable Products:
    a. Allied Construction Technologies, Inc; AC Tech 2170 FC: www.actechperforms.com/#sle.
    b. ARDEX Engineered Cements; ARDEX MC RAPID: www.ardexamericas.com/#sle.
    c. Floor Seal Technology, Inc; MES 100: www.floorseal.com/#sle.
    d. ISE Logik Industries; MVEC 710 with MVBP 600.

e. LATICRETE International, Inc; LATICRETE VAPOR BAN E: www.laticrete.com/#sle.

f. Sika Corporation; Sikafloor Moisture Tolerance Epoxy Primer: www.sikafloorusa.com/#sle.

g. USG Corporation; Durock CoverPrep: www.usg.com/#sle.

h. UZIN UTZ NORTH AMERICA, INC; UZIN PE 460 with UZIN PE 280: https://us.uzin.com/#sle.

i. Substitutions: See Section 016000 - Product Requirements.

E. Remedial Colloidal Silica Floor Treatment: Clear, penetrating floor treatment intended by its manufacturer to vapor-proof concrete slabs by closing capillary system of concrete, and eliminating route of moisture vapor emission while preserving mechanical key for adhesive bonding.

1. Acceptable Products:

a. Spray-Lock Concrete Protection; SCP 327: www.concreteprotection.com.

b. Substitutions: See Section 016000 - Product Requirements.

F. Water Vapor Emission Controlling Curing Compound: Single-component curing compound for preventative water vapor emission control for newly placed concrete.

1. Coordinate with curing requirements specified in 033000 - Cast-in-Place Concrete.
2. Comply with ASTM C309 and ASTM C1315, Type I Class A or C.
3. Acceptable Products:

a. Creteseal Concrete Waterproofing Products, Inc.; Creteseal 2000: www.creteseal.com.

b. Floor Seal Technology, Inc.; VaporSeal 309 System: www.floorseal.com.

c. SINAK Corporation; VC5: www.sinak.com.

d. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 CONCRETE SLAB PREPARATION

A. Perform following operations in the order indicated:

1. Existing concrete slabs (on-grade and elevated) with existing floor coverings:

a. Visual observation of existing floor covering, for adhesion, water damage, alkaline deposits, and other defects.

b. Removal of existing floor covering.

2. Existing concrete slabs with coatings or penetrating sealers/hardeners/dustproofers:

a. Remove existing coatings and curing agents from surface according to recommendations of remedial coating manufacturer.

b. Prepare surface according to recommendations of remedial coating manufacturer and according to ASTM D4259.

3. Preliminary cleaning.

4. Moisture vapor emission tests; 3 tests in the first 1000 square feet and one test in each additional 1000 square feet, unless otherwise indicated or required by flooring manufacturer.

5. Internal relative humidity tests; in same locations as moisture vapor emission tests, unless otherwise indicated.

6. Alkalinity (pH) tests; in same locations as moisture vapor emission tests, unless otherwise indicated.

7. Substrate surface porosity tests.

8. Specified remediation, if required.

9. Patching, smoothing, and leveling, as required.

10. Other preparation specified.

11. Adhesive bond and compatibility test.

12. Protection.

B. Remediations:

1. Active Water Leaks or Continuing Moisture Migration to Surface of Slab: Correct this condition before doing any other remediation; re-test after correction.

2. Excessive Moisture Emission or Relative Humidity: If an adhesive that is resistant to the level of moisture present is available and acceptable to flooring manufacturer, use that adhesive for installation of the flooring; if not, apply remedial floor coating or remedial sheet membrane over entire suspect floor area.

3. Excessive Alkalinity (pH): If remedial floor coating is necessary to address excessive moisture, no additional remediation is required; if not, if an adhesive that is resistant to the level present is available and acceptable to the flooring manufacturer, use that adhesive for installation of the flooring; otherwise, apply a skim coat of specified patching compound over entire suspect floor area.

3.2 REMOVAL OF EXISTING FLOOR COVERINGS

A. Comply with local, State, and federal regulations and recommendations of RFCI (RWP), as applicable to floor covering being removed.

B. Dispose of removed materials in accordance with local, State, and federal regulations and as specified.

3.3 PRELIMINARY CLEANING

A. Clean floors of dust, solvents, paint, wax, oil, grease, asphalt, residual adhesive, adhesive removers, film-forming curing compounds, sealing compounds, alkaline salts, excessive laitance, mold, mildew, and other materials that might prevent adhesive bond.

B. Do not use solvents or other chemicals for cleaning.

3.4 MOISTURE VAPOR EMISSION TESTING

A. Not required for concrete floor slabs containing moisture vapor reduction admixture.

B. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

C. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

D. For concrete floor slabs without moisture vapor reduction admixture, test in accordance with ASTM F1869 and as follows.

E. Plastic sheet test and mat bond test may not be substituted for the specified ASTM test method, as those methods do not quantify the moisture content sufficiently.

F. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if test values exceed 3 pounds per 1000 square feet per 24 hours.

G. Report: Report the information required by the test method.

3.5 INTERNAL RELATIVE HUMIDITY TESTING

A. Not required for concrete floor slabs containing moisture vapor reduction admixture.

B. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

C. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

D. For concrete floor slabs without moisture vapor reduction admixture, test in accordance with ASTM F2170 Procedure A and as follows.

1. Testing with electrical impedance or resistance apparatus may not be substituted for the specified ASTM test method, as the values determined are not comparable to the ASTM test values and do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if any test value exceeds 75 percent relative humidity.

F. Report: Report the information required by the test method.

3.6 ALKALINITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. The following procedure is the equivalent of that described in ASTM F710, repeated here for the Contractor's convenience.

1. Use a wide range alkalinity (pH) test paper, its associated chart, and distilled or deionized water.

2. Place several drops of water on a clean surface of concrete, forming a puddle approximately 1 inch in diameter. Allow the puddle to set for approximately 60 seconds, then dip the alkalinity (pH) test paper into the water, remove it, and compare immediately to chart to determine alkalinity (pH) reading.

3. Use of a digital pH meter with probe is acceptable; follow meter manufacturer's instructions.

C. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if alkalinity (pH) test value is over 10.

3.7 SUBSTRATE SURFACE ABSORPTION (POROSITY) TESTING

A. Test in accordance with ASTM F710 and F3191.

B. Follow the appropriate installation instructions for the substrate surface porosity conditions. If the selected material is not compatible with the substrate surface profile, select a different material compatible with substrate surface porosity conditions and flooring material.

C. Report the information required by the test method.

3.8 PREPARATION

A. Prepare concrete substrate surfaces in accordance with ASTM F710.

B. See individual floor covering section(s) for additional requirements.

C. Comply with requirements and recommendations of floor covering manufacturer.

D. Verify appropriate concrete surface profile (CSP) is present for material to be installed.

E. Fill and smooth surface cracks, grooves, depressions, control joints and other non-moving joints, and other irregularities with patching compound.

F. Do not fill expansion joints, isolation joints, or other moving joints.

3.9 ADHESIVE BOND AND COMPATIBILITY TESTING

A. Comply with requirements and recommendations of floor covering manufacturer.

B. In the absence of adhesive and flooring manufacturer’s written instructions, test in accordance with ASTM F3311.

C. Report the results of the adhesive bond and compatibility tests and note any concerns over adhesion.

3.10 APPLICATION OF REMEDIAL FLOOR COATING

A. Comply with requirements and recommendations of manufacturer.

B. Curing compounds and membrane forming products are usually considered unacceptable by flooring and adhesive manufacturers. If such materials are used, either obtain the approval of the flooring and adhesive manufacturers prior to use.

3.11 PROTECTION

A. Cover prepared floors with building paper or other durable covering.

END OF SECTION

SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Metal partition, ceiling, and soffit framing.

B. Framing accessories.

1.3 RELATED REQUIREMENTS

A. Section 054000 - Cold-Formed Metal Framing: Exterior wall stud framing.

B. Section 061000 - Rough Carpentry: Wood blocking within stud framing.

C. Section 092900 - Gypsum Board: Execution requirements for anchors for attaching work of this section.

1.4 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members.

B. AISI S220 - North American Standard for Cold-Formed Steel Nonstructural Framing.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.

D. ASTM A413/A413M - Standard Specification for Carbon Steel Chain.

E. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.

F. ASTM A645/A645M - Standard Specification for Pressure Vessel Plates, 5 % and 51 2 % Nickel Alloy Steels, Specially Heat Treated.

G. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

H. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

I. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.

J. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.

K. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.

L. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

M. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

N. ASTM E413 - Classification for Rating Sound Insulation.

O. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data describing framing member materials and finish, product criteria, load charts, and limitations.

C. Product Data: Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.

D. Evaluation Reports: Submit evaluation reports for framing, tracks, anchors, and fasteners from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience and approved by manufacturer.

B. Manufacturer Qualifications: Comply with one of the following:

1. Member of Steel Stud Manufacturers Association (SSMA): www.ssma.com/#sle.
2. Member of Supreme Steel Framing System Association (SSFSA): www.ssfsa.com/#sle.

C. Code-Compliance Certification of Studs and Tracks: Provide framing members certified in accordance with the product-certification program of the the Certified Steel Stud Association, the Steel Framing Industry Association, or the Steel Stud Manufacturers Association.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202 "Code of Standard Practice."

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Metal Framing, Connectors, and Accessories:

1. CEMCO: www.cemcosteel.com/#sle.
2. ClarkDietrich Building Systems: www.clarkdietrich.com/#sle.
3. Jaimes Industries: www.jaimesind.com/#sle.
4. Marino: www.marinoware.com/#sle.
5. MBA Building Supplies, Inc.: www.mbastuds.com.
6. MRI Steel Framing LLC: www.mristeelframing.com.
7. State Building Products, Inc.: http://www.statebp.com.
8. Steel Construction Systems: www.steelconsystems.com/#sle.
9. The Steel Network, Inc: www.SteelNetwork.com/#sle.
10. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Design Requirements: Design metal framing to comply with performance requirements, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts.

1. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members" and ASTM A645/A645M, Section 10.

B. Performance Requirements:

1. Interior Suspended Gypsum Board Ceilings, Soffits, and Bulkheads: Design and install to provide deflection of not more than L/360 of distance between supports.
2. Interior Metal Stud/Gypsum Board Assemblies: Design and install to withstand lateral loading (air pressure) of 5 psf with deflection limit not more than L/240 of partition height.
3. Interior Metal Stud/Gypsum Board Assemblies at Locations with Ceramic Tile or Other Hard Surface Finishes: Design and install to withstand lateral loading (air pressure) of 5 psf with deflection limit not more than L/360 of partition height.
4. Where documents indicate a stud size, size shall be considered minimum. Increase gage to meet minimum performance requirements.
5. Accommodate building structure deflections in connections to structure.

C. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E90 and classified according to ASTM A413/A413M by an independent testing agency.

2.3 FRAMING MATERIALS

A. Fire Rated Assemblies: Comply with applicable code and tested according to ASTM E 119 and as scheduled in Drawings.

B. Loadbearing Studs: As specified in Section 054000.

C. Non-Loadbearing Framing System Components: ASTM C645, galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated.

1. Protective Coating: ASTM A653/A653M, G40, (Z120); or coating with equivalent corrosion resistance, hot-dip galvanized unless otherwise indicated.

a. Galvannealed products are unacceptable.

2. Studs: C shaped with flat or formed webs.

a. Minimum Base-Steel Thickness: 0.033 inch (20-gage drywall) unless otherwise indicated.

b. Minimum Base-Steel Thickness at Wall Tile: 0.033 inch.

c. Minimum Base-Steel Thickness at Opening Jambs: 0.033 inch.

3. Runners: U-shaped, sized to match studs.

a. Minimum Base-Steel Thickness: Same as studs.

4. Equivalent Gauge Studs and Runners:

a. High strength, roll-formed and embossed with surface deformations to stiffen the framing members so they are structurally comparable to conventional ASTM C645 steel studs and tracks.

b. Minimum Base Steel Thickness: 0.0181 inch (20 EQ).

c. Prohibited Locations: High-strength (EQ) studs may not be used at the following locations:

1) Walls at vestibules or other areas expected to be exposed to wind loads greater than 5 psf.

2) Walls to receive cement backer board, wall tile or other inflexible finishes.

3) Walls to receive abuse resistant or impact resistant gypsum board.

4) Walls used to support countertop construction, casework, audio/visual equipment, or other similar elements.

5) Walls greater than 15 feet in height.

5. Ceiling Carrying Channels: C shaped (Main Runners).

a. Minimum Base-Steel Thickness: 0.053 inch.

b. Minimum Depth: 1-1/2 inches.

c. Minimum flange width: 1/2 inch.

6. Ceiling Furring Channels (Furring Members):

a. Cold-Rolled Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges, 3/4 inch deep.

b. Steel Studs and Runners: 0.0296-inch minimum base-steel thickness.

c. Equivalent Gauge Studs and Runners: 0.0181 inch (20 EQ) minimum base-steel thickness.

d. Hat-Shaped, Rigid Furring Channels: 0.0296-inch minimum base-steel thickness, 7/8-inch deep.

7. Furring: Hat-shaped sections, minimum depth of 7/8 inch.

a. Minimum Base-Steel Thickness: 0.0296 inch.

8. Z-Shaped Furring: With slotted or non-slotted web, face flange of 1-1/4 inches, wall attachment flange of 3/4 inch, minimum uncoated-steel thickness of 0.018 inch, and depth required to fit insulation thickness indicated.

D. Grid Suspension System for Gypsum Board Ceilings: ASTM C645, direct-hung, non-rated system unless otherwise rnoted, composed of main beams and cross-furring members that interlock.

1. Where fire-rated grid system may be required by authorities having jurisdiction provide hanger wire suspension 8-inches off fire breaks in accordance with system manufacturer's written guidelines.

E. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

F. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.16 inch in diameter.

G. Flat Hangers: Steel sheet, 1 by 3/16 inch by length indicated.

H. Partition Head to Structure Connections: Provide mechanical anchorage devices that accommodate deflection using slotted holes, screws, and anti-friction bushings, preventing rotation of studs while maintaining structural performance of partition.

1. Structural Performance: Maintain lateral load resistance and vertical movement capacity required by applicable code when evaluated in accordance with AISI S100.

2. Material: ASTM A653/A653M steel sheet, SS Grade 50.

3. Provide components UL-listed for use in UL-listed fire-resistance-rated head of partition joint systems indicated on drawings.

I. Deflection and Firestop Track: Intumescent strip factory-applied to track flanges expands when exposed to heat or flames to provide a perimeter joint seal.

1. Products:

a. ClarkDietrich; BlazeFrame Firestop Deflection Track: www.clarkdietrich.com/#sle.

b. Fire Trak Corp.; Fire Trak System.

c. Metal-Lite, Inc; The System.

d. Slip Trak Systems; SLP-TRK.

e. Steel Network, Inc. (The); VertiTrack Series.

f. Substitutions: See Section 016000 - Product Requirements.

J. Preformed Top Track Firestop Seal:

1. Provide components UL-listed for use in UL-listed fire-resistance-rated head of partition joint systems indicated on drawings.

2. Products:

a. Hilti, Inc; Top Track Seal CFS TTS: www.us.hilti.com/#sle.

b. Specified Technologies Inc; SpeedFlex TTG Track Top Gasket: www.stfirestop.com/#sle.

c. Substitutions: See Section 016000 - Product Requirements.

K. Non-Loadbearing Framing Accessories:

1. Ceiling Hangers: Type and size as specified in ASTM C754 for spacing required.

2. Partial Height Wall Framing Support: Provides stud reinforcement and anchored connection to floor.

a. Materials: ASTM A36/A36M formed sheet steel support member with factory-welded ASTM A1003/A1003M steel plate base.

b. Products:

1) ClarkDietrich; Pony Wall (PW): www.clarkdietrich.com/#sle.

2) Substitutions: See Section 016000 - Product Requirements.

3. Bracing and Bridging: ASTM A653/A653M G90 galvanized steel; for lateral bracing of wall studs with slots for engaging on-module studs.

4. Framing Connectors: ASTM A653/A653M steel clips; secures cold rolled channel to wall studs for lateral bracing.

5. Flexible Wood Backing: Fire-retardant-treated wood with sheet steel connectors.

a. Products:

1) ClarkDietrich; Danback: www.clarkdietrich.com/#sle.

2) Substitutions: See Section 016000 - Product Requirements.

6. Sheet Metal Backing: 0.0538 inch thick, galvanized.

7. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

8. Fasteners: ASTM C1002 self-piercing self-tapping screws.

9. Anchorage Devices: Powder actuated.

10. Touch-Up Primer for Corrosion Protected Surfaces: SSPC-Paint 20 Type I - Inorganic.

L. Sound Isolation Tape: Elastomeric foam tape for sound decoupling.

1. Surface Burning Characteristics: Provide assemblies with flame spread index of 75 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.

2. Tape Thickness: 1/4 inch.

3. Products:

a. Armacell LLC; ArmaComfort MTD: www.armacell.us/#sle.

b. Substitutions: See Section 016000 - Product Requirements.

M. Acoustic Insulation and Sealant: As specified in Section 092900 - Gypsum Board.

N. Isolation Strip at Exterior Walls: Provide one of the following:

1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.

2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

2.4 FABRICATION

A. Fabricate assemblies of framed sections to sizes and profiles required.

B. Fit, reinforce, and brace framing members to suit design requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that rough-in utilities are in proper location.

C. Examine areas and substrates for compliance with requirements and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.

3.3 INSTALLATION OF STUD FRAMING

A. Install non-structural members in accordance with ASTM C754.

B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

C. Install bracing at terminations in assemblies.

1. For interior non-load bearing walls indicated to terminate above suspended ceilings provide 20-gauge stud diagonal bracing of walls at door openings, corner wall intersections and at maximum 10’-0” intervals to structural supports or substrates above. Otherwise extend framing full height to structural supports or substrates above suspended ceilings.

D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

E. Extend partition framing to structure where indicated and to ceiling in other locations.

F. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

G. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.

H. Align and secure top and bottom runners at 24 inches on center unless otherwise indicated.

I. At partitions indicated with an acoustic rating:

1. Install acoustic insulation, sealants, and accessories as described in 092900 - Gypsum Board.

2. Provide components and install as required to produce STC ratings as indicated, based on published tests by manufacturer conducted in accordance with ASTM E90 with STC rating calculated in accordance with ASTM E413.

3. Sound Isolation Tape: Apply to vertical studs and top and bottom tracks/runners in accordance with manufacturer's instructions.

J. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.

1. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

K. Fit runners under and above openings; secure intermediate studs to same spacing as wall studs.

L. Install studs vertically at spacing indicated on drawings unless otherwise required to meet performance requirements.

M. Install studs so flanges within framing system point in same direction.

N. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

O. Align stud web openings horizontally.

P. Secure studs to tracks using crimping method. Do not weld.

Q. Stud splicing is not permissible.

R. Fabricate corners using a minimum of three studs.

S. Install double studs at wall openings, door and window jambs, not more than 2 inches from each side of openings.

1. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
2. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.

T. Brace stud framing system rigid.

U. Coordinate erection of studs with requirements of door frames and window frames; install supports and attachments.

V. Coordinate installation of bucks, anchors, and blocking with electrical, mechanical, and other work to be placed within or behind stud framing.

W. Furring: Coordinate with sound isolation clip spacing and locations. Lap splices a minimum of 6 inches.

X. Use backing/blocking for reinforcement of the following:

1. Framed openings.
2. Wall mounted cabinets.
3. Plumbing fixtures.
4. Toilet accessories.
5. Wall mounted door hardware.
6. Wall mounted televisions or other equipment.

3.4 CEILING AND SOFFIT FRAMING

A. Contractor’s Option: At the Contractor’s option suspended ceiling systems may be either suspended steel framing system or grid suspension system.

B. Comply with requirements of ASTM C754.

C. Install furring after work above ceiling or soffit is complete. Coordinate the location of hangers with other work.

D. Install furring independent of walls, columns, and above-ceiling work.

E. Securely anchor hangers to structural members or embed in structural slab. Space hangers as required to limit deflection to criteria indicated.

1. Hanger spacing not to exceed 48 inches on center.

F. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.

4. Do not attach hangers to steel roof deck.

5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.

6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.

7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

G. Space main carrying channels at maximum 48 inch on center, and not more than 6 inches from wall surfaces. Lap splice securely.

H. Securely fix carrying channels to hangers to prevent turning or twisting and to transmit full load to hangers.

I. Place furring channels perpendicular to carrying channels, not more than 2 inches from perimeter walls, and rigidly secure. Lap splices securely.

J. Reinforce openings in suspension system that interrupt main carrying channels or furring channels with lateral channel bracing. Extend bracing minimum 24 inches past each opening.

K. Laterally brace suspension system.

L. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

M. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

N. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.5 TOLERANCES

A. Maximum Variation From True Position: 1/8 inch in 10 feet.

B. Maximum Variation From Plumb: 1/8 inch in 10 feet.

SECTION 092900 - GYPSUM BOARD

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Performance criteria for gypsum board assemblies.

B. Acoustic insulation.

C. Cementitious backing board.

D. Gypsum wallboard.

E. Joint treatment and accessories.

1.3 RELATED REQUIREMENTS

A. Section 061600 - Sheathing: Exterior wall sheathing.

B. Section 078400 - Firestopping: Top-of-wall assemblies at fire-resistance-rated walls.

C. Section 092216 - Non-Structural Metal Framing.

1.4 REFERENCE STANDARDS

A. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units.

B. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.

C. ASTM C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing.

D. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

E. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board.

F. ASTM C919 - Standard Practice for Use of Sealants in Acoustical Applications.

G. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness.

H. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.

I. ASTM C1047 - Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base.

J. ASTM C1193 - Standard Guide for Use of Joint Sealants.

K. ASTM C1325 - Standard Specification for Fiber-Mat Reinforced Cementitious Backer Units.

L. ASTM C1396/C1396M - Standard Specification for Gypsum Board.

M. ASTM C1658/C1658M - Standard Specification for Glass Mat Gypsum Panels.

N. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.

O. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

P. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

Q. ASTM E413 - Classification for Rating Sound Insulation.

R. GA-216 - Application and Finishing of Gypsum Panel Products.

S. GA-226 - Application of Gypsum Board to Form Curved Surfaces.

T. UL (FRD) - Fire Resistance Directory.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of gypsum board assemblies with size, location, and installation of service utilities.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

C. Sequencing: Install service utilities in an orderly and expeditious manner.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on gypsum board, accessories, joint finishing system, and acoustic insulation and sealants.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

C. Store gypsum products and accessories indoors and keep above freezing. Elevate boards above floor, on nonwicking supports, in accordance with manufacturer's recommendations.

D. Protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat to prevent sagging.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Comply with requirements of ASTM C840 or gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. American Gypsum Company: www.americangypsum.com.
2. CertainTeed Corporation: www.certainteed.com.
3. Georgia-Pacific Gypsum: www.gpgypsum.com.
4. National Gypsum Company: www.nationalgypsum.com.
5. USG Corporation: www.usg.com.
6. Substitutions: See Section 016000 - Product Requirements.

2.2 GYPSUM BOARD ASSEMBLIES

A. Provide completed assemblies complying with ASTM C840 and GA-216.

1. See PART 3 for finishing requirements.

B. Interior Partitions, Indicated as Acoustic: Provide completed assemblies with the following characteristics:

1. Acoustic Attenuation: STC as indicated in Drawings calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

C. NFPA Assemblies: Provide completed exterior assemblies tested in accordance with NFPA 285 where indicated.

D. Fire Rated Assemblies: Provide completed assemblies tested according to ASTM E 119 and as scheduled in Drawings.

1. UL Assembly Numbers: Provide construction equivalent to that listed for the particular assembly in the current UL (FRD).

2.3 BOARD MATERIALS

A. Gypsum Wallboard: Paper-faced gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.

1. Application: Use for vertical surfaces and ceilings, unless otherwise indicated.
2. Glass mat faced gypsum panels as defined in ASTM C1658/C1658M, suitable for paint finish, of the same core type and thickness may be substituted for paper-faced board unless otherwise required below.
    a. Glass mat faced gypsum panels are required for all pre-rock applications and gypsum installation prior to building being enclosed.
3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
    a. Mold-resistant board is required whenever board is being installed before the building is enclosed and conditioned.
    b. Mold resistant board is required in areas subject to wetting, steam, or high humidity.
4. At Assemblies Indicated with Fire-Resistance Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
5. At Above Grade Assemblies Indicated to Comply with NFPA 285: Use Type X board for interior drywall.
6. Thickness:
    a. Vertical Surfaces: 5/8 inch.
    b. Ceilings: 5/8 inch, unless otherwise noted.
    c. Multi-Layer Assemblies: Thicknesses as indicated on drawings.
7. Mold-Resistant, Paper-Faced Products:
    a. American Gypsum Company; M-Bloc Type X: www.americangypsum.com/#sle.
    b. American Gypsum Company; M-Bloc Type C: www.americangypsum.com/#sle.
    c. CertainTeed Corporation; M2Tech 5/8" Type X Moisture & Mold Resistant Drywall: www.certainteed.com/#sle.
    d. Georgia-Pacific Gypsum; ToughRock Fireguard X Mold-Guard: www.gpgypsum.com/#sle.

e. Gold Bond Building Products, LLC provided by National Gypsum Company; Gold Bond EVOLVE XP Fire-Shield Gypsum Board: www.goldbondbuilding.com/#sle.

f. Gold Bond Building Products, LLC provided by National Gypsum Company; Gold Bond XP Fire-Shield Gypsum Board: www.goldbondbuilding.com/#sle.

g. USG Corporation; Sheetrock Brand EcoSmart Panels Mold Tough Firecode X 5/8 in. (15.9 mm): www.usg.com/#sle.

h. USG Corporation; Sheetrock Brand Mold Tough Firecode SCX Panels 5/8 in. (15.9 mm): www.usg.com/#sle.

i. Substitutions: See Section 016000 - Product Requirements.

B. Tile Backing Board:

1. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

2. ANSI Cement-Based Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.

a. Thickness: 1/2 inch.

b. Products:

1) Custom Building Products; Wonderboard Lite: www.custombuildingproducts.com.

2) PermaBASE Building Products, LLC provided by National Gypsum Company; PermaBase Cement Board: www.goldbondbuilding.com/#sle.

3) USG Corporation; DUROCK: www.usg.com/#sle..

4) Substitutions: See Section 016000 - Product Requirements.

2.4 GYPSUM BOARD ACCESSORIES

A. Sound Attenuation Insulation: ASTM C665; mineral fiber or glass fiber batt, friction fit type, unfaced.

1. Thickness: As indicated on Drawings, minimum 2 inches.

2. Fire-Rated Assemblies: Use insulation type required by indicated tested assembly.

B. Sound Isolation Tape: Elastomeric foam tape for sound decoupling.

1. Surface Burning Characteristics: Provide assemblies with flame spread index of 75 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.

2. Tape Thickness: 1/4 inch.

C. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.

1. Products:

a. Franklin International, Inc; Titebond Acoustical Smoke & Sound Sealant: www.titebond.com/#sle.

b. Liquid Nails, a brand of PPG Architectural Coatings: www.liquidnails.com/#sle.

c. Specified Technologies Inc; Smoke N Sound Acoustical Sealant: www.stifirestop.com/#sle.

d. Pecora Corporation; AC-20 FTR.

e. Specified Technologies, Inc.; Smoke N Sound Acoustical Sealant.

f. Grabber Construction Products; Acoustical Sealant GSC.

g. Accumetric LLC; BOSS 826 Acoustical Sound Sealant.

h. USG Corporation; SHEETROCK Acoustical Sealant.

i. Substitutions: See Section 016000 - Product Requirements.

2. Color of exposed acoustical joint sealants: Match adjacent surface.

D. Acoustical Outlet Box Pads:

1. Minimum thickness - 1/8 inch.
2. Adhesion - adheres readily to metal or plastic.
3. Service temperature - 30 degrees to 200 degrees F.
4. Shall contain no asbestos.
5. Minimum shelf life - 1 year.
6. Non Fire-Rated Products:

a. Lowry's Outlet Box Pads as manufactured by Harry A. Lowry & Associates, Inc., Sun Valley, CA.

b. Sound Pad #68 as manufactured by L.H. Dottie Co., City of Commerce, CA.

7. Fire-Rated Products:

a. Flamesafe FSP 1077 Putty Pads as manufactured by W.R. Grace & Co., Hartfield, PA.

b. Putty Pads as manufactured by Specified Technologies Inc., Somerville, NJ.

c. Hilti CP617 Putty Pads as manufactured by Hilti, Tulsa, OK.

d. 3M Fire Barrier Moldable Putty Pads type MPP-X to fit box size as manufactured by 3M, St. Paul, MN.

e. Metacaulk ® Putty Pads as manufactured by RectorSeal, Houston, TX.

E. Finishing Accessories: ASTM C1047, galvanized steel, rolled zinc, rigid plastic, or composite, unless noted otherwise.

1. Types: As detailed or required for finished appearance.

2. Special Shapes: In addition to conventional corner bead and control joints, provide U-bead, L-bead, LC-bead, and Casing Bead at exposed panel edges.
3. Acceptable Products:
    a. Same manufacturer as framing materials.
    b. ClarkDietrich (Finishing Accessories) www.clarkdietrich.com
    c. Phillips Manufacturing Co: www.phillipsmfg.com/#sle.
    d. Stockton Products: www.stocktonproducts.com/#sle.
    e. Trim-tex, Inc: www.trim-tex.com/#sle.
    f. Substitutions: See Section 016000 - Product Requirements.

F. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.
1. Tape: 2 inch wide, coated glass fiber tape for joints and cornersexterior and glass-mat gypsum.
2. Tape: 2 inch wide, creased paper tape for joints and cornersfor interior gypsum board.
3. Tape for Tile Backing Panels: As recommended by panel manufacturer.
4. Joint Compound: Drying type, vinyl-based, ready-mixed.

G. Finishing Compound: Surface coat and primer, takes the place of skim coating.

H. High Build Drywall Surfacer: Vinyl acrylic latex-based coating for spray application, designed to take the place of skim coating and separate paint primer in achieving Level 5 finish.

I. Screws for Fastening of Gypsum Panel Products to Cold-Formed Steel Studs Less than 0.033 inches in Thickness and Wood Members: ASTM C1002; self-piercing tapping screws, corrosion-resistant.

J. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch in Thickness: ASTM C954; steel drill screws, corrosion-resistant.

K. Screws for Fastening of Gypsum Panel Products to Wood Framing or Blocking: Type W screws, corrosion resistant. Nails not permitted.

L. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

M. Anchorage to Substrate: Tie wire, nails, screws, and other metal supports, of type and size to suit application; to rigidly secure materials in place.

N. Adhesive for Attachment to Metal:
1. Products:
    a. Franklin International, Inc; Titebond Drywall Construction Adhesive: www.titebond.com/#sle.
    b. Liquid Nails, a brand of PPG Architectural Coatings: www.liquidnails.com/#sle.

c. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ACOUSTIC ACCESSORIES INSTALLATION

A. General: Limit installation of outlet boxes and other penetrations to one penetration per stud bay. Seal all penetrations and gaps with acoustic sealant, outlet box pads, or other acoustic shielding materials as approved by Architect in accordance with manufacturer's written instructions and tested assembly instructions.

B. Preparation for acoustic sealant:

1. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.

2. Joint Priming: Prime joint substrates where recommended by acoustical-joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

C. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

D. Sound Isolation Tape: Apply to vertical studs and top and bottom tracks/runners in accordance with manufacturer's instructions.

E. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

F. Acoustic Sealant: Install as follows:

1. Comply with ASTM C919, ASTM C1193, and manufacturer's written recommendations for closing off sound-flanking paths around or through assemblies, including sealing partitions to underside of floor slabs above acoustical ceilings.

2. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3. Place one bead continuously on substrate before installation of perimeter framing members.
4. Place continuous bead at perimeter of each layer of gypsum board.
5. Seal around all penetrations by conduit, pipe, ducts, and rough-in boxes, except where firestopping is provided.

G. Acoustical Outlet Box Pads: Install as follows within acoustic partitions:
1. Remove any water, excess dust, dirt and oil from the surfaces.
2. Comply with manufacturer's written instructions and UL requirements.
3. Ensure the entire surface is covered. Seal around conduit where it connects to outlet box using manufacturer's recommended materials.

3.3 BOARD INSTALLATION

A. Comply with ASTM C840 and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.

B. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.

C. Form control and expansion joints with space between edges of adjoining gypsum panels.

D. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.

E. Single-Layer Nonrated: Install gypsum board in most economical direction, with ends and edges occurring over firm bearing.

F. Double-Layer Non-Rated: Use gypsum board for first layer, placed parallel to framing or furring members, with ends and edges occurring over firm bearing. Place second layer perpendicular to framing or furring members. Offset joints of second layer from joints of first layer.

G. Fire-Resistance-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

H. Exposed Gypsum Board in Interior Wet Areas: Seal joints, cut edges, and holes with water-resistant sealant.

I. Cementitious Backing Board: Install over steel framing members where indicated, in accordance with ANSI A108/A118/A136.1 and manufacturer's instructions.

J. Installation on Metal Framing: Use screws for attachment of gypsum board.

K. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around and through assemblies, including sealing partitions above acoustical ceilings.

L. Curved Surfaces: Apply gypsum board to curved substrates in accordance with GA-226.

3.4 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints consistent with lines of building spaces and as indicated.
   1. Not more than 30 feet apart on walls and ceilings over 50 feet long.
   2. At exterior soffits, not more than 30 feet apart in both directions.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.

3.5 JOINT TREATMENT

A. Glass Mat Faced Gypsum Board: Use fiberglass joint tape, embed and finish with setting type joint compound.

B. Paper Faced Gypsum Board: Use paper joint tape, embed with drying type joint compound and finish with drying type joint compound.

C. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:
   1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish, walls to receive wallcoverings, and other areas specifically indicated.
   2. Level 4: Walls and ceilings to receive paint finish, unless otherwise indicated.
   3. Level 3: Walls to receive textured wall finish.
   4. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.
   5. Level 1: Fire-resistance-rated wall areas above finished ceilings, whether or not accessible in the completed construction.
   6. Level 0: Temporary partitions.
   7. Level 0: Surfaces indicated to be finished in later stage of project.

D. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
   1. Feather coats of joint compound so that camber is maximum 1/32 inch.

E. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

F. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.6 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet in any direction.

3.7 PROTECTION

A. Protect installed gypsum board assemblies from subsequent construction operations.

B. Repair damage from construction operations.

END OF SECTION

This page intentionally left blank

SECTION 093000 - TILING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Tile for floor applications.

B. Tile for wall applications.

C. Non-ceramic trim.

D. Accessories, setting, and grouting materials.

1.3 RELATED REQUIREMENTS

A. Section 079200 - Joint Sealants: Sealing joints between tile work and adjacent construction and fixtures.

B. Section 090561 - Common Work Results For Flooring Preparation: Concrete slab moisture and alkalinity testing and remediation procedures.

C. Section 092900 - Gypsum Board: Tile backer board.

1.4 REFERENCE STANDARDS

A. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium).

B. ASTM C627 - Standard Test Method for Evaluating Ceramic Floor Tile Installation Systems Using the Robinson-Type Floor Tester.

C. ASTM F2873 - Standard Practice for the Installation of Self-Leveling Underlayment and the Preparation of Surface to Receive Resilient Flooring.

D. TCNA (HB-GP) - Handbook for Gauged Porcelain Tiles and Gauged Porcelain Tile Panels/Slabs Installation.

E. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation.

1.5 DEFINITIONS

A. DCOF: Dynamic Coefficient of Friction.

B. Module Size: Actual tile size, with minor facial dimension as measured by ASTM C499, plus joint width indicated.

C. Facial Dimension: Actual tile size, with minor facial dimension as measured by ASTM C499.

D. Large Format Tile: Any tile unit that maintains an edge of 15 inches or greater in any dimension.

E. Slip-Resistant: Installed flooring surface which has a wet coeffecient of friction of 0.42, minimum, as measured according to ANSI 323.3 (BOT-3000E DCOF AcuTest).

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate location of tiling movement joints on concrete floor substrates with locations of concrete floor expansion and control joints; align substrate joints and tiling system joints where required by specified reference standards.

B. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this Section; require attendance by all affected installers.

1. Review installation procedures and coordination requirements.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturers' data sheets on tile, mortar, grout, and accessories. Include instructions for using grouts and adhesives.

C. Verification Samples:

1. Full-sized units of each type and composition of tile and for each color and finish specified. For ceramic mosaic tile in color blend patterns, provide one full sheet of each specified color blend.

2. Full-sized units of each type of trim and accessory for each color and finish specified.

3. Grout color samples for each type and color specified.

D. Concrete Sub-floor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Installer's Qualification Statement:

1. Submit documentation of National Tile Contractors Association (NTCA) or Tile Contractors' Association of America (TCAA) accreditation; www.tile-assn.com/#sle

G. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.

2. Extra Tile: 5 percent of each size, color, and surface finish combination.

1.8 QUALITY ASSURANCE

A. Maintain one copy of ANSI A108/A118/A136, TCNA (HB), and TCNA (HB-GP) on-site.

B. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum five years of documented experience.

C. Installer Qualifications:

1. Company specializing in performing tile installation, with minimum of five years of documented experience.

a. Accredited Five-Star member of the National Tile Contractors Association (NTCA) or Trowel of Excellence member of the Tile Contractors' Association of America (TCAA).

D. Provide materials obtained from only one manufacturer for each type and color of tile, and for each type of mortar, grout, adhesive, and sealant.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.10 FIELD CONDITIONS

A. Comply with referenced standards and manufacturer's recommendations for protection and maintenance of environmental conditions during and after installation.

B. Do not install solvent-based products in an unventilated environment.

C. Maintain ambient and substrate temperature of 50 degrees F during installation, and for at least seven days after installation. Maintain higher temperatures for proprietary mortars and grouts when recommended by manufacturer.

D. Vent temporary heaters to the exterior to prevent damage to tile work due to carbon dioxide accumulation.

1.11 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace materials that fail within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Installer's Special Warranty: Specified form, signed by Installer, covering Work of this Section, for warranty period of 2 years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all tile and trim types listed in this section.
2. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Wet Dynamic Coefficient of Friction (DCOF): For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM A 137.1-2012 Section 9.6.1:

1. For materials installed on walkway surfaces, provide products with the following values as determined by testing identical products per ANSI B101.3-2012:

a. Level (Horizontal) Surface: DCOF of 0.42 or greater, wet.

b. Ramp Surfaces: Minimum, wet DCOF of 0.51 or greater, wet.

B. Break Strength: ASTM C 648.

1. Wall Tiles: 90 lbf.
2. Floor Tiles: 250 lbf.

C. Bond Strength: ASTM C 482; 50 psi minimum.

2.3 TILING MATERIALS

A. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

B. Ceramic Tile: ANSI A137.1, standard grade.

1. Color(s): As indicated.

C. Porcelain Tile: ANSI A137.1, standard grade.

1. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
2. Color(s): As indicated.

2.4 TRIM AND ACCESSORIES

A. Metal Trim: Type and finish as scheduled, style and dimensions as indicated on drawings, for setting using tile mortar or adhesive. Provide trim height to match tile and setting bed thickness.

B. Accessible Thresholds and Transitions: Provide transitions between tile surfaces and adjoining finished floor surfaces. Fabricate thresholds to heights indicated, but not more than 1/2 inch above adjoining floor surfaces, with transition edges beveled on a slope not exceeding 1:2.

2.5 SETTING MATERIALS

A. Modified Dry Set Cement Mortar Bond Coat: ANSI A118.4 and ANSI A118.11.

1. Applications: Use this type of bond coat where no other type of bond coat is indicated.
2. Products:

a. ARDEX Engineered Cements; X 3+: www.ardexamericas.com/#sle.

b. LATICRETE International, Inc; 4-XLT: www.laticrete.com/#sle.

c. Mapei Corporation; Keraflex Plus: www.mapei.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

2.6 GROUTS

A. High Performance Polymer Modified Grout: ANSI A118.7 polymer modified cement grout.

1. Applications: Use this type of grout where no other type of grout is indicated.
2. Use sanded grout for joints 1/8 inch wide and larger; use unsanded grout for joints less than 1/8 inch wide.
3. Color(s): As indicated on drawings.
4. Acceptable Products:

a. ARDEX Engineered Cements; ARDEX FL (Sanded) or FGC (Unsanded): www.ardexamericas.com/#sle.

b. LATICRETE International, Inc.; LATICRETE PermaColor: www.laticrete.com.

c. Mapei Corporation; Ultracolor Plus FA: www.mapei.com/#sle.

d. Substitutions: See Section 016000 - Product Requirements.

2.7 ACCESSORY MATERIALS

A. Concrete Floor Slab Crack Isolation and Waterproofing Membrane: Material complying with ANSI A118.10 and ANSI A118.12; intended as waterproofin, suitable for installation over green and existing concrete:

1. Crack Resistance: No failure at 1/16 inch gap, minimum.
2. Water Resistance: Passes.

3. Fluid or Trowel Applied Type:

a. Material: Synthetic rubber or Acrylic.

b. Thickness: 40 mils, maximum.

c. Products:

1) ARDEX; S1-K: www.ardex.com/.

2) LATICRETE International, Inc; HYDRO BAN 1: www.laticrete.com/#sle.

3) Mapei Corporation; Mapelastic AquaDefense: www.mapei.com/#sle.

4) Substitutions: See Section 016000 - Product Requirements.

B. Self-leveling Underlayment: Flowable, pre-formulated, water-mixed latex-Portland cement-based material; self-leveling to provide flat, level surface on tiling substrates, and meeting the requirements of ASTM C627.

1. Applications: On concrete substrates.

2. Acceptable Manufacturers:

a. ARDEX; TL1000.

b. LATICRETE International, Inc.; 86 Latilevel Thin Pour: www.laticrete.com.

c. Mapei Corporation; Novoplan 2 Plus with Primer T: www.mapei.com/.

d. Substitutions: See Section 016000 - Product Requirements.

C. Backing Board: Specified in Section 092900 - Gypsum Board.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive tile.

1. Large Format Tile Installations Greater than 500 Square Feet: When specified tile is 24 by 24 inches or larger, or when planks exceed 30 inches in the long dimension, install 1/4 inch application of self-leveling underlayment under the entire installation.

2. At all other tile installations, Tile contractor shall be responsible for floor prep up to 25% of the total area to be tiled at an average of 1/8 inch thickness, using pourable or trowelable materials supplied by the setting system manufacturer.

B. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values:

1. Under Thinset Tile: F(F) of 35; F(L) of 25.

C. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.

D. Verify that subfloor surfaces are dust free and free of substances that could impair bonding of setting materials to subfloor surfaces.

E. Cementitious Subfloor Surfaces: Verify that substrates are ready for tiling installation by testing for moisture and alkalinity (pH).

1. Test in accordance with Section 090561.
2. Obtain instructions if test results are not within limits recommended by tiling material manufacturer and setting material manufacturer.
3. Follow moisture and alkalinity remediation procedures in Section 090561.

F. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Prepare floor substrates for installation of flooring in accordance with Section 090561.

D. Seal substrate surface cracks with filler. Level existing substrate surfaces to acceptable flatness tolerances.

E. Install cementitious backer board in accordance with ANSI A108.11 and board manufacturer's instructions. Tape joints and corners, cover with skim coat of setting material to a feather edge.

3.3 INSTALLATION - GENERAL

A. Install tile and grout in accordance with applicable requirements of ANSI A108.1a through ANSI A108.13, manufacturer's instructions, and TCNA (HB) recommendations.

B. Blending: For tile exhibiting color or pattern variations within the ranges of accepted submittals, verify that tile has been blended so that tile units taken from one package show same range in colors or patterns as those taken from other packages.

C. Floor System Coverage: Where specified for individual setting methods, install floor tile units with 95 percent mortar coverage, minimum, by complying with applicable special requirements for back buttering of tile units in referenced ANSI A108 specifications.

D. Wall System Coverage: Where specified for individual setting methods, install wall tile units with 95 percent mortar coverage, minimum, by complying with applicable special requirements for back buttering of tile units in referenced ANSI A108 specifications.

E. Install crack isolation membrane to comply with ANSI A118.10 and membrane manufacturer's written instructions for full floor coverage.

F. Movement Joints: Comply with TCNA (HB) Method EJ171F requirements for locations, spacing, and installation of applicable movement joints, whether or not specifically indicated or detailed on Drawings, and as follows:

1. Field Joint Spacing - Interior: Maximum 24 feet on center in each direction; reduce spacing to maximum 10 feet on center in areas exposed to direct sunlight or moisture.

2. Field Joint Spacing - Exterior and Above-Ground Concrete Slabs: Maximum 12 feet on center in each direction.
3. Joint Width: Match adjacent grouted joint widths, unless TCNA EJ171 requires a specific joint width based on joint location or joint service conditions.
4. Apply sealant joint to junction of tile and dissimilar materials and junction of dissimilar planes, including but not limited to floor to wall joints, corners, and metal trim and non-ceramic accessory items.
5. Keep movement joints free of setting adhesive and grout.
6. Where metal trims are not specified, form internal angles and corners square, not grouted, with sealant joint.
7. Where metal trims are not specified, form external angles and corners square, not grouted, with sealant joint.
8. Apply specified sealant to joints.

G. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.

H. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly.
1. Where floor and wall tile are of same dimensional module, align floor and wall joints.

I. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout.

J. Install non-ceramic trim in accordance with manufacturer's instructions.

K. Sound tile after setting. Replace hollow sounding units.

L. Keep control and expansion joints free of mortar, grout, and adhesive.

M. Prior to grouting, allow installation to completely cure; minimum of 48 hours.

N. Grout tile joints, except where movement joints are indicated or specified.

O. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.

P. Allow completed tiling assemblies to cure full 72 hours before allowing heavy foot or equipment traffic on final installations.

3.4 INSTALLATION - FLOORS - THIN-SET METHODS

A. Over interior concrete substrates, install in accordance with TCNA (HB) Method F113.
1. Provide 95 percent coverage of setting mortar over tile back surfaces, minimum.
2. Use full coverage crack isolation membrane under all tile unless other underlayment is indicated.

3.5 INSTALLATION - WALL TILE

A. Over cementitious backer units on studs, install in accordance with TCNA (HB) Method W244 .

1. Provide 95 percent coverage of setting mortar over tile back surfaces, minimum.

B. Over gypsum wallboard on wood or metal studs install in accordance with TCNA (HB) Method w243.

1. Provide 95 percent coverage of setting mortar over tile back surfaces, minimum.

C. Grout with high performance grout.

3.6 TOLERANCES

A. Comply with applicable requirements of ANSI A108.2, unless otherwise specified in this Section.

B. Flatness - Finished Tiling Surfaces:

1. Ceramic Tile: 1/4 inch in 10 feet.

C. Lippage - Adjacent Tile Units:

1. Wall Tile and Mosaic Tile: 1/32 inch; joint width 1/16 inch to 1/8 inch; 1 x 1 inch to 6 x 6 inch tile size.

2. Pressed Floor Tile and Porcelain Tile: 1/32 inch; joint width 1/16 inch to less than 1/4 inch; all tile sizes.

3.7 CLEANING

A. Clean tile and grout surfaces.

B. Remove grout efflorescence as required with product approved by tile and grout manufacturer.

C. Use cleaning materials and procedures as permitted by the tile and grout manufacturer's written instructions. Protect metal surfaces, iron, and vitreous fixtures from effects of acid cleaning. Flush surfaces with clean water before and after acid cleaning.

D. Leave finished installation clean and free of cracked, chipped, broken, un-bonded, or otherwise defective tile work.

3.8 PROTECTION

A. Do not permit traffic over finished floor surface for minimum 7 days after installation.

B. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

SECTION 095113 - ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Suspended metal grid ceiling system.

B. Acoustical units.

1.3 RELATED REQUIREMENTS

1.4 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. ASTM C635/C635M - Standard Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

C. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ASTM E1264 - Standard Classification for Acoustical Ceiling Products.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Sequencing: Sequence work to ensure acoustical ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.

1. Do not install acoustical units until after interior wet work is dry.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on suspension system components and acoustical units.

C. Samples: Submit two samples minimum 6 x 6 inch in size illustrating material and finish of acoustical units.

D. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.

2. Extra Acoustical Units: Quantity equal to 5 percent of total installed.

1.7 QUALITY ASSURANCE

A. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

B. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

C. System Installer Qualifications: Company specializing in the installation of products specified in this Section with minimum three years documented experience.

1.8 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 60 degrees F, and maximum humidity of 20 to 40 percent prior to, during, and after acoustical unit installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

B. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Interior Suspended Ceilings, Soffits, and Bulkheads: Maintain deflection of not more than L/360 of distance between supports.

B. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.

2.3 ACOUSTICAL CEILINGS

A. Acoustical Units - General: ASTM E1264, Class A.

1. Provide units with manufacturer's proprietary anti-humidity, sag-resistant composition and anti-microbial treatment to inhibit the propagation of mold and mildew.

B. Acoustical Panels: Painted mineral fiber, with the following characteristics:

1. Classification: ASTM E1264 Type A

a. Form: A2.1, nodular.

b. Pattern: "G" - smooth.

2. Thickness: 7/8 inches.

3. Light Reflectance: 85 percent, minimum, determined in accordance with ASTM E1264.

4. NRC Range: 0.95, minimum, determined in accordance with ASTM E1264.

5. Ceiling Attenuation Class (CAC): 30, minimum, determined in accordance with ASTM E1264.

6. Panel Edge: As indicated in finish schedule on drawings.

7. Color: White.

8. Suspension System: Exposed grid.

C. Acoustical Panels: Gypsum panel ceiling tiles with factory-laminated vinyl facing, with the following characteristics:

1. Application(s): Kitchen.

2. Classification: ASTM E1264 Type XX.

a. Pattern: "G" - smooth.

3. Size: 24 by 24 inches.

4. Thickness: 1/2 inch.

5. Light Reflectance: 77 percent, determined in accordance with ASTM E1264.

6. Panel Edge: Square.

7. Color: White.

8. Suspension System: Exposed grid.

2.4 SUSPENSION SYSTEMS

A. Metal Suspension Systems - General: Complying with ASTM C635/C635M; die cut and interlocking components, with perimeter moldings, hold down clips, stabilizer bars, clips, and splices as required.

1. Materials:

a. Steel Grid: ASTM A653/A653M, G30 coating, except provide not less than G60 coating for severe or wet environments.

B. Exposed Suspension System: Hot-dipped galvanized steel grid.

1. Structural Classification: Heavy-duty, when tested in accordance with ASTM C635/C635M.

2. Profile: Tee; 15/16 inch face width unless otherwise indicated.

3. Finish: Baked enamel.
4. Color: White, unless otherwise indicated.

2.5 ACCESSORIES

A. Support Channels and Hangers: Galvanized steel; size and type to suit application and ceiling system flatness requirement specified.

B. Hanger Wire: 12 gauge, 0.08 inch galvanized steel wire.

C. Hold-Down Clips: Manufacturer's standard clips to suit application.

D. Perimeter Moldings: Same metal and finish as grid.
1. Size: As required for installation conditions.
2. Angle Molding: L-shaped, for mounting at same elevation as face of grid.
3. At Circular Penetrations: Provide edge moldings fabricated to diameter required to fit penetration precisely.

E. Touch-up Paint: Type and color to match acoustical and grid units.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install after major above-ceiling work is complete.

B. Coordinate the location of hangers with other work.

3.3 INSTALLATION - SUSPENSION SYSTEM

A. Install suspension system in accordance with ASTM C636/C636M and manufacturer's instructions and as supplemented in this section.

B. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.

C. Locate system on room axis according to reflected plan.

D. Perimeter Molding: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

1. Use longest practical lengths.

E. Suspension System, Non-Seismic: Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

F. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

G. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.

H. Support fixture loads using supplementary hangers located within 6 inches of each corner, or support components independently.

I. Do not eccentrically load system or induce rotation of runners.

3.4 INSTALLATION - ACOUSTICAL UNITS

A. Install acoustical units in accordance with manufacturer's instructions.

B. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.

C. Fit border trim neatly against abutting surfaces.

D. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.

E. Cutting Acoustical Units:

1. Cut to fit irregular grid and perimeter edge trim.
2. Make field cut edges of same profile as factory edges; finish cut edges to match factory finished edges if cut edge is exposed to view.
3. Double cut and field paint exposed reveal edges to match factory finished edges.

F. Where round obstructions occur, provide preformed closures to match perimeter molding.

G. Install hold-down clips on panels within 10 ft of an exterior door.

3.5 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet.

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.6 CLEANING

A. Clean surfaces.

B. Replace damaged or abraded components.

END OF SECTION

SECTION 096500 - RESILIENT FLOORING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2

1.3 SECTION INCLUDES

A. Resilient sheet flooring.

B. Resilient tile flooring.

C. Installation accessories.

1.4 RELATED REQUIREMENTS

A. Section 016116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 090561 - Common Work Results For Flooring Preparation: Independent agency testing of concrete slabs, cleaning, or preparation; moisture and alkalinity testing and remediation procedures.

C. Section 096513 - Resilient Wall Base and Accessories .

1.5 REFERENCE STANDARDS

A. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

B. ASTM F1066 - Standard Specification for Vinyl Composition Floor Tile.

C. ASTM F1303 - Standard Specification for Sheet Vinyl Floor Covering with Backing.

D. ASTM F1913 - Standard Specification for Vinyl Sheet Floor Covering Without Backing.

E. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.

F. SCAQMD 1168 - South Coast Air Quality Management District Rule No.1168; current edition; www.aqmd.gov.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Selection Samples: Submit manufacturer's complete set of color samples for Architect's initial selection.

D. Verification Samples: Submit two samples, minimum 6 x 12 inch in size illustrating color and pattern for each resilient flooring product specified.

E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

F. Manufacturer's Qualification Statement.

G. Installer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.

2. Extra Flooring Material: Additional quantity equivalent to 5 percent of each type and color.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified flooring with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing specified flooring with minimum three years documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Upon receipt, immediately remove any shrink-wrap and check materials for damage and the correct style, color, quantity and run numbers.

B. Store all materials off of the floor in an acclimatized, weather-tight space.

C. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

D. Deliver and store materials in manufacturer's original unopened containers, with brand names and production lot numbers clearly marked.

E. Do not double stack pallets.

1.9 FIELD CONDITIONS

A. Store materials for not less than 48 hours prior to installation in area of installation at a minimum temperature of 65 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

B. Install resilient flooring and accessories after other finishing operations, including painting have been completed.

C. Do not install resilient flooring over concrete slabs until slabs have been fully cured, and are sufficiently dry to achieve proper bond with adhesive as determined by resilient flooring manufacturer's recommended bond and moisture test.

1.10 WARRANTY

A. Resilient Flooring: Provide manufacturer's warranty, as follows:

1. Materials: Minimum 15 years from date of purchase, covering manufacturing defects and wear due to normal foot traffic.

2. Installation: Minimum 2 years from date of installation; warrant entire installation against loss of adhesion to substrates.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 SHEET FLOORING

A. Homogenous Vinyl Sheet Flooring: Homogeneous without backing, with color and pattern throughout full thickness.

1. Minimum Requirements: Comply with ASTM F1913.

2. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with ASTM E648, NFPA 253, ASTM E648, or NFPA 253.

3. Seams: Heat welded.

4. Color: As scheduled.

B. Heterogenous Vinyl Sheet Flooring: Color and pattern throughout wear layer thickness, with backing.

1. Minimum Requirements: Comply with ASTM F1303, Type II, with Class A fibrous backing.

2. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with ASTM E648, NFPA 253, ASTM E648, or NFPA 253.

3. Seams: Heat welded.

4. Color: As scheduled..

C. Welding Rod: Solid bead in material compatible with flooring, produced by flooring manufacturer for heat welding seams, and in color matching field color.

2.3 TILE FLOORING

A. Homogenous Vinyl Tile: Homogeneous, with color extending throughout thickness.

1. Minimum Requirements: Comply with ASTM F1066, of Class corresponding to type specified.

2. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with ASTM E648, NFPA 253, ASTM E648, or NFPA 253.

3. Size: As scheduled.

4. VOC Content Limits: As specified in Section 016116.

5. Color: As scheduled.

2.4 ACCESSORIES

A. Subfloor Filler: White premix latex; type recommended by adhesive material manufacturer.

B. Adhesives: Waterproof; types recommended by flooring manufacturer.

1. Provide only products having lower volatile organic compound (VOC) content than required by the more stringent of the South Coast Air Quality Management District Rule No.1168 and the Bay Area Air Quality Management District Regulation 8, Rule 51.

C. Resilient Wall Base, Edge Strips, and Accessories: Specified in Section 096513.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of flooring to substrate.

B. Minimum F(F) Floor Flatness Values:

1. Under Resilient Flooring: F(F) of 35.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for resilient flooring installation by testing for moisture and alkalinity (pH).

1. Test in accordance with Section 090561.

2. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.

3. If flooring manufacturer does not reccomend specific remediation materials and procedures, follow moisture and alkalinity remediation procedures in Section 090561.

D. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

A. Prepare floor substrates for installation of flooring in accordance with Section 090561.

B. Clean substrate.

3.3 INSTALLATION - GENERAL

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install in accordance with manufacturer's written instructions.

C. Adhesive-Applied Installation:

1. Spread only enough adhesive to permit installation of materials before initial set.
2. Fit joints and butt seams tightly.
3. Set flooring in place, press with heavy roller to attain full adhesion.

D. Where type of floor finish, pattern, or color are different on opposite sides of door, terminate flooring under centerline of door.

E. Install edge strips at unprotected or exposed edges, where flooring terminates, and where indicated.

1. Resilient Strips: Attach to substrate using adhesive.

F. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.

3.4 INSTALLATION - SHEET FLOORING

A. Cut curvilinear patterns and shapes in flooring by waterjetting.

B. Lay flooring with joints and seams parallel to longer room dimensions, to produce minimum number of seams. Lay out seams to avoid widths less than 1/3 of roll width; match patterns at seams.

C. Seal seams by heat welding where indicatedor required by manufacturer for applicable flooring products.

3.5 INSTALLATION - TILE FLOORING

A. Mix tile from container to ensure shade variations are consistent when tile is placed, unless otherwise indicated in manufacturer's installation instructions.

B. Install flooring in pattern as indicated in drawings. Allow minimum 1/2 full size tile width at room or area perimeter.

C. Install plank tile with a random offset of at least 6 inches from adjacent rows.

3.6 CLEANING

A. Remove excess adhesive from floor, base, and wall surfaces without damage.

B. Clean in accordance with manufacturer's written instructions.

3.7 PROTECTION

A. Prohibit traffic on resilient flooring for 48 hours after installation.

B. Place protective coverings over finished floors; do not remove coverings until Date of Substantial Completion.

END OF SECTION

SECTION 096513 - RESILIENT WALL BASE AND ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Resilient wall base.

B. Resilient edge and transition strips.

C. Accessories.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 096500 - Resilient Flooring.

C. Section 096813 - Tile Carpeting.

1.4 REFERENCE STANDARDS

A. ASTM F1861 - Standard Specification for Resilient Wall Base.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Selection Samples: If basis of design color is not provided, submit manufacturer's complete set of color samples for Architect's selection.

D. Verification Samples: Submit two samples, minimum 4x4 inch in size illustrating color and pattern for each resilient flooring product specified.

E. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.
2. Extra Wall Base: 24 linear feet of each type and color.

3. Clearly identify each package.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified flooring with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing specified flooring with minimum three years documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Upon receipt, immediately remove any shrink-wrap and check materials for damage and the correct style, color, quantity and run numbers.

B. Store all materials off of the floor in an acclimatized, weather-tight space.

C. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

D. Deliver and store materials in manufacturer's original unopened containers, with brand names and production lot numbers clearly marked.

E. Protect roll materials from damage by storing on end.

F. Do not double stack pallets.

1.8 FIELD CONDITIONS

A. Store materials for not less than 48 hours prior to installation in area of installation at a minimum temperature of 65 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

B. Install resilient accessories after other finishing operations, including painting have been completed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 RESILIENT BASE

A. Resilient Base: ASTM F1861, Type TS rubber, vulcanized thermoset; top set.

1. Profile: Style B, Cove.
2. Group: I (solid, homogeneous).
3. Height: As scheduled.
4. Thickness: 0.125 inch.
5. Finish: Satin.
6. Length: Roll.
7. Color: As indicated on drawings.
8. Accessories: Premolded external corners and internal corners.

B. Resilient Base: ASTM F1861, Type TP, rubber, thermoplastic; top set.
1. Profile: Smooth.
2. Group: I (solid, homogeneous).
3. Height: As scheduled.
4. Thickness: 0.25 inch.
5. Finish: Matte.
6. Length: Roll.
7. Color: As indicated on drawings.
8. Accessories: Premolded external corners and internal corners.

2.3 ACCESSORIES

A. Subfloor Filler: Type recommended by adhesive material manufacturer; in accordance with Section 090561 - Common Work Results For Flooring Preparation.

B. Adhesives: Waterbased type recommended by flooring manufacturer.
1. Compatible with materials being adhered; maximum VOC content of 50 g/L.

C. Moldings and Edge Strips: Homogeneous vinyl or rubber type; tapered or bullnose edge.
1. Profiles: As scheduled in drawings, selected by flooring heights.
2. Color: As scheduled..

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive resilient base.

3.2 PREPARATION

A. Prepare substrates as recommended by flooring and adhesive manufacturers.

B. Remove substrate ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

1. Prohibit traffic until filler is fully cured.

C. Clean substrate.

3.3 INSTALLATION - GENERAL

A. Starting installation constitutes acceptance of conditions.

B. Install in accordance with manufacturer's written instructions.

C. Adhesive-Applied Installation:

1. Spread only enough adhesive to permit installation of materials before initial set.

2. Fit joints and butt seams tightly.

3.4 INSTALLATION - RESILIENT BASE

A. Apply wall base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

B. Fit joints tightly and make vertical. Install in longest lengths possible; maintain minimum dimension of 18 inches between joints.

C. Miter internal corners. At external corners, use premolded units.

1. Outside Corners: Use straight pieces of maximum lengths possible. Form without producing discoloration (whitening) at bends.

D. Install base on solid backing. Bond tightly to wall and floor surfaces.

E. Do not stretch wall base during installation.

F. Scribe and fit to door frames and other interruptions.

3.5 INSTALLATION - RESILIENT ACCESORIES

A. Install edge strips at unprotected or exposed edges, where flooring terminates, and where indicated.

1. Attach to substrate using manufacturer's recommended adhesive.

3.6 CLEANING

A. Remove excess adhesive from floor, base, and wall surfaces without damage.

B. Clean in accordance with manufacturer's written instructions.

3.7 PROTECTION

A. Prohibit traffic on resilient flooring for 48 hours after installation.

END OF SECTION

This page intentionally left blank

SECTION 096700 - FLUID-APPLIED FLOORING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fluid-applied flooring and base.

1.3 RELATED REQUIREMENTS

A. Section 079200 - Joint Sealants: Sealing joints between fluid-applied flooring and adjacent construction and fixtures.

B. Section 090561 - Common Work Results For Flooring Preparation: Concrete slab moisture and alkalinity testing and remediation procedures.

1.4 REFERENCE STANDARDS

A. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.

1.5 DEFINITIONS

A. DCOF: Dynamic Coefficient of Friction.

B. Slip-Resistant: Installed flooring surface which has a wet coeffecient of friction of 0.42, minimum, as measured according to ANSI B101.3 (DCOF Slip Resistance Test).

1.6 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting at least one week prior to the start of the work of this Section; require attendance by all affected installers, manufacturer, Contractor, and Architect.

1. Discuss installation testing, prep, procedures, details, and other pertinent issues.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns and colors available.

C. Samples for Selection: Submit samles showing range of options for color, texture, and aggregate for each system.

D. Samples for Verification: Submit two samples, 12 x 12 inch in size illustrating color and pattern for each floor material for each color specified.

E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

F. Manufacturer's Certificate: Provide letter of certification from manufacturer stating that installer is a certified applicator and is familiar with manufacturers required procedures for application of specified finish system

1. Slip-Resistance: Certify that specified floor finish system, when installed, comply with specified requirements for slip-resistance.

G. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

H. Manufacturer's Qualification Statement.

I. Applicator's Qualification Statement.

J. Maintenance Data: Include maintenance procedures, recommended maintenance materials, procedures for stain removal, repairing surface, and suggested schedule for cleaning.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section with minimum five years documented experience.

B. Applicator Qualifications: Company specializing in performing the work of this Section.

1. Minimum five years of documented experience.
2. Approved by manufacturer.

C. Basis of Design: Specifications are based on flooring types by the specified basis of design manufacturer. Flooring types manufactured by other acceptable manufacturers are permitted, subject to compliance with all specified requirements; and provided that deviations in composition, construction, performance, and finish are minor and do not detract substantially from the indicated design intent.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

B. Store resin materials in a dry, secure area.

C. Store materials for three days prior to installation in area of installation to achieve temperature stability.

1.10 FIELD CONDITIONS

A. Maintain minimum temperature in storage area of 55 degrees F.

B. Store materials in area of installation for minimum period of 24 hours prior to installation.

C. Maintain ambient temperature required by manufacturer 72 hours prior to, during, and 24 hours after installation of materials.

D. Concrete substrate shall be properly cured for a minimum of 28 days.

1.11 WARRANTY

A. Fluid-applied Flooring: Provide manufacturer's warranty, as follows:

1. Materials: Minimum 2 years from Date of Substantrial Completion.

2. Installation: Minimum 2 years from Date of Substantial Completion; warrant entire installation against loss of adhesion to substrates.

PART 2 PRODUCTS

2.1 FLOORING SYSTEMS

A. Fluid-Applied Flooring: Polyurethane cement slurry base coat(s) with broadcast aggregate and slip-resistant granules.

1. Aggregate: Quartz granules.

2. System Thickness: 1/4 inch, nominal, when dry.

3. Texture: Slip resistant.

4. Sheen: High gloss.

5. Color: As scheduled.

6. Acceptable Manufacturers:

a. Basis of Design: As indicated in Section 090000 - Finish Schedule.

b. Substitutions: See Section 01 60 00-Product Requirements.

2.2 ACCESSORIES

A. Base Caps: Zinc or plastic with projecting base of 1/8 inch; color as selected.

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Cant Strips: Molded material compatible with flooring.

C. Subfloor Filler: Type recommended by fluid-applied flooring manufacturer.

D. Primer: Type recommended by fluid-applied flooring manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive flooring.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive flooring.

C. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of materials to subfloor surfaces.

D. Cementitious Subfloor Surfaces: Verify that substrates are ready for fluid-applied flooring installation by testing for moisture and alkalinity (pH).

1. Test in accordance with Section 090561.
2. Obtain instructions if test results are not within limits recommended by fluid-applied flooring manufacturer.

E. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

A. Remove subfloor ridges and bumps. Fill low spots, cracks, joints, holes, and other defects with subfloor filler.

B. Prepare concrete surfaces according to ICRI 310.2R.

C. Prepare concrete surfaces according to manufacturer's guidelines.

D. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Grind irregularities above the surface level. Prohibit traffic until filler is cured.

E. Vacuum clean substrate.

F. Apply primer to surfaces required by flooring manufacturer.

3.3 INSTALLATION - ACCESSORIES

A. Install cant strips at base of walls where flooring is to be extended up wall as base.

B. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, sanding, and top coating of cove base. Round internal and external corners.

C. Install terminating cap strip at top of base; attach securely to wall substrate.

3.4 INSTALLATION - FLOORING

A. Apply in accordance with manufacturer's instructions.

1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
3. At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
    a. Apply joint sealant to comply with manufacturer's written recommendations.

B. Apply primer to surfaces required by flooring manufacturer at manufacturer's recommended rate.

C. Apply each coat to minimum thickness required by manufacturer.
1. Mix and apply mortar and base coat(s) as indicated for flooring system and at coverage rates recommended in writing by manufacturer. Screed mortar materials, compact and smooth, with steel finishing trowels.
2. Aggregate: Broadcast in number of coats indicated for flooring system and at spreading rates recommended in writing by manufacturer
3. Apply topcoat(s) in number of coats indicated for flooring system and at spreading rates recommended in writing by manufacturer.

D. Finish to uniform, level surface.

3.5 TERMINATIONS

A. Chase edges to “lock” the coating system into the concrete substrate along lines of termination.

B. Penetration Treatment: Lap and seal coating onto the perimeter of the penetrating item by bridging over compatible elastomer at the interface to compensate for possible movement.

C. Treat floor drains by chasing the coating to lock in place at point of termination.

3.6 JOINTS AND CRACKS

A. Treat control joints to bridge potential cracks and to maintain monolithic protection.

B. Treat cold joints and construction joints to bridge potential cracks and to maintain monolithic protection on horizontal and vertical surfaces as well as horizontal and vertical interfaces.

C. Discontinue floor coating system at vertical and horizontal contraction and expansion joints by installing backer rod and compatible sealant after coating installation is completed. Provide sealant type recommended by manufacturer for traffic conditions and chemical exposures to be encountered.

3.7 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

3.8 PROTECTION

A. Prohibit traffic on floor finish for 48 hours after installation.

B. Barricade area to protect flooring until fully cured.

END OF SECTION

SECTION 096813 - TILE CARPETING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Carpet tile, fully adhered.

B. Entrance mats.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 090561 - Common Work Results For Flooring Preparation: Removal of existing floor coverings, cleaning, and preparation; moisture and alkalinity testing and remediation procedures.

C. Section 096513 - Resilient Wall Base and Accessories.

D. Section 124813 - Entrance Floor Mats and Frames.

1.4 REFERENCE STANDARDS

A. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.

B. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

C. CRI (GLP) - Green Label Plus Testing Program - Certified Products.

D. CRI 104 - Standard for Installation of Commercial Carpet.

E. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Samples: Submit two carpet tiles illustrating color and pattern design for each carpet color selected.

D. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

F. Product Schedule: Use same room and product designations indicated on Drawings and in schedules.

G. Operation and Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.

2. Extra Carpet Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet tile with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing carpet tile with minimum three years documented experience.

C. Basis of Design: Design is based on specified basis of design manufacturer. Similar systems by other acceptable manufacturers are permitted, subject to compliance with all specified performance characteristics, and provided that deviations in performance, materials, finish, texture and color are minor, and do not detract from the indicated design intent.

1.7 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with CRI 104 section for "Storage and Handling."

B. Deliver carpeting materials in original mill protective wrapping, with mill register numbers and tags attached.

C. Store inside, in well ventilated area, protected from weather, moisture, and soiling.

1.8 FIELD CONDITIONS

A. Sub-floor preparation is to include all required work to prepare the existing floor for installation of the product as specified in this document and Manufacturer’s installation instructions.

1. All material used in sub-floor preparation and repair shall be recommended by the flooring manufacturer and shall be chemically and physically compatible with the flooring system.

B. Stage materials in area of installation for minimum period of 24 hours prior to installation.

C. Maintain minimum 70 degrees F ambient temperature 24 hours prior to, during and 24 hours after installation.

D. Ventilate installation area during installation and for 72 hours after installation.

E. Do not commence with carpet installation until painting and finishing work is complete and ceilings and overhead work has been tested, approved, and completed.

F. Do not install carpet tile over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

1.9 WARRANTY

A. Special Carpet Tile Warranty: Written warranty, signed by carpet tile manufacturer agreeing to replace carpet tile that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

B. Substitutions: See Section 016000 - Product Requirements.

2.2 CARPET TILE MATERIALS

A. General: Comply with recycled content, adhesives and sealants, volatile organic compound (VOC), and flooring system product requirements specified in Section 6000 and Section 01 6116 as applicable.

B. Tile Carpeting: Nylon 6,6 tufted, tip-sheared pattern loop, manufactured in one color dye lot.

1. Tile Size: As scheduled.

2. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with ASTM E648 or NFPA 253.

3. Surface Flammability Ignition: Pass ASTM D2859 (the "pill test").

4. Face Weight: 18 oz/sq yd, minimum.

5. Primary Backing Material: Vinyl composite.

C. Entrance Mats: Nylon 6.6 textured tufted loop with vinyl composite material backing reinforced with fiberglass with antimicrobial additives.

1. Size: As scheduled.
2. Color: As scheduled.
3. Thickness: 9/32 inch, nominal.
4. Total Weight: 139 oz/sq yd.
5. Performance:

a. Smoke Density: Pass (flaming and non-flaming), in accordance with ASTM E662.

b. Critical Radiant Flux: Class 1, in accordance with AATCC 134.

c. Static Control: < 3 kV, in accordance with AATCC 134.

d. Color Fastness to Light: 4, in accordance with AATCC 16.

e. Dimensional Stability: -0.2% to +0.2%, in accordance with EN986.

2.3 ACCESSORIES

A. Subfloor Filler: Type recommended by flooring material manufacturer, in accordance with Section 090561 - Common Work Results For Flooring Preparation.

B. Transitions: As scheduled.

C. Resilient Wall Base and Accessories: Specified in Section 096513.

D. Adhesives: Recommended by carpet tile manufacturer; releasable type; compatible with materials being adhered; maximum VOC content of 50 g/L; CRI (GLP) certified.

E. Miscellaneous Materials: Provide other items recommended by carpet manufacturer and installer for the indicated conditions of carpet use, and as required for complete installation.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive carpet tile.

B. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to subfloor surfaces.

C. Cementitious Subfloor Surfaces: Verify that substrates are ready for flooring installation by testing for moisture and alkalinity (pH).

1. Test in accordance with Section 090561.

2. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

3. If flooring manufacturer does not reccomend specific remediation materials and procedures, follow moisture and alkalinity remediation procedures in Section 090561.

D. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

A. General: Comply with CRI 104 sections for "Site Conditions" and "Floor Preparation" for preparing substrates indicated to receive carpet tile installation.

B. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

D. Remove subfloor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with subfloor filler.

E. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured.

F. Vacuum clean substrate.

G. There will be no exceptions to the provisions stated in the Manufacturer’s installation instructions.

3.3 INSTALLATION

A. Starting installation constitutes acceptance of subfloor conditions.

B. Install carpet tile in accordance with manufacturer's instructions and CRI 104 (Commercial).

C. Blend carpet from different cartons to ensure minimal variation in color match.

D. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.

E. Locate change of color or pattern between rooms under door centerline.

F. Fully adhere carpet tile to substrate.

G. Trim carpet tile neatly at walls and around interruptions.

H. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, alcoves, and similar openings.

I. Complete installation of edge strips, concealing exposed edges.

3.4 CLEANING

A. Remove excess adhesive without damage, from floor, base, and wall surfaces.

B. Clean and vacuum carpet surfaces.

3.5 PROTECTION

A. Protect installed carpet tile to comply with CRI 104.

1. Do not use plastic protection. Use kraft paper, corrugated box material or hardboard as recommended by carpet tile manufacturers.

B. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 097200 - WALL COVERINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Surface preparation.

B. Wall coverings.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 092900 - Gypsum Board: Preparation of substrates to receive wall coverings.

C. Section 099123 - Interior Painting: Priming of substrate surfaces.

1.4 REFERENCE STANDARDS

A. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Coating Systems.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. ASTM F793/F793M - Standard Classification of Wall Coverings by Use Characteristics.

D. ASTM F3008 - Standard Specification for Cork Floor Tile.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on wall covering and adhesive.

C. Shop Drawings: Indicate wall elevations with seaming layout.

D. Samples: Submit two samples of wall covering, 24 x 24 inch in size illustrating color, finish, and texture.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.
2. Extra Wall Covering Materials: 25 linear feet of each color and pattern of wall covering; store where directed.
3. Package and label each roll by manufacturer, color and pattern, and destination room number.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages or containers clearly labeled to identify manufacturer, brand name, quality and grade, and fire hazard classification.

B. Inspect roll materials at arrival on site, to verify acceptability.

C. Store materials in a well ventilated area protected from weather, moisture, soiling, and extreme temperatures and humidity. Maintain temperature is storage area above 40 degrees F.

D. Protect packaged adhesive from temperature cycling and cold temperatures.

E. Do not store roll goods on end.

1.8 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the adhesive or wall covering product manufacturer.

B. Maintain these conditions 24 hours before, during, and after installation of adhesive and wall covering.

C. Provide lighting level of 80 ft candles measured mid-height at substrate surfaces.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

2.2 WALL COVERINGS

A. General Requirements:

1. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.

2. Chemical and Stain Resistance: No visible staining or discoloration and no damage to surface texture when tested in accordance with ASTM D1308.

B. Wall Coverings:

1. Woven fabric-backed vinyl roll stock:

a. Comply with ASTM F793/F793M, Category V, Type II.

b. Total Thickness: 0.029 inch, minimum.

c. Total Weight: 35 oz per linear yard.

d. Roll Width: 52-54 inches.

e. Backing: Woven, osnaburg fabric.

f. Color: As scheduled.

g. Pattern: As scheduled.

h. Pattern Match: Straight.

2. Fabric-backed vinyl roll stock:

a. Comply with ASTM F793/F793M, Category V, Type II.

b. Total Weight: 20 oz per linear yard.

c. Roll Width: 51 inches.

d. Backing: Non-woven, synthetic fabric.

e. Color: As scheduled.

f. Pattern: As scheduled.

g. Pattern Match: Straight.

C. Wall Covering: PVC-Free Cork.

1. Panel Size: As scheduled.

2. Cork Thickness: 3 millimeter, minimum.

3. Panel Edge Treatment: Square.

4. Trim: Manufacturer's standard trim shapes.

5. Surface Texture: As scheduled.

D. Adhesive: Manufacturer's standard water-based contact adhesive; adhesives not approved by manufacturer are not permitted.

E. Substrate Filler: As recommended by adhesive and wall covering manufacturers; compatible with substrate.

F. Substrate Primer and Sealer: Free of volatile organic compounds (VOC); wall covering manufacturer's recommended or approved type.

PART 3 EXECUTION

3.1 EXAMINATION - ALL PRODUCT TYPES

A. Verify that substrate surfaces are ready to receive work, and conform to requirements of the wall covering manufacturer.

B. Measure moisture content of surfaces using an electronic moisture meter. Do not apply wall coverings if moisture content of substrate exceeds level recommended by wall covering manufacturer.

C. Verify flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet nor vary at a rate greater than 1/16 inch/ft.

3.2 EXAMINATION - CORK WALL COVERING

A. Consult all associated product literature concerning installation, adhesive maintenance and warranty prior to installation of material.

B. Allow all trades to complete work prior to installation.

C. Deliver all materials to the installation location in its original packaging with labels intact.

D. Do not stack pallets to avoid damage.

E. Remove any plastic and strapping from product after delivery.

F. Do not remove material from packaging or store outside of packaging until ready for installation.

G. Ensure that all adhesives intended for installation are approved for use with material.

H. Ensure installation area and material storage conditions are between 65° F (19° C) and 85° F (30° C) and 45% and 55% RH for at least 72 hours before, during and after installation.

I. Ensure HVAC system is operational and fully functioning at normal operating conditions.

J. Protect installation area from extreme climate changes, such as heat, freezing and humidity, as well as direct sunlight for at least 72 hours before, during and after installation.

K. Ensure all substrate preparation requirements have been performed, read and/or understood by all interested parties.

L. Do not proceed with installation until all conditions have been met.

3.3 PREPARATION - VINYL WALL COVERING

A. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

B. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize; wipe dry.

C. Surface Appurtenances: Remove or mask electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces that affect work of this Section. Remove existing coatings that exhibit loose surface defects.

E. Marks: Seal with shellac those that may bleed through surface finishes.

F. Apply one coat of primer sealer to substrate surfaces. Allow to dry. Lightly sand smooth.

G. Vacuum clean surfaces free of loose particles.

3.4 PREPARATION - CORK WALL COVERING

A. All substrates must be:

1. clean, smooth, permanently dry, flat, structurally sound, free of visible water or condensation, dust, sealers, residual adhesives and adhesive removers, solvents, wax, oil, grease, asphalt, gypsum compounds, visible alkaline salts or excessive efflorescence, mold, mildew and all other extraneous coating, film, material or foreign matter.

B. Substrate must be a structurally sound interior wall surface, such as dry plaster, cured drywall, fiber-reinforced plastic (FRP) panels, fiberglass, exterior grade plywood (Group 1, CC type), concrete, metal and masonry.

C. All cracks, voids, divots, grout lines and imperfections must be filled with a patch or filler suitable for the substrate.

D. Prime gypsum board surfaces with primer color that coordinates with the cork color prior to installation to avoid white primers increasing the appearance of natural and acceptable size varaiation and shrinkage during installation and seasonal environmental changes.

E. All substrates that have been painted must be sanded with 100-150 grit sandpaper to create a surface profile and promote adhesion.

1. Failure to sand painted surfaces may result in bond failure or excessive movement.

F. When installing directly over a resinous products, such as an epoxy paint, ensure that coating is dry to the touch and has cured for the prescribed length of time.

1. Substrate must be clean, dry, sound and free of contaminates.

2. Sand the surfaces of the substrate with 100-150 grit sandpaper to create a surface profile and promote adhesion.

3. Resinous substrates are non-porous – follow all installation instructions, flash times for non-porous substrates.

3.5 INSTALLATION - VINYL WALL COVERING

A. Apply adhesive and wall covering in accordance with manufacturer's instructions.

B. Apply adhesive to wall surface immediately prior to application of wall covering.

C. Use wall covering in roll number sequence.

D. Razor trim edges. Do not razor cut on gypsum board surfaces.

E. Apply wall covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

F. Butt edges tightly.

G. Horizontal seams are not acceptable.

H. Do not seam within 2 inches of internal corners or within 6 inches of external corners.

I. Install wall covering before installation of bases and items attached to or spaced slightly from wall surface.

J. Do not install wall covering more than 1/4 inch below top of resilient base.

K. Cover spaces above and below windows, above doors, in pattern sequence from roll.

L. Remove excess adhesive while wet from seam before proceeding to next wall covering sheet. Wipe clean with dry cloth.

3.6 INSTALLATION - CORK WALL COVERING

A. Stir adhesive to ensure a homogeneous and continuous consistency; close adhesive container when not in use.

1. Be sure to only pour out adhesive that will be immediately used, as dried adhesive cannot be reused; do not return adhesive that has been poured out to the original container.

B. Precoating: Pre-coat tiles with adhesive the day prior to coating the substrate.

1. Store tiles front to back in the original packaging until final installation.
2. Do not all precoated surfaces to make contact with each other to prevent full adhesion.
3. Install tiles within 24 hours of being precoated.

C. Apply adhesive with a paint roller evenly to both the back of the tile and the substrate, ensure even coverage and a consistent, glossy film on both surfaces.

1. Apply an additional coat to areas of uneven adhesive coverage.
2. Prevent excessive adhesive build-up.

D. Allow adhesive to dry on both surfaces prior to installation; immediately remove excessive adhesive from the tile face or fixtures with water and a pH neutral cleaner.

1. Wait for adhesive to turn from white to transparent/clear; approximate drying time to the touch is 30 to 60 minutes.

E. Install tile within 60 to 90 minutes, after adhesive is dry.

1. Adhesive will form an immediate bond once contact is made between the two surfaces.

2. Avoid sliding or forcing tiles into place.

F. Use a soft, non-marking rubber mallet with a minimum 2 inch surface area to carefully set each and every cork tile after installation in order to ensure that cork tile makes full contact with substrate.

1. Set the corners, edges and centers of all tiles in order to establish complete contact and proper adhesive bond.

G. Visually inspect installation to ensure that material has not shifted and that adhesive has not been compressed onto the surface.

H. Clean excessive adhesive or adhesive residue from the surface of the material per adhesive recommendations.

1. Do not apply abrasive or solvent based cleaners directly to material.

3.7 CLEANING

A. Clean wall coverings of excess adhesive, dust, dirt, and other contaminants.

B. Reinstall wall plates and accessories removed prior to work of this Section.

3.8 PROTECTION

A. Do not permit construction activities at or near finished wall covering areas.

END OF SECTION

This page intentionally left blank

SECTION 098430 - SOUND-ABSORBING WALL AND CEILING UNITS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Sound-absorbing wall units.

B. Sound-absorbing ceiling units.

C. Mounting accessories.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

1.4 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's printed data sheets for products specified.

C. Shop Drawings: Fabrication and installation details, panel layout and attachment hardware.

D. Selection Samples: Manufacturer's color charts for fabric covering, indicating full range of colors and patterns available.

E. Verification Samples: Fabricated samples of each type of panel specified; 12 by 12 inch, showing construction, edge details, and finish.

F. Test Reports: Certified test data from an independent test agency verifying that panels meet specified requirements for acoustical and fire performance.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with at least three years of documented experience.

B. Basis of Design: Specifications are based on products by specified basis of design manufacturer. Products manufactured by other acceptable manufacturers are permitted, subject to compliance with specified requirements, and provided that deviations in design, performance, composition, color, and profile are minor, and do not detract substantially from the indicated design intent.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect acoustical units from moisture during shipment, storage, and handling. Deliver in factory-wrapped bundles; do not open bundles until units are needed for installation.

B. Store units flat, in dry, well-ventilated space; do not stand on end.

C. Protect edges from damage.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

B. Substitutions: See Section 016000 - Product Requirements.

2.2 FELTED SOUND-ABSORBING UNITS

A. Felt Wall Panels, Notched:

1. Material: Recyled polyester (PET) felt.
2. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
3. Noise Reduction Coefficient (NRC): 0.40 minimum when tested in accordance with ASTM C423.
4. Backing: None.
5. Thickness: 1 inch, nominal.
6. Surface pattern: As scheduled.
7. Color: As scheduled.
8. Mounting: Manufacturer's recommended tape on all panel edges and vertically every 12 inches on center.

B. Felt Ceiling Panels:

1. Material: Recyled polyester (PET) felt.

2. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
3. Noise Reduction Coefficient (NRC): 0.70 minimum when tested in accordance with ASTM C423.
4. Backing: None.
5. Thickness: 1 inch, nominal.
6. Edges: Square
7. Surface pattern: As scheduled.
8. Color: As scheduled.
9. Mounting: Suspended.

2.3 FABRICATION

A. Tolerances: Fabricate to finished tolerance of plus or minus 1/16 inch for thickness, overall length and width, and squareness from corner to corner.

B. Factory-applied finishes on wood veneer panels to be uniform, smooth, and without blemishes.

2.4 ACCESSORIES

A. Back-Mounting Accessories: Manufacturer's standard accessories for concealed support, designed to allow panel removal, and as follows:
1. Two-part clip and base-support bracket system; brackets designed to support full weight of panels and clips designed for lateral support, with one part mechanically attached to back of panel and the other attached to substrate.

B. Ceiling-Suspended Accessories: Manufacturer's standard accessories at locations as indicated on each acoustical unit, sized appropriately for weight of acoustical unit.
1. Provide galvanized wire for suspension from ceiling at heights as indicated.

C. Fixing Clips: Manufacturers standard for application as indicated.

D. Panel Tapes and Adhesive: Acceptable to acoustical panel manufacturer for application as indicated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates for conditions detrimental to installation of acoustical units. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install acoustical units in locations as indicated, following manufacturer's installation instructions.

B. Install mounting accessories and supports in accordance with shop drawings.

C. Align panels accurately, with edges plumb and top edges level. Scribe to fit accurately at adjoining work and penetrations.

3.3 CLEANING

A. Clean units upon completion of installation from dust and other foreign materials, following manufacturer's instructions.

3.4 PROTECTION

A. Provide protection of installed acoustical panels until Date of Substantial Completion.

B. Replace panels that cannot be cleaned and repaired to satisfaction of the Architect.

END OF SECTION

SECTION 099113 - EXTERIOR PAINTING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Scope: Finish exterior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.

D. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
5. Non-metallic roofing and flashing.
6. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, zinc, and lead.
7. Weathering steel.
8. Floors, unless specifically indicated.
9. Ceramic and other types of tiles.
10. Brick, glass unit masonry, architectural concrete, cast stone, integrally colored plaster and stucco, unless otherwise noted.
11. Glass.
12. Concealed pipes, ducts, and conduits.

1.3 RELATED REQUIREMENTS

A. Section 016116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 055000 - Metal Fabrications: Shop-primed items.

C. Section 099123 - Interior Painting.

1.4 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.5 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications.

C. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

D. SCAQMD 1113 - Architectural Coatings.

E. SSPC-SP 1 - Solvent Cleaning.

F. SSPC-SP 2 - Hand Tool Cleaning.

G. SSPC-SP 6 - Commercial Blast Cleaning.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

C. Samples: Submit three paper "draw down" samples, 8-1/2 by 11 inches in size, illustrating range of colors available for each finishing product specified.

1. Where sheen is specified, submit samples in only that sheen.
2. Where sheen is not specified, discuss sheen options with Architect before preparing samples, to eliminate sheens definitely not required.
3. Paint color submittals will not be considered until color submittals for major materials not to be painted, such as masonry, siding, and factory finished metals, have been approved.

D. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

E. Manufacturer's Instructions: Indicate special surface preparation procedures.

F. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces, and color samples of each color and finish used.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.
2. Extra Paint and Finish Materials: 1 gallon of each color; from the same product run, store where directed.
3. Label each container with color in addition to the manufacturer's label.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum five years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum five years experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.9 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply exterior paint and finishes during rain or snow, or when relative humidity is outside the humidity ranges required by the paint product manufacturer.

D. Minimum Application Temperatures for Latex Paints: 50 degrees F for exterior; unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candles measured mid-height at substrate surface.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Provide paints and finishes used in any individual system from the same manufacturer; no exceptions.

B. Paints:

1. PPG Paints: www.ppgpaints.com/#sle.
2. Sherwin-Williams Company: www.sherwin-williams.com/#sle.
3. Benjamin Moore: www.benjaminmoore.com.

C. Primer Sealers: Same manufacturer as top coats.

2.2 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless required to be a field-catalyzed paint.

1. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
2. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
3. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color.
4. Supply each paint material in quantity required to complete entire project's work from a single production run.
5. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content:

1. Provide paints and finishes that comply with the most stringent requirements specified in the following:

    a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.

    b. SCAQMD 1113 Rule.

2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: As indicated on drawings.

1. Extend colors to surface edges; colors may change at any edge as directed by Architect.

2.3 PAINT SYSTEMS - EXTERIOR

A. Exterior Surfaces to be Painted, Unless Otherwise Indicated: Including applications listed below.

1. Two top coats and one coat primer.

    a. If flash rusting occurs, use two coats of primer.

2. Exterior Acrylic Urethane, Water Based.

    a. Application: Galvanized steel railings.

    b. Products:

        1) Sherwin Williams Pro Industrial Acrolon 100 HS Waterbased Urethane.

3. Exterior Urethane Alkyd Enamel.

    a. Application: Steel railings.

    b. Products:

        1) Sherwin Williams Pro Industrial Urethane Alkyd Enamel.

4. Exterior Light Industrial Coating, Water Based.

    a. Application: Primed and galvanized metals (doors, fences, lintels, etc).

    b. Products:

        1) PPG Paints Pitt-Tech Plus WB DTM Industrial Enamel.

        2) Benjamin Moore Super Spec HP DTM Acrylic.

        3) Sherwin Williams Pro Industrial DTM Acrylic B66 Series.

5. Top Coat Sheen:

    a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.

    b. Satin: MPI gloss level 4; use this sheen at wood, cementitous or masonry substrates unless otherwise noted.

    c. Semi-Gloss: MPI gloss level 5; use this sheen at metal substrates unless otherwise noted.

6. Primer: As recommended by top coat manufacturer for specific substrate.

2.4 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer.

    a. Products:

        1) Pittsburgh Paints: 4-603XI Perma-Crete Interior/Exterior Alkali Resistant Primer. (MPI #3)

        2) Benjamin Moore Ultra Spec Acrylic High-Build Masonry Primer.

        3) Sherwin Williams Loxon Concrete & Masonry Primer (MPI #3).

4) Substitutions: Section 016000 - Product Requirements.

2. Interior/Exterior Latex Block Filler.

a. Products:

1) Kilz Pro-X p50 Block Filler Primer.

2) Pittsburgh Paints: 6-15XI Speedhide Masonry Hi Fill Latex Block Filler. (MPI #4)

3) Benjamin Moore Ultra Spec High-Build Masonry Block Filler.

4) Sherwin Williams B25W25 Preprite Block Filler. (MPI #4).

5) Substitutions: Section 016000 - Product Requirements.

3. Water Based Primer for Galvanized Metal.

a. Products:

1) Pittsburgh Paints: 4020 PF Pitt-Tech Plus Interior/Exterior Waterborne Acrylic Primer Finish DTM Industrial Enamel. (MPI #134).

2) Sherwin Williams Pro-Cryl Universal Metal Primer B-66 Series.

3) Substitutions: Section 016000 - Product Requirements.

4. Rust-Inhibitive Water Based Primer.

a. Products:

1) Benjamin Moore: MO4 Acrylic Metal Primer.

2) ICI Paints: Devoe Coatings DevFlex 4020PF Direct to Metal Primer & Flat Finish.

3) PPG Industries: 90-708 Series, Pitt-Tech One-Pack Interior/Exterior Industrial Primer.

4) Sherwin Williams: DTM Acrylic Primer Finish B66W1.

5) Substitutions: Section 016000 - Product Requirements.

5. High-Build Universal Metal Primer.

a. Products:

1) Sherwin Williams: Kem Kromik Universal Metal Primer.

2) Substitutions: Section 016000 - Product Requirements.

2.5 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Test shop-applied primer for compatibility with subsequent cover materials.

3.2 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing paints or finishes that exhibit surface defects.

D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces for finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

G. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

H. Galvanized Surfaces:

1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.
2. Prepare surface according to SSPC-SP 2.

I. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces.

3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

J. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.3 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

C. Where adjacent sealant is to be painted, do not apply finish coats until sealant is applied.

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance.

F. Dark Colors and Deep Clear Colors: Regardless of number of coats specified, apply additional coats until complete hide is achieved.

G. Sand metal surfaces lightly between coats to achieve required finish.

H. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

I. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.4 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.5 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 099113.1 – EXTERIOR PAINTING (SITE/CIVIL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

B. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparation and the application of paint systems on the following exterior substrates:

1. Exterior galvanized metal bollards.

B. Related Sections include the following:

1. Division 05 Section “Shop-Applied Coatings for Metal” for factory-applied metal primer for exterior metal framing and fabrications.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For each type of topcoat product indicated.

C. Samples for Verification: For each type of paint system and each color and gloss of topcoat indicated.

1. Submit Samples on rigid backing, 8 inches (200 mm) square.
2. Step coats on Samples to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

D. Product List: For each product indicated, include the following:

1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
2. Printout of current "MPI Approved Products List" for each product category specified in Part 2, with the proposed product highlighted.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 QUALITY ASSURANCE

A. MPI Standards:

1. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."
2. Preparation and Workmanship: Comply with requirements in "MPI Architectural Painting Specification Manual" for products and paint systems indicated.

B. Mockups: Apply benchmark samples of each paint system indicated and each color and finish selected to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
2. Final approval of color selections will be based on benchmark samples.

a. If preliminary color selections are not approved, apply additional benchmark samples of additional colors selected by Architect at no added cost to Owner.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.7 PROJECT CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).

B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below that are from same production run (batch mix) as materials applied and that are packaged for storage and identified with labels describing contents.

1. Quantity: Furnish an additional 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Benjamin Moore & Co.
2. ICI Paints.
3. PPG Architectural Finishes, Inc.
4. Sherwin-Williams Company (The).

2.2 PAINT, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. Colors: As selected by Architect from manufacturer's full range.

2.3 EXTERIOR ALKYD PAINTS

A. Exterior Alkyd Enamel (Gloss): MPI #9 (Gloss Level 6).

1. VOC Content: E Range of E1.

    a. Benjamin Moore: Benjamin Moore - Urethane Alkyd Gloss Enamel; No. M22.
    b. ICI Paints: Devoe Coatings - Devguard Alkyd Enamel; No. 4308-0100.

2. VOC Content: E Range of E2.

    a. PPG: Speedhide I - Ext. Alkyd Enamel – Gloss; No. 6-282.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of work.

B. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

C. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove plates, machined surfaces, and similar items already in place that are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
2. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

C. Clean substrates of substances that could impair bond of paints, including dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers as required to produce paint systems indicated.

D. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions.

1. Use applicators and techniques suited for paint and substrate indicated.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

3.4 FIELD QUALITY CONTROL

A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when paints are being applied:

1. Owner will engage the services of a qualified testing agency to sample paint materials being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
2. Testing agency will perform tests for compliance of paint materials with product requirements.
3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying-paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 EXTERIOR PAINTING SCHEDULE

A. Galvanized-Metal Substrates:

1. Alkyd System: MPI EXT 5.3B.

a. Intermediate Coat: Exterior alkyd enamel matching topcoat.
b. Topcoat: Exterior alkyd enamel (gloss).

END OF SECTION 099113.1

SECTION 099113 - EXTERIOR PAINTING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Scope: Finish exterior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.

D. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
5. Non-metallic roofing and flashing.
6. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, zinc, and lead.
7. Weathering steel.
8. Floors, unless specifically indicated.
9. Ceramic and other types of tiles.
10. Brick, glass unit masonry, architectural concrete, cast stone, integrally colored plaster and stucco, unless otherwise noted.
11. Glass.
12. Concealed pipes, ducts, and conduits.

1.3 RELATED REQUIREMENTS

A. Section 016116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 055000 - Metal Fabrications: Shop-primed items.

C. Section 099123 - Interior Painting.

1.4 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.5 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications.

C. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

D. SCAQMD 1113 - Architectural Coatings.

E. SSPC-SP 1 - Solvent Cleaning.

F. SSPC-SP 2 - Hand Tool Cleaning.

G. SSPC-SP 6 - Commercial Blast Cleaning.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

C. Samples: Submit three paper "draw down" samples, 8-1/2 by 11 inches in size, illustrating range of colors available for each finishing product specified.

1. Where sheen is specified, submit samples in only that sheen.
2. Where sheen is not specified, discuss sheen options with Architect before preparing samples, to eliminate sheens definitely not required.
3. Paint color submittals will not be considered until color submittals for major materials not to be painted, such as masonry, siding, and factory finished metals, have been approved.

D. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

E. Manufacturer's Instructions: Indicate special surface preparation procedures.

F. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces, and color samples of each color and finish used.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.
2. Extra Paint and Finish Materials: 1 gallon of each color; from the same product run, store where directed.
3. Label each container with color in addition to the manufacturer's label.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum five years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum five years experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.9 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply exterior paint and finishes during rain or snow, or when relative humidity is outside the humidity ranges required by the paint product manufacturer.

D. Minimum Application Temperatures for Latex Paints: 50 degrees F for exterior; unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candles measured mid-height at substrate surface.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Provide paints and finishes used in any individual system from the same manufacturer; no exceptions.

B. Paints:

1. PPG Paints: www.ppgpaints.com/#sle.
2. Sherwin-Williams Company: www.sherwin-williams.com/#sle.
3. Benjamin Moore: www.benjaminmoore.com.

C. Primer Sealers: Same manufacturer as top coats.

2.2 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless required to be a field-catalyzed paint.

1. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
2. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
3. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color.
4. Supply each paint material in quantity required to complete entire project's work from a single production run.
5. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content:

1. Provide paints and finishes that comply with the most stringent requirements specified in the following:

    a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.

    b. SCAQMD 1113 Rule.

2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: As indicated on drawings.

1. Extend colors to surface edges; colors may change at any edge as directed by Architect.

2.3 PAINT SYSTEMS - EXTERIOR

A. Exterior Surfaces to be Painted, Unless Otherwise Indicated: Including applications listed below.

1. Two top coats and one coat primer.

    a. If flash rusting occurs, use two coats of primer.

2. Exterior Acrylic Urethane, Water Based.

    a. Application: Galvanized steel railings.

    b. Products:

        1) Sherwin Williams Pro Industrial Acrolon 100 HS Waterbased Urethane.

3. Exterior Urethane Alkyd Enamel.

    a. Application: Steel railings.

    b. Products:

        1) Sherwin Williams Pro Industrial Urethane Alkyd Enamel.

4. Exterior Light Industrial Coating, Water Based.

    a. Application: Primed and galvanized metals (doors, fences, lintels, etc).

    b. Products:

        1) PPG Paints Pitt-Tech Plus WB DTM Industrial Enamel.

        2) Benjamin Moore Super Spec HP DTM Acrylic.

        3) Sherwin Williams Pro Industrial DTM Acrylic B66 Series.

5. Top Coat Sheen:

    a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.

    b. Satin: MPI gloss level 4; use this sheen at wood, cementitous or masonry substrates unless otherwise noted.

    c. Semi-Gloss: MPI gloss level 5; use this sheen at metal substrates unless otherwise noted.

6. Primer: As recommended by top coat manufacturer for specific substrate.

2.4 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer.

    a. Products:

        1) Pittsburgh Paints: 4-603XI Perma-Crete Interior/Exterior Alkali Resistant Primer. (MPI #3)

        2) Benjamin Moore Ultra Spec Acrylic High-Build Masonry Primer.

        3) Sherwin Williams Loxon Concrete & Masonry Primer (MPI #3).

4) Substitutions: Section 016000 - Product Requirements.

2. Interior/Exterior Latex Block Filler.

a. Products:

1) Kilz Pro-X p50 Block Filler Primer.

2) Pittsburgh Paints: 6-15XI Speedhide Masonry Hi Fill Latex Block Filler. (MPI #4)

3) Benjamin Moore Ultra Spec High-Build Masonry Block Filler.

4) Sherwin Williams B25W25 Preprite Block Filler. (MPI #4).

5) Substitutions: Section 016000 - Product Requirements.

3. Water Based Primer for Galvanized Metal.

a. Products:

1) Pittsburgh Paints: 4020 PF Pitt-Tech Plus Interior/Exterior Waterborne Acrylic Primer Finish DTM Industrial Enamel. (MPI #134).

2) Sherwin Williams Pro-Cryl Universal Metal Primer B-66 Series.

3) Substitutions: Section 016000 - Product Requirements.

4. Rust-Inhibitive Water Based Primer.

a. Products:

1) Benjamin Moore: MO4 Acrylic Metal Primer.

2) ICI Paints: Devoe Coatings DevFlex 4020PF Direct to Metal Primer & Flat Finish.

3) PPG Industries: 90-708 Series, Pitt-Tech One-Pack Interior/Exterior Industrial Primer.

4) Sherwin Williams: DTM Acrylic Primer Finish B66W1.

5) Substitutions: Section 016000 - Product Requirements.

5. High-Build Universal Metal Primer.

a. Products:

1) Sherwin Williams: Kem Kromik Universal Metal Primer.

2) Substitutions: Section 016000 - Product Requirements.

2.5 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Test shop-applied primer for compatibility with subsequent cover materials.

3.2 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing paints or finishes that exhibit surface defects.

D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces for finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

G. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

H. Galvanized Surfaces:

1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.
2. Prepare surface according to SSPC-SP 2.

I. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces.

3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

J. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.3 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

C. Where adjacent sealant is to be painted, do not apply finish coats until sealant is applied.

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance.

F. Dark Colors and Deep Clear Colors: Regardless of number of coats specified, apply additional coats until complete hide is achieved.

G. Sand metal surfaces lightly between coats to achieve required finish.

H. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

I. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.4 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.5 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 099123 - INTERIOR PAINTING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Materials for backpriming woodwork.

D. Scope: Finish interior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.

1. Both sides and edges of plywood backboards for electrical and telecom equipment before installing equipment.
2. Prime surfaces to receive wall coverings.
3. Mechanical and Electrical:

    a. In finished areas, paint insulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports, mechanical equipment, and electrical equipment, unless otherwise indicated.

    b. In finished areas, paint shop-primed items.

    c. Paint interior surfaces of air ducts that are visible through grilles and louvers with one coat of flat black paint to visible surfaces.

    d. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.

E. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, bar code labels, and operating parts of equipment.
5. Stainless steel, anodized aluminum, bronze, terne-coated stainless steel, and lead items.
6. Marble, granite, slate, and other natural stones.

7. Floors, unless specifically indicated.
8. Ceramic and other tiles.
9. Brick, architectural concrete, cast stone, integrally colored plaster, and stucco.
10. Glass.
11. Acoustical materials, unless specifically indicated.
12. Concealed pipes, ducts, and conduits.

1.3 RELATED REQUIREMENTS

A. Section 055000 - Metal Fabrications: Shop-primed items.

B. Section 064000 - Architectural Woodwork: Items to receive transparent finish in the field.

C. Section 081113 - Hollow Metal Doors and Frames: Shop-primed items to receive paint in the field.

D. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

E. Section 099113 - Exterior Painting.

1.4 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.5 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications.

C. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating.

D. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials.

E. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

F. SCAQMD 1113 - Architectural Coatings.

G. SSPC-SP 1 - Solvent Cleaning.

H. SSPC-SP 2 - Hand Tool Cleaning.

I. SSPC-SP 6 - Commercial Blast Cleaning.

J. SSPC-SP 13 - Surface Preparation of Concrete.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g., "alkyd enamel").

2. Cross-reference to specified paint system products to be used in project; include description of each system.

C. Samples: Submit three paper "draw down" samples, 8-1/2 by 11 inches in size, illustrating range of colors available for each finishing product specified.

1. Where sheen is specified, submit samples in only that sheen.

2. Where sheen is not specified, discuss sheen options with Architect before preparing samples, to eliminate sheens not required.

3. Allow 30 days for approval process, after receipt of complete samples by Architect.

4. Paint color submittals will not be considered until color submittals for major materials not to be painted, such as factory finished metals, wood cabinets, and wood doors, have been approved.

D. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

E. Manufacturer's Instructions: Indicate special surface preparation procedures.

F. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces, and color samples of each color and finish used.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. Extra Paint and Finish Materials: 1 gal of each color; from the same product run, store where directed.

2. Label each container with color in addition to the manufacturer's label.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum five years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum five years experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.9 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply materials when relative humidity exceeds 85 percent, at temperatures less than 5 degrees F above the dew point, or to damp or wet surfaces.

D. Minimum Application Temperatures for Paints: 50 degrees F for interiors unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 fc measured mid-height at substrate surface.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Provide paints and finishes used in any individual system from the same manufacturer; no exceptions.

B. Paints:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

C. Primer Sealers: Same manufacturer as top coats.

D. Substitutions: See Section 016000 - Product Requirements.

2.2 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready-mixed, unless intended to be a field-catalyzed paint.

1. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.

2. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

3. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color.

4. Supply each paint material in quantity required to complete entire project's work from a single production run.
5. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content:

1. Provide paints and finishes that comply with the most stringent requirements specified in the following:
   a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.
   b. SCAQMD 1113 Rule.
   c. Architectural coatings VOC limits of the State in which the Project is located.
2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: As indicated on drawings.

1. Extend colors to surface edges; colors may change at any edge as directed by Architect.
2. In finished areas, finish pipes, ducts, conduit, and equipment the same color as the wall/ceiling under which they are mounted.

2.3 PAINT SYSTEMS - INTERIOR

A. LATEX PAINTS

1. Two top coats and one coat primer.
2. Institutional Low Odor/VOC Interior Latex.

B. WATERBASED EPOXY PAINTS

1. Two top coats and one coat primer.
2. Waterbased Epoxy.

C. ACRYLIC PAINTS

1. Two top coats over shop primer, except where special primer is recommended by manufacturer.
2. Acrylic Enamel for Metal Surfaces (Non-Railing).
3. Acrylic Enamel for Wood Surfaces.
4. Acrylic Dry Fall for Overhead Conditions.

D. TRANSPARENT FINISHES

1. Transparent Stain and Varnish for Non-Traffic Wood Surfaces:

    a. One coat of stain.

        1) Stain Products:

            a) Pittsburgh Paints Deft Interior Oil-Based Wood Stain, DFT400 Series.

            b) Sherwin Williams Minwax Performance Series Tintable Wood Stain 250 VOC.

            c) Benjamin Moore Benwood Interior Waterborne Wood Stain.

            d) Rust-Oleum Varathane Interior WB Wood Stain (MPI 186)

    b. Two coats of polyurethane.

        1) Polyurethane Products:

            a) Pittsburgh Paints Deft Interior/Exterior Water Based Polyurethane Satin, DFT259.

            b) Sherwin Williams Minwax Water-Based Oil-Modified Polyurethane, Satin.

            c) Benjamin Moore Benwood Stays Clear Acrylic Polyurethane.

            d) Rust-Oleum Varathane Crystal Clear WB Polyurethane Satin (MPI 128)

2.4 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer.

    a. Products:

        1) Pittsburgh Paints Perma-Crete Interior/Exterior Alkali Resistant Primer, 4-603XI. (MPI #3)

        2) Sherwin-Williams Loxon Concrete and Masonry Primer Sealer, LX02W50. (MPI #3)

        3) Benjamin Moore High Build Acrylic Masonry Primer, 068.

        4) Rust-Oleum Zinsser Bulls Eye 123 Acrylic Primer (MPI #3).

2. Interior/Exterior Latex Block Filler.

    a. Products:

        1) Kilz Pro-X p50 Block Filler Primer.

2) PPG Paints Speedhide Masonry Hi Fill Latex Block Filler, 6-15XI .

3) Sherwin-Williams PrepRite Block Filler.

4) Zinsser by Rust-Oleum Corporation Block Filler 2X High Build Primer for Concrete: www.rustoleum.com/#sle. (MPI #4)

3. Interior Drywall Primer Sealer.

a. Products:

1) PPG Paints Speedhide Zero Interior Latex Sealer, 6-4900XI.

2) Zinsser by Rust-Oleum Corporation Drywall Primer: www.rustoleum.com/#sle.

3) Sherwin-Williams ProMar 200 Zero VOC Interior Latex Primer, B28 Series.

4) Benjamin Moore Ultra Spec 500 Primer 534.

4. Interior Rust-Inhibitive Water Based Primer.

a. Products:

1) Pittsburgh Paints Pitt-Tech Plus Interior/Exterior EP DTM Waterborne Acrylic Primer/Finish, 90-1908. (MPI #107)

2) Rust-Oleum Corporation Commercial Universal Acrylic Primer: www.rustoleum.com/#sle. (MPI #107)

3) Sherwin-Williams Pro-Cryl Universal Waterbased Primer.

4) Benjamin Moore Ultra Spec HP Acrylic Metal Primer, HP04.

5. Interior Water Based Primer for Galvanized Metal.

a. Products:

1) Pittsburgh Paints Pitt-Tech Plus EP DTM Industrial Primer, 90-1912. (MPI #134)

2) Sherwin-Williams Pro-Cryl Universal Waterbased Primer.

3) Benjamin Moore Ultra Spec HP Acrylic Metal Primer, HP04.

4) Rust-Oleum Corporation Commercial Universal Acrylic Primer: www.rustoleum.com/#sle. (MPI #107)

2.5 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been adequately prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially affect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Test shop-applied primer for compatibility with subsequent cover materials.

F. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces is below the following maximums:

1. Gypsum Wallboard: 12 percent.
2. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
3. Interior Wood: 15 percent, measured in accordance with ASTM D4442.

3.2 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing paints or finishes that exhibit surface defects.

D. Remove surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi at 6 to 12 inches. Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.
4. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

G. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.
3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi at 6 to 12 inches. Allow to dry.

H. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

I. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

J. Galvanized Surfaces:

1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.
2. Prepare surface according to SSPC-SP 2.

K. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.
3. Remove rust, loose mill scale, and other foreign substances using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 Commercial Blast Cleaning. Protect from corrosion until coated.

L. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

M. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.3 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions.

C. Where adjacent sealant is to be painted, do not apply finish coats until sealant is applied.

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

F. Dark Colors and Deep Clear Colors: Regardless of number of coats specified, apply as many coats as necessary for complete hide.

G. Sand wood and metal surfaces lightly between coats to achieve required finish.

H. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

I. Mechanical Work: Painting of mechanical work includes the following:

1. Interior Occupied Areas: Unless otherwise indicated, paint the following when exposed to view in finished construction:

a. Structural supports for mechanical equipment.

b. Mechanical equipment (except pre-finished equipment).

c. Piping, pipe hangers, and supports.

d. Ductwork.

e. Insulation on pipe and ductwork.

f. Accessory items.

g. Fire suppression system piping.

J. Electrical Work: Painting of electrical work includes the following:

1. Interior Occupied Areas: Unless otherwise indicated, paint the following when items exposed to view in finished construction:

a. Structural supports for electrical equipment.

b. Electrical equipment (except pre-finished equipment).

c. Conduit and fittings, panels and boxes, and wiremold.

d. Panelboards, including telephone equipment.

e. Accessory items.

K. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.4 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from Project site.

1. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.5 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

3.6 SCHEDULE - PAINT SYSTEMS

A. Naming Convention:

1. Substrate - Interior or Exterior - Opaque or Transparent - #Coats/Topcoat Type.

B. Paint Cmu-I-OP-3L - CMU Substrates, Latex Enamel (Eggshell):

1. Block Filler: Block Filler 10 mils DFT.
2. Intermediate Coat: Latex Enamel, 1.6 mils DFT.
3. Topcoats: Latex Enamel, 1.6 mils DFT.

C. Paint M-I-OP-3AU-Steel Railings, Opaque, 3 Coat (Semi-gloss):

1. Prime Coat: Rust-Inhibitive Water Based Primer, 3.0 mils DFT.
2. Intermediate Coat: Acrylic Urethane, 1.8-3.5 mils DFT.
3. Topcoats: Acrylic Urethane, 1.8-3.5 mils DFT.

D. Paint M-I-OP-3AE - Steel Substrates, Acrylic Enamel (Semi-gloss):

1. Prime Coat: Rust-Inhibitive Water Based Primer, 3.0 mils DFT.
2. Intermediate Coat: Acrylic Enamel, 1.4 mils DFT.
3. Topcoats: Acrylic Enamel, 1.4 mils DFT.

E. Paint Mo-I-OP-3AD - Steel Substrates, Acrylic Dry-Fall (Exposed Overhead Steel - Flat):

1. Prime Coat: Rust-Inhibitive Water Based Primer, 3.0 mils DFT.
2. Intermediate Coat: Interior Acrylic Dry-Fall, 3.0-4.5 mils DFT.
3. Topcoats: Interior Acrylic Dry-Fall, 3.0-4.5 mils DFT.

F. Paint G-I-OP-3L - Gypsum Board Substrates, Latex Enamel (Ceilings - Flat; Walls - Eggshell, Unless Otherwise Noted):

1. Prime Coat: Interior Latex Primer Sealer, 1.4 mils DFT.
2. Intermediate Coat: Latex Enamel, 1.6 mils DFT.
3. Topcoats: Latex Enamel, 1.6 mils DFT.

G. Paint G-I-OP-3WE - Gypsum Board Substrates, Waterbased Epoxy:

1. Prime Coat: Interior Latex Primer Sealer, 1.4 mils DFT.
2. Intermediate Coat: Waterbased Epoxy, 1.6 mils DFT.
3. Topcoats: Waterbased Epoxy, 1.6 mils DFT.

H. Primer G-I-P-1L -Gypsum Board Substrates to Receive Wall Covering, Primer, 1 Coat:

1. Prime Coat: Interior Latex Primer Sealer, 1.4 mils DFT.

I. Varnish Wd-I-TR-PV - Wood Paneling Substrates, Varnish (Satin):

1. Stain: Interior Oil Stain.
2. Intermediate Coat: Polyurethane Varnish, 1.4 mils DFT.
3. Topcoats: Polyurethane Varnish, 1.4 mils DFT.

END OF SECTION

SECTION 099600 - HIGH-PERFORMANCE COATINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. High performance coatings for steel railings and exterior steel fabrications.

B. Surface preparation.

1.3 RELATED REQUIREMENTS

A. Section 099113 - Exterior Painting.

B. Section 099123 - Interior Painting: Requirements for mechanical and electrical equipment surfaces.

1.4 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency.

B. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual.

C. SCAQMD 1113 - Architectural Coatings.

D. SSPC-SP 1 - Solvent Cleaning.

E. SSPC-SP 2 - Hand Tool Cleaning.

F. SSPC-SP 6 - Commercial Blast Cleaning.

1.5 SUBMITTALS

A. Product Data: Provide complete list of all products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. Cross-reference to specified coating system(s) product is to be used in; include description of each system.

3. If proposal of substitutions is allowed under submittal procedures, explanation of all substitutions proposed.

B. Samples: Submit two samples 8 by 8 inch in size illustrating colors available for selection.

C. Manufacturer's Certificate: Certify that high-performance coatings comply with VOC limits specified.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.6 QUALITY ASSURANCE

A. Maintain one copy of each referenced document that applies to application on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Applicator Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of coating, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Coating Materials: Store at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.8 FIELD CONDITIONS

A. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

B. Do not apply exterior coatings during rain or snow, or when relative humidity is outside the humidity ranges required by the coating product manufacturer.

C. Do not install materials when temperature is below 55 degrees F or above 90 degrees F.

D. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coating.

E. Provide lighting level of 80 ft candles measured mid-height at substrate surface.

F. Restrict traffic from area where coating is being applied or is curing.

1.9 WARRANTY

A. Correct defective Work within a five year period after Date of Substantial Completion.

B. Warranty: Include coverage for bond to substrate.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Provide high performance coating products from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.

B. High-Performance Coatings:

1. PPG Paints: www.ppgpaints.com/#sle.
2. Sherwin-Williams Company: www.protective.sherwin-williams.com/industries/#sle.
3. Tnemec Company, Inc: www.tnemec.com/#sle.

2.2 HIGH-PERFORMANCE COATINGS

A. Provide coating systems that meet the following minimum performance criteria, unless more stringent criteria are specified:

1. Surface Burning Characteristics: Flame spread/Smoke developed index of 0/0, maximum, when tested in accordance with ASTM E84.

2.3 TOP COAT MATERIALS

A. Coatings - General: Provide complete multi-coat systems formulated and recommended by manufacturer for the applications indicated, in the thicknesses indicated; number of coats specified does not include primer or filler coat.

1. Lead Content: Not greater than 0.06 percent by weight of total nonvolatile content.
2. Chromium Content, as Hexavalent Chromium, Zinc Chromate, or Strontium Chromate: None.
3. Volatile Organic Compound (VOC) Content:

a. Provide coatings that comply with the most stringent requirements specified in the following:

1) 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.

2) SCAQMD 1113 Rule.

3) Architectural coatings VOC limits of State in which the project is located.

b. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

4. Minimum Number of Top Coats: Two unless additional top coats are required or recommended by manufacturer to achieve uniform color and coating.

5. Colors: As indicated.

B. Acrylic Coating for Exterior Galvanized Steel Fabrications:

1. Product Characteristics:

a. Prime Coat: 3.0 mils DFT.

b. Intermediate Coat: 3.0 mils DFT.

c. Topcoat: 3.0 mils DFT.

2. Top Coat(s): One component acrylic.

a. Sheen: Gloss.

b. Products:

1) Sherwin-Williams; Sher Cryl HPA.

2) Substitutions: Section 01 60 00 - Product Requirements.

3. Primer: As recommended by coating manufacturer for specific substrate.

C. Urethane Coating for Exterior Galvanized Steel Fabrications:

1. Product Characteristics:

a. Prime Coat: 3.0 mils DFT.

b. Intermediate Coat: 3.0 mils DFT.

c. Topcoat: 3.0 mils DFT.

2. Top Coat(s): Polyurethane, Two-Component.

a. Sheen: Gloss.

b. Products:

1) Sherwin-Williams; Acrolon 218 HS; MPI #72, 174: www.protective.sherwin-williams.com/#sle.

2) Tnemec Company, Inc; Series 1095 Endura-Shield: www.tnemec.com/#sle.

3) Substitutions: Section 016000 - Product Requirements.

3. Top Coat(s): Acrylic Urethane, Water Based, Two-Component.

a. Sheen: High Gloss.

b. Products:

1) Sherwin-Williams; Pro Industrial Waterbased Acrolon 100: www.protective.sherwin-williams.com/#sle.

2) Substitutions: Section 016000 - Product Requirements.

4. Primer: As recommended by coating manufacturer for specific substrate.

2.4 ACCESSORY MATERIALS

A. Accessory Materials: Provide all primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of coated surfaces.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Do not begin application of coatings until substrates have been properly prepared.

C. Verify that substrate surfaces are ready to receive work as instructed by the coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

D. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially affect proper application.

E. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

F. Test shop-applied primer for compatibility with subsequent cover materials.

G. Proceed with coating application only after unacceptable conditions have been corrected.

1. Commencing coating application constitutes Contractor's acceptance of substrates and conditions.

3.2 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings. If unremovable, seal surface with shellac.

C. Remove finish hardware, fixture covers, and accessories and store.

D. Galvanized Surfaces:

1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

a. Products:

1) Great Lakes Laboratories; Clean & Etch or approved equal.

2. Prepare surface according to SSPC-SP 2.

E. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.

2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.

3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning", and protect from corrosion until coated.

F. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.3 PRIMING

A. Apply primer to all surfaces, unless specifically not required by coating manufacturer. Apply in accordance with coating manufacturer's instructions.

3.4 COATING APPLICATION

A. Apply coatings in accordance with manufacturer's written instructions, to thicknesses specified and recommendations in "MPI Architectural Painting and Specification Manual".

B. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.5 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Clean surfaces immediately of overspray, splatter, and excess material.

C. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

3.6 PROTECTION

A. Protect finished work from damage.

END OF SECTION

This page intentionally left blank

SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Porcelain enamel steel markerboards.

B. Tackable wall panels.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Blocking and supports.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data on each product and its accessories.

C. Shop Drawings: Indicate wall elevations, dimensions, joint locations, special anchor details.

D. Samples: Submit two samples minimum 2 by 2 inch in size illustrating materials and finish, color and texture of each finished surface material.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

1.6 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for specified products.

PART 2 PRODUCTS

2.1 VISUAL DISPLAY UNITS

A. Porcelain Enamel Steel Markerboards:
   1. Basis of Design: As indicated in Section 090000 - Finish Schedule.
      a. Substitutions: See Section 016000 - Product Requirements.

B. Framed Tackable Wall Panels: Linoleum-modified cork; Factory-fabricated.
   1. Basis of Design: As indicated in Section 090000 - Finish Schedule.
      a. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that internal wall blocking is ready to receive work and positioning dimensions are as indicated on shop drawings.

3.2 PREPARATION

A. Acclimatize tackable wall panels by removing from packaging in installation area not less than 24 hours before application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install boards in accordance with manufacturer's instructions.

B. Secure units level and plumb.

C. Install tackable wall panels in accordance with manufacturer's recommendations on specified substrates with concealed attachments.

3.4 CLEANING

A. Clean board surfaces in accordance with manufacturer's instructions.

END OF SECTION

SECTION 101400 - SIGNAGE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Room and door signs.

B. Interior directional and informational signs.

C. Emergency evacuation maps.

D. Building identification signs.

E. Dimensional letter signs.

F. Signs required for Building Code compliance and building occupancy.

1.3 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.

C. Signage Schedule: Provide information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.

1. When room numbers to appear on signs differ from those on Drawings, include the drawing room number on schedule.
2. When content of signs is indicated to be determined later, request such information from Owner through Architect at least 2 months prior to start of fabrication; upon request, submit preliminary schedule.

3. Submit for approval by Owner through Architect prior to fabrication.

D. Samples: Submit two samples of each type of sign, of size similar to that required for project, illustrating sign style, font, and method of attachment.

E. Selection Samples: Where colors are not specified, submit two sets of color selection charts or chips.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years of documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Package signs as required to prevent damage before installation.

B. Package room and door signs in sequential order of installation, labeled by floor or building.

C. Store tape adhesive at normal room temperature.

1.7 FIELD CONDITIONS

A. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.

B. Maintain this minimum temperature during and after installation of signs.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers - Flat Signage:

1. ASI Sign Systems, Inc.: www.asisign.com.
2. FASTSIGNS: www.fastsigns.com/#sle.
3. Inpro: www.inprocorp.com/#sle.
4. Signs of Our Times: www.signsofourtimes.com/.
5. Substitutions: See Section 016000 - Product Requirements.

B. Acceptable Manufacturers - Dimensional Letter Signage:

1. Cosco Industries; Cast Aluminum: www.coscoarchitecturalsigns.com/#sle.
2. Gemini; Cast Metal: www.geminimade.com/.
3. Impact Signs Inc.; Cast Aluminum Letters: www.impactsigns.com/.
4. Substitutions: See Section 016000 - Product Requirements.

2.2 SIGNAGE APPLICATIONS

A. Accessibility Compliance: Signs are required to comply with ADA Standards and ICC A117.1 and applicable building codes, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.

B. Room and Door Signs:

1. Sign Type: Flat signs with graphic symbols and panel media as specified.
2. Provide "tactile" signage, with letters raised minimum 1/32 inch and Grade II braille.
3. Character Height: 1 inch.
4. Rest Rooms: Identify with pictograms, the names "MEN" and "WOMEN", room numbers indicated on the drawings, and braille.
5. Interior Rooms: Identify with room names and numbers to be determined later, not those shown on the Drawings, and braille.

C. Interior Directional and Informational Signs:

1. Sign Type: Flat signs with panel media as specified.
2. Allow for 20 signs 4 inches high by 16 inches long.
3. Tactile Exit Signs: Identify with either "EXIT" or "EMERGENCY EXIT" and braille.
    a. Locations: Adjacent to each door to an egress stairway, exit passageway, and exit discharge.
4. Where suspended, ceiling mounted, or projecting from wall signs are indicated, provide two-sided signs with same information on both sides.

D. Emergency Evacuation Maps:

1. Allow for one map per classroom and lobby.
2. Map content to be provided by Owner.
3. Use clear plastic panel silk-screened on reverse, in brushed aluminum frame, screw-mounted.

E. Code-Required Door and Room Signs: Provide all signs required by Authority Having Jurisdiction (AHJ) for building occupancy; determine requirements and report to Owner and Architect prior to making specified submittals. Include cost of these signs in Contract Sum.

F. Building Identification Signs:

1. Use individual metal letters.
2. Mount on outside wall in location indicated on Drawings.
3. Finish: As selected by Architect.
4. Mounting: Minmum 2" standoffs.

2.3 FLAT SIGNAGE

A. Flat Signs: Signage media without frame.

1. Material: Plastic or acrylic having a non-glare finish.

2. Edges: Square.
3. Corners: Square.
4. Wall Mounting of One-Sided Signs: Tape adhesive.
5. Wall and Ceiling Mounting of Two-Sided Signs: Aluminum wall bracket, powder coated, color selected from manufacturer's standard colors, attached with screws in predrilled mounting holes, set in clear silicone sealant.
6. Suspended Mounting: Stainless steel suspension cables, cable clamps, and ceiling fastener suitable for attachment to ceiling construction indicated.
7. Signs Mounted on Glass: Where signs are mounted on glass, provide blank back-panel of matching size and material to conceal mounting unless otherwise noted.

B. Color and Font: Unless otherwise indicated:
1. Character Font: Helvetica, Arial, or other sans serif font.
2. Character Case: Upper case only.
3. Background Color: As selected by Architect from manufacturer's standard range.
4. Character Color: Contrasting color as selected.

2.4 DIMENSIONAL LETTER SIGNAGE

A. Metal Letters:
1. Metal: Aluminum casting.
2. Metal Thickness: Manufacturer's standard for letter size.
3. Letter Height: As indicated on drawings.
4. Text and Typeface:
a. Character Font: Helvetica, Arial, or other sans serif font.
b. Character Case: Upper case only.
5. Finish: As selected by Architect from manufacturer's full range.
6. Mounting: Concealed screws with stand-offs.

2.5 ACCESSORIES

A. Mounting Devices: Except as specified for each sign type, provide mounting devices specifically recommended by manufacturer for indicated application; concealed upon finished installation.

B. Concealed Screws: Stainless steel, galvanized steel, chrome plated, or other non-corroding metal.

C. Exposed Screws: Stainless steel.

D. Tape Adhesive: Double sided tape, permanent adhesive.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install neatly, with horizontal edges level.

C. Locate signs and mount at heights indicated on drawings and in accordance with ADA Standards and ICC A117.1.

D. Locate signs where indicated:

1. Emergency Evacuation Maps: Locate in each classroom, and other locations indicated on Drawings.

2. If no location is indicated obtain Architect's instructions.

E. Protect from damage until Date of Substantial Completion; repair or replace damaged items.

END OF SECTION

This page intentionally left blank

SECTION 101426 – POST AND PANEL SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes:

1. Non-illuminated post and panel signs.

1.3 COORDINATION

A. Furnish templates and tolerance information for placement of sign-anchorage devices embedded in permanent construction by other installers.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For post and panel/pylon signage.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.

C. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.

1.6 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For special warranty.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by the manufacturer.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify locations of embedded in permanent construction by other installers by field measurements before fabrication and indicate measurements on Shop Drawings.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering.
b. Deterioration of embedded graphic image.
c. Separation or delamination of sheet materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

B. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for signs.

2.2 POST AND PANEL/PYLON SIGNS

A. Post and Panel Sign: Sign of single-panel configuration; with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Laminated, Aluminum-Sheet Sign Panels: Aluminum sheet laminated to both sides of acrylic core sheet with painted edges.

a. Composite-Sheet Thickness: Manufacturer's standard for size of sign.
b. Surface-Applied Graphics: Applied vinyl film.

2. Posts: Flanged U-Channel Post

a. Carbon steel, ASTM A499 Grade 60 and chemical requirements of ASTM A1.
b. ConnDOT Type “A” post: 3.00 pounds/lf
c. Retainer spacer strap: Glavanized stee, ASTM A123. Formed and dimensioned as shown on the drawings.
d. Post assembled in ConnDOT “breakaway” configuration, Type 1, as indicated on the drawings. Breakaway feature shall conform to ConnDOT and AASHTO “Roadside Design Guide” and have adequate strength to carry the sign at 60 mile per hour wind loadings.

3. Text and Typeface: typeface as indicated by manufacturer's designation and variable content as scheduled.

2.3 MATERIALS

A. Aluminum Sheet and Plate: ASTM B 209 (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

B. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Copper Sheet: ASTM B 152/B 152M.

D. Steel Materials:

1. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating, either commercial or forming steel.
2. Bolts for Steel Framing: ASTM A 307 or ASTM A 325 (ASTM A 325M) as necessary for design loads and connection details.
3. For steel exposed to view on completion, provide materials having flat, smooth surfaces without blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.

E. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated and suitable for exterior applications.

F. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish stainless-steel or hot-dip galvanized devices unless otherwise indicated.

3. Exposed Metal-Fastener Components, General:

a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
b. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant, Allen-head or one-way-head slots unless otherwise indicated.

4. Inserts: Furnish inserts to be set by other trades into concrete or masonry work.

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

C. Anchoring Materials:

1. Non-shrink, Nonmetallic Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for exterior applications.
2. Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
3. Water-Resistant Product: At exterior locations, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Preassemble signs in the shop to the greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in locations concealed from view after final assembly.
2. Mill joints to tight, hairline fit. Form joints exposed to weather to resist water penetration and retention.
3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed joints of flux, and dress exposed and contact surfaces.
4. Conceal fasteners and anchors unless indicated to be exposed; locate exposed fasteners where they will be inconspicuous.
5. Internally brace signs for stability and for securing fasteners.

B. Sign Message Panels: Construct sign-panel surfaces to be smooth and to remain flat under installed conditions within a tolerance of plus or minus 1/16 inch (1.5 mm) measured diagonally from corner to corner.

1. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated.
2. Increase panel thickness or reinforce with concealed stiffeners or backing materials as needed to produce surfaces without distortion, buckles, warp, or other surface deformations.
3. Continuously weld joints and seams unless other methods are indicated; grind, fill, and dress welds to produce smooth, flush, exposed surfaces with welds invisible after final finishing.

C. Post Fabrication: Fabricate posts designed to withstand wind pressure indicated for Project location and of lengths required for installation method indicated for each sign.

1. Aluminum Posts: 2-3/8” OD Pipe (Sch 40), coated, extruded-aluminum tubing unless otherwise indicated, with brackets or slots to engage sign panels. Include post caps, fillers, spacers, junction boxes, access panels, reinforcement where required for loading conditions, and related accessories required for complete installation.
2. Direct Burial: Fabricate posts 36 inches (910 mm) longer than height of sign to permit direct burial and embedment in concrete foundations or concrete-filled postholes.

2.6 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

B. Color Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

2.8 METALLIC-COATED STEEL FINISHES

A. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A 780/A 780M.

B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretretaing, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

2.9 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, and prepare for coating according to coating manufacturer's written instructions.

1. For Baked-Enamel or Powder-Coat Finish: After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.

B. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.

C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretretaing, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.

B. Verify that sign-support surfaces are within tolerances to accommodate signs.

C. Verify that anchor inserts are correctly sized and located to accommodate signs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using installation methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to accessibility standard.
3. Before installation, verify that sign components are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 INSTALLING POSTS

A. Vertical Tolerance: Set posts plumb within a tolerance of 1/16 inch in 3 feet.

B. Direct-Burial Method and Concrete Footing:

1. Excavation: Excavate posthole to dimensions indicated. Reconstruct subgrade that is not firm, undisturbed, or compacted soil, or that is damaged by freezing temperatures, frost, rain, accumulated water, or construction activities by excavating an additional 12 inches (300 mm), backfilling with satisfactory soil or well-graded aggregate, and compacting to original subgrade elevation.
2. Setting in Earth: Set post in position, support to prevent movement.
3. Setting in Cast-in-Place Concrete: Set post in position, support to prevent movement, and place concrete for concrete foundation as indicated.
4. Setting in Preformed Hole in Concrete Foundation: Form or core drill holes in concrete foundation not less than 3/4 inch larger than outside dimension of post for installing posts in concrete. Set post in position, shim to prevent movement, and fill annular space between post and hole with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

a. Leave anchorage joint exposed with 1/8-inch anchoring material sloped away from post.

3.4 FINISH AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 101426

SECTION 102123 - CUBICLE CURTAINS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Surface mounted overhead curtain track and guides.

B. Cubicle curtains.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 095113 - Acoustical Panel Ceilings: Suspended ceiling system to support track.

1.4 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for curtain fabric characteristics and tracks.

C. Shop Drawings: Indicate a reflected ceiling plan view of curtain track, hangers and suspension points, attachment details, schedule of curtain sizes.

D. Selection Samples: Submit two fabric samples, minimum 6x6 inch in size illustrating manufacturer's full range of available fabric colors and patterns, for selection.

E. Verification Samples: Submit 12 by 12 inch sample patch of curtain cloth with representative top, bottom, and edge hem stitch detail, heading with reinforcement and carrier attachment to curtain header.

F. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

G. Maintenance Data: Include recommended cleaning methods and materials and stain removal methods.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.
2. Extra Curtains: Two of each type and size.
3. Extra Carriers: Two.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept curtain materials on site and inspect for damage.

B. Store curtain materials on site and deliver to Owner for installation when requested.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.
2. Substitutions: See Section 016000 - Product Requirements.

2.2 TRACKS AND TRACK COMPONENTS

A. Tracks: Extruded aluminum sections; one piece per track run.

1. Profile: Channel.
2. Mounting: Surface.
3. Structural Performance: Capable of supporting vertical test load of 50 lbs without visible deflection of track or damage to supports, safely supporting moving loads, and sufficiently rigid to resist visible deflection and without permanent set.
4. Track End Stop: To fit track section.
5. Track Bends: Minimum 12 inch radius; fabricated without deformation of track section or impeding movement of carriers.
6. Finish on Exposed Surfaces: As selected by Architect from standard options.

B. Curtain Carriers: Nylon slider to accurately fit track; designed to eliminate bind when curtain is pulled; fitted to curtain to prevent accidental curtain removal; minimum 3 carriers per foot of track length.

C. Wand: Plastic, attached to lead carrier, for pull-to-close action.

D. Installation Accessories: Types required for specified mounting method and substrate conditions.

2.3 CURTAINS

A. Cubicle Curtains:

1. Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
2. Inherently flame resistant or flameproofed; capable of passing NFPA 701 test.
3. Material: Close weave polyester; anti-bacterial, self deodorizing, sanitized, and preshrunk.
4. Colors and Patterns: As scheduled..

B. Open Mesh Cloth: Open weave to permit air circulation; flameproof material, manufacturer's standard color.

C. Attachment of Curtain Fabric to Open Mesh Cloth: Manufacturer's standard sewn seam.

D. Curtain Fabrication:

1. Manufacture curtains of one piece, sized 20 percent wider than track length. Terminate curtain 15 inches from floor with hemmed edge.
2. Length of curtain to end 15 inches above finished floor.
3. Railroad fabric without vertical seams.
4. Pattern match fabric with vertical seams.
5. Include open mesh cloth at top minimum 20 inches of curtain for room air circulation.
    a. If jurisdictional authority or applicable code requires additional open mesh cloth at top for fire sprinkler system distribution, provide required open dimension to achieve compliance.
6. Curtain Heading: Web reinforced band of open mesh cloth with metal grommet holes for carriers spaced 6 inches on center.
7. Seams and Hems: Manufacturer's standard fabrication method for securely sewn and finished seams and hems.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces are ready to receive work of this Section.

B. Verify that field measurements are as indicated.

3.2 INSTALLATION

A. Install curtain track to be secure, rigid, and true to ceiling line.

B. Secure track to ceiling system.

C. Install end cap and stop device.

D. Install curtains on carriers ensuring smooth operation.

END OF SECTION

SECTION 102600 - WALL AND DOOR PROTECTION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Chair rails.

B. Corner guards.

C. Protective wall covering.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 097200 - Wall Coverings: Terminating wall covering at wall and door protection.

1.4 REFERENCE STANDARDS

A. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

B. ASTM D543 - Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. ASTM F476 - Standard Test Methods for Security of Swinging Door Assemblies.

E. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Indicate physical dimensions and anchorage details.

C. Samples: Submit samples illustrating component design, configurations, joinery, color and finish.

1. Submit two sections of corner guards, 12 inches long.

D. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver wall and door protection items in original, undamaged protective packaging. Label items to designate installation locations.

B. Protect work from moisture damage.

C. Protect work from UV light damage.

D. Do not deliver products to project site until areas for storage and installation are fully enclosed, and interior temperature and humidity are in compliance with manufacturer's recommendations for each type of item.

E. Store products in either horizontal or vertical position, in compliance with manufacturer's instructions.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

B. Substitutions: See Section 016000 - Product Requirements.

2.2 PERFORMANCE CRITERIA

A. Impact Strength: Unless otherwise noted, provide protection products and assemblies that have been successfully tested for compliance with applicable provisions of ASTM D256 and/or ASTM F476.

B. Chemical and Stain Resistance: Unless otherwise noted, provide protection products and assemblies with chemical and stain resistance complying with applicable provisions of ASTM D543.

C. Fungal Resistance: Unless otherwise noted, provide protection products and assemblies which pass ASTM G21 testing.

2.3 PRODUCT TYPES

A. Chair Rails: Factory- or shop-fabricated, with preformed end caps and internal and external corners:

1. Material: High impact co-extruded thermoplastic rubber, color as selected from manufacturer's standard colors.
2. Surface Burning Characteristics: Provide assemblies with flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
3. Mounting: Surface.
4. Return rail to wall.

B. Corner Guards - Surface Mounted:

1. Material: High impact vinyl with full height extruded aluminum retainer.
2. Material: Polyethylene terephthalate (PET or PETG); PVC-free with full height extruded aluminum retainer.
3. Surface Burning Characteristics: Provide assemblies with flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
4. Width of Wings: 2 inches.
5. Corner: Radiused.
6. Color: As selected from manufacturer's standard colors.
7. Length: One piece.
8. Preformed end caps.

C. Protective Wall Covering:

1. Material: Polyethylene terephthalate (PET or PETG); PVC and PBTs-free.
2. Thickness: 3/32 inch.
3. Surface Burning Characteristics: Provide assemblies with flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
4. Color: As selected from manufacturer's standard colors.
5. Texture: Smooth.
6. Accessories: Provide manufacturer's standard color-matched trim and moldings.
7. Mounting: Adhesive.

D. Mounting Brackets and Attachment Hardware: Appropriate to component and substrate.

E. Terminations: Provide end cap terminations as indicated in Section 090000 - Finish Schedule.

2.4 SOURCE QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Provide wall and door protection systems of each type from a single source and manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as instructed by the manufacturer.

B. Verify that substrate surfaces for adhered items are clean and smooth.

1. Test painted or wall covering surfaces for adhesion in inconspicuous area, as recommended by manufacturer. Follow adhesive manufacturer's recommendations for remedial measures at locations and/or application conditions where adhesion test's results are unsatisfactory.

C. Start of installation constitutes acceptance of project conditions.

3.2 INSTALLATION

A. Install components in accordance with manufacturer's instructions, level and plumb, secured rigidly in position to supporting construction.

B. Position top of bumper rail 36 inches from finished floor.

C. Position corner and edge guards 4 inches above finished floor to ceiling, unless otherwise indicated on Drawings.

D. Terminate rails 1 inch short of door openings and intersecting walls.

3.3 TOLERANCES

A. Maximum Variation From Required Height: 1/4 inch.

B. Maximum Variation From Level or Plane For Visible Length: 1/4 inch.

3.4 CLEANING

A. Clean wall and door protection items of excess adhesive, dust, dirt, and other contaminants.

END OF SECTION

SECTION 102800 - WASHROOM ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Commercial toilet accessories.

B. Utility room accessories.

C. Under-lavatory pipe supply covers.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 09 22 16: Placement of reinforcement for backing plate reinforcement.

1.4 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

C. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

E. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

F. ASTM B86 - Standard Specification for Zinc and Zinc-Aluminum (ZA) Alloy Foundry and Die Castings.

G. ASTM B456 - Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium.

H. ASTM C1036 - Standard Specification for Flat Glass.

I. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror.

J. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

K. ICC A117.1 - Accessible and Usable Buildings and Facilities.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with the placement of internal wall reinforcement to receive anchor attachments.

B. Coordinate locations of accessories with other work to avoid interference, and to assure proper operation and servicing of accessory units.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit data on accessories describing size, finish, details of function, and attachment methods.

C. Manufacturer's Installation Instructions: Indicate special procedures and conditions requiring special attention.

1.7 QUALITY ASSURANCE

A. Provide accessories by the same manufacturer for each type of accessory unit. For units exposed in the same areas, provide matching finishes.

B. Comply with ASTM F446 for grab bars and accessories, anchorage, test methods, and performance.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver accessories to site until rooms in which they are to be installed are ready to receive them.

B. Pack accessories individually in a manner to protect accessory and its finish.

PART 2 - PRODUCTS

2.1 WASHROOM ACCESSORIES

A. Basis-of-Design Product: Subject to compliance with requirements, provide products indicated by Bobrick Washroom Equipment, Inc. or a comparable product by one of the following:

1. AJW.
2. American Specialties, Inc.
3. Bradley Corporation.

B. Grab Bar:

1. Basis-of-Design Product: Bobrick; B-6806.99 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 18 gauge.
    a. Finish: Smooth, No. 4, satin finish on ends and slip-resistant texture in grip area.
4. Outside Diameter: 1-1/2 inches.
5. Configuration and Length: Provide in straight lengths, in sizes indicated.

C. Mirror Unit:

1. Basis-of-Design Product: Bobrick; B-290 Series.
2. Frame: Stainless-steel angle, 0.05 inch thick, 3/4 inch x 3/4 inch angle with vertical-grain satin finish, one-piece roll-formed construction.
    a. Corners: Welded and ground smooth.
    b. Backing: Galvanized steel fastened to frame with concealed screws and equipped with integral horizontal hanging brackets near the top and bottom of the mirror.
3. Hangers: Produce rigid, tamper- and theft-resistant installation, using method indicated below.
    a. Wall bracket of 20 gauge galvanized steel, equipped with concealed locking devices requiring a special tool to remove.
4. Mirror: No. 1 quality, 1/4-inch select float glass, with all edges protected by plastic filler strips.
    a. Provide protective backing of full-size, shock absorbing, water resistant, nonabrasive, 3/16-inch thick polyethylene padding.
5. Sizes: As indicated.

D. Robe Hook:

1. Basis-of-Design Product: Bobrick; B-6707.
2. Mounting: Surface mounted.
3. Material and Finish: Stainless steel, No. 4 finish (satin).
    a. Flange and Support Arm: 22 gauge stainless steel with concealed 16 gauge stainless steel mounting bracket, all-welded construction. Secure to wall plate with stainless steel setscrew.
    b. Concealed Wall Plate: 16 gauge stainless steel.
    c. Cap: 10 gauge stainless steel, welded to support arm.

E. Sanitary-Napkin Disposal Unit:

1. Basis-of-Design Product: Bobrick; B-254.
2. Mounting: Surface mounted.
3. Receptacle: Removable.

4. Material and Finish: Stainless steel, No. 4 finish (satin).

    a. Cabinet: 22 gauge stainless steel, all-welded construction. Provide towel tray with hemmed opening to dispense towels without tearing.

    b. Door: 22 gauge stainless steel, secured to cabinet with a full-length stainless steel piano-hinge.

    c. Disposal Panel: 22 gauge stainless steel with bottom edge hemmed for safety. Panel is secured to door with a spring-loaded, full-length stainless steel piano hinge. Equip with the international handicapped accessible graphic symbol for identifying sanitary napkin disposal.

    d. Waste Receptacle: Leak-proof, rigid molded polyethylene, with a 1.2 gallon capacity.

2.2 BATHROOM ACCESSORIES (DISTRICT STANDARD)

A. Product Installation: Subject to compliance with requirements, contractor to provide blocking and installation of owner supplied products below. Products will be provided by the owner to the job site for installation by the contractor.

1. Toilet Tissue (Roll) Dispenser:

    a. Basis-of-Design Product: Geogia-Pacific; 56509.

    b. Description: Double-roll dispenser.

    c. Mounting: Surface mounted.

2. Towel (Roll) Dispenser:

    a. Basis-of-Design Product: Hillyard; PAP432190.

    b. Description: Hands-free roll towel dispenser.

    c. Mounting: Surface Mount.

3. Liquid-Soap Dispenser:

    a. Basis-of-Design Product: Hillyard; HIL22304.

    b. Description: One dispenser with 4 output options

    c. Mounting: Surface mounted.

    d. Capacity: 42 fl oz.

2.3 CUSTODIAL ACCESSORIES

A. Basis-of-Design Product: Subject to compliance with requirements, provide products indicated by Bobrick Washroom Equipment, Inc. or a comparable product by one of the following:

1. AJW.

2. American Specialties, Inc.
3. Bradley Corporation.

B. Mop and Broom Holder:

1. Basis-of-Design Product: Bobrick; B-224.
2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
3. Length: 36 inches.
4. Hooks: Three.
5. Mop/Broom Holders: Four, spring-loaded, rubber hat, cam type.
6. Material and Finish: Stainless steel, No. 4 finish (satin).
    a. Shelf: Not less than 18 gauge stainless steel.
    b. Rod: Approximately 1/4-inch- diameter stainless steel.

2.4 UNDER-LAVATORY PIPE AND SUPPLY COVERS

A. Under-Lavatory Pipe and Supply Covers:

1. Insulate exposed drainage piping, including hot, cold, and tempered water supplies under lavatories or sinks to comply with ADA Standards.
2. Exterior Surfaces: Smooth non-absorbent, non-abrasive surfaces.
3. Construction: 1/8 inch flexible PVC.
    a. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
    b. Comply with ICC A117.1.
4. Color: White.
5. Fasteners: Reusable, snap-locking fasteners with no sharp or abrasive external surfaces.

2.5

2.6 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.

B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify exact location of accessories for installation.

C. For electrically-operated accessories, verify that electrical power connections are ready and in the correct locations.

D. Verify that field measurements are as indicated on drawings.

E. See Section 09 22 16 for installation of blocking, reinforcing plates, and concealed anchors in walls and ceilings.

3.2 PREPARATION

A. Deliver inserts and rough-in frames to site for timely installation.

B. Provide templates and rough-in measurements as required.

3.3 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to method in ASTM F446.

3.4 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

3.5 PROTECTION

A. Protect installed accessories from damage due to subsequent construction operations.

END OF SECTION

SECTION 104116 - EMERGENCY KEY BOXES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fire department lock boxes for emergency key storage.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's catalog literature for specified specialty items, marked to clearly show products to be furnished for this project.

C. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Package hardware items individually; label and identify each package with door opening code to match hardware schedule.

PART 2 PRODUCTS

2.1 FIRE DEPARTMENT LOCK BOX

A. Fire Department Lock Box: Heavy-duty, type as recommended by fire department, solid stainless-steel box with hinged door and interior gasket seal; single drill resistant lock with dust covers.

1. Application: Building mounted locations.
2. Capacity: Holds 10 keys.
3. Finish: As selected by Architect from manufacturer's standard options.
4. Include location stickers as required by local jurisdiction.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install specified items in accordance with manufacturer's instructions and applicable jurisdictional requirements.

1. Confirm required location with authority having jurisdiction prior to installation.

B. Use templates provided by item manufacturer.

C. Do not install surface mounted items until finishes applied to substrate are complete.

D. Set units level, plumb, and true to line and location. Adjust and reinforce the attachment substrate as required for proper installation and operation.

E. Install at 5'-0" above finish floor or as otherwise indicated by Authorities Having Jurisdiction.

3.2 ADJUSTING

A. Adjust hardware for smooth operation.

B. Adjust gasketing for complete, continuous seal; replace if unable to make complete seal.

C. Replace units which cannot be adjusted and lubricated to operate freely and smoothly.

3.3 PROTECTION

A. Do not permit adjacent work to damage hardware or finish.

END OF SECTION

SECTION 104400 - FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fire extinguishers.

B. Fire extinguisher cabinets.

C. Accessories.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Wood blocking product and execution requirements.

1.4 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

B. FM (AG) - FM Approval Guide.

C. NFPA 10 - Standard for Portable Fire Extinguishers.

D. UL (DIR) - Online Certifications Directory.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product data for each item.

C. Manufacturer's Installation Instructions: Indicate special criteria and wall opening coordination requirements.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Maintenance Data: Include test, refill or recharge schedules and re-certification requirements.

1.6 QUALITY ASSURANCE

A. Basis of Design: Specifications are based on specialty types and model numbers by the specified basis of design manufacturer. Specialty types manufactured by other acceptable manufacturers are permitted, subject to compliance with all specified requirements, and provided that deviations in dimensions and profile are minor, and do not detract substantially from the indicated design intent.

1.7 FIELD CONDITIONS

A. Do not install extinguishers when ambient temperature may cause freezing of extinguisher ingredients.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Fire Extinguishers:
1. Activar Construction Products Group, Inc. - JL Industries: www.activarcpg.com/#sle.
2. Ansul, a Tyco Business: www.ansul.com/#sle.
3. Fire-End & Croker Corporation: www.croker.com/#sle.
4. Kidde, a unit of United Technologies Corp.: www.kidde.com.
5. Larsen's Manufacturing Co.: www.larsensmfg.com.
6. Oval Brand Fire Products: www.ovalfireproducts.com/#sle.
7. Potter-Roemer: www.potterroemer.com/#sle.
8. Pyro-Chem, a Tyco Business: www.pyrochem.com.
9. Substitutions: See Section 016000 - Product Requirements.

B. Basis of Design - Cabinets:
1. Larsen's Manufacturing Co.: www.larsensmfg.com.
a. Fire Extinguisher Cabinets: Architectural Series, 2409 semi-recessed.

C. Other Acceptable Cabinet Manufacturers:
1. Activar Construction Products Group: www.activarcpg.com/#sle.
2. Fire-End & Croker Corporation: www.croker.com/#sle.
3. Kidde, a unit of United Technologies Corp.: www.kidde.com.
4. Oval Brand Fire Products: www.ovalfireproducts.com/#sle.
5. Potter-Roemer: www.potterroemer.com/#sle.
6. The Williams Brothers Corporation of America: www.wbdoors.com/#sle.
7. Substitutions: See Section 016000 - Product Requirements.

2.2 FIRE EXTINGUISHERS

A. Fire Extinguishers - General: Comply with product requirements of NFPA 10 and applicable codes, whichever is more stringent.

1. Provide extinguishers labeled by UL (DIR) or FM (AG) for purpose specified and as indicated.

B. Multipurpose Dry Chemical Type Fire Extinguishers: Carbon steel tank, with pressure gauge.

1. Stored Pressure Operated: Deep Drawn.
2. Class: A:B:C type.
3. Size: 5 pound 10 pound.
4. Finish: Baked polyester powder coat red color.
5. Temperature Range: -65 degrees F to 120 degrees F.

C. Wet Chemical Type Fire Extinguishers: Stainless steel tank, with pressure gauge.

1. Class: K type.
2. Size: 1.6 gallons.
3. Finish: Polished stainless steel.
4. Temperature range: Minus 20 degrees F to 120 degrees F.

2.3 FIRE EXTINGUISHER CABINETS

A. Fire Rating: Listed and labeled in accordance with ASTM E814 requirements for fire resistance rating of walls where being installed.

B. Cabinet Construction: Non-fire rated.

1. Formed primed steel sheet; 0.036 inch thick base metal.

C. Fire Rated Cabinet Construction: Fire rating to match wall rating.

1. Steel; double wall or outer and inner boxes with 5/8 inch thick fire barrier material.

D. Cabinet Configuration: Semi-recessed type, unless otherwise indicated or specified.

1. Sized to accommodate scheduled items and accessories.
2. Semi-Recessed Cabinets: Maximum 4 inch projection from wall surface, including handles and other components.
3. Provide cabinet enclosure with right angle inside corners and seams, and with formed perimeter trim and door stiles.

E. Door Glazing: Tempered glass, clear, 1/8 inch thick, and set in resilient channel glazing gasket.

1. Glazing Style: Provide Vertical Duo door.

F. Cabinet Mounting Hardware: Appropriate to cabinet, with pre-drilled holes for placement of anchors.

G. Fabrication: Weld, fill, and grind components smooth.

H. Finish of Cabinet Exterior Trim and Door: Baked enamel, white color.

I. Finish of Cabinet Interior: White colored enamel.

2.4 ACCESSORIES

A. Extinguisher Brackets: Formed steel, chrome-plated.

B. Lettering: FIRE EXTINGUISHER decal, or vinyl self-adhering, pre-spaced red lettering in accordance with authorities having jurisdiction (AHJ).

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify rough openings for cabinet are correctly sized and located.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Fire Extinguisher Cabinets: Install cabinets plumb and level in wall openings, maximum 30 inches from finished floor to inside bottom of cabinet.

C. Secure rigidly in place.

D. Mount extinguishers as scheduled.

E. Position signage at locations required by Authorities Having Jurisdiction.

3.3 SCHEDULES

A. Dry Chemical Type: Class ABC.
   1. Locations: All areas except food service areas.
   2. Mounting: In cabinets, except use wall brackets in areas not accessible to public and where cabinets are not shown.

B. Wet Chemical Type: Class K.
   1. Locations: Food service kitchen.
   2. Mounting: Wall bracket mounting.

END OF SECTION

SECTION 105116 - WOOD LOCKERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Wood lockers.

1.3 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Wood base construction.

B. Section 061000 - Rough Carpentry: Wood blocking and nailers.

1.4 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards, 2nd Edition.

C. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards.

D. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood.

E. ICC A117.1 - Accessible and Usable Buildings and Facilities.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's published data on locker construction, sizes, fittings, and accessories.

C. Shop Drawings: Indicate locker plan layout, numbering plan, combination lock code, and key codes.

D. Samples: Submit two samples of wood veneer panel, 6 by ____ inch in size illustrating wood grain, stain color, and sheen.

E. Manufacturer's Installation Instructions: Indicate component installation assembly.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store lockers in a dry, ventilated area until ready for installation.

1.8 FIELD CONDITIONS

A. Ambient Conditions: Maintain temperature and relative humidity within range recommended by wood locker manufacturer during and after installation of lockers.

1.9 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Jonti-Craft, Inc.: www.jonti-craft.com/

B. Substitutions: See Section 016000 - Product Requirements.

2.2 LOCKER APPLICATIONS

A. Open-Front Student Lockers: Wood veneer-faced lockers, free-standing with matching closed base.

1. Configuration: Single tier.
2. Dimensions:
    a. Height and Width: Manufacturer's standard.
    b. Depth: Sufficient to prevent tipping.
3. Fittings:
    a. Hat shelf.
    b. Hooks: One double prong.
    c. Single shoe shelf.
4. Basis of Design Products:

a. Standard Lockers: Neat-N-Trim 2687JC.

b. Large Lockers: Trim-N-Tidy 2713JC.

2.3 WOOD LOCKERS

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless noted otherwise.

B. Accessibility: Comply with ICC A117.1 and ADA Standards.

C. Lockers: Factory assembled, made of hardwood plywood panels with dowleled and glued joints; fully finished inside and out; each gang of lockers capable of standing on its own.

1. Species: Manufacturer's standard..
2. Wood Finish: Manufacturer's standard stain and clear sealer.
3. Interior Finish: Match locker exterior wood species and finish.
4. Edge Profiles: Radiused, smooth.
5. Toe Kick: Size and proximity to floor sufficient to prevent pinching of hands and feet.
6. Where locker ends or sides are exposed, finish the same as fronts or provide extra panels to match fronts.

D. Component Thicknesses:

1. Doors: 3/4 inch minimum thickness.
2. Locker Body: Tops, bottoms, sides, and shelves 3/4 inch; backs 1/2 inch; minimum.
3. Toe Kick Plates: 1/2 inch minimum thickness.

E. Coat Hooks: Stainless steel; attached with tamperproof screws.

2.4 MATERIALS

A. Adhesives Used for Assembly: Comply with VOC requirements for adhesives and sealants; see Section 016116.

B. Wood-Based Materials:

1. Certified as sustainably harvested; see Section 016000.
2. Composite Wood Panels: Containing no urea-formaldehyde resin binders.

C. Hardwood Plywood: Veneer core; HPVA HP-1 grade as indicated, species as indicated, clear, compatible grain and color, no defects.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that prepared bases are in correct position and configuration.

B. Verify bases and embedded anchors are properly sized.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Place and secure on prepared base.

C. Install lockers plumb and square.

D. Secure lockers with anchor devices to suit substrate materials.

E. Bolt adjoining locker units together to provide rigid installation.

F. Touch up damaged finish to match original, using materials provided by fabricator; replace components that cannot be refinished like new.

G. Replace components that do not operate smoothly.

3.3 CLEANING

A. Clean locker interior and exterior surfaces.

END OF SECTION

SECTION 107516 – GROUND-SET FLAGPOLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY

A. Section includes:

1. Ground-set flagpoles made from aluminum.
2. American Flag.

B. Related Sections:

1. Division 00 Section “Subsurface Information” for geotechnical report.
2. Division 03 Section “Site Cast-in-Place Concrete” for flagpole footing.
3. Division 26 Section “Exterior Lighting” for lighting attached to flagpole.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include

documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design flagpole assemblies.

B. Seismic Performance: Flagpole assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

C. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand design loads indicated within limits and under conditions indicated.

1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location is New Haven, Connecticut.
2. Base flagpole design on polyester, nylon or cotton flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.

2.3 ALUMINUM FLAGPOLES

A. Aluminum Flagpoles: Cone or Entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B 241/B 241M, Alloy 6063, with a minimum wall thickness of 3/16 inch (4.8 mm).

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. American Flagpole.
    b. Eder Flag Manufacturing Company, Inc.
    c. Morgan-Francis Flagpoles and Accessories.
    d. Pole-Tech Company Inc.

B. Exposed Height: 30 feet (9 m).

C. Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

1. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.
2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

D. Sleeve for Aluminum Flagpole: Fiberglass or PVC pipe foundation sleeve, made to fit flagpole, for casting into concrete foundation.

E. Cast Aluminum Base: Provide cast aluminum octagonal base Model No. MF 3380-1 with anodized finish to match color of flagpole as manufactured by Morgan-Francis Flagpoles and Accessories, 9850 East 30th Street, Indianapolis, IN 46229 (800) 814-9568 or approved equal.

2.4 FITTINGS

A. Cast Aluminum Ball Finial: Sized as indicated.

1. Cast aluminum with gold anodic finish.

B. Internal Halyard, Winch System: Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: Stainless-steel swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.
2. Plastic Halyard Flag Clips: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Furnish two per halyard.

    a. Product: Subject to compliance with requirements, provide "Quiet Halyard" flag clasp by Acme/Lingo Flagpoles LLC.

C. Flagpole Lights

1. Basis-of-Design Product: Subject to compliance with requirements, provide Weatherproof Flagpole 12-inch LED Downlight as manufactured by Eagle Mountain Flag & Flagpole or a comparable product, as approved by the Landscape Architect:
2. Requirements:

    a. As indicated on Site Lighting Schedule on Site Electrical Drawings.
    b. Housing Material: Cylinder fabricated from 6063-T6aluminum.

c. Mounting Bracket: Cast aluminum that fits snuggly to butt diameter of flagpole.
d. Wiring: Internal to flagpole with electrical harness.
e. Lights: Manufacturer's standard light fixture configured for downward illumination.
f. Truck Finish: To match flagpole
g. Dome Finish: Gold
h. Power Supply: In-ground driver adjacent flagpole.

D. American Flag:

1. Material: Nylon.
2. Construction: Sewn stripes, embroidered stars, constructed with heavy canvas heading material, 4 rows of stitching at the fly end, and rugged brass grommets. Flag shall be designed for outdoor use and to resist fading and fraying.
3. Size: 4 feet by 6 feet.

2.5 MISCELLANEOUS MATERIALS

A. Drainage Material: Crushed stone or crushed or uncrushed gravel; coarse aggregate.

B. Elastomeric Joint Sealant: Multicomponent nonsag urethane, single-component nonsag urethane, or single-component neutral-curing silicone joint sealant as recommended by flagpole manufacturer and complying with requirements in Section 07 9200 "Joint Sealants."

PART 3 - EXECUTION

3.1 PREPARATION

A. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete. Place and compact drainage material at excavation bottom.

B. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms to prevent displacement during concreting.

C. Anchor Bolts: Locate and secure anchor bolts in forms with templates and by tying to reinforcement.

D. Place concrete, as specified in Section 03 3000 "Cast-in-Place Concrete." Compact concrete in place by using vibrators. Moist-cure exposed concrete for no fewer than seven days or use nonstaining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.2 FLAGPOLE INSTALLATION

A. General: Install flagpoles where indicated and according to Shop Drawings and manufacturer's written instructions.

B. Baseplate: Cast anchor bolts in concrete foundation. Install baseplate on washers placed over leveling nuts on anchor bolts and adjust until flagpole is plumb. After flagpole is plumb, tighten

retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate.

END OF SECTION 107516

SECTION 108210 - EQUIPMENT SCREENS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Pre-formed metal panel equipment screens.

B. Attachment frame system.

C. System accessories.

D. Design engineering of equipment screen system.

1.3 RELATED SECTIONS

A. Section 051200 - Structural Steel Framing : Structural framing to support screen panels.

B. Section 075323 - Ethylene-Propylene-Diene-Monomer Roofing (EPDM): Flashing of screen support roof penetrations.

C. Section 084113 - Aluminum-Framed Entrances and Storefronts: Framing color requirements for equipment screen cladding to match.

1.4 PRICE AND PAYMENT PROCEDURES

A. See Section 012300 - Alternates, for product alternates affecting this Section.

1.5 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix).

B. ASCE 7 - Minimum Design Loads for Buildings and Other Structures; American Society of Civil Engineers.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2011.

D. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

E. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].

1.6 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this Section.

1. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion. Include the manufacturer's technical representative.

2. Review installation procedures and coordination required with related work, and conditions which could affect successful performance of the Work.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate system and panel layout plan and elevations, component connection details, clearance dimensions, tolerances, frame details, and details of interface with adjacent construction and equipment.

C. Product Data: Provide data describing system characteristics, standard detail sheets, and system limitations.

D. Selection Samples: Submit samples of available panel colors for selection.

E. Certificate: Submit manufacturer's certification that products meet or exceed specified requirements.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this Section with minimum three years of experience.

C. Perform design under direct supervision of a Professional Engineer experienced in design of this Work and licensed in the State in which the Project is located.

D. Basis of Design: Drawing details are based on screen and support profiles by specified basis of design manufacturer. Similar profiles by other acceptable manufacturers are permitted, subject to compliance with all specified performance characteristics, and provided that deviations in dimension, profile, performance, and finish are minor and do not detract from the indicated design intent.

1.9 DELIVERY, STORAGE, AND PROTECTION

A. Provide wrapping to protect pre-finished panel surfaces. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Equipment Screen Framing System Manufacturer:
   1. RoofScreen Manufacturing; SC3 Frame: www.cityscapesinc.com.
   2. Substitutions: See Section 016000 - Product Requirements.

B. Basis of Design Metal Wall Panel Manufacturer:
   1. Morin Corporation; Exposed Y-29, Profile B: www.morincorp.com/.
   2. Substitutions: See Section 016000 - Product Requirements.

2.2 EQUIPMENT SCREEN FRAMING SYSTEM

A. General: Provide factory-formed modular framing system designed to be field assembled and mechanically attached to roof structures to support equipment screen panels.

B. Modular Frame, Cantilevered Three-Member System: Formed with high-strength galvanized steel tubing and stainless steel connectors.
   1. Framing Tubing: 2.5-inch O.D. galvanized steel.
   2. Wall Thickness: As determined by manufacturer's structural engineering calculations.

C. Connector Fittings: Formed ANSI Type 304 Stainless Steel with telescoping design.

D. Base Attachment: Welded steel base support with stainless steel cap and EPDM gaskets for compression seal.

E. Hardware: 18-8 Stainless Steel bolts/nuts; corrosion-resistant coated carbon steel screws.

2.3 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

A. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.

B. Box Rib Profile, Exposed-Fastener, Perforated, Metal Wall Panels: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.
   1. Aluminum Thickness: 0.050.
   2. Rib Spacing: 7-3/16 inch, on center.
   3. Panel Coverage: 29 inch, minimum.
   4. Panel Depth: 1-1/2 inch.

2.4 DESIGN REQUIREMENTS

A. General: Design system to resist snow, wind, suction, and uplift loading at any point in the system without damage or permanent set.

B. Regulatory Requirements: Comply with requirements of building authorities having jurisdiction in Project location.

C. Design Criteria:

1. Rooftop Equipment Screens:

a. The manufacturer is responsible for the structural design of all materials, assembly, and attachments to resist snow, wind, suction, and uplift loading at any point without damage or permanent set.

b. Framing shall be designed in accordance with the Aluminum Design Manual to resist the minimum loading criteria according to ASCE 7.

c. Minimum Clear Space Between Equipment and Screen: 36 inch nominal.

d. Screen Heights: As indicated on drawings.

e. Screens Mounted to Steel Posts: Posts must be set no further than 96 inches on center.

2.5 MATERIALS

A. Square Base Supports: Weldments fabricated from cold rolled steel conforming to ASTM A 1008, fabricated with pre-punched holes in base plate for fastening to roof structure. After fabrication, apply minimum 2 to 4 mil baked on powder coat primer.

1. Height: Varies by roof assembly thickness, slope, and required clearance as indicated on drawings.

B. Square Base Support Extensions: Fabricated from same material and finish as base supports.

1. Height: 8 inches.

C. Square Base Cap: Weldments fabricated from AISI Type 304 stainless steel with mill finish, and fabricated to overlap base support and flashing boot a minimum of 2 inches (51 mm). Provide moment resisting adjustable connection to attach framing to base cap.

D. Square Post Support: Weldments fabricated from galvanized steel tube conforming to ASTM A 500 and cold rolled steel plate conforming to ASTM A36, fabricated with pre-punched holes in base plate for fastening to roof structure. After fabrication, apply minimum 2 to 4 mil shop primer to base plate and weld.

E. Square Post Cap: Saddle - AISI Type 304 Stainless Steel, 11ga. Connective tube- AISI Type 304 Stainless Steel, 11 ga. Fabricated to overlap base support and flashing boot a minimum of 2 inches (51 mm).

F. Roof Flashing: As specified in Section 075323 - Ethylene-Propylene-Diene-Monomer Roofing (EPDM).

G. Base Cap Gasket: EPDM with self-adhesive closed cell foam.

H. Framing: Carbon or galvanized steel structural tubing in manufacturer's standard sizes, conforming to ASTM A 500 and/or ASTM A787 with manufacturer's standard galvanized coating conforming to ASTM A 1057; provide with wall thickness as determined by structural calculations.

I. Connector Fittings: Fabricated from AISI Type 304 stainless steel with mill finish.

J. Steel Girts: Steel tube conforming to ASTM A 500 and/or A 787, with a G90 hot-dip galvanized coating.

K. Steel Hat Channel: Steel sheet conforming to ASTM A 653, Class SS, with a G90 hot-dip galvanized coating per ASTM A 1057.

L. Hardware: Bolts, nuts and washers: 18-8 stainless steel.

M. Self-Drilling Screws: Carbon steel with factory applied protective coating conforming to ASTM B 117 salt spray testing.

N. Welding Materials: AWS D1.1; type required for materials being welded.

O. Aluminum Sheet: Coil-coated sheet, ASTM B209 (ASTM B209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.

1. Finish: Superior performing organic coatings.

a. Factory finish all surfaces that will be exposed in completed assemblies.

b. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

c. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

d. Color: Custom match to storefront framing.

P. Trim and Closures:

1. Material: Aluminum.
2. Thickness: 0.050.
3. Finish: Superior Performing Organic Coatings System.

2.6 ACCESSORIES

A. Fasteners and Anchors: Stainless steel type; sized and configured to comply with design requirements.

B. Panel Accessories: Provide components required for a complete system including trim, copings, fascia, sills, corner units, clips, flashings, sealants, fillers, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer

C. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

D. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.

3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.7 FINISHES

A. Cladding:

1. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

2. Color: Custom; match to storefront framing.

2.8 FABRICATION

A. Framing:

1. Fit and shop assemble items in largest practical sections, for delivery to site.

2. Fabricate items with joints tightly fitted and secured.

3. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

4. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

5. Fabricate system components so that portions of screen can be dismantled for repairs to equipment being screened and for future roof replacement.

B. Panels:

1. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

2. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate in accordance with equipment manufacturer's written instructions and to comply with details shown.

3. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

4. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that prevent metal-to-metal contact, and that minimize noise from movements.

5. Sheet Metal Flashing and Trim: Fabricate trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

   a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

   b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.

   c. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.

   d. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

      1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that equipment items and associated curb supports are ready to receive work and unit dimensions are as indicated on shop drawings.

3.2 FRAMING INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects.

C. Provide for erection loads, and for sufficient temporary bracing to maintain indicated alignment until completion of erection and installation of permanent attachments.

D. Anchor fabrications to structure as indicated.

E. Separate dissimilar metals and use gasketed fasteners, isolation shim, or isolation tape to eliminate possibility of corrosive or electrolytic action between metals.

F. Exercise care when installing components so as not to damage finish surfaces. Touch up as required to repair damaged finishes.

G. Install flashing boots at base supports as required to provide a watertight connection. Install as recommended by the roof membrane manufacturer.

H. Remove all protective masking from material immediately after installation.

3.3 PANEL INSTALLATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages in accordance with ASTM C754 and metal panel manufacturer's written recommendations.

B. General: Install metal panels in accordance with manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to support structure unless otherwise indicated. Allow provisions in the assembly for thermal and structural movement.

C. Shim or otherwise plumb substrates receiving metal panels.

D. Install screw fasteners in predrilled holes.

E. Locate and space fasteners in uniform vertical and horizontal alignment.

F. Install flashing and trim as metal panel work proceeds.

G. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.

H. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.

I. Fasteners: Use stainless steel fasteners.

J. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

K. Lap-Seam Metal Panels: Attach metal panels to supports with fasteners at each lapped joint at location and spacing within the panel profile recommended by manufacturer.

L. Follow manufacturer’s standard Installation Guide.

M. Install components required for a complete metal panel system including trim, copings, corners, seam covers,, sealants, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

N. Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level as indicated.

O. Install exposed trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal trim to fit substrates.

P. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 ft. (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.4 TOLERANCES

A. Maximum Variation From True Position: 1/4 inch.

B. Maximum Offset From True Alignment: 1/4 inch.

3.5 CLEANING

A. Clean surfaces and components immediately prior to Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 113013 - RESIDENTIAL APPLIANCES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2

1.3 SECTION INCLUDES

A. Kitchen appliances.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate clearance requirements and utility service rough-in locations with casework in which appliances are to be installed.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data indicating dimensions, capacity, and operating features of each piece of residential equipment specified.

C. Installation Instructions: Submit manufacturer's printed installation instructions for each appliance type, including clearance requirements and utility service location requirements.

D. Copies of Warranties: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section, with not less than three years of documented experience.

B. Electric Appliances: Listed and labeled by UL (DIR) and complying with NEMA Standards (National Electrical Manufacturers Association).

C. Gas Appliances: Bearing design certification seal of American Gas Association (AGA).

D. Basis of Design: Specifications are based on appliance models and types by the specified basis of design manufacturer. Appliances manufactured by other acceptable manufacturers are permitted, subject to compliance with all specified requirements; and provided that deviations in dimensions, sizes, style, function, and finish are minor, and do not detract substantially from the indicated design intent.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five (5) year manufacturer warranty on refrigeration system of refrigerators.

C. Provide ten (10) year manufacturer warranty on magnetron tube of microwave ovens.

PART 2 PRODUCTS

2.1 KITCHEN APPLIANCES

A. Provide Equipment Eligible for Energy Star Rating: Energy Star Rated.

B. Refrigerator: Free-standing, top-mounted freezer, frost-free.
   1. Capacity: Total minimum storage of 20 cubic ft; minimum 25 percent freezer capacity.
   2. Features: Include glass shelves.
   3. Finish: Porcelain enameled steel, color as indicated.
   4. Acceptable Manufacturers:
      a. Frigidaire Home Products; FFHT2045XS: www.frigidaire.com/#sle.

C. Microwave: Countertop.
   1. Capacity: 2.2 cubic ft.
   2. Power: 1,100 watts.
   3. Features: Include turntable.
   4. Exterior Finish: Stainless steel.
   5. Acceptable Manufacturers:
      a. GE Appliances; PCT22U1WSS: www.geappliances.com/#sle.
      b. Substitutions: See Section 016000 - Product Requirements.

2.2 MEDICAL APPLIANCES

A. Pharmaceutical Refrigerator: Undercounter.
   1. General: Provide a 24-inch wide, built-in undercounter all-refrigerator designed for vaccine and pharmaceutical storage, complying with CDC and VFC guidelines; ADA compliant with a maximum cabinet height of 32 inches for installation under lower counters.

2. Capacity: 5.5 cubic feet.
3. Performance & Controls:
    a. Temperature Range: Fixed operating range of 2 to 8 degrees C (35.6 to 46.4 degrees F).
    b. External Monitoring: Front-mounted digital microprocessor with NIST-calibrated temperature display (Celsius/Fahrenheit switchable) showing current, minimum, and maximum temperatures.
    c. Alarm System: High/low temperature audible alarm with buffered temperature probe encased in a glycol-filled bottle for accurate simulated product temperature.
    d. Cooling: Internal fan-forced cooling for even temperature distribution and automatic defrost for reduced maintenance.
    e. Defrost: Automatic.
4. Features & Construction:
    a. Exterior: White fully finished cabinet with front-breathing design for built-in or freestanding use.
    b. Security: Factory-installed keyed lock located at the top of the solid door.
    c. LED lighting, three adjustable wire shelves, and a flat door liner for deep storage.
    d. Connectivity: Pre-installed 3/8-inch access port for external monitoring probes.
    e. Electrical: Hospital-grade power cord with ‘green dot’ plug.
5. Features:
    a. Door Swing: Standard Right-Hand.
    b. Data Logging: [Option DL2B] NIST-calibrated USB digital data logger with LCD display.
    c. Self-Closing Door: Optional self-closing door mechanism to ensure temperature integrity.
    d. Power Failure Alarm: [Option PF1HG] Supplemental alarm for loss of power.
    e. WiFi Integration: [Option DL11B] WiFi-enabled temperature monitoring kit.
    f. Stainless Steel Finish: [Option SSK] Stainless steel kickplate.
6. Acceptable Manufacturers:
    a. Accucold Division, Felix Storch, Inc.; FF7LWBIMED2ADA: www.accucold.com.
    b. Substitutions: See Section 016000 - Product Requirements.

2.3 ACCESSORIES

A. Provide appliances with light bulbs, power cords, and other standard accessories supplied by the manufacturer or required for complete and functional installation of each appliance unit.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify utility rough-ins are provided and correctly located.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Anchor built-in equipment in place.

3.3 ADJUSTING

A. Adjust equipment to provide efficient operation.

3.4 CLEANING

A. Remove packing materials from equipment and properly discard.

B. Wash and clean equipment.

END OF SECTION

SECTION 11 40 00
FOODSERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of contract, including General and Supplementary Conditions and Division 01 Sections, apply to this Section.

1.2 SCOPE

A. Attention is directed to the detailed Item Specifications, which provide for minimum acceptable products. Item Specifications paragraphs may indicate materials or components that exceed the manufacturer's standards and are required for this project.

B. Cooperate and coordinate with others engaged on the project in order that work will progress on schedule.

C. Work to be performed under this Section is shown on Foodservice Equipment Drawings.

D. Install materials furnished under this Section, other than materials that are expressly noted for installation under other Sections. Installation work shall be performed by workmen compatible with those existent on the project site. Equipment shall be of the latest design; new and unused, unless indicated otherwise in the Item Specifications, complete with all standard parts for normal operations and including such accessories or materials as may be required to comply with these Specifications.

E. This Specification is to further describe and supplement the applicable Drawings. What is called for by either the Drawings and/or these Specifications shall be furnished and installed as part of this work. Any questions relative to discrepancies or omissions shall be submitted to the Architect.

F. Provide neatly punched openings or cutouts required to permit passage of plumbing and electrical services by related trades and to accommodate mounted switches and receptacles in the equipment.

1. Work in this Section shall include but shall not be limited to the following:
2. Catalog items of equipment.
3. Fabricated equipment other than catalog items.
4. Plumbing trim consisting of mechanical system components required for standard operation of equipment items such as faucets and waste outlets. Vacuum breakers shall be furnished for equipment where water is introduced less than 2 in. above flood level.
5. Electrical equipment forming an integral part of equipment items such as electric motors, heating elements, controls, switches, starters, temperature regulators and internal wiring to a control panel or switch, if mounted on the equipment.

G. Sustainable Design Intent: Comply with project requirements intended to achieve a rating, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council.

1.3 RELATED WORK SPECIFIED ELSEWHERE

A. Finished floor and walls, structural supports for all ceiling supported equipment, acoustical ceilings and related building.

B. Connecting piping, waste lines, traps and vent piping, complete with shut-off valves to all the equipment, and the rough-in for sanitary waste, domestic water, floor drains and plumbing fixtures except those provided under this Section, and related mechanical work.

C. Exhaust ventilating systems complete with blowers, ductwork, hangers, access panels, and insulation between the exhaust collars and the exhaust blowers.

D. External wiring; the mounting and wiring of motor starters, solenoid valves, switches and receptacles not integral with the equipment; mounting and wiring of walk-in refrigerated room ceiling mount light fixtures; wiring of walk-in refrigerated room interior evaporator coils; connecting conduit, and external connections to equipment to the building electrical distribution system.

1.4 SUBMITTALS

A. Submit Shop Drawings for approval in accordance with the General Conditions.

B. Stub-in drawings shall indicate the layout of equipment and dimensioned locations of all services to the equipment.

1. Hand drawn scale: 1/2 inch = 1’-0”.
2. CAD drawn scale: 1/4 inch = 1’-0”.
3. Stubbed services shall include electrical, hot and cold water, floor drains or floor sinks, solid wastes and exhaust collar connections. Point of connection services shall include steam supply, condensate return, gas connection and indirect waste connections. Service dimensions shall include height measured from finish floor.
4. Electrical and plumbing services shall be indicated and coordinated on the same drawing.
5. Call-outs for each stub point indicated at the point, or clearly keyed to a schedule on the same drawing.
6. Special conditions plan shall include all floor recesses, curbs and special wall construction indicated and dimensioned

C. Fabrication drawings shall be furnished for non-catalog items, showing plans, elevations and full construction details with gauges, components, fasteners, erection and connections. Drawings shall be to the minimum scale of 3/4 in. = 1 ft., 0 in.

D. Drawings for custom fabrication, refrigerated rooms, exhaust ventilators, and stub-in drawings shall each be individually submitted in separate drawing packages.

E. Standard items of equipment, not built-in or part of other assemblies shall be submitted for approval in the form of bound catalog cuts. Each cut shall include a

clearly marked item number, a listing of all optional accessories and finishes, and connection data.

F. Mechanical refrigeration system submittal shall include the firm name and address of the installation contractor and name of the qualified installer.

G. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible. Kitchen Equipment Contractor shall clearly indicate that items are Energy Star rated both on the submittal cover sheet and manufacturer cut sheets.

H. Failure to comply with approved shop drawings shall be cause for rejection of an improperly built assembly.

1.5 SAMPLES

A. If the bidder's proposed equipment fabricator is unknown to the Consultant's office, immediately after award of contract, submit the following samples for selection and approval:

1. Section of table showing edge, bullnose, framing, fasteners, gusset, leg, and foot, all assembled.
2. Drawer assembly (will be returned for use on this project).

B. Work delivered to the job shall match approved samples.

1.6 GUARANTEES AND WARRANTIES

A. New equipment furnished for this facility shall be guaranteed for a period of not less than one calendar year beginning on the date of final acceptance of the work of this Section. In the case of a manufacturer whose standard warranty exceeds this period the longer period shall apply. Self-contained refrigeration units for reach-in refrigerators, freezers, ice cream chests and ice machines shall carry a five-year replacement warranty for the sealed unit. The guarantee shall protect against defective material, design and workmanship.

B. In addition to the guarantee called for under the General Conditions, this Contractor shall further agree that in the event of failure of any system or item of equipment or improper functioning of specified work during the guarantee period, he shall have "on call" competent service personnel available to make the necessary repairs or replacements of specified work promptly at no cost to the Owner. In the event that replacement of an entire item is required, the Owner will have the option of full use of the defective equipment until a replacement has been delivered and completely installed.

C. Furnish manufacturer's warranty for each item of standard equipment and a warranty on fabricated equipment. Submit guarantees and warranties to the Architect in accordance with conditions found in "Demonstration and Operating Instructions" paragraphs, contained in Part 3, this Section.

1.7 REGULATORY AGENCIES

A. Work shall be in accordance with the governing health, building and safety, and fire protection codes and regulations.

B. Standards of the National Sanitation Foundation (NSF) shall serve as guidelines for the work of this Section.

C. Electric equipment and accessories shall conform to the standards of the National Electric Manufacturers Association (NEMA), Underwriters Laboratories, Inc. (UL) or Electrical Testing Station (ETS).

D. Steam generating equipment and accessories shall conform to the standards of the American Society of Mechanical Engineers (ASME).

E. Gas fired equipment and accessories shall conform to the standards of the American Gas Association (AGA) and the American National Standards Institute (ANSI) Z83.11.

F. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible.

1.8 EQUALITY OF MATERIALS AND EQUIPMENT

A. The base bid shall contain no substitutions to these drawings or specifications. Bidders may offer substitute equipment in a separate proposal, indicating the proposed model and sum to be added or deducted if the alternate item is accepted by the Owner. Each line item shall include delivery, installation and taxes. Decisions to accept or reject a piece of equipment shall be made by the Owner, and all decisions shall be final.

PART 2 - PRODUCTS

2.1 MATERIALS AND FINISHES

A. General

1. Metals shall be free from defects impairing strength, durability or appearance, made of new materials with structural properties to withstand strains and stresses to which normally subject.
2. Stock materials, patterns, products and methods of fabrication shall be approved provided that they conform to the requirements specified under Item Specifications.

B. Stainless Steel

1. Stainless steel shall be non-magnetic corrosion resistant chromium-nickel steel, Type 302 or 304 (18-8 Alloy), polished to a Number 4 finish where exposed, unless otherwise noted. Minimum gauges shall be as specified under Item Specifications.

C. Galvanized (Galvannealed) Steel

1. Galvannealed steel shall be commercial quality with tight coat of zinc galvanizing metal applied to a soft steel sheet, subsequently passed through a 1200 degree F. oven, resulting in a spangle free paintable surface. Minimum gauges shall be as specified under Item Specifications.

D. Plastic Laminate Materials

1. The laminate facing shall be GP-50, .050 in. thick, general purpose, high pressure, decorative plastic laminate that meets or exceeds the requirements of NEMA Publication LD3-1985, and NSF Standard 35. The plastic laminate

exposed surfaces shall be provided in accordance with the specified manufacturer, finish and color. Balancing sheet shall be backing grade GP-28 in matching color at semi-exposed and BK-20 unfinished where hidden.

2. Plastic laminate covered surfaces shall be factory fabricated with 3/4 in. thick core having plastic laminate facing on both faces and all edges, laminated with waterproof glue under pressure in accordance with the plastic laminate manufacturer's specifications.
3. The core shall be medium density phenolic resin particleboard conforming to ANSI A208.1, Type 2-M-2, 45 pound per cubic foot density minimum.
4. Provide veneer core plywood or solid hardwood edge banding for doors and vertical dividers or panels where hardware is attached to casework.
5. Hinges shall be articulated, spring loaded type equal to Grass CST65-170-F or Stanley, with quantity adequate to support the door without deformation. Do not provide handles on plastic laminate clad doors.

2.2 CONSTRUCTION

A. General

1. Flat metal work items of equipment, such as tables, sinks, or counter tops, and other non-catalog items described under Item Specifications, shall be manufactured by a food service equipment fabricator who has the plant, personnel and engineering facilities to properly design, detail and manufacture high quality food service equipment.
2. The equipment fabricator shall be subject to the approval of the Architect, Owner and Consultant. Refer to Paragraph 1.05, Samples.
3. Fabricated foodservice equipment shall be manufactured by one manufacturer, of uniform design, material and finish.
4. Equipment shall conform to the applicable requirements of current Federal, State, and Local Codes and Regulations.

B. Welding

1. The words "weld", "welded" or "welding" as used in this Section of the Specification shall mean that metal joints shall be continuously welded and the exposed parts ground smooth and polished to match adjoining surfaces. Welding electrodes shall match the material being welded.
2. Where spot welding is specified, the welds shall be a maximum spacing of 3 in. on center.
3. Where tack welding is specified, the pieces welded shall have 1/2 in. minimum lengths of welding material at 4 in. on center maximum spacing.

C. Grinding, Polishing and Finishing

1. Exposed welding joints shall be ground flush with the adjoining material and neatly finished to harmonize therewith. Wherever material has been depressed or sunken by a welding operation, such depressions shall be suitably hammered and peened flush with the adjoining surfaces and, if necessary, again welded and ground to eliminate low spots. Ground surfaces shall be polished or buffed to a degree consistent with good workmanship. Coves shall be ground and polished to match adjoining material.
2. Care shall be exercised in grinding operations to avoid excessive heating of metal and discoloration. Abrasives, wheels, and belts used in grinding

stainless steel shall be iron free and shall have not been used on carbon steel. The texture of the final polishing operation shall be uniform and smooth. Grain direction shall be uniform, uni-directional for a total length of material. Cross grains and random polishing are not acceptable.

3. The general finish of equipment shall be consistent throughout the job. Brake ends shall be free of open texture or orange peel appearance, and where brake work mars the uniform finish of the material, the marks shall be removed by grinding and polishing, and finishing. Sheared edges shall be free of burrs, projections or fins to eliminate all danger of laceration. Mitered or bullnosed corners shall be neatly finished with the underedge of the material neatly ground to a uniform condition and in no case will overlapping material be acceptable. The equipment surfaces, where exposed, shall be finished to a grained Number 4 (satin) finish unless otherwise specified. An exposed surface shall include an inside surface, which is exposed to view when a swinging or sliding door is opened. Underside of shelves need not be satin finish unless otherwise specified.
4. Excessive distortion caused by welding shall be cause for rejection for that item of equipment.

2.3 BUY-OUT COMPONENTS

A. CASTERS: 5 in. diameter polyurethane tired, swivel, plate or stem mount to suit application, 300 pound capacity, brakes only if specified, NSF approved; Component Hardware C-21-3050 (plate/no brake), C21-3051 (plate/brake) C23-3350 (stem/no brake) or C23-3351 (stem/brake), or equal by Kason, or PDI Atlanta.

B. COUNTER LEGS: Stainless steel, 6 in. to 7-3/4 in. height adjustment; Component Hardware A72-0811, or A77-5048, or equal by Kason, or PDI Atlanta.

C. DOOR AND DRAWER PULLS: Stainless steel, full grip type with beveled edge, NSF approved for stud mounting in device, in horizontal attitude to meet NSF requirements; Component Hardware P63-1012, or equal by Kason, or PDI Atlanta.

D. DOOR HINGES: Stainless steel, lift off type, swedged knuckle for minimum clearance, nylon bearings; Component Hardware M75-1002 or equal by Kason, or PDI Atlanta.

E. DRAWER PANS: Molded plastic or fiberglass, 20 in. by 20 in. by 5 in. deep, NSF approved; Component Hardware S80-2020, or equal by Kason, or PDI Atlanta.

F. DRAWER SLIDES: Stainless steel, NSF approved, full extension, 200 pound capacity with stainless steel ball bearing wheels; Component Hardware S-52 series, or equal by Kason, or PDI Atlanta.

G. FAUCET SETS, DECK MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on swivel nozzle or swivel gooseneck to suit the application; T&S Brass B-0221 (with B-0425-M connection kit) or B-0321-NPL, or equal by Component Hardware, Chicago, or Fisher.

H. FAUCET SETS, POTWASHING SINK: Chrome plated cast bronze with removable cartridges, 3/4 in. passages, eccentric flanged female inlets on 8 in. centers with LL street EL inlets with locknuts, four prong handles, 12 in. swing spout; T&S Brass B-0290 or equal by Component Hardware, Chicago, or Fisher.

I. FAUCET SETS, SPLASH MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on 12 in. swing spout; T&S Brass, B-0231-CC or equal by Component Hardware, Chicago, or Fisher. Provide each with a mounting kit.

J. GUSSETS: Stainless steel, stepped side, fully closed, NSF approved, mild steel interior reinforcement, wide flange for welding to framing, set screw anchor for leg; Component Hardware A20-0206C, or equal by Kason, or PDI Atlanta.

K. LEG AND BULLET FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-6272-C, or equal by Kason, or PDI Atlanta.

L. LEG AND FLANGED FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with 3-1/2 in. diameter flange and two holes for securing to floor, minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-4272-C, or equal by Kason, or PDI Atlanta.

M. NUTS: Zinc plated "Pal Nuts" with integral cap and lockwasher; Component Hardware Q-34-1024 or equal by Kason, or PDI Atlanta.

N. SEALANT: Sealant for sealing equipment to walls or filling crevices between components. All materials listed below that are used in the building interior must not exceed the following requirements:

1. South Coast Air Quality Management District (SCAQMD) Rule #1168
2. For interior adhesives and sealants applied within the weatherproof barrier, submit a printed statement of VOC content.

O. SOUND DEADENING BASINS: Component Hardware Q75-1366 or equal by Kason, or PDI Atlanta.

P. SOUND DEADENING TOPS AND SHELVES: Component Hardware Q85-5225, or equal by Kason, or PDI Atlanta, "Tacky Tape" installed between all channel or angle reinforced tops, drainboards or undershelves.

Q. WASTE OUTLETS, CRUMB CUP: Stainless steel body, removable crumb cup stopper, gasket, coupling nut and sealing washer, 1-1/2 in. IPS, and optional 4 in. long nickel plated brass tailpiece with gasket; Component Hardware E38-1010, or equal by Kason, or PDI Atlanta.

R. WASTE OUTLETS, LEVER OPERATED: Cast stainless steel rotary type with 1-1/2 in. NPS and 2 in. NPS threads, and removable beehive crumb-cup; Component Hardware DSS-8000 or equal by Component Hardware, Chicago, or Fisher.

S. WELD STUDS: Copper flashed steel with 10-24 threads, length to suit; Component Hardware Q-36, or equal by Kason, or PDI Atlanta.

T. GFCI RECEPTACLES: Pass & Seymour 2095-W, 115 volt, 20 amp GFCI Duplex Receptacle or equal.

2.4 FABRICATED COMPONENTS

A. Box Type Cabinet Construction

1. Sheet metal cabinet bases of box type construction shall be fabricated without general interior framing. Structural strength shall be achieved by the gauge of the metal and the formed angle and channel edges and corners. Vertical sections shall be closed. Cabinet base shall be fabricated of 18 gauge minimum of material specified at Item Specifications. Mount on counter legs or base as specified.
2. Intermediate shelf shall be fabricated of 16 gauge stainless steel with rear and sides turned up 1-1/2 in. tight to the cabinet sides. The front edge of shelf shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees and shelf spot welded in place. Reinforce underside with longitudinal 14 gauge channel on the centerline.
3. Bottom shelf shall be fabricated of 16 gauge stainless steel similar to the intermediate shelf except that the front edge shall be formed into a full width 1-1/2 in. by 4 in. welded in boxed channel. Rear edge shall be fitted with a full width channel. Underside shall be reinforced.

B. Counters and Drainboards

1. Counters, table tops and drainboards shall be 14 gauge stainless steel, of NSF construction, with edges per Item Specifications. Metal tops shall be made of the largest pieces available and shall appear as one piece with all field and shop joints reinforced and welded, ground and polished. Short pieces of metal will not be acceptable. Counter bends shall be not less than 1/8 in. radius. Wherever a fixture has a waste or drain outlet, the surface shall pitch toward the outlet.
2. Counters, table tops and drainboards shall be reinforced with channel or angle frame as specified in the Item Specifications. Framing shall be secured to the underside with sound deadening material sandwiched between the surfaces, weld studs, and nuts.
3. Wherever bolts or screws are welded to the underside of trim or tops, neatly finish the reverse side of the weld uniform with the adjoining surface of the trim or top. Depressions at these points will not be acceptable. Raise dimples and depressions by peening, or heating and shrinking, and grind and polish to present a flat surface.

C. Crossrails

1. Crossrails shall be not less than 1-1/4 in. outside diameter 16 gauge stainless steel tubing welded, ground and polished to a Number 4 finish. Crossrails shall be welded to legs at a height of 10 in. above finished floor, and shall extend from left to right between front legs, unless otherwise specified, and from front to back between all legs.

D. Drawer Assembly

1. Drawer assemblies shall consist of a removable drawer pan set in a removable 16 gauge stainless steel channel shaped drawer support frame with gusset plate reinforced corners.
2. Support frame shall have double pan front cover consisting of boxed 18 gauge stainless steel outer shell with welded corners, flush mounted recessed stainless steel pull, 20 gauge stainless steel back shell tack welded to outer shell with fiberglass sound deadening between. Drawer shall be provided with

rubber bumpers to quiet closing. Support drawer frame on full extension drawer slides.

3. Drawer shall be suspended from table in a three-sided, 16 gauge stainless steel enclosure with flanged-in bottom edges, banded lower front, flanged-out front side and top edges. All sharp corners shall be broken and any exposed exterior threads of slide mounting bolts shall be provided with solid metal acorn nuts.
4. Component Hardware S91-0020 with thermoplastic pan is considered as equivalent to the above specified construction.

E. Edges

1. Marine: Bumped up 1/2 in. at 45 degrees and turned down 1-1/2 in. and in 1/2 in. at 45 degrees; corners welded and square.
2. Raised roll: Coved up and rolled 180 degrees on a 1-1/2 in. diameter with 3 in. height; corners welded and rounded or coved.
3. Rolled: Rolled 180 degrees on a 1-1/2 in. diameter; corners welded and bullnosed.
4. Short (6 inch) splash on counters and tables: Coved up 6 in., turned back to wall or equipment 1 in. and down 1/2 in.; ends welded closed. Secure tight to face of wall with clips unless specified otherwise and seal joint.
5. Tall (10 inch) splash on preparation sinks, dishtables, counter, and tables: Coved up 8-1/2 in., turned back to wall or equipment 1-1/2 in. at 45 degrees and down 1/2 in.; ends welded closed. Secure 3 in. off face of wall with brackets unless specified otherwise.
6. Turn down: Turn down 2 in. and in 1/2 in. at 45 degrees; corners welded and square.

F. Framing of Tops, Drainboards, Undershelves

1. Channel: Reinforce with 1 in. by 4 in. by 1 in. 14 gauge galvannealed steel channels; stainless steel if exposed to view. Channels shall run front-to-back at all legs and longitudinally on the centerline. Cross and longitudinal members shall be welded into a single assembly at intersections and sharp corners shall be broken. Framing shall be secured to underside of tops with pairs of weld studs. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. The following specified angle framing is considered superior to channel framing and may be used in its place.
2. Angle: 1-1/2 in. by 1-1/2 in. by 1/8 in. perimeter angle frame with crossmembers not over 30 in. on center. Framing shall be secured to top with weld studs, 18 in. on center maximum with three minimum studs on any single face of a table. Perimeter angle frame that is exposed to normal view, shall be stainless steel. Crossmembers and framing not unexposed to normal view shall be iron. Corners of angle frame shall be mitered, or notched and brake formed to form a closed corner. Corner gusset plates used for mounting of leg gussets shall be 1/8 in. thick and sealed to underside of the top. Iron framework joints shall be ground smooth, and shall be painted with a minimum of two coats of aluminum lacquer after degreasing. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. Channel framing shall not be considered equal to specified angle framing.

3. Sound deaden all horizontal framed surfaces with material sandwiched between the framing and the bottom of the surface.

G. Hinged Doors

1. Hinged doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle, and an adjustable tension door catch equal to Component Hardware M22-2430. Doors shall close against the bottom shelf and flush with body of equipment.
2. Louvered hinged doors for ventilation shall be fabricated of the same components and provided with a full perimeter 3 in. wide channel reinforcing frame on the interior face. Remaining face shall be die punched with drip-proof louvers fully utilizing the remaining flat metal or a stainless steel flattened expanded metal grille per Item Specifications.

H. Sinks and Sink Inserts

1. Unless otherwise specified, sinks including sink inserts built into tops of fixtures, shall be made of 14 gauge stainless steel with all vertical and horizontal corners rounded to a radius of approximately 3/4 in. with the intersections meeting in a spherical section. Sinks shall be integrally welded to fixture tops.
2. Sinks with two or more compartments shall have full height, 1 in. thick double wall partitions consisting of two pieces of stainless steel back-to-back so fabricated that each compartment will be a deep bowl with coved corners. Partitions shall be welded in place to the bottom, front and back of the sink with smooth rounded coved corners. Top edges of the partitions shall be continuously welded. The front of the sinks shall consist of a stainless steel smooth, flush apron, same gauge as the sinks. Bottom and rear of partitions shall be closed. Sink dimensions contained in Item Specifications are inside dimensions.
3. Sinks shall be provided with integral 14 gauge stainless steel drainboards when specified. Drainboards and sink basins shall be pitched toward waste outlets and shall be self draining. The underside of all sink basins shall sound deadened. Sink units shall be provided with an integral splash at walls. Provide the necessary holes for the mounting of faucet sets.

I. Sliding Doors

1. Sliding doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle. Provide sliding doors with nylon roller bearing sheaves and overhead track components equal to Component Hardware B58-5523 and 5513 sheaves, B57 track, B62-1093 nylon door guides and B60-1086 door stops.

J. Undershelves

1. Undershelf in an open type table shall be 16 gauge stainless steel unless otherwise noted. Edges shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees with corners notched out to fit legs to which shelf shall be welded from underside. Line up all edges of shelf with centerline of legs. Reinforce underside with longitudinal 14 gauge channel on the centerline.

K. Wall Brackets

1. Dish tables, sinks and counters with sinks shall be securely anchored 3 in. off the face of the wall unless specified otherwise. Brackets shall be "Z" shaped and fabricated of 3 in. wide, 14 gauge stainless steel. Brackets shall be secured in a vertical attitude to the rear of equipment backsplash with weld studs, and to the wall with appropriate fasteners.
2. Counters that are specified tight-to-wall shall be secured in a hidden manner with steel clips, and the wall/fixture joint shall be sealed.

L. Wall Shelves

1. Wall shelves shall be fabricated of 16 gauge stainless steel, size per Item Specifications, with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees, measured from horizontal.

2.5 ELECTRICAL EQUIPMENT AND WIRING

A. Under this Section, items of equipment having mounted electrical motors, electrical heating units, lighting fixtures, controllers, control stations, switches, receptacles and the like shall be internally wired as specified herein, terminating at a junction box mounted on the equipment and left ready for connection to the building electrical distribution system by the Electrical Contractor. Extra ceiling mount light fixtures for refrigerated rooms shall be delivered to Electrical Contractor for field installation and wiring. Connections to evaporator coils mounted inside refrigerated rooms shall be wired by the Electrical Contractor.

B. Provide openings or cutouts required to accommodate the switches and receptacles in the specified work, and the wiring in conduit from terminal blocks in junction boxes.

C. Electrically operated equipment and fabricator wiring shall conform to the requirements of Underwriter's Laboratories, Inc. Motors over one horsepower shall be equipped with overload protection.

D. Furnish wiring diagrams for equipment as requested by the Architect or Contractor.

2.6 ITEM SPECIFICATIONS

Item 1

MOP SINK CABINET

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts CMM-MC-D2 or equal by Julien Inc.

Size - 50" x 22-5/8" x 84" high; 12" deep mop sink basin

Construction - 16 gauge type 304 stainless steel sloped top at 5 degrees with edges turned down, 16 gauge stainless steel cabinet body, vented cabinet walls, 18 gauge double-pan hinged double doors with locks and “T” handles, two full depth adjustable intermediate shelves, one shallow depth adjustable 12” deep adjustable shelf and a fixed stainless steel bottom shelf on left side, adjustable hallow depth intermediate shelf, two mop holders, and mop sink with drain fitting and stainless steel strainer on right side, full stainless steel back panel with neatly punched holes spaced 8" on center for water connections. Sides of cabinet to be notched and extended where it meets to wall for tight installation avoiding conflict with coved flooring base material.

Installation - KEC to provide stainless steel trim as required to close off gaps at walls. Secure and seal to wall.

Accessories - Provide with T&S Brass B-2492 service faucet.

Item 2

MOP BUCKET

No work in this Section. Units provided by Owner.

Item 3

STAFF LOCKER, TWO-TIER

Quantity - 3

No work in this Section. Units provided by General Contractor.

Item 4

OFFICE DESK

No work in this Section. Units provided by General Contractor.

Item 5

WALK-IN COOLER

Make - American Panel or equal by Bally or Thermalrite

Size - 6'-9" x 8'-3" x 7'-10" high minimum inside dimensions; 7'-8" high after finished floor is installed by the General Contractor

Power - 1.1 KW - 120/60/1 to light fixtures, temperature monitor/alarm, and door defrost heater strip

Installation - The walk-in cooler shall be installed on 4" high screeds prior to installation of the finished floor, and shall be floorless type utilizing the finished floor provided by the General Contractor for its interior floor. Screeds shall be secured to the sub floor provided by the General Contractor with no exposed fasteners. Finished floor and setting bed shall be carried into cooler from the adjacent room and level to same, and shall have coved joints at all walls, turned up a minimum of 4".

Construction - All standard construction per the manufacturer, modified to meet the specific following points:

- Walls to be 4" thick with CFC free urethane foam insulation, UL Class 1 rated

- Cam type locking devices
- 34" x 76" minimum door clearance
- Polished hardware (hinges and latch to match)
- Three hinges on doors (to include one Kason 1248 spring assist hinge per door)
- Leveraged pull handle (mechanical advantage type, Kason 1236 or equal)
- Quarter turn inside safety release lever handle mechanism (not screw type)
- Prewired door sections with heater wires and light fixtures and switches
- Kason 1808 LED light fixtures
- Dial type thermometers at doors
- Model IC+ (with dry contacts) or Modularm 75LC temperature and HACCP monitoring system at doors. Cooler and freezer alarms to interconnect with access control system for alert monitoring. This Cintractor to provide each system with a pair of 22 gauge low voltage wires. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment.
- NSF construction throughout with exception of buried floor panels
- Interior and exterior faces of doors and exposed exterior walls shall be provided with aluminum diamond tread plate protective material to a height of 48" above finished floor. Hold diamond plating up 6" from the finish floor to accommodate the coved base.

Minimum Cooler Insulation R-Values

Wall and Roof Panels (4 in.): R-29

Floors: R-25

Doors: R-32

Minimum materials - Interior wall surfaces shall be clad with white .038" pebble finished aluminum; the exterior surface shall be .038” pebble finish aluminum. The ceiling shall be finished in white polyester over 24 gauge galvanized steel. Interior floor shall be 14 gauge galvanized steel.

Accessories - Each door shall be provided with a heated vision panel, 14-1/2" x 23” constructed of three panels of tempered unbreakable glass, electrically heated, with sealed air spaces between. Provide matching trim strips and closure panels to adjoining surfaces, fabricated per details, made of largest pieces available to minimize number of joints, and installed in accordance with NSF Brochure 770202, Installation Manual for Walk-in Refrigerators and Freezers. Provide one total extra Kason 1808 light fixtures for mounting in the rooms and deliver to Electrical Contractor for field installation.

Guarantee - The walk-in refrigerated room panels shall be guaranteed for a period of ten (10) years from the date of approved installation for defects in materials and workmanship when subjected to normal use and service; remainder of rooms for one year.

Item 6

MECHANICAL REFRIGERATION SYSTEM

Make - Heatcraft, Bohn, Larkin, Climate Control, Chandler

Scope - Furnish and install complete refrigeration systems for the walk-in refrigerated rooms in accordance with the plans. The systems shall include condensing units, evaporator coils, piping, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted refrigeration practice.

Important: The installation work shall be performed by a fully qualified refrigeration contractor employing a certified mechanic fully trained in the installation of commercial refrigeration systems. Submittal shall list the installing company and the qualified system installer.

Piping - Furnish and install the interconnecting piping between the condensing units and their respective unit coolers. Piping shall be installed in a neat and workmanlike manner with adjustable hangers spaced at no more than ten foot intervals on horizontal runs; six foot intervals, vertical runs.

Line sizes shall be in accordance with ASHRAE standards and best refrigeration practice to assure proper feed to evaporator, avoid excessive pressure drop, and prevent excessive amounts of lubricating oil from being trapped in any part of the system. Line sizing shall be such that it will protect the compressor from loss of lubrication at all times, prevent liquid refrigerant from entering the compressor during operating or idle time, and maintain a clean and dry system.

Refrigeration piping shall be Type L, ACR grade, hard drawn seamless copper tubing, wrought type copper fittings, and silver soldered joints. Precharged lines are not acceptable.

Furnish and install sleeves for refrigerant and evaporator drain piping wherever piping passes through a wall or ceiling. Sleeves shall be non-conductive gray plastic tubing, with interior dimension sized at least 1/4" larger than piping, and shall be neatly packed with brine putty after installation.

Furnish and install condensate drain piping from the unit cooler to an open drain. Piping shall consist of not less than 7/8" Type L copper tubing, supported 36" on center maximum, in such a way that there will be 1" clearance between the wall and the tubing. Provide a union or slip fitting at the connection to the evaporator drain pan to allow easy disassembly for service and cleaning. Drain piping shall be pitched 1/4" to the foot and carried through the wall of the refrigerated area. It shall be trapped to prevent entry of warm air and insects to the refrigerated rooms and discharged to a floor drain with the code required air gap. The exposed drain piping shall be spray painted.

Provide an electric drainline heater tape in the freezer, with a length equal to five wraps per foot of length of the drainline located within the freezer compartment. Wrap and secure in accordance with manufacturer's recommendations.

Provide chrome plated escutcheon plates at all exposed points where piping penetrates the wall or ceilings.

Insulation - Suction lines for refrigerated rooms having a temperature above freezing shall be covered with 3/4" wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

Suction lines for refrigerated rooms having a temperature below freezing shall be covered with 1" wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

The insulation shall be applied to these lines in accordance with manufacturer's recommendations, and as they are being installed so that insulation will not be split. All joints shall be completely sealed with overlapping, cemented material to prevent the formation of frost on the lines.

Controls - Each evaporator shall be provided with an iNtelliGen electronic control as manufactured by Heatcraft Refrigeration. Provide each system with a pair of twisted 24 gauge low voltage wires, Belden 9841 or equal. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts at the evaporators to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

Refrigerant Testing - The entire system shall be pressure and leak tested at no less than 100 PSIG, cleaned and dehydrated by maintaining a vacuum of 500 microns or lower for a period of twelve hours. The required operating charge of refrigerant and oil, if necessary, shall be added and the entire system tested for performance. Each system shall be clearly marked as to the type refrigerant required.

Guarantee - The equipment shall be guaranteed to maintain the specified temperatures. All mechanical refrigeration equipment shall be mechanically guaranteed for a period of one year after date of acceptance by the Owner. The emergency service shall be provided free of charge, whenever necessary on a 24 hour, seven day-per-week basis during the guarantee period.

Any leaks that occur during the first year of operation after acceptance by the Owner, shall be repaired and the necessary refrigerant added at no expense to the Owner.

The year's service shall be provided by the installing company, and under no circumstances will the service policy be sublet to another refrigeration contractor. The name of the installer/service agency for the guarantee period shall be located at a prominent place on the condensing units.

The condensing units shall be provided with an additional four year parts warranty to commence upon the completion of the aforementioned guarantee, bringing the total parts warranty to five years.

Condensing Units - The condensing units shall consist of an EC energy saving motor with variable speed controller, compressor, refrigerant condenser, liquid receiver, compressor service valves, and a dual high-low pressure control. The units shall be as manufactured by Heatcraft Refrigeration.

The condensing units shall be outdoor type, wall mountable, and quiet type with an approximate 51 to 63 decibel rating at 100 percent fan speed. The compressor shall be Microchannel Coil Technology scroll type per schedule, and fitted with coated aluminum fin condenser, suction service valve, discharge service valve, compressor contactor, high and low pressure controls, receiver with fusible plug, liquid shut-off valve and charging port, mounted non-fused disconnect switch, waterproof electrical control box, discharge line vibration eliminator, weather resistant UL painted steel cabinet, access guard, liquid

line assembly, suction line filter and vibration eliminator, crankcase heater, and 1-1/2" high raised steel base.

Provide condensing units with 18" high support stands and mount on roof per Architectural drawings with all structural supports, roof penetrations and weatherproofing provided by the General Contractor.

Evaporator Coils - Each evaporator shall be provided with iNtelliGen electronic control as manufactured by Heatcraft Refrigeration, thermostatic expansion valve, and solenoid valve. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit. iNtelliGen Controls to include iIC integration card for BMS connection direct to evaporator controls. iNtelliGen Controls to include iWC Webserver card for router connection direct to evaporator controls. Each evaporator coil shall be provided with a refrigerant leak detection system.

The freezer shall be provided with an automatic electric defrost system consisting of one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with variable speed EC energy saving fan motors with controller. Coil shall be NSF and UL Listed.

The cooler shall be provided with one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with EC energy saving fan motors. Coil shall be NSF and UL Listed.

Furnish and install 1/4" minimum diameter stainless steel threaded mounting rods for the hanging of the evaporator coils, with stainless steel washers and nuts on the interior ends, and reinforcing angle at the exterior top of the room. Plated steel running thread is not acceptable.

Item 7
COOLER EVAPORATOR COIL
Make - Bohn BEL0095AS6AMA
Power - 1.8 amps - 120/60/1
Specified as part of item 3 Mechanical Refrigeration systems.

Item 8
COOLER CONDENSING UNIT
Make - Bohn BCH0010MCACZ0017
Power - 7.2 amps - 208/60/3
Specified as part of item 3 Mechanical Refrigeration systems.

Item 9

MOBILE SHELVING UNIT, FOUR-TIER

Quantity - 6

Make - MetroMax Q or equal by Eagle

Size - (2) 48" x 21", (2) 42" x 21", (1) 36” x 21” and (1) 30" x 21", all 69" high on casters; four tier

Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5" diameter polyurethane tired swivel casters with donut bumpers.

Accessories - Provide with polymer posts in lieu of standard.

Item 10

EXISTING BUN PAN RACK

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 11

STORAGE SHELVING, FIVE-TIER

Quantity - 4

Make - Metro Super Adjustable Super Erecta or equal by Eagle

Size - per plan x 74-5/8" high; five tier with bottom shelf up 14" clear above floor

Description - Unit shall be all standard construction with Super Adjustable Chrome plated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1" shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item 12

DUNNAGE RACK

Quantity - 2

Make - Channel HD2048 or equal by New Age

Size - 48" x 20" x 12" high

Description - Dunnage platforms shall be all standard construction with extruded high tensile aluminum tubing with four horizontal tubes and four legs welded together, and each unit capable of supporting 2,500 pounds.

Item 14

EXISTING REACH-IN FREEZER

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 15

UTILITY CART

Make - Lakeside 521 or equal by Kelmax or Channel

Size - 32-5/8" x 19-3/8" x 34-1/2"

Description - Cart shall be all standard NSF construction, fully welded stainless steel throughout, with top and bottom shelves supported by an angle frame, and mounted on two 8" fixed and two 5" swivel casters. Capacity of cart to be 650 pounds.

Item 16

HAND SINK

Quantity - 2

Make - Glastender WHS-14-S or equal by Advance Tabco

Size 14" x 15" x 14" high plus 7" rear splash

Plumbing - 3/8” hot and cold water; 1-1/2” direct waste

Description - 20 gauge type 304 stainless steel body with 6" deep bowl, heavy duty deck mounted faucet set, with 18 gauge wall hanging bracket. Hand sink included integral left and right side splashes with radius worksurface corners for cleaning and front lip to contain splash.

Accessories - Provide with a deck mounted gooseneck faucet set, 3" flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap, B-0199-02-F10 aerator tip in lieu of the standard. Provided end splashes welded to each side.

set, wall hanging bracket and built-in soap and towel dispensers.

Item 17

WASTE BIN

Quantity - 2

No work in this Section. Units provided by Owner.

Item 18

REACH-IN FREEZER

Make - Traulsen G12001 or equal by Continental

Power - 9.7 amps - 1/2 HP - 115/60/1 - cord and plug

Capacity - 23.4 cubic feet

Doors - Half height solid doors, left hinged

Description - Freezer shall be constructed with stainless steel exterior front and doors, anodized aluminum sides and interior, and galvanized steel top, back and bottom. Provide heavy duty all-metal construction with foamed-in-place polyurethane insulation. Unit shall include self-closing cam lift hinges with stay-open feature, cylinder door locks, lifetime guaranteed handles, and magnetic door gaskets. Interior shall include three (3) epoxy coated wire shelves with adjustable supports and automatic LED lighting. Provide anti-condensate door heaters.

Refrigeration system shall be top-mounted, self-contained using R-448A refrigerant with thermostatic expansion valve, air-cooled hermetic compressor, and evaporator located outside the food zone. Provide microprocessor controls with LED display maintaining 0°F to -5°F operating range. Include front-facing condenser coil and non-electric condensate evaporator.

Mount unit on 6" high locking casters.

Accessories - Provide tray slides as required and additional shelves as needed. Include standard 3-year parts and labor warranty with additional 2-year compressor warranty.

Item 19

PREP TABLE WITH SINKS

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 90" x 27" x 36" high to work surface plus 10" high splash at rear; two 18" x 20" x 10" deep integral sink basins

Construction - 14 gauge stainless steel top, basins and splash, channel reinforced, six legs with gussets and adjustable feet, partial undershelf, two crossrails, tall splash rear, and marine front and ends, secured 3" off face of wall.

Accessories - Drawer assembly, splash mounted faucet set and two 2" lever waste outlets. Provide a flat spot for mounting the manual can opener, fully weld the flat spot to the table spot leaving no gaps.

Item 20

WALL SHELF

Quantity - 2

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 72" x 12" mounted 54" and 60” above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2", front edges of ends angled back, all corners broken, and front turned down 1-1/2", and in 1/2" at 45°. Shelf corners shall be welded, ground and polished. Mount shelf 1" off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48" on center maximum. Flag brackets shall have a web angle of 30° measured from horizontal.

Item 21

WASTE BARREL

Quantity - 3

No work in this Section. Units provided by Owner.

Item 22

CAN OPENER

Make - Edlund S-11 or equal by Vollrath or Nemco

Description - Opener shall be all standard construction with cast stainless steel body, base and blade. Install on table per plan.

Item 25

CEILING MOUNTED UTENSIL RACK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 4'-6" x 24" mounted up 6'-6" and 7'-6" above floor

Construction - Rack shall be fabricated of 1/4" x 2" stainless steel bar stock throughout, fully welded construction, consisting of a two bar upper rail with full radiused ends, a single lower rail, reinforcing straps, and suspended from the overhead structure on four hangers. Provide unit with forty Component Hardware J77-4401 stainless steel double pot hooks.

Item 26

COUNTERTOP SIX PAN STEAMER

Make - Cleveland 22CGT6.1 or Groen

Size - 21-1/2" x 32-1/8" x 30" high on 4" high legs

Power - 35 watts - 120/60/1

Rating - 1/2" gas inlet at 32,000 BTU/hour

Capacity - Six 12" x 20" x 2-1/2" deep pans

Description - Atmospheric gas boilerless unit shall consist of a six pan compartment with 60 minute electro-mechanical timer with audible signal and switch for manual operation. Cooking compartment shall be coved corner stainless steel construction with insulation and equipped with a two piece door with floating inner piece and reversible gasket. Base cabinet to have stainless steel top, sides, and front and include a flue back.

Accessories - Provide unit with 34" high stainless steel equipment stand (UNISTAND34).

Item 27

WATER FILTER ASSEMBLY

Make - 3M ScaleGard HT SF165 Modified or equal by Pentair

Description - Unit shall be all standard construction designed for wall mounting behind the Cleveland steamer and consisting of a mounting bracket, quarter-turn cartridge release mechanism, manifold with integral pressure gauge, integral quarter turn shut-off valve, outlet check valve, filter cartridge with internal prefilter membrane and external scale feeder cartridge. Provide with HF95-CLX chloramine reduction filter cartridge in lieu of standard HF65 cartridge.

Accessories - Provide four spare HF95-CLX filter cartridges and four spare HF8-S cartridges.

Item 28

EXISTING SIX-BURNER RANGE

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 29

DOUBLE CONVECTION OVEN

Make - Blodgett ZEPHAIRE-200-G-ES Double or equal by Vulcan or Montague

Size - 38-1/4” x 46” to include fan motor by 70-5/8” high

Power - (2) 8 amps - 3/4 HP - 120/60/1 - cords and plugs

Rating - 3/4" gas inlet at 100,000 BTU/Hour

Description - Units shall be all standard construction with stainless steel front, sides and top, porcelain enameled steel interior with 29" x 28-1/4" x 20" high inside dimensions, 1” solid block insulation and 1" thick mineral fibre sheet insulation for 2” on insulation on top, back and sides, simultaneously operating doors with stainless steel framed dual pane thermal glass windows, removable rack supports capable of holding eleven racks and five chrome plated steel wire racks, electronic ignition with fail-safe controls, solid state manual controls with separate dials for temperature and time settings, timer with buzzer, removable dual tube burners, pressure regulators, two-speed blowers with thermal overload protection and door interlock, and interior lighting with two halogen bake oven lamps. Provide standard one year parts and labor warranty on the total oven and additional three year warranty on the door assembly, parts only.

Accessories - Mount on heavy duty swivel casters. Manifold the two ovens for a single gas connection. Provide assembly with a 48" long x 3/4" line size Dormont 1675 KIT2S plastic covered hose assembly with full port gas ball valve, two Supr-Swivels, brass

disconnect, 90° street elbow and restraining cable. Mount the nipple on the rear of the oven, and the hose assembly with disconnect device connected to the building supply line.

Item 30

EXHAUST HOOD

Make - Captive Aire or equal by Gaylord

Size - 10'-3" x 60" x 24" high plus 4" high collars, mounted up 6'-8" above finished floor; flat bottom

Power - 0.8 KW - 120/60/1 to lights; remote controller provided and installed by Electrical Contractor.

Exhaust - 2,200 CFM exhaust through a 14" dia. collar at -0.969" static pressure. Blower, control switch, and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edges with integral front baffle, double wall insulated fronts, and NSF Listed. Units shall have grease collection troughs, storage containers, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75% of grease particles five microns in size, and 85% of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator.

Accessories - Provide unit with five LED UL Listed light fixtures, factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3" above finished ceiling to close to adjacent surfaces on three sides. Provide one filter removal tool, quarter end panels. And a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item 31

STAINLESS STEEL WALL FLASHING

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 12'-10" extending from bottom of ventilator to floor or top of coved material

Construction - Wall shall be clad with 20 gauge type 304 stainless steel cut in largest sheets to minimize joints and secured to wall with adhesive and no exposed fasteners. Provide Component Hardware J64-1450 “T” dividers at joints and J63-1451 cap strips at ends. Provide carefully punched holes at all service locations.

Item 32

FIRE SUPPRESSION SYSTEM

Make - Ansul R-102 or equal by Kidde or Pyro-Chem

Protection for hoods: Item 30

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust duct work, if required. Tanks shall be mounted in the hood manufacturer provided utility cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel or chrome and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include

integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms, etc. Suppressant tanks shall be stainless steel. Provide a properly sized mechanically operated gas shut-off valve (up to 3" diameter) for mounting by the Plumber at a point in the gas supply that will shut off fuel to all gas fired equipment. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a recessed junction box mounted for installing the pull box with cable conduit concealed within walls. Provide system with class-K extinguisher as required.

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. ***Chrome sleeves are not acceptable.***

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on all nozzles.

Item 33

HOOD AUTO-START CONTROL SYSTEM

Make - Captive Aire SC-310110MA (DWG# 8517245) or equal by Gaylord or Halton

Power - 15 amps circuit - 120/60/1 to logic controller

Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Item 30.

Mount system processor in a stainless steel cabinet, wall mounted per plan at 80" high minimum above the floor. Mount the room air temperature sensor on the wall 66" above the finished floor.

Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the hood control system. Submittal shall list the installing company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.

Accessories - Provide BacNet monitoring system. Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration.

Item 34

AUTO-START CONTROL INTERFACE CABLE

Specified as part of Item 33

Item 35

ROOM TEMPERATURE SENSOR

Specified as part of Item 33

Item 36

EXISTING INSULATED FOOD CARRIER

Quantity - 14

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 37

COOK'S TABLE WITH SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 8'-0" x 30" x 36" high; overshelf 3'-6" long with shelf at 54" above floor; 10" deep shelf; 18" x 20" x 10" deep integral sink basin

Construction - 14 gauge stainless steel top and sink basin over angle frame, edges formed in turndown, six legs with gussets, adjustable feet, flanged feet at the corners for securing to floor, two crossrails and partial undershelf. Overshelf shall be 16 gauge stainless steel, constructed similar to a wall shelf, channel reinforced, and welded to three extended rear table legs with support webs, and supported in integrally welded inverted gussets with sleeved joints for rigidity.

Accessories - Drawer assembly, deck mounted faucet set and a 2" lever waste outlet. Provide 4 rigid stainless steel brackets for mounting of electric outlets in setback positions complete with work boxes, GFI receptacles and stainless steel cover plates. Prewire receptacles through table legs to a mounted junction box below the undershelf.

Item 38

EXISTING HOT HOLDING CABINET

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 39

WATER FILTER ASSEMBLY, WAREWASHER

Make - WaterSpec WS-SSEXT or equal by 3M or Everpure

Description - Unit shall be all standard construction designed for vertical wall mounting per plan and consisting of a mounting bracket, manifold, and filter cartridge with housing. Assembly shall have an operating inlet water temperature range of 35 to 160 degrees Fahrenheit.

Accessories - Provide four spare SS-EXT filter cartridges.

Item 40

MILK COOLER

Make - Beverage-Air STF58HC-1-S or equal by Continental

Size - 58" x 34" x 47-3/4" high; sixteen 13" x 13" x 11" milk crate capacity

Power - 3.3 amps - 1/3 HP - 120/60/1 - cord and plug

Description - Dual access milk cooler shall be all standard construction with stainless steel interior and exterior fronts and ends, self-contained refrigeration system with thermostatic controls and blower, urethane foam insulation, exterior dial thermometer, and hinged and lockable drop-front covers. Interior shall be fitted with a vinyl coated wire rack. Mount on 4" diameter swivel casters and provide with R-290 refrigerant.

Accessories - Provide unit with optional five year compressor warranty.

Item 41

EXISTING HEATED SERVING COUNTER

No work in this Section. Owner to relocate this equipment following completion of the project.

Item 42

MOBILE WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 66" x 30" x 36" high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5" diameter swivel casters, two with brakes, and full undershelf.

Item 43

INSULATED FOOD CARRIER

Quantity - 5

Size - 21-1/2" W x 33-1/4" D x 63-3/4" H

Description - Insulated transport cart shall be double cavity Camcart design constructed of durable molded polyethylene with foam insulation for temperature retention. Unit shall be configured for sheet pan storage with (24) tray support rails on 1-15/16" centers. Provide full height doors with heavy duty hinges and positive latching. Unit shall include molded-in handles for transport and reinforced doors to prevent warping and improve insulation.

Accessories - Provide (4) 6" diameter casters, (2) rigid and (2) swivel (one with brake). Provide in charcoal gray color (615).

Item 44

THREE COMPARTMENT SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 1'-2" x 30" x 34" high plus 10" high splash at wall; 3" high raised open roll at front and end; three 21" x 27" x 12" deep integral sink basins

Construction - 14 gauge stainless steel top, basins and splash, stainless steel channel reinforced, six legs with gussets, adjustable feet, and five lengths of crossrail. Secure 3" off face of wall. Turn end down into dishwasher and secure with stainless steel machine screws and nuts. Provide left and center basin with a lift out, 16 gauge stainless steel cover with all edges flanged down 1", corners rounded and welded, provided with two neatly punched thumb holes, and designed to rest on 1/4" rod stock supports welded across the basin corners at proper height to provide a flush surface. Provide a hook under the drainboard for hanging the lids when not in use. Provide right basin with two 16 gauge perforated stainless steel scrapping baskets, 20-1/2" x 12" x 4" deep, with top of short ends flanged out 1" to hang on top of the basin sides, and integral tubular rack-slide/handles flush with counter top. Round off corners of flanged edges.

Accessories - Provide unit with one splash mounted faucet set and three 2" lever waste outlets.

Item 45

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 54" x 12" mounted 54" above floor

Construction - See item 20

Item 46

PRE-RINSE ASSEMBLY WITH ADD-ON FAUCET

Make - T&S Brass B-0133-BC or equal by Fisher

Description - Pre-rinse sprayer shall be all standard construction with splash mounted mixing body, tubing riser, spring action gooseneck, wall bracket, and a B-107-J water saver pre-rinse spray.

Accessories - Provide with T&S B-0156 add-on faucet assembly

Item 47

VENTLESS WAREWASHER

Make - Hobart AM16VLT-BAS (Hot Water Sanitizing) or equal by Champion

Power - 53.7 amps - 208/60/3

Maximum Water Use - 0.64 Gallons per Rack

Certification - Unit shall be Energy Star compliant

Description - Dishwasher shall be door type with extended hood of all standard construction with 40 rack per hour capacity, 16 gauge stainless steel drawn tank, 18 gauge stainless steel chamber, and 12 gauge stainless steel frame and stainless steel feet, ventless energy recovery, touchscreen controls, WiFi connectivity, two stage filtration, pillarless opening, three-sided hood, pumped drain, door lock, timed wash cycles for 1, 2, 4 or 6 minutes, NSF pot and pan rating for 2, 4, and 6 minute cycles, 70°F rise integral electric booster heater, 27" door opening for 18" x 26" sheet pans or 60-quart, spring counterbalanced chamber, X-shaped revolving, interchangeable upper and lower anti-clogging wash arms, revolving, interchangeable upper and lower rinse arms, slanted, self-locating, one-piece scrap screen and, basket system, automatic fill, door actuated start. Pump shall be stainless steel with stainless steel impeller and shaft, fitted with a stainless steel and carbon ceramic seal, capable of 160 gallon per minute flow and self draining. Motor shall be 2 HP, three phase, squirrel cage, induction-run type with inherent thermal protection, grease packed ball bearings, splashproof design, and ventilated.

Accessories - Single point electrical connection, and four plastic racks; two peg, two flat, sheet pan rack. Provide drain water tempering kit.

Item 48

CLEAN DISTABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 48" x 30" x 34" high plus 10" splash at rear; 3" high raised roll at front and end

Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front and end, tall splash at rear, turned down into dishwasher and secured with stainless steel machine screws, and mounted on four legs with gussets, adjustable feet and undershelf. Secure table 3" off face of wall.

Item 49

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts or equal by Julien

Size - 36" x 12" mounted 54" above floor

Construction - See item 20

PART 3 - EXECUTION

3.1 SANITATION REQUIREMENTS

A. Equipment specified herein shall be fabricated to conform to the "Food Service Equipment Standards" of the National Sanitation Foundation prepared by the Committee on Food Service Standards, and published by the National Sanitation Foundation, Ann Arbor, Michigan. Any differences of opinion on sanitation will be referred to the State Department of Health for a ruling.

B. Equipment shall be installed in accordance with the manufacturer's instructions and the best practices of the food service industry, with careful attention to eliminating all cracks, crevices and concealed spaces in wet areas that would be difficult to clean or keep free of vermin and soil.

3.2 EXAMINATION AND ACCEPTANCE

A. Determine whether the General Contractor will furnish and provide temporary power and light, openings and storage space to permit scheduled delivery of equipment. Verify water pressure and provide necessary reducing valves.

B. Examine space in which specified work is to be installed to assure that conditions are satisfactory for the installation of specified work. Report in writing to the Architect, any deficiency in the work of other contractors affecting specified work. Commencement of specified work will be construed as acceptance of space conditions.

C. Obtain and verify all measurements and conditions on the job, and assume responsibility in respect to same.

D. Inspect flooring and raised concrete bases, wall finishes, painting, ceiling installation and all related work for readiness to commence installation of foodservice equipment. Verify the existence of required mechanical and electrical rough-ins.

3.3 CLEANING UP

A. Debris and surplus materials resulting from installation work shall be removed promptly as work progresses, to a location indicated by the General Contractor.

B. Following completion, and before final acceptance by the Owner, clean finished surfaces in accordance with the manufacturer's instructions, and leave specified work free of imperfections.

3.4 DEMONSTRATION AND OPERATING INSTRUCTIONS

A. Before final acceptance, and by appointment with the Owner and his representatives, completely demonstrate with power, the correct operation of each new item of operating equipment.

B. Prior to the demonstration, turn on all mechanical and electrical foodservice equipment. Test for leaks, poor connections, and inadequate or faulty performance and correct if necessary. Adjust for proper operation. Thermostatically controlled equipment and equipment with automatic features shall be operated for a sufficient length of time with proper testing equipment to prove controls are functioning as intended. Recalibrate thermostats if necessary.

C. Provide Architect or Consultant with a loose leaf bound manual of operating data and maintenance instructions containing complete description, wiring diagrams, operating data, maintenance requirements and other information pertaining to the proper operation and upkeep of the various items of electrical or mechanical equipment. Include names, addresses and telephone numbers of authorized service agencies for all items. Arrange all material in alphabetical order by Manufacturer. Provide with a list of equipment to include make, model, and serial number where applicable. Book shall be turned over to Owner after review and approval.

D. Submit guarantees and warranties to the Architect in the above specified manual with all warranty cards completed and becoming effective at the time the equipment was satisfactorily demonstrated.

3.5 PROTECTION OF WORK

A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.

B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.

C. Damaged work as determined by the Architect, shall be repaired or replaced as determined by the Architect.

3.6 EXISTING EQUIPMENT

A. Foodservice equipment that is scheduled for reuse shall be removed and stored in a location provided by the General Contractor on site. This Contractor shall provide transportation of equipment.

B. Verify and document the operating condition of all relocated equipment prior to its being disconnected. Document the condition of the equipment to note any dents, scratches, broken components or other damage prior to placing it in storage. Protect equipment during transport and storage, and assume responsibility for its re-installation in the condition viewed prior to removal. Transport and install the equipment in accordance with Item Specifications.

C. This Contractor is not responsible for refurbishing equipment noted as "Existing" on plans or specifications unless work is specifically called for in the Item Specifications.

D. Disconnecting and reconnecting of services to "Existing" equipment shall be performed by related trades.

E. This Contractor shall restart all existing equipment following its reconnection to building services and verify its correct operation as viewed prior to removal.

F. This Contractor shall not provide a warranty or guarantee on "Existing" equipment. In the case of a new component being provided by this Contractor for an "Existing" piece of equipment, the component shall be warranteed or guaranteed as specified hereinbefore.

G. Foodservice equipment that is scheduled for reuse must be verified for NSF certification.

END OF SECTION

SECTION 122300 - VINYL SHUTTERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Security-type vinyl shutters used for classroom lockdown shades.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

1.4 REFERENCE STANDARDS

A. NFPA 701

B. ASTM E84

C. UL 723

1.5 SUBMITTALS

A. PRODUCT DATA: Submit manufacturer’s descriptive literature indicating sizes, quantities and installation instructions and verifying that product meets requirements specified, including manufacturer's recommendations for maintenance and cleaning.

B. DRAWINGS AND DIAGRAMS: Submit diagrams of any components or units, working and assembly drawings.

C. SAMPLE: Submit one sample shutter of each type specified; furnish complete units with all required components, mounting and associated hardware, instructions, and warranty.

1.6 QUALITY ASSURANCE

A. SUPPLIER: Manufacturer, subsidiary or licensed agent shall be approved to supply the products specified, and to honor any claims against product presented in accordance with warranty.

B. INSTALLER: Installer or agent shall be qualified to install specified products by prior experience, demonstrated performance and acceptance of requirements of manufacturer, Installer shall be responsible for an acceptable installation.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver product to site in manufacturer's original packaging.

B. Handle and store product to prevent damage to materials.

1.8 JOB CONDITIONS

A. Enclose building prior to Shutter installation.

1.9 WARRANTY

A. Five Year Warranty. Product warranties available from manufacturer or its authorized agent.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.

B. Substitutions: See Section 016000 - Product Requirements.

2.2 MATERIALS

A. Shutters: Flame retardant corrugated vinyl, in compliance with NFPA 701; through-body color; scratch-resistant finish; constructed to prevent accidental movement.

1. Thickness: 4 milimeter, minimum.
2. Color: As scheduled.
3. Tolerances: Within +/- 1/4 inch, or as recommended in writing by manufacturer.

B. Accessories and Hardware: As scheduled.

PART 3 EXECUTION

3.1 INSPECTION

A. Installer shall be responsible for inspection on site, approval of mounting surfaces, installation conditions and field measurement for this work.

B. Other interacting trades shall receive drawings of shutters, dimensions, assembly and installation methods from manufacturer upon request.

3.2 INSTALLATION

A. Comply with manufacturer’s specifications, standards and procedures as detailed in manufacturer's installation instructions.

B. Provide adequate spacers to permit unencumbered operation of shutter.

C. Clean finish installation of dirt and finger marks.

D. Leave work area clean and free of debris.

3.3 DEMONSTRATION

A. Demonstrate operation method and instruct responsible personnel in the proper operation and maintenance of the shutters.

END OF SECTION

This page intentionally left blank

SECTION 122400 - WINDOW SHADES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2

1.3 SECTION INCLUDES

A. Interior manual roller shades.

1.4 RELATED REQUIREMENTS

A. Section 061000 - Rough Carpentry: Concealed wood blocking for attachment of headrail brackets.

B. Section 090000 - Finish Schedule: Schedule of manufacturers

1.5 REFERENCE STANDARDS

A. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

C. WCMA A100.1 - Standard for Safety of Window Covering Products.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with window installation and placement of concealed blocking to support shades.

B. Preinstallation Meeting: Convene one week prior to commencing work related to products of this section; require attendance of affected installers.

C. Sequencing:

1. Do not fabricate shades until field dimensions for each opening have been taken with field conditions in place.
2. Do not install shades until final surface finishes and painting are complete.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets, including materials, finishes, fabrication details, dimensions, profiles, mounting requirements, and accessories.

C. Shop Drawings: Include shade schedule indicating size, location and keys to details, head, jamb and sill details, mounting dimension requirements for each product and condition, and operation direction.

D. Source Quality Control Submittals: Provide test reports indicating compliance with specified fabric properties.

E. Selection Samples: Where shade fabric is not scheduled, include fabric samples in full range of available colors and patterns.

F. Verification Samples: Minimum size 6 inches square, representing actual materials, color and pattern.

G. Manufacturer's Instructions: Include instructions for storage, handling, protection, examination, preparation, and installation of product.

H. Operation and Maintenance Data: List of all components with part numbers, sources of supply, and operation and maintenance instructions; include copy of shop drawings.

I. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of this type with minimum five years of documented experience with shading systems of similar size and type.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in manufacturer's unopened packaging, labeled to identify each shade for each opening.

B. Handle and store shades in accordance with manufacturer's recommendations.

1.10 FIELD CONDITIONS

A. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.11 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide manufacturer's warranty from Date of Substantial Completion, covering the following:

1. Shade Hardware: One year.
2. Fabric: One year.
3. Aluminum and Steel Coatings: One year.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.
2. Substitutions: See Section 016000 - Product Requirements.

B. Other Acceptable Manufacturers - Interior Manually Operated Roller Shades:

C. Source Limitations: Furnish products produced by a single manufacturer and obtained from a single supplier.

2.2 ROLLER SHADES

A. General:

1. Provide shade system components that are easy to remove or adjust without removal of mounted shade brackets.
2. Provide shade system that operates smoothly when shades are raised or lowered.

B. Roller Shades - for manual operation:

1. Description - Interior Roller Shades: Single roller, manually operated fabric window shade system complete with mounting brackets, roller tubes, hembars, hardware, and accessories.

a. Drop Position: Regular roll.

b. Roll Direction: Roll down, closed position is at window sill.

c. Mounting: Window jamb mounted - inside, between jambs.

d. Size: As indicated on drawings.

e. Fabric: As indicated under Shade Fabric article.

f. Clutch Operator: Manufacturer's standard material and design, permanently lubricated.

g. Drive Chain: Continuous loop, beaded ball chain with restraining device, 95 lb minimum breaking strength; comply with WCMA A100.1. Provide upper and lower limit stops.

C. Brackets and Mounting Hardware: As recommended by manufacturer for mounting indicated and to accommodate shade fabric roll-up size and weight.

1. Material: Stamped steel.

D. Roller Tubes: As required for type of shade operation.

1. Material: Extruded aluminum, baked enamel; color from manufacturer's standards.
2. Size: As recommended by manufacturer; selected for suitability for installation conditions, span, and weight of shades.
3. Fabric Attachment: Utilize extruded channel in tube to accept vinyl spline welded to fabric edge.
4. Take-Up Roller: Manufacturer's standard roller tube pretensioned for winding lift cable in bottom-up type shades.

E. Hembars: Designed to maintain bottom of shade straight and flat.

1. Style: Manufacturer's standard concealed hembar, flat profile with closed ends.

2.3 SHADE FABRIC

A. Fabric: Micro-perforated, nonflammable, color-fast, impervious to heat and moisture, and able to retain its shape under normal operation.

1. Material: Vinyl coated polyester.
2. Performance Requirements:

a. Flammability: Pass NFPA 701 large and small tests.

b. Fungal Resistance: No growth when tested in accordance with ASTM G21.

3. Openness Factor: 1%.
4. Color: As scheduled.

2.4 ACCESSORIES

A. Fascia: Extruded aluminum, size as required to conceal shade mounting, attachable to brackets without exposed fasteners.

1. Color and Style: As selected by Architect from shade manufacturer’s full selection.
2. Profile: Square.

B. Brackets and Mounting Hardware: As recommended by manufacturer for mounting configuration and span indicated.

C. End Caps: Provide manufacturer's standard end caps to cover exposed ends of brackets.

D. Fasteners: Noncorrosive, and as recommended by shade manufacturer.

2.5 ROLLER SHADE FABRICATION

A. Field measure finished openings prior to ordering or fabrication.

B. Dimensional Tolerances: Fabricate shades to fit openings within specified tolerances.

1. Vertical Dimensions: Fill openings from head to sill with 1/2 inch space between bottom bar and window sill.

2. Horizontal Dimensions - Inside Mounting: Fill openings from jamb to jamb.

C. At openings requiring continuous multiple shade units with separate rollers, locate roller joints at window mullion centers; butt rollers end-to-end.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine finished openings for deficiencies that may preclude satisfactory installation.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Start of installation shall be considered acceptance of substrates.

3.2 PREPARATION

A. Prepare surfaces using methods recommended by manufacturer for achieving best result for substrate under the project conditions.

B. Coordinate with window installation and placement of concealed blocking to support shades.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions and approved shop drawings, using mounting devices as indicated.

B. Installation Tolerances:

1. Inside Mounting: Maximum space between shade and jamb when closed of 1/16 inch.

2. Maximum Offset From Level: 1/16 inch.

C. Replace shades that exceed specified dimensional tolerances at no extra cost to Owner.

D. Adjust level, projection, and shade centering from mounting bracket. Verify there is no telescoping of shade fabric. Ensure smooth shade operation.

3.4 CLEANING

A. Clean soiled shades and exposed components as recommended by manufacturer.

B. Replace shades that cannot be cleaned to "like new" condition.

3.5 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals, for closeout submittals.

B. See Section 017900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate manualoperation and maintenance of window shade system to Owner's personnel.

3.6 PROTECTION

A. Protect installed products from subsequent construction operations.

B. Touch-up, repair, or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 123600 - COUNTERTOPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2

SECTION INCLUDES

A. Countertops for architectural cabinet work.

B. Wall-hung counters and vanity tops.

C. Solid surface window stools.

1.3 RELATED REQUIREMENTS

A. Section 064000 - Architectural Woodwork.

1.4 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. AWI (QCP) - Quality Certification Program.

C. IAPMO Z124 - Plastic Plumbing Fixtures.

D. ISFA 2-01 - Classification and Standards for Solid Surfacing Material.

E. ISFA 3-01 - Classification and Standards for Quartz Surfacing Material.

F. NEMA LD 3 - High-Pressure Decorative Laminates.

G. NSI (DSDM) - Dimensional Stone Design Manual, Version VIII.

H. PS 1 - Structural Plywood.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizing and configuration of countertops with associated casework and adjacent construction.
2. Coordinate sizing and locations of cutouts for plumbing fixtures with base cabinet configurations for proper alignments as indicated on Drawings.

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Specimen warranty.

C. Shop Drawings: Complete details of materials and installation; combine with shop drawings of cabinets and casework specified in other Sections.
1. Indicate plans, sections, dimensions, seam locations, component sizes, edge details, fabrication details, attachment provisions, sizes of furring, blocking, and coordination requirements with adjacent work. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacles and other items installed in countertops.

D. Verification Samples: For each finish product specified, minimum size 6 inches square, representing actual product, color, and patterns.

E. Test Reports: Chemical resistance testing, showing compliance with specified requirements.

F. Installation Instructions: Manufacturer's installation instructions and recommendations.

G. Maintenance Data: Manufacturer's instructions and recommendations for maintenance and repair of countertop surfaces.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified in this Section, with not less than three years of documented experience.

C. Quality Certification:
1. Comply with AWI (QCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.awiqcp.org/#sle.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.9 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Field Measurements: Verify dimensions of construction to receive countertops by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

A. Solid Surface Material Manufacturer Warranty: Provide manufacturer’s standard warranty for solid surface material for period of 10 years against material defects.

PART 2 PRODUCTS

2.1 COUNTERTOPS

A. Quality Standard: Premium Grade, in accordance with AWI/AWMAC/WI (AWS), unless noted otherwise.

B. Plastic Laminate Countertops: High-pressure decorative laminate (HPDL) sheet bonded to substrate.
   1. Laminate Sheet: NEMA LD 3, Grade HGS, 0.048 inch nominal thickness.
      a. Basis of Design: As indicated in finish schedule on drawings.
         1) Substitutions: See Section 016000 - Product Requirements.
      b. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
      c. Finish: Matte or suede, gloss rating of 5 to 20.
      d. Surface Color and Pattern: As indicated on drawings.
   2. Exposed Edge Treatment: Molded PVC edge with T-spline, sized to completely cover edge of panel.
      a. Color: As selected by Architect from the manufacturer's full line.
   3. Back and End Splashes: Same material, same construction.
   4. Fabricate in accordance with AWI/AWMAC/WI (AWS), Section 11 - Countertops, Custom Grade.

C. Solid Surfacing Countertops and Window Stools: Solid surfacing sheet or plastic resin casting over continuous substrate.

1. Flat Sheet Thickness: 1/2 inch, minimum.
2. Solid Surfacing Sheet and Plastic Resin Castings: Complying with ISFA 2-01 and NEMA LD 3; acrylic or polyester resin, mineral filler, and pigments; homogenous, non-porous and capable of being worked and repaired using standard woodworking tools; no surface coating; color and pattern consistent throughout thickness.
    a. Basis of Design: As indicated in finish schedule on drawings.
        1) Substitutions: See Section 016000 - Product Requirements.
    b. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
    c. Sinks: Separate units for undercounter mounting; comply with IAPMO Z124.
    d. Finish on Exposed Surfaces: Matte, gloss rating of 5 to 20.
    e. Color and Pattern: As indicated on drawings.
3. Other Components Thickness: 1/2 inch, minimum.
4. Exposed Edge Treatment: Built up to minimum 1-1/4 inch thick; bevel eased edge profile.
5. Back and End Splashes: Same sheet material, square top; minimum 4 inches high.
6. Skirts: As indicated on Drawings.
7. Fabricate in accordance with manufacturer's standard requirements.

D. Natural Quartz and Resin Composite Countertops: Sheet or slab of natural quartz and plastic resin over continuous substrate.
1. Flat Sheet Thickness: 1-1/4 inch, minimum.
2. Natural Quartz and Resin Composite Sheets, Slabs and Castings: Complying with ISFA 3-01 and NEMA LD 3; orthophthalic polyester resin, mineral filler, and pigments; homogenous, non-porous and capable of being worked and repaired using standard stone fabrication tools; no surface coating; color and pattern consistent throughout thickness.
    a. Basis of Design: As indicated in finsh schedule on drawings.
        1) Substitutions: See Section 016000 - Product Requirements.
    b. Factory fabricate components to the greatest extent practical in sizes and shapes indicated; comply with NSI (DSDM).
    c. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
    d. Sinks: Separate units for undercounter mounting; comply with IAPMO Z124.
    e. Finish on Exposed Surfaces: Polished.
    f. Color and Pattern: As scheduled on Drawings.
3. Other Components Thickness: 3/4 inch, minimum.

4. Exposed Edge Treatment: Built up to minimum 1-1/4 inch thick; square edge.
5. Back and End Splashes: Same sheet material, square top; minimum 4 inches high.
6. Skirts: As indicated on Drawings.
7. Fabricate in accordance with manufacturer's standard requirements.

2.2 MATERIALS

A. Plywood for Supporting Substrate: PS 1 Exterior Grade, A-C veneer grade, minimum 5-ply; minimum 3/4 inch thick; join lengths using metal splines.

B. Adhesives: Chemical resistant waterproof adhesive as recommended by manufacturer of materials being joined.

C. Joint Sealant: Mildew-resistant silicone sealant, clear.

2.3 ACCESSORIES

A. Countertop and Workstation Brackets:
1. Material: Steel or aluminum.
2. Load Capacity Per Bracket: 450 pounds minimum.
3. Finish: Manufacturer's standard, factory-applied powder coat.
4. Color: Selected by Architect from manufacturer's standard range.
5. Products: See drawings for types and locations.
a. A&M Hardware, Inc ; Concealed Brackets: http://www.aandmhardware.com.
b. Rangine Corporation; Rakks EH-Inside Wall Mount - Counter Support Brackets; www.rakks.com.
c. Substitutions: See Section 016000 - Product Requirements.

B. Americans with Disabilities Act (ADA)-Compliant Vanity and Countertop Brackets: ADA Compliant bracket with option to install surface-mounted skirt.
1. Material: Steel or aluminum.
2. Load Capacity Per Bracket: 450 pounds minimum.
3. Finish: Manufacturer's standard, factory-applied powder coat.
4. Color: Selected by Architect from manufacturer's standard range.
5. Products:
a. A&M Hardware, Inc ; ADA Vanity Brackets: http://www.aandmhardware.com/#sle.
b. Hafele; ADA Vanity Bracket: www.hafele.com.
c. Rangine Corporation; Rakks ADA Vanity Brackets; www.rakks.com.
d. Substitutions: See Section 016000 - Product Requirements.

2.4 FABRICATION

A. Fabricate tops and splashes in the largest sections practicable, with top surface of joints flush.

1. Join lengths of tops using best method recommended by manufacturer.
2. Fabricate to overhang fronts and ends of cabinets 1 inch except where top butts against cabinet or wall.
3. Prepare all cutouts accurately to size; replace tops having improperly dimensioned or unnecessary cutouts or fixture holes.

B. Provide back/end splash wherever counter edge abuts vertical surface unless otherwise indicated.

1. Secure to walls with contact surfaces set in waterproof adhesive.
2. Height: 4 inches, unless otherwise indicated.

C. Solid Surfacing: Fabricate tops up to 144 inches long in one piece; join pieces with adhesive sealant in accordance with manufacturer's recommendations and instructions.

1. Arrange seams symmetrically or in orderly locations, minimum 12 inches from edges of sink and similar cutouts.

D. Cutouts and Holes:

1. Undercounter Fixtures: Make cutouts for undercounter fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
2. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch into fixture opening.
3. Counter-Mounted Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
4. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

E. Wall-Mounted Counters: Provide skirts, aprons, brackets, and braces as indicated on Drawings, finished to match.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that blocking/backing has been installed prior to installation of countertop brackets and prefabricated vanities.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Verify that wall surfaces have been finished and mechanical and electrical services and outlets are installed in proper locations.

E. Verify actual site dimensions and location of adjacent materials prior to commencing work.

F. Examine cabinets upon which counter tops are to be installed. Verify cabinets are level to within 1/8" in 10' - 0"

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Securely attach countertops to cabinets using concealed fasteners. Make flat surfaces level; shim where required.

B. Attach plastic laminate countertops using screws with minimum penetration into substrate board of 5/8 inch.

C. Attach wood substrates using screws with minimum penetration into substrate board of 5/8 inch.

D. Attach countertops using compatible adhesive.

E. Stone and Quartz:

1. Do not cut stone or quartz and resin composite countertops in field unless otherwise indicated. If countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.

F. Set countertops to comply with requirements indicated. Shim and adjust, with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances. Install anchors and other attachments indicated or necessary to secure countertops in place.

G. Bond joints with countertop manufacturer's recommended adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

H. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

I. Seal joint between back/end splashes and vertical surfaces.

3.4 TOLERANCES

A. Variation From Horizontal: 1/8 inch in 10 feet 1/8 inch in 10 feet, maximum.

B. Offset From Wall, Countertops: 1/8 inch maximum; 1/16 inch minimum.

C. Field Joints: 1/8 inch wide, maximum.

3.5 CLEANING

A. Clean countertops surfaces thoroughly.

3.6 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 124813 - ENTRANCE FLOOR MATS AND FRAMES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Extruded aluminum entrance floor grilles.

B. Walk-off matting.

1.3 RELATED REQUIREMENTS

A. Section 090000 - Finish Schedule: Schedule of manufacturers and products.

B. Section 096813 - Tile Carpeting : Walk-off mats used in combination with aluminum entrance floor mats.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating properties of walk-off surface, component dimensions and recessed frame characteristics.

C. Shop Drawings: Indicate dimensions and details for recessed frame.

1. For recessed frames located within a dimensionally restricted area, show dimensions of space within which the frame will be installed.

D. Samples: Submit two samples, 6 by 6 inch in size illustrating pattern, color, finish, and edging.

E. Maintenance Data: Include cleaning instructions, and stain removal procedures.

1.5 QUALITY ASSURANCE

A. Installer: Installer should be highly experienced in performing work of this section, having previously done work similar to that required for this project.

1.6 FIELD CONDITIONS

A. Temperature: Maintain temperature where products will be installed before, during and after installation as recommended by Manufacturer.

B. Field Measurements: Where possible, verify actual measurements by field measuring before fabrication and include measurements in shop drawings. To avoid construction delays, coordinate field measurements and fabrication schedule based upon construction progress.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Basis of Design: As indicated in Section 090000 - Finish Schedule for all product types listed in this section.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 ENTRANCE FLOOR GRILLES AND GRATINGS

A. Entrance Floor Grilles: Recessed all-aluminum foot grilles with drain pan.

1. Locations: As indicated on drawings.
2. Construction:
   a. Bolt-thru design with individual aluminum spacers.
   b. Swedge, welded, and key lock fastening of rails are not permitted.
3. Material:
   a. Heavy gauge aluminum alloy type 6061-T6.
   b. Soft aluminum alloys (such as 6063-T52) are not permitted.
4. Recycled Content: Aluminum to be 64% pre-consumer and 16% post-consumer recycled content.
5. System Depth: 2-1/8 inch total, with grille, frame, and drain pan.
6. Grilles:
   a. Panels: Foot grille to be supplied in panels not to exceed 48 inch x 42 inch. One Piece design not allowed. All grille panels to be supplied with individual, pre-fabricated, factory-assembled frames.
   b. Depth: 1 inch without frame, and 1-1/8 inch with frame.
   c. Blades:
      1) Shape: Tee.

2) Size: 3/16 inch wide at primary body, 1/8 inch wide at top walking surface x 1 inch deep.

3) Spacing: Not to exceed 3/16 inch between blades.

7. Frame:

a. Type: Recessed.

b. Construction: Aluminum, inverted "T" shape, pre-assembled at factory incorporating welded construction for all joints. For each grille section, provide an invisible section divider integrated and welded within the frame.

8. Drain Pan: 20 gauge aluminum.

2.3 ENTRANCE MATS

A. Walk-Off Matting: Extruded post-industrial recycled polyvinyl chloride (PVC) welded in a non-hinged grid with polyamide nylon 6.6 fiber insert grille design with an embossed non-skid surface.

1. Size: As scheduled.
2. Color: As scheduled.
3. Application Style: Surface mounted.
4. Locations: As indicated on drawings.
5. Performance:

a. ASTM C1028 Static Coefficient of Friction: Wet 1.01; Dry 0.97.

b. ASTM E648 Critical Radiant Flux: Class 1.

2.4 FABRICATION

A. Construct recessed mat frames square, tight joints at corners, rigid. Coat surfaces with protective coating where in contact with cementitious materials.

B. Fabricate mats in single unit sizes; fabricate multiple mats where indicated on drawings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that floor opening for mats are ready to receive work.

3.2 PREPARATION

A. Mats: Verify size of floor recess before fabricating mats.

B. Vacuum clean floor recess.

3.3 INSTALLATION

A. Install frames to achieve flush plane with finished floor surface.

B. Install walk-off surface in floor recess flush with finish floor after cleaning of finish flooring.

3.4 TOLERANCES

A. Maximum Gap Formed at Recessed Frame From Mat Size: 1/4 inch.

END OF SECTION

SECTION 129313 - BICYCLE RACKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled "Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Procurement and installation of bicycle racks of the style and configuration indicated.

a. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.
b. Contractor is responsible for all heath and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR)

C. 29 CFR 1926, Safety and Health Regulations for Construction.

1.4 ASTM INTERNATIONAL (ASTM)

A. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod and Wire.

B. ASTM C94 - Standard Specification for Ready-Mixed Concrete.

C. ASTM D2967 - Standard Test Method for Corner Coverage of Powder Coating.

D. ASTM D3451 - Standard Guide for Testing Coating Powders and Powder Coatings.

E. ASTM D4217 - Standard Test Method for Gel Time of Thermosetting Coating Powder.

F. ASTM A123 - Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.

G. ASTM A428 - Standard Test Method for Weight (Mass) of Coating on Aluminum-Coated Iron or Steel Articles.

1.5 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.

2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.

3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.6 SUBMITTALS

A. Shop drawings for all equipment furnished under this Section. Shop drawings shall indicate the configuration, dimensions, layout, and spacing of major and minor equipment components such as posts, supports, rails, brackets, fasteners, foundations, anchorage, and a schedule of such equipment components. Show in large-scale details any unique fabrication, assembly, and/or installation requirements.

B. Material certificates or other data indicating compliance with these Specifications for finish type, color, size, style, posts, fittings, hardware, and accessories.

C. Copies of manufacturer-provided installation instructions, operation instructions, and maintenance material for all equipment furnished under this Section.

D. Manufacturer’s warranties and associated warranty registration data in Owner’s name. Submit two (2) copies of each warranty to Engineer in the manufacture’s/supplier's standard form or if there is no standard form available, in a form specified by Engineer.

1.7 QUALITY ASSURANCE

Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage

1. Transportation carrier shall use appropriate methods to ensure materials are properly packaged, stacked, and restrained during transport. Utilize protective packaging as required.
2. Protect materials during storage against moisture, soiling, staining, and physical damage.
3. Any product or associated component showing manufacturing flaws upon receipt at the Project Site shall be referred to Engineer for determination as to whether it shall be repaired, rejected, or used.
4. Protect railing materials during storage to avoid damage from moisture, abrasion, and other construction activities.

B. Handling

1. Handle railing materials to prevent abrasion, chipping, marring, soiling and other damage.

C. Damaged equipment shall not be installed. Contractor shall bear responsibility for damage to equipment until final acceptance by Owner. Any installed equipment exhibiting damage shall be replaced or repaired to the satisfaction of Engineer, and Contractor shall assume all costs related thereto.

1.9 WARRANTY

A. Provide manufacturer’s standard warranty, as applicable, for all products furnished under this Section. Warranty shall be registered in Owner’s name.

B. Bind warranties in heavy-duty, commercial-quality, durable 3-ring, vinyl-covered loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.

C. Provide heavy paper dividers with celluloid covered tabs for each separate warranty. Mark the tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product, and the name, address, and telephone number of the Installer.

D. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project title or name, and name of Contractor.

E. When warranted construction requires operation and maintenance manuals, provide additional copies of each required warranty, as necessary, for inclusion in each required manual.

PART 2 - PRODUCTS

A. BICYCLE RACK

B. Basis-of-Design Product: Subject to compliance with requirements, provide “Loop Bicycle Rack” as manufactured by Landscape Forms (800) 521-2546 or a comparable product by the following, as approved by the Landscape Architect:

1. www.landscapeforms.com.

C. Bicycle Rack Construction:

1. Frame: : Aluminum Casting – A356 ASTM B108 or A360 ASTM B108 & LFI 7.4.2-A1.

2. Style: Double-side parking with hoop form mounted at end of each section.

a. Overall Height: 31 inches.
b. Overall Length: 36 inches.
c. Capacity: Designed to accommodate two bicycles per unit.

3. Installation Method: In ground mount embedded into concrete base.

4. Aluminum Finish: Powder-coated.

5. Color: Matte Black.

2.2 CYLINDRICAL FORMS/FORM TUBES

A. Pre-formed, single use cylindrical heavy-duty cardboard or plastic forms.

2.3 CONCRETE FOOTINGS

A. Ready-Mix, ASTM C94; or pre-packaged concrete mix, ASTM C 387. Minimum 28-day compressive strength of 4,000 psi.

PART 3 - EXECUTION

3.1 FOOTINGS

A. Where concrete footings are called-for, verify rack location(s) before proceeding. For multiple racks, verify spacing.

B. Install concrete footings as indicated on the Drawings using cylindrical forms. Verify top of footing elevation relative to finished grades and adjust as required prior to forming.

3.2 INSTALLATION

A. Verify mounting location before proceeding. For multiple racks, verify spacing.

B. Examine conditions at the installation area for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Use manufacturer’s templates or similar guides prior to drilling for anchorage. Control dust and protect adjacent areas.

E. Comply with manufacturer's written installation instructions for installation, unless more stringent requirements are indicated. Complete field assembly where required.

3.3 PROTECTION AND CLEAN UP

A. After completing installation, inspect components. Remove spots, dirt, and debris.

B. Protect until acceptance of project. Repair any damaged finishes to match original finish or replace component.

END OF SECTION

SECTION 210500 - FIRE PROTECTION BASIC MATERIALS AND METHODS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor and each Subcontractor and/or supplier providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SECTION INCLUDES

A. Pipe, fittings, sleeves, escutcheons, seals, and connections for sprinkler systems.

1.3 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 211300 - Fire-Suppression Sprinkler Systems: Sprinkler systems design.

C. Section 220553 - Identification for Plumbing Piping and Equipment: Piping identification.

1.4 REFERENCE STANDARDS

A. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX – Welding and Brazing Qualifications; 2023.

B. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2020.

C. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2021.

D. ASME B16.4 - Gray Iron Threaded Fittings: Classes 125 and 250; 2021.

E. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings; 2018.

F. ASSE 1015 - Double Check Backflow Prevention Assemblies and Double Check Fire Protection Backflow Prevention Assemblies; American Society of Sanitary Engineering; 2021.

G. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999 (Reapproved 2022).

H. ASTM A197/A197M - Standard Specification for Cupola Malleable Iron; 2000 (Reapproved 2019).

I. ASTM A795/A795M - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use; 2021

J. AWWA C104/A21.4 - Cement-Mortar Lining for Ductile Iron Pipe and Fittings; 2022.

K. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings; 2021.

L. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings; 2023.

M. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast; 2017, witgh Errata (2018).

N. AWWA C153 - Ductile-Iron Compact Fittings; 2019.

O. FM (AG) - FM Approval Guide current edition.

P. NFPA 13 - Standard for the Installation of Sprinkler Systems; 2019.

Q. UL (DIR) - Online Certifications Directory Current Edition.

R. UL 262 - Gate Valves for Fire-Protection Service; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

S. UL 312 - Check Valves for Fire-Protection Service; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.5 SUBMITTALS

A. See Section 013300 - Submittal Procedures, for project requirements.

B. Product Data: Provide manufacturers catalogue information. Indicate valve data and ratings.

C. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

D. Project Record Documents: Record actual locations of components and tag numbering.

E. Operation and Maintenance Data: Include installation instructions and spare parts lists.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

B. Conform to UL (DIR) requirements.

C. Valves: Bear UL and FM product listing label or marking. Provide manufacturer's name and pressure rating marked on valve body.

1.7 CONTRACTOR'S RESPONSIBILITIES

A. All permits and fees.

B. Hoisting, rigging, transportation costs and installation of necessary appurtenances.

C. The Contractor shall visit the premises and note all pertinent facts and details including conditions under which the work must be carried out. No allowance will be made for failure to have done so.

D. Holes - Cutting and Patching: Cutting will be by core boring, patch will require both waterproofing and fireproofing.

E. Expenses for Fire Watches are the responsibility of the Fire Protection Contractor.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store valves in shipping containers, with labeling in place.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

PART 2 PRODUCTS

2.1 FIRE PROTECTION SYSTEMS

A. Sprinkler Systems: Comply with NFPA 13.

B. Welding Materials and Procedures: Comply with ASME BPVC-IX.

2.2 BURIED PIPING

A. Ductile Iron Pipe: AWWA C151/A21.51, 125 pound WSP, Class 52, exterior bituminous coating, AWWA C104 cement-mortar lined.

1. Fittings: AWWA C110 or C153 mechanical joint, Class 350, exterior bituminous coating, AWWA C104 cement mortar lined.

2. Joints: AWWA C111, SRB rubber gasket.

3. Mechanical joint: Shaped composition sealing gasket, T-bolts, and nuts, low alloy corrosion resistant high strength steel.

2.3 ABOVE GROUND PIPING

A. Steel Pipe: ASTM A 795 Schedule 10 or ASTM A795 Schedule 40, black.

1. Standard weight Schedule 40 with grooved coupling in sizes 1-1/2" and 2". Standard square cut grooves to coupling manufacturer's specifications.

2. Standard weight Schedule 40 with threaded coupling and fittings in sizes 2" and smaller.

3. Light wall Schedule 10 with grooved couplings in sizes 2-1/2" and larger. Rolled grooves; no cut grooves or threading will be allowed on Schedule 10.

B. Fittings

1. Steel Fittings: ASME B16.9 wrought steel, buttwelded.

2. Cast Iron Fittings: ASME B16.1, flanges and flanged fittings and ASME B16.4 threaded fittings.

3. Malleable Iron Fittings: ASME B16.3, threaded fittings, ASTM A47 and ASTM A197.

4. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.

2.4 PIPE HANGERS AND SUPPORTS

A. Hangers for Pipe Sizes 3/8 to 3 inch: Malleable iron, split ring extension hanger.

B. Hangers for Pipe Sizes 1 inch and Over: Carbon steel, adjustable ring, with knurled swivel. NFPA threaded rod sizes.

C. Hanger attachment to structural steel beam: Universal or wide mouth malleable iron C-type beam clamp with locknut, U.L. Listed. Secure with retaining strap hammered tight to beam flange.

D. Hanger attachment to concrete: Set-in expansion anchors to rated capacity or self drilling anchors where weight of piping does not exceed half of rated capacity.

E. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

F. Wall Support for Pipe Sizes 4 inches and Over: Welded steel bracket and wrought steel clamp.

G. Vertical Support: Steel riser clamp.

H. Floor Support: Cast iron adjustable pipe saddle with U-bolt, threaded pipe adjuster, cast iron floor flange, and steel pipe support.

2.5 GATE VALVES

A. Up to and including 2 inches:

1. Bronze body with union bonnet, bronze trim, rising stem, handwheel, solid wedge or disc, threaded ends.

B. Over 4 inches:

1. Class 125 flanged cast iron body, rising stem with bolted bonnet, resilient wedge, OS&Y gate valve, 200 PSI non-shock water pressure. UL listed and FM approved.

2.6 BALL VALVES

A. Up to and including 2 inches:

1. Bronze two piece body, brass, chrome plated bronze, or stainless steel ball, teflon seats and stuffing box ring, lever handle and balancing stops, threaded ends with union.

2.7 BUTTERFLY VALVES

A. Bronze Body:

1. Stainless steel disc, resilient replaceable seat, threaded or grooved ends, extended neck, handwheel and gear drive and integral indicating device, and built-in tamper proof switch rated 10 amp at 115 volt AC. UL listed and FM approved

B. Ductile Iron Body

1. Epoxy coated ductile iron, chrome or nickel plated ductile iron or aluminum bronze disc, resilient replaceable EPDM seat, wafer, lug, or grooved ends, extended neck, handwheel and gear drive, 175 PSI non-shock water pressure. Integral indicating device, and internal tamper switch rated 10 amp at 115 volt AC. UL listed and FM approved

2.8 CHECK VALVES

A. Up to and including 2 inch:

1. Bronze body and swing disc, rubber seat, threaded ends.

B. 4 inch and Over:

1. Iron body, bronze mounted, swing check with rubber disc, renewable disc and seat, flanged maintenance port, grooved or flanged ends with automatic ball check. 175 PSI non-shock water pressure. UL listed and FM approved.

2.9 DRAIN VALVES

A. Ball Valve:

1. Brass with cap and chain, 3/4 inch hose thread.

2.10 DOUBLE CHECK VALVE ASSEMBLIES

A. Double Check Valve Assemblies:

1. ASSE 1015; Ductile or cast iron body with corrosion resistant internal parts and stainless steel springs; two independently operating, spring loaded check valves. All bodies epoxy coated, check valves with removable bronze seat, tight sealing rubber faced disc, test cocks bronze body ball valves, 175 PSI working pressure. UL listed and FM approved.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and foreign material, from inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install sprinkler system and service main piping, hangers, and supports in accordance with NFPA 13.

B. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

C. Install piping to conserve building space, to not interfere with use of space and other work.

D. Group piping whenever practical at common elevations.

E. Sleeve pipes passing through partitions, walls, and floors.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Inserts:

1. Provide inserts for placement in concrete formwork.

2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

3.3 HANGERS AND SUPPORTS

A. Pipe Hangers and Supports:

1. Place hangers within 12 inches of each horizontal elbow. Any sprinkler pipe over 1'-6" in length requires a hanger and the maximum overhang beyond the last hanger shall not exceed 1'-6". Hangers are to be installed on both sides of grooved pipe couplings.

2. Use hangers with 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe. End of line hangers for pendent sprinklers shall prevent upward movement of pipe.

3. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.

4. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.

3.4 PIPING SYSTEM

A. The piping system shall be arranged so that the entire system can be flushed and drained through accessible low points. Slope piping towards main drain or provide auxiliary drains for water in trapped sections of pipe.

B. Pipe and fittings for drain lines shall be galvanized.

C. Do not penetrate building structural members unless indicated.

D. Provide sleeves when penetrating floors, walls, and foundations. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required. Firestop floor penetrations in un-rated floors to a minimum of 1 hour UL fire rating.

E. Escutcheons:

1. Install and firmly attach escutcheons at piping penetrations into finished spaces.

2. Provide escutcheons on both sides of partitions separating finished areas through which piping passes.

3. Use chrome plated escutcheons in occupied spaces and to conceal openings in construction.

F. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

G. Grooved fittings and couplings shall be installed in accordance with the manufacturer's recommendations. Piping shall be cut and prepared per the coupling manufacturer's standards.

H. Threaded joints shall be made with teflon liquid joints compound applied to male threads only.

I. Chrome-plated escutcheon shall be used on all exposed piping with penetrates either walls or ceilings.

3.5 VALVES

A. Install valves with stems upright or horizontal, not inverted. Remove protective coatings prior to installation.

B. Provide drain valves at main shut-off valves, low points of piping and apparatus. All drain piping shall be galvanized.

C. Backflow Preventer: Install per manufacturer's instructions and requirements of the Public Health Code.

1. Installation shall provide adequate space for testing, repair and maintenance.

2. Ensure valve assembly trim is provided in right hand or left hand configuration as appropriate for access in installed location.

3. Thoroughly flush piping prior to installing backflow prevention assembly.

4. Perform certification test of backflow preventer in accordance with the New England Water Works Association guidelines for field test procedure; and furnish report.

END OF SECTION 210500

This page intentionally left blank

SECTION 211300 - FIRE SUPPRESSION SPRINKLERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor and each Subcontractor and/or supplier providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SECTION INCLUDES

A. Wet-pipe sprinkler systems.

B. System design, installation, and certification.

C. Fire department connections.

1.3 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 210500 - Fire Protection Basic Materials and Methods: Pipe, fittings, and valves.

C. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

D. Section 284600 - Fire Detection and Alarm.

1.4 SYSTEM DESCRIPTION

A. Systems to provide coverage for the existing school building.

B. Provide hydraulically designed automatic wet pipe sprinkler system. Water supply from new 6" water service connected to municipal water main in Willow Brook Road.

C. Furnish all necessary labor, materials, tool, equipment, appurtenances, instruments, etc. necessary to fully complete the Fire Protection System in accordance with the plans and specifications and both local and state fire codes and NFPA 13.

1.5 REFERENCE STANDARDS

A. FM (AG) - FM Approval Guide current edition.

B. NFPA 13 - Standard for the Installation of Sprinkler Systems; 2019.

C. UL (DIR) - Online Certifications Directory current edition.

1.6 SUBMITTALS

A. See Section 013300 - Submittal Procedures, for project requirements.

B. Product Data: Provide data on sprinklers, valves, and specialties, including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.

C. Shop Drawings:

1. Submit preliminary layout of finished ceiling areas indicating only sprinkler locations coordinated with ceiling installation.

2. Indicate hydraulic calculations, detailed pipe layout, hangers and supports, sprinklers, components and accessories. Indicate system controls.

3. Sealed plans with detailed pipe layout indicating, hangers and supports, sprinklers, components and accessories. Indicate sprinkler locations fully coordinated with final ceiling layouts.

4. Submit shop drawings and hydraulic calculations to authority having jurisdiction, Rating Bureau and RZ Design Associates, Inc. for approval.

D. Project Record Documents: Record actual locations of sprinklers and deviations of piping from drawings. Indicate drain and test locations.

E. Operation and Maintenance Data: Include components of system, servicing requirements, record drawings, Test Certificates, replacement part numbers and availability, and location and numbers of service depot.

1.7 QUALITY ASSURANCE

A. Comply with UL (DIR) requirements.

B. Design by a NICET Level IV Certified Sprinkler Technician or under direct supervision of a Professional Fire Protection Engineer experienced in design of this type of work and licensed in Connecticut.

C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years experience and approved by manufacturer.

E. Equipment and Components: Provide products that bear UL label or FM marking.

1.8 CONTRACTOR'S RESPONSIBILITIES

A. Drawings are diagrammatic; do not rely on scaling of drawings. Make such deviations and offsets as necessary to meet the space requirements.

B. The contractor shall be responsible for water damage to the property of the owner, the work of other trades, and existing building systems during all phases of the work.

C. Coordination Drawings: The Fire Protection Contactor shall incorporate the shop drawing sprinkler design into the master coordination drawings and work with the other trade contractors to resolve conflicts.

1.9 EXTRA MATERIALS

A. Provide extra sprinklers of type and size matching those installed, in quantity required by referenced NFPA design and installation standard.

B. Provide suitable wrenches for each sprinkler type.

C. Provide red enamel finished steel sheet metal storage cabinet in location designated.

PART 2 PRODUCTS

2.1 SPRINKLERS

A. Suspended Ceiling Type: Recessed pendent type with matching push on escutcheon plate.

1. Finish: Chrome plated.

2. Escutcheon Plate Finish: Chrome plated.

3. Fusible Link: Glass bulb type, quick response, temperature rated for specific area hazard.

B. Suspended Ceiling Type: Concealed pendent with white cover plate for gypsum board ceilings.

1. Fusible Link: Glass bulb type or fusible link type, quick response, temperature rated for specific area hazard.

C. Exposed Area Type: Standard upright type.

1. Finish: Brass.

2. Fusible Link: Glass bulb type, quick response, temperature rated for specific area hazard.

D. Sidewall Type: Standard horizontal sidewall type with matching push on escutcheon plate.

1. Escutcheon Plate Finish: Chrome plated.

2. Fusible Link: Glass bulb type, quick response, temperature rated for specific area hazard.

E. Dry Sprinklers: Standard dry pendent type with matching push on escutcheon plate.

1. Finish: Chrome plated.

2. Fusible Link: Glass bulb type, quick response, temperature rated for specific area hazard.

2.2 FLEXIBLE SPRINKLER DROPS

A. Description: Flexible Sprinkler Hose Fittings for use in commercial suspended ceilings.

1. Product Performance Criteria: UL Listed pursuant to UL 2443 Standard for Flexible Sprinkler Hose with Fittings for Fire Protection Service. FM Approved pursuant to FM Class Number 1637 Approval Standard for Flexible Sprinkler Hose with Threaded End Fittings.

2. Materials and Fabrication: Flexible Sprinkler Hose Assemblies and End Fittings.

   a. Hose: AISI 304 Stainless Steel corrugated flexible hose with AISI 304 Stainless Steel braided jacket. Welded stainless steel collars and brass slip nuts with EPDM seals. Hose bore 28 mm internal corrugated hose diameter, minimum rated pressure 175 psi, and maximum length 1800 mm (6 Ft).

   b. Inlet nipple and outlet reducer of Zinc-Plated Carbon Steel.1" NPT inlet and straight outlet with 1/2" or 3/4 NPT sprinkler reducer with clamp bar flats.

   c. Ceiling Brackets and Support Bar: Zinc-Plated Carbon Steel assemblies intended for installation into commercial suspended ceilings having medium to heavy support tee bars meeting ATSM C-635 and installed in accordance with ASTM C-636. Assemblies shall be adjustable with set-screws and clamps that anchor the sprinkler securely to the ceiling grid and are suitable for both pendent and concealed type heads.

2.3 SPRINKLER SPECIALTIES

A. Riser Check Valve: Swing check type valve with drain and gauge ports. Ductile iron body featuring covered access port for maintenance of internal components without removing valve from installed position; spring loaded, stainless steel clapper with EPDM rubber face and bronze seat ring. Trim to include angle drain valve, supply and system pressure gauges. UL listed and FM approved.

B. Inspector's Test Connection: Section drain valve with integral test port, single bronze body ball valve with minimum 1" NPT inlet and outlet, chromium plated bronze ball, glass impregnated teflon valve seat, two fused tempered sight glasses and 1/2" test orifice. UL listed and FM approved. Provide AGF Manufacturing Inc. Model 3011SG or approved equal.

C. Air Venting Valves: Equip wet-pipe sprinkler systems with automatic float type air vent. Provide AGF Model M7900AAV; forged brass body assembly with integrated ball valve, stainless steel strainer and purge valve with hose fitting. Install at high point in each sprinkler zone.

2.4 ACCESSORIES

A. Water Flow Switch: Vane type switch, aluminum pipe saddle mount, polyethylene paddle, adjustable retard and tamper-proof housing, with two SPDT contacts; rated 10 amp at 125 volt AC and 2.5 amp at 24 volt DC. As manufactured by Potter Electric, Model VSR-F or equal by System Sensor or Notifier.

B. Alarm Bell: Vibrating bell, 8 inch red powder coat finish, 120 volts AC. Bell shall conform to UL 464; furnish with weatherproof back box. As manufactured by Potter Electric, Model PB1208 or equal by System Sensor or Notifier. Minimum 75 dB at 10 feet.

C. Supervisory Switches: For monitoring open position of OS&Y gate valve, integral mounting bracket with adjustable clamp bar. Tamper-proof switch housing with two SPDT contacts rated at 15 amp at 125 volt AC and 2.5 amp at 30 volt DC. As manufactured by Potter, Model OSYSU-2 or equal by System Sensor or Notifier.

2.5 FIRE DEPARTMENT CONNECTIONS

A. Type: Large Diameter Hose.

B. 5" Storz x 4" NPT female, with Storz blind cap, non-threaded, genderless, 1/3 turn quick connect coupling, with lever type lock per NFPA 1963. Connector and cap manufactured of forge T6160 aluminum alloy with hardcoat anodized finish, face gasket resilient nitrile rubber. Cap attached to connector by chain or cable.

C. Escutcheon: Round red enamel finished aluminum plate, lettering "AUTO. SPKR.".

1. Product: Croker Fig. 6362 or equal by Potter-Roemer, Fire Protection Products Inc. or Kochek.

2.6 HOSE VALVE TEST HEADER

A. Type: Flush backflow preventer test header.

B. Cast brass body with end inlet and two outlets, chrome plated non-rising stem hose gate valves with loose bonnets, 3" female NPT inlet and 2-1/2" male hose thread outlet, and caps and chains. Threads to local fire department specifications.

C. Escutcheon: Rectangular chrome plated, lettering "BACKFLOW PREVENTER TEST CONNECTION".

1. Product: Potter Roemer Fig. 5862-C with Fig. 4335 valve or equal by Elkhart Brass or Croker.

PART 3 EXECUTION

3.1 GENERAL

A. The complete system shall be installed in accordance with Rules and Regulations pertaining to Light Hazard (not to exceed 168 sq. ft. per head - system hydraulically calculated; not sized per pipe schedule) and Ordinary Hazard Group 1 occupancies and comply with the full requirements of the regulatory agencies.

B. The Fire Protection Contractor shall have hydrant flow tests conducted on the fire hydrants hydraulically closest to the new water service entrance. Conduct test and record test data in accordance with NFPA 291.

1. Obtain flow test data, attested to by Clerk of the Works, which is adequate to base the design on. Data will be judged adequate if the actual flow values measured during flow test equal or exceed total demand. Flow values extrapolated from measured flow values may not be used as a basis for design.

C. The Fire Protection Contractor shall have prepared by a NICET Level IV Certified Sprinkler Technician or under a P.E. work installation drawings (Shop Drawings) and shall submit them to the engineer and Rating Bureau for approval.

D. Shop Drawings shall include all hydraulic calculations prepared on forms similar to those in NFPA 13 Appendix A.

E. Design Criteria:

Light Hazard - 0.10 GPM/Sf density over the most remote 1500 sq.ft. for offices and classrooms. Protection area limitation 168 sq.ft. with standard coverage sprinklers.

Ordinary Hazard Group 1 - 0.15 GPM/SF density over the most remote 1500 sq.ft. for Storage and Mechanical Areas. Protection area limitation 130 sq.ft.

Calculations shall allow a 10 percent safety factor for future deterioration of the water supply.

F. Water Supply: (Verify the following.)

Willow Brook Road, March 31, 2026

1. Static: 138 psig
2. Residual: 30 psig
3. Flow: 535 GPM

G. Before commencing work, the Fire Protection Contractor shall coordinate with other trades, so that no possible interferences will occur. If due to inadequate coordination, extra work is entailed, the Fire Protection Contractor shall be held fully responsible.

3.2 INSTALLATION

A. Install in accordance with referenced NFPA design and installation standard.

B. Install equipment in accordance with manufacturer's instructions.

C. Locate outside alarm bell on exterior of building wall adjacent to fire protection riser.

D. Place pipe runs to minimize obstruction to other work. Special care must be taken to insure that piping above hung ceilings is run to maintain maximum headroom and clearance for access to equipment of other trades and to avoid conflict with electrical conduits, light fixtures, other piping, ductwork etc.

E. Pipe shall be run concealed throughout finished spaces. Place above finished ceilings or in chases, shafts, wall cavities or soffits. Exposed piping shall be run with care for aesthetics, minimizing fittings and offsets and creating symmetry in the in the installation.

F. In gridded sprinkler systems, the water velocity shall not exceed 20 ft./sec. in branch lines 2" and smaller.

G. Pipe size for drops to sprinkler heads located below suspended ceilings shall be 1 inch minimum.

3.3 SPRINKLER HEADS

A. Sprinkler heads of the proper configuration and numbers are to be installed as required in accordance with regulations pertaining to Light and Ordinary Hazard Occupancies and meet the full requirements of the NFPA, Local Fire Department, State Fire Marshal, Fire Insurance Company, Rating Bureau and other agencies having jurisdiction.

B. Center sprinklers in ceiling tiles except where indicated otherwise. Provide and adjust arm over assemblies as necessary.

C. Where flexible sprinkler drop are used the minimum bend radius shall be 7 inches. Use FM equivalent length in hydraulic calculations. The ceiling support brackets shall be attached to the main tee bar runner in the grid, not the cross support rails. Follow all manufacturer's instructions.

D. Apply masking tape or paper cover to ensure concealed sprinklers, cover plates, and sprinkler escutcheons do not receive field paint finish. Remove after painting. Replace painted sprinklers.

E. Install heads with Teflon liquid joint compound applied to male threads only.

F. Install guards on sprinklers in locations subject to mechanical damage.

G. Mount sprinkler head cabinet in the location directed by the Owner Representative. Stock with spare sprinkler heads of each type and or temperature rating and a sprinkler head wrench per NFPA 13.

3.4 FIRE DEPARTMENT CONNECTION

A. The fire department connection shall be made down stream of riser check valve in the system piping. There shall not be a shut-off valve in the fire department line.

B. The pipeline between the check valve and the outside hose coupling shall be equipped with an approved automatic drip.

C. Locate fire department connection with sufficient clearance from walls, obstructions, or adjacent siamese connectors to allow full swing of fire department wrench handle.

D. Installation shall conform with the requirements of the local Fire Department, and the Rating Bureau in accordance with NFPA.

3.5 INSPECTOR'S TEST CONNECTIONS

A. Install at end of most remote branch line, valve shall not be over 7'-0" above floor. Terminate connection outside building with 1 inch 45 degree elbow. Flow shall be equivalent to one sprinkler head.

B. Inspector's test connections shall be mounted so as to be easily reached for test purposes without need for the use of a ladder.

3.6 TESTING

A. Hydrostatically test entire system. Test system at no less than 200 psi for two (2) hours after completion, in accordance with NFPA 13.

B. Flush entire piping system of foreign matter. Furnish to the insurance carrier, Contractor's Material and Test Certificate. Fill in and sign form as outlined in NFPA 13.

C. During and after completion, the entire installation shall be subject to inspection and testing by the insurance carrier.

D. Notify authority having jurisdiction of testing.

3.7 INTERFACE WITH OTHER PRODUCTS

A. Ensure required devices are installed and connected as required to fire alarm system.

END OF SECTION 211300

SECTION 220500 - PLUMBING GENERAL CONDITIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and the general provisions of the Contract, including The General Conditions of the Contract, the Supplementary General Conditions, and Division 1 Specification Sections are a part of this Section and shall be binding on the Contractor and/or Subcontractor who performs this work. Note also all Addenda.

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 COMMISSIONING

A. Where indicated in the equipment or commissioning specifications, engage a factory-authorized service representative, to perform startup service as per functional test sheets and requirements of Section 01 91 13 - General Commissioning Requirements.

B. Complete installation, startup checks and functional tests according to Section 01 91 13 - General Commissioning Requirements and manufacturers written instructions.

C. Operational Test: After electrical system has been energized, start units to confirm proper unit operation. Rectify malfunctions, replace defective parts with new ones and repeat the start up procedure.

D. Verify that equipment is installed and commissioned as per requirements of Section 01 91 13 and manufacturers written instructions/requirements.

1.3 DESCRIPTION

A. The General Conditions and Supplementary General Conditions are a part of this Division and are to be considered a part of this Contract.

B. Where items of the General Conditions and Supplementary General Conditions are repeated in other Sections of the Specifications, it is merely intended to qualify or to call particular attention to them. It is not intended that any other parts of the General Conditions and Supplementary General Conditions shall be assumed to be omitted if not repeated therein.

C. This Section applies equally and specifically to all Contractors supplying labor and/or equipment and/or materials as required under each Section of this Division.

D. The following information contains specifications of Work in connection with, and in addition to, this Division:

1. All drawings associated with the project.

2. All specifications associated with the project.

E. Division of work responsibilities shall be as defined and directed by the Bidding Agent and/or the Bidding General Contractor.

1.4 INTENT

A. It is the intent of the Specifications and Drawings to call for finished work, tested and ready for operation.

B. Furnish, deliver and install any apparatus, appliance, material or Work not shown on Drawings but mentioned in the Specifications, or vice versa, or any incidental accessories necessary to make the Work complete and perfect in all respects and ready for operation, even if not particularly specified, under their respective Section without additional expense to the Owner.

C. Include in the work minor details not usually shown or specified but necessary for proper installation and operation, as though they were hereinafter shown or specified.

D. Provide Engineer written notice of any materials or apparatus believed inadequate or unsuitable; in violation of laws, ordinances, rules or regulations of authorities having jurisdiction; and any necessary items of Work omitted. In the absence of such written notice, it is mutually agreed that Work under each Section has included the cost of all required items for the accepted, satisfactory functioning of the entire system without extra compensation.

E. The Work indicated is diagrammatic. The Architect and/or Engineer may require as part of this Contract, the relocation of devices to reasonable distances from the general locations shown.

F. Verbal clarifications of the Drawings or Specifications during the bid period are not to be relied upon. Refer any questions or clarifications to the Engineer at least five Working days prior to bidding to allow for issuance of an addendum. After the five-day deadline, Bidder must make a decision and qualify the Bid, if the Bidder feels it necessary.

1.5 DRAWINGS

A. Drawings are diagrammatic and indicate the general arrangement of systems and work included in the Contract. (Do not scale the Drawings.) Consult the Architectural Drawings and Details for exact location of fixtures and equipment; where same are not definitely located, obtain this information from the Architect.

B. Closely follow Drawings in layout of Work; check Drawings of other Divisions to verify spaces in which work will be installed. Maintain maximum headroom. Where space conditions appear inadequate, Engineer shall be notified before proceeding with installations.

C. Engineer may, without extra charge, make reasonable modifications in the layout as needed to prevent conflict with work of other trades and/or for proper execution of the work.

D. Where variances occur between the Drawings and Specifications or within either of the Documents, include the item or arrangement of better quality, greater quantity or higher cost in the Contract price. The Engineer shall decide on the item and the manner in which the work shall be installed.

1.6 SURVEYS AND MEASUREMENTS

A. Before submitting a Bid, the Contractor shall visit the site and shall become thoroughly familiar with all conditions under which the work will be installed. Contractor will be held responsible for any assumptions, omissions or errors made as a result of failure to become familiar with the site and the Contract Documents.

B. Base all measurements, both horizontal and vertical, from established bench marks. All Work shall agree with these established lines and levels. Verify all measurements at the site and check the correctness of same as related to the Work.

C. Should the Contractor discover any discrepancies between actual measurements and those indicated which prevent following good practice or the intent of the Drawings and Specifications, notify the Engineer do not proceed with that Work until instructions have been received from the Engineer.

1.7 CODES AND STANDARDS

A. The Codes and Standards listed below apply to all Work. Where Codes or Standards are mentioned in these Specifications, follow the latest edition or revision.

B. The current adopted editions of the following State or local Codes apply:

1. Connecticut State Building Code with Amendments to the following:

a. International Building Code

b. International Mechanical Code

c. International Plumbing Code

d. Connecticut Gas Equipment and Piping Code

e. National Electrical Code (NFPA 70)

f. International Energy Conservation Code

g. ICC/ANSI A117.1-2017 Accessible and Usable Buildings and Facilities

C. All materials furnished and all work installed shall comply with the rules and recommendations of the NFPA, the requirements of the local utility companies, the recommendations of the fire insurance rating organization having jurisdiction and the requirements of all Governmental departments having jurisdiction.

D. Include in the Work, without extra cost to the Owner, any labor, materials, testing, services, apparatus and Drawings in order to comply with all applicable laws, ordinances, rules and regulations, whether or not shown on Drawings and/or specified.

1.8 PERMITS AND FEES

A. Give all necessary notices, obtain all permits; pay all Government and State sales taxes and fees where applicable, and other costs, including utility connections or extensions in connection with the Work. File all necessary Drawings, prepare all Documents and obtain all necessary approvals of all Governmental and State departments having jurisdiction, obtain all required certificates of inspections for Work and deliver a copy to the Engineer before request for acceptance and final payment for the Work.

1.9 SEISMIC RESTRAINT

A. General: Verify current seismic requirements based on project location and with Code requirements. If This project is in a seismic zone per State and/or Local Codes and Ordinances and all materials and equipment shall be installed, supported, and seismically restrained accordingly.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where the Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of vibration isolation bases and seismic restraints that are similar to those required for this Project in material, design, and extent.

C. Shop Drawings: Show designs and calculations, certified by a professional engineer, for the following:

1. Design Calculations: Calculations for selection of vibration isolators, design of vibration isolation bases, design of seismic supports and selection of seismic restraints for all equipment and materials.

2. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to the structure and to the supported equipment. Include auxiliary motor slides and rails, and base weights.

3. Seismic Restraint Details: Detail fabrication and attachment of restraints, supports and snubbers.

4. Seismic Separation Assemblies: Refer to the Architectural and/or Structural drawings for locations of seismic joints.

D. Installation: Installation shall be carried out in strict accordance with the Seismic Engineer's submittal, current Code, accepted standards and the equipment and material manufacturers' recommendations.

1.10 COORDINATION

A. Carry out all work in conjunction with other trades and give full cooperation in order that all work may proceed with a minimum of delay and interference. Particular emphasis is placed on timely installation of major apparatus and furnishing other Contractors, especially the General Contractor or Construction Manager, with information as to openings, chases, sleeves, bases, inserts, equipment locations, panels, access doors, etc. required by other trades, and to allow for serviceable access to equipment.

B. Mechanical contractors' shall initiate coordination drawings and sections clearly showing how the work is to be installed in relation to the work of other trades, at no extra charge to the Owner. The Contractors' shall prepare coordination drawings at a scale no less than 1/4"=1'-0", showing the work of all trades, including but not limited to, the following: proposed ductwork installation in detail, including ceiling heights, approved structural steel shop drawings, duct heights, access doors, light fixtures, registers and diffusers, sprinkler piping, electrical distribution conduits, wires, panels and any other electrical work which may conflict with the sheet metal ducts or piping, waste and vent piping, water piping, storm piping, and rain leaders. Provide elevation details showing connections and equipment layout and configuration based on approved submittals. Each shall use a different color code. A coordination meeting of all Contractors involved is then to be held and all possible conflicts are to be resolved. All trades shall sign acceptance of the drawings and then shall submit two (2) prints of each drawing to the Engineer for record.

C. Contractors are required to examine all of the Project Drawings and mutually arrange Work so as to avoid interference. In general, ductwork, heating piping, sprinkler piping and drainage lines take precedence over water, gas and electrical conduits. The Engineer regarding the arrangement of Work, which cannot be agreed upon by the Contractors, will make final decisions. Service of equipment will take precedence.

D. Where the Work of the Contractor will be installed in close proximity to or will interfere with Work of other trades, assist in working out space conditions to make a satisfactory adjustment.

E. If Work is installed before coordinating with other Divisions or so as to cause interference with Work of other Sections, the Contractor causing the interference will make necessary changes to correct the condition without extra charge to the Owner.

F. Initial contact and coordination has been conducted with utility entities for the purpose of the preparation of Bid Documents. The Contractor shall coordinate all final specific utility requirements.

1.11 ACCEPTANCES

A. The equipment, materials, Workmanship, design and arrangement of all Work installed are subject to the review of the Engineer.

B. Within 30 days after the awarding of a Contract, submit to the Engineer for review a list of manufacturers of equipment proposed for the Work. The intent to use the exact makes specified does not relieve the Contractor of the responsibility of submitting such a list.

C. If extensive or unacceptable delivery time is expected on a particular item of equipment specified, notify the Engineer, in writing, within 30 days of the awarding of the Contract. In such instances, deviations may be made pending acceptance by the Engineer or the Owner's representative.

D. Where any specific material, process or method of construction or manufactured article is specified by reference to the catalog or model number of a manufacturer, the Specifications are to be used as a guide and are not intended to take precedence over the basic duty and performance specified or noted on the Drawings. In all cases, verify the duty specified with the specific characteristics of the equipment offered for review. Equipment characteristics are to be used as mandatory requirements where the Contractor proposes to use an acceptable equivalent.

E. If material or equipment is installed before shop drawing review, liability for its removal and replacement is assumed by the Contractor, at no extra charge to the Owner, if, in the opinion of the Engineer, the material or equipment does not meet the intent of the Drawings and Specifications.

F. Failure on the part of the Engineer to reject shop drawings or to reject Work in progress shall not be interpreted as acceptance of Work not in conformance with the Drawings and/or Specifications. Correct Work not in conformance with the Drawings and/or Specifications whenever non-conformance is discovered.

1.12 EQUIPMENT DEVIATIONS

A. Where the Contractor proposes to deviate (substitute or provide an equivalent) from the equipment or materials as hereinafter specified, he shall do so by making a request in writing within 60 days from the Award of Contract. The Contractor shall state in his request whether it is a substitution or an equivalent to that specified, and the amount of credit involved. A copy of said request shall be included in the Base Bid with manufacturer's equipment cuts.

1. The Base Product Specification shall be based on using the materials and equipment as specified and scheduled with no exceptions. Equipment Manufacturers Scheduled on Drawings are considered Base Product Specification and any other acceptable manufacturers listed in the specifications is considered an equivalent manufacturer to the Base Product Specification. Unlisted manufacturers are considered a substitution and equipment deviation and subject to the requirements for equipment substitution and deviation. When any alternate manufacturer does not qualify acceptable, as determined by the Engineer, provide the Base Bid manufacturer at no additional cost to Owner.

2. Where an equivalent manufacturer is listed in the specifications, it may or may not indicate that there is an equal product available. Any products must meet all criteria of the Base Product Specification as determined by the Engineer.

B. Substitutions and Equipment Deviations will not be considered if they have a direct bearing on the changing or revising of Contract Documents or if it involves other Contractor's scope of work or thier equipment. Coordination with all trades is required and must be acceptable to all other involved Contractors.

C. Substitutions may be considered for one of the following:

1. Substitution for Cause: Changes proposed by the Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of warranty terms.

2. Substitutions for Convenience: Changes proposed by the Contractor or Owner that are not required in order to meet other Project requirements, but may offer advantage to either the Owner or Contractor.

D. In these Specifications and on the accompanying Drawings, one or more makes of materials, apparatus or appliances may have been specified for use in this installation. This has been done for convenience in fixing the standard of workmanship, finish and design required for installation. In the event that only one (1) manufacturer of a product is specified and it is found that the manufacturer has discontinued the product, the Contractor shall use an acceptable equivalent product that meets the requirements of an equivalent product, as noted below, and has all the features of the originally specified product. The details of workmanship, finish and design, and the guaranteed performance of any material, apparatus or appliance which the Contractor desires to deviate for those mentioned herein shall also conform to these standards.

E. Where no specific make of material, apparatus or appliance is mentioned, any first-class product made by a reputable manufacturer may be submitted for the Engineer's review.

F. Where two or more names are given as equivalents, the Contractor must use the specified item or one of the named equivalents. Where one name only is used and is followed by the words "or acceptable equivalent", the Contractor must use the item named or he may apply for an equipment deviation through the prescribed manner in accordance with this Specification.

G. Equipment, material or devices submitted for review as an "accepted equivalent" shall meet the following requirements:

1. The equivalent shall have the same construction features such as, but not limited to:

2. Material thickness, gauge, weight, density, etc.

3. Welded, riveted, bolted, etc., construction

4. Finish, undercoatings, corrosion protection

5. The equivalent shall perform with the same or better operating efficiency.

6. The equivalent shall have equal or greater reserve capacity.

7. The equivalent shall be locally represented by the manufacturer for service, parts and technical information.

8. The equivalent shall bear the same labels of performance certification as is applicable to the specified item, such as AMCA or ARI labels.

H. Where the Contractor proposes to use an item of equipment other than specified or detailed on the Drawings which requires any redesign of the structure, partitions, foundations, piping, wiring or any other part of the mechanical, electrical or architectural layout, all such redesign and all new drawings and detailing required therefore shall be prepared by the Designers of Record at the expense of the Contractor and at no additional cost to the Owner.

I. Where such accepted deviation or substitution requires a different quantity and arrangement of piping, ductwork, valves, pumps, insulation, wiring, conduit and equipment from that specified or indicated on the Drawings, the Contractor shall, with the acceptance by the Engineer, furnish and install any such additional equipment required by the system at no additional cost to the Owner, including any costs added to other trades due to the substitution.

J. The Engineer shall determine if an "accepted equivalent" to a manufacturer listed in the Specifications is considered acceptable.

1.13 SHOP DRAWINGS

A. Refer to individual specification sections for additional submittal information.

B. The Contractor shall submit for review detailed shop drawings of all equipment and material specified in each section and coordinated ductwork layouts. No material or equipment may be delivered to the job site or installed until the Contractor has received shop drawings for the particular material or equipment which have been properly reviewed.

C. Shop drawings shall be submitted within 60 days after award of Contract before any material or equipment is purchased. The Contractor shall submit for review copies of all shop drawings to be incorporated in the Contract. Refer to the General Conditions and Supplementary General Conditions for the quantity of copies required for submission. Where quantities are not specified, provide seven (9) copies for review.

D. Provide shop drawings for all devices specified under equipment specifications for all systems, materials, equipment and/or devices. Shop drawings shall include manufacturers' names, catalog numbers, cuts, diagrams and other such descriptive data as may be required to identify and accept the equipment. A complete list in each category (example: all fixtures) of all shop drawings, catalog cuts, material lists, etc., shall be submitted to the Engineer at one time. No consideration will be given to a partial shop drawing submittal. Partial submissions shall be rejected.

E. Equipment shop drawings shall contain full range performance curves, graphs, tables or other pertinent data which clearly indicates operational range of a given unit size. Computer generated/plotted curves, based solely on design performance, will not be accepted.

F. All specific options and/or alternatives shall be clearly indicated. Failure to do so shall be grounds for rejection.

G. Submittals shall be marked with the trade involved, i.e., HVAC, plumbing, fire protection, etc. and the specific associated specification section.

H. Where multiple quantities or types of equipment are being submitted, provide a cover sheet (with a list of contents) on the submittal identifying the equipment or material being submitted.

I. Failure to submit shop drawings in ample time for review shall not entitle the Contractor to an extension of Contract time. Contractor must allow for a one week review at the Engineer's office plus normal delivery time to the G.C., Architect, Engineer, and return to the Architect, and G.C. No claim for extension by reason of such default will be allowed, nor shall the Contractor be entitled to purchase, furnish and/or install equipment which has not been reviewed by the Engineer. The Contractor shall incur all costs associated with delay of construction due to equipment and/or materials arriving late due to late or improper shop drawing submittal.

J. The Contractor shall furnish all necessary templates, patterns, etc., for installation work and for the purpose of making adjoining work conform; furnish setting plans and shop details to other trades as required.

K. Acceptance rendered on shop drawings shall not be considered as a guarantee of measurements or building conditions. Where drawings are reviewed, review does not indicate that drawings have been checked in detail; said approval does not in any way relieve the Contractor from his responsibility or necessity of furnishing material or performing work as required by the Contract Drawings and Specifications. Verify available space prior to submitting shop drawings.

L. Acceptance of shop drawings shall not apply to quantity nor relieve Contractor of his responsibility to comply with intent of Drawings and Specifications.

M. Acceptance of shop drawings is final and no further changes will be allowed without the written consent of the Engineer.

N. Shop drawing submittal sheets which may show items that are not being furnished shall have those items crossed off to clearly indicate which items will be furnished.

O. Contractor shall make any corrections required by Engineer and shall resubmit required number of corrected copies of shop drawings or new samples until accepted. Contractor shall direct specific attention in writing or on resubmitted shop drawings to revisions other than corrections requested by Engineer on previous submissions. Engineer shall review no more than one resubmittal of any shop drawing or sample at Owner's expense. The fees for review of additional resubmittals shall be paid by the Contractor at the Engineer's standard rates.

1.14 CHANGES IN WORK

A. A Change Order is a written order to the Contractor signed by the Owner and the Architect, issued after Contracts have been awarded, authorizing a change in the work or an adjustment in the Contract sum or the Contract time. A Change Order signed by the Contractor indicates his agreement therewith, including the adjustment in the Contract sum or the Contract time.

B. All changes in the work shall follow the recommendations of the AIA "General Conditions of the Contract for Construction", Article 12.

1.15 MANUFACTURER'S IDENTIFICATION

A. All component parts of each item of equipment or device shall bear the manufacturer's nameplate giving name of manufacturer, description, size, type, serial and model number, electrical characteristics, etc., in order to facilitate maintenance or replacement. Nameplate data shall not be obstructed. The nameplate of a Contractor or distributor will not be acceptable.

B. All material and equipment for the electrical portion of the mechanical systems shall bear the label of or be listed by UL, or other accredited authoritative agencies or testing organizations approved by the authority having jurisdiction.

1.16 RECORD DRAWINGS

A. Maintain at the job site a record set of Project Drawings on which any changes in location or routing of all equipment, materials and access panels shall be recorded.

B. At the end of construction, the Contractor shall provide the Owner with a complete set of As-Built Drawings, including all updated coordination drawings, ductwork and piping plans. As-Builts shall be drawn on the latest version of Autocad or compatible software, approved in writing, prior to submittal. The Owner shall be provided with a "CD Rom" disk and one set of reproducible mylar sepias.

1.17 MATERIALS AND WORKMANSHIP

A. All materials and apparatus required for the work, except as otherwise specifically indicated, shall be new, of first-class quality, and shall be furnished, delivered, erected, connected and finished in every detail and be so selected and arranged as to fit properly into the building spaces. Where no specific type or quality of material is given, a first-class standard article as accepted by industry standards shall be furnished.

B. The Contractor shall furnish the services of an experienced superintendent who shall be constantly in charge of the installation of the work together with all skilled workmen, fitters, metal workers, welders, helpers and laborers required to unload, transfer, erect, connect, adjust, start, operate and test each system.

C. Unless otherwise specifically indicated on the Drawings or Specifications, all equipment and materials shall be installed with the acceptance of the Engineer and in accordance with the recommendations of the manufacturer. This includes the performance of such tests as the manufacturer recommends.

D. All labor for installation of mechanical systems shall be performed by experienced, skilled tradesmen under the supervision of a licensed journeyman foreman. All work shall be of a quality consistent with good trade practice and shall be installed in a neat, workmanlike manner. The Engineer reserves the right to reject any work which, in his opinion, has been installed in a substandard, dangerous or unserviceable manner. The Contractor shall replace said work in a satisfactory manner at no extra cost to the Owner.

1.18 PROTECTION OF MATERIALS AND EQUIPMENT

A. Work under each Section shall include protecting the work and material of all other Sections from damage by work or workmen and shall include making good all damage thus caused.

B. The Contractor shall be responsible for work and equipment until the facility has been accepted by the Owner. Protect work against theft, injury or damage and carefully store material and equipment received on site which is not immediately installed. Close open ends of work with temporary covers or plugs during construction to prevent entry of foreign material.

C. Work under each Section includes receiving, unloading, uncrating, storing, protecting, setting in place and completely connecting equipment supplied under each Section. Work under each Section shall also include exercising special care in handling and protecting equipment and fixtures, and shall include the cost of replacing any of the equipment and fixtures which are missing or damaged.

D. Equipment and material stored on the job site shall be protected from the weather, vehicles, dirt and/or damage by workmen or machinery. Insure that all electrical or absorbent equipment or material is protected from moisture during storage.

1.19 BASES AND SUPPORTS

A. Unless otherwise specifically noted, the Contractor shall furnish all necessary supports, rails, framing, bases and piers required for all equipment furnished under this Division.

B. Unless otherwise indicated in individual trade Sections, pumps, fans, air handlers, boilers, chillers, tanks, compressors and other rotating machinery shall be mounted on a minimum of six (6") inch high concrete pads which shall be furnished and installed per Division 3. All pads shall be extended six (6") inches beyond machine base in all directions with top edge chamfered. Shop drawings of all foundations and pads shall be submitted to the Engineer for review before they are constructed. The Mechanical Contractor shall field coordinate all required dimensional and necessary loading information.

C. Construction of foundations, supports, pads, bases and piers where mounted on the floor shall be of the same finish quality as the adjacent and surrounding flooring material.

D. Unless otherwise shown, all equipment shall be securely attached to the building structure in an acceptable manner. Attachments shall be of a strong and durable nature; any attachments that are insufficient, in the opinion of the Engineer, shall be replaced as directed without extra cost to the Owner.

E. All equipment supports shall be designed and constructed such that the equipment will be capable of resisting both vertical and horizontal movement. The equipment shall be positively anchored to the bases or supports to resist vertical movement. The equipment and its supports shall be provided with suitable restraints to resist horizontal movement from any direction as dictated by applicable seismic Codes.

1.20 SLEEVES, INSERTS AND ANCHOR BOLTS

A. The Contractor shall provide, set in place and be held responsible for the location of all sleeves, inserts and anchor bolts required for the work. In the event that failure to do so requires cutting and patching of finished work, it shall be done at the Contractor's expense.

B. It is the responsibility of the Contractor to furnish cast-in-place steel sleeves, inserts and anchors in sufficient time to be installed during initial concrete pours. Where job schedules make this impossible, coordinate and obtain acceptance from the Structural Engineer for alternate installation methods.

C. All pipes and conduits passing through floors, walls or partitions shall be provided with sleeves having an inside diameter one (1") inch larger than the outside diameter of the pipe, conduit or insulation enclosing the pipe.

D. Piping insulation shall run continuous through sleeve.

E. Penetrations through fire-rated walls, ceilings and all floors (except slab on grade) in which piping or ducts pass shall be filled solidly with acceptable fire-stopping material. Sleeves shall be steel or a UL / FM listed and approved assembly.

F. When ducts, piping or conduit penetrate the floor of a mechanical room located above an occupied space, such penetrations shall be made completely watertight, such that a liquid leak shall not pass through the penetration.

1.21 FIRE-STOPS AND SEALS

A. Refer to Division 07 Specification for additional and more specific information.

B. Fire-stopping systems shall be submitted as shop drawing.

C. Penetrations through fire-rated walls, ceiling or floors shall be sealed with a UL approved fire-stop fitting classified for an hourly rating equivalent to the fire rating of the wall, ceiling or floor.

D. Thruwall and floor seals shall be used to provide a positive means of sealing pipes or ducts which pass through the concrete foundation of a structure below grade or below ground water level. Seals shall also be used at entry points through concrete walls or floors which must be sealed.

1.22 CUTTING AND PATCHING

A. All cutting and patching shall be done per Division 1 requirements. The Contractor shall furnish sketches showing the location and sizes of all openings, chases, etc., required for the installation of work.

B. Work under this Division shall include furnishing, locating and setting inserts and/or sleeves required before the floors and walls are built or be responsible for cutting, drilling or chopping where sleeves and inserts were not installed or correctly located. The Contractor shall do all drilling required for the installation of hangers.

C. Exercise extreme caution when core drilling or punching openings in concrete floor slabs in order to avoid cutting or damaging structural members. No structural members or structural slabs/floors shall be cut without the written acceptance of the Structural Engineer and all such cutting shall be done in a manner directed by him.

D. SCAFFOLDING, RIGGING, HOISTING

1. The Contractor shall furnish all scaffolding, rigging, hoisting and services necessary for erection and delivery into the premises any equipment and apparatus furnished under this Division. Remove same from premises when no longer required.

1.23 EXCAVATION AND BACKFILLING

A. Excavation and backfilling shall be done per Division 2 of the Specifications.

B. It is the responsibility of the Contractor to coordinate sizes, depths, fill and bedding requirements and any other excavation work required under this Division per code and local utility requirements.

1.24 WATERPROOFING

A. Where any work pierces waterproofing, including waterproof concrete and floors in wet areas, the method of installation shall be reviewed by the Engineer before work is done. The Contractor shall furnish all necessary sleeves, caulking and flashing required to make openings absolutely watertight.

1.25 ACCESSIBILITY AND ACCESS PANELS

A. The Contractor shall be responsible for the sufficiency of the size of shafts and chases, the adequate thickness of partitions, and the adequate clearance in double partitions and hung ceilings for the proper installation of the work.

B. Locate all equipment which must be serviced, operated or maintained in fully accessible positions. Equipment shall include, but not be limited to: motors, controllers, coil, valves, switchgear, drain points, etc. Access doors shall be furnished if required for better accessibility. Minor deviations from the Drawings may be made to allow better accessibility, but changes of magnitude or which involve extra cost shall not be made without the acceptance of the Engineer.

C. Access doors in walls, ceilings, floors, etc., shall be field coordinated. It is the responsibility of the Contractor to coordinate and provide information regarding the sizes and quantities of access doors required for his work. The Contractor shall arrange his work in such a manner as to minimize the quantity of access doors required, such as grouping shutoff valves in the same area. Where possible, locate valves in already accessible areas, such as lay-in ceilings, etc.

D. On a clean set of prints, the Contractor shall mark in red pencil the location of each required access door, including its size and fire rating (if any), and shall submit the print to the Architect for review before access doors are purchased or installed.

E. Upon completion of the Project, the Contractor shall physically demonstrate that all equipment and devices installed have been located and/or provided with adequate access panels for repair, maintenance and/or operation. Any equipment not so furnished shall be relocated or provided with additional access panels by the installing Contractor at no additional cost to the Owner. All access panel or door locations shall be indicated on Owner's final as-built record drawings.

F. Permanent ladders for access to equipment when shown on Plans shall be furnished and installed. Coordinate exact requirements in field.

1.26 TEMPORARY OPENINGS

A. The Contractor shall ascertain from an examination of the Drawings whether any special temporary openings in the building will be required for the admission of apparatus provided under this Division and shall coordinate the requirements accordingly. In the event of failure of the Contractor to give sufficient notice in time to arrange for these openings during construction, the Contractor shall assume all costs of providing such openings thereafter.

B. SHUTDOWNS

1. When installation of a new system requires the temporary shutdown of an existing operating system, the connection of the new system shall be performed at such time as designated by the Owner's representative.

2. The Architect and the Owner shall be notified of the estimated duration of the shutdown period at least ten (10) days in advance of the date the work is to be performed.

3. Work shall be arranged for continuous performance whenever possible. The Contractor shall provide all necessary labor, including overtime if required, to assure that existing operating services will be shut down only during the time actually required to make necessary connections.

1.27 TAGS AND CHARTS

A. Each valve and piece of apparatus under this Division shall be provided with suitable brass or laminated plastic tags securely fastened with brass chains, screws or rivets. Equipment shall be numbered with laminated plastic tags or neatly stenciled letters two (2") inches high using designations in equipment schedules and/or shall conform to a directory indicating number, location and use of each item. Directories shall be prepared under each Section and shall be glass framed.

B. Directory shall indicate valve tag number and the unit number, floor/area branch line, main line, service or other pertinent data to quickly and easily identify the valve's purpose.

1.28 ESCUTCHEONS

A. The Contractor shall provide escutcheons on pipes wherever they pass through floors, ceilings, walls or partitions in finished visible locations.

1.29 PAINTING

A. All finish painting in completed areas shall be performed per other divisions of the Specifications.

B. All materials shipped to the job site under this Division, such as piping, fittings, plumbing fixtures, valves,etc., shall have standard manufacturer's finish, unless otherwise specified by Architect.

C. All outdoor piping, fittings and hangers shall be properly primed with zinc-rich primer and finished with a minimum of two (2) coats of high grade exterior enamel.

1.30 PIPE EXPANSION

A. All pipe connections shall be installed to allow for freedom of movement of the piping during expansion and contraction without springing. Provide engineered design, layout, details and fabrication, submitted with registered professional engineer sign and seal, of swing joints, expansion loops and expansion joints with proper anchors and guides. Pay particular attention to plastic piping with high coefficients of expansion.

B. Consideration of required seismic lateral restraints shall be given when anchoring piping and making provision for expansion.

1.31 ELECTRICAL CONNECTIONS

A. Unless otherwise specified, all wiring shall be furnished and installed per Division 26 Specifications.

B. All motor controllers not factory mounted on mechanical equipment shall be furnished, mounted, and installed by the Division 26 contractor, and shall be coordinated with this contractor. Provide properly sized overload heaters and all required accessories with all motor controllers. See Division 26 Motor Controllers for motor controller requirements.

C. All power wiring shall be furnished and installed per Division 26 complete from power source to motor or equipment junction box including power wiring through the motor controller and proper means of disconnect per NEC and Division 26. The Division 26 Contractor shall provide all disconnects, unless noted otherwise.

1.32 QUIET OPERATION

A. Equipment and material used in the various systems described herein shall not produce a sound level greater than 55 decibels in the area served. If noise level is deemed objectionable by the Owner/Engineer, the Contractor shall test and record sound levels in the presence of the Owner/Engineer. The sound level shall be observed on the "A" weighting network of a sound level or sound survey meter. The ASHRAE "Guide and Data Book" provides a means to determine sound level of mechanical equipment when the total of background plus equipment sound levels exceeds the minimum acceptable equipment sound level.

B. If objectionable noises or vibrations of any magnitude are produced and transmitted to occupied portions of the building by apparatus, piping, ducts or other parts of the mechanical work, the Contractor shall make such changes or additions as necessary without extra cost to the Owner.

1.33 MAINTENANCE

A. The Contractor shall provide the necessary skilled labor to assure the proper operation and to provide all required current and preventative maintenance for all equipment and controls provided under this Division until final acceptance of the building by the Owner. The Contractor shall not assume acceptance of the building by the Owner until he receives written notification.

B. The Contractor shall receive calls for any and all problems experienced in the operation of the equipment provided under this Division and he shall take steps to immediately correct any deficiencies that may exist.

C. The Contractor shall provide a check list and shall put a copy of it in the boiler or main mechanical room. The check list shall itemize each piece of equipment furnished under his Section.

D. The Contractor shall certify on this check list that he has examined each piece of equipment and that, in his opinion, it is operating as intended by the manufacturer, it has been properly lubricated, and that all necessary current and preventative maintenance has been performed as recommended by the manufacturer and by good and accepted practice.

E. The Contractor shall check all controls in the building to ascertain that they are functioning as designed. This shall apply to all thermostats, aquastats, humidistats, freezestats and firestats, etc. This portion of the work shall be performed by the Contractor who installed the controls.

F. During construction, the Contractor shall ensure that all filters are in place on all equipment. If the equipment is operated during construction (see restrictions section of this specification), strict attention shall be paid to maintaining clean and effective filters and cleaning ductwork and equipment. Filters shall be new and/or clean when the system testing and balancing takes place. The Contractor shall bear the cost of all filters and media during construction until final acceptance by the Owner. This requirement shall apply equally to fluid filters and strainers.

G. Where normal preventative maintenance for any piece of equipment requires special tools, the Contractor shall furnish the appropriate tools for that piece of equipment (i.e., special filter removal hooks, valve wrenches, etc.).

1.34 DEMOLITION

A. All required demolition work shall be performed by the Contractor. All demolition work shall be performed in a neat and orderly fashion.

B. Demolition work, if indicated on the drawings, is intended for general information only and is not intended to describe the full extent of demolition work required under this Contract. All existing plumbing work and systems, including but not limited to piping, equipment, wiring, controls, hangers, and supports, made obsolete by this project, shall be removed in their entirety under this Contract, unless noted otherwise.

1. Existing plumbing fixtures, water piping, sanitary/waste piping, storm piping as indicated on the plans, decribed in notes or implied by nature of the work.

a. All plumbing water piping removed from active lines to remain shall be capped watertight.

1) Remove abandoned piping to source of supply, provide isolation valve and cap at mains.

b. All sanitary branch piping removed from active systems to remain shall either have a new cleanout provided at termination or the branch line shall be removed to within 24" of the active main and capped.

c. Removal shall be complete to behind finished surfaces.

d. Contractor shall make safe all work associated with this division.

C. After piping, equipment, etc., has been removed, neatly cap remaining piping, and insulate caps to match the existing adjacent piping. In finished areas, all piping shall be cut back to a concealed location, i.e., within walls, above ceilings, etc., before capping.

D. Before submitting his Bid, the Contractor shall visit the site with the Contract Documents in hand, and shall inspect all existing systems to determine the extent of demolition work involved. Particular attention is drawn to the removal of existing walls or portions of existing walls. In those areas, all exposed and concealed piping, equipment, etc., running across or through affected areas shall be removed as required. Piping shall then be either capped, or, if required for the proper continuing operation of an existing system or portions to remain, piping shall be rerouted around the affected areas and reconnected as required.

E. In general, it shall be the responsibility of the Contractor to remove demolished equipment, piping, etc., from the site and properly dispose of it. If the Owner shall so request, however, the Contractor shall turn over demolished equipment, etc., to the Owner for the Owner's use. Unless otherwise noted, demolished work shall not be abandoned in place. Contractor shall make safe all utilities pertaining to this section.

F. Demolition shall include the removal of all hangers and supports, anchors and other items not required for the new work.

G. EXAMINATION

1. Verify existing conditions in the field. Note which items are to remain and which items are to be removed as indicated on drawings.

2. Verify that abandoned wiring and equipment serve only abandoned facilities.

3. Demolition drawings are based on casual field observation and existing record documents.

4. Report discrepancies to Engineer before disturbing existing installation, i.e. asbestos. Where asbestos materials are deemed to be part of the equipment, the abatement contractor shall be responsible for demolition and proper removal and disposal of equipment.

5. Beginning of demolition means installer accepts existing conditions.

H. PREPARATION

1. Disconnect electrical systems in walls, floors, and ceilings to be removed. Coordinate with Electrical Contractor for extent of work to be performed.

2. Provide temporary piping and connections if required to maintain existing systems in service during construction. When work must be performed on energized equipment or piping, coordinate shut-down time with owner.

3. Existing Domestic Cold Water System: Maintain existing systems in service. Disable systems only to make switchovers and/or connections. Minimize outage duration.

   a. Obtain permission from Owner at least 24 hours before partially or completely disabling system.

4. Existing Sanitary System: Maintain existing system in service. Disable system only to make switchovers and/or connections. Minimize outage duration.

5. Contractor shall coordinate demolition work in any occupied areas so as to cause the least interuption or disruption to normal routines.

   a. All demolition work shall be scheduled and coordinated in order to accommodate construction phasing schedule.

I. DEMOLITION AND EXTENSION OF EXISTING WORK

1. Remove, relocate, and extend existing installations to accommodate new construction.

2. Contractor shall make safe all work associated with this division.

3. Disconnect and remove piping and fittings serving equipment that has been removed .

4. Disconnect and remove existing equipment, piping and fittings as indicated on the drawings.

1.35 LUBRICATION

A. All equipment installed under this Contract having moving parts and requiring lubrication shall be properly lubricated according to manufacturer's recommendations prior to testing and operation. Any such equipment discovered to have been operated before lubrication by the Contractor is subject to rejection and replacement at no additional cost to the Owner.

B. The Contractor shall furnish and install, as appropriate on all equipment requiring lubrication, Zerk pressure gun grease fittings or sight gravity-feed oilers equipped with shutoff and needle valve adjustment.

1. Units furnished with sealed bearings and lifetime lubrication are exempted.

2. All fittings and oilers are to be fully accessible for lubrication with equipment which does not require special adapters.

3. Where fittings would be otherwise inaccessible, furnish and install extended grease lines.

1.36 CLEANING

A. The Contractor shall be responsible for keeping the jobsite clean, safe and neat throughout the duration of construction. The Contractor shall clean up his own debris daily and shall coordinate removal of rubbish and debris with the General Contractor/Construction Manager.

B. No debris, construction materials, cigarette butts, coffee cups, etc., shall be left above suspended ceilings.

C. Terminal equipment and plumbing fixtures shall cleaned at substantial completion.

D. If any part of a system should be stopped or damaged by any foreign matter after being placed in operation, the system shall be disconnected, cleaned and reconnected wherever necessary to locate and/or remove obstructions. Any work damaged in the course of removing obstructions shall be repaired or replaced when the system is reconnected at no additional cost to the Owner.

E. During the course of construction, all pipes shall be capped in an acceptable manner to insure adequate protection against the entrance of foreign matter.

F. Upon completion of all work under the Contract, the Contractor shall remove from the premises all rubbish, debris and excess materials left over from his work. Any oil or grease stains on floor areas caused by the Contractor shall be removed and floor areas left clean.

1.37 OPERATING INSTRUCTIONS

A. Upon completion of all work and tests, the Contractor shall furnish the necessary skilled labor and helpers for operating his system and equipment for a period specified under each applicable Section of this Division. During this period, he shall fully instruct the Owner or the Owner's representative in the operation, adjustment and maintenance of all equipment furnished. The Contractor shall give at least 72 hours notice to the Owner, Engineer, and Commissioning Agent in advance of this period.

1. Prior to the instruction period, the contractor shall have approved Owner's Manuals on site for aiding in the instructions.

B. The Contractor shall formally submit for delivery to the Engineer a minimum of three (3) Owner's Manuals, to be complete bound sets of typewritten or blueprinted instructions for operating and maintaining all systems and equipment included in this Division. All instructions shall be submitted in draft for review prior to final issue. Manufacturer's advertising literature or catalogs will not be acceptable for operating and maintenance instruction.

C. The Contractor, in the above-mentioned instructions, shall include the maintenance schedule for the principal items of equipment furnished under this Division.

D. The appropriate Contractor shall physically demonstrate procedures for all routine maintenance of all equipment furnished under each respective Section to assure accessibility to all devices.

E. An authorized manufacturer's representative shall attest in writing that the equipment has been properly installed prior to startup of any major equipment. These letters will be bound into the operating and maintenance books.

F. Refer to individual trade Sections for any other particular requirements related to operating instructions.

1.38 ADJUSTING AND TESTING

A. Prior to factory star-up procedures, the Contractor shall perform prefunctional checks and procedures to ensure that the equipment is installed properly and are operational.

1. The prefunctional checklists and procedures are to be provided by the Commisioning Agent. These forms must be filled out and approved before final start-up and adjustments are made by the factory representative.

B. After all the equipment and accessories to be furnished are in place, they shall be put in final adjustment and subjected to such operating tests so as to assure the Engineer and the Commissioning Agent that they are in proper adjustment, the controls operate as described in the sequence of operation and all systems are in satisfactory, permanent operating condition.

C. A factory service engineering representative shall inspect the installation and assist in the initial startup and adjustment to the equipment. The period of these services shall be for such time as necessary to secure proper installation and adjustments. After the equipment is placed in permanent operation, the service engineering representative shall supervise the initial operation of the equipment and instruct the personnel responsible for operation and maintenance of the equipment.

1. The following equipment will require this inspection: pumps, equipment, water temperature controls and valves, water heaters, specialized plumbing fixtures, and electric/electronic faucets and flush vlaves.

2. The service engineering representative shall notify the Contractor in writing that the equipment was installed according to manufacturer's recommendations and is operating as intended by the manufacturer.

a. The written notification shall include a complete start-up report on manufacturer's letterhead with all information including date and signature.

b. The report shall be made available to the Engineer and Commisioning Agent for review before acceptance is granted.

1.39 GUARANTEES

A. The Contractor shall guarantee all equipment, material and workmanship under these Specifications and the Contract for a period of one (1) year from the date of final acceptance by Owner, unless otherwise noted.

B. All refrigeration compressors shall have five (5) year guarantee from the date of final acceptance by the Owner unless otherwise noted.

C. All water heaters shall have an optional minimum five (5) year guarantee from the date of final acceptance by the Owner unless otherwise noted.

D. During this guarantee period, all defects developing through faulty equipment, materials or workmanship shall be corrected or replaced immediately by the Contractor without expense to the Owner. Such repairs or replacements shall be made to the Engineer's satisfaction.

1.40 RESTRICTIONS

A. Water heaters provided under this Division may not be used for temporary hot water requirements due to premature wear and dirt/dust infiltration. Written approval may be obtained from the Owner only after submission of a written cleaning plan and guarantee/warranty extension.

B. Piping shall not be run in any concrete floor slab. Written approval from the Structural Engineer may be obtained only after submission and approval of a layout shop drawing.

PART 2 PRODUCTS - NOT USED.

PART 3 EXECUTION - NOT USED.

END OF SECTION 22 05 00 220500

This page intentionally left blank

SECTION 220505 - PLUMBING DEMOLITION

PART 1 GENERAL.

1.1 RELATED DOCUMENTS

A. Drawings and the general provisions of the Contract, including The General Conditions of the Contract, the Supplementary General Conditions, and Division 1 Specification Sections are a part of this Section and shall be binding on the Contractor and/or Subcontractor who performs this work. Note also all Addenda.

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

C. The Contractor and each Subcontractor and/or supplier providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SECTION INCLUDES

A. Plumbing demolition.

1. Plumbing Contractor shall make all work safe, including all coordination between all other trades such as Mechanical, Electrical, Fire Projection, ect.

2. Existing plumbing fixtures, water piping, sanitary/waste piping, vent piping and storm piping as indicated on the plans, decribed in notes or implied by nature of the work.

a. All plumbing water piping removed from active lines to remain shall be valved with use of a proper isolation valve. I

b. All sanitary branch piping removed from active systems to remain shall be removed to within 24" of the active main and capped.

c. Removal shall be complete to behind finished surfaces.

B. Demolition shall include the removal of all hangers and supports, anchors and other items not required for the new work.

PART 3 EXECUTION

2.1 EXAMINATION

A. Verify existing conditions in the field. Note which items are to remain and which items are to be removed as indicated on drawings.

B. Verify that abandoned wiring and equipment serve only abandoned facilities.

C. Demolition drawings are based on casual field observation and existing record documents.

D. Report discrepancies to Engineer before disturbing existing installation.

E. Report discrepancies to Engineer before disturbing existing installation, i.e. asbestos. Where asbestos materials are deemed to be part of the equipment, the abatement contractor shall be responsible for demolition and proper removal and disposal of equipment.

F. Beginning of demolition means installer accepts existing conditions.

2.2 PREPARATION

A. Disconnect electrical systems in walls, floors, and ceilings to be removed.

B. Provide temporary piping, ductwork, control wiring, and connections to maintain existing systems in service during construction. When work must be performed on energized equipment or piping, coordinate shut-down time with owner.

C. Existing Domestic Cold Water System: Maintain existing systems in service. Disable systems only to make switchovers and/or connections. Minimize outage duration.

1. Obtain permission from Owner at least 24 hours before partially or completely disabling system.

D. Existing Sanitary System: Maintain existing system in service. Disable system only to make switchovers and/or connections. Minimize outage duration.

2.3 DEMOLITION AND EXTENSION OF EXISTING PLUMBING WORK

A. All demolition work shall be scheduled and coordinated in order to accommodate construction phasing schedule.

B. Remove, relocate, and extend existing installations to accommodate new construction.

C. Remove abandoned piping to source of supply, provide isolation valve and cap at mains.

D. Contractor shall make safe all work associated with this division.

E. Disconnect and remove plumbing piping and fittings serving equipment that has been removed .

F. Disconnect and remove existing equipment, piping and fittings as indicated on the drawings.

2.4 CLEANING AND REPAIR

A. Clean and repair existing materials and equipment which remain or are to be reused in accordance with manufacturer's reccommended maintenance procedures.

END OF SECTION 220505

SECTION 220513 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General construction and requirements.

B. Applications.

C. Single phase electric motors.

D. Three phase electric motors.

E. Electronically Commutated Motors (ECM).

1.2 RELATED REQUIREMENTS

A. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

B. Section 262913 - Enclosed Controllers.

1.3 REFERENCE STANDARDS

A. NEMA MG 00001 - Motors and Generators.

B. NFPA 70 - National Electrical Code.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide wiring diagrams with electrical characteristics and connection requirements.

C. Test Reports: Indicate test results verifying nominal efficiency and power factor for three phase motors larger than 1/2 horsepower.

D. Manufacturer's Installation Instructions: Indicate setting, mechanical connections, lubrication, and wiring instructions.

E. Operation Data: Include instructions for safe operating procedures.

F. Maintenance Data: Include assembly drawings, bearing data including replacement sizes, and lubrication instructions.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture of electric motors for _____ use, and their accessories, with minimum three years documented product development, testing, and manufacturing experience.

B. Comply with NFPA 70.

C. Provide certificate of compliance from Authority Having Jurisdiction indicating approval of high efficiency motors.

D. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect motors stored on site from weather and moisture by maintaining factory covers and suitable weather-proof covering. For extended outdoor storage, remove motors from equipment and store separately.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Provide five year manufacturer warranty for motors larger than 20 horsepower.

PART 2 PRODUCTS

2.1 GENERAL CONSTRUCTION AND REQUIREMENTS

A. Electrical Service: Refer to Section 260583 for required electrical characteristics.

B. Electrical Service:

C. Construction:

1. Open drip-proof type except where specifically noted otherwise.

2. Design for continuous operation in 104 degrees F environment.

3. Design for temperature rise in accordance with NEMA MG 00001 limits for insulation class, service factor, and motor enclosure type.

D. Visible Nameplate: Indicating motor horsepower, voltage, phase, cycles, RPM, full load amps, locked rotor amps, frame size, manufacturer's name and model number, service factor, power factor, efficiency.

E. Wiring Terminations:

1. Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70, threaded for conduit.

2. For fractional horsepower motors where connection is made directly, provide threaded conduit connection in end frame.

2.2 APPLICATIONS

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install securely on firm foundation. Mount ball bearing motors with shaft in any position.

C. Check line voltage and phase and ensure agreement with nameplate.

END OF SECTION 220513

This page intentionally left blank

SECTION 220516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Flexible pipe connectors.

B. Expansion joints and compensators.

C. Pipe loops, offsets, and swing joints.

1.2 RELATED REQUIREMENTS

1.3 REFERENCE STANDARDS

A. EJMA (STDS) - EJMA Standards.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.

2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

PART 2 PRODUCTS

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.

C. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.

D. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

E. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

F. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required.

G. Substitute grooved piping for vibration isolated equipment instead of flexible connectors. Grooved piping need not be anchored.

END OF SECTION 220516

SECTION 220517 - SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pipe sleeves.

B. Pipe sleeve-seals.

1.2 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 220523 - General-Duty Valves for Plumbing Piping.

C. Section 220553 - Identification for Plumbing Piping and Equipment: Piping identification.

D. Section 220716 - Plumbing Equipment Insulation.

E. Section 220719 - Plumbing Piping Insulation.

1.3 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 016000 - Product Requirements, for additional provisions.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

B. Clean equipment, pipes, valves, and fittings of grease, metal cuttings, and sludge that may have accumulated from the installation and testing of the system.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store sleeve and sleeve seals in shipping containers, with labeling in place.

B. Provide temporary protective coating on cast iron and steel sleeves if shipped loose.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.1 PIPE SLEEVES

A. Manufacturers:

B. Vertical Piping:

1. Sleeve Length: 1 inch above finished floor.

2. Provide sealant for watertight joint.

3. Blocked Out Floor Openings: Provide 1-1/2 inch angle set in silicon adhesive around opening.

4. Drilled Penetrations: Provide 1-1/2 inch angle ring or square set in silicone adhesive around penetration.

C. Pipe Passing Through Below Grade Exterior Walls:

1. Zinc coated or cast iron pipe.

2. Provide watertight space with link rubber or modular seal between sleeve and pipe on both pipe ends.

D. Pipe Passing Through Concrete Beam Flanges, except where Brass Pipe Sleeves are Specified:

1. Galvanized steel pipe or black iron pipe with asphalt coating.

2. Connect sleeve with floor plate except in mechanical rooms.

E. Penetrations in concrete beam flanges are permitted but are prohibited through ribs or beams without prior approval from the Engineer.

F. Clearances:

1. Provide allowance for insulated piping.

2. Wall, Floor, Partitions, and Beam Flanges: 1 inch greater than external pipe diameter.

3. All Rated Openings: Caulked tight with fire stopping material complying with ASTM E814 in accordance with Section 078400 to prevent the spread of fire, smoke, and gases.

2.2 PIPE-SLEEVE SEALS

A. Manufacturers:

B. Pipe Sleeve Material:

1. Bearing Walls: Steel, cast iron, or terra-cotta pipe.

2. Masonry Structures: Sheet metal or fiber.

C. Wall Sleeve: PVC material with waterstop collar, and nailer end-caps.

PART 3 EXECUTION

3.1 INSTALLERS

3.2 PREPARATION

3.3 INSTALLATION

A. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

B. Install piping to conserve building space, to not interfere with use of space and other work.

C. Install piping and pipe sleeves to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

D. Provide sleeves when penetrating footings, floors, walls, and partitions. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.

E. Manufactured Sleeve-Seal Systems:

1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.

2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.

3. Locate piping in center of sleeve or penetration.

4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.

5. Tighten bolting for a water-tight seal.

6. Install in accordance with manufacturer's recommendations.

F. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

END OF SECTION 220517

This page intentionally left blank

SECTION 220519 - METERS AND GAUGES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Water meters.

B. Gas meters.

C. Pressure gauges.

D. Thermometers.

1.2 RELATED REQUIREMENTS

A. Section 221006 - Plumbing Piping

1.3 REFERENCE STANDARDS

A. ASME B40.100 - Pressure Gauges and Gauge Attachments.

B. ASTM E1 - Standard Specification for ASTM Liquid-in-Glass Thermometers.

C. ASTM E77 - Standard Test Method for Inspection and Verification of Thermometers.

D. AWWA C700 - Cold-Water Meters -- Displacement Type, Metal Alloy Main Case.

E. AWWA C701 - Cold-Water Meters -- Turbine Type, for Customer Service.

F. AWWA C702 - Cold-Water Meters -- Compound Type.

G. AWWA M6 - Water Meters -- Selection, Installation, Testing, and Maintenance.

H. NSF 61 - Drinking Water System Components - Health Effects.

I. NSF 372 - Drinking Water System Components - Lead Content.

J. UL 393 - Indicating Pressure Gauges for Fire-Protection Service.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Utility Service Metering: Coordinate and apply Utility Service Provider requirements in terms of meter type, size, physical location, pipe size, upstream/downstream pipe lengths required, and other installation details.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide red-marked product data sheets for each furnished item with associated components and accessories.

C. Project Record Documents: Record actual locations of components and instrumentation.

PART 2 PRODUCTS

2.1 WATER METERS

A. Compound Water Meters:

1. Manufacturers:
2. Utility Connection Size: 3 inch flanged.
3. Maximum Unidirectional Water Flow Capacity: As indicated on drawings.
4. Lead-free bronze alloy case, polymer-based cap, and hermetically sealed register.
5. Pressure and Temperature: Up to 150 psi and 100 degrees F.
6. AWWA C702, with lead content below 0.25 percent when using non-lead-free materials on wetted surfaces according to NSF 61 and NSF 372.

B. Turbine Water Meters:

1. Flow Capacity Range: As indicated on drawings.
2. Coated ductile iron case, polymer-based cap, test port, and hermetically sealed register with low flow indicator.
3. Pressure and Temperature: Up to 175 psi and 120 degrees F.
4. AWWA C701 Class II, with lead content below 0.25 percent when using non-lead-free materials on wetted surfaces according to NSF 61 and NSF 372.

2.2 PRESSURE GAUGES

A. Manufacturers:

1. Dwyer Instruments, Inc: www.dwyer-inst.com.
2. Moeller Instrument Company, Inc: www.moellerinstrument.com.
3. Omega Engineering, Inc: www.omega.com.

B. Bourdon Tube for Liquids and Gases:

1. Dial Size and Cover: 4-1/2 inch diameter scale with polycarbonate window.
2. Dial Text and Markings: Black color on white background with scaled kPa and psi units.
3. Accuracy: ASME B40.100, adjustable commercial grade (D) with 5 percent of span.
4. Scale: Psi.

2.3 THERMOMETERS

A. General:

1. Product Compliance: ASTM E1.
2. Lens: Clear glass, except where stated.
3. Accuracy: One percent, when tested in accordance with ASTM E77, except where stated.
4. Scale: Black markings depicting single scale in degrees F where expected process value falls half-span of standard temperature range.

B. Thermometers - Dial Type:

PART 3 EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Verify Utility Service Provider piping readiness to receive meter.

B. Do not install instrumentation when areas are under construction, except for required rough-in, taps, supports, and test plugs.

3.2 INSTALLATION

A. Install metering products in accordance with manufacturer's instructions for intended fluid type and service.

B. Install water meters with inlet and outlet isolation valves in compliance with AWWA M6.

C. Install pressure gages with pulsation dampers. Provide gage cock to isolate each gage. Extend nipples to allow clearance from insulation.

D. Locate PT (pressure-temperature) test plugs adjacent to control device sockets.

3.3 SCHEDULES

A. Pressure Gages, Location:

1. Pumps
2. Expansion Tanks
3. Pressure reducing valves
4. Backflow preventers
5. Scale range shall be consistant with the service
6. Backflow preventers, 0 to ____ psi.

B. Stem Type Thermometers, Location and Scale Range:

1. Domestic hot water supply and recirculation, 0 to 150 degrees F.

END OF SECTION 220519

This page intentionally left blank

SECTION 220523 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Applications.

B. General requirements.

C. Ball valves.

D. Butterfly valves.

E. Check valves.

F. Gate valves.

G. Globe valves.

H. Plug valves.

1.2 RELATED REQUIREMENTS

A. Section 220553 - Identification for Plumbing Piping and Equipment.

B. Section 220719 - Plumbing Piping Insulation.

C. Section 221005 - Plumbing Piping.

1.3 ABBREVIATIONS AND ACRONYMS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene copolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

D. NRS: Non-rising stem.

E. OS&Y: Outside screw and yoke.

F. PTFE: Polytetrafluoroethylene.

G. RS: Rising stem.

H. SWP: Steam working pressure.

I. TFE: Tetrafluoroethylene.

1.4 REFERENCE STANDARDS

A. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.

B. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

C. ASME B16.10 - Face-to-Face and End-to-End Dimensions of Valves.

D. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.

E. ASME B16.34 - Valves - Flanged, Threaded and Welding End.

F. ASME B31.9 - Building Services Piping.

G. ASTM A48/A48M - Standard Specification for Gray Iron Castings.

H. ASTM A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

I. ASTM B62 - Standard Specification for Composition Bronze or Ounce Metal Castings.

J. AWWA C606 - Grooved and Shouldered Joints.

K. MSS SP-45 - Bypass and Drain Connections.

L. MSS SP-78 - Gray Iron Plug Valves, Flanged and Threaded Ends.

M. MSS SP-80 - Bronze Gate, Globe, Angle, and Check Valves.

N. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on valves including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.

C. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

D. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listings.

1.6 QUALITY ASSURANCE

A. Manufacturer:

1. Obtain valves for each valve type from single manufacturer.

2. Company must specialize in manufacturing products specified in this section, with not less than three years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Minimize exposure of operable surfaces by setting plug and ball valves to open position.

2. Protect valve parts exposed to piped medium against rust and corrosion.

3. Protect valve piping connections such as grooves, weld ends, threads, and flange faces.
4. Adjust globe, gate, and angle valves to the closed position to avoid clattering.
5. Secure check valves in either the closed position or open position.
6. Adjust butterfly valves to closed or partially closed position.

B. Use the following precautions during storage:

1. Maintain valve end protection and protect flanges and specialties from dirt.
   a. Provide temporary inlet and outlet caps.
   b. Maintain caps in place until installation.
2. Store valves in shipping containers and maintain in place until installation.
   a. Store valves indoors in dry environment.
   b. Store valves off the ground in watertight enclosures when indoor storage is not an option.

1.8 EXERCISE THE FOLLOWING PRECAUTIONS FOR HANDLING:

A. Handle large valves with sling, modified to avoid damage to exposed parts.

B. Avoid the use of operating handles or stems as rigging or lifting points.

PART 2 PRODUCTS

2.1 APPLICATIONS

A. See Drawings for specific valve locations in addition to those locations listed below.

B. Provide the following valves for the applications if not indicated on drawings:

1. Shutoff: Ball, butterfly, gate or plug.
2. Dead-End: Single-flange butterfly (lug) type.
3. Throttling: Provide globe, angle, ball, or butterfly.
4. Swing Check (Pump Outlet):
   a. 2 NPS and Smaller: Bronze swing check valves with bronze disc.
   b. 2-1/2 NPS and Larger for Domestic Water: Iron swing check valves with closure control, metal or resilient seat check valves.
   c. 2-1/2 NPS and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.

C. Substitutions of valves with higher CWP classes or SWP ratings for same valve types are permitted when specified CWP ratings or SWP classes are not available.

D. Required Valve End Connections for Non-Wafer Types:

1. Steel Pipe:

a. 2 NPS and Smaller: Threaded ends.

b. 2-1/2 NPS to 4 NPS: Grooved or flanged ends except where threaded valve-end option is indicated in valve schedules below.

c. 5 NPS and Larger: Grooved or flanged ends.

2. Copper Tube:

a. 2 NPS and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.

b. 2-1/2 NPS to 4 NPS: Grooved or flanged ends except where threaded valve-end option is indicated in valve schedules below.

c. 5 NPS and Larger: Grooved or flanged ends.

E. Domestic, Hot and Cold Water Valves:

1. 2 NPS and Smaller:

a. Bronze and Brass: Provide with solder-joint or _____ ends.

b. Bronze Angle: Class 125, bronze disc.

c. Ball: One piece, full port, brass or _____ with brass trim.

d. Bronze Swing Check: Class 125, bronze disc.

2. 2-1/2 NPS and Larger:

a. Iron, 2-1/2 NPS to 4 NPS: Provide with threaded or _____ ends.

b. Iron Ball: Class 150.

c. Iron Single-Flange Butterfly: 200 CWP, EPDM seat, aluminum-bronze disc.

d. Iron Grooved-End Butterfly: 175 CWP.

e. Iron Swing Check: Class 125, metal seats.

f. Iron Swing Check with Closure Control: Class 125, lever and spring.

g. Iron Grooved-End Swing Check: 300 CWP.

h. Iron Center-Guided Check: Class 125, compact-wafer, metal seat.

i. Iron Plate-Type Check: Class 125; single plate; metal seat.

j. Iron Gate: Class 125, NRS.

k. Iron Globe: Class 125.

2.2 GENERAL REQUIREMENTS

A. Valve Pressure and Temperature Ratings: No less than rating indicated; as required for system pressures and temperatures.

B. Valve Sizes: Match upstream piping unless otherwise indicated.

C. Valve Actuator Types:

1. Gear Actuator: Quarter-turn valves 8 NPS and larger.

2. Handwheel: Valves other than quarter-turn types.

3. Hand Lever: Quarter-turn valves 6 NPS and smaller except plug valves.

4. Wrench: Plug valves with square heads.

5. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator, of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

D. Valves in Insulated Piping: With 2 NPS stem extensions and the following features:

1. Gate Valves: Rising stem.

2. Ball Valves: Extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

3. Butterfly Valves: Extended neck.

4. Memory Stops: Fully adjustable after insulation is installed.

E. Valve-End Connections:

1. Threaded End Valves: ASME B1.20.1.

2. Flanges on Iron Valves: ASME B16.1 for flanges on iron valves.

3. Pipe Flanges and Flanged Fittings 1/2 NPS through 24 NPS: ASME B16.5.

4. Solder Joint Connections: ASME B16.18.

5. Grooved End Connections: AWWA C606.

F. General ASME Compliance:

1. Ferrous Valve Dimensions and Design Criteria: ASME B16.10 and ASME B16.34.

2. Solder-joint Connections: ASME B16.18.

3. Building Services Piping Valves: ASME B31.9.

G. Valve Materials for Potable Water: NSF 61 and NSF 372.

H. Bronze Valves:

1. Fabricate from dezincification resistant material.

2. Copper alloys containing more than 15 percent zinc are not permitted.

I. Valve Bypass and Drain Connections: MSS SP-45.

J. Source Limitations: Obtain each valve type from a single manufacturer.

2.3 BRONZE ANGLE VALVES

A. Class 125: CWP Rating: 200 psig:.

1. Comply with MSS SP-80, Type 1.

2. Body: Bronze; ASTM B62, with integral seat and screw in bonnet.

3. Ends: Threaded.

4. Stem: Bronze.

5. Disc: Bronze.

6. Packing: Asbestos free.

7. Handwheel: Bronze or aluminum.

2.4 BRASS BALL VALVES

A. Three Piece, Full Port with Stainless Steel Trim:

1. Comply with MSS SP-110.

2. SWP Rating: 150 psig.

3. CWP Rating: 600 psig.

4. Body: Forged brass.

5. Ends: Threaded.

6. Seats: PTFE.

7. Stem: Stainless steel.

8. Ball: Stainless steel, vented.

2.5 BRONZE BALL VALVES

2.6 IRON, SINGLE FLANGE BUTTERFLY VALVES

2.7 IRON, GROOVED-END BUTTERFLY VALVES

2.8 BRONZE SWING CHECK VALVES

2.9 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

2.10 BRONZE GATE VALVES

A. Non-Rising Stem (NRS):

1. Comply with MSS SP-80, Type I.
2. Class 125: CWP Rating: 200 psig:.
3. Body: ASTM B62, bronze with integral seat and screw-in bonnet.
4. Ends: Threaded or solder joint joint.
5. Stem: Bronze.
6. Disc: Solid wedge; bronze.
7. Packing: Asbestos free.
8. Handwheel: Malleable iron, bronze, or aluminum.

2.11 LUBRICATED PLUG VALVES

A. Regular Gland with Flanged Ends:

1. Comply with MSS SP-78, Type II.
2. Class 125: CWP Rating: 200 psig.
3. Body: ASTM A48/A48M or ASTM A126, cast iron with lubrication sealing system.
4. Pattern: Regular or short.
5. Plug: Cast iron or bronze with sealant groove.

PART 3 EXECUTION

3.1 EXAMINATION

A. Discard all packing materials and verify that valve interior, including threads and flanges are completely clean without signs of damage or degradation that could result in leakage.

B. Verify valve parts to be fully operational in all positions from closed to fully open.

C. Confirm gasket material to be suitable for the service, to be of correct size, and without defects that could compromise effectiveness.

D. Should valve is determined to be defective, replace with new valve.

3.2 INSTALLATION

A. Provide unions or flanges with valves to facilitate equipment removal and maintenance while maintaining system operation and full accessibility for servicing.

B. Provide separate valve support as required and locate valve with stem at or above center of piping, maintaining unimpeded stem movement.

C. Where valve support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.

D. Install check valves where necessary to maintain direction of flow as follows:

1. Lift Check: Install with stem plumb and vertical.

2. Swing Check: Install horizontal maintaining hinge pin level.

E. Provide chainwheels on operators for valves 4 NPS and larger where located 96 NPS or more above finished floor, terminating 60 NPS above finished floor.

END OF SECTION 220523

SECTION 220529 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Strut systems for pipe or equipment support.

B. Beam clamps.

C. Pipe hangers.

D. Pipe rollers and roller supports.

E. Pipe supports, guides, shields, and saddles.

F. Seismic bracing hardware.

G. Nonpenetrating rooftop supports for low-slope roofs.

H. Anchors and fasteners.

1.2 RELATED REQUIREMENTS

A. Section 055000 - Metal Fabrications.

B. Section 220548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for metal channel (strut) framing systems, nonpenetrating rooftop supports, post-installed concrete and masonry anchors, and thermal insulated pipe supports.

1. Fiberglass Strut Channel Framing Systems: Include requirements for strength derating according to ambient temperature.

C. Shop Drawings: Include details for fabricated hangers and supports where materials or methods other than those indicated are proposed for substitution.

1.4 DELIVERY, STORAGE, AND HANDLING

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Provide required hardware to hang or support piping, equipment, or fixtures with related accessories as necessary to complete installation of plumbing work.

B. Provide hardware products listed, classified, and labeled as suitable for intended purpose.

C. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of _____. Include consideration for vibration, equipment operation, and shock loads where applicable.

D. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.

E. Fire Resistance: Provide hardware rated for 60 minutes resistance unless specifically indicated by the authority having jurisdiction.

F. Vibration Isolation and Seismic Restraint Requirements: See Section 220548.

G. Materials for Metal Fabricated Supports: Comply with Section 055000.

1. Zinc-Plated Steel: Electroplated in accordance with ASTM B633 unless stated otherwise.

2. Galvanized Steel: Hot-dip galvanized in accordance with ASTM A123/A123M or ASTM A153/A153M unless stated otherwise.

H. Corrosion Resistance: Use corrosion-resistant metal-based materials fully compatible with exposed piping materials and suitable for the environment where installed.

2.2 PREFABRICATED TRAPEZE-FRAMED SYSTEMS

2.3 STRUT SYSTEMS FOR PIPE OR EQUIPMENT SUPPORT

A. Hanger Rods:

1. Threaded zinc-plated steel unless otherwise indicated.

B. Channel Nuts:

1. Provide carbon steel channel nut with epoxy copper or zinc finish and long, regular, or short spring as indicated on drawings.

C. Cable Hanging System Kits:

1. Manufacturers:

a. B-Line, a brand of Eaton Corporation; _____: www.eaton.com/#sle.

b. Ductmate Industries, Inc; _____: ductmate.com/#sle.

2. Provide cable-wire in bulk or pre-cut lengths with respective cable hangers as required to hold minimum weight of 120 lb.

2.4 BEAM CLAMPS

A. Manufacturers:

2.5 PIPE CLAMPS

A. Riser Clamps:

1. Manufacturers:

2. For insulated pipe runs, provide two bolt-type clamps designed for installation under insulation.

3. MSS SP-58 type 1 or 8, carbon steel or steel with epoxy plated, plain, stainless steel, or zinc plated finish.

4. UL (DIR) listed: Pipe sizes 1/2 to 8 inch.

B. Strut Clamps:

1. Pipe Clamp: Two-piece rigid, universal, or outer diameter type, carbon steel with epoxy copper or zinc finish.

2.6 PIPE ROLLERS AND ROLLER SUPPORTS

A. Manufacturers:

2.7 PIPE SUPPORTS, GUIDES, SHIELDS, AND SADDLES

A. Dielectric Barriers: Provide between metallic supports and metallic piping and associated items of dissimilar type; acceptable dielectric barriers include rubber or plastic sheets or coatings attached securely to pipe or item.

B. Pipe Shields for Insulated Piping:

1. MSS SP-58 type 40, ASTM A1011/A1011M steel or ASTM A653/A653M carbon steel.

2. General Construction and Requirements:

a. Surface Burning Characteristics: Comply with ASTM E84 or UL 723.

b. Shields Material: UV-resistant polypropylene with glass fill.

c. Maximum Insulated Pipe Outer Diameter: 12-5/8 inch.

d. Service Temperature: Minus 40 to 178 degrees F.

e. Pipe shields to be provided at hanger, support, and guide locations on pipe requiring insulation or additional support.

C. Pipe Supports:

1. Material: ASTM A395/A395M ductile iron, ASTM A36/A36M carbon steel, ASTM A47/A47M malleable iron, ASTM A181/A181M forged steel, or ASTM A283/A283M steel.

2. Liquid Temperatures Up to 122 degrees F:

a. Overhead Support: MSS SP-58 types 1, 3 through 12 clamps.

b. Support From Below: MSS SP-58 types 35 through 38.

D. Pipe Supports, Thermal Insulated:

1. General Requirements:

a. Insulated pipe supports to be provided at hanger, support, and guide locations on pipe requiring insulation or additional support.

b. Surface Burning Characteristics: Flame spread index/smoke developed index of 5/30, maximum, when tested in accordance with ASTM E84 or UL 723.

c. Provide pipe supports for 1/2 to 30 inch iron pipes.

d. Insulation inserts to consist of rigid phenolic foam insulation surrounded by 360 degree, PVC jacketing.

2. PVC Jacket:

a. Pipe insulation protection shields to be provided with ball bearing hinge and locking seam.

b. Moisture Vapor Transmission: 0.0071 perm inch, when tested in accordance with ASTM E96/E96M.

c. Minimum Thickness: 60 mil, 0.06 inch.

E. Copper Pipe Supports:

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that mounting surfaces are ready to receive support and attachment components.

B. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

C. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.

D. Unless specifically indicated or approved by Engineer, do not provide support from suspended ceiling support system or ceiling grid.

E. Unless specifically indicated or approved by Engineer, do not provide support from roof deck.

F. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

G. Provide thermal insulated pipe supports complete with hangers and accessories. Install thermal insulated pipe supports during the installation of the piping system.

3.3 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Inspect support and attachment components for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

END OF SECTION 220529

This page intentionally left blank

SECTION 220533 - HEAT TRACING FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Self-regulating temperature maintenance electric heating cable.

B. Accessories.

C. Controls.

1.2 RELATED REQUIREMENTS

A. Section 220719 - Plumbing Piping Insulation.

1.3 REFERENCE STANDARDS

A. UL515 - Electric Resistance Heat Tracing for Comercial Applications

B. IEEE 515.1 - IEEE Standard for the Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Commercial Applications.

C. NFPA 70 - National Electrical Code.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

C. Coordinate the work with other trades to provide circuit breaker ratings suitable for installed circuit lengths.

1.5 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for electric heat tracing.

C. Shop Drawings: Indicate electric heat tracing layout, including power connections, tees, end seal, cable length and circuit cable length..

D. Manufacturer's Installation Instructions: Indicate installation instructions and recommendations.

E. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions of equipment and controls, maintenance and repair data, and parts listings.

1.6 QUALITY ASSURANCE

A. Qualifications

1. Manufacturers

    a. Manufacturer to show minimum of thirty (30) year experience in manufacturing electric self-regulating heating cables.

    b. Manufacturer will be ISO-9001 registered.

    c. Manufacturer to provide products consistent with IEEE 515.1 and CSA 22.2 No 130-03 requirements.

    d. The self-regulating temperature maintenance cable shall be qualified and tested to demonstrate a useful lifetime in excess of 40 years.

    e. The manufacturer shall provide an extensive global reference list for this application, including installations that have been in operation for over 15 years.

2. Installers

    a. System installer shall have complete understanding of product and product literature from manufacturer or authorized representative prior to installation. Electrical connections shall be performed by a licensed electrician.

3. Electrical Components, Devices, and Accessories: Listed and labelled as defined in NFPA 70, Article 100, by a Nationally Recognized Testing Laboratory (NRTL), and marked for intended use.

B. Certifications

1. The system (heating cable, connection kits, and controller) shall be UL Listed, CSA Certified, or FM Approved for hot water temperature maintenance.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery And Acceptance Requirements

1. Deliver, store and handle products to prevent their deterioration or damage due to moisture, temperature changes, contaminates or other causes.

2. Deliver products to site in original, unopened containers or packages with intact and legible manufacturers' labels identifying the following:

    a. Product and Manufacturer

    b. Length/Quantity

    c. Lot Number

    d. Installation and Operation Manual

    e. MSDS (if applicable)

B. Storage And Handling Requirements

1. Store the heating cable in a clean, dry location with a temperature range 0°F (-18°C) to 140°F (60°C).

2. Protect the heating cable from mechanical damage.

1.8 WARRANTY

A. Manufacturer Warranty

1. Manufacturer shall warrant all goods listed below for two (2) years from date of purchase against faulty workmanship and use of defective materials when such goods are properly installed, operated, and maintained according to product documentation:

a. Heating cables, connection kits & accessories

b. Thermostats, controllers, panels contactors, sensors and accessories

B. Special Warranty -

1. Contractor shall provide the owner an extended product warranty for the heat tracing products listed below. The contractor must complete and forward to owner the Installation, Inspection or Commissioning Record(s) located in the back of installation manual for the heat trace system being installed, and complete the online warranty registration form within thirty (30) days from the date of installation, otherwise only standard limited warranty applies.

a. Heating Cable & Components = Ten (10) Years from Date of Purchase

2. Products not automatically offered with a 10 year manufacturer’s warranty, as a standard matter of course, will not be allowed. Warranty information must be published on the manufacturer's website

PART 2 PRODUCTS

2.1 HEAT TRACING SYSTEM

A. Manufacturers:

1. Basis of Design Manufacturer: Subject to the compliance with requirements, provide Raychem heat tracing products of Pentair Thermal Building Solutions. www.pentairthermal.com

a. Substitutions: See Section 016000 - Product Requirements.

B. Materials

1. Heating cables shall be Raychem HWAT-R2, self-regulating temperature maintenance heating cables specifically designed for this application, tested and approved to IEEE 515.1 and CSA 22.2 No 130-03.

a. The construction of the self-regulating temperature maintenance heating cable shall consist of a continuous core of conductive polymer that is radiation crosslinked, extruded between two (2) 16 AWG nickel?plated copper bus wires that varies its power output in response to pipe temperature changes.

b. The heating cable shall have a modified polyolefin inner jacket for dielectric integrity long life expectancy.

c. The heating cable shall have a laminated aluminum foil layer (Mylar wrap) for additional mechanical protection and shall act as a plasticizer diffusion shield.

d. The heating cable shall have a thicker gauge (5/24) tinned copper braid with minimum 70% coverage for ground path and mechanical ruggedness.

e. The heating cable shall have a polyolefin outer jacket printed with cable model #, agency listings, batch number and meter marks (for ease of installation within maximum circuit length.

f. The heating cable shall have a self-regulating factor of at least 70 percent for HWAT-R2. The self-regulating factor is defined as the percent reduction of the heating cable power output going from a 40°F pipe temperature to 150°F pipe temperature

g. The heating cable shall operate on line voltages of 208 volts without the use of transformers

h. The heating cable shall be included in a UL Listed, CSA Certified, or FM Approved system.

i. Constant wattage cables are not acceptable.

2. Heating Cable Connection Kits

a. Heating cable connection kits shall be Raychem RayClic.

b. Contractor shall provide power connections, splices/tees, and end seal kits to properly connect & terminate the heating cable.

c. All splices, tees and crosses shall be installed underneath the pipe insulation with service loops installed to allow for future service of the piping.

d. Connection kits shall be rated Type 4X to prevent water ingress and corrosion. All components shall be UV stabilized and shall not require the installing contractor to cut into the heating-cable core to expose the bus wires.

e. Connection kits shall be UL Listed, CSA Certified, and FM approved.

3. Attachment of Heating Cable

a. Attachment method of heating cable to the piping shall be Raychem model

1) GT-66 - general purpose, high temperature, glass filament tape for installation @ 40°F and above. Contractor to fix the heating cable to the pipe every 12” by wrapping the GT-66 tape around the pipe & over the heating cable.

2) AT-180 - aluminum tape, high temperature for all plastic piping for installations @ 32°F and above. Tape is installed lengthwise over the heating cable.

b. Metal cable ties are not permitted

4. Identification of Heating Cable System

a. Contractor shall provide & install Raychem model ETL “Electric Heat Traced” labels on exterior of pipe insulation every ten (10) feet on opposite sides of the pipe for the entire length of heat traced piping.

b. In addition, all splices, tees, crosses and power connections shall be labeled on the exterior of the pipe insulation indicating that presence of a connection kit.

5. Energy Efficient Control System

a. Single Circuit Local Digital Controller

1) All self-regulating temperature maintenance cable shall be controlled via an energy saving, programmable single circuit controller to provide adjustable maintained temperatures in the range of 105?F (40?C) to 140?F (60?C), known as Raychem HWAT-ECO, manufactured by Pentair.

2) Digital controller shall operate on 208 - 240 V.

3) Pre-programmed duty cycles based on ambient temperature ranging from

4) 60 - 80°F.

5) The pre-programmed duty cycles shall be based on Raychem HWAT heating cables only. No other heating cables may be used with the HWAT-ECO controller.

6) Flexible temperature control from 105 - 140°F.

7) Three programmable temperature set points for maximum energy efficiency: Maintain, Economy, Off

8) Controller shall have heat cycle setting.

9) Heating cable manufacturer shall provide a local digital controller with 24/7 pre-programmed time based profiles specific to the selected heating cable application such as schools, hospitals and prisons.

10) Controller shall have remote temperature setting through 0 - 10 Vdc BMS interface.

11) Controller shall have a pipe temperature sensor, low/high pipe temperatures alarms and high temperature cut-out to maximize the energy efficiency of the HWAT system by verifying that the hot pipe temperature is at the correct temperature (low temperature alarm); and to monitor and alarm if the pipe temperature is hotter than intended (high temperature alarm and cut-out).

12) Multiple HWAT-ECO controllers can be networked together (master/slave association) to allow BMS to interface with a master HWAT-ECO to control cloned circuits, and to minimize the number of HWAT-ECO controllers that must be individually programmed.

13) Controller shall have 24 A switching capacity rating.

14) Enclosure type shall be NEMA 12 (ABS).

15) Controller shall have NO/NC alarm contacts. Controller shall alarm on:

(a) Loss of power

(b) Controller reinitialized

(c) Internal controller temperature too high

(d) Pipe temperature too high

(e) Pipe temperature too low

(f) Master/slave error

16) Digital controller shall have c-UL-us approvals specifically for use with the HWAT-R2 heating cable.

6. Thermal Pipe Insulation

a. Pipes must be thermally insulated in accordance with the HWAT Design Guide requirements. No deviation from the insulation schedule will be allowed.

b. Thermal insulation must be a type that is flame retardant (closed?cell or fiberglass) with waterproof covering.

7. Approval

a. The system (heating cable, connection kits, and controller) shall be UL Listed, CSA Certified, or FM Approved for hot water temperature maintenance.

b. The temperature maintenance system shall have a design, installation and operating manual specific to domestic hot water piping.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verification Of Conditions

1. Prior to installation of heating cable system, verify that all piping which will be heat trace has passed all hydrostatic/pressure test and is signed off by plumbing inspector.

B. Preinstalling Testing

1. Prior to installing heating cable on the piping an insulation resistance test shall be performed by the installing contractor to ensure integrity of heating cable as describe in the installation & maintenance manual.

3.2 PREPARATION

A. Protection Of In-Place Conditions

1. All heating cable ends shall be protected from moisture ingress until cable is terminated.

2. Acceptable methods are installing RayClic-E end seals.

3.3 INSTALLATION

A. Comply with manufacturer’s recommendations in the HWAT System Installation and Operation Manual - H57548.

B. Apply the heating cable linearly on the pipe after piping has successfully completed any pressure tests. Secure the heating cable to piping with fiberglass tape.

C. Install electric heating cable according to the drawings and the manufacturer’s instructions. The installer shall be responsible for providing a complete functional system, installed in accordance with applicable national and local requirements.

D. Any deviation in circuitry, insulation, or piping material must be approved by engineer prior to execution.

E. Distribution pipes & express risers must be isolated electrically. Each shall have their own circuit(s).

F. Branch lines shall be grouped electrically based on location.

G. All power connections must be located in accessible areas. Access panels for power connection shall be a minimum of 12” x 12” and within reach of power connection kit.

H. Refer to Electrical Specification for power connection locations.

I. All power, tee, and splice connection points shall be shown on the plumbing as-built.

J. Installation training, provided by an authorized manufacturer's representative must be completed prior to work mobilization.

K. Interface With Other Work

1. Grounding of controller shall be equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

2. Connection of all electrical wiring shall be according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3. Pipe Insulation shall be thermally insulated in accordance with the HWAT design guide requirements.

3.4 FIELD QUALITY CONTROL

A. Initial start-up and field testing (commissioning) of the system shall be performed by factory technician or factory representative per the owner's requirements.

B. Field Tests And Inspections

1. The system shall be commissioned in accordance to the HWAT Installation and Operation manual.

2. The heating cable circuit integrity shall be tested using a 2500 Vdc megohmmeter at the following intervals:

a. Before installing the heating cable

b. After heating cable has been installed onto the pipe

c. After installing connection kits

d. After the thermal insulation is installed onto the pipe

e. Prior to initial start?up (commissioning)

f. As part of the regular system maintenance

g. Minimum acceptable insulation resistance shall be 1000 megohms or greater

3. The technician shall verify the insulation schedule is in compliance with the HWAT Installation and Operation manual.

4. The technician shall verify that the HWAT-ECO control parameters are set to the application requirements.

5. The technician shall verify that the HWAT-ECO alarm contacts are corrected connected to the BMS.

C. Non-Conforming Work

1. Any heat tracing circuit which fails the any of the above test must be corrected prior to commissioning or startup of the system.

3.5 SYSTEM STARTUP

A. Provide a factory-certified technician or manufacturer's representative for startup & commissioning of the heat tracing system and controller.

B. Coordinate all controller settings with plumbing engineer prior to programming the controller.

C. Provide commissioning report in submittals package to owner.

3.6 EXAMINATION

A. Verify that piping and equipment are ready to receive work.

B. Verify field measurements are as indicated on shop drawings.

C. Verify required power is available, in proper location, and ready for use.

3.7 PREPARATION

A. Clean exposed surfaces prior to installation.

B. Prepare surfaces using approved methods as recommended by manufacturer.

3.8 INSTALLATION

A. Install in accordance with manufacturer's written installation instructions.

B. Comply with installation requirements of IEEE 515.1 and NFPA 70, Article 427.

C. Apply heating cable linearly on pipe with fiberglass tape only after piping has successfully completed any required pressure testing.

D. Comply with applicable local building codes and requirements of authorities having jurisdiction.

E. Identification:

1. After thermal insulation installation, apply external pipeline decals to indicate presence of the thermal insulation cladding at intervals not to exceed 20 ft including cladding over each valve or other equipment that may require maintenance.

3.9 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Perform start-up by factory technician or factory representative as per Owner's requirements.

C. Field Testing and Inspections:

1. Commission system in accordance with installation and operation manual.

2. Inspect for sources of water entry and proper sealing.

3. Inspect weather barrier to confirm that no sharp edges are contacting the trace heating.

4. Insulation Resistance: Greater than 20 megohms at a test voltage of 2500 VDC for polymer insulated trace heaters.

5. Test heating cable integrity with megohmmeter at the following intervals:

6. Measure voltage and current at each unit.

7. Controls:

3.10 CLOSEOUT ACTIVITIES

END OF SECTION 220533

SECTION 220553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Nameplates.

B. Tags.

C. Stencils.

D. Pipe markers.

1.2 RELATED REQUIREMENTS

A. Section 221005 - Plumbing Piping

B. Section 220719 - Plumbing Piping Insulationa

1.3 REFERENCE STANDARDS

A. ASME A13.1 - Scheme for the Identification of Piping Systems.

B. ASTM D709 - Standard Specification for Laminated Thermosetting Materials.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. List: Submit list of wording, symbols, letter size, and color coding for mechanical identification.

C. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Product Data: Provide manufacturers catalog literature for each product required.

E. Manufacturer's Installation Instructions: Indicate special procedures, and installation.

F. Project Record Documents: Record actual locations of tagged valves.

PART 2 PRODUCTS

2.1 IDENTIFICATION APPLICATIONS

A. Heat Transfer Equipment: Nameplates.

B. Piping: Pipe markers.

C. Pumps: Nameplates.

D. Small-sized Equipment: Tags.

E. Tanks: Nameplates.

F. Valves: Tags.

G. Water Treatment Devices: Nameplates.

2.2 NAMEPLATES

A. Manufacturers:

1. Brimar Industries, Inc.: www.pipemarker.com/#sle.
2. Kolbi Pipe Marker Co.: www.kolbipipemarkers.com.
3. Seton Identification Products: www.seton.com.

B. Description: Laminated three-layer plastic with engraved letters.

1. Letter Color: White.
2. Letter Height: 1/4 inch.
3. Background Color: Black.
4. Plastic: Comply with ASTM D709.

2.3 TAGS

A. Manufacturers:

1. Advanced Graphic Engraving: www.advancedgraphicengraving.com.
2. Brady Corporation: www.bradycorp.com.
3. Brimar Industries, Inc.: www.pipemarker.com/#sle.
4. Kolbi Pipe Marker Co.: www.kolbipipemarkers.com.
5. Seton Identification Products: www.seton.com.

B. Plastic Tags: Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inch diameter.

C. Valve Tag Chart: Typewritten letter size list in anodized aluminum frame.

2.4 PIPE MARKERS

A. Manufacturers:

1. Brady Corporation: www.bradycorp.com.
2. Brimar Industries, Inc: www.pipemarker.com/#sle.
3. Kolbi Pipe Marker Co: www.kolbipipemarkers.com.
4. MIFAB, Inc: www.mifab.com.

5. Seton Identification Products: www.seton.com.

B. Comply with ASME A13.1.

C. Plastic Pipe Markers: Factory fabricated, flexible, semi- rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.

D. Plastic Tape Pipe Markers: Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

E. Underground Plastic Pipe Markers: Bright colored continuously printed plastic ribbon tape, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service.

F. Color code as follows:

1. Potable, Cooling, Boiler, Feed, Other Water: Green with white letters.

2. Fire Quenching Fluids: Red with white letters.

3. Toxic and Corrosive Fluids: Orange with black letters.

4. Flammable Fluids: Yellow with black letters.

5. Combustible Fluids: Brown with white letters.

6. Compressed Air: Blue with white letters.

PART 3 EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

3.2 INSTALLATION

A. Install and permanently fasten equipment nameplates on each major item of mechanical equipment. Locate nameplates where accessible and visible. Equipment nomenclature to directly correspond with drawings. Include nameplates for the following general categories of equipment:

1. Water heaters.

2. Pumps.

3. Balancing valves.

4. Grease Traps

5. Expansion tanks

B. Install equipment markers with permanent adhesive on or near each major item of mechanical equipment.

1. Letter Size: Minimum 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

2. Data: Distinguish among multiple units, indicate operational requirements, indicate safety and emergency precautions, warn of hazards and improper operations, and identify units.

3.3 PIPING IDENTIFICATION

A. Install manufactured pipe markers indicating service on all piping system. Install with flow indication arrows showing direction of flow.

1. Self-adhesive pipe markers with flow arrows. Use color-coded, self-adhesive plastic tape, at least 1-1/2 inches wide, lapped at least 3 inches at both ends of pipe marker, and covering full circumference of pipe.

B. Locate pipe markers and color bands where piping is exposed in finished spaces; machine rooms; accessible maintenance spaces such as shafts and plenums; and exterior non concealed locations as follows:

1. Near each valve and balance device.

2. Near each branch connection, excluding short takeoffs for fixtures. Where flow pattern is not obvious, mark each pipe at branch.

3. Near penetrations through walls, floors, ceilings, and no accessible enclosures.

4. At access doors and similar access points that permit view of concealed piping.

5. Near major equipment items and other points of origination and termination.

6. Spaced at maximum intervals of 20 feet along each run. Reduce intervals to 20 feet in areas of congested piping and equipment.

7. On piping above removable acoustical ceilings. Omit intermediately spaced markers.

3.4 EXPANSION TANK

A. Provide self-adhesive tag attached to tank indicating system fill pressure

3.5 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

a. Cold water: 1-1/2 inches, round.

b. Hot Water: 1-1/2 inches, round

2. Valve-Tag Color:

a. Cold Water Natural.

b. Hot Water: Natural.

3. Letter Color:

a. Cold Water: Black.

b. Hot Water: Black.

3.6 ADJUSTING

A. relocate plumbing identification materials and devices that have become visually blocked by other work.

B. Do not begin installation until substrates have been properly prepared.

END OF SECTION 220553

This page intentionally left blank

SECTION 220719 - PLUMBING PIPING INSULATION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Glass fiber insulation.

B. Jacketing and accessories.

1.2 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 221005 - Plumbing Piping: Placement of hangers and hanger inserts.

1.3 REFERENCE STANDARDS

A. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

B. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.

C. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials.

F. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years of documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified in this section with minimum three years of experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

1.7 FIELD CONDITIONS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.

2.2 GLASS FIBER INSULATION

A. Manufacturers:

1. CertainTeed Corporation: www.certainteed.com.

2. Johns Manville Corporation: www.jm.com.

3. Knauf Insulation: www.knaufusa.com.

4. Owens Corning Corporation; Fiberglas Pipe Insulation ASJ: www.ocbuildingspec.com/#sle.

5. Owens Corning Corporation; VaporWick Pipe Insulation: www.ocbuildingspec.com/#sle.

B. Insulation: ASTM C547 and ASTM C795; rigid molded, noncombustible.

1. K Value: ASTM C177, 0.24 at 75 degrees F.

2. Maximum Service Temperature: 850 degrees F.

3. Maximum Moisture Absorption: 0.2 percent by volume.

C. Vapor Barrier Jacket: White Kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with ASTM E96/E96M of 0.02 perm.

D. Vapor Barrier Lap Adhesive: Compatible with insulation.

2.3 JACKETING AND ACCESSORIES

A. PVC Plastic Jacket:

1. Manufacturers:

a. Johns Manville Corporation: www.jm.com.

2. Jacket: One piece molded type fitting covers and sheet material, off-white color.

a. Minimum Service Temperature: 0 degrees F.

b. Maximum Service Temperature: 150 degrees F.

c. Moisture Vapor Permeability: 0.002 perm inch, maximum, when tested in accordance with ASTM E96/E96M.

d. Thickness: 10 mil, 0.010 inch.

e. Connections: Brush on welding adhesive.

3. Covering Adhesive Mastic: Compatible with insulation.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that piping has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with North American Insulation Manufacturers Association (NAIMA) National Insulation Standards.

C. Exposed Piping: Locate insulation and cover seams in least visible locations.

D. Insulated pipes conveying fluids below ambient temperature: Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.

E. Glass fiber insulated pipes conveying fluids below ambient temperature:

1. Provide vapor barrier jackets, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.

2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.

F. For hot piping conveying fluids 140 degrees F or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.

G. Glass fiber insulated pipes conveying fluids above ambient temperature:

1. Provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples.

2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.

H. Inserts and Shields:

1. Application: Piping 1-1/2 inches diameter or larger.

2. Shields: Galvanized steel between pipe hangers or pipe hanger rolls and inserts.

3. Insert Location: Between support shield and piping and under the finish jacket.

4. Insert Configuration: Minimum 6 inches long, of same thickness and contour as adjoining insulation; may be factory fabricated.

5. Insert Material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

I. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions. At fire separations, see Section 078400.

J. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces (less than 10 feet above finished floor): Finish with PVC jacket and fitting covers.

K. Exterior Applications: Provide vapor barrier jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement. Cover with aluminum jacket with seams located on bottom side of horizontal piping.

L. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size large enough to enclose pipe and heat tracer. Cover with aluminum jacket with seams located on bottom side of horizontal piping.

3.3 SCHEDULES

A. Plumbing Systems:

1. Domestic Cold Water Supply:

a. Glass Fiber Insulation:

1) less than 1" pipe size: 1/2" thickness

2) 1" pipe size and larger: 1" thickness

2. Domestic Hot Water Supply:

a. Glass Fiber Insulation:

1) 1" pipe size and less: 1" thickness

2) 1-1/4" pipe size: 1-1/2" thickness (1.5" thickness if heat traced)

3) 1-1/2" pipe size: 1.5" thickness (1.5" thickness if heat traced)

4) 2" pipe size: 1.5" thickness (2" thickness if heat traced)

5) 2.5" pipe size: 1.5" thickness (2.5" thickness if heat traced)

6) 3" pipe size: 1.5" thickness (3" thickness if heat traced)

3. Domestic Hot Water Recirculation:

a. Glass Fiber Insulation:

1) All sizes: 1" thickness

2)

4. Roof Drain Bodies:

a. All Service Jacket

1) All sizes: 1-1/2" thickness

5. Roof Drainage Above Grade:

a. Glass Fiber Insulation:

1) All sizes: 1" thickness

B. Other Systems:

1. Kitchen Evaporator Coil Condensate:

a. Glass Fiber Insulation:

1) All sizes: 1/2" thickness

2. Kitchen Grease Waste with Heat Trace

a. Elastomeric

1) All sizes: 1" thickness

END OF SECTION 220719

This page intentionally left blank

SECTION 221005 - PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sanitary waste piping, buried within 5 feet of building.

B. Sanitary waste piping, above grade.

C. Domestic water piping, buried within 5 feet of building.

D. Domestic water piping, above grade.

E. Storm drainage piping, buried within 5 feet of building.

1. Storm drainage piping, above grade.

2. Natural gas piping, buried beyond 5 feet of building.

3. Natural gas piping, buried within 5 feet of building.

4. Natural gas piping, above grade.

5. Pipe flanges, unions, and couplings.

6. Pipe hangers and supports.

7. Pipe sleeve-seal systems.

8. Ball valves.

9. Butterfly valves.

10. Balancing valves.

11. Pressure reducing valves.

12. Pressure relief valves.

13. Pressure-temperature valves.

14. Strainers.

1.2 RELATED REQUIREMENTS

A. Section 083100 - Access Doors and Panels.

B. Section 220516 - Expansion Fittings and Loops for Plumbing Piping.

C. Section 220548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

D. Section 220553 - Identification for Plumbing Piping and Equipment.

E. Section 220719 - Plumbing Piping Insulation.

1.3 REFERENCE STANDARDS

A. ANSI LC 1/CSA 6.26 - Fuel Gas Piping Systems Using Corrugated Stainless Steel Tubing.

B. ANSI Z21.22 - American National Standard for Relief Valves for Hot Water Supply Systems.

C. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300.

D. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.

E. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.

F. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.

G. ASME B31.1 - Power Piping.

H. ASME B31.9 - Building Services Piping.

I. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators.

J. ASSE 1003 - Performance Requirements for Water Pressure Reducing Valves for Potable Water Distribution Systems.

K. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings.

L. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

M. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

N. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.

O. ASTM B32 - Standard Specification for Solder Metal.

P. ASTM B42 - Standard Specification for Seamless Copper Pipe, Standard Sizes.

Q. ASTM B813 - Standard Specification for Liquid and Paste Fluxes for Soldering of Copper and Copper Alloy Tube.

R. ASTM B828 - Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings.

S. ASTM D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.

T. ASTM D2665 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.

U. ASTM D2729 - Standard Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.

V. ASTM D2855 - Standard Practice for the Two-Step (Primer and Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets.

W. ASTM D3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.

X. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

Y. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems.

Z. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

AA. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast.

BB. AWWA C550 - Protective Interior Coatings for Valves and Hydrants.

CC. AWWA C606 - Grooved and Shouldered Joints.

DD. AWWA C651 - Disinfecting Water Mains.

EE. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.

FF. CISPI 310 - Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.

GG. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry Elements.

HH. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements.

II. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

JJ. MSS SP-67 - Butterfly Valves.

KK. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

LL. NSF 61 - Drinking Water System Components - Health Effects.

MM. NSF 372 - Drinking Water System Components - Lead Content.

NN. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

B. Welders' Certificates: Submit certification of welders' compliance with ASME BPVC-IX.

C. Shop Drawings: For non-penetrating rooftop supports, submit detailed layout developed for this project, with design calculations for loadings and spacings.

D. Sustainable Design Documentation: For soldered copper joints, submit installer's certification that the specified installation method and materials were used.

E. Project Record Documents: Record actual locations of valves.

1.5 QUALITY ASSURANCE

A. Perform work in accordance with applicable codes.

B. Valves: Manufacturer's name and pressure rating marked on valve body.

C. Welding Materials and Procedures: Comply with ASME BPVC-IX and applicable state labor regulations.

D. Welder Qualifications: Certified in accordance with ASME BPVC-IX.

E. Identify pipe with marking including size, ASTM material classification, ASTM specification, potable water certification, water pressure rating.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.7 FIELD CONDITIONS

A. Do not install underground piping when bedding is wet or frozen.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Potable Water Supply Systems: Provide piping, pipe fittings, and solder and flux (if used), that comply with NSF 61 and NSF 372 for maximum lead content; label pipe and fittings.

B. Plenum-Installed Acid Waste Piping: Flame-spread index equal or below 25 and smoke-spread index equal or below 50 according to ASTM E84 or UL 723 tests.

2.2 SANITARY WASTE PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Cast Iron Pipe: CISPI 301, hubless.

1. Fittings: Cast iron.

2. Joints: CISPI 310, neoprene gasket and stainless steel clamp and shield assemblies.

B. PVC Pipe: ASTM D2665 or ASTM D3034.

1. Fittings: PVC.

2. Joints: Solvent welded, with ASTM D2564 solvent cement.

2.3 SANITARY WASTE PIPING, ABOVE GRADE

A. PVC Pipe: ASTM D2729.

1. Fittings: PVC.

2. Joints: Solvent welded, with ASTM D2564 solvent cement.

B. PVC Pipe: ASTM D2665.

1. Fittings: PVC.

2. Joints: Solvent welded, with ASTM D2564 solvent cement.

2.4 DOMESTIC WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Copper Pipe: ASTM B42, annealed.

1. Fittings: ASME B16.26, cast bronze.

2. Joints: Flared.

B. Ductile Iron Pipe: AWWA C151/A21.51.

1. Fittings: Ductile or gray iron, standard thickness.

2. Joints: AWWA C111/A21.11, styrene butadiene rubber (SBR) or vulcanized SBR gasket with 3/4 inch diameter rods.

2.5 DOMESTIC WATER PIPING, ABOVE GRADE

A. Copper Tube: ASTM B88 (ASTM B88M), Type L (B), Drawn (H).

1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.

2. Joints: ASTM B32, alloy Sn95 solder.

3. Mechanical Press Sealed Fittings: Double-pressed type, NSF 61 and NSF 372 approved or certified, utilizing EPDM, nontoxic, synthetic rubber sealing elements.

2.6 STORM DRAINAGE PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Cast Iron Pipe: CISPI 301, hubless, service weight.

1. Fittings: Cast iron.

2. Joints: Neoprene gaskets and stainless steel clamp-and-shield assemblies.

B. PVC Pipe: ASTM D2665 or ASTM D3034.

1. Fittings: PVC.

2. Joints: Solvent welded, with ASTM D2564 solvent cement.

2.7 STORM DRAINAGE PIPING, ABOVE GRADE

A. Cast Iron Pipe: CISPI 301, hubless, service weight.

1. Fittings: Cast iron.

2. Joints: Neoprene gaskets and stainless steel clamp-and-shield assemblies.

B. PVC Pipe: ASTM D2665.

1. Fittings: PVC.

2. Joints: Solvent welded, with ASTM D2564 solvent cement.

2.8 NATURAL GAS PIPING, BURIED BEYOND 5 FEET OF BUILDING

A. Steel Pipe: ASTM A53/A53M Schedule 40 black.

1. Fittings: ASTM A234/A234M, wrought steel welding type, with AWWA C105/A21.5 polyethylene jacket or double layer, half-lapped 10 mil polyethylene tape.

2. Joints: ASME B31.1, welded.

2.9 NATURAL GAS PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Steel Pipe: ASTM A53/A53M Schedule 40 black.

1. Fittings: ASTM A234/A234M, wrought steel welding type.

2. Joints: ASME B31.1, welded.

3. Jacket: AWWA C105/A21.5 polyethylene jacket or double layer, half-lapped 10 mil polyethylene tape.

B. Flexible Gas Piping:

1. Corrugated Stainless Steel Tubing: Comply with ANSI LC 1/CSA 6.26.

2. Fittings: Provided by piping system manufacturer.

2.10 NATURAL GAS PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53/A53M Schedule 40 black.

1. Fittings: ASME B16.3, malleable iron, or ASTM A234/A234M, wrought steel welding type.

2. Joints: Threaded or welded to ASME B31.1.

B. Flexible Gas Piping:

1. Corrugated Stainless Steel Tubing: Comply with ANSI LC 1/CSA 6.26.

2. Comply with ASTM E84.

3. Fittings: Provided by piping system manufacturer.

2.11 PIPE FLANGES, UNIONS, AND COUPLINGS

A. Unions for Pipe Sizes 3 inch and Under:

1. Ferrous Pipe: Class 150 malleable iron threaded unions.

2. Copper Tube and Pipe: Class 150 bronze unions with soldered joints.

B. Flanges for Pipe Sizes Over 1 inch:

1. Ferrous Pipe: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets.

2. Copper Tube and Pipe: Class 150 slip-on bronze flanges; preformed neoprene gaskets.

C. Mechanical Couplings for Grooved and Shouldered Joints: Two or more curved housing segments with continuous key to engage pipe groove, circular C-profile gasket, and bolts to secure and compress gasket.

1. Dimensions and Testing: In accordance with AWWA C606.

2. Housing Material: Provide ASTM A47/A47M malleable iron or ductile iron.

3. Gasket Material: EPDM suitable for operating temperature range from minus 30 degrees F to 230 degrees F.

4. Bolts and Nuts: Hot dipped galvanized or zinc-electroplated steel.

5. When pipe is field grooved, provide coupling manufacturer's grooving tools.

6. Manufacturers:

a. Grinnell Products, a Tyco Business: www.grinnell.com.

D. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

2.12 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with MSS SP-58.

1. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.

2. Overhead Supports: Individual steel rod hangers attached to structure or to trapeze hangers.
    a. Cold and Hot Pipe Sizes 6 inch and Larger: Double hangers.
3. Trapeze Hangers: Welded steel channel frames attached to structure.
4. Vertical Pipe Support: Steel riser clamp.
5. Floor Supports: Concrete pier or steel pedestal with floor flange; fixture attachment.
6. Rooftop Supports for Low-Slope Roofs: Steel pedestals with bases that rest on top of roofing membrane, not requiring any attachment to the roof structure and not penetrating the roofing assembly, with support fixtures as specified; and as follows:
    a. Bases: High-density polypropylene.
    b. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
    c. Steel Components: Stainless steel or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.
    d. Attachment and Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports; corrosion-resistant material.
    e. Height: Provide minimum clearance of 6 inches under pipe to top of roofing.
    f. Manufacturers:
        1) PHP Systems/Design: www.phpsd.com.

B. Plumbing Piping - Drain, Waste, and Vent:

1. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron, adjustable swivel, split ring.
2. Hangers for Pipe Sizes 2 inch and Over: Carbon steel, adjustable, clevis.
3. Wall Support for Pipe Sizes to 3 inch: Cast iron hook.
4. Wall Support for Pipe Sizes 4 inch and Over: Welded steel bracket and wrought steel clamp.
5. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
6. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.

C. Plumbing Piping - Water:

1. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron, adjustable swivel, split ring.
2. Hangers for Cold Pipe Sizes 2 inch and Over: Carbon steel, adjustable, clevis.

3. Hangers for Hot Pipe Sizes 2 to 4 inch: Carbon steel, adjustable, clevis.

4. Hangers for Hot Pipe Sizes 6 inch and Larger: Adjustable steel yoke, cast iron pipe roll, double hanger.

5. Wall Support for Pipe Sizes Up to 3 inch: Cast iron hook.

6. Wall Support for Pipe Sizes 4 inch and Larger: Welded steel bracket and wrought steel clamp.

7. Wall Support for Hot Pipe Sizes 6 inch and Larger: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron pipe roll.

8. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

9. Floor Support for Hot Pipe Sizes to 4 inch: Cast iron adjustable pipe saddle, locknut, nipple, floor flange, and concrete pier or steel support.

10. Floor Support for Hot Pipe Sizes 6 inch and Larger: Adjustable cast iron pipe roll and stand, steel screws, and concrete pier or steel support.

11. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.

D. Hanger Fasteners: Attach hangers to structure using appropriate fasteners, as follows:

1. Concrete Wedge Expansion Anchors: Comply with ICC-ES AC193.

2. Masonry Wedge Expansion Anchors: Comply with ICC-ES AC01.

3. Concrete Screw Type Anchors: Comply with ICC-ES AC193.

4. Masonry Screw Type Anchors: Comply with ICC-ES AC106.

5. Concrete Adhesive Type Anchors: Comply with ICC-ES AC308.

6. Other Types: As required.

2.13 PIPE SLEEVE-SEAL SYSTEMS

A. Manufacturers:

1. The Metraflex Company; MetraSeal: www.metraflex.com/#sle.

B. Modular Mechanical Seals:

1. Elastomer-based interlocking links continuously fill annular space between pipe and wall-sleeve, wall or casing opening.

2. Watertight seal between pipe and wall-sleeve, wall or casing opening.

3. Size and select seal component materials in accordance to service requirements.

4. Glass reinforced plastic pressure end plates.

2.14 BALL VALVES

A. Manufacturers:

1. Grinnell Products, a Tyco Business: www.grinnell.com.

2. Nibco, Inc: www.nibco.com.

3. Uponor, Inc: www.uponorengineering.com/sle.

B. Construction, 4 inch and Smaller: MSS SP-110, Class 150, 400 psi CWP, bronze or ductile iron body, 304 stainless steel or chrome plated brass ball, regular port, teflon seats and stuffing box ring, blow-out proof stem, lever handle with balancing stops, threaded or grooved ends with union.

2.15 BUTTERFLY VALVES

A. Manufacturers:

1. Crane Company: www.cranecpe.com.

2. Grinnell Products; B302: www.grinnell.com/#sle.

B. Construction 1-1/2 inch and Larger: MSS SP-67, 200 psi CWP, cast or ductile iron body, nickel-plated ductile iron disc, resilient replaceable EPDM seat, wafer ends, extended neck, 10 position lever handle.

C. Provide gear operators for valves 8 inches and larger, and chain-wheel operators for valves mounted over 8 feet above floor.

2.16 BALANCING VALVES

A. Calibration: Control flow within five percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, maximum minimum pressure 3.5 psi.

2.17 PIPING SPECIALTIES

A. Flow Controls:

1. Manufacturers:

a. ITT Bell & Gossett: www.bellgossett.com.

b. Griswold Controls: www.griswoldcontrols.com.

c. Taco, Inc: www.taco-hvac.com.

2. Construction: Class 125, Brass or bronze body with union on inlet and outlet, temperature and pressure test plug on inlet and outlet, blowdown/backflush drain.

3. Calibration: Control flow within 5 percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, maximum minimum pressure 3.5 psi.

2.18 PRESSURE REDUCING VALVES

A. Manufacturers:

1. Amtrol Inc: www.amtrol.com.
2. Cla-Val Company: www.cla-val.com.
3. Flomatic Valves: www.flomatic.com/#sle.
4. Watts Regulator Company: www.wattsregulator.com.

B. 2 inch and Smaller:

1. ASSE 1003, bronze body, stainless steel, and thermoplastic internal parts, fabric reinforced diaphragm, strainer, threaded single union ends.
2. Pressure Reducing Pilot-Operator:
   a. Operating Range: 5 to 50 psi.
   b. Connected into brass or bronze pilot piping and fittings.
   c. Fixed flow restrictor, pressure gauges, and isolation valves.

C. 2 inch and Larger:

1. ASSE 1003, cast iron body with interior lining complying with AWWA C550, bronze fitted, elastomeric diaphragm and seat disc, flanged.
2. Pressure Reducing Pilot-Operator:
   a. Operating Range: 5 to 50 psi.
   b. Connected into brass or bronze pilot piping and fittings.
   c. Fixed flow restrictor, strainer, pressure gauges, and isolation valves.

2.19 PRESSURE RELIEF VALVES

A. ANSI Z21.22, AGA certified, bronze body, teflon seat, steel stem and springs, automatic, direct pressure actuated.

2.20 STRAINERS

A. Manufacturers:

1. Armstrong International, Inc: www.armstronginternational.com.
2. Green Country Filter Manufacturing: www.greencountryfilter.com.
3. WEAMCO: www.weamco.com.

B. Size 2 inch and Smaller:

1. Threaded brass body for 175 psi CWP, Y pattern with 1/32 inch stainless steel perforated screen.

2. Class 150, threaded bronze body 300 psi CWP, Y pattern with 1/32 inch stainless steel perforated screen.

C. Size 1-1/2 inch to 4 inch:

1. Class 125, flanged iron body, Y pattern with 1/16 inch stainless steel perforated screen.

D. Size 5 inch and Larger:

1. Class 125, flanged iron body, basket pattern with 1/8 inch stainless steel perforated screen.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

C. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

D. Install piping to maintain headroom, conserve space, and not interfere with use of space.

E. Group piping whenever practical at common elevations.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. See Section 220516.

G. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.

1. See Section 220719.

H. Provide access where valves and fittings are not exposed.

1. Coordinate size and location of access doors with Section 083100.

I. Establish elevations of buried piping outside the building to ensure not less than 4 ft of cover.

J. Install vent piping penetrating roofed areas to maintain integrity of roof assembly.

K. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welding.

L. Provide support for utility meters in accordance with requirements of utility companies.

M. Excavate in accordance with Division 31.

N. Backfill in accordance with Division 31.

O. Install valves with stems upright or horizontal, not inverted. See Section 220523.

P. Install water piping to ASME B31.9.

Q. Copper Pipe and Tube: Make soldered joints in accordance with ASTM B828, using specified solder, and flux meeting ASTM B813; in potable water systems use flux also complying with NSF 61 and NSF 372.

R. PVC Pipe: Make solvent-welded joints in accordance with ASTM D2855.

S. Sleeve pipes passing through partitions, walls, and floors.

T. Inserts:

1. Provide inserts for placement in concrete formwork.
2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches.
4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut above slab.

U. Pipe Hangers and Supports:

1. Install in accordance with ASME B31.9.
2. Support horizontal piping as indicated.
3. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
4. Place hangers within 12 inches of each horizontal elbow.
5. Use hangers with 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.

6. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.

7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.

8. Provide copper plated hangers and supports for copper piping.

9. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

   a. Painting of interior and exterior plumbing systems and components is specified in Division 09.

10. Provide hangers adjacent to motor-driven equipment with vibration isolation; see Section 220548.

11. Support cast iron drainage piping at every joint.

V. Pipe Sleeve-Seal Systems:

1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.

2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.

3. Locate piping in center of sleeve or penetration.

4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.

5. Tighten bolting for a watertight seal.

6. Install in accordance with manufacturer's recommendations.

W. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

3.4 APPLICATION

A. Use grooved mechanical couplings and fasteners only in accessible locations.

B. Install unions downstream of valves and at equipment or apparatus connections.

C. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.

D. Install gate, ball, or butterfly valves for shut-off and to isolate equipment, part of systems, or vertical risers.

E. Install globe valves for throttling, bypass, or manual flow control services.

F. Provide lug end butterfly valves adjacent to equipment when provided to isolate equipment.

G. Provide spring-loaded check valves on discharge of water pumps.

H. Provide flow controls in water recirculating systems where indicated.

3.5 TOLERANCES

A. Drainage Piping: Establish invert elevations within 1/2 inch vertically of location indicated and slope to drain at minimum of 1/4 inch per foot slope.

B. Water Piping: Slope at minimum of 1/32 inch per foot and arrange to drain at low points.

3.6 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. Prior to starting work, verify system is complete, flushed, and clean.

B. Ensure acidity (pH) of water to be treated is between 7.4 and 7.6 by adding alkali (caustic soda or soda ash) or acid (hydrochloric).

C. Inject disinfectant, free chlorine in liquid, powder, tablet, or gas form throughout system to obtain 50 to 80 mg/L residual.

D. Bleed water from outlets to ensure distribution and test for disinfectant residual at minimum 15 percent of outlets.

E. Maintain disinfectant in system for 24 hours.

F. If final disinfectant residual tests less than 25 mg/L, repeat treatment.

G. Flush disinfectant from system until residual equal to that of incoming water or 1.0 mg/L.

H. Take samples no sooner than 24 hours after flushing, from 10 percent of outlets and from water entry, and analyze in accordance with AWWA C651.

3.7 SERVICE CONNECTIONS

A. Provide new sanitary and storm sewer services. Before commencing work check invert elevations required for sewer connections, confirm inverts and ensure that these can be properly connected with slope for drainage and cover to avoid freezing.

B. Provide new water service complete with approved reduced pressure backflow preventer and water meter with by-pass valves, pressure reducing valve, and sand strainer.

1. Provide sleeve in wall for service main and support at wall with reinforced concrete bridge. Calk enlarged sleeve and make watertight with pliable material. Anchor service main inside to concrete wall.

3.8 SCHEDULES

A. Pipe Hanger Spacing:

1. Metal Piping:

a. Pipe Size: 1/2 inch to 1-1/4 inch:

1) Maximum Hanger Spacing: 6.5 ft.

2) Hanger Rod Diameter: 3/8 inches.

b. Pipe Size: 1-1/2 inch to 2 inch:

1) Maximum Hanger Spacing: 10 ft.

2) Hanger Rod Diameter: 3/8 inch.

c. Pipe Size: 2-1/2 inch to 3 inch:

1) Maximum Hanger Spacing: 10 ft.

2) Hanger Rod Diameter: 1/2 inch.

d. Pipe Size: 4 inch to 6 inch:

1) Maximum Hanger Spacing: 10 ft.

2) Hanger Rod Diameter: 5/8 inch.

e. Pipe Size: 8 inch to 12 inch:

1) Maximum hanger spacing: 14 ft.

2) Hanger Rod Diameter: 7/8 inch.

2. Plastic Piping:

a. All Sizes:

1) Maximum Hanger Spacing: 6 ft.

2) Hanger Rod Diameter: 3/8 inch.

END OF SECTION 221005

SECTION 221006 - PLUMBING PIPING SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Drains.

B. Cleanouts.

C. Hose bibbs.

D. Hydrants.

E. Backflow preventers.

F. Double check valve assemblies.

G. Water hammer arrestors.

H. Sumps.

I. Mixing valves.

J. Exterior penetration accessories.

1.2 RELATED REQUIREMENTS

A. Section 221005 - Plumbing Piping.

B. Section 223000 - Plumbing Equipment.

C. Section 224000 - Plumbing Fixtures.

1.3 REFERENCE STANDARDS

A. ASME A112.6.3 - Floor and Trench Drains.

B. ASME A112.6.4 - Roof, Deck, and Balcony Drains.

C. ASSE 1012 - Performance Requirements for Backflow Preventers with an Intermediate Atmospheric Vent.

D. NSF 61 - Drinking Water System Components - Health Effects.

E. NSF 372 - Drinking Water System Components - Lead Content.

F. PDI-WH 201 - Water Hammer Arresters.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component sizes, rough-in requirements, service sizes, and finishes.

C. Shop Drawings: Indicate dimensions, weights, and placement of openings and holes.

D. Certificates: Certify that grease interceptors meet or exceed specified requirements.

E. Manufacturer's Instructions: Indicate Manufacturer's Installation Instructions: Indicate assembly and support requirements.

F. Sustainable Design Documentation: Submit appropriate evidence that materials used in potable water systems comply with the specified requirements.

G. Operation Data: Indicate frequency of treatment required for interceptors.

H. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

I. Project Record Documents: Record actual locations of equipment, cleanouts, backflow preventers, water hammer arrestors.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept specialties on site in original factory packaging. Inspect for damage.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Specialties in Potable Water Supply Systems: Provide products that comply with NSF 61 and NSF 372 for maximum lead content.

2.2 DRAINS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Zurn Industries, LLC: www.zurn.com.
4. Watts Regulator Company

B. Roof Drains:

1. Assembly: ASME A112.6.4.
2. Body: Lacquered cast iron with sump.
3. Strainer: Removable cast iron dome with vandal proof screws.

4. Accessories: Coordinate with roofing type, refer to schedule on drawings:
    a. Membrane flange and membrane clamp with integral gravel stop.
    b. Adjustable under deck clamp.
    c. Roof sump receiver.
    d. Adjustable extension sleeve for roof insulation.

C. Floor Drain:

1. ASME A112.6.3; lacquered cast iron or stainless steel, two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer. Refer to schedule on drawings for options and accessories.

D. Floor Drain (FD-2):

1. ASME A112.6.3; lacquered cast iron or stainless steel, two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable round nickel bronze strainer with removable perforated sediment bucket.

E. Floor Sink:

1. Lacquered cast iron body with dome strainer and seepage flange.

F. Floor Sink:

1. Round lacquered cast iron body with integral seepage pan, epoxy coated interior, aluminum dome strainer, nickel bronze frame, full grate.

2.3 CLEANOUTS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Zurn Industries, LLC: www.zurn.com.
4. Watts Regulator Company

B. Cleanouts at Exterior Surfaced Areas:

1. Round cast nickel bronze access frame and non-skid cover.

C. Cleanouts at Exterior Unsurfaced Areas:

1. Line type with lacquered cast iron body and round epoxy coated gasketed cover.

D. Cleanouts at Interior Finished Floor Areas:

1. Lacquered cast iron body with anchor flange, reversible clamping collar, threaded top assembly, and round gasketed scored cover in service areas and round gasketed depressed cover to accept floor finish in finished floor areas.

E. Cleanouts at Interior Finished Wall Areas:

1. Line type with lacquered cast iron body and round epoxy coated gasketed cover, and round stainless steel access cover secured with machine screw.

F. Cleanouts at Interior Unfinished Accessible Areas: Calked or threaded type. Provide bolted stack cleanouts on vertical rainwater leaders.

2.4 HOSE BIBBS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.

2. Watts Regulator Company: www.wattsregulator.com.

3. Zurn Industries, LLC: www.zurn.com.

4. Substitutions: See Section 016000 - Product Requirements.

2.5 BACKFLOW PREVENTERS

A. Manufacturers:

1. Conbraco Industries, Inc: www.apollovalves.com.

2. Watts Regulator Company, a part of Watts Water Technologies: www.wattsregulator.com.

3. Zurn Industries, LLC: www.zurn.com.

2.6 DOUBLE CHECK VALVE ASSEMBLIES

A. Manufacturers:

1. Conbraco Industries, Inc: www.apollovalves.com.

2. Watts Regulator Company, a part of Watts Water Technologies: www.wattsregulator.com.

3. Zurn Industries, LLC: www.zurn.com.

B. Double Check Valve Assemblies:

1. ASSE 1012; Bronze body with corrosion resistant internal parts and stainless steel springs; two independently operating check valves with intermediate atmospheric vent.

2.7 WATER HAMMER ARRESTORS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.

2. Watts Regulator Company, a part of Watts Water Technologies: www.wattsregulator.com.

3. Zurn Industries, LLC: www.zurn.com.

4. Substitutions: See Section 016000 - Product Requirements.

B. Water Hammer Arrestors:

1. Stainless steel construction, bellows type sized in accordance with PDI-WH 201, precharged suitable for operation in temperature range minus 100 to 300 degrees F and maximum 250 psi working pressure.

2.8 MIXING VALVES

A. Thermostatic Mixing Valves:

1. Manufacturers:

a. ESBE: www.esbe.se/en.

b. Honeywell International Inc: yourhome.honeywell.com.

c. Leonard Valve Company: www.leonardvalve.com.

d. Powers

2. Valve: Chrome plated cast brass body, stainless steel or copper alloy bellows, integral temperature adjustment.

3. Accessories:

a. Volume control shut-off valve on outlet.

b. Stem thermometer on outlet.

c. Strainer stop checks on inlets.

4. Cabinet: 16 gage, 0.0598 inch prime coated steel, for recessed mounting with keyed lock.

2.9 FLOOR DRAIN TRAP SEALS

A. Description: Push-fit EPDM or silicone fitting with a one-way membrane.

2.10 EXTERIOR PENETRATION ACCESSORIES

A. Flashing Panels for Exterior Wall Penetrations: Premanufactured components and accessories as required to preserve integrity of building envelope; suitable for conduits and facade materials to be installed.

1. Manufacturers:

a. Quickflash Weatherproofing Products, Inc; _____: www.quickflashproducts.com/#sle.

B. Plumbing Ventilation Thru Roof Accessories - Retrofit:

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Ensure clearance at cleanout for rodding of drainage system.

C. Encase exterior cleanouts in concrete flush with grade.

D. Install floor cleanouts at elevation to accommodate finished floor.

E. Install approved potable water protection devices on plumbing lines where contamination of domestic water may occur; on boiler feed water lines, janitor rooms, fire sprinkler systems, premise isolation, irrigation systems, flush valves, interior and exterior hose bibbs.

F. Pipe relief from backflow preventer to nearest drain.

G. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to washing machine outlets.

H. Install air chambers on hot and cold water supply piping to each fixture or group of fixtures (each washroom). Fabricate same size as supply pipe or 3/4 inch minimum, and minimum 18 inches long.

END OF SECTION 221006

SECTION 221250 - NATURAL GAS PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. The Contractor and each Subcontractor and/or supplier providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

1.2 SECTION INCLUDES

A. Pipe, pipe fittings, valves, and connections for gas piping systems.

1. Natural Gas.

2. Regulators and safety devices for Natural and L.P. gas systems

1.3 RELATED SECTIONS

A. Section 07 84 13 - Firestopping

B. Section 220510 - PLUMBING GENERAL CONDITIONS

C. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Ststems

D. Section 22 05 53 - Identification for Plumbing Piping and Equipment

E. Section 22 05 19 - Meters and Gages for Plumbing Piping

F. Section 22 10 05 - Plumbing Piping

G. Section 22 30 00 - Plumbing Equipment

1.4 REFERENCES

A. Connecticut Fuel Gas Code

B. NFPA 54

C. ANSI Z223.1

D. CSA / AGA Standards

E. FM P7825 - Approval Guide; Factory Mutual Research Corporation; current edition.

F. ANSI/ASME B36.10 Welded and Seamless Wrought-Steel pipe

G. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless

H. ANSI/ASME B1.20.1 - Pipe Threads, General Purpose, Inch

1.5 SYSTEM DESCRIPTION

A. Provide piping from the gas meter as shown on the plans.

B. Provide gas piping, including fittings and valves to form a complete system.

1. Piping includes connections to equipment shown on the plans or provided by others.

2. Provide any required gas regulators at equipment connections for reductions in pressure. Coordinate with all other trades for requirements of equipment.

1.6 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Piping and fittings

1. Product Data: Provide Manufacturers literature.

2. Shop Drawings: Indicate all catlog data.

C. Equipment and Valving

1. Product Data: Provide Manufacturers literature.

2. Shop Drawings: Indicate all catlog data.

D. Test Reports: Indicate final testing, inspection and approval reports by the AHJ and/or the service utility.

E. Certificates: Certify that products of this section meet or exceed specified requirements.

1.7 QUALITY ASSURANCE

A. Perform in accordance with Connecticut Fuel Gas Code standard, State of Connecticut Building Code.

B. Requirements of the service Utility

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum 3 years of experience.

E. Products Requiring Electrical Connection: Listed and classified by UL as suitable for the purpose specified and indicated.

F. All valves, regulators, etc. shall be tested and rated for respective natural gas applications by UL and CSA.

1.8 PROJECT CONDITIONS

A. Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner.

PART 2 PRODUCTS

2.1 MATERIALS

A. Metallic pipe: Steel and wrought-iron pipe, minimum schedule 40, ANSI/ASME B36.10, ASTM A53

B. Metallic pipe fittings: Steel or malleable iron.

C. Piping shall be threaded up to 2" in diameter, over 2" piping shall be welded.

2.2 MANUFACTURED ITEMS

A. Line Gas Pressure Regulators

B. Gas Appliance Regulators

C. Overpressure Protection Device

1. For systems over 60 psi

2.3 ACCESSORIES

A. Shutoff Valves

1. Plug type - Heavy duty, iron body construction, flat head type with brass plug and washer, CSA / UL tested and approved

2. Ball type - Bronze body, chrome plated ball, brass stem, PTFE seat, stem packing and bearing CSA/UL tested and approved.

3. Strainer - Bronze body, CSA/UL tested and approved

4. Roof Supports

PART 3 EXECUTION

3.1 PIPING - GENERAL

A. The service entrance of the gas pipe to the building shall be provided with a line size, CSA/UL tested and approved shut-off plug valve. The valve shall be lockable open or shut with a standard padlock.

B. Ream ends of pipe free from burrs. Keep free of scale, dirt and oil. Piping shall be blown out with compressed air.

C. Pipe threads shall be tapered in compliance with ANSI/ASME B1.20.1. Apply pipe joint compound to male threads only.

1. Threaded pipe shall be used for piping of 2" or less. All piping larger than 2" shall have welded fittings and joints.

D. Provide couplings for pipe size transitions and for joining lengths of pipe. Bushings shall not be used.

3.2 PIPING INSIDE BUILDINGS

A. Do not cut, notch or drill through beams or joists to install piping.

B. Slope piping upwards towards risers or equipment at not less than 1/4" in 15 feet.

C. Piping shall not be installed in concealed locations except with the use of elbows, tees and couplings.

1. Where fittings are inserted in the piping, the pipe shall be reconnected by welding, flanges or a ground joint union.

2. Valves shall not be installed in concealed locations.

D. Where piping is installed in partition walls, a steel striker plate is to be provided the full length of the concealed pipe run

E. Changes in direction shall be made by the use of fittings, factory or field bends.

1. Bends shall be made only with bending equipment and shall be free from buckling, cracks or other damage.

2. Pipe shall not be bent more than 90° with the inside radius not less than 6 times the outside diameter of the pipe.

F. Provide drips at all risers or low points in the system. Drips are to be readily accessible for cleaning or emptying and are not to be used for supporting the piping.

G. Provide plug type gas cocks in pipe branch lines and connections to equipment and cap until ready for connection to equipment.

1. Ball type shutoffs will be acceptable in branch lines off mains

H. All gas piping inside and outside the building shall be painted yellow and pipe markers provided.

I. Branch piping is to be connected from top or side of horizontal piping.

J. Maximum hanger spacing:

1. 1/2" pipe -6 feet

2. 3/4" to 1" pipe -8 feet

3. 1¼" and larger pipe -10 feet

3.3 PIPING OUTSIDE THE BUILDINGS (EXPOSED, NOT BURIED)

A. Slope piping upwards towards risers or equipment at not less than 1/4" in 15 feet.

B. Piping shall not be installed in concealed locations except with the use of elbows, tees and couplings.

1. Where fittings are inserted in the piping, the pipe shall be reconnected by welding, flanges or a ground joint union.

2. Valves shall not be installed in concealed locations.

C. Changes in direction shall be made by the use of fittings, factory or field bends.

1. Bends shall be made only with bending equipment and shall be free from buckling, cracks or other damage.

2. Pipe shall not be bent more than 90° with the inside radius not less than 6 times the outside diameter of the pipe.

D. Provide drips at all risers or low points in the system. Drips are to be readily accessible for cleaning or emptying and are not to be used for supporting the piping.

1. Where drips could be subject to freezing, the AHJ may authorize the drips to be deleted.

E. Provide plug type gas cocks in pipe branch lines and connections to equipment and cap until ready for connection to equipment.

1. Ball type shutoffs will be acceptable in branch lines off mains

F. All gas piping outside the building shall be painted yellow with primer, two coats of paint and pipe markers provided.

G. Branch piping is to be connected from top or side of horizontal piping.

H. Maximum roof support spacing:

1. 1/2" pipe -4 feet

2. 3/4" to 1" pipe -6 feet

3. 1¼" and larger pipe -8 feet

4. Within 12" either side of bends, valves and regulators.

3.4 TESTING

A. All piping, new and existing, shall be tested and shall be in compliance with NFPA-54 with records of inspection and tests performed.

B. Test medium shall be compressed air or other inert gas.

C. Test pressure shall be 1-1/2 times the maximum working pressure but not less than 3 PSIG. Duration shall be ½ hour for each 500 cubic feet of pipe or fraction thereof.

1. Piping shall be tested without valves installed.

2. Valves are not to be used as a bulkhead between gas in one section of pipe and test medium in another.

D. Provide gauges or a manometer of increments not greater than 1/10 pound. Soap solution shall be used at joints or fittings.

1. Pressure gauges shall be permanently installed downstream from each line pressure regulator.

E. After turning on the gas the piping shall be purged of all test medium and the system shall again be checked for leakage.

F. The gas utility shall be the governing authority and shall be presented with copies of tests results and records. All rules and regulations must be complied with and coordinated to insure a safe installation.

G. If any part of the gas system is defective or not in compliance with this specification the contractor shall repair or replace the items at no cost to the Owner.

3.5 REGULATORS

A. Set primary regulator at incoming servivce to pressure as specified on drawings. Coordinate additional requirements with local Gas Co.

B. Set secondary regulators as necessary for appliances and equipment.

C. Vent regulators and other equipment to exterior of building and terminate with suppressor.

1. Vents shall be run independently of each other and shall be field located.

D. Provide strainers on the inlet of each line pressure regulator or electrically operated valve.

E. Provide a shut-off valve upstream of each gas pressure regulator

3.6 EQUIPMENT CONNECTORS

A. Connectors shall have a plug type shut-off gas cock installed in rigid tubing in an accessible location upstream of the connector.

1. Flexible connectors of semi-rigid stainless steel with polyethylene jacket may be used for connecting appliances to the shut-off valve.

2. All connectors shall be provided with a drip leg, full line size.

B. Connectors shall be made from the top or side of horizontal lines.

C. Provide unions for connectors at gas-cocks and equipment.

D. Connectors to kitchen equipment are to be the "quick disconnect" type.

END OF SECTION 22 12 50 221250

SECTION 221329 - SANITARY SEWERAGE PUMPS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Submersible sewage pumps.

1.2 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. ABMA STD 11 - Load Ratings and Fatigue Life for Roller Bearings.

C. ICC (IPC) - International Plumbing Code.

D. NEMA MG 00001 - Motors and Generators.

E. UL (DIR) - Online Certifications Directory.

1.3 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Certificate: Certify that products of this section meet or exceed specified requirements.

C. Executed warranty.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing each product specified in this section, with minimum three years of documented experience.

B. Certifications: UL (DIR) listed, classified, and suitable for purpose specified and indicated.

C. Identification: Provide pumps with manufacturer's name, model number, and rating/capacity identified by permanently attached label.

1.5 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.6 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty for _____. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 SUBMERSIBLE SEWAGE PUMPS

A. Manufacturers:

1. Zoeller Company; _____: www.zoeller.com/#sle.

B. Description: Submersible centrifugal pump made of rugged stainless steel and cast-iron housing and base with oil-filled motor chamber, ball bearings, and mechanical seal.

C. Casing:

1. Capable of withstanding pressures 50 percent greater than maximum operating pressure.

2. Volute: Consisting of smooth passages providing unobstructed flow through pump.

3. Exposed Nuts and Bolts: Stainless steel construction.

4. Finish: Protect casing exterior surfaces in contact with sewage using sewage-resistant coal tar epoxy coating.

D. Pump Shaft: Fabricate of high-grade alloy steel of adequate strength and size, with application-appropriate safety factor to transmit full driver horsepower. Include shaft key so that impeller cannot be loosened by either reverse or forward torque.

E. Wear Rings: Renewable; provided on casing and impeller with wearing surfaces normal to axis of rotation. Material suitable for ease of maintenance and secured to prevent rotation.

F. Bearings:

1. Provide roller type capable to handle multi-directional thrust loads.

2. Do not use pumps dependent on thrust and hydraulic balance.

3. Bearing Life: L-10, 50,000 hours minimum, complying with ABMA STD 9 or ABMA STD 11.

G. Seals:

1. Provide tandem mechanical shaft seal system running in oil bath.

H. Motor:

1. Base-mounted, enclosed, lubricated oil-free, thermal-overload protected, continuous-duty, permanent split capacitor with oil-resistant, three-prong connector, 6-foot power cord.

2. Watertight with Class F insulation, NEMA B design, complying with NEMA MG 00001.

3. Provide oil filled, air filled with water jacket, or air filled with cooling fins that encircle stator housing.

I. Power Cable:

1. Enters through heavy-duty entry assembly provided with internal grommet assembly to prevent leakage.
2. Separate motor and cable entry junction by terminal board or stator lead sealing gland that prevents foreign material from gaining access to motor interior through top of pump.
3. Standard construction for submersible pump applications; do not use materials consisting of silicones.

J. Controls: Integral, chemically-resistant, vertical plated-steel rod float switch. Cycle pump ON/OFF between 2.5- and 9-inch heights from bottom of pump.

K. Solids Handling Capacity: Pass lint and other small solids up to 1/2 inch in size.

L. Discharge Pipe Size: 2 inches, NPT, female.

M. Maximum Water-Based Effluent Temperature: 120 degrees F.

N. Accessories: Provide reverse flow assembly and high-level audio/visual alarm system.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install products with related fittings and accessories according to manufacturer instructions.

B. Provide accessories required to complete installation in accordance with ICC (IPC).

3.2 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Tests: Conduct tests to demonstrate satisfactory functional operation and efficiency.

3.3 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

3.4 PROTECTION

A. Protect installed products from damage due from subsequent construction operations.

B. Repair or replace products damaged before Date of Substantial Completion.

END OF SECTION 221329

This page intentionally left blank

SECTION 223000 - PLUMBING EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Water Heaters:

1. Commercial gas fired.

B. Domestic hot water storage tanks.

C. In-line circulator pumps.

D. Sump pumps.

E. Submersible sump pumps.

F. Cooling condensate removal pumps.

1.2 RELATED REQUIREMENTS

1.3 REFERENCE STANDARDS

A. UL 778 - Standard for Motor-Operated Water Pumps.

PART 2 PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

2.2 WATER HEATERS

A. Manufacturers:

1. A.O. Smith Water Products Co; _____: www.hotwater.com/#sle.

B. Commercial Gas Fired:

1. Type: Automatic, natural gas-fired, vertical storage.

2. Performance:

3. Tank: Glass lined welded steel ASME labeled; multiple flue passages, 4 inch diameter inspection port, thermally insulated with minimum 2 inches glass fiber, encased in corrosion-resistant steel jacket; baked-on enamel finish; floor shield and legs.

4. Accessories:

a. Water Connections: Brass.

b. Dip Tube: Brass.

c. Drain valve.

d. Anode: Magnesium.

5. Certified For The Following Applications:

2.3 DOMESTIC HOT WATER STORAGE TANKS

A. Manufacturers:

1. A.O. Smith Water Products Co; _____: www.hotwater.com/#sle.

B. Tank: Welded steel, ASME labeled for working pressure of 125 psig, steel support saddles, tappings for accessories, threaded connections of stainless steel, access manhole.

C. Openings: Up to 3 inches, copper-silicone threaded; over 4 inches, flanged; flanged collar for heat exchanger; manway fitting.

D. Accessories: Tank drain, water inlet and outlet, thermometer range of 40 to 200 degrees F, ASME pressure relief valve suitable for maximum working pressure.

2.4 IN-LINE CIRCULATOR PUMPS

A. Casing: Bronze, rated for 125 psig working pressure, with stainless steel rotor assembly.

B. Impeller: Bronze.

C. Shaft: Alloy steel with integral thrust collar and two oil lubricated bronze sleeve bearings.

D. Seal: Carbon rotating against a stationary ceramic seat.

E. Drive: Flexible coupling.

2.5 SUMP PUMPS

A. Manufacturers:

1. Zoeller Company; _____: www.zoeller.com/#sle.

B. Type: Vertical centrifugal, direct connected, simplex arrangement.

C. Casing: Cast iron volute with radial clearance around impeller, inlet strainer, slide away couplings.

D. Impeller: Cast iron; open non-clog, keyed to corrosion resistant alloy steel shaft.

E. Support: Cast iron pedestal motor support on steel floor plate with gas tight gaskets.

F. Bearings: Forced grease lubricated bronze sleeve spaced maximum 48 inches and grease lubricated ball thrust at floor plate.

G. Drive: Flexible coupling to vertical, solid shaft ball bearing electric motor.

H. Sump: Steel cover plate with steel curb frame for grouting into concrete sump with inspection opening and cover, and alarm fittings.

I. Controls (Simplex): Float switch with float rod, stops, and corrosion resistant float, and separate pressure switch high level alarm with transformer, alarm bell and stand-pipe.

2.6 COOLING CONDENSATE REMOVAL PUMPS

A. Manufacturers:

1. Franklin Electric Company; _____: www.franklin-electric.com/#sle.

2. Liberty Pumps Inc; _____: www.libertypumps.com/#sle.

B. Construction: Commercial grade, nonferrous pump with stainless steel shaft, integral discharge check valve, integral float switch, safety switch, thermoplastic reservoir, motor assembly, and power cord with ground.

C. Safety: UL 778.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install plumbing equipment in accordance with manufacturer's instructions, as required by code, and complying with conditions of certification, if any.

B. Coordinate with plumbing piping and related fuel piping work to achieve operating system.

C. Domestic Water Storage Tanks:

1. Provide steel pipe support, independent of building structural framing members.

2. Clean and flush prior to delivery to site. Seal until pipe connections are made.

D. Pumps:

1. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

2. Provide electrical interlocking from cooling condensate pump safety switch to associated HVAC unit(s) furnished under other Sections.

3.2 SCHEDULES

END OF SECTION 223000

This page intentionally left blank

SECTION 224000 - PLUMBING FIXTURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Water closets.

B. Urinals.

C. Lavatories.

D. Sinks.

E. Mop sinks.

F. Under-lavatory pipe supply covers.

G. Electric water coolers.

H. Drinking fountains.

1.2 RELATED REQUIREMENTS

A. Section 064100 - Architectural Wood Casework: Preparation of counters for sinks and lavatories.

B. Section 114000 - Foodservice Equipment: Food service sinks.

C. Section 221005 - Plumbing Piping.

D. Section 223000 - Plumbing Equipment.

1.3 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design.

B. ASME A112.6.1M - Supports for Off-the-Floor Plumbing Fixtures for Public Use.

C. ASME A112.19.2 - Ceramic Plumbing Fixtures.

D. ICC A117.1 - Accessible and Usable Buildings and Facilities.

E. NSF 61 - Drinking Water System Components - Health Effects.

F. NSF 372 - Drinking Water System Components - Lead Content.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.

C. Samples: Submit two lavatory supply fittings.

D. Manufacturer's Instructions: Indicate installation methods and procedures.

E. Sustainable Design Documentation: Submit appropriate evidence that materials used in potable water systems comply with the specified requirements.

F. Maintenance Data: Include fixture trim exploded view and replacement parts lists.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.6 REGULATORY REQUIREMENTS

1.7 MOCK-UP

A. Provide mock-up of typical bathroom group.

B. Mock-up may remain as part of the Work.

1.8 DELIVERY, STORAGE, AND HANDLING

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Potable Water Systems: Provide plumbing fittings and faucets that comply with NSF 61 and NSF 372 for maximum lead content; label pipe and fittings.

2.2 FLUSH VALVE WATER CLOSETS

A. Water Closets: Vitreous china, ASME A112.19.2, floor mounted, siphon jet flush action, china bolt caps.

1. Bowl: ASME A112.19.2; 16.5 inches high with elongated rim.

2. Flush Valve: Exposed (top spud).

3. Flush Operation: Sensor operated.

4. Supply Size: 1-1/2 inches.

5. Outlet Size: 2 inches.

6. Color: White.

7. Manufacturers:

a. Kohler Company; _____: www.kohler.com/#sle.

B. Flush Valves: ASME A112.18.1, diaphragm type, complete with vacuum breaker stops and accessories.

C. Water Closet Carriers:

1. Manufacturers:

a. Zurn Industries, Inc; _____: www.zurn.com/#sle.

2. ASME A112.6.1M; adjustable cast iron frame, integral drain hub and vent, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers.

2.3 LAVATORIES

A. Vitreous China Wall Hung Basin: ASME A112.19.2; vitreous china wall hung lavatory, ___ by ___ inch minimum, with 4 inch high back, rectangular basin with splash lip, front overflow, and soap depression.

2.4 SINKS

A. Single Compartment Bowl: ASME A112.19.3; _____ by _____ by _____ inch outside dimensions 20 gage, 0.0359 inch thick, Type 302 stainless steel, self rimming and undercoated, with ledge back drilled for trim.

2.5 UNDER-LAVATORY PIPE SUPPLY COVERS

A. Manufacturers:

1. Plumberex Specialty Products, Inc; _____: www.plumberex.com/#sle.

B. Basis of Design: Plumberex Specialty Products, Inc; www.plumberex.com/#sle.

1. Slim Fit Under-Lavatory Insulators (Non-Sewn): Plumberex Trap Gear.

2. Under-Lavatory Covers with Snap-Lock Fasteners (Molded): Plumberex Pro-Extreme.

C. General:

1. Insulate exposed drainage piping including hot, cold and tempered water supplies under lavatories or sinks per ADA Standards.

2. Construction: 1/8 inch PVC with antimicrobial, antifungal and UV resistant properties.

a. Comply with ASTM C1822 Type I for covers on accessible lavatory piping.

b. Comply with ASME A112.18.9 for covers on accessible lavatory piping.

c. Comply with ICC A117.1.

3. Fasteners: Reusable, snap-locking fasteners with no sharp or abrasive external surfaces. No cable ties allowed.

2.6 DRINKING FOUNTAINS

A. Drinking Fountain Manufacturers:

1. Elkay Manufacturing Company; _____: www.elkay.com/#sle.

2.7 DRINKING FOUNTAINS - BOTTLE FILLERS

A. Manufacturers:

1. Elkay Manufacturing Company; _____: www.elkay.com/#sle.

2.8 ELECTRIC WATER COOLERS

A. Electric Water Cooler Manufacturers:

1. Elkay Manufacturing Company; _____: www.elkay.com/#sle.

B. Water Cooler: Electric, mechanically refrigerated; surface mounted, ADA compliant; stainless steel top, vinyl on steel body, elevated anti-squirt bubbler with stream guard, automatic stream regulator, push button, mounting bracket; integral air cooled condenser and stainless steel grille.

C. Bottle Filler: Materials to match fountain.

2.9 MOP SINKS

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that walls and floor finishes are prepared and ready for installation of fixtures.

B. Verify that electric power is available and of the correct characteristics.

C. Confirm that millwork is constructed with adequate provision for the installation of counter top lavatories and sinks.

3.2 INSTALLATION

A. Install each fixture with trap, easily removable for servicing and cleaning.

B. Provide chrome plated rigid or flexible supplies to fixtures with loose key stops, reducers, and escutcheons.

C. Install components level and plumb.

D. Install and secure fixtures in place with wall supports and bolts.

E. Solidly attach water closets to floor with lag screws. Lead flashing is not intended hold fixture in place.

3.3 INTERFACE WITH WORK OF OTHER SECTIONS

A. Review millwork shop drawings. Confirm location and size of fixtures and openings before rough-in and installation.

3.4 ADJUSTING

A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.5 CLEANING

A. Clean plumbing fixtures and equipment.

B. See Section 017419 - Construction Waste Management and Disposal, for additional requirements.

3.6 PROTECTION

A. Protect installed products from damage due to subsequent construction operations.

B. Repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 224000

SECTION 230500 - MECHANICAL GENERAL CONDITIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractor and/or supplier providing goods or services referenced in or related to this Section shall also be bound by the Related Documents identified in Division 01 Section "Summary".

1.2 DESCRIPTION

A. The General Conditions and Supplementary General Conditions are a part of this Division and are to be considered a part of this Contract.

B. Where items of the General Conditions and Supplementary General Conditions are repeated in other Sections of the Specifications, it is merely intended to qualify or to call particular attention to them. It is not intended that any other parts of the General Conditions and Supplementary General Conditions shall be assumed to be omitted if not repeated therein.

This Section applies equally and specifically to all Contractors supplying labor and/or equipment and/or materials as required under each Section of this Division.

C. The following information contains specifications of Work in connection with, and in addition to, this Division:

1. All drawings associated with the project.

2. All specifications associated with the project.

D. Division of work responsibilities shall be as defined and directed by the Bidding Agent and/or the Bidding General Contractor.

1.3 INTENT

A. It is the intent of the Specifications and Drawings to call for finished work, tested and ready for operation.

B. Furnish, deliver and install any apparatus, appliance, material or Work not shown on Drawings but mentioned in the Specifications, or vice versa, or any incidental accessories necessary to make the Work complete and perfect in all respects and ready for operation, even if not particularly specified, under their respective Section without additional expense to the Owner.

C. Include in the work minor details not usually shown or specified but necessary for proper installation and operation, as though they were hereinafter shown or specified.

D. Provide Engineer written notice of any materials or apparatus believed inadequate or unsuitable; in violation of laws, ordinances, rules or regulations of authorities having jurisdiction; and any necessary items of Work omitted. In the absence of such written notice, it is mutually agreed that Work under each Section has included the cost of all required items for the accepted, satisfactory functioning of the entire system without extra compensation.

E. The Work indicated is diagrammatic. The Architect and/or Engineer may require as part of this Contract, the relocation of devices to reasonable distances from the general locations shown.

F. Verbal clarifications of the Drawings or Specifications during the bid period are not to be relied upon. Refer any questions or clarifications to the Engineer at least five Working days prior to bidding to allow for issuance of an addendum. After the five-day deadline, Bidder must make a decision and qualify the Bid, if the Bidder feels it necessary.

1.4 DRAWINGS

A. Drawings are diagrammatic and indicate the general arrangement of systems and work included in the Contract. (Do not scale the Drawings.) Consult the Architectural Drawings and Details for exact location of fixtures and equipment; where same are not definitely located, obtain this information from the Architect.

B. Closely follow Drawings in layout of Work; check Drawings of other Divisions to verify spaces in which work will be installed. Maintain maximum headroom. Where space conditions appear inadequate, Engineer shall be notified before proceeding with installations.

C. Engineer may, without extra charge, make reasonable modifications in the layout as needed to prevent conflict with work of other trades and/or for proper execution of the work.

D. Where variances occur between the Drawings and Specifications or within either of the Documents, include the item or arrangement of better quality, greater quantity or higher cost in the Contract price. The Engineer shall decide on the item and the manner in which the work shall be installed.

1.5 SURVEYS AND MEASUREMENTS

A. Before submitting a Bid, the Contractor shall visit the site and shall become thoroughly familiar with all conditions under which the work will be installed. Contractor will be held responsible for any assumptions, omissions or errors made as a result of failure to become familiar with the site and the Contract Documents.

B. Base all measurements, both horizontal and vertical, from established bench marks. All Work shall agree with these established lines and levels. Verify all measurements at the site and check the correctness of same as related to the Work.

C. Should the Contractor discover any discrepancies between actual measurements and those indicated which prevent following good practice or the intent of the Drawings and Specifications, notify the Engineer do not proceed with that Work until instructions have been received from the Engineer.

1.6 CODES AND STANDARDS

A. The Codes and Standards listed below apply to all Work. Where Codes or Standards are mentioned in these Specifications, follow the latest edition or revision.

B. The current adopted editions of the following State or local Codes apply:

1. 2021 International Building Code

2. 2022 Connecticut State Building Code
3. 2021 International Existing Building Code
4. 2021 International Mechanical Code
5. 2021 International Plumbing Code
6. 2020 National Electrical Code (NFPA 70)
7. 2021 International Energy Conservation Code
8. ICC/ANSI A117.1-2017 Accessible and Usable Buildings and Facilities

C. All materials furnished and all work installed shall comply with the rules and recommendations of the NFPA, the requirements of the local utility companies, the recommendations of the fire insurance rating organization having jurisdiction and the requirements of all Governmental departments having jurisdiction.

D. Include in the Work, without extra cost to the Owner, any labor, materials, testing, services, apparatus and Drawings in order to comply with all applicable laws, ordinances, rules and regulations, whether or not shown on Drawings and/or specified.

1.7 PERMITS AND FEES

A. Give all necessary notices, obtain all permits; pay all Government and State sales taxes and fees where applicable, and other costs, including utility connections or extensions in connection with the Work. File all necessary Drawings, prepare all Documents and obtain all necessary approvals of all Governmental and State departments having jurisdiction, obtain all required certificates of inspections for Work and deliver a copy to the Engineer before request for acceptance and final payment for the Work.

1.8 COORDINATION

A. Carry out all work in conjunction with other trades and give full cooperation in order that all work may proceed with a minimum of delay and interference. Particular emphasis is placed on timely installation of major apparatus and furnishing other Contractors, especially the General Contractor or Construction Manager, with information as to openings, chases, sleeves, bases, inserts, equipment locations, panels, access doors, etc. required by other trades, and to allow for serviceable access to equipment.

B. Mechanical contractors' shall initiate coordination drawings and sections clearly showing how the work is to be installed in relation to the work of other trades, at no extra charge to the Owner. The Contractors' shall prepare coordination drawings at a scale no less than 1/4"=1'-0", showing the work of all trades, including but not limited to, the following: proposed ductwork installation in detail, including ceiling heights, approved structural steel shop drawings, duct heights, access doors, light fixtures, registers and diffusers, sprinkler piping, electrical distribution conduits, wires, panels and any other electrical work which may conflict with the sheet metal ducts or piping, waste and vent piping, water piping, storm piping, and rain leaders. Provide elevation details showing connections and equipment layout and configuration based on approved submittals. Each shall use a different color code. A coordination meeting of all Contractors involved is then to be held and all possible conflicts are to be resolved. All trades shall sign acceptance of the drawings and then shall submit two (2) prints of each drawing to the Engineer for record.

C. Contractors are required to examine all of the Project Drawings and mutually arrange Work so as to avoid interference. In general, ductwork, heating piping, sprinkler piping and drainage lines take precedence over water, gas and electrical conduits. The Engineer regarding the arrangement of Work, which cannot be agreed upon by the Contractors, will make final decisions. Service of equipment will take precedence.

D. Where the Work of the Contractor will be installed in close proximity to or will interfere with Work of other trades, assist in working out space conditions to make a satisfactory adjustment.

E. If Work is installed before coordinating with other Divisions or so as to cause interference with Work of other Sections, the Contractor causing the interference will make necessary changes to correct the condition without extra charge to the Owner.

F. Initial contact and coordination has been conducted with utility entities for the purpose of the preparation of Bid Documents. The Contractor shall coordinate all final specific utility requirements.

1.9 ACCEPTANCES

A. The equipment, materials, Workmanship, design and arrangement of all Work installed are subject to the review of the Engineer.

B. Within 30 days after the awarding of a Contract, submit to the Engineer for review a list of manufacturers of equipment proposed for the Work. The intent to use the exact makes specified does not relieve the Contractor of the responsibility of submitting such a list.

C. If extensive or unacceptable delivery time is expected on a particular item of equipment specified, notify the Engineer, in writing, within 30 days of the awarding of the Contract. In such instances, deviations may be made pending acceptance by the Engineer or the Owner's representative.

D. Where any specific material, process or method of construction or manufactured article is specified by reference to the catalog or model number of a manufacturer, the Specifications are to be used as a guide and are not intended to take precedence over the basic duty and performance specified or noted on the Drawings. In all cases, verify the duty specified with the specific characteristics of the equipment offered for review. Equipment characteristics are to be used as mandatory requirements where the Contractor proposes to use an acceptable equivalent.

E. If material or equipment is installed before shop drawing review, liability for its removal and replacement is assumed by the Contractor, at no extra charge to the Owner, if, in the opinion of the Engineer, the material or equipment does not meet the intent of the Drawings and Specifications.

F. Failure on the part of the Engineer to reject shop drawings or to reject Work in progress shall not be interpreted as acceptance of Work not in conformance with the Drawings and/or Specifications. Correct Work not in conformance with the Drawings and/or Specifications whenever non-conformance is discovered.

1.10 EQUIPMENT DEVIATIONS

A. Where the Contractor proposes to deviate (substitute or provide an equivalent) from the equipment or materials as hereinafter specified, he shall do so by making a request in writing a minumum of 14 calendar days prior to submitting his bid. The request shall include a detailed decription of the proposed deviation, manufacturer's equipment cuts, copy of manufacturer's warranty and a line-by-line comparison detailing how the proposed product differs from the specified product. The proposed deviation must be equivalent or better than the specified product as judged by the Engineer.

1. The Base Bid shall be based on using the materials and equipment as specified and scheduled with no exceptions. Equipment Manufacturers Scheduled on Drawings are considered Base Product Specification and any other acceptable manufacturers listed in the specifications is considered an equipment deviation and subject to the requirements above. When any alternate manufacturer does not qualify acceptable, as determined by the Engineer, provide the Base Product manufacturer at no additional cost to Owner.

2. Where an equivalent manufacturer is listed in the specifications, it may or may not indicate that there is an equal product available. Any products must meet all criteria of the Base Product Specification as determined by the Engineer.

B. Substitutions and Equipment Deviations will not be considered if they have a direct bearing on the changing or revising of Contract Documents or if it involves other Contractor's scope of work or thier equipment. Coordination with all trades is required and must be acceptable to all other involved Contractors.

C. Substitutions may be considered for one of the following:

1. Substitution for Cause: Changes proposed by the Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of warranty terms.

2. Substitutions for Convenience: Changes proposed by the Contractor that are not required in order to meet other Project requirements, but may offer advantage to either the Owner or Contractor.

D. In these Specifications and on the accompanying Drawings, one or more makes of materials, apparatus or appliances may have been specified for use in this installation. This has been done for convenience in fixing the standard of workmanship, finish and design required for installation. In the event that only one (1) manufacturer of a product is specified and it is found that the manufacturer has discontinued the product, the Contractor shall use an acceptable equivalent product that meets the requirements of an equivalent product, as noted below, and has all the features of the originally specified product. The details of workmanship, finish and design, and the guaranteed performance of any material, apparatus or appliance which the Contractor desires to deviate for those mentioned herein shall also conform to these standards.

E. Where no specific make of material, apparatus or appliance is mentioned, any first-class product made by a reputable manufacturer may be submitted for the Engineer's review.

F. Where two or more names are given as equivalents or where one name only is used and is followed by the words "or acceptable equivalent", the Contractor must use the item named or he may apply for an equipment deviation through the prescribed manner in accordance with this Specification.

G. Equipment, material or devices submitted for review as an "accepted equivalent" shall meet the following requirements:

1. The equivalent shall have the same construction features such as, but not limited to:

2. Material thickness, gauge, weight, density, etc.

3. Welded, riveted, bolted, etc., construction

4. Finish, undercoatings, corrosion protection

5. The equivalent shall perform with the same or better operating efficiency.

6. The equivalent shall have equal or greater reserve capacity.

7. The equivalent shall be locally represented by the manufacturer for service, parts and technical information.

8. The equivalent shall bear the same labels of performance certification as is applicable to the specified item, such as AMCA or ARI labels.

H. Where the Contractor proposes to use an item of equipment other than specified or detailed on the Drawings which requires any redesign of the structure, partitions, foundations, piping, wiring or any other part of the mechanical, electrical or architectural layout, all such redesign and all new drawings and detailing required therefore shall be prepared by the Designers of Record at the expense of the Contractor and at no additional cost to the Owner.

I. Where such accepted deviation or substitution requires a different quantity and arrangement of piping, ductwork, valves, pumps, insulation, wiring, conduit and equipment from that specified or indicated on the Drawings, the Contractor shall, with the acceptance by the Engineer, furnish and install any such additional equipment required by the system at no additional cost to the Owner, including any costs added to other trades due to the substitution.

J. The Engineer shall determine if an "accepted equivalent" to a manufacturer listed in the Specifications is considered acceptable.

1.11 SHOP DRAWINGS

A. Refer to individual specification sections for additional submittal information.

B. The Contractor shall submit for review detailed shop drawings of all equipment and material specified in each section and coordinated ductwork layouts. No material or equipment may be delivered to the job site or installed until the Contractor has received shop drawings for the particular material or equipment which have been properly reviewed.

C. Shop drawings shall be submitted within 60 days after award of Contract before any material or equipment is purchased. The Contractor shall submit for review copies of all shop drawings to be incorporated in the Contract. Refer to the General Conditions and Supplementary General Conditions for the quantity of copies required for submission. Where quantities are not specified, provide seven (7) copies for review.

D. Provide shop drawings for all devices specified under equipment specifications for all systems, materials, equipment and/or devices. Shop drawings shall include manufacturers' names, catalog numbers, cuts, diagrams and other such descriptive data as may be required to identify and accept the equipment. A complete list in each category (example: all fixtures) of all shop drawings, catalog cuts, material lists, etc., shall be submitted to the Engineer at one time. No consideration will be given to a partial shop drawing submittal. Partial submissions shall be rejected.

E. Equipment shop drawings shall contain full range performance curves, graphs, tables or other pertinent data which clearly indicates operational range of a given unit size. Computer generated/plotted curves, based solely on design performance, will not be accepted.

F. All specific options and/or alternatives shall be clearly indicated. Failure to do so shall be grounds for rejection.

G. Submittals shall be marked with the trade involved, i.e., HVAC, plumbing, fire protection, etc. and the specific associated specification section.

H. Where multiple quantities or types of equipment are being submitted, provide a cover sheet (with a list of contents) on the submittal identifying the equipment or material being submitted.

I. Failure to submit shop drawings in ample time for review shall not entitle the Contractor to an extension of Contract time. Contractor must allow for a one week review at the Engineer's office plus normal delivery time to the G.C., Architect, Engineer, and return to the Architect, and G.C. No claim for extension by reason of such default will be allowed, nor shall the Contractor be entitled to purchase, furnish and/or install equipment which has not been reviewed by the Engineer. The Contractor shall incur all costs associated with delay of construction due to equipment and/or materials arriving late due to late or improper shop drawing submittal.

J. The Contractor shall furnish all necessary templates, patterns, etc., for installation work and for the purpose of making adjoining work conform; furnish setting plans and shop details to other trades as required.

K. Acceptance rendered on shop drawings shall not be considered as a guarantee of measurements or building conditions. Where drawings are reviewed, review does not indicate that drawings have been checked in detail; said approval does not in any way relieve the Contractor from his responsibility or necessity of furnishing material or performing work as required by the Contract Drawings and Specifications. Verify available space prior to submitting shop drawings.

L. Acceptance of shop drawings shall not apply to quantity nor relieve Contractor of his responsibility to comply with intent of Drawings and Specifications.

M. Acceptance of shop drawings is final and no further changes will be allowed without the written consent of the Engineer.

N. Shop drawing submittal sheets which may show items that are not being furnished shall have those items crossed off to clearly indicate which items will be furnished.

O. Bidders shall not rely on any verbal clarification of the Drawings and/or Specifications. Any questions shall be referred to the Engineer at least five (5) working days prior to Bidding to allow for issuance of an Addendum. After the five (5) day deadline, Bidder shall make a decision and qualify the Bid, if the Bidder deems if necessary.

P. Contractor shall make any corrections required by Engineer and shall resubmit required number of corrected copies of shop drawings or new samples until accepted. Contractor shall direct specific attention in writing or on resubmitted shop drawings to revisions other than corrections requested by Engineer on previous submissions. Engineer shall review no more than one resubmittal of any shop drawing or sample at Owner's expense. The fees for review of additional resubmittals shall be paid by the Contractor at the Engineer's standard rates.

1.12 CHANGES IN WORK

A. A Change Order is a written order to the Contractor signed by the Owner and the Architect, issued after Contracts have been awarded, authorizing a change in the work or an adjustment in the Contract sum or the Contract time. A Change Order signed by the Contractor indicates his agreement therewith, including the adjustment in the Contract sum or the Contract time.

B. All changes in the work shall follow the recommendations of the AIA "General Conditions of the Contract for Construction", Article 12.

1.13 MANUFACTURER'S IDENTIFICATION

A. All component parts of each item of equipment or device shall bear the manufacturer's nameplate giving name of manufacturer, description, size, type, serial and model number, electrical characteristics, etc., in order to facilitate maintenance or replacement. Nameplate data shall not be obstructed. The nameplate of a Contractor or distributor will not be acceptable.

B. All material and equipment for the electrical portion of the mechanical systems shall bear the label of or be listed by UL, or other accredited authoritative agencies or testing organizations approved by the authority having jurisdiction.

1.14 RECORD DRAWINGS

A. Maintain at the job site a record set of Mechanical Drawings on which any changes in location or routing of all equipment, materials and access panels shall be recorded.

B. At the end of construction, the Contractor shall provide the Owner with a complete set of As-Built Drawings, including all updated coordination drawings, ductwork and piping plans. As-Builts shall be drawn on the latest version of AutoCAD or compatible software, approved in writing, prior to submittal.

1.15 MATERIALS AND WORKMANSHIP

A. All materials and apparatus required for the work, except as otherwise specifically indicated, shall be new, of first-class quality, and shall be furnished, delivered, erected, connected and finished in every detail and be so selected and arranged as to fit properly into the building spaces. Where no specific type or quality of material is given, a first-class standard article as accepted by industry standards shall be furnished.

B. The Contractor shall furnish the services of an experienced superintendent who shall be constantly in charge of the installation of the work together with all skilled workmen, fitters, metal workers, welders, helpers and laborers required to unload, transfer, erect, connect, adjust, start, operate and test each system.

C. Unless otherwise specifically indicated on the Drawings or Specifications, all equipment and materials shall be installed with the acceptance of the Engineer and in accordance with the recommendations of the manufacturer. This includes the performance of such tests as the manufacturer recommends.
