

KAUFMAN ISD - MAINTENANCE REPORT

OCTOBER 2026

The Kaufman ISD maintenance team has been working hard to maintain systems and make improvements across the district.

Here are a few of the projects that the crew has been working on this month:

Here the crew repairs a garden bed at the high school. The bed was cleared and lined with decorative rock. The rock will prevent the mulch from washing out across the walkway.

Ken and Kristian used the bucket truck to mount some weather gadgets at Monday Elementary School. The students will now be able to measure wind direction and speed. Fantastic !

This year's record heat has produced some challenges for the team. Above, Margo repairs some fence panels at Monday that had shifted in the moving clay. Below, the team works to repair HCAV compressors at Helen Edwards.

12 tons of fill sand was added to the grass practice fields. Above, the crew uses the top dressing machine to spread the sand evenly across the field. Below, Benny and company use the auger machine to clean out drain pipes at Norman.

Below left, light replacement at Helen. Right, Mystie works on purchase orders.

Finally, our newest team member (Harry) spent some time this month removing some uninvited guests from the schools. All critters were relocated to a rehabilitation facility and we wish the best for them. Thanks Harry !
