BTA BLAIR EXECUTIVE AIRPORT

Memorandum

October 20th 2026

Trevor Corey, Airport Manager

Fuel Tank Installation/Relocation

Blair Airport Authority,

Airport staff are requesting the installation and relocation of fuel tanks near the SRE Building. One tank will be installed to provide 91 Octane Gasoline, while the other will be relocated that currently provides Off-Road Diesel Fuel.

Currently the location of the off road diesel tank is near the Fuel Farm. This location will be compromised soon when changes to our gate are made. Discussions have been had previously about moving the main gate from its current location near the FBO, to north of the fuel farm where the temporary construction entrance was located. If the gate is moved to this location, we will be forced to move the fuel tanks regardless.

A previous Estimate was received for this work, but the estimate was never presented to the Airport Authority board. Since then, that bid has expired, and a new one was requested. The new bid was an increase from the original.

Installation of a fuel tank to provide 91 Octane gasoline will allow airport equipment and vehicles to fuel on site. Additionally, the mower contractor for the Blair Executive Airport has indicated this installation would greatly benefit his operations having quick access to fuel for his mowers. The fuel used by non-airport individuals/businesses would be tracked and billed accordingly. It wouldn't be a huge income source but it would be some.

Estimate Received:

$13,611.60

Recommendation:

Approve the installation and relocation of Fuel Tanks near the SRE Building
