(h) If a surplus in the food service fund exists at the end of a fiscal year for three successive years, a district may recode for that fiscal year the costs of lunchroom supervision, lunchroom custodial services, lunchroom utilities, lunchroom furniture, and other administrative costs of the food service program charged to the general fund according to paragraph (c) and charge those costs to the food service fund in a total amount not to exceed the amount of surplus in the food service fund.

(i) For purposes of this subdivision, "lunchroom furniture" means tables and chairs regularly used by pupils in a lunchroom from which they may consume milk, meals, or snacks in connection with school or community service activities.

Subd. 4. **No fees.** A participant that receives school lunch aid under this section must make lunch available without charge and must not deny a school lunch to all participating students who qualify for free or reduced-price meals, whether or not that student has an outstanding balance in the student's meals account.

Subd. 5. **Respectful treatment.** (a) The participant must also provide

Thank you for your business!

Dear Parents,

At *[fill in school of district name here]*, we take the issue of account misuse in our lunch lines very seriously. Unfortunately, there are instances where students inadvertently or intentionally use another student's account to obtain lunch. While we do our best to monitor and reverse fraudulent charges, not all situations are detected, and the resulting costs can sadly fall on you as parents. Additionally, even students eligible for free or reduced lunch are limited to one meal per day; any additional meals are charged at full price.

To enhance security and protect your child's lunch account, we are excited to introduce a new solution: the IDconnect® finger identification system. This innovative technology links your child's ID number to their finger, giving them complete control over their identity and significantly reducing the risk of account misuse. We invite your input on this solution.

It's important to clarify that this system does **not** store any biometric data, such as fingerprints or measurements. Thanks to a patented software design, it cannot reproduce a fingerprint in any way. A match is made only when a finger is placed on the reader, and all data is kept securely on our local school network with multiple layers of passwords and encryption.

During the initial enrollment, we gather a variable number of measurements to create a unique enrollment. Rest assured, **none** of these measurements are stored. The information is encrypted and cannot be used to recreate a fingerprint, ensuring your child's safety.

While you have the option to opt out of the system, please keep in mind that doing so puts your child at greater risk of having their ID misused, which could lead to the loss of vital information and/or lunch funds

We encourage you to learn more about this technology. You can visit the company's website at www.fingerid.net to view video clips of its implementation in over 3,000 schools nationwide.

Your feedback is invaluable as we consider this important change. Please let us know your thoughts, understanding that the system does not store fingerprints and all data is deleted when a student leaves our district.

To help us gauge your perspective, please respond to the following options:

- ___ Continue with current identification methods, which can lead to misuse and potential charges.
- ___ Implement this modern technology to eliminate daily lunch line account misuse.

Additional comments:

Thank you for your support!

Sincerely,

[Your Name]

[Your Contact Information]

IDCONNECT® FINGER

Our IDconnect® Finger system takes a series of measurements and comes up with a unique identity for each student's finger. We do not store the fingerprint image and the process cannot be reversed to retrieve the finger measurements.

Enrollment:

- Enrolls up to 10 fingers for one ID. We recommend enrolling both index fingers.
- Enrolls students during normal operation.
- Ability to enroll from all clients simultaneously.

Speed:

- Speeds of access are extremely fast, even with very large databases. Initial database license are 5,000, but can be expanded up to 200,000 (additional licensure cost) for district level installation.
- Searches the entire database of IDs in less than 2 seconds.

Capacity:

- Pre-load patron data, via comma or tab delimited text file.
- Accepts up to 6 different ID numbers.
- Accepts up to 5 user-defined fields.
- Batch update database with new students via comma or tab delimited text file.
- Batch update database inserting new students and deleting graduated students via comma or tab delimited text file.

Reader:

- TouchChip fingerprinting sensor and ergonomic finger guide for quick capture
- Power on LED indicates device readiness
- 6' USB Cable
- Gasket to keep out moisture and dust
- Weighted base for stability

IDCONNECT® CAN OPERATE WITH:

- Windows 98, XP, Vista, Windows Server 2000, 2003, 2008, 2012, 2016, 2019
- Windows 7,8, and 10 (32-bit or 64-bit)
- Works with Virtual Servers

IDconnect® uses client/server technology to allow multiple lookup and enrollment points through a LAN or wide area network (WAN)

Hard drive space would be 2GB for nearly all databases. Can be run on a Thin Client. Client machine should have 1 USB port for the finger scanner/reader. An additional USB port is needed for the Stop/Go Feedback Light.
