Board Date *October 2023*

- Contractor has installed new cooling tower and in the process of installing all 4 roof top units on Middle School Gym.

Project Name **ECHS/ECMS Replace carpet with Tile**

ESSER II

Board Date *October 2023*

- ECHS- classrooms are complete; ECMS & ECHS dining halls will be complete next summer due to time constraints.

Project Name **VUE Demolition of A Building**

District New Construction

Board Date *October 2023*

- Project on hold pending authorization to continue

Project Name **SMAC Baseball Restrooms**

District New Construction

Board Date *October 2023*

- Project is on hold.

Project Name **SMAC Dugout Drainage Mitigation**

District New Construction

Board Date *October 2023*

- Project on HOLD

Project Name **ECAC Bleachers**

District New Construction

Board Date *October 2023*

- Maintenance to run power to press boxes.

Project Name **SMEE & SMNE Roofing Projects**

District New Construction

Board Date *August 2023*

- All roofs at SMEE are covered and we are currently waiting on the trim, gutters and down spots to complete SMEE. SMNE is still pending the completion of SMEE.

Board Date *October 2023*

- SMEE flashing is complete and SMNE roofing still ongoing.

Project Name **SMUE & SMEE HVAC Replacement**

ESSER III

Board Date *October 2023*

- Still waiting on equipment to arrive.

Project Name **Vancleave HVAC Renovation**

ESSER III

Board Date *October 2023*

- Equipment currently being order- project begins when equipment has been received.

Project Name **VAC Flooring Replacement**

ESSER II & III

Board Date *October 2023*

- Complete

Project Name **VHS Roofing Project**

District New Construction

Board Date *October 2023*

- Brad Patano is preparing roofing bid package and it is still in design.

Project Name **ECMS 800 Hall- VCT Tile /Carpet Replacment - 4 classrooms**

ESSER III

Board Date *October 2023*

- Contractor remove carpet, installed VCT tile and new base board

Primary Destination	County	Maximum Daily Meal Reimbursement	First & Last Day of Travel		
Oxford	Lafayette	$64	$48.00		
Southaven	Desoto	$59	$44.25		
Starkville	Oktibbeha	$64	$48.00		
Standard Rate	All Other	$59	$44.25		
All other states/counties per https://www.gsa.gov/travel/plan-book/per-diem-rates					

District: Jackson County School District
Section: D - Fiscal Management
Policy Code: DJDAA - Travel Reimbursements

Staff Travel—Local and Non-Local JCSD GBRF

The Jackson County Board of Education recognizes that it is necessary that staff travel to attend various meetings, conferences, and school/district-related functions. All local travel requiring only mileage reimbursement (for employee's personal vehicle) or fuel reimbursement (for school vehicle) and/or registration fees may be pre-approved by the staff member's immediate supervisor. Local travel requiring other payments, and all non-local travel must have the pre-approval of the Board of Education.

Local travel shall be considered those trips, on official school business, which require an employee to travel within the boundaries of Mobile County, AL and Jackson, Harrison, Hancock, Stone, Lamar, Forrest, George, Green, and Perry counties in Mississippi. Attendance to virtual conferences while at the employee's regular work location shall also be considered local travel.

Approved staff attending school related athletic events or school activities associated with MHSAA and only require mileage or fuel reimbursement shall be considered Local Travel for purposes of reimbursement. Athletic travel may be approved by the Assistant Superintendent and/or Superintendent.

Mileage and fuel reimbursements within "local" travel shall be submitted to and approved by the employee's immediate supervisor.

Upon submission of a travel voucher detailing specific expenditures with supporting documents, staff members shall be reimbursed for travel expenses open claims docket at the next board meeting. If an overnight stay is required, then expenses for meals shall be reimbursed at the actual cost of the meals[1] not to exceed the state approved maximum meal per diem rate for the city and state in which the conference is held.[2] Reimbursement for meals shall be prorated at 75% of the per diem meal allowance for the day travel begins and the day travel ends.[3] Alcoholic beverages are not reimbursable.[4] The travel voucher shall be signed and dated by the staff member's immediate supervisor and then submitted to the appropriate personnel for subsequent payment of expenses. All reimbursement of expenses shall be paid after board approval via direct deposit into the same account as the employee's primary bank account for payroll purposes.

Staff members are encouraged to car pool as a means of keeping travel expenses at a minimum.

Travel advances must be settled within 10 working days after the return from travel. Travel advances not settled in a timely manner may result in an employee's payroll check being withheld until the liability is resolved.[5]

Parking fees may be reimbursed, but only at a standard or regular rate. For example, if valet service is an additional charge over "regular" parking, the difference will be deducted and the lower rate reimbursed.

If employees choose to bring non-employees on a school-funded trip (or if they bring an employee who is not part of the meeting/conference), the difference in cost between the employee-only rate and the rate charged for the "extra" person shall be deducted from the reimbursement/cost.

Adopted Date: 8/23/2004
Approved/Revised Date: 4/19/2021

District: Jackson County School District
Section: I - Instructional Program
Policy Code: IFCB - Field Trips and Excursions

Field Trips and Excursions

The Jackson County Board of Education recognizes the need and desirability of field trips to enrich the experiences of students. A well-planned field trip is considered a worthwhile educational experience. Therefore, educational field trips related to class subjects may be authorized provided the following conditions are met:

1. The principal shall be notified in advance of the trip. Field trips must have the endorsement of the principal and must be designed to augment the lesson plans of the teacher.
2. A trip permit form must be endorsed by the Assistant Superintendent ~~at the Attendance Center~~ of Curriculum and Instruction in advance of the trip.
3. All field trip arrangements are the teacher's responsibility, including transportation, waivers, chaperones, etc. Students shall be under the direct supervision of a teacher or other certified personnel. Students will not be excluded because additional supervision for them is needed. The teacher must request in advance for additional supervision. School buses may be used for transportation for field trips. Only authorized personnel may drive a school bus.
4. Before each field trip each pupil must present to his/her teacher a document signed by the parent/guardian, giving the pupil permission to participate in the field trip.
5. Field trips shall not be taken after May 1. An exception to the May 1 deadline can be made if the following conditions are met:
    a. If the trip cannot be scheduled at any date prior to May 1.
    b. If all plans for the trip are completed prior to May 1.
    c. If the trip complies with the guidelines and approval process stated in this policy.
    d. If the trip has been approved by the Assistant Superintendent ~~for the Attendance Center~~ of Curriculum and Instruction.

~~6. Fees charged for trips using district-owned vehicles are divided into four categories:~~

~~a. The fee charged for transporting students to any planned activities for which participation with other schools or districts is scheduled, such as athletic events, band or choral events, FFA judging, debate teams, etc., or to any events directly programmed by the school administration will be $.30 per mile each way. The sponsoring school is also responsible for driver fees, additional gasoline and oil, and other incidental fees.~~

~~b. Field trips, will be charged a fee of $.50 per mile each way. This cost will be paid by the district and will not be charged to the schools. The district will cover the cost of two field trips per grade per year. Elementary grades may require more than one day per trip to accommodate the entire grade and will be considered as one trip. (Other trips for Gifted, Choir, Special Education, ETC. are to also follow the rule of only 2 per year. The sponsoring school is responsible for the cost of these trips.) Secondary~~

~~schools are allowed the equivalent of two field trips per grade per year. For example if the school serves grades 10-12, the district will cover the transportation cost for 6 field trips per year which can be divided between subject area at the principal's discretion .~~

~~c. Kindergarten classes are allowed to take more than one field trip per semester to accommodate the community trips needed to enhance their curriculum. The District will pay the transportation cost for 2 trips per year for Kindergarten. The Sponsoring school will be responsible for the transportation cost for the community trips that exceed the 2 trips paid for by the district.~~

~~d. Reward trips will be charged .50 per mile each way. Individual schools will be responsible for paying this fee. The sponsoring school is also responsible for driver fees, additional gasoline and oil, and other incidental fees. Reward trips are trips that are not necessarily related to instructional goals but are a form of reward for students/organizations. If students may be excluded from such trips for not meeting the criteria established by the principal (or designee), parents shall be notified, in writing, of said criteria and shall sign a document verifying receipt of the notification from the school. Students should not be arbitrarily disallowed from participation in these trips.~~

6. Field trips will be limited to one per grade (K-5) per year. This restriction shall not apply to Life Skills, WINGS, athletics, clubs, or reward trips.
7. Field trips must be board approved if either of the following conditions are met:
    a. Overnight stay
    b. Out of state travel

For any trip or school-related activity for which students are transported, whether by private vehicle or by district-owned vehicle, the proper trip permit form shall be submitted, necessary insurance requirements shall be met, and all of the above stated guidelines for trip permits shall be followed as applicable.

Section: J Students
Policy Code: JCDAB Student Drug Testing Program Extracurricular Activities
Policy:

Student Drug Test Policy

STATEMENT OF PURPOSE AND INTENT

The Jackson County School District (JCSD) recognizes that drug use by students participating in CTE, athletics, cheer, dance, band, and/or choir, a drivers' education course, and those who drive and park on campus (hereinafter "participating students") present special concerns about the dangerous combination of drugs and participation in these activities. While the misuse or abuse of illegal drugs, prescription and even nonprescription drugs is unsafe for any student, the additional demands placed upon participating students make such misuse or abuse dangerous.

In response to the serious health risks and other risks posed by participating students' use, JCSD has implemented a drug testing policy which is designed to provide early detection of drug use and to eradicate or reduce significantly use and influence of prohibited drugs and other chemicals by participating students.

In pursuit of these purposes, JCSD declares that the use of prohibited drugs, or intoxication and physical influence thereof, by participating students is inherently unsafe. Such use, intoxication or influence should be detected and prevented and such participating students should be counseled, educated and monitored. This policy is adopted to promote the safety, health and well-being of participating students and is not intended to be disciplinary or punitive in nature. The sanctions provided for herein relate solely to limiting the opportunity of any student found to be in violation of the policy to participate in the covered activity. There will be no academic sanction for violation of the policy and the policy is intended to complement all other policies of the JCSD regarding the possession or use of illegal drugs. Beginning July 1, 2017, this policy will become effective.

All students enrolled in JCSD who are in 7th grade or higher and who (1) participate in any JCSD High School or Middle School CTE, athletic program, cheer, dance, choir, and/or band or (2) obtain a parking permit to allow them to drive and park on a JCSD campus or (3) enroll in a drivers' education course shall be subject to drug testing to the extent and manner provided for in this policy.

The Board authorizes the superintendent to implement procedures in furtherance of the goals of this policy.

DEFINITIONS

"Athletic Department" shall mean the Athletic Departments for each of the attendance centers within the JCSD.

"Confirmation test" means a drug test on a specimen to substantiate the results of a prior drug test on the specimen. The confirmation test may use an alternate method of equal or greater sensitivity than that used in the previous drug test.

"Drug test" means a chemical test administered for the purpose of determining the presence or absence of a drug in a person's bodily fluids.

"Illegal drug" means (a) a prohibited drug as set forth below, (b) a drug listed as illegal under Mississippi law, (c) a drug which is illegal to use under Mississippi law without a prescription, or (d) which is controlled by the Food and Drug Administration.

"Initial test" means an initial drug test to determine the presence or absence or drugs or related metabolites in specimens.

"Medical Review Officer" or "MRO" means a licensed physician, either a Doctor of Medicine or Doctor of Osteopathy, or other medical or scientific expert knowledgeable in drug abuse disorders, employed to help the JCSD interpret, evaluate and monitor its drug testing program.

"Negative drug test" means a drug test that does not show evidence of a prohibited drug in a person's system.

"Participating Students" are students participating in CTE, athletics, cheer, dance, choir, and/or band and/or those who obtain a parking permit toallow them to drive and park on campus, and/or enroll in a drivers education course.

"Positive drug test" means a drug test that indicates the presence of a prohibited drug in a person's system.

"Prescription medication" means a drug prescribed for use by a duly licensed physician, dentist or other medical practitioner licensed to issue prescriptions.

"Prohibited drug" means any drug which is considered a part of the group of drugs listed in Section IV. PROHIBITED DRUGS/ALCOHOL below.

"Random testing" means a neutral selection basis of testing for drugs which provides a mechanism for selecting participating students for testing that: (i) results in an equal probability that any student from a pool of students subject to the selection mechanism will be selected, and (ii) does not give JCSD and school personnel the discretion to waive the selection of any student selected under the mechanism, unless a student has a significant cognitive disability documented in their Individualized Education Plan.

"Specimen" means a tissue or product of the human body chemically capable of revealing the presence of drugs in the human body.

"Calendar Year" means 365 days from the date a violation is declared.

"JCSD" means Jackson County School District.

ADMINISTRATIVE PROCEDURE

Concurrent Drug Testing Policies
This policy and the JCSD policy on drugs as listed in the JCSD Student Handbook shall be administered separately and concurrently. Tests occurring under this policy shall not be used for or considered for the purposes of the JCSD Assertive Disciple Program; however, test results under the Assertive Discipline Program may be considered for the purposes of eligibility to participate in CTE, athletics, cheer, dance, choir, and/or band or to drive to and park on the JCSD campus or to enroll in drivers' education course and for testing or monitoring under this policy. Participating students are subject to all related policies concerning this subject area.

Implementation
All participating students and their parents or guardians will be notified of this policy upon (1) entering an athletic program, CTE, cheer, dance, choir, and/or band, or (2) seeking a JCSD parking permit, or (3) enrolling in drivers' education course. The JCSD Superintendent and/or his or her designees shall be responsible for the fair, impartial and complete implementation of this policy and for ensuring the no-notice, surprise nature of all testing. The JCSD Administration shall be responsible for the coordination and execution of all testing through a third-party vendor, which is the MRO. The initial method of collection will be done by urinalysis.

Consent/Refusal to Consent
The parents or legal guardians of participating students will be asked to sign a consent form acknowledging this policy, authorizing the test for prohibited drugs as provided for in this policy and consenting to the release of the test results to the MRO, Superintendent and/or his/her designees on a need to know and confidential basis. The test results will also be provided to the parents/guardians of the participating student. If a participating student and/or his or her parent/guardian declines or fails to sign the consent form, the student will be ineligible to participate in any JCSD CTE, athletic program, cheer, dance, choir, and/or band or to drive and park on the JCSD campus or to enroll in drivers' education course. The consent form to be used for purposes of this policy shall be formulated by the MRO and Superintendent.

Annual Testing
As an annual prerequisite for participation in a JCSD CTE, athletic program, cheer, dance, choir, and/or band or for permission to drive and park on the JCSD campus, or enrolling in drivers' education course, parents/guardians of participating students must sign a consent form acknowledging this policy, authorizing the test for prohibited drugs as provided for in this policy. Any student who tests positive for drugs may be ineligible to participate in JCSD CTE, athletic program, cheer, dance, choir, and/or band or to drive and park on the JCSD campus or enroll in drivers' education course as provided for in this policy, or, at the discretion of the Principal or Athletic Director, and approved by the Superintendent, may participate subject to the provisions of
Section "Appeal" of this policy.

Random Testing
Participating students will be tested on a random basis for use of prohibited drugs. Random testing shall be conducted no less than two (2) times during a school year and may be conducted during the school year at any other time during the school year as determined by the Superintendent. The random testing shall be announced or revealed prior to the time of the commencement and shall be conducted on a no-notice, surprise basis. The JCSD Superintendent and his designees shall determine the percentage of participating students tested in any one (1) random test not to exceed ten percent
(10%) of eligible students on a specific campus or the designated amount budgeted by the school board for the cost of the MRO contract for drug analysis tests. Once the percent is established for the year it will be applied consistently in each attendance center. The Superintendent and his designees shall take all reasonable steps to assure the integrity, confidentiality, and random nature of the MRO selection process. This would include, but not necessarily be limited to the MRO:

1. Assuring that the names of all participating students are in the pool.
2. Assuring that the person drawing the names has no way of knowingly choosing or failing to choose particular students for the testing.
3. Assuring that the identity of students for testing is not known to those involved in the selection process.
4. Assuring the direct observation of the selection process by at least two certified employees of the District as determined by the Superintendent.

Specimen Collection
All specimens will be collected under reasonable and sanitary conditions. Individual dignity and privacy will be preserved to the extent practicable. Universally accepted standards for testing, labeling, storage and transportation of specimens will be strictly followed by the testing facilities. The MRO will request information before each confirmation test regarding prescription and non-prescription drugs and any other information which could lead to a false positive test. JCSD staff shall be present only for supervising of students during random testing. No JCSD staff shall be involved in the collection, storage, labeling, or handling of specimens from random testing unless necessary because of the student's handicapping condition that has been previously documented.

Testing Procedures
A laboratory certified by the National Institute of Drug Abuse will be designated by JCSD to perform all initial drug tests and selection of students. The laboratory and the MRO will be responsible for the handling and safe delivery of all positive specimens to the confirmation laboratory and such delivery will be accomplished through proper chain of custody procedures.

Finding of Drug Use Consequences
If a student violates this policy, the consequences described below will apply only to the component of the activity impacted by the violation (i.e., CTE, athletics, dance, cheer, band, choir, driving on campus, and/or driving during drivers' education class). The student's grade will not be lowered because of the student's suspension from participation in these activities; however, a student will not be allowed to drive until a negative test result occurs, which could negatively impact a grade in a drivers' education class. The student may be expected to complete alternative assignments during the suspension in order to maintain his or her grade .

1. **First Violation** If the initial test for drugs indicates a negative result, no further test will occur unless there is good reason to suspect the quality of the specimen sample. If the initial test indicates a positive result, a confirmation test will be conducted immediately. Should the confirmation test also indicate a positive result for a participating student, the following consequences shall be imposed:
   a. The district will notify the student and his or her parent/guardian via a phone call and in writing of such positive test results.
   b. The student shall be suspended from participation in all athletics, cheer, dance, choir, and/or band activities (which encompasses, for purposes of this policy, all participation including: tryouts, practices and competitions) and from driving to and parking on a JCSD campus or being enrolled in a drivers' education course for a minimum of thirty (30) days, which can be reduced by half upon the successful completion in a drug counseling and/or drug education program and passing a second drug test.
   c. The student shall submit to a mandatory drug test at a laboratory certified by the National Institute of Drug Abuse that will be designated by JCSD, on or about thirty days after the date on which JCSD received notification of the confirmation tests positive result. Parent/Guardian will be responsible for the cost of the test and JCSD will determine time frame it will be administered. A positive test result shall constitute a separate violation of this policy and shall be treated as a second violation.
   d. The student shall be required to participate in and complete a drug counseling or education program developed by and provided by JCSD. Refusal to participate in the counseling and/or education program, as set forth in this paragraph, will be treated and handled as a second positive test result.
   e. The student will not be allowed to resume participation until he/she has had a negative drug test at the expense of the parent/guardian.
   f. After successfully returning from a first violation, the student may be required to submit to additional unannounced retests within the calendar year of the violation at the discretion of the district. If the student receives a positive result at this point, a second violation is declared.
2. **Second Violation** Should a participating student test positive for a second time in any two calendar years, the following consequences shall be imposed:
   a. The MRO or district will notify the student and his or her parent/guardian in writing and/or via phone call of such positive test results.
   b. The student shall be suspended from participation in all athletics, dance, and cheer, choir, and/or band activities (which encompasses, for purposes of this policy, all participation including: tryouts, practices and competitions) and from driving to and parking on a JCSD campus or being enrolled in a drivers' education course for a minimum of sixty (60) days.
   c. The student shall submit to a mandatory drug test at a laboratory certified by the National Institute of Drug Abuse that will be designated by JCSD, on or about sixty (60) days after the date on which JCSD received notification of the confirmation tests' positive result. Parent/Guardian will be responsible for the cost of the test and JCSD will determine time frame it will be administered. A positive test result shall constitute a separate violation of this policy and shall be treated as a third violation.
   d. The student shall be required to attend a drug counseling or rehabilitation program at the expense of the parent/guardian. A drug counselor shall refer the student to a JCSD approved outside drug counseling agency. Documentation of attendance and completion of counseling must be submitted to the principal before participation/eligibility is reinstated.
   e. After successfully returning from a second violation, the student may be required to submit to additional unannounced retests within the calendar year of the violation at the discretion of the district. If the student receives a positive result at this point, a third violation is declared.
3. **Third Violation** Should a participating student test positive for a third time in any two calendar years, the following consequences shall be imposed:
   a. The MRO or district will notify the student and his or her parent/guardian in writing and/or via telephone of such positive test results.
   b. The student shall be suspended from participation in all athletic, dance cheer, choir, and/or band activities and from driving to and parking on the JCSD campus and from drivers' education course for a minimum of one (1) calendar year.
   c. The student shall be required to attend a drug counseling or rehabilitation program at the expense of the parent/ guardian. A drug counselor shall refer the student to a JCSD approved outside drug counseling agency. Documentation of attendance and completion of counseling must be submitted to the principal before participation/eligibility is reinstated.
   d. The JCSD reserves the right to require the student to submit to mandatory drug testing during the calendar year of the violation as often as deemed appropriate by the administration. The student will not be allowed to resume participation until he or she presents a negative result on retest. No positive test results as described in this policy will be used as grounds to discipline, suspend or expel a participating student, except for the guidelines provided in this policy.

Appeal
A participating student has the right to appeal a decision under this policy by following the grievance procedures as outlined in JCSD Student Handbook and shall be afforded all student due process rights as provided by law. Participation in CTE classes, athletics, dance, cheer, choir and/or band and parking at JCSD or enrolling in drivers' education course is a privilege only and a student has no property right or interests in such participation.

Medical Review Officer
As part of this policy, JCSD will utilize the services of a Medical Review Officer (MRO) as designated by JCSD. The MRO will interpret, monitor, and evaluate all positive test results so as to determine whether any alternative medical explanation could account for the positive results. The MRO must be a licensed physician, or group of licensed physicians, knowledgeable in drug abuse disorders.

Confidentiality
The results of a student's drug test shall not be released to anyone other than the Medical Review Officer (MRO), the Superintendent or his/her designees and the student's parents/guardians. Results may also be released to the Board of Trustees, the school attorney, athletic department personnel, and/or school advisor on a need-to-know and confidential basis. No other person may receive the test results without the express authorization and consent of the participating student's parent/guardian.

Cost
JCSD will bear the cost of the initial drug and confirmation test required by JCSD under this policy. The participating student or his or her parent/guardian will pay the costs of any retest requested by the student and of all tests required after a violation of this policy, as outlined in Section "Appeal" above. If a parent requests that blood testing or any other alternate method of equal or greater sensitivity be utilized then the parent will be responsible for the additional costs associated with the testing method.

Use of Prescription or Legal Non-prescription Drugs
Prior to an initial drug test, a participating student may voluntarily disclose the use of any prescription or non-prescription drugs, but will not be required to do so. If the initial test results are positive, the MRO shall request from the student and/or the parent/guardian information regarding what, if any, prescription and non-prescription drugs, the student was using at the time of the test.

Prohibited Drugs/Alcohol
JCSD will test for the use of prohibited drugs in the following groups:

1. Marijuana
2. Cocaine
3. Opiates
4. Amphetamines
5. Phencyclidine (PCP)
6. Spice (synthetic marijuana)

Drug Assistance Program Procedures for Intervention Program
In the event that a student chooses to enroll in a designated Drug Counseling or Rehabilitation program the following steps may be considered:

1. The student and his/her parent(s) or legal guardian(s) will be provided with information regarding those designated drug/alcohol programs that are available in our vicinity.

2. The student and his/her parent(s) or legal guardian(s) will be responsible for providing for the cost of the program.
3. The student and his/her parent(s) or legal guardian(s) will be responsible for transportation to and from the program.

4. To ensure that the student successfully completes the program, the parent/guardian will sign a release of information form with the treatment center giving the center the right to share information with the school system's designee. The school will receive a report from the treatment center advising the District of the student's attendance and degree of success.

District: MSBA Sample
Section: B - School Board Operations
Policy Code: BBBE - Board Member Compensation and Expenses

BOARD MEMBER COMPENSATION AND EXPENSES

BOARD MEMBER CHOICE

Each school board member shall receive per diem in the amount of one hundred twelve dollars ($112.00) for no more than thirty-six (36) meetings of the school board during any one (1) fiscal year, or may choose to receive as compensation for services an annual salary subject to the following provisions:

1. For a school board member serving in a district with less than five thousand students enrolled in the school district, that member shall receive an annual salary of four thousand dollars ($4,000);

2. For a school board member serving in a district with at least five thousand students but less than ten thousand students enrolled in the school district, that member shall receive an annual salary of not less than four thousand dollars ($4,000) but not more than five thousand dollars ($5,000);

3. For a school board member serving in a district with greater than ten thousand students enrolled in the school district, that member shall receive an annual salary of not less than four thousand dollars ($4,000) but not more than six thousand dollars ($6,000);

The school board should record in its minutes the selection made by each individual board member. The choice made by each school board member shall be irrevocable and shall remain in effect for all successive terms or periods of service of that member. Such compensation shall not entitle any school board member to receive or be eligible for any state employee group insurance, retirement or other fringe benefits.

REIMBURSEMENT

Each member shall be reimbursed for the necessary expenses and mileage in attending meetings of the school board. In addition, all members may be reimbursed for mileage and actual expenses incurred in the further performance of their duties, including attendance at any mandatory school board training session or at regional and national education meetings, when such mileage and other expenses are authorized by the board prior to the date on which they occur. Detailed vouchers shall be submitted for reimbursement for all expenses authorized by this section. Such reimbursement shall be in accordance with Section 25-3-41.

Such expenses shall be paid on order of the school board by pay certificates issued by the superintendent of the school district involved against the funds available for payment of the administrative expense of the district.

REFRESHMENTS / MEALS AT BOARD MEETINGS

When attending meetings of the board and mandatory training sessions, board members may be provided refreshments and/or a meal when such is deemed necessary to prevent major interruptions to the board meeting or training session. A meal may be provided in lieu of reimbursement in order to avoid disruption of business, if the board determines that such is a necessary and reasonable expense of the meeting.

PENALTY FOR MISSED BOARD MEETINGS

If a member of a school board misses twenty percent (20%) or more of the meetings of the school board during a calendar year, except for absences caused by required military duty, the member must reimburse the school district that portion of the total salary paid to the member that year which is proportionate to the number of meetings missed by the member in relation to the total number of school board meetings held during that year. For purposes of this subsection, consideration may be given only to meetings of which public notice is required. 37-6-13

District: Jackson County School District
Section: I - Instructional Program
Policy Code: IDAG Dual Enrollment

DUAL ENROLLMENT CREDIT

Eligible students may participate in the Dual Enrollment Program established by the Jackson County School District (JCSD) in compliance with the MS Code §37-15-38.

A dual enrolled student is a student who is enrolled in a community or junior college or state institution of higher learning while enrolled in high school.

A dual credit student is a student who is enrolled in a community or junior college or state institution of higher learning while enrolled in high school and who is receiving high school and college credit for postsecondary coursework.

1. Dual Credit Program Allowances

   A student may be granted credit delivered through the following means:

   . Examination preparation taught at a JCSD high school by a qualified teacher. A student may receive credit at the secondary level after completion of an approved course and passing the standard examination, such as an Advanced Placement (AP) or International Baccalaureate (IB) course through which a JCSD high school student is allowed CLEP credit by making a three (3) or higher on the end-of-course examination.

   a. College or university courses taught at a JCSD high school or designated postsecondary site by a qualified teacher who is an employee of JCSD and approved as an instructor by the collaborating college or university.

   b. College or university courses taught at a college, university or high school by an instructor employed by the college or university and approved by JCSD.

   c. Online courses of any public university, community or junior college in Mississippi.

2. Admission Criteria for Dual Enrollment in Community and Junior College or University Programs

   Students may be admitted to enroll in community or junior college courses under the dual enrollment programs if they meet that individual institution's stated dual enrollment admission requirements.

3. Tuition and Cost Responsibility

   Tuition and costs for university-level courses and community and junior college courses offered under a Dual Enrollment Program shall be the responsibility of the parents, custodian or legal guardians of the student.

4. Transportation Responsibility

   Any transportation required by a student to participate in the Dual Enrollment Program is the responsibility of the parent, custodian or legal guardian of the student.

5. JCSD Average Daily Attendance Credit

   When dually enrolled, the student shall be counted, for Adequate Education Program funding purposes, in the average daily attendance of JCSD in which the student attends high school.

6. High School Student Transcript Transfer Requirements

   Grades and college credits earned by a student admitted to a Dual Credit Program must be recorded on the JCSD high school student record and on the college transcript at the university or community or junior college and high school where the student attends classes.

7. Ineligible Courses for Dual Credit Programs

   Any course that is required for Subject Area Testing as a requirement for graduation from JCSD is not eligible for dual credit.

8. Eligible Courses for Dual Credit Programs

   Courses eligible for dual credit include, but are not necessarily limited to, foreign languages, advanced math courses, advanced science courses, performing arts, advanced business and technology, and career and technical courses. All courses being considered for dual credit must receive unconditional approval from the Superintendent of JCSD and the chief instructional officer at the participating community or junior college or university in order for college credit to be awarded. A university or community or junior college shall make the final decision on what courses are eligible for semester hour credits.

9. High School Carnegie Unit Equivalency

   One (1) three-hour university or community or junior college course is equal to one (1) High School Carnegie Unit.

10. Maximum Dual Credits Allowed

It is the intent of the Dual Enrollment Program to make it possible for every eligible student who desires to earn a semester's worth of college credit in high school to do so. A qualified dually enrolled JCSD high school student must be allowed to earn an unlimited number of college or university credits for dual credit.

11. Qualifications of Dual Credit Instructors

A dual credit academic instructor must meet the requirements set forth by the regional accrediting association (Southern Association of Colleges and Schools). University and community and junior college personnel have the sole authority in the selection of dual credit instructors. A dual credit career and technical education instructor must meet the requirements set forth by the Mississippi Community College Board in the qualifications manual for postsecondary career and technical personnel.

The Superintendent and/or designee shall develop procedures to support this policy.

Mission Statement

The mission of the Jackson County School District is to provide a safe, nurturing environment conducive to quality education wherein all students have the opportunity to obtain the essential skills necessary to achieve the goals of their choice and to become responsible, productive citizens.

JCSD Strategic Plan Goals

1. Decreased safety incidents
2. Increased student achievement
3. Sound financial management
4. Improved facilities and infrastructure
5. Positive educational experience
6. Effective leadership

Introduction

Teachers and students of Jackson County School District are provided superior-quality information, tools, and resources that are appropriate and adequate to facilitate the highest levels of student academic achievement. All administrators and faculty members are given access to the most current academic frameworks and standards available from the Mississippi Department of Education. Academic frameworks and standards are provided to teachers both digitally through internet links and in a flash-drive file at each campus. District and school-level professional development is furnished in an ongoing effort to build teacher capacity in instructional best-practices. In addition, teachers work together to align resources and instructional pacing to the Mississippi College and Career Readiness Standards. Input from parents, students, staff members, faculty members, and administrators is obtained annually regarding district-provided curriculum, resources, and information. This data, along with student assessment results, is considered for procedural and purchasing decision-making.
The instructional management system includes a tiered instructional model (MTSS) in accordance with (7 Miss. Admin. Code Pt. 3, Ch. 41, R. 41.1), including academic interventions, behavioral interventions, and Literacy-Based Promotion Act requirements.

JCSD SCHOOL BOARD POLICY

Section: I Instructional Program
Policy Code: IB Instructional Goals
Policy:

Instructional Goals

The School Board of the Jackson County District directs the Superintendent to implement and maintain the planned instructional program which complies with Mississippi Code 37-3- 49 (2)(a-c) and s7-3-49(5) and School Board Policy 4300. The district curriculum will at a minimum, align with current academic standards required and adopted by the State Board of Education. These standards are available to all teachers in each school.

1. The school district implements an instructional management system that has been adopted by the school board and that includes, at a minimum, the current academic standards required and adopted by the State Board of Education. {MS Code 37-3-49)
2. Suggested teaching strategies, resources, and assessment strategies are available to teachers in each school for selection and use in teaching the current academic standards required and adopted by the State Board of Education. {MS Code 37-3-49}
3. The school district provides each student in each school with current or otherwise appropriate textbooks that are in good condition. {MS Code 37-43-1, 37-9-14(2)(b), and 37-7-301(ff)}

The district shall provide resource materials as necessary, within legal budgetary limitations, to support the current standards required and adopted by the State Board of Education.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Introduction

Mission Statement

The Mississippi Department of Education is dedicated to student success including the improvement of student achievement in English Language Arts in order to produce citizens who are capable of making complex decisions, solving complex problems, and communicating fluently in a global society. The Mississippi College- and Career-Readiness Standards provide a consistent, clear understanding of what students are expected to know and be able to do by the end of each grade level or course. The standards are designed to be robust and relevant to the real world, reflecting the knowledge and skills that students need for success in college and careers and to compete in the global economy.

Purpose

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards is to provide a basis for curriculum development for Grades K-12 English Language Arts teachers in Mississippi. This document provides an outline of what students should know and be able to do by the end of each grade level in preparation for college and career. The primary purpose of this document is to provide a basis for curriculum development for K-12 English Language Arts teachers, outlining what students should know and be able to do by the end of each grade level and course. Mississippi-specific courses that were revised to align with the Mississippi College- and Career-Readiness Standards include Survey of African American Writing, Creative Writing, Debate, Foundations of Journalism, Broadcast Journalism, Print Journalism, Mississippi Writers, Oral Communication, Technical and Workplace Writing, Survey of Twentieth Century Writing, and World Literature. The new Southern Regional Education Board (SREB) Literacy Ready course is included as a transition to college English course.

Organization of the 2016 Mississippi College- and Career-Readiness Standards

The 2016 Mississippi College- and Career-Readiness Standards are divided into 6 sections. The first section includes an introduction to the document, an overview of the Mississippi College- and Career-Readiness Standards for English Language Arts. The second section includes the MS CCRS for ELA for kindergarten through second grade. The third section includes the MS CCRS for ELA for grades 3-5. The fourth section includes the MS CCRS for ELA, including Literacy in Social Studies, Science, and Technical Subjects. The final section includes the Mississippi Specific High School ELA electives, Advanced Placement courses, and the SREB Bridge Course.

Implementation

The required year for the implementation of the 2016 Mississippi College- and Career-Readiness Standards is school year 2016-2017.

Mississippi College- and Career-Readiness Standards (MS CCRS) for English Language Arts Overview

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

Mississippi College- and Career-Readiness Standards (MS CCRS) for English Language Arts

OVERVIEW

The Mississippi College- and Career-Readiness Standards (MS CCRS) for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects ("the Standards") are the culmination of an extended, broad-based effort to fulfill the charge to create next generation K–12 standards in order to help ensure that all students are college and career ready in literacy no later than the end of high school.

The Standards set requirements not only for English language arts (ELA) but also for literacy in history/social studies, science, and technical subjects. Just as students must learn to read, write, speak, listen, and use language effectively in a variety of content areas, so too must the Standards specify the literacy skills and understandings required for college and career readiness in multiple disciplines. Literacy standards for grade 6 and above are predicated on teachers of ELA, history/social studies, science, and technical subjects using their content area expertise to help students meet the particular challenges of reading, writing, speaking, listening, and language in their respective fields. It is important to note that the 6–12 literacy standards in history/social studies, science, and technical subjects are not meant to replace content standards in those areas but rather to supplement them.

As a natural outgrowth of meeting the charge to define college and career readiness, the Standards also lay out a vision of what it means to be a literate person in the twenty-first century. Indeed, the skills and understandings students are expected to demonstrate have wide applicability outside the classroom or workplace. Students who meet the Standards readily undertake the close, attentive reading that is at the heart of understanding and enjoying complex works of literature. They habitually perform the critical reading necessary to pick carefully through the staggering amount of information available today in print and digitally. They actively seek the wide, deep, and thoughtful engagement with high-quality literary and informational texts that builds knowledge, enlarges experience, and broadens worldviews. They reflexively demonstrate the cogent reasoning and use of evidence that is essential to both private deliberation and responsible citizenship in a democratic republic. In short, students who meet the Standards develop the skills in reading, writing, speaking, and listening that are the foundation for any creative and purposeful expression in language.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Key Design Considerations

Mississippi College- and Career-Readiness and Grade-Specific Standards

The Mississippi College- and Career-Readiness (MS CCRS) standards anchor the document and define general, cross-disciplinary literacy expectations that must be met for students to be prepared to enter college and workforce training programs ready to succeed. The K–12 grade-specific standards define end-of-year expectations and a cumulative progression designed to enable students to meet college and career readiness expectations no later than the end of high school. The MS CCRS and high school (grades 9–12) standards work in tandem to define the college and career readiness line—the former providing broad standards, the latter providing additional specificity. Hence, both should be considered when developing college and career readiness assessments.

Students advancing through the grades are expected to meet each year's grade specific standards, retain or further develop skills and understandings mastered in preceding grades, and work steadily toward meeting the more general expectations described by the MS CCRS standards.

Grade Levels for K–8; Grade Bands for 9–10 and 11–12

The Standards use individual grade levels in kindergarten through grade 8 to provide useful specificity; the Standards use two-year bands in grades 9–12 to allow flexibility in high school course design.

A Focus on Results Rather than Means

By emphasizing required achievements, the Standards leave room for school districts to determine how those goals should be reached and what additional topics should be addressed. Thus, the Standards do not mandate such things as a particular writing process or the full range of metacognitive strategies that students may need to monitor and direct their thinking and learning. Teachers are thus free to provide students with whatever tools and knowledge their professional judgment and experience identify as most helpful for meeting the goals set out in the Standards.

An Integrated Model of Literacy

Although the Standards are divided into Reading, Writing, Speaking and Listening, and Language strands for conceptual clarity, the processes of communication are closely connected, as reflected throughout this document. For example, Writing standard 9 requires that students be able to write about what they read. Likewise, Speaking and Listening standard 4 sets the expectation that students will share findings from their research.

Research and Media Skills Blended into the Standards as a Whole

To be ready for college, workforce training, and life in a technological society, students need the ability to gather, comprehend, evaluate, synthesize, and report on information and ideas, to

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

conduct original research in order to answer questions or solve problems, and to analyze and create a high volume and extensive range of print and non-print texts in media forms old and new. Research, media skills, and understandings are embedded throughout the Standards rather than treated in a separate section.

Shared Responsibility for Students' Literacy Development

The Standards insist that instruction in reading, writing, speaking, listening, and language be a shared responsibility within the school. The K–5 standards include expectations for reading, writing, speaking, listening, and language applicable to a range of subjects, including but not limited to ELA. The grades 6–12 standards are divided into two sections, one for ELA and the other for history/social studies, science, and technical subjects. This division reflects the unique, time-honored place of ELA teachers in developing students' literacy skills while at the same time recognizing that teachers in other areas must have a role in this development as well.

Part of the motivation behind the interdisciplinary approach to literacy promulgated by the Standards is extensive research establishing the need for college and career ready students to be proficient in reading complex informational text independently in a variety of content areas. Most of the required reading in college and workforce training programs is informational in structure and challenging in content; postsecondary education programs typically provide students with both a higher volume of such reading than is generally required in K–12 schools and comparatively little scaffolding.

The Standards are not alone in calling for a special emphasis on informational text. The 2009 reading framework of the National Assessment of Educational Progress (NAEP) requires a high and increasing proportion of informational text on its assessment as students advance through the grades.

Strategies for Content Area Reading

Though strategies utilized in reading and language arts classes provide the framework that students need to comprehend content-specific texts, students must also be equipped with transferable skills and strategies that can be used across grade levels and curricula. The following are suggestions for content area reading that can be incorporated in all classrooms.

Suggestions for Teaching Content-Specific Vocabulary and Facilitating Comprehension

- Establish goals and purposes for reading.
- Plan pre-reading activities that allow students to develop prerequisite knowledge and vocabulary about content-specific topics. Activities may include reading materials, videos, websites, and field trips.
- Plan post-reading activities that allow students to demonstrate mastery of skills and concepts through visual, kinesthetic, oral, and/or written products. Comprehension is often aided when linked to the creation of a product.
- Create mental or visual images associated with technical vocabulary words.
- Link new vocabulary with background knowledge.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

- Focus on the semantic relationships of new and familiar words.
- Use synonyms, antonyms, and dictionary definitions to understand the meaning of specialized and technical vocabulary.
- Analyze the structure of new words (affixes, compound words, etc.) to determine word meaning.
- Maintain word banks and word walls for new words (**Note**: Word banks and word walls should be interactive; students must regularly interact with words banks and word walls to fully expand their vocabulary and analyze how words and concepts aid in reading comprehension).
- Use semantic gradients (vocabulary continuums) to illustrate a continuum of words by degree. Semantic gradients often feature antonyms or opposites on each end of the continuum. This strategy broadens students' knowledge of related and opposite words.
- Develop activities that allow students to work collaboratively to figure out the meaning of new words.
- Encourage students to generate and ask questions of texts.
- Design activities that allow students to make inferences, predict, summarize, and visualize concepts.
- Examine physical features of texts, such as different kinds of text features, including typeface, headings, and subheadings.

Many of the suggested strategies (e.g., prediction, summarizing, analyzing text features) must be directly taught (explicit instruction) and practiced, while other strategies (e.g., creating visual or mental images) can be components of incidental (implicit) instruction.

Additionally, students must engage in reading, writing, speaking, and listening activities that are authentic and content-specific. Textbooks and discipline-specific texts, such as primary and secondary source documents, articles, tables, and graphs, must be cornerstones in social studies, science, and technical subjects to aid students in using reading strategies that are discipline-specific.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

The Standards aim to align instruction with this framework so that many more students than at present can meet the requirements of college and career readiness. In K–5, the Standards follow NAEP's lead in balancing the reading of literature with the reading of informational texts, including texts in history/social studies, science, and technical subjects. In accord with NAEP's growing emphasis on informational texts in the higher grades, the Standards demand that a significant amount of reading of informational texts take place in and outside the ELA classroom. Fulfilling the Standards for 6–12 ELA requires much greater attention to a specific category of informational text—literary nonfiction—than has been traditional. Because the ELA classroom must focus on literature (stories, drama, and poetry) as well as literary nonfiction, a great deal of informational reading in grades 6–12 must take place in other classes if the NAEP assessment framework is to be matched instructionally.[1] To measure students' growth toward college and career readiness, assessments aligned with the Standards should adhere to the distribution of texts across grades cited in the NAEP framework.

Distribution of Communicative Purposes by Grade in the 2011 NAEP Writing Framework

Grade	To Persuade	To Explain	To Convey Experience
4	30%	35%	35%
8	35%	35%	30%
12	40%	40%	20%

Source: National Assessment Governing Board. (2007). *Writing framework for the 2011 National Assessment of Educational Progress, pre-publication edition.* Iowa City, IA: ACT, Inc.

NAEP likewise outlines a distribution across the grades of the core purposes and types of student writing. The 2011 NAEP framework, like the Standards, cultivates the development of three mutually reinforcing writing capacities: writing to persuade, to explain, and to convey real or imagined experience. Evidence concerning the demands of college and career readiness gathered during development of the Standards concurs with NAEP's shifting emphases: standards for grades 9–12 describe writing in all three forms, but, consistent with NAEP, the overwhelming focus of writing throughout high school should be on arguments and informative/explanatory texts.[2]

It follows that writing assessments aligned with the Standards should adhere to the distribution of writing purposes across grades outlined by NAEP.

Focus and Coherence in Instruction and Assessment

While the Standards delineate specific expectations in reading, writing, speaking, listening, and language, each standard need not be a separate focus for instruction and assessment. Often,

[1]The percentages on the table reflect the sum of student reading, not just reading in ELA settings. Teachers of senior English classes, for example, are not required to devote 70 percent of reading to informational texts. Rather, 70 percent of student reading across the grade should be informational.

[2] As with reading, the percentages in the table reflect the sum of student writing, not just writing in ELA settings.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

several standards can be addressed by a single rich task. For example, when editing writing, students address Writing standard 5 ("Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach") as well as Language standards 1–3 (which deal with conventions of Standard English and knowledge of language). When drawing evidence from literary and informational texts per Writing Standard 9, students are also demonstrating their comprehension skill in relation to specific standards in Reading. When discussing something they have read or written, students are also demonstrating their speaking and listening skills. The CCR anchor standards themselves provide another source of focus and coherence.

The same ten CCR anchor standards for Reading apply to both literary and informational texts, including texts in history/social studies, science, and technical subjects. The ten CCR anchor standards for Writing cover numerous text types and subject areas. This means that students can develop mutually reinforcing skills and exhibit mastery.

Students Who are College- and Career-Ready

The descriptions that follow are not standards themselves but instead offer a portrait of students who meet the standards set out in this document. As students advance through the grades and master the standards in reading, writing, speaking, listening, and language, they are able to exhibit with increasing fullness and regularity these capacities of the literate individual.

They demonstrate independence.

Students can, without significant scaffolding, comprehend and evaluate complex texts across a range of types and disciplines, and they can construct effective arguments and convey intricate or multifaceted information. Likewise, students are able independently to discern a speaker's key points, request clarification, and ask relevant questions. They build on others' ideas, articulate their own ideas, and confirm they have been understood. Without prompting, they demonstrate command of Standard English and acquire and use a wide-ranging vocabulary. More broadly, they become self-directed learners, effectively seeking out and using resources to assist them, including teachers, peers, and print and digital reference materials.

They build strong content knowledge.

Students establish a base of knowledge across a wide range of subject matter by engaging with works of quality and substance. They become proficient in new areas through research and study. They read purposefully and listen attentively to gain both general knowledge and discipline-specific expertise. They refine and share their knowledge through writing and speaking.

They respond to the varying demands of audience, task, purpose, and discipline.

Students adapt their communication in relation to audience, task, purpose, and discipline. They set and adjust purpose for reading, writing, speaking, listening, and language use as warranted by the task. They appreciate nuances, such as how the composition of an audience should affect tone when speaking and how the connotations of words affect meaning. They also know

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

that different disciplines call for different types of evidence (e.g., documentary evidence in history, experimental evidence in science).

They comprehend as well as critique.

Students are engaged and open-minded—but discerning—readers and listeners. They work diligently to understand precisely what an author or speaker is saying, but they also question an author's or speaker's assumptions and premises and assess the veracity of claims and the soundness of reasoning.

They value evidence.

Students cite specific evidence when offering an oral or written interpretation of a text. They use relevant evidence when supporting their own points in writing and speaking, making their reasoning clear to the reader or listener, and they constructively evaluate others' use of evidence.

They use technology and digital media strategically and capably.

Students employ technology thoughtfully to enhance their reading, writing, speaking, listening, and language use. They tailor their searches online to acquire useful information efficiently, and they integrate what they learn using technology with what they learn offline. They are familiar with the strengths and limitations of various technological tools and mediums and can select and use those best suited to their communication goals.

They come to understand other perspectives and cultures.

Students appreciate that the twenty-first-century classroom and workplace are settings in which people from often widely divergent cultures and who represent diverse experiences and perspectives must learn and work together. Students actively seek to understand other perspectives and cultures through reading and listening, and they are able to communicate effectively with people of varied backgrounds. They evaluate other points of view critically and constructively. Through reading great classic and contemporary works of literature representative of a variety of periods, cultures, and worldviews, students can vicariously inhabit worlds and have experiences much different than their own.

Overall Organization of the Standards for English Language Arts

The Standards comprise three main sections: a comprehensive K–5 section and two content area–specific sections for grades 6–12, one for ELA and one for history/social studies, science, and technical subjects.

Each section is divided into strands. K–5 and 6–12 ELA have Reading, Writing, Speaking and Listening, and Language strands; the 6–12 history/ social studies, science, and technical subjects section focuses on Reading and Writing. Each strand is headed by a strand-specific set of College- and Career-Readiness Anchor Standards that is identical across all grades and content areas.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Standards for each grade within K–8 and for grades 9–10 and 11–12 follow the CCR anchor standards in each strand. Each grade-specific standard (as these standards are collectively referred to) corresponds to the same-numbered CCR anchor standard. Put another way, each CCR anchor standard has an accompanying grade-specific standard translating the broader MS CCRS statement into grade-appropriate end-of-year expectations.

Individual CCR anchor standards can be identified by their strand, CCR status, and number (R.CCR.6, for example). Individual grade-specific standards can be identified by their strand, grade, and number (or number and letter, where applicable), so that RI.4.3, for example, stands for Reading, Informational Text, grade 4, standard 3 and W.5.1a stands for Writing, grade 5, standard 1a. Strand designations can be found in brackets alongside the full strand title.

Who is responsible for which portion of the Standard?

A single K–5 section lists standards for reading, writing, speaking, listening, and language across the curriculum. Grades 6–12 are covered in two content area–specific sections, the first for the English language arts teacher and the second for teachers of history/social studies, science, and technical subjects. Each section uses the same CCR anchor standards but also includes grade-specific standards tuned to the literacy requirements of the particular discipline(s).

Key Features of the Standards

Reading: Text complexity and the growth of comprehension

The Reading standards place equal emphasis on the sophistication of what students read and the skill with which they read. Standard 10 defines a grade-by grade "staircase" of increasing text complexity that rises from beginning reading to the college and career readiness level. Whatever they are reading, students must also show a steadily growing ability to discern more from and make fuller use of text, including making an increasing number of connections among ideas and between texts, considering a wider range of textual evidence, and becoming more sensitive to inconsistencies, ambiguities, and poor reasoning in texts.

The following link provides a rubric for determining text complexity of informational texts:
http://www.mde.k12.ms.us/docs/secondary-education/qualitative-rubrics-for-measuring-text-complexity-informational-and-literary.pdf?sfvrsn=2

The following link provides a rubric for determining text complexity of literature:
http://www.mde.k12.ms.us/docs/secondary-education/qualitative-rubrics-for-measuring-text-complexity-informational-and-literary.pdf?sfvrsn=2

Writing: Text types, responding to reading, and research

The Standards acknowledge the fact that whereas some writing skills, such as the ability to plan, revise, edit, and publish, are applicable to many types of writing, other skills are more properly defined in terms of specific writing types: arguments,

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

informative/explanatory texts, and narratives. Standard 9 stresses the importance of the writing-reading connection by requiring students to draw upon and write about evidence from literary and informational texts. Because of the centrality of writing to most forms of inquiry, research standards are prominently included in this strand, though skills important to research are infused throughout the document.

Speaking and Listening: Flexible communication and collaboration

Including but not limited to skills necessary for formal presentations, the Speaking and Listening standards require students to develop a range of broadly useful oral communication and interpersonal skills. Students must learn to work together, express and listen carefully to ideas, integrate information from oral, visual, quantitative, and media sources, evaluate what they hear, use media and visual displays strategically to help achieve communicative purposes, and adapt speech to context and task.

Language: Conventions, effective use, and vocabulary

The Language standards include the essential "rules" of standard written and spoken English, but they also approach language as a matter of craft and informed choice among alternatives. The vocabulary standards focus on understanding words and phrases, their relationships, and their nuances and on acquiring new vocabulary, particularly general academic and domain-specific words and phrases.

College- and Career-Readiness Anchor Standards

COLLEGE- AND CAREER-READINESS STANDARDS: READING

The K–12 standards define what students should understand and be able to do by the end of each grade. The standards correspond to the College- and Career-Readiness (CCR) anchor standards below by number. The MS CCRS and grade-specific standards are necessary complements—the former providing broad standards, the latter providing additional specificity—that together define the skills and understandings that all students must demonstrate.

Key Ideas and Details	
CCR.R.1	Read closely to determine what the text says explicitly and to make logical inferences from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.
CCR.R.2	Determine central ideas or themes of a text and analyze their development; summarize the key supporting details and ideas.
CCR.R.3	Analyze how and why individuals, events, or ideas develop and interact over the course of a text.
Craft and Structure	
CCR.R.4	Interpret words and phrases as they are used in a text, including determining technical, connotative, and figurative meanings, and analyze how specific word choices shape meaning or tone.
CCR.R.5	Analyze the structure of texts, including how specific sentences, paragraphs, and larger portions of the text (e.g., a section, chapter, scene, or stanza) relate to each other and the whole.
CCR.R.6	Assess how point of view or purpose shapes the content and style of a text.
Integration of Knowledge and Ideas	
CCR.R.7	Integrate and evaluate content presented in diverse media and formats, including visually and quantitatively, as well as in words.
CCR.R.8	Delineate and evaluate the argument and specific claims in a text, including the validity of the reasoning as well as the relevance and sufficiency of the evidence.
CCR.R.9	Analyze how two or more texts address similar themes or topics in order to build knowledge or to compare the approaches the authors take.
Range of Reading and Level of Text Complexity	
CCR.R.10	Read and comprehend complex literary and informational texts independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Note on range and content of student reading:

To build a foundation for college and career readiness, students must read widely and deeply from among a broad range of high-quality, increasingly challenging literary and informational texts. Through extensive reading of stories, dramas, poems, and myths from diverse cultures and different time periods, students gain literary and cultural knowledge as well as familiarity with various text structures and elements. By reading texts in history/social studies, science, and other disciplines, students build a foundation of knowledge in these fields that will also give them the background to be better readers in all content areas. Students also acquire the habits of reading independently and closely, which are essential to their future success.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

COLLEGE- AND CAREER-READINESS STANDARDS: WRITING

Text Types and Purposes[3]	
CCR.W.1	Write arguments to support claims in an analysis of substantive topics or texts using valid reasoning and relevant and sufficient evidence.
CCR.W.2	Write informative/explanatory texts to examine and convey complex ideas and information clearly and accurately through the effective selection, organization, and analysis of content.
CCR.W.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details and well-structured event sequences.
Production and Distribution of Writing	
CCR.W.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
CCR.W.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach.
CCR.W.6	Use technology, including the Internet, to produce and publish writing and to interact and collaborate with others.
Research to Build and Present Knowledge	
CCR.W.7	Conduct short as well as more sustained research projects based on focused questions, demonstrating understanding of the subject under investigation.
CCR.W.8	Gather relevant information from multiple print and digital sources, assess the credibility and accuracy of each source, and integrate the information while avoiding plagiarism.
CCR.W.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
Range if Writing	
CCR.W.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

Note on range and content of student writing:

To build a foundation for college and career readiness, students need to learn to use writing as a way of offering and supporting opinions, demonstrating understanding of the subjects they are studying, and conveying real and imagined experiences and events. They learn to appreciate that a key purpose of writing is to communicate clearly to an external, sometimes unfamiliar audience, and they begin to adapt the form and content of their writing to accomplish a particular task and purpose. They develop the capacity to build knowledge on a subject through research projects and to respond analytically to literary and informational sources. To meet these goals, students must devote significant time and effort to writing, producing numerous pieces over short and extended time frames throughout the year.

[3] These broad types of writing include many subgenres.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

COLLEGE- AND CAREER-READINESS STANDARDS: SPEAKING AND LISTENING

Comprehension and Collaboration	
CCR.SL.1	Prepare for and participate effectively in a range of conversations and collaborations with diverse partners, building on others' ideas and expressing their own clearly and persuasively.
CCR.SL.2	Integrate and evaluate information presented in diverse media and formats, including visually, quantitatively, and orally.
CCR.SL.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric.
Presentation of Knowledge and Ideas	
CCR.SL.4	Present information, findings, and supporting evidence such that listeners can follow the line of reasoning and the organization, development, and style are appropriate to task, purpose, and audience.
CCR.SL.5	Make strategic use of digital media and visual displays of data to express information and enhance understanding of presentations.
CCR.SL.6	Adapt speech to a variety of contexts and communicative tasks, demonstrating command of formal English when indicated or appropriate.

Note on range and content of student speaking and listening:

To build a foundation for college and career readiness, students must have ample opportunities to take part in a variety of rich, structured conversations—as part of a whole class, in small groups, and with a partner. Being productive members of these conversations requires that students contribute accurate, relevant information; respond to and develop what others have said; make comparisons and contrasts; and analyze and synthesize a multitude of ideas in various domains.

New technologies have broadened and expanded the role that speaking and listening play in acquiring and sharing knowledge and have tightened their link to other forms of communication. Digital texts confront students with the potential for continually updated content and dynamically changing combinations of words, graphics, images, hyperlinks, and embedded video and audio.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

COLLEGE- AND CAREER-READINESS STANDARDS: LANGUAGE

Conventions of Standard English	
CCR.L.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
CCR.L.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
Knowledge of Language	
CCR.L.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
Vocabulary Acquisition and Use	
CCR.L.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases by using context clues, analyzing meaningful word parts, and consulting general and specialized reference materials, as appropriate.
CCR.L.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
CCR.L.6	Acquire and use accurately a range of general academic and domain-specific words and phrases sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when encountering an unknown term important to comprehension or expression.

Note on range and content of student language usage:

To build a foundation for college and career readiness in language, students must gain control over many conventions of Standard English grammar, usage, and mechanics as well as learn other ways to use language to convey meaning effectively. They must also be able to determine or clarify the meaning of grade-appropriate words encountered through listening, reading, and media use; come to appreciate that words have nonliteral meanings, shadings of meaning, and relationships to other words; and expand their vocabulary in the course of studying content. The inclusion of Language standards in their own strand should not be taken as an indication that skills related to conventions, effective language use, and vocabulary are unimportant to reading, writing, speaking, and listening; indeed, they are inseparable from such contexts.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Mississippi College- and Career- Readiness Standards for English Scaffolding Document

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

Overview of the MS CCRS Scaffolding Document

Purpose

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

Organization of the 2016 Mississippi College- and Career-Standards Scaffolding Document

The 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is divided by grade level. Within each grade level, the Scaffolding Document is separated into the four strands identified in the Mississippi College- and Career-Readiness Standards for English Language Arts: Reading, Writing, Speaking and Listening, and Language.

Each standard is then broken down into three categories: Prerequisite Knowledge, Conceptual Understanding, and Evidence of Knowledge. The Prerequisite Knowledge column lists the skills that students should have mastered in previous grades in order to work towards mastery of the grade-specific standard. In other words, this column details what a student needs to KNOW before mastering the grade-specific standard. The Conceptual Understanding column explains the deeper understanding of concepts, not actions or skills, which are required for mastery of the grade specific standard. In other words, this column explains what a student needs to UNDERSTAND before mastering the grade-specific standard. The last column, Evidence of Knowledge, explains what student mastery looks like, including what work a student produces to exhibit mastery of the grade-specific standard. In other words, this column describes what a student needs to DO to show mastery of the grade-specific standard.

Finally, key terms are included for each standard. These key terms include the ideas, concepts, and verbs that are necessary for mastery of the standard.

A link to the scaffolding document can be found on the last page of each grade level's standards. The scaffolding documents for all grades may be accessed here: http://www.mde.k12.ms.us/ESE/ccr

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

MS CCRS for English Language Arts Grades K-2

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

Kindergarten

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.K.1	With prompting and support, ask and answer questions about key details in a text.
RL.K.2	With prompting and support, retell familiar stories, including key details.
RL.K.3	With prompting and support, identify characters, settings, and major events in a story.
Craft and Structure	
RL.K.4	Ask and answer questions about unknown words in a text.
RL.K.5	Recognize common types of texts (e.g., storybooks, poems).
RL.K.6	With prompting and support, name the author and illustrator of a story and define the role of each in telling the story.
Integration of Knowledge and Ideas	
RL.K.7	With prompting and support, describe the relationship between illustrations and the story in which they appear (e.g., what moment in a story an illustration depicts).
RL.K.8	Not applicable to literature.
RL.K.9	With prompting and support, compare and contrast the adventures and experiences of characters in familiar stories.
Range of Reading and Level of Text Complexity	
RL.K.10	Actively engage in group reading activities with purpose and understanding.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

Reading Informational Text	
Key Ideas and Details	
RI.K.1	With prompting and support, ask and answer questions about key details in a text.
RI.K.2	With prompting and support, identify the main topic and retell key details of a text.
RI.K.3	With prompting and support, describe the connection between two individuals, events, ideas, or pieces of information in a text.
Craft and Structure	
RI.K.4	With prompting and support, ask and answer questions about unknown words in a text.
RI.K.5	Identify the front cover, back cover, and title page of a book.
RI.K.6	Name the author and illustrator of a text and define the role of each in presenting the ideas or information in a text.
Integration of Knowledge and Ideas	
RI.K.7	With prompting and support, describe the relationship between illustrations and the text in which they appear (e.g., what person, place, thing, or idea in the text an illustration depicts).
RI.K.8	With prompting and support, identify the reasons an author gives to support points in a text.
RI.K.9	With prompting and support, identify basic similarities in and differences between two texts on the same topic (e.g., in illustrations, descriptions, or procedures).
Range of Reading and Level of Text Complexity	
RI.K.10	Actively engage in group reading activities with purpose and understanding.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

These standards are directed toward fostering students' understanding and working knowledge of concepts of print, the alphabetic principle, and other basic conventions of the English writing system. These foundational skills are not an end in and of themselves; rather, they are necessary and important components of an effective, comprehensive reading program designed to develop proficient readers with the capacity to comprehend texts across a range of types and disciplines. Instruction should be differentiated: good readers will need much less practice with these concepts than struggling readers will. The point is to teach students what they need to learn and not what they already know—to discern when particular children or activities warrant more or less attention.

Reading Foundational Skills	
Print Concepts	
RF.K.1	Demonstrate understanding of the organization and basic features of print.
RF.K.1a	Follow words from left to right, top to bottom, and page by page.
RF.K.1b	Recognize that spoken words are represented in written language by specific sequences of letters.
RF.K.1c	Understand that words are separated by spaces in print.
RF.K.1d	Recognize and name all upper- and lowercase letters of the alphabet.
Phonological Awareness	
RF.K.2	Demonstrate understanding of spoken words, syllables, and sounds (phonemes).
RF.K.2a	Recognize and produce rhyming words.
RF.K.2b	Count, pronounce, blend, and segment syllables in spoken words.
RF.K.2c	Blend and segment onsets and rimes of single-syllable spoken words.
RF.K.2d	Isolate and pronounce the initial, medial vowel, and final sounds (phonemes) in three-phoneme (consonant-vowel-consonant, or CVC) words.[1] (This does not include CVCs ending with /l/, /r/, or /x/.)
RF.K.2e	Add or substitute individual sounds (phonemes) in simple, one-syllable words to make new words.
Phonics and Word Recognition	
RF.K.3	Know and apply grade-level phonics and word analysis skills in decoding words.
RF.K.3a	Demonstrate basic knowledge of one-to-one letter-sound correspondences by producing the primary sound or many of the most frequent sounds for each consonant.
RF.K.3b	Associate the long and short sounds with the common spellings (graphemes) for the five major vowels.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

RF.K.3c	Read common high-frequency words by sight (e.g., *the*, *of*, *to*, *you*, *she*, *my*, *is*, *are*, *do*, *does*).
RF.K.3d	Distinguish between similarly spelled words by identifying the sounds of the letters that differ.
Fluency	
RF.K.4	Read emergent-reader texts with purpose and understanding.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

The following standards for Kindergarten offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. The expected growth in student writing ability is reflected both in the standards themselves.

Writing	
Text Types and Purposes	
W.K.1	Use a combination of drawing, dictating, and writing to compose opinion pieces in which they tell a reader the topic or the name of the book they are writing about and state an opinion or preference about the topic or book (e.g., *My favorite book is...*).
W.K.2	Use a combination of drawing, dictating, and writing to compose informative/explanatory texts in which they name what they are writing about and supply some information about the topic.
W.K.3	Use a combination of drawing, dictating, and writing to narrate a single event or several loosely linked events, tell about the events in the order in which they occurred, and provide a reaction to what happened.
Production and Distribution of Writing	
W.K.4	Begins in grade 3.
W.K.5	With guidance and support from adults, respond to questions and suggestions from peers and add details to strengthen writing as needed.
W.K.6	With guidance and support from adults, explore a variety of digital tools to produce and publish writing, including in collaboration with peers.
Research to Build and Present Knowledge	
W.K.7	Participate in shared research and writing projects (e.g., explore a number of books by a favorite author and express opinions about them).
W.K.8	With guidance and support from adults, recall information from experiences or gather information from provided sources to answer a question.
W.K.9	Begins in grade 4.
Range of Writing	
W.K.10	Begins in grade 3.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

The following standards for Kindergarten offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.K.1	Participate in collaborative conversations with diverse partners about *kindergarten topics and texts* with peers and adults in small and larger groups.
SL.K.1a	Follow agreed-upon rules for discussions (e.g., listening to others and taking turns speaking about the topics and texts under discussion).
SL.K.1b	Continue a conversation through multiple exchanges.
SL.K.2	Confirm understanding of a text read aloud or information presented orally or through other media by asking and answering questions about key details and requesting clarification if something is not understood.
SL.K.3	Ask and answer questions in order to seek help, get information, or clarify something that is not understood.
Presentation of Knowledge and Ideas	
SL.K.4	Describe familiar people, places, things, and events and, with prompting and support, provide additional detail.
SL.K.5	Add drawings or other visual displays to descriptions as desired to provide additional detail.
SL.K.6	Speak audibly and express thoughts, feelings, and ideas clearly.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

The following standards for grades Kindergarten offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Language	
Conventions of Standard English	
L.K.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing or keyboarding) or speaking.
L.K.1a	Print many upper- and lowercase letters.
L.K.1b	Use frequently occurring nouns and verbs.
L.K.1c	Form regular plural nouns orally by adding /s/ or /es/ (e.g., *dog, dogs; wish, wishes*).
L.K.1d	Understand and use question words (interrogatives) (e.g., *who, what, where, when, why, how*).
L.K.1e	Use the most frequently occurring prepositions (e.g., *to, from, in, out, on, off, for, of, by, with*).
L.K.1f	Produce and expand complete sentences in shared language activities.
L.K.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.K.2a	Capitalize the first word in a sentence and the pronoun *I*.
L.K.2b	Recognize and name end punctuation.
L.K.2c	Write a letter or letters for most consonant and short-vowel sounds (phonemes).
L.K.2d	Spell simple words phonetically, drawing on knowledge of sound-letter relationships.
Knowledge of Language	
L.K.3	Begins in grade 2.
Vocabulary Acquisition and Use	
L.K.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on kindergarten reading and content.
L.K.4a	Identify new meanings for familiar words and apply them accurately (e.g., knowing *duck* is a bird and learning the verb to *duck*).
L.K.4b	Use the most frequently occurring inflections and affixes (e.g., *-ed, -s, re-, un-, pre-, -ful, -less*) as a clue to the meaning of an unknown word.
L.K.5	With guidance and support from adults, explore word relationships and nuances in word meanings.
L.K.5a	Sort common objects into categories (e.g., shapes, foods) to gain a sense of the concepts the categories represent.
L.K.5b	Demonstrate understanding of frequently occurring verbs and adjectives by relating them to their opposites (antonyms).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Kindergarten

L.K.5c	Identify real-life connections between words and their use (e.g., note places at school that are colorful).
L.K.5d	Distinguish shades of meaning among verbs describing the same general action (e.g., *walk, march, strut, prance*) by acting out the meanings.
L.K.6	Use words and phrases acquired through conversations, reading and being read to, and responding to texts.

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.1.1	Ask and answer questions about key details in a text.
RL.1.2	Retell stories, including key details, and demonstrate understanding of their central message or lesson.
RL.1.3	Describe characters, settings, and major events in a story, using key details.
Craft and Structure	
RL.1.4	Identify words and phrases in stories or poems that suggest feelings or appeal to the senses.
RL.1.5	Explain major differences between books that tell stories and books that give information, drawing on a wide reading of a range of text types.
RL.1.6	Identify who is telling the story at various points in a text.
Integration of Knowledge and Ideas	
RL.1.7	Use illustrations and details in a story to describe its characters, setting, or events.
RL.1.8	Not applicable to literature.
RL.1.9	Compare and contrast the adventures and experiences of characters in stories.
Range of Reading and Level of Text Complexity	
RL.1.10	With prompting and support, read prose and poetry of appropriate complexity for grade 1.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

Reading Informational Text	
Key Ideas and Details	
RI.1.1	Ask and answer questions about key details in a text.
RI.1.2	Identify the main topic and retell key details of a text.
RI.1.3	Describe the connection between two individuals, events, ideas, or pieces of information in a text.
Craft and Structure	
RI.1.4	Ask and answer questions to help determine or clarify the meaning of words and phrases in a text.
RI.1.5	Know and use various text features (e.g., headings, tables of contents, glossaries, electronic menus, icons) to locate key facts or information in a text.
RI.1.6	Distinguish between information provided by pictures or other illustrations and information provided by the words in a text.
Integration of Knowledge and Ideas	
RI.1.7	Use the illustrations and details in a text to describe its key ideas.
RI.1.8	Identify the reasons an author gives to support points in a text.
RI.1.9	Identify basic similarities in and differences between two texts on the same topic (e.g., in illustrations, descriptions, or procedures).
Range of Reading and Level of Text Complexity	
RI.1.10	With prompting and support, read informational texts appropriately complex for grade 1.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

These standards are directed toward fostering students' understanding and working knowledge of concepts of print, the alphabetic principle, and other basic conventions of the English writing system. These foundational skills are not an end in and of themselves; rather, they are necessary and important components of an effective, comprehensive reading program designed to develop proficient readers with the capacity to comprehend texts across a range of types and disciplines. Instruction should be differentiated: good readers will need much less practice with these concepts than struggling readers will. The point is to teach students what they need to learn and not what they already know—to discern when particular children or activities warrant more or less attention.

Reading Foundational Skills	
Print Concepts	
RF.1.1	Demonstrate understanding of the organization and basic features of print.
RF.1.1a	Recognize the distinguishing features of a sentence (e.g., first word, capitalization, ending punctuation).
Phonological Awareness	
RF.1.2	Demonstrate understanding of spoken words, syllables, and sounds (phonemes).
RF.1.2a	Distinguish long from short vowel sounds in spoken single-syllable words.
RF.1.2b	Orally produce single-syllable words by blending sounds (phonemes), including consonant blends.
RF.1.2c	Isolate and pronounce initial, medial vowel, and final sounds (phonemes) in spoken single-syllable words.
RF.1.2d	Segment spoken single-syllable words into their complete sequence of individual sounds (phonemes).
Phonics and Word Recognition	
RF.1.3	Know and apply grade-level phonics and word analysis skills in decoding words.
RF.1.3a	Know the spelling-sound correspondences for common consonant digraphs.
RF.1.3b	Decode regularly spelled one-syllable words
RF.1.3c	Know final -e and common vowel team conventions for representing long vowel sounds.
RF.1.3d	Use knowledge that every syllable must have a vowel sound to determine the number of syllables in a printed word.
RF.1.3e	Decode two-syllable words following basic patterns by breaking the words into syllables.
RF.1.3f	Read words with inflectional endings.
RF.1.3g	Recognize and read grade-appropriate irregularly spelled words.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

Fluency	
RF.1.4	Read with sufficient accuracy and fluency to support comprehension.
RF.1.4a	Read grade-level text with purpose and understanding.
RF.1.4b	Read grade-level text orally with accuracy, appropriate rate, and expression on successive readings.
RF.1.4c	Use context to confirm or self-correct word recognition and understanding, rereading as necessary.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

The following standards for Grade 1 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. The expected growth in student writing ability is reflected both in the standards themselves.

Writing	
Text Types and Purposes	
W.1.1	Write opinion pieces in which they introduce the topic or name the book they are writing about, state an opinion, supply a reason for the opinion, and provide some sense of closure.
W.1.2	Write informative/explanatory texts in which they name a topic, supply some facts about the topic, and provide some sense of closure.
W.1.3	Write narratives in which they recount two or more appropriately sequenced events, include some details regarding what happened, use temporal words to signal event order, and provide some sense of closure.
Production and Distribution of Writing	
W.1.4	Begins in grade 3.
W.1.5	With guidance and support from adults, focus on a topic, respond to questions and suggestions from peers, and add details to strengthen writing as needed.
W.1.6	With guidance and support from adults, use a variety of digital tools to produce and publish writing, including in collaboration with peers.
Research to Build and Present Knowledge	
W.1.7	Participate in shared research and writing projects (e.g., explore a number of "how-to" books on a given topic and use them to write a sequence of instructions).
W.1.8	With guidance and support from adults, recall information from experiences or gather information from provided sources to answer a question.
W.1.9	Begins in grade 4.
Range of Writing	
W.1.10	Begins in grade 3.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

The following standards for Grade 1 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.1.1	Participate in collaborative conversations with diverse partners about grade 1 topics and texts with peers and adults in small and larger groups.
SL.1.1a	Follow agreed-upon rules for discussions (e.g., listening to others with care, speaking one at a time about the topics and texts under discussion).
SL.1.1b	Build on others' talk in conversations by responding to the comments of others through multiple exchanges.
SL.1.1c	Ask questions to clear up any confusion about the topics and texts under discussion.
SL.1.2	Ask and answer questions about key details in a text read aloud or information presented orally or through other media.
SL.1.3	Ask and answer questions about what a speaker says in order to gather additional information or clarify something that is not understood.
Presentation of Knowledge and Ideas	
SL.1.4	Describe people, places, things, and events with relevant details, expressing ideas and feelings clearly.
SL.1.5	Add drawings or other visual displays to descriptions when appropriate to clarify ideas, thoughts, and feelings.
SL.1.6	Produce complete sentences when appropriate to task and situation.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

The following standards for Grade 1 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Language	
Conventions of Standard English	
L.1.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing or keyboarding) or speaking.
L.1.1a	Print all upper- and lowercase letters.
L.1.1b	Use common, proper, and possessive nouns.
L.1.1c	Use singular and plural nouns with matching verbs in basic sentences (e.g., He hops; We hop).
L.1.1d	Use personal, possessive, and indefinite pronouns (e.g., I, me, my; they, them, their, anyone, everything).
L.1.1e	Use verbs to convey a sense of past, present, and future (e.g., Yesterday I walked home; Today I walk home; Tomorrow I will walk home).
L.1.1f	Use frequently occurring adjectives.
L.1.1g	Use frequently occurring conjunctions (e.g., *and, but, or, so, because*).
L.1.1h	Use determiners (e.g., articles, demonstratives).
L.1.1i	Use frequently occurring prepositions (e.g., *during, beyond, toward).*
L.1.1j	Produce and expand complete simple and compound declarative, interrogative, imperative, and exclamatory sentences in response to prompts.
L.1.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.1.2a	Capitalize dates and names of people.
L.1.2b	Use end punctuation for sentences.
L.1.2c	Use commas in dates and to separate single words in a series.
L.1.2d	Use conventional spelling for words with common spelling patterns and for frequently occurring irregular words.
L.1.2e	Spell untaught words phonetically, drawing on phonemic awareness and spelling conventions.
Knowledge of Language	
L.1.3	Begins in grade 2.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 1

Vocabulary Acquisition and Use	
L.1.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on *grade 1 reading and content*, choosing flexibly from an array of strategies.
L.1.4a	Use sentence-level context as a clue to the meaning of a word or phrase.
L.1.4b	Use frequently occurring affixes as a clue to the meaning of a word.
L.1.4c	Identify frequently occurring root words (e.g., *look*) and their inflectional forms (e.g., *looks, looked, looking*).
L.1.5	With guidance and support from adults, demonstrate understanding of word relationships and nuances in word meanings.
L.1.5a	Sort words into categories (e.g., colors, clothing) to gain a sense of the concepts the categories represent.
L.1.5b	Define words by category and by one or more key attributes (e.g., a *duck* is a bird that swims; a *tiger* is a large cat with stripes).
L.1.5c	Identify real-life connections between words and their use (e.g., note places at home that are *cozy*).
L.1.5d	Distinguish shades of meaning among verbs differing in manner (e.g., *look, peek, glance, stare, glare, scowl*) and adjectives differing in intensity (e.g., large, gigantic) by defining or choosing them or by acting out the meanings.
L.1.6	Use words and phrases acquired through conversations, reading and being read to, and responding to texts, including using frequently occurring conjunctions to signal simple relationships (e.g., *because*).

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

Grade 2

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.2.1	Ask and answer such questions as *who, what, where, when, why*, and *how* to demonstrate understanding of key details in a text.
RL.2.2	Recount stories, including fables and folktales from diverse cultures, and determine their central message, lesson, or moral.
RL.2.3	Describe how characters in a story respond to major events and challenges.
Craft and Structure	
RL.2.4	Describe how words and phrases (e.g., regular beats, alliteration, rhymes, repeated lines) supply rhythm and meaning in a story, poem, or song.
RL.2.5	Describe the overall structure of a story, including describing how the beginning introduces the story and the ending concludes the action.
RL.2.6	Acknowledge differences in the points of view of characters, including by speaking in a different voice for each character when reading dialogue aloud.
Integration of Knowledge and Ideas	
RL.2.7	Use information gained from the illustrations and words in a print or digital text to demonstrate understanding of its characters, setting, or plot.
RL.2.8	(not applicable to literature)
RL.2.9	Compare and contrast two or more versions of the same story (e.g., Cinderella stories) by different authors or from different cultures.
Range of Reading and Level of Text Complexity	
RL.2.10	By the end of the year, read and comprehend literature, including stories and poetry, in the grades 2–3 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 2

Reading Informational Text	
Key Ideas and Details	
RI.2.1	Ask and answer such questions as *who, what, where, when, why*, and *how* to demonstrate understanding of key details in a text.
RI.2.2	Identify the main topic of a multi-paragraph text as well as the focus of specific paragraphs within the text.
RI.2.3	Describe the connection between a series of historical events, scientific ideas or concepts, or steps in technical procedures in a text.
Craft and Structure	
RI.2.4	Determine the meaning of words and phrases in a text relevant to a *grade 2 topic or subject area.*
RI.2.5	Know and use various text features (e.g., captions, bold print, subheadings, glossaries, indexes, electronic menus, icons) to locate key facts or information in a text efficiently.
RI.2.6	Identify the main purpose of a text, including what the author wants to answer, explain, or describe.
Integration of Knowledge and Ideas	
RI.2.7	Explain how specific images (e.g., a diagram showing how a machine works) contribute to and clarify a text.
RI.2.8	Describe how reasons support specific points the author makes in a text.
RI.2.9	Compare and contrast the most important points presented by two texts on the same topic.
Range of Reading and Level of Text Complexity	
RI.2.10	By the end of year, read and comprehend informational texts, including history/social studies, science, and technical texts, in the grades 2–3 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION

Grade 2

The following standards for Grade 2 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.2.1	Participate in collaborative conversations with diverse partners about *grade 2 topics and texts* with peers and adults in small and larger groups.
SL.2.1a	Follow agreed-upon rules for discussions (e.g., gaining the floor in respectful ways, listening to others with care, speaking one at a time about the topics and texts under discussion).
SL.2.1b	Build on others' talk in conversations by linking their comments to the remarks of others.
SL.2.1c	Ask for clarification and further explanation as needed about the topics and texts under discussion.
SL.2.2	Recount or describe key ideas or details from a text read aloud or information presented orally or through other media.
SL.2.3	Ask and answer questions about what a speaker says in order to clarify comprehension, gather additional information, or deepen understanding of a topic or issue.
Presentation of Knowledge and Ideas	
SL.2.4	Tell a story or recount an experience with appropriate facts and relevant, descriptive details, speaking audibly in coherent sentences.
SL.2.5	Create audio recordings of stories or poems; add drawings or other visual displays to stories or recounts of experiences when appropriate to clarify ideas, thoughts, and feelings.
SL.2.6	Produce complete sentences when appropriate to task and situation in order to provide requested detail or clarification. (See grade 2 Language standards 1 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 2

The following standards for Grade 2 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Language	
Conventions of Standard English	
L.2.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.2.1a	Use collective nouns (e.g., *group*).
L.2.1b	Form and use frequently occurring irregular plural nouns (e.g., *feet, children, teeth, mice, fish*).
L.2.1c	Use reflexive pronouns (e.g., *myself, ourselves*).
L.2.1d	Form and use the past tense of frequently occurring irregular verbs (e.g., *sat, hid, told*).
L.2.1e	Use adjectives and adverbs, and choose between them depending on what is to be modified.
L.2.1f	Produce, expand, and rearrange complete simple and compound sentences (e.g., *The boy watched the movie; The little boy watched the movie; The action movie was watched by the little boy*).
L.2.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.2.2a	Capitalize holidays, product names, and geographic names.
L.2.2b	Use commas in greetings and closings of letters.
L.2.2c	Use an apostrophe to form contractions and frequently occurring possessives.
L.2.2d	Generalize learned spelling patterns when writing words (e.g., cage → badge; boy → boil).
L.2.2e	Consult reference materials, including beginning dictionaries, as needed to check and correct spellings.
Knowledge of Language	
L.2.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.2.3a	Compare formal and informal uses of English.
Vocabulary Acquisition and Use	
L.2.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grade 2 reading and content, choosing flexibly from an array of strategies.
L.2.4a	Use sentence-level context as a clue to the meaning of a word or phrase.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 2

L.2.4b	Determine the meaning of the new word formed when a known prefix is added to a known word (e.g., *happy/unhappy, tell/retell*).
L.2.4c	Use a known root word as a clue to the meaning of an unknown word with the same root (e.g., *addition, additional*).
L.2.4d	Use knowledge of the meaning of individual words to predict the meaning of compound words (e.g., *birdhouse, lighthouse, housefly; bookshelf, notebook, bookmark*).
L.2.4e	Use glossaries and beginning dictionaries, both print and digital, to determine or clarify the meaning of words and phrases.
L.2.5	Demonstrate understanding of word relationships and nuances in word meanings.
L.2.5a	Identify real-life connections between words and their use (e.g., *describe foods that are spicy or juicy*).
L.2.5b	Distinguish shades of meaning among closely related verbs (e.g., *toss, throw, hurl*) and closely related adjectives (e.g., *thin, slender, skinny, scrawny*).
L.2.6	Use words and phrases acquired through conversations, reading and being read to, and responding to texts, including using adjectives and adverbs to describe (e.g., *When other kids are happy that makes me happy*).

Grade 3

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.3.1	Ask and answer questions to demonstrate understanding of a text, referring explicitly to the text as the basis for the answers.
RL.3.2	Recount stories, including fables, folktales, and myths from diverse cultures; determine the central message, lesson, or moral and explain how it is conveyed through key details in the text.
RL.3.3	Describe characters in a story (e.g., their traits, motivations, or feelings) and explain how their actions contribute to the sequence of events.
Craft and Structure	
RL.3.4	Determine the meaning of words and phrases as they are used in a text, distinguishing literal from nonliteral language.
RL.3.5	Refer to parts of stories, dramas, and poems when writing or speaking about a text, using terms such as chapter, scene, and stanza; describe how each successive part builds on earlier sections.
RL.3.6	Distinguish their own point of view from that of the narrator or those of the characters.
Integration of Knowledge and Ideas	
RL.3.7	Explain how specific aspects of a text's illustrations contribute to what is conveyed by the words in a story (e.g., create mood, emphasize aspects of a character or setting).
RL.3.8	(not applicable to literature)
RL.3.9	Compare and contrast the themes, settings, and plots of stories written by the same author about the same or similar characters (e.g., in books from a series).
Range of Reading and Level of Text Complexity	
RL.3.10	By the end of the year, read and comprehend literature, including stories, dramas, and poetry, at the high end of the grades 2–3 text complexity band independently and proficiently.

Grade 3

Reading Informational Text	
Key Ideas and Details	
RI.3.1	Ask and answer questions to demonstrate understanding of a text, referring explicitly to the text as the basis for the answers.
RI.3.2	Determine the main idea of a text; recount the key details and explain how they support the main idea.
RI.3.3	Describe the relationship between a series of historical events, scientific ideas or concepts, or steps in technical procedures in a text, using language that pertains to time, sequence, and cause/effect.
Craft and Structure	
RI.3.4	Determine the meaning of general academic and domain-specific words and phrases in a text relevant to a *grade 3 topic or subject area*.
RI.3.5	Use text features and search tools (e.g., key words, sidebars, hyperlinks) to locate information relevant to a given topic efficiently.
RI.3.6	Distinguish their own point of view from that of the author of a text.
Integration of Knowledge and Ideas	
RI.3.7	Use information gained from illustrations (e.g., maps, photographs) and the words in a text to demonstrate understanding of the text (e.g., where, when, why, and how key events occur).
RI.3.8	Describe the logical connection between particular sentences and paragraphs in a text (e.g., comparison, cause/effect, first/second/third in a sequence).
RI.3.9	Compare and contrast the most important points and key details presented in two texts on the same topic.
Range of Reading and Level of Text Complexity	
RI.3.10	By the end of the year, read and comprehend informational texts, including history/social studies, science, and technical texts, at the high end of the grades 2–3 text complexity band independently and proficiently.

Ensuring a bright future for every child

Grade 3

The following standards for Grade 3 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. The expected growth in student writing ability is reflected both in the standards themselves.

Writing	
Text Types and Purposes	
W.3.1	Write opinion pieces on topics or texts, supporting a point of view with reasons.
W.3.1a	Introduce the topic or text they are writing about, state an opinion, and create an organizational structure that lists reasons.
W.3.1b	Provide reasons that support the opinion.
W.3.1c	Use linking words and phrases (e.g., *because*, *therefore*, *since*, *for example*) to connect opinion and reasons.
W.3.1d	Provide a concluding statement or section.
W.3.2	Write informative/explanatory texts to examine a topic and convey ideas and information clearly.
W.3.2a	Introduce a topic and group related information together; include illustrations when useful to aiding comprehension.
W.3.2b	Develop the topic with facts, definitions, and details.
W.3.2c	Use linking words and phrases (e.g., *also*, *another*, *and*, *more*, *but*) to connect ideas within categories of information.
W.3.2d	Provide a concluding statement or section.
W.3.3	Write narratives to develop real or imagined experiences or events using effective technique, descriptive details, and clear event sequences.
W.3.3a	Establish a situation and introduce a narrator and/or characters; organize an event sequence that unfolds naturally.
W.3.3b	Use dialogue and descriptions of actions, thoughts, and feelings to develop experiences and events or show the response of characters to situations.
W.3.3c	Use temporal words and phrases to signal event order.
W.3.3d	Provide a sense of closure.
Production and Distribution of Writing	
W.3.4	With guidance and support from adults, produce writing in which the development and organization are appropriate to task and purpose. (Grade-specific expectations for writing types are defined in standards 1–3 above.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 3

W.3.5	With guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, and editing. (Editing for conventions should demonstrate command of Language standards 1-3 up to and including grade 3).
W.3.6	With guidance and support from adults, use technology to produce and publish writing (using keyboarding skills) as well as to interact and collaborate with others.
Research to Build and Present Knowledge	
W.3.7	Conduct short research projects that build knowledge about a topic.
W.3.8	Recall information from experiences or gather information from print and digital sources; take brief notes on sources and sort evidence into provided categories.
W.3.9	Begins in grade 4.
Range of Writing	
W.3.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 3

The following standards for Grade 3 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.3.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 3 topics and texts, building on others' ideas and expressing their own clearly.
SL.3.1a	Come to discussions prepared, having read or studied required material; explicitly draw on that preparation and other information known about the topic to explore ideas under discussion.
SL.3.1b	Follow agreed-upon rules for discussions (e.g., gaining the floor in respectful ways, listening to others with care, speaking one at a time about the topics and texts under discussion).
SL.3.1c	Ask questions to check understanding of information presented, stay on topic, and link their comments to the remarks of others.
SL.3.1d	Explain their own ideas and understanding in light of the discussion.
SL.3.2	Determine the main ideas and supporting details of a text read aloud or information presented in diverse media and formats, including visually, quantitatively, and orally.
SL.3.3	Ask and answer questions about information from a speaker, offering appropriate elaboration and detail.
Presentation of Knowledge and Ideas	
SL.3.4	Report on a topic or text, tell a story, or recount an experience with appropriate facts and relevant, descriptive details, speaking clearly at an understandable pace.
SL.3.5	Create engaging audio recordings of stories or poems that demonstrate fluid reading at an understandable pace; add visual displays when appropriate to emphasize or enhance certain facts or details.
SL.3.6	Speak in complete sentences when appropriate to task and situation in order to provide requested detail or clarification. (See grade 3 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 3

The following standards for Grade 3 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Language	
Conventions of Standard English	
L.3.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.3.1a	Explain the function of nouns, pronouns, verbs, adjectives, and adverbs in general and their functions in particular sentences.
L.3.1b	Form and use regular and irregular plural nouns.
L.3.1c	Use abstract nouns (e.g., childhood).
L.3.1d	Form and use regular and irregular verbs.
L.3.1e	Form and use the simple (e.g., I walked; I walk; I will walk) verb tenses.
L.3.1f	Ensure subject-verb and pronoun-antecedent agreement.
L.3.1g	Form and use comparative and superlative adjectives and adverbs, and choose between them depending on what is to be modified.
L.3.1h	Use coordinating and subordinating conjunctions.
L.3.1i	Produce simple, compound, and complex sentences.
L.3.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.3.2a	Capitalize appropriate words in titles.
L.3.2b	Use commas in addresses.
L.3.2c	Use commas and quotation marks in dialogue.
L.3.2d	Form and use possessives.
L.3.2e	Use conventional spelling for high-frequency and other studied words and for adding suffixes to base words (e.g., *sitting, smiled, cries, happiness*).
L.3.2f	Use spelling patterns and generalizations (e.g., *word families, position-based spellings, syllable patterns, ending rules, meaningful word parts*) in writing words.
L.3.2g	Consult reference materials, including beginning dictionaries, as needed to check and correct spellings.
Knowledge of Language	
L.3.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 3

L.3.3a	Choose words and phrases for effect.
L.3.3b	Recognize and observe differences between the conventions of spoken and written standard English.
Vocabulary Acquisition and Use	
L.3.4	Determine or clarify the meaning of unknown and multiple-meaning word and phrases based on grade 3 reading and content, choosing flexibly from a range of strategies.
L.3.4a	Use sentence-level context as a clue to the meaning of a word or phrase.
L.3.4b	Determine the meaning of the new word formed when a known affix is added to a known word (e.g., agreeable/disagreeable, comfortable/uncomfortable, care/careless, heat/preheat).
L.3.4c	Use a known root word as a clue to the meaning of an unknown word with the same root (e.g., company, companion).
L.3.4d	Use glossaries or beginning dictionaries, both print and digital, to determine or clarify the precise meaning of key words and phrases.
L.3.5	Demonstrate understanding of figurative language, word relationships and nuances in word meanings.
L.3.5a	Distinguish the literal and nonliteral meanings of words and phrases in context (e.g., take steps).
L.3.5b	Identify real-life connections between words and their use (e.g., describe people who are friendly or helpful).
L.3.5c	Distinguish shades of meaning among related words that describe states of mind or degrees of certainty (e.g., knew, believed, suspected, heard, wondered).
L.3.6	Acquire and use accurately grade-appropriate conversational, general academic, and domain-specific words and phrases, including those that signal spatial and temporal relationships (e.g., After dinner that night we went looking for them).

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.
The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.4.1	Refer to details and examples in a text when explaining what the text says explicitly and when drawing inferences from the text.
RL.4.2	Determine a theme of a story, drama, or poem from details in the text; summarize the text.
RL.4.3	Describe in depth a character, setting, or event in a story or drama, drawing on specific details in the text (e.g., a character's thoughts, words, or actions).
Craft and Structure	
RL.4.4	Determine the meaning of words and phrases as they are used in a text, including those that allude to significant characters found in mythology (e.g., Herculean).
RL.4.5	Explain major differences between poems, drama, and prose, and refer to the structural elements of poems (e.g., verse, rhythm, meter) and drama (e.g., casts of characters, settings, descriptions, dialogue, stage directions) when writing or speaking about a text.
RL.4.6	Compare and contrast the point of view from which different stories are narrated, including the difference between first- and third-person narrations.
Integration of Knowledge and Ideas	
RL.4.7	Make connections between the text of a story or drama and a visual or oral presentation of the text, identifying where each version reflects specific descriptions and directions in the text.
RL.4.8	Not applicable to literature.
RL.4.9	Compare and contrast the treatment of similar themes and topics (e.g., opposition of good and evil) and patterns of events (e.g., the quest) in stories, myths, and traditional literature from different cultures.
Range of Reading and Level of Text Complexity	
RL.4.10	By the end of the year, read and comprehend literature, including stories, dramas, and poetry, in the grades 4–5 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

Reading Informational Text	
Key Ideas and Details	
RI.4.1	Refer to details and examples in a text when explaining what the text says explicitly and when drawing inferences from the text.
RI.4.2	Determine the main idea of a text and explain how it is supported by key details; summarize the text.
RI.4.3	Explain events, procedures, ideas, or concepts in a historical, scientific, or technical text, including what happened and why, based on specific information in the text.
Craft and Structure	
RI.4.4	Determine the meaning of general academic and domain-specific words or phrases in a text relevant to a grade 4 topic or subject area.
RI.4.5	Describe the overall structure (e.g., chronology, comparison, cause/effect, problem/solution) of events, ideas, concepts, or information in a text or part of a text.
RI.4.6	Compare and contrast a firsthand and secondhand account of the same event or topic; describe the differences in focus and the information provided.
Integration of Knowledge and Ideas	
RI.4.7	Interpret information presented visually, orally, or quantitatively (e.g., in charts, graphs, diagrams, time lines, animations, or interactive elements on Web pages) and explain how the information contributes to an understanding of the text in which it appears.
RI.4.8	Explain how an author uses reasons and evidence to support particular points in a text.
RI.4.9	Integrate information from two texts on the same topic in order to write or speak about the subject knowledgeably.
Range of Reading and Level of Text Complexity	
RI.4.10	By the end of year, read and comprehend informational texts, including history/social studies, science, and technical texts, in the grades 4–5 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

These standards are directed toward fostering students' understanding and working knowledge of concepts of print, the alphabetic principle, and other basic conventions of the English writing system. These foundational skills are not an end in and of themselves; rather, they are necessary and important components of an effective, comprehensive reading program designed to develop proficient readers with the capacity to comprehend texts across a range of types and disciplines. Instruction should be differentiated: good readers will need much less practice with these concepts than struggling readers will. The point is to teach students what they need to learn and not what they already know—to discern when particular children or activities warrant more or less attention.

Reading Foundational Skills	
Print Concepts	
Not applicable in grade 4.	
Phonological Awareness	
Not applicable in grade 4.	
Phonics and Word Recognition	
RF.4.3	Know and apply grade-level phonics and word analysis skills in decoding words.
RF.4.3a	Use combined knowledge of all letter-sound correspondences, syllabication patterns, and morphology (e.g., roots and affixes) to read accurately unfamiliar multisyllabic words in context and out of context.
Fluency	
RF.4.4	Read with sufficient accuracy and fluency to support comprehension.
RF.4.4a	Read grade-level text with purpose and understanding.
RF.4.4b	Read grade-level prose and poetry orally with accuracy, appropriate rate, and expression on successive readings.
RF.4.4c	Use context to confirm or self-correct word recognition and understanding, rereading as necessary.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

The following standards for Grade 4 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. The expected growth in student writing ability is reflected both in the standards themselves.

Writing	
Text Types and Purposes	
W.4.1	Write opinion pieces on topics or texts, supporting a point of view with reasons and information.
W.4.1a	Introduce a topic or text clearly, state an opinion, and create an organizational structure in which related ideas are grouped to support the writer's purpose.
W.4.1b	Provide reasons that are supported by facts and details.
W.4.1c	Link opinion and reasons using words and phrases (e.g., for instance, in order to, in addition).
W.4.1d	Provide a concluding statement or section related to the opinion presented.
W.4.2	Write informative/explanatory texts to examine a topic and convey ideas and information clearly.
W.4.2a	Introduce a topic clearly and group related information in paragraphs and sections; include formatting (e.g., headings), illustrations, and multimedia when useful to aiding comprehension.
W.4.2b	Develop the topic with facts, definitions, concrete details, quotations, or other information and examples related to the topic.
W.4.2c	Link ideas within categories of information using words and phrases (e.g., another, for example, also, because).
W.4.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
W.4.2e	Provide a concluding statement or section related to the information or explanation presented.
W.4.3	Write narratives to develop real or imagined experiences or events using effective technique, descriptive details, and clear event sequences.
W.4.3a	Orient the reader by establishing a situation and introducing a narrator and/or characters; organize an event sequence that unfolds naturally.
W.4.3b	Use dialogue and description to develop experiences and events or show the responses of characters to situations.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

W.4.3c	Use a variety of transitional words and phrases to manage the sequence of events.
W.4.3d	Use concrete words and phrases and sensory details to convey experiences and events precisely.
W.4.3e	Provide a conclusion that follows from the narrated experiences or events.
Production and Distribution of Writing	
W.4.4	Produce clear and coherent writing in which the development and organization are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.4.5	With guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, and editing. (Editing for conventions should demonstrate command of Language standards 1-3 up to and including grade 4.)
W.4.6	With some guidance and support from adults, use technology, including the Internet, to produce and publish writing as well as to interact and collaborate with others; demonstrate sufficient command of keyboarding skills.
Research to Build and Present Knowledge	
W.4.7	Conduct short research projects that build knowledge through investigation of different aspects of a topic.
W.4.8	Recall relevant information from experiences or gather relevant information from print and digital sources; take notes and categorize information, and provide a list of sources.
W.4.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.4.9a	Apply *grade 4 Reading standards* to literature (e.g., "Describe in depth a character, setting, or event in a story or drama, drawing on specific details in the text [e.g., a character's thoughts, words, or actions].").
W.4.9b	Apply *grade 4 Reading standards* to informational texts (e.g., "Explain how an author uses reasons and evidence to support particular points in a text").
Range of Writing	
W.4.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

The following standards for Grade 4 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.4.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 4 topics and texts, building on others' ideas and expressing their own clearly.
SL.4.1a	Come to discussions prepared, having read or studied required material; explicitly draw on that preparation and other information known about the topic to explore ideas under discussion.
SL.4.1b	Follow agreed-upon rules for discussions and carry out assigned roles.
SL.4.1c	Pose and respond to specific questions to clarify or follow up on information, and make comments that contribute to the discussion and link to the remarks of others.
SL.4.1d	Review the key ideas expressed and explain their own ideas and understanding in light of the discussion.
SL.4.2	Paraphrase portions of a text read aloud or information presented in diverse media and formats, including visually, quantitatively, and orally.
SL.4.3	Identify the reasons and evidence a speaker provides to support particular points.
Presentation of Knowledge and Ideas	
SL.4.4	Report on a topic or text, tell a story, or recount an experience in an organized manner, using appropriate facts and relevant, descriptive details to support main ideas or themes; speak clearly at an understandable pace.
SL.4.5	Add audio recordings and visual displays to presentations when appropriate to enhance the development of main ideas or themes.
SL.4.6	Differentiate between contexts that call for formal English (e.g., presenting ideas) and situations where informal discourse is appropriate (e.g., small-group discussion); use formal English when appropriate to task and situation. (See grade 4 Language standards 1 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

The following standards for Grade 4 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.4.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.4.1a	Use relative pronouns (who, whose, whom, which, that) and relative adverbs (where, when, why).
L.4.1b	Form and use the progressive (e.g., I was walking; I am walking; I will be walking) verb tenses.
L.4.1c	Use modal auxiliaries (e.g., can, may, must) to convey various conditions.
L.4.1d	Order adjectives within sentences according to conventional patterns (e.g., a small red bag rather than a red small bag).
L.4.1e	Form and use prepositional phrases.
L.4.1f	Produce complete sentences, recognizing and correcting inappropriate fragments and run-ons.*
L.4.1g	Correctly use frequently confused words (e.g., to, too, two; there, their).*
L.4.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.4.2a	Use correct capitalization.
L.4.2b	Use commas and quotation marks to mark direct speech and quotations from a text.
L.4.2c	Use a comma before a coordinating conjunction in a compound sentence.
L.4.2d	Spell grade-appropriate words correctly, consulting references as needed.
Knowledge of Language	
L.4.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.4.3a	Choose words and phrases to convey ideas precisely.*
L.4.3b	Choose punctuation for effect.*

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 4

L.4.3c	Differentiate between contexts that call for formal English (e.g., presenting ideas) and situations where informal discourse is appropriate (e.g., small-group discussion).
Vocabulary Acquisition and Use	
L.4.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grade 4 reading and content, choosing flexibly from a range of strategies.
L.4.4a	Use context (e.g., definitions, examples, or restatements in text) as a clue to the meaning of a word or phrase.
L.4.4b	Use common, grade-appropriate Greek and Latin affixes and roots as clues to the meaning of a word (e.g., telegraph, photograph, autograph).
L.4.4c	Consult reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation and determine or clarify the precise meaning of key words and phrases.
L.4.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.4.5a	Explain the meaning of simple similes and metaphors (e.g., as pretty as a picture) in context.
L.4.5b	Recognize and explain the meaning of common idioms, adages, and proverbs.
L.4.5c	Demonstrate understanding of words by relating them to their opposites (antonyms) and to words with similar but not identical meanings (synonyms).
L.4.6	Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases, including those that signal precise actions, emotions, or states of being (e.g., quizzed, whined, stammered) and that are basic to a particular topic (e.g., wildlife, conservation, and endangered when discussing animal preservation).

Grade 5

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Reading Literature	
Key Ideas and Details	
RL.5.1	Quote accurately from a text when explaining what the text says explicitly and when drawing inferences from the text.
RL.5.2	Determine a theme of a story, drama, or poem from details in the text, including how characters in a story or drama respond to challenges or how the speaker in a poem reflects upon a topic; summarize the text.
RL.5.3	Compare and contrast two or more characters, settings, or events in a story or drama, drawing on specific details in the text (e.g., how characters interact).
Craft and Structure	
RL.5.4	Determine the meaning of words and phrases as they are used in a text, including figurative language such as metaphors and similes.
RL.5.5	Explain how a series of chapters, scenes, or stanzas fits together to provide the overall structure of a particular story, drama, or poem.
RL.5.6	Describe how a narrator's or speaker's point of view influences how events are described.
Integration of Knowledge and Ideas	
RL.5.7	Analyze how visual and multimedia elements contribute to the meaning, tone, or beauty of a text (e.g., graphic novel, multimedia presentation of fiction, folktale, myth, poem).
RL.5.8	Not applicable to literature.
RL.5.9	Compare and contrast stories in the same genre (e.g., mysteries and adventure stories) on their approaches to similar themes and topics.
Range of Reading and Level of Text Complexity	
RL.5.10	By the end of the year, read and comprehend literature, including stories, dramas, and poetry, at the high end of the grades 4–5 text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 5

Reading Informational Text	
Key Ideas and Details	
RI.5.1	Quote accurately from a text when explaining what the text says explicitly and when drawing inferences from the text.
RI.5.2	Determine two or more main ideas of a text and explain how they are supported by key details; summarize the text.
RI.5.3	Explain the relationships or interactions between two or more individuals, events, ideas, or concepts in a historical, scientific, or technical text based on specific information in the text.
Craft and Structure	
RI.5.4	Determine the meaning of general academic and domain-specific words and phrases in a text relevant to a grade 5 topic or subject area.
RI.5.5	Compare and contrast the overall structure (e.g., chronology, comparison, cause/effect, problem/solution) of events, ideas, concepts, or information in two or more texts.
RI.5.6	Analyze multiple accounts of the same event or topic, noting important similarities and differences in the point of view they represent.
Integration of Knowledge and Ideas	
RI.5.7	Draw on information from multiple print or digital sources, demonstrating the ability to locate an answer to a question quickly or to solve a problem efficiently.
RI.5.8	Explain how an author uses reasons and evidence to support particular points in a text, identifying which reasons and evidence support which point(s).
RI.5.9	Integrate information from several texts on the same topic in order to write or speak about the subject knowledgeably.
Range of Reading and Level of Text Complexity	
RI.5.10	By the end of the year, read and comprehend informational texts, including history/social studies, science, and technical texts, at the high end of the grades 4–5 text complexity band independently and proficiently.

Writing	
Text Types and Purposes	
W.5.1	Write opinion pieces on topics or texts, supporting a point of view with reasons and information.
W.5.1a	Introduce a topic or text clearly, state an opinion, and create an organizational structure in which ideas are logically grouped to support the writer's purpose.
W.5.1b	Provide logically ordered reasons that are supported by facts and details.
W.5.1c	Link opinion and reasons using words, phrases, and clauses (e.g., consequently, specifically).
W.5.1d	Provide a concluding statement or section related to the opinion presented.
W.5.2	Write informative/explanatory texts to examine a topic and convey ideas and information clearly.
W.5.2a	Introduce a topic clearly, provide a general observation and focus, and group related information logically; include formatting (e.g., headings), illustrations, and multimedia when useful to aiding comprehension.
W.5.2b	Develop the topic with facts, definitions, concrete details, quotations, or other information and examples related to the topic.
W.5.2c	Link ideas within and across categories of information using words, phrases, and clauses (e.g., in contrast, especially).
W.5.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
W.5.2e	Provide a concluding statement or section related to the information or explanation presented.
W.5.3	Write narratives to develop real or imagined experiences or events using effective technique, descriptive details, and clear event sequences.
W.5.3a	Orient the reader by establishing a situation and introducing a narrator and/or characters; organize an event sequence that unfolds naturally.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 5

W.5.3b	Use narrative techniques, such as dialogue, description, and pacing, to develop experiences and events or show the responses of characters to situations.
W.5.3c	Use a variety of transitional words, phrases, and clauses to manage the sequence of events.
W.5.3d	Use concrete words and phrases and sensory details to convey experiences and events precisely.
W.5.3e	Provide a conclusion that follows from the narrated experiences or events.
Production and Distribution of Writing	
W.5.4	Produce clear and coherent writing in which the development and organization are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.5.5	With guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach. (Editing for conventions should demonstrate command of Language standards 1-3 up to and including grade 5.)
W.5.6	With some guidance and support from adults, use technology, including the Internet, to produce and publish writing as well as to interact and collaborate with others; demonstrate sufficient command of keyboarding skills.
Research to Build and Present Knowledge	
W.5.7	Conduct short research projects that use several sources to build knowledge through investigation of different aspects of a topic.
W.5.8	Recall relevant information from experiences or gather relevant information from print and digital sources; summarize or paraphrase information in notes and finished work, and provide a list of sources.
W.5.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.5.9a	Apply grade 5 Reading standards to literature (e.g., “Compare and contrast two or more characters, settings, or events in a story or a drama, drawing on specific details in the text [e.g., how characters interact]”).
W.5.9b	Apply grade 5 Reading standards to informational texts (e.g., “Explain how an author uses reasons and evidence to support particular points in a text, identifying which reasons and evidence support which point[s]”).
Range of Writing	
W.5.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 5

The following standards for Grade 5 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.5.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 5 topics and texts, building on others' ideas and expressing their own clearly.
SL.5.1a	Come to discussions prepared, having read or studied required material; explicitly draw on that preparation and other information known about the topic to explore ideas under discussion.
SL.5.1b	Follow agreed-upon rules for discussions and carry out assigned roles.
SL.5.1c	Pose and respond to specific questions by making comments that contribute to the discussion and elaborate on the remarks of others.
SL.5.1d	Review the key ideas expressed and draw conclusions in light of information and knowledge gained from the discussions.
SL.5.2	Summarize a written text read aloud or information presented in diverse media and formats, including visually, quantitatively, and orally.
SL.5.3	Summarize the points a speaker makes and explain how each claim is supported by reasons and evidence.
Presentation of Knowledge and Ideas	
SL.5.4	Report on a topic or text or present an opinion, sequencing ideas logically and using appropriate facts and relevant, descriptive details to support main ideas or themes; speak clearly at an understandable pace.
SL.5.5	Include multimedia components (e.g., graphics, sound) and visual displays in presentations when appropriate to enhance the development of main ideas or themes.
SL.5.6	Adapt speech to a variety of contexts and tasks, using formal English when appropriate to task and situation. (See grade 5 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 5

The following standards for Grade 5 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.5.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.5.1a	Explain the function of conjunctions, prepositions, and interjections in general and their function in particular sentences.
L.5.1b	Form and use the perfect (e.g., I had walked; I have walked; I will have walked) verb tenses.
L.5.1c	Use verb tense to convey various times, sequences, states, and conditions.
L.5.1d	Recognize and correct inappropriate shifts in verb tense.*
L.5.1e	Use correlative conjunctions (e.g., either/or, neither/nor).
L.5.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.5.2a	Use punctuation to separate items in a series.*
L.5.2b	Use a comma to separate an introductory element from the rest of the sentence.
L.5.2c	Use a comma to set off the words yes and no (e.g., Yes, thank you), to set off a tag question from the rest of the sentence (e.g., It's true, isn't it?), and to indicate direct address (e.g., Is that you, Steve?).
L.5.2d	Use underlining, quotation marks, or italics to indicate titles of works.
L.5.2e	Spell grade-appropriate words correctly, consulting references as needed.
Knowledge of Language	
L.5.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.5.3a	Expand, combine, and reduce sentences for meaning, reader/listener interest, and style.
L.5.3b	Compare and contrast the varieties of English (e.g., dialects, registers) used in stories, dramas, or poems.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 5

Vocabulary Acquisition and Use	
L.5.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grade 5 reading and content, choosing flexibly from a range of strategies.
L.5.4a	Use context (e.g., cause/effect relationships and comparisons in text) as a clue to the meaning of a word or phrase.
L.5.4b	Use common, grade-appropriate Greek and Latin affixes and roots as clues to the meaning of a word (e.g., photograph, photosynthesis).
L.5.4c	Consult reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation and determine or clarify the precise meaning of key words and phrases.
L.5.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.5.5a	Interpret figurative language, including similes and metaphors, in context.
L.5.5b	Recognize and explain the meaning of common idioms, adages, and proverbs.
L.5.5c	Use the relationship between particular words (e.g., synonyms, antonyms, homographs) to better understand each of the words.
L.5.6	Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases, including those that signal contrast, addition, and other logical relationships (e.g., however, although, nevertheless, similarly, moreover, in addition).

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

MS CCRS for English Language Arts Grades 6-8

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

Grade 6

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.6.1	Cite textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RL.6.2	Determine a theme or central idea of a text and how it is conveyed through particular details; provide a summary of the text based upon this determination.
RL.6.3	Describe how the plot of a literary text unfolds in a series of episodes as well as how the characters respond or change as the plot moves toward a resolution.
Craft and Structure	
RL.6.4	Determine the meaning of words and phrases as they are used in a text, including figurative and connotative meanings; analyze the impact of a specific word choice on meaning and tone.
RL.6.5	Analyze how a particular sentence, chapter, scene, or stanza fits into the overall structure of a text and contributes to the development of the theme, setting, or plot.
RL.6.6	Explain how an author develops the point of view of the narrator or speaker in a text.
Integration of Knowledge and Ideas	
RL.6.7	Compare and contrast the experience of reading a story, drama, or poem to listening to or viewing an audio, video, or live version of the text, including contrasting what they "see" and "hear" when reading the text to what they perceive when they listen or watch.
RL.6.8	Not applicable to literature.
RL.6.9	Compare and contrast texts in different forms or genres (e.g., stories and poems; historical novels and fantasy stories) in terms of their approaches to similar themes and topics.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

	Range of Reading and Level of Text Complexity
RL.6.10	By the end of the year, read and comprehend literature, including stories, dramas, and poems, in the grades 6–8 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

Reading Informational Text	
Key Ideas and Details	
RI.6.1	Cite textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RI.6.2	Determine a central idea of a text and how it is conveyed through particular details; provide a summary of the text distinct from personal opinions or judgments.
RI.6.3	Analyze in detail how a key individual, event, or idea is introduced, illustrated, and elaborated in a text (e.g., through examples or anecdotes).
Craft and Structure	
RI.6.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings.
RI.6.5	Analyze how a particular sentence, paragraph, chapter, or section fits into the overall structure of a text and contributes to the development of the ideas.
RI.6.6	Determine an author's point of view or purpose in a text and explain how it is conveyed in the text.
Integration of Knowledge and Ideas	
RI.6.7	Integrate information presented in different media or formats (e.g., visually, quantitatively) as well as in words to develop a coherent understanding of a topic or issue.
RI.6.8	Trace and evaluate the argument and specific claims in a text, distinguishing claims that are supported by reasons and evidence from claims that are not.
RI.6.9	Compare and contrast one author's presentation of events with that of another (e.g., a memoir written by and a biography on the same person).
Range of Reading and Level of Text Complexity	
RI.6.10	By the end of the year, read and comprehend literary nonfiction in the grades 6–8 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

The following standards for Grade 6 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.6.1	Write arguments to support claims with clear reasons and relevant evidence.
W.6.1a	Introduce claim(s) and organize the reasons and evidence clearly.
W.6.1b	Support claim(s) with clear reasons and relevant evidence, using credible sources and demonstrating an understanding of the topic or text.
W.6.1c	Use words, phrases, and clauses to clarify the relationships among claim(s) and reasons.
W.6.1d	Establish and maintain a formal style.
W.6.1e	Provide a concluding statement or section that follows from the argument presented.
W.6.2	Write informative/explanatory texts to examine a topic and convey ideas, concepts, and information through the selection, organization, and analysis of relevant content.
W.6.2a	Introduce a topic; organize ideas, concepts, and information, using strategies such as definition, classification, comparison/contrast, and cause/effect; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension.
W.6.2b	Develop the topic with relevant facts, definitions, concrete details, quotations, or other information and examples.
W.6.2c	Use appropriate transitions to clarify the relationships among ideas and concepts.
W.6.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
W.6.2e	Establish and maintain a formal style.
W.6.2f	Provide a concluding statement or section that follows from the information or explanation presented.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

W.6.3	Write narratives to develop real or imagined experiences or events using effective technique, relevant descriptive details, and well-structured event sequences.
W.6.3a	Engage and orient the reader by establishing a context and introducing a narrator and/or characters; organize an event sequence that unfolds naturally and logically.
W.6.3b	Use narrative techniques, such as dialogue, pacing, and description, to develop experiences, events, and/or characters.
W.6.3c	Use a variety of transition words, phrases, and clauses to convey sequence and signal shifts from one time frame or setting to another.
W.6.3d	Use precise words and phrases, relevant descriptive details, and sensory language to convey experiences and events.
W.6.3e	Provide a conclusion that follows from the narrated experiences or events.
Production and Distribution of Writing	
W.6.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.6.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grade 6.)
W.6.6	Use technology, including the Internet, to produce and publish writing as well as to interact and collaborate with others; demonstrate sufficient command of keyboarding skills.
Research to Build and Present Knowledge	
W.6.7	Conduct short research projects to answer a question, drawing on several sources and refocusing the inquiry when appropriate.
W.6.8	Gather relevant information from multiple print and digital sources; assess the credibility of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and providing basic bibliographic information for sources.
W.6.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.6.9a	Apply grade 6 Reading standards to literary texts (e.g., “Compare and contrast texts in different forms or genres [e.g., stories and poems; historical novels and fantasy stories] in terms of their approaches to similar themes and topics”).
W.6.9b	Apply grade 6 Reading standards to literary nonfiction and/or informational texts (e.g., “Trace and evaluate the argument and specific claims in a text, distinguishing claims that are supported by reasons and evidence from claims that are not”).

Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.6.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 6 topics, texts, and issues, building on others' ideas and expressing their own clearly.
SL.6.1a	Come to discussions prepared, having read or studied required material; explicitly draw on that preparation by referring to evidence on the topic, text, or issue to probe and reflect on ideas under discussion.
SL.6.1b	Follow rules for collegial discussions, set specific goals and deadlines, and define individual roles as needed.
SL.6.1c	Pose and respond to specific questions with elaboration and detail by making comments that contribute to the topic, text, or issue under discussion.
SL.6.1d	Review the key ideas expressed and demonstrate understanding of multiple perspectives through reflection and paraphrasing.
SL.6.2	Interpret information presented in diverse media and formats (e.g., visually, quantitatively, orally) and explain how it contributes to a topic, text, or issue under study.
SL.6.3	Delineate a speaker's argument and specific claims, distinguishing claims that are supported by reasons and evidence from claims that are not.
Presentation of Knowledge and Ideas	
SL.6.4	Present claims and findings, sequencing ideas logically and using pertinent descriptions, facts, and details to accentuate main ideas or themes; use appropriate eye contact, adequate volume, and clear pronunciation.
SL.6.5	Include multimedia components (e.g., graphics, images, music, sound) and visual displays in presentations to clarify information.
SL.6.6	Adapt speech to a variety of contexts and tasks, demonstrating command of formal English when indicated or appropriate. (See grade 6 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

The following standards for grades 6–12 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.6.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.6.1a	Ensure that pronouns are in the proper case (subjective, objective, possessive).
L.6.1b	Use intensive pronouns (e.g., myself, ourselves).
L.6.1c	Recognize and correct inappropriate shifts in pronoun number and person.*
L.6.1d	Recognize and correct vague pronouns (i.e., ones with unclear or ambiguous antecedents).*
L.6.1e	Recognize variations from standard English in their own and others' writing and speaking, and identify and use strategies to improve expression in conventional language.*
L.6.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.6.2a	Use punctuation (commas, parentheses, dashes) to set off nonrestrictive/parenthetical elements.*
L.6.2b	Spell correctly.
Knowledge of Language	
L.6.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.6.3a	Vary sentence patterns for meaning, reader/listener interest, and style.*
L.6.3b	Maintain consistency in style and tone.*
Vocabulary Acquisition and Use	
L.6.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grade 6 reading and content, choosing flexibly from a range of strategies.
L.6.4a	Use context (e.g., the overall meaning of a sentence or paragraph; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 6

L.6.4b	Use common, grade-appropriate Greek or Latin affixes and roots as clues to the meaning of a word (e.g., audience, auditory, audible).
L.6.4c	Consult reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning or its part of speech.
L.6.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.6.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.6.5a	Interpret figures of speech (e.g., personification) in context.
L.6.5b	Use the relationship between particular words (e.g., cause/effect, part/whole, item/category) to better understand each of the words.
L.6.5c	Distinguish among the connotations (associations) of words with similar denotations (definitions) (e.g., stingy, scrimping, economical, unwasteful, thrifty).
L.6.6	Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases; gather vocabulary knowledge when considering a word or phrase important to comprehension or expression.

Scaffolding Document

Reading Informational Text	
Key Ideas and Details	
RI.7.1	Cite several pieces of textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RI.7.2	Determine a central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an accurate summary of the text based upon this analysis.
RI.7.3	Analyze the interactions between individuals, events, and ideas in a text (e.g., how ideas influence individuals or events, or how individuals influence ideas or events).
Craft and Structure	
RI.7.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze the impact of a specific word choice on meaning and tone.
RI.7.5	Analyze the structure an author uses to organize a text, including how the major sections contribute to the whole and to the development of the ideas.
RI.7.6	Determine an author's point of view or purpose in a text and analyze how the author distinguishes his or her position from that of others.
Integration of Knowledge and Ideas	
RI.7.7	Compare and contrast a text to an audio, video, or multimedia version of the text, analyzing each medium's portrayal of the subject (e.g., how the delivery of a speech affects the impact of the words).
RI.7.8	Trace and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient to support the claims.
RI.7.9	Analyze how two or more authors writing about the same topic shape their presentations of key information by emphasizing different evidence or advancing different interpretations of facts.
Range of Reading and Level of Text Complexity	
RI.7.10	By the end of the year, read and comprehend literary nonfiction in the grades 6–8 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

The following standards for Grade 7 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.7.1	Write arguments to support claims with clear reasons and relevant evidence.
W.7.1a	Introduce claim(s), acknowledge alternate or opposing claims, and organize the reasons and evidence logically.
W.7.1b	Support claim(s) with logical reasoning and relevant evidence, using accurate, credible sources and demonstrating an understanding of the topic or text.
W.7.1c	Use words, phrases, and clauses to create cohesion and clarify the relationships among claim(s), reasons, and evidence.
W.7.1d	Establish and maintain a formal style.
W.7.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.7.2	Write informative/explanatory texts to examine a topic and convey ideas, concepts, and information through the selection, organization, and analysis of relevant content.
W.7.2a	Introduce a topic clearly, previewing what is to follow; organize ideas, concepts, and information, using strategies such as definition, classification, comparison/contrast, and cause/effect; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension.
W.7.2b	Develop the topic with relevant facts, definitions, concrete details, quotations, or other information and examples.
W.7.2c	Use appropriate transitions to create cohesion and clarify the relationships among ideas and concepts.
W.7.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
W.7.2e	Establish and maintain a formal style.
W.7.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

W.7.3	Write narratives to develop real or imagined experiences or events using effective technique, relevant descriptive details, and well-structured event sequences.
W.7.3a	Engage and orient the reader by establishing a context and point of view and introducing a narrator and/or characters; organize an event sequence that unfolds naturally and logically.
W.7.3b	Use narrative techniques, such as dialogue, pacing, and description, to develop experiences, events, and/or characters.
W.7.3c	Use a variety of transition words, phrases, and clauses to convey sequence and signal shifts from one time frame or setting to another.
W.7.3d	Use precise words and phrases, relevant descriptive details, and sensory language to capture the action and convey experiences and events.
W.7.3e	Provide a conclusion that follows from and reflects on the narrated experiences or events.
Production and Distribution of Writing	
W.7.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.7.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on how well purpose and audience have been addressed. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grade 7.)
W.7.6	Use technology, including the Internet, to produce and publish writing and link to and cite sources as well as to interact and collaborate with others, including linking to and citing sources.
Research to Build and Present Knowledge	
W.7.7	Conduct short research projects to answer a question, drawing on several sources and generating additional related, focused questions for further research and investigation.
W.7.8	Gather relevant information from multiple print and digital sources, using search terms effectively; assess the credibility and accuracy of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and following a standard format for citation.
W.7.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.7.9a	Apply grade 7 Reading standards to literary texts (e.g., “Compare and contrast a fictional portrayal of a time, place, or character and a historical account of the same period as a means of understanding how authors of fiction use or alter history”).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

W.7.9b	Apply grade 7 Reading standards to literary nonfiction and/or informational texts (e.g. "Trace and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient to support the claims").
Range of Writing	
W.7.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

The following standards for Grade 7 offer a focus for instruction in each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.7.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 7 topics, texts, and issues, building on others' ideas and expressing their own clearly.
SL.7.1a	Come to discussions prepared, having read or researched material under study; explicitly draw on that preparation by referring to evidence on the topic, text, or issue to probe and reflect on ideas under discussion.
SL.7.1b	Follow rules for collegial discussions, track progress toward specific goals and deadlines, and define individual roles as needed.
SL.7.1c	Pose questions that elicit elaboration and respond to others' questions and comments with relevant observations and ideas that bring the discussion back on topic as needed.
SL.7.1d	Acknowledge new information expressed by others and, when warranted, modify their own views.
SL.7.2	Analyze the main ideas and supporting details presented in diverse media and formats (e.g., visually, quantitatively, orally) and explain how the ideas clarify a topic, text, or issue under study.
SL.7.3	Delineate a speaker's argument and specific claims, evaluating the soundness of the reasoning and the relevance and sufficiency of the evidence.
Presentation of Knowledge and Ideas	
SL.7.4	Present claims and findings, emphasizing salient points in a focused, coherent manner with pertinent descriptions, facts, details, and examples; use appropriate eye contact, adequate volume, and clear pronunciation.
SL.7.5	Include multimedia components and visual displays in presentations to clarify claims and findings and emphasize salient points.
SL.7.6	Adapt speech to a variety of contexts and tasks, demonstrating command of formal English when indicated or appropriate. (See grade 7 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

The following standards for Grade 7 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.7.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.7.1a	Explain the function of phrases and clauses in general and their function in specific sentences.
L.7.1b	Choose among simple, compound, complex, and compound-complex sentences to signal differing relationships among ideas.
L.7.1c	Place phrases and clauses within a sentence, recognizing and correcting misplaced and dangling modifiers.*
L.7.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.7.2a	Use a comma to separate coordinate adjectives (e.g., It was a fascinating, enjoyable movie but not He wore an old[,] green shirt).
L.7.2b	Spell correctly.
Knowledge of Language	
L.7.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.7.3a	Choose language that expresses ideas precisely and concisely, recognizing and eliminating wordiness and redundancy.*
Vocabulary Acquisition and Use	
L.7.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grade 7 reading and content, choosing flexibly from a range of strategies.
L.7.4a	Use context (e.g., the overall meaning of a sentence or paragraph; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.7.4b	Use common, grade-appropriate Greek or Latin affixes and roots as clues to the meaning of a word (e.g., belligerent, bellicose, rebel).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 7

L.7.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning or its part of speech.
L.7.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.7.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.7.5a	Interpret figures of speech (e.g., literary, biblical, and mythological allusions) in context.
L.7.5b	Use the relationship between particular words (e.g., synonym/antonym, analogy) to better understand each of the words.
L.7.5c	Distinguish among the connotations (associations) of words with similar denotations (definitions) (e.g., refined, respectful, polite, diplomatic, condescending).
L.7.6	Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases; gather vocabulary knowledge when considering a word or phrase important to comprehension or expression.

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

Grade 8

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.8.1	Cite the textual evidence that most strongly supports an analysis of what the text says explicitly as well as inferences drawn from the text.
RL.8.2	Determine a theme or central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an accurate summary of the text based upon this analysis.
RL.8.3	Analyze how particular lines of dialogue or incidents in a literary text propel the action, reveal aspects of a character, or provoke a decision.
Craft and Structure	
RL.8.4	Determine the meaning of words and phrases as they are used in a text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including analogies or allusions to other texts.
RL.8.5	Compare and contrast the structure of two or more texts and analyze how the differing structure of each text contributes to its meaning and style.
RL.8.6	Analyze how differences in the points of view of the characters and the audience or reader (e.g., created through the use of dramatic irony) create such effects as suspense or humor.
Integration of Knowledge and Ideas	
RL.8.7	Analyze the extent to which a filmed or live production of a story or drama stays faithful to or departs from the text or script, evaluating the choices made by the director or actors.
RL.8.8	Not applicable to literature.
RL.8.9	Analyze how myths, traditional stories, or religious works such as the Bible influence themes, patterns of events, or character types in a modern work, including how the material is rendered new.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Range of Reading and Level of Text Complexity	
RL.8.10	By the end of the year, read and comprehend literature, including stories, dramas, and poems, at the high end of grades 6–8 text complexity band independently and proficiently.

Grade 8

Reading Informational Text	
Key Ideas and Details	
RI.8.1	Cite the textual evidence that most strongly supports an analysis of what the text says explicitly as well as inferences drawn from the text.
RI.8.2	Determine a central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an accurate summary of the text based upon this analysis.
RI.8.3	Analyze how a text makes connections among and distinctions between individuals, ideas, or events (e.g., through comparisons, analogies, or categories).
Craft and Structure	
RI.8.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze the impact of specific word choices on meaning and tone, including analogies or allusions to other texts.
RI.8.5	Analyze the structure of a specific paragraph in a text, including the role of particular sentences in developing and refining a key concept.
RI.8.6	Determine an author's point of view or purpose in a text and analyze how the author acknowledges and responds to conflicting evidence or viewpoints.
Integration of Knowledge and Ideas	
RI.8.7	Evaluate the advantages and disadvantages of using different mediums (e.g., print or digital text, video, multimedia) to present a particular topic or idea.
RI.8.8	Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient; recognize when irrelevant evidence is introduced.
RI.8.9	Analyze a case in which two or more texts provide conflicting information on the same topic and identify where the texts disagree on matters of fact or interpretation.
Range of Reading and Level of Text Complexity	
RI.8.10	By the end of the year, read and comprehend literary nonfiction at the high end of the grades 6–8 text complexity band independently and proficiently.

Grade 8

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

The following standards for Grade 8 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.8.1	Write arguments to support claims with clear reasons and relevant evidence.
W.8.1a	Introduce claim(s), acknowledge and distinguish the claim(s) from alternate or opposing claims, and organize the reasons and evidence logically.
W.8.1b	Support claim(s) with logical reasoning and relevant evidence, using accurate, credible sources and demonstrating an understanding of the topic or text.
W.8.1c	Use words, phrases, and clauses to create cohesion and clarify the relationships among claim(s), counterclaims, reasons, and evidence.
W.8.1d	Establish and maintain a formal style.
W.8.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.8.2	Write informative/explanatory texts to examine a topic and convey ideas, concepts, and information through the selection, organization, and analysis of relevant content.
W.8.2a	Introduce a topic clearly, previewing what is to follow; organize ideas, concepts, and information into broader categories; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension.
W.8.2b	Develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.
W.8.2c	Use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts.
W.8.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
W.8.2e	Establish and maintain a formal style.
W.8.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented.

Grade 8

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.8.3	Write narratives to develop real or imagined experiences or events using effective technique, relevant descriptive details, and well-structured event sequences.
W.8.3a	Engage and orient the reader by establishing a context and point of view and introducing a narrator and/or characters; organize an event sequence that unfolds naturally and logically.
W.8.3b	Use narrative techniques, such as dialogue, pacing, description, and reflection, to develop experiences, events, and/or characters.
W.8.3c	Use a variety of transition words, phrases, and clauses to convey sequence, signal shifts from one time frame or setting to another, and show the relationships among experiences and events.
W.8.3d	Use precise words and phrases, relevant descriptive details, and sensory language to capture the action and convey experiences and events.
W.8.3e	Provide a conclusion that follows from and reflects on the narrated experiences or events.
Production and Distribution of Writing	
W.8.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.8.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on how well purpose and audience have been addressed. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grade 8.)
W.8.6	Use technology, including the Internet, to produce and publish writing and present the relationships between information and ideas efficiently as well as to interact and collaborate with others.
Research to Build and Present Knowledge	
W.8.7	Conduct short research projects to answer a question (including a self-generated question), drawing on several sources and generating additional related, focused questions that allow for multiple avenues of exploration.
W.8.8	Gather relevant information from multiple print and digital sources, using search terms effectively; assess the credibility and accuracy of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and following a standard format for citation.
W.8.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.8.9a	Apply grade 8 Reading standards to literature (e.g., “Analyze how a modern work of fiction draws on themes, patterns of events, or character types from myths, traditional stories, or religious works such as the Bible, including describing how the material is rendered new”).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Grade 8

W.8.9b	Apply grade 8 Reading standards to literary nonfiction and/or informational texts (e.g., "Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient; recognize when irrelevant evidence is introduced").
Range of Writing	
W.8.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

SL.8.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 8 topics, texts, and issues, building on others' ideas and expressing their own clearly.
SL.8.1a	Come to discussions prepared, having read or researched material under study; explicitly draw on that preparation by referring to evidence on the topic, text, or issue to probe and reflect on ideas under discussion.
SL.8.1b	Follow rules for collegial discussions and decision-making, track progress toward specific goals and deadlines, and define individual roles as needed.
SL.8.1c	Pose questions that connect the ideas of several speakers and respond to others' questions and comments with relevant evidence, observations, and ideas.
SL.8.1d	Acknowledge new information expressed by others, and, when warranted, qualify or justify their own views in light of the evidence presented.
SL.8.2	Analyze the purpose of information presented in diverse media and formats (e.g., visually, quantitatively, orally) and evaluate the motives (e.g., social, commercial, political) behind its presentation.
SL.8.3	Delineate a speaker's argument and specific claims, evaluating the soundness of the reasoning and relevance and sufficiency of the evidence and identifying when irrelevant evidence is introduced.
Presentation of Knowledge and Ideas	
SL.8.4	Present claims and findings, emphasizing salient points in a focused, coherent manner with relevant evidence, sound valid reasoning, and well-chosen details; use appropriate eye contact, adequate volume, and clear pronunciation.
SL.8.5	Integrate multimedia and visual displays into presentations to clarify information, strengthen claims and evidence, and add interest.
SL.8.6	Adapt speech to a variety of contexts and tasks, demonstrating command of formal English when indicated or appropriate. (See grade 8 Language standards 1 and 3 for specific expectations.)

Grade 8

The following standards for Grade 8 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.8.1	Demonstrate command of the conventions of standard English grammar and usage when writing (printing, cursive, or keyboarding) or speaking.
L.8.1a	Explain the function of verbals (gerunds, participles, infinitives) in general and their function in particular sentences.
L.8.1b	Form and use verbs in the active and passive voice.
L.8.1c	Form and use verbs in the indicative, imperative, interrogative, conditional, and subjunctive mood.
L.8.1d	Recognize and correct inappropriate shifts in verb voice and mood.*
L.8.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.8.2a	Use punctuation (comma, ellipsis, dash) to indicate a pause or break.
L.8.2b	Use an ellipsis to indicate an omission.
L.8.2c	Spell correctly.
Knowledge of Language	
L.8.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.
L.8.3a	Use verbs in the active and passive voice and in the conditional and subjunctive mood to achieve particular effects (e.g., emphasizing the actor or the action; expressing uncertainty or describing a state contrary to fact).
Vocabulary Acquisition and Use	
L.8.4	Determine or clarify the meaning of unknown and multiple-meaning words or phrases based on grade 8 reading and content, choosing flexibly from a range of strategies.
L.8.4a	Use context (e.g., the overall meaning of a sentence or paragraph; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.8.4b	Use common, grade-appropriate Greek or Latin affixes and roots as clues to the meaning of a word (e.g., precede, recede, secede).

Literacy in History/Social Studies - Grades 6-8

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading History/Social Studies	
Key Ideas and Details	
RH.6-8.1	Cite specific textual evidence to support analysis of primary and secondary sources.
RH.6-8.2	Determine the central ideas or information of a primary or secondary source; provide an accurate summary of the source distinct from prior knowledge or opinions.
RH.6-8.3	Identify key steps in a text's description of a process related to history/social studies (e.g., how a bill becomes law, how interest rates are raised or lowered).
Craft and Structure	
RH.6-8.4	Determine the meaning of words and phrases as they are used in a text, including vocabulary specific to domains related to history/social studies.
RH.6-8.5	Describe how a text presents information (e.g., sequentially, comparatively, causally).
RH.6-8.6	Identify aspects of a text that reveal an author's point of view or purpose (e.g., loaded language, inclusion or avoidance of particular facts).
Integration of Knowledge and Ideas	
RH.6-8.7	Integrate visual information (e.g., in charts, graphs, photographs, videos, or maps) with other information in print and digital texts.
RH.6-8.8	Distinguish among fact, opinion, and reasoned judgment in a text.
RH.6-8.9	Analyze the relationship between a primary and secondary source on the same topic.
Range of Reading and Level of Text Complexity	
RH.6-8.10	By the end of grade 8, read and comprehend history/social studies texts in the grades 6–8 text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Literacy in Science and Technical Subjects - Grades 6-8

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Science and Technical Subjects	
Key Ideas and Details	
RST.6-8.1	Cite specific textual evidence to support analysis of science and technical texts.
RST.6-8.2	Determine the central ideas or conclusions of a text; provide an accurate summary of the text distinct from prior knowledge or opinions.
RST.6-8.3	Follow precisely a multistep procedure when carrying out experiments, taking measurements, or performing technical tasks.
Craft and Structure	
RST.6-8.4	Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 6–8 texts and topics.
RST.6-8.5	Analyze the structure an author uses to organize a text, including how the major sections contribute to the whole and to an understanding of the topic.
RST.6-8.6	Analyze the author's purpose in providing an explanation, describing a procedure, or discussing an experiment in a text.
Integration of Knowledge and Ideas	
RST.6-8.7	Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table).
RST.6-8.8	Distinguish among facts, reasoned judgment based on research findings, and speculation in a text.
RST.6-8.9	Compare and contrast the information gained from experiments, simulations, video, or multimedia sources with that gained from reading a text on the same topic.
Range of Reading and Level of Text Complexity	
RST.6-8.10	By the end of grade 8, read and comprehend science/technical texts in the grades 6–8 text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/Social Studies, Science, and Technical Subjects - Grades 6-8

The standards below begin at grade 6; standards for K–5 writing in history/social studies, science, and technical subjects are integrated into the K–5 Writing standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Writing	
Text Types and Purposes	
WHST.6-8.1	Write arguments focused on discipline-specific content.
WHST.6-8.1a	Introduce claim(s) about a topic or issue, acknowledge and distinguish the claim(s) from alternate or opposing claims, and organize the reasons and evidence logically.
WHST.6-8.1b	Support claim(s) with logical reasoning and relevant, accurate data and evidence that demonstrate an understanding of the topic or text, using credible sources.
WHST.6-8.1c	Use words, phrases, and clauses to create cohesion and clarify the relationships among claim(s), counterclaims, reasons, and evidence.
WHST.6-8.1d	Establish and maintain a formal style.
WHST.6-8.1e	Provide a concluding statement or section that follows from and supports the argument presented.
WHST.6-8.2	Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.
WHST.6-8.2a	Introduce a topic clearly, previewing what is to follow; organize ideas, concepts, and information into broader categories as appropriate to achieving purpose; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension.
WHST.6-8.2b	Develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.
WHST.6-8.2c	Use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts.
WHST.6-8.2d	Use precise language and domain-specific vocabulary to inform about or explain the topic.
WHST.6-8.2e	Establish and maintain a formal style and objective tone.
WHST.6-8.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented.
WHST.6-8.3	Not Applicable

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/Social Studies, Science, and Technical Subjects - Grades 6-8

Production and Distribution of Writing	
WHST.6-8.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
WHST.6-8.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on how well purpose and audience have been addressed.
WHST.6-8.6	Use technology, including the Internet, to produce and publish writing and present the relationships between information and ideas clearly and efficiently.
Research to Build and Present Knowledge	
WHST.6-8.7	Conduct short research projects to answer a question (including a self-generated question), drawing on several sources and generating additional related, focused questions that allow for multiple avenues of exploration.
WHST.6-8.8	Gather relevant information from multiple print and digital sources, using search terms effectively; assess the credibility and accuracy of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and following a standard format for citation.
WHST.6-8.9	Draw evidence from informational texts to support analysis reflection, and research.
Range of Writing	
WHST.6-8.10	Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

Note: Students' narrative skills continue to grow in these grades. The Standards require that students be able to incorporate narrative elements effectively into arguments and informative/explanatory texts. In history/social studies, students must be able to incorporate narrative accounts into their analyses of individuals or events of historical import. In science and technical subjects, students must be able to write precise enough descriptions of the step-by-step procedures they use in their investigations or technical work that others can replicate them and (possibly) reach the same results.

MS CCRS for English Language Arts Grades 9 - 12

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

English I

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.9.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RL.9.2	Determine the theme(s) or central idea(s) of a text and analyze in detail the development over the course of the text, including how details of a text interact and build on one another to shape and refine the theme(s) or central idea(s); provide an accurate summary of the text based upon this analysis.
RL.9.3	Analyze how complex characters (e.g., those with multiple or conflicting motivations) develop over the course of a literary text, interact with other characters, and advance the plot or develop the theme.
Craft and Structure	
RL.9.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language evokes a sense of time and place; how it sets a formal or informal tone).
RL.9.5	Analyze how an author's choices concerning how to structure a text, order events within it (e.g., parallel plots), and manipulate time (e.g., pacing, flashbacks) create such effects as mystery, tension, or surprise.
RL.9.6	Analyze a particular point of view or cultural experience reflected in a work of literature from outside the United States, drawing on a wide reading of world literature.
Integration of Knowledge and Ideas	
RL.9.7	Analyze the representation of a subject or a key scene in two different artistic mediums, including what is emphasized or absent in each treatment (e.g., Auden's "Musée des Beaux Arts" and Breughel's Landscape with the Fall of Icarus).
RL.9.8	Not applicable to literature.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

RL.9.9	Analyze how an author draws on and transforms source material in a specific work (e.g., how Shakespeare treats a theme or topic from Ovid or the Bible or how a later author draws on a play by Shakespeare).
Range of Reading and Level of Text Complexity	
RL.9.10	By the end of grade 9, read and comprehend literature, including stories, dramas, and poems, in the grades 9-10 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION

English I

Reading Informational Text	
Key Ideas and Details	
RI.9.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RI.9.2	Determine central idea(s) of a text and analyze in detail the development over the course of the text, including how details of a text interact and build on one another to shape and refine the central idea(s); provide an accurate summary of the text based upon this analysis.
RI.9.3	Analyze how the author unfolds an analysis or series of ideas or events, including the order in which the points are made, how they are introduced and developed, and the connections that are drawn between them.
Craft and Structure	
RI.9.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language of a court opinion differs from that of a newspaper).
RI.9.5	Analyze in detail how an author's ideas or claims are developed and refined by particular sentences, paragraphs, or larger portions of a text (e.g., a section or chapter).
RI.9.6	Determine an author's point of view or purpose in a text and analyze how an author uses rhetoric to advance that point of view or purpose.
Integration of Knowledge and Ideas	
RI.9.7	Analyze various accounts of a subject told in different mediums (e.g., a person's life story in both print and multimedia), determining which details are emphasized in each account.
RI.9.8	Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is valid and the evidence is relevant and sufficient; identify false statements and fallacious reasoning.
RI.9.9	Analyze seminal U.S. documents of historical and literary significance (e.g., Washington's Farewell Address, the Gettysburg Address, Roosevelt's Four Freedoms speech, King's "Letter from Birmingham Jail"), including how they address related themes and concepts.
Range of Reading and Level of Text Complexity	
RI.9.10	By the end of grade 9, read and comprehend literacy nonfiction in the grades 9-10 text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

The following standards for Grade 9 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.9.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.9.1a	Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among claim(s), counterclaims, reasons, and evidence.
W.9.1b	Develop claim(s) and counterclaims fairly, supplying evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level and concerns.
W.9.1c	Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.9.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.9.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.9.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.9.2a	Introduce a topic; organize complex ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.9.2b	Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.9.2c	Use appropriate and varied transitions to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

W.9.2d	Use precise language and domain-specific vocabulary to manage the complexity of the topic.
W.9.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.9.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.9.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.9.3a	Engage and orient the reader by setting out a problem, situation, or observation, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.9.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.9.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole.
W.9.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.9.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
Production and Distribution of Writing	
W.9.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.9.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 9–10.)
W.9.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products, taking advantage of technology's capacity to link to other information and to display information flexibly and dynamically.
Research to Build and Present Knowledge	
W.9.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

W.9.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation.
W.9.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.9.9a	Apply grades 9–10 Reading standards to literature (e.g., "Analyze how an author draws on and transforms source material in a specific work [e.g., how Shakespeare treats a theme or topic from Ovid or the Bible or how a later author draws on a play by Shakespeare]").
W.9.9b	Apply grades 9–10 Reading standards to literary nonfiction and/or informational texts (e.g., "Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is valid and the evidence is relevant and sufficient; identify false statements and fallacious reasoning").
Range of Writing	
W.9.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

The following standards for Grade 9 offer a focus for instruction in each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.9.1	Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9–10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
SL.9.1a	Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.
SL.9.1b	Work with peers to set rules for collegial discussions and decision-making (e.g., informal consensus, taking votes on key issues, presentation of alternate views), clear goals and deadlines, and individual roles as needed.
SL.9.1c	Propel conversations by posing and responding to questions that relate the current discussion to broader themes or larger ideas; actively incorporate others into the discussion; and clarify, verify, or challenge ideas and conclusions.
SL.9.1d	Respond thoughtfully to diverse perspectives, summarize points of agreement and disagreement, and, when warranted, qualify or justify their own views and understanding and make new connections in light of the evidence and reasoning presented.
SL.9.2	Integrate multiple sources of information presented in diverse media or formats (e.g., visually, quantitatively, orally) evaluating the credibility and accuracy of each source.
SL.9.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, identifying any fallacious reasoning or exaggerated or distorted evidence.
Presentation of Knowledge and Ideas	
SL.9.4	Present information, findings, and supporting evidence clearly, concisely, and logically such that listeners can follow the line of reasoning and the organization, development, substance, and style are appropriate to purpose, audience, and task.
SL.9.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
SL.9.6	Adapt speech to a variety of contexts and tasks, demonstrating command of formal English when indicated or appropriate. (See grades 9–10 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

The following standards for Grade 9 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.9.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
L.9.1a	Use parallel structure.*
L.9.1b	Use various types of phrases (noun, verb, adjectival, adverbial, participial, prepositional, absolute) and clauses (independent, dependent; noun, relative, adverbial) to convey specific meanings and add variety and interest to writing or presentations.
L.9.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.9.2a	Use a semicolon (and perhaps a conjunctive adverb) to link two or more closely related independent clauses.
L.9.2b	Use a colon to introduce a list or quotation.
L.9.2c	Spell correctly.
Knowledge of Language	
L.9.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.9.3a	Write and edit work so that it conforms to the guidelines in a style manual (e.g., MLA Handbook, Turabian's Manual for Writers) appropriate for the discipline and writing type.
Vocabulary Acquisition and Use	
L.9.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 9–10 reading and content, choosing flexibly from a range of strategies.
L.9.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.9.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., analyze, analysis, analytical; advocate, advocacy).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English I

L.9.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, or its etymology.
L.9.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.9.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.9.5a	Interpret figures of speech (e.g., euphemism, oxymoron) in context and analyze their role in the text.
L.9.5b	Analyze nuances in the meaning of words with similar denotations.
L.9.6	Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression.

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English II

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.10.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RL.10.2	Determine the theme(s) or central idea(s) of a text and analyze in detail the development over the course of the text, including how details of a text interact and build on one another to shape and refine the theme(s) or central idea(s); provide an accurate summary of the text based upon this analysis.
RL.10.3	Analyze how complex characters (e.g., those with multiple or conflicting motivations) develop over the course of a literary text, interact with other characters, and advance the plot or develop the theme.
Craft and Structure	
RL.10.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language evokes a sense of time and place; how it sets a formal or informal tone).
RL.10.5	Analyze how an author's choices concerning how to structure a text, order events within it (e.g., parallel plots), and manipulate time (e.g., pacing, flashbacks) create such effects as mystery, tension, or surprise.
RL.10.6	Analyze a particular point of view or cultural experience reflected in a work of literature from outside the United States, drawing on a wide reading of world literature.
Integration of Knowledge and Ideas	
RL.10.7	Analyze the representation of a subject or a key scene in two different artistic mediums, including what is emphasized or absent in each treatment (e.g., Auden's "Musée des Beaux Arts" and Breughel's Landscape with the Fall of Icarus).
RL.10.8	Not applicable to literature.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English II

RL.10.9	Analyze how an author draws on and transforms source material in a specific work (e.g., how Shakespeare treats a theme or topic from Ovid or the Bible or how a later author draws on a play by Shakespeare).
Range of Reading and Level of Text Complexity	
RL.10.10	By the end of grade 10, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 9–10 text complexity band independently and proficiently.

Literacy in History/Social Studies - Grades 9-10

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading in History/Social Studies	
Key Ideas and Details	
RH.9-10.1	Cite specific textual evidence to support analysis of primary and secondary sources, attending to such features as the date and origin of the information.
RH.9-10.2	Determine the central ideas or information of a primary or secondary source; provide an accurate summary of how key events or ideas develop over the course of the text.
RH.9-10.3	Analyze in detail a series of events described in a text; determine whether earlier events caused later ones or simply preceded them.
Craft and Structure	
RH.9-10.4	Determine the meaning of words and phrases as they are used in a text, including vocabulary describing political, social, or economic aspects of history/social science.
RH.9-10.5	Analyze how a text uses structure to emphasize key points or advance an explanation or analysis.
RH.9-10.6	Compare the point of view of two or more authors for how they treat the same or similar topics, including which details they include and emphasize in their respective accounts.
Integration of Knowledge and Ideas	
RH.9-10.7	Integrate quantitative or technical analysis (e.g., charts, research data) with qualitative analysis in print or digital text.
RH.9-10.8	Assess the extent to which the reasoning and evidence in a text support the author's claims.
RH.9-10.9	Compare and contrast treatments of the same topic in several primary and secondary sources.
Range of Reading and Level of Text Complexity	
RH.9-10.10	By the end of grade 10, read and comprehend history/social studies texts in the grades 9–10 text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Literacy in Science and Technical Subjects - Grades 9-10

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading in Science and Technical Subjects	
Key Ideas and Details	
RST.9-10.1	Cite specific textual evidence to support analysis of science and technical texts, attending to the precise details of explanations or descriptions.
RST.9-10.2	Determine the central ideas or conclusions of a text; trace the text's explanation or depiction of a complex process, phenomenon, or concept; provide an accurate summary of the text.
RST.9-10.3	Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks, attending to special cases or exceptions defined in the text.
Craft and Structure	
RST.9-10.4	Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 9–10 texts and topics.
RST.9-10.5	Analyze the structure of the relationships among concepts in a text, including relationships among key terms (e.g., force, friction, reaction force, energy).
RST.9-10.6	Analyze the author's purpose in providing an explanation, describing a procedure, or discussing an experiment in a text, defining the question the author seeks to address.
Integration of Knowledge and Ideas	
RST.9-10.7	Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.
RST.9-10.8	Assess the extent to which the reasoning and evidence in a text support the author's claim or a recommendation for solving a scientific or technical problem.
RST.9-10.9	Compare and contrast findings presented in a text to those from other sources (including their own experiments), noting when the findings support or contradict previous explanations or accounts.
Range of Reading and Level of Text Complexity	
RST.9-10.10	By the end of grade 10, read and comprehend science/technical texts in the grades 9–10 text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/SS, Science, and Technical Subjects - Grades 9-10

The standards below begin at grade 6; standards for K–5 writing in history/social studies, science, and technical subjects are integrated into the K–5 Writing standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Writing	
Text Types and Purposes	
WHST.9-10.1	Write arguments focused on discipline-specific content.
WHST.9-10.1a	Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among the claim(s), counterclaims, reasons, and evidence.
WHST.9-10.1b	Develop claim(s) and counterclaims fairly, supplying data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form and in a manner that anticipates the audience's knowledge level and concerns.
WHST.9-10.1c	Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
WHST.9-10.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
WHST.9-10.1e	Provide a concluding statement or section that follows from or supports the argument presented.
WHST.9-10.2	Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.
WHST.9-10.2a	Introduce a topic and organize ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
WHST.9-10.2b	Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/SS, Science, and Technical Subjects - Grades 9-10

WHST.9-10.2c	Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among ideas and concepts.
WHST.9-10.2d	Use precise language and domain-specific vocabulary to manage the complexity of the topic and convey a style appropriate to the discipline and context as well as to the expertise of likely readers.
WHST.9-10.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
WHST.9-10.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
WHST.9-10.3	Not Applicable
Production and Distribution of Writing	
WHST.9-10.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
WHST.9-10.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.
WHST.9-10.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products, taking advantage of technology's capacity to link to other information and to display information flexibly and dynamically.
Research to Build and Present Knowledge	
WHST.9-10.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
WHST.9-10.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation.
WHST.9-10.9	Draw evidence from informational texts to support analysis, reflection, and research.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/SS, Science, and Technical Subjects - Grades 9-10:

Range of Writing	
WHST.9-10.10	Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

Note: Students' narrative skills continue to grow in these grades. The Standards require that students be able to incorporate narrative elements effectively into arguments and informative/explanatory texts. In history/social studies, students must be able to incorporate narrative accounts into their analyses of individuals or events of historical import. In science and technical subjects, students must be able to write precise enough descriptions of the step-by-step procedures they use in their investigations or technical work that others can replicate them and (possibly) reach the same results.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.11.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RL.11.2	Determine themes or central ideas of a text and analyze in detail their development over the course of the text, including how details of a text interact and build on one another to produce a complex account; provide an accurate summary of the text based upon this analysis.
RL.11.3	Analyze the impact of the author's choices regarding how to develop and relate elements of a literary text (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).
Craft and Structure	
RL.11.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.)
RL.11.5	Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.
RL.11.6	Analyze a case in which grasping a point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).
Integration of Knowledge and Ideas	
RL.11.7	Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

RL.11.8	Not applicable to literature.
RL.11.9	Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.
Range of Reading and Level of Text Complexity	
RL.11.10	By the end of grade 11, read and comprehend literature, including stories, dramas, and poems, in the grades 11-CCR text complexity band proficiently, with scaffolding as needed at the high end of the range.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

Reading Informational Text	
Key Ideas and Details	
RI.11.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.11.2	Determine central ideas of a text and analyze in detail their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an accurate summary of the text based upon this analysis.
RI.11.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
Craft and Structure	
RI.11.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in Federalist No. 10).
RI.11.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.
RI.11.6	Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text.
Integration of Knowledge and Ideas	
RI.11.7	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
RI.11.8	Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning (e.g., in U.S. Supreme Court majority opinions and dissents) and the premises, purposes, and arguments in works of public advocacy (e.g., The Federalist, presidential addresses).[4]
RI.11.9	Analyze seventeenth-, eighteenth-, and nineteenth-century foundational U.S. documents of historical and literary significance for their themes, purposes, and rhetorical features. Such documents might include The Declaration of Independence, the Preamble to the Constitution, the Bill of Rights, and Lincoln's Second Inaugural Address.
Range of Reading and Level of Text Complexity	
RI.11.10	By the end of grade 11, read and comprehend literary nonfiction in the grades 11-CCR text complexity band proficiently, with scaffolding as needed at the high

[4] The discussion of U.S. historical documents can be applied in context to a more global perspective.

MISSISSIPPI DEPARTMENT OF EDUCATION

	end of the range.

English III

The following standards for Grade 11 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.11.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

W.11.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.11.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.11.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
Production and Distribution of Writing	
W.11.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

W.11.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
Research to Build and Present Knowledge	
W.11.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11.9a	Apply grades 11–12 Reading standards to literature (e.g., "Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics").
W.11.9b	Apply grades 11–12 Reading standards to literary nonfiction and/or informational texts (e.g., "Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy [e.g., The Federalist, presidential addresses]").
Range of Writing	
W.11.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

The following standards for Grade 11 offer a focus for instruction in each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.11.1	Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11–12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
SL.11.1a	Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.
SL.11.1b	Work with peers to promote civil, democratic discussions and decision-making, set clear goals and deadlines, and establish individual roles as needed.
SL.11.1c	Propel conversations by posing and responding to questions that probe reasoning and evidence; ensure a hearing for a full range of positions on a topic or issue; clarify, verify, or challenge ideas and conclusions; and promote divergent and creative perspectives.
SL.11.1d	Respond thoughtfully to diverse perspectives; synthesize comments, claims, and evidence made on all sides of an issue; resolve contradictions when possible; and determine what additional information or research is required to deepen the investigation or complete the task.
SL.11.2	Integrate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, orally) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.
SL.11.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, assessing the stance, premises, links among ideas, word choice, points of emphasis, and tone used.
Presentation of Knowledge and Ideas	
SL.11.4	Present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization, development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

SL.11.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
SL.11.6	Adapt speech to a variety of contexts and tasks, demonstrating a command of formal English when indicated or appropriate. (See grades 11–12 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

The following standards for Grade 12 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.11.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
L.11.1a	Apply the understanding that usage is a matter of convention, can change over time, and is sometimes contested.
L.11.1b	Resolve issues of complex or contested usage, consulting references (e.g., Merriam-Webster's Dictionary of English Usage, Garner's Modern American Usage) as needed.
L.11.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.11.2a	Observe hyphenation conventions.
L.11.2b	Spell correctly.
Knowledge of Language	
L.11.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.11.3a	Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; when analyzing complex texts, demonstrate an understanding of how syntax contributes to the purpose or meaning of the text.
Vocabulary Acquisition and Use	
L.11.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.
L.11.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.11.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English III

L.11.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage.
L.11.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.11.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.11.5a	Interpret figures of speech (e.g., hyperbole, paradox) in context and analyze their role in the text.
L.11.5b	Analyze nuances in the meaning of words with similar denotations.
L.11.6	Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression.

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

The following standards offer a focus for instruction each year and help ensure that students gain adequate exposure to a range of texts and tasks. Rigor is also infused through the requirement that students read increasingly complex texts through the grades. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

The CCR anchor standards and high school grade-specific standards work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading Literature	
Key Ideas and Details	
RL.12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RL.12.2	Determine themes or central ideas of a text and analyze in detail their development over the course of the text, including how details of a text interact and build on one another to produce a complex account; provide an accurate summary of the text based upon this analysis.
RL.12.3	Analyze the impact of the author's choices regarding how to develop and relate elements of a literary text (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).
Craft and Structure	
RL.12.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.)
RL.12.5	Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.
RL.12.6	Analyze a case in which grasping a point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).
Integration of Knowledge and Ideas	
RL.12.7	Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

RL.12.8	Not applicable to literature.
RL.12.9	Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.[5]
Range of Reading and Level of Text Complexity	
RL.12.10	By the end of grade 12, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 12–CCR text complexity band independently and proficiently.

[5] In English IV, this study may be expanded to include the literature of other cultures during the same time period.

MISSISSIPPI DEPARTMENT OF EDUCATION

English IV

Reading Informational Text	
Key Ideas and Details	
RI.12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.12.2	Determine two or more central ideas of a text and analyze in detail their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an accurate summary of the text based upon this analysis.
RI.12.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
Craft and Structure	
RI.12.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in Federalist No. 10).
RI.12.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.
RI.12.6	Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text.
Integration of Knowledge and Ideas	
RI.12.7	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
RI.12.8	Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning (e.g., in U.S. Supreme Court majority opinions and dissents) and the premises, purposes, and arguments in works of public advocacy (e.g., The Federalist, presidential addresses).[6]
RI.12.9	Analyze seventeenth-, eighteenth-, and nineteenth-century foundational U.S. documents of historical and literary significance for their themes, purposes, and rhetorical features. Such documents might include The Declaration of Independence, the Preamble to the Constitution, the Bill of Rights, and Lincoln's Second Inaugural Address.
Range of Reading and Level of Text Complexity	
RI.12.10	By the end of grade 12, read and comprehend literary nonfiction at the high end of the grades 12-CCR text complexity band independently and proficiently.

[6] The discussion of U.S. historical documents can be applied in context to a more global perspective.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

The following standards for Grade 12 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Each year in their writing, students should demonstrate increasing sophistication in all aspects of language use, from vocabulary and syntax to the development and organization of ideas, and they should address increasingly demanding content and sources. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Writing	
Text Types and Purposes	
W.12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

W.12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.12.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
Production and Distribution of Writing	
W.12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

W.12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
Research to Build and Present Knowledge	
W.12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.12.9a	Apply grades 11–12 Reading standards to literature (e.g., "Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics").
W.12.9b	Apply grades 11–12 Reading standards to literary nonfiction and/or informational texts (e.g., "Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy [e.g., The Federalist, presidential addresses]").
Range of Writing	
W.12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

The following standards for Grade 12 offer a focus for instruction in each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades.

Speaking and Listening	
Comprehension and Collaboration	
SL.12.1	Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11–12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
SL.12.1a	Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.
SL.12.1b	Work with peers to promote civil, democratic discussions and decision-making, set clear goals and deadlines, and establish individual roles as needed.
SL.12.1c	Propel conversations by posing and responding to questions that probe reasoning and evidence; ensure a hearing for a full range of positions on a topic or issue; clarify, verify, or challenge ideas and conclusions; and promote divergent and creative perspectives.
SL.12.1d	Respond thoughtfully to diverse perspectives; synthesize comments, claims, and evidence made on all sides of an issue; resolve contradictions when possible; and determine what additional information or research is required to deepen the investigation or complete the task.
SL.12.2	Integrate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, orally) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.
SL.12.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, assessing the stance, premises, links among ideas, word choice, points of emphasis, and tone used.
Presentation of Knowledge and Ideas	
SL.12.4	Present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization, development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

SL.12.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
SL.12.6	Adapt speech to a variety of contexts and tasks, demonstrating a command of formal English when indicated or appropriate. (See grades 11–12 Language standards 1 and 3 for specific expectations.)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

The following standards for Grade 12 offer a focus for instruction each year to help ensure that students gain adequate mastery of a range of skills and applications. Students advancing through the grades are expected to meet each year's grade-specific standards and retain or further develop skills and understandings mastered in preceding grades. Beginning in grade 3, skills and understandings that are particularly likely to require continued attention in higher grades as they are applied to increasingly sophisticated writing and speaking are marked with an asterisk (*).

Language	
Conventions of Standard English	
L.12.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
L.12.1a	Apply the understanding that usage is a matter of convention, can change over time, and is sometimes contested.
L.12.1b	Resolve issues of complex or contested usage, consulting references (e.g., Merriam-Webster's Dictionary of English Usage, Garner's Modern American Usage) as needed.
L.12.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.12.2a	Observe hyphenation conventions.
L.12.2b	Spell correctly.
Knowledge of Language	
L.12.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.12.3a	Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; when analyzing complex texts, demonstrate an understanding of how syntax contributes to the purpose or meaning of the text.
Vocabulary Acquisition and Use	
L.12.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.
L.12.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.12.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

English IV

L.12.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage.
L.12.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.12.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.12.5a	Interpret figures of speech (e.g., hyperbole, paradox) in context and analyze their role in the text.
L.12.5b	Analyze nuances in the meaning of words with similar denotations.
L.12.6	Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression.

Scaffolding Document

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery.

The Scaffolding Document can be found at http://www.mde.k12.ms.us/ESE/ccr.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Literacy in History/Social Studies - Grades 11-12

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading in History/Social Studies	
Key Ideas and Details	
RH.11-12.1	Cite specific textual evidence to support analysis of primary and secondary sources, connecting insights gained from specific details to an understanding of the text as a whole.
RH.11-12.2	Determine the central ideas or information of a primary or secondary source; provide an accurate summary that makes clear the relationships among the key details and ideas.
RH.11-12.3	Evaluate various explanations for actions or events and determine which explanation best accords with textual evidence, acknowledging where the text leaves matters uncertain.
Craft and Structure	
RH.11-12.4	Determine the meaning of words and phrases as they are used in a text, including analyzing how an author uses and refines the meaning of a key term over the course of a text (e.g., how Madison defines faction in Federalist No. 10).
RH.11-12.5	Analyze in detail how a complex primary source is structured, including how key sentences, paragraphs, and larger portions of the text contribute to the whole.
RH.11-12.6	Evaluate authors' differing points of view on the same historical event or issue by assessing the authors' claims, reasoning, and evidence.
Integration of Knowledge and Ideas	
RH.11-12.7	Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, as well as in words) in order to address a question or solve a problem.
RH.11-12.8	Evaluate an author's premises, claims, and evidence by corroborating or challenging them with other information.
RH.-11-12.9	Integrate information from diverse sources, both primary and secondary, into a coherent understanding of an idea or event, noting discrepancies among sources.
Range of Reading and Level of Text Complexity	
RH.11-12.10	By the end of grade 12, read and comprehend history/social studies texts in the grades 12–CCR text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Literacy in Science and Technical Subjects - Grades 11-12

The standards below begin at grade 6; standards for K–5 reading in history/social studies, science, and technical subjects are integrated into the K–5 Reading standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Reading in Science and Technical Subjects	
Key Ideas and Details	
RST.11-12.1	Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.
RST.11-12.2	Determine the central ideas or conclusions of a text; summarize complex concepts, processes, or information presented in a text by paraphrasing them in simpler but still accurate terms.
RST.11-12.3	Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.
Craft and Structure	
RST.11-12.4	Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11–12 texts and topics.
RST.11-12.5	Analyze how the text structures information or ideas into categories or hierarchies, demonstrating understanding of the information or ideas.
RST.11-12.6	Analyze the author's purpose in providing an explanation, describing a procedure, or discussing an experiment in a text, identifying important issues that remain unresolved.
Integration of Knowledge and Ideas	
RST.11-12.7	Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.
RST.11-12.8	Evaluate the hypotheses, data, analysis, and conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusions with other sources of information.
RST.-11-12.9	Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process, phenomenon, or concept, resolving conflicting information when possible.
Range of Reading and Level of Text Complexity	
RST.11-12.10	By the end of grade 12, read and comprehend science/technical texts in the grades 12–CCR text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/Social Studies, Science and Technical Subjects - Grades 11-12

The standards below begin at grade 6; standards for K–5 writing in history/social studies, science, and technical subjects are integrated into the K–5 Writing standards. The CCR anchor standards and high school standards in literacy work in tandem to define college and career readiness expectations—the former providing broad standards, the latter providing additional specificity.

Writing	
Text Types and Purposes	
WHST.11-12.1	Write arguments focused on discipline-specific content.
WHST.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences the claim(s), counterclaims, reasons, and evidence.
WHST.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form that anticipates the audience's knowledge level, concerns, values, and possible biases.
WHST.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
WHST.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
WHST.11-12.1e	Provide a concluding statement or section that follows from or supports the argument presented.
WHST.11-12.2	Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.
WHST.11-12.2a	Introduce a topic and organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/Social Studies, Science and Technical Subjects - Grades 11-12

WHST.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
WHST.11-12.2c	Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
WHST.11-12.2d	Use precise language, domain-specific vocabulary and techniques such as metaphor, simile, and analogy to manage the complexity of the topic; convey a knowledgeable stance in a style that responds to the discipline and context as well as to the expertise of likely readers.
WHST.11-12.2e	Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).
WHST.11-12.3	Not Applicable
Production and Distribution of Writing	
WHST.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
WHST.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.
WHST.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
Research to Build and Present Knowledge	
WHST.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
WHST.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the specific task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
WHST.11-12.9	Draw evidence from informational texts to support analysis, reflection, and research.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Writing in History/Social Studies, Science and Technical Subjects - Grades 11-12

Range of Writing	
WHST.11-12.10	Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.

Note: Students' narrative skills continue to grow in these grades. The Standards require that students be able to incorporate narrative elements effectively into arguments and informative/explanatory texts. In history/social studies, students must be able to incorporate narrative accounts into their analyses of individuals or events of historical import. In science and technical subjects, students must be able to write precise enough descriptions of the step-by-step procedures they use in their investigations or technical work that others can replicate them and (possibly) reach the same results.

Creative Writing

Grades 9-12
1 English Credit

The Creative Writing course will provide the student practices in the processes of composing poems, personal descriptive and narrative essays, and short fiction. If time allows, the writing of drama may be pursued. The course affords an opportunity for self- expression, promotes critical thinking, expands the imagination, and develops the use of figurative and literal language. The student will pursue an independent project in creative writing. The student will become a critical reader and editor of his/her own work and of the work of his/her classmates. The student will be encouraged to submit works for publication.

Writing	
W.11-12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11-12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11-12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11-12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11-12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.11-12.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9a	Apply grades 11–12 Reading standards to literature (e.g., "Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics").
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.
Language	
L.11-12.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
L.11-12.1a	Apply the understanding that usage is a matter of convention, can change over time, and is sometimes contested.
L.11-12.1b	Resolve issues of complex or contested usage, consulting references (e.g., Merriam-Webster's Dictionary of English Usage, Garner's Modern American Usage) as needed.
L.11-12.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.11-12.2a	Observe hyphenation conventions.
L.11-12.2b	Spell correctly.
L.11-12.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.11-12.3a	Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; apply an understanding of syntax to the study of complex texts when reading.
L.11-12.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.
L.11-12.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.11-12.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).

MISSISSIPPI DEPARTMENT OF EDUCATION

Debate

Grades 9-12
.5 or 1 English Credit

This course provides instruction in how to acquire, analyze, and evaluate information in order to organize effective arguments, and it provides practice in making those arguments. Skill in debate helps the individual to think logically, clearly, and quickly, and it helps a student to identify flawed reasoning and argue persuasively.

Writing	
W.11-12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., "Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy [e.g., The Federalist, presidential addresses]").
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Speaking and Listening	
SL.11-12.1	Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11–12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
SL.11-12.1a	Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.
SL.11-12.1b	Work with peers to promote civil, democratic discussions and decision-making, set clear goals and deadlines, and establish individual roles as needed.
SL.11-12.1c	Propel conversations by posing and responding to questions that probe reasoning and evidence; ensure a hearing for a full range of positions on a topic or issue; clarify, verify, or challenge ideas and conclusions; and promote divergent and creative perspectives.
SL.11-12.1d	Respond thoughtfully to diverse perspectives; synthesize comments, claims, and evidence made on all sides of an issue; resolve contradictions when possible; and determine what additional information or research is required to deepen the investigation or complete the task.
SL.11-12.2	Integrate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, orally) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.
SL.11-12.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, assessing the stance, premises, links among ideas, word choice, points of emphasis, and tone used.
SL.11-12.4	Present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization, development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.
SL.11-12.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
SL.11-12.6	Adapt speech to a variety of contexts and tasks, demonstrating a command of formal English when indicated or appropriate. (See grades 11–12 Language standards 1 and 3 here for specific expectations.)
Language	
L.11-12.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.
L.11-12.1a	Apply the understanding that usage is a matter of convention, can change over time, and is sometimes contested.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

L.11-12.1b	Resolve issues of complex or contested usage, consulting references (e.g., Merriam-Webster's Dictionary of English Usage, Garner's Modern American Usage) as needed.
L.11-12.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.11-12.2a	Observe hyphenation conventions.
L.11-12.2b	Spell correctly.
L.11-12.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.11-12.3a	Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; apply an understanding of syntax to the study of complex texts when reading.
L.11-12.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.
L.11-12.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.11-12.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).
L.11-12.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage.
L.11-12.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.11-12.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.11-12.5a	Interpret figures of speech (e.g., hyperbole, paradox) in context and analyze their role in the text.
L.11-12.5b	Analyze nuances in the meaning of words with similar denotations.
L.11-12.6	Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Foundations of Journalism

Grades 9-12
.5 or 1 English Credit

Foundations of Journalism is an English course for one Carnegie unit credit. It's intended as a general course to enhance students' communication and media literacy skills. It is a prerequisite for subsequent journalism courses. This course is designed to help students produce a factual, journalistically-sound piece of writing from interviews they conducted. By the end of this course, students should be able to produce a factual, journalistically-sound piece of writing from interviews they conducted. Students should also be able to create at least one accompanying visual element (photo/video) and publish their work (story + visual) to the web.

1. Develop an awareness of the history and role of journalism in Mississippi and in American society.	
1.a	Understand the relationship of a free press to a democratic society.
1.b	Trace the historical development of media through American history, including but not limited to the following events/periods: • 1st newspaper in America • The Civil War and the rise of the telegraph • Yellow Journalism • Orson Welles and the power of radio • Kennedy/Nixon debate and the power of television • Cable Network News (CNN) starts 24-hour news cycle • Newspapers start websites and the rise of bloggers • Facebook, Twitter and the social media revolution
1.c	Identify famous Mississippi journalists/newspapers and their historical significance.
1.d	Identify careers related to the field of journalism and new media.
2. Develop skills in gathering and evaluating information.	
2.a	Determine a theme or central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an objective summary of the text. (RL.9-10.2)
2.b	Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account; provide an objective summary of the text. (RL.11-12.2)
2.c	Determine a central idea of a text and analyze its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an objective summary of the text. (RI.9-10.2)

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

2.d	Analyze various accounts of a subject told in different mediums (e.g., a person's life story in both print and multimedia), determining which details are emphasized in each account. (RI.9-10.7)
2.e	Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is valid and the evidence is relevant and sufficient; identify false statements and fallacious reasoning. (RI.9-10.8)
2.f	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem. (RI.11-12.7)
2.g	Develop techniques in interviewing and note-taking, and interview sources from a list of developed questions.
2.h	Develop techniques in researching and gathering background information for written reports.
3. Develop journalistic writing skills.	
3.a	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence. (W.9-10.1)
3.b	Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among claim(s), counterclaims, reasons, and evidence. (W.9-10.1a)
3.c	Develop claim(s) and counterclaims fairly, supplying evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level and concerns. (W.9-10.1b)
3.d	Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims. (W.9-10.1c)
3.e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing. (W.9-10.1d)
3.f	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content. (W.9-10.2)
3.g	Introduce a topic; organize complex ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension. (W.9-10.2a)
3.h	Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic. (W.9-10.2b)
3.i	Use appropriate and varied transitions to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts. (W.9-10.2c)
3.j	Use precise language and domain-specific vocabulary to manage the complexity of the topic. (W.9-10.12d)
3.k	Establish and maintain a formal style and objective tone while attending to the

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	norms and conventions of the discipline in which they are writing. (W.9-10.2e)
3.l	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation. (W.9-10.8)
3.m	Identify news, elements of news and news sources.
3.n	Present facts without editorializing.
3.o	Write stories with effective leads.
3.p	Write stories that answer who, what, when, where, why and how of a topic, using the basic inverted-pyramid structure of a news story.
3.q	Recognize and develop categories of specialized writing including opinion, features, sports, blog posts, captions, broadcast reports, headlines, and yearbook.
3.r	Use copy symbols and stylebook to proofread/copyedit writing for errors in content, organization, grammar, and accuracy.
4. Identify the legal and ethical principles associated with practicing media.	
4.a	Examine the Society of Professional Journalists' Code of Ethics.
4.b	Identify court decisions and understand how they are relevant to student media, including but not limited to *Tinker vs. Des Moines School District (1969)* and *Hazelwood School District vs. Kuhlmeier (1988)*.
4.c	Understand the legal parameters of libel, slander and copyright law.
5. Demonstrate use of video, photography, and design in media.	
5.a	Understand basic rules of layout and page design, including typography.
5.b	Develop skills in photo journalism.
5.c	Explore the basics of filming and video editing for journalism.
6. Demonstrate digital publishing and linking.	
6.a	Examine the ways that online content differs from print content.
6.b	Publish stories in a digital format, such as blog.
6.c	Insert links into online stories that add context or depth to coverage.
7. Demonstrate the role of advertising.	
7.a	Understand the role of advertising in the communications media.
7.b	Understand professional techniques in writing and designing advertisements.
7.c	Produce sample advertisements for local businesses.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Broadcast Journalism

Grades 9-12
.5 or 1 English Credit

The Broadcast Journalism course provides students with quality academic instruction in television, radio, and video production by providing training in operating equipment, reporting and scriptwriting, as well as planning, directing, and producing video projects. This course is designed to help students produce a broadcast news show that includes anchor segments, field reports and feature segments. Students should select all content, write all scripts, and film and edit all video. Show(s) should be published to the web and available to the public. Foundations of Journalism is a prerequisite for this class.

1. Work individually and as a member of a team to produce original video/radio shows for school/community.	
1.a	Establish production parameters/vision and organize a plan for deadlines, division of labor, etc.
1.b	Understand concepts of basic set design for a small studio news show.
1.c	Assume a given role, such as reporter/writer, videographer, director/editor, producer, etc.
1.d	Brainstorm ideas for coverage based on news value and assign projects accordingly.
1.e	Deliver news show to students/community.
2. Plan and produce factual and informative audio/video packages for broadcast.	
2.a	Brainstorm, research and storyboard packages before filming/writing.
2.b	Film on-camera interviews and B-roll that capture all angles of a story.
2.c	Use a combination of standard camera shots (close-up, medium, wide, establishing, cut-in, cut-away, etc.)
2.d	Edit raw footage and audio into a meaningful sequence of events that complements a spoken, non-biased narration.
2.e	Compose graphics and special effects that enhance (not distract from) reporting.
3. Write quality, informative scripts for broadcasts and packages.	
3.a	Distinguish between newspaper/magazine writing and broadcast writing (writing to be read vs. writing to be heard).
3.b	Focus scriptwriting on informing an audience. Eliminate generalities and unnecessary words. Use short, simple, conversational narration that employs proper usage of Standard English.
3.c	Identify people by title and full name on first reference. Use only last names in subsequent mentions.
3.d	Speak coherently (verbally and non-verbally) and in harmony with the tone of the report, and continually refine presentation skills (voice quality, articulation,

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	body language and stage presence).
4. Operate basic video/audio production equipment.	
4.a	Explain the function of each type of production equipment.
4.b	Operate and exhibit the correct use of cameras, tripods, hand-held/lavaliere microphones, audio mixers, graphics generators and video editing software.
4.c	Execute basic camera movements using a tripod.
4.d	Use the basic structure of small studio lighting.
4.e	Use relevant broadcasting terminology and establish it as the common language of studio.
4.f	Demonstrate the concepts of headroom, nose room, lead room and the Rule of Thirds.
5. Use industry-standard marketing techniques to sell advertisements and advance the publication's brand.	
5.a	Work with local groups and businesses to design advertisements based on the customer's needs.
5.b	Develop a marketing campaign for publication (with both digital and print elements).
6. Engage audience through the web, social media.	
6.a	Publish work to the web via streaming sites such as Vimeo, TeacherTube or YouTube, via podcast or on the school web site.
6.b	Engage audience through social media, including but not limited to links to student content, breaking news reports, polls and requests for feedback.
7. Evaluate broadcasts to determine areas for growth and improvement.	
7.a	Critique works of other students.
7.b	Encourage other students, community members and industry professionals to submit feedback.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Print Journalism

Grades 9-12
.5 or 1 English Credit

The Print Journalism course provides students with quality academic instruction in newspaper/yearbook/news-site production by providing training in reporting, writing, photography, design and equipment operation, as well as in leadership and management skills (necessary to plan and execute the publication process). This course is designed to help students produce a newspaper, news magazine, news website or yearbook that informs a defined audience of school and community news in a timely manner. Students should select all content, write all copy, photograph/design visual elements and manage their own website/social media accounts. Works should be published in some form (print or digital) and available to the public, either for free or for purchase.

1. Work individually and as a member of a team to produce original student-run publications for the school/community.	
1.a	Establish publication parameters/vision and organize a plan for deadlines, division of labor, etc.
1.b	Assume a given role, such as reporter/writer, photographer, editor, etc.
1.c	Identify ideas for coverage based on news value and assign work accordingly.
1.d	Operate within parameters of standard legal and ethical practices
2. Identify local topics of student interest/concern and gather information that informs/educates the audience.	
2.a	Gather background information via books, reports, the web, etc.
2.b	Formulate a list of big-idea questions that need answering and seek out human sources that can answer them.
2.c	Interview sources using a list of pre-prepared questions; eliminating items, adding others and asking follow-up/clarifying questions as needed.
3. Demonstrate journalistic writing and editing skills through factual, non-biased coverage of events relevant to students.	
3.a	Structure stories as an inverted pyramid, with the major facts at the top of the story. Leads should be succinct and engaging.
3.b	Focus writing on informing an audience. Eliminate generalities and unnecessary words. Use short, simple, conversational writing that employs proper usage of Standard English.
3.c	Properly attribute quotes (direct and indirect) from outside sources.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

3.d	Demonstrate ability to clearly articulate opinions in staff editorials, columns & reviews. These stories should be clearly marked as opinion/commentary.
3.e	Use copy symbols and stylebook to proofread/copyedit writing for errors in content, organization, grammar and accuracy.
4. Produce quality, consistent visual elements that advance the overall readability of the story, publication.	
4.a	Take quality photographs that capture the action and/or emotion of the event/topic. All photographs should be accompanied by an identifying caption.
4.b	Develop a consistent layout/design that reflects the identity/theme of the online/print publication. This includes typography, artwork, modules and copy.
5. Use industry-standard marketing techniques to sell advertisements and the publication's brand.	
5.a	Work with local groups and businesses to design advertisements that meet the customer's needs.
5.b	Develop a marketing campaign for a publication (with both digital and print elements).
6. Engage audience through the web, social media.	
6.a	Publish work to the web via an independent staff site (recommended) or on the school web site.
6.b	Engage audience through social media, including but not limited to links to student content, breaking news reports, polls and requests for feedback.
7. Evaluate publications to identify areas for growth and improvement.	
7.a	Critique the work of other students.
7.b	Encourage other students, community members and industry professionals to submit feedback.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Mississippi Writers

Grades 9-12
.5 or 1 English Credit

The Mississippi Writers course focuses on the state's rich literary heritage through the study of poetry, fiction, nonfiction, and drama. The course identifies major sources and themes of twentieth century and contemporary Mississippi writing. The student will recognize the contribution of Mississippi writers, such as William Faulkner, Eudora Welty, Richard Wright, Willie Morris, Anne Moody, etc., to twentieth century American writing and recognize that Mississippi writing is an expression of a particular place that achieves universality.

Reading Literature	
RL.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RL.11-12.2	Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account; provide an objective summary of the text.
RL.11-12.3	Analyze the impact of the author's choices regarding how to develop and relate elements of a story or drama (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).
RL.11-12.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful.
RL.11-12.5	Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.
RL.11-12.6	Analyze a case in which grasping a point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).
RL.11-12.7	Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text.
RL.11-12.9	Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.
RL.11-12.10	By the end of grade 12, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 11–CCR text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Reading Informational Text	
RI.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.11-12.2	Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.
RI.11-12.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
RI.11-12.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text.
RI.11-12.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.
RI.11-12.6	Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text.
RI.11-12.7	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
RI.11-12.8	Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal and the premises, purposes, and arguments in works of public advocacy.
RI.12.9	Analyze seventeenth-, eighteenth-, and nineteenth-century foundational U.S. documents of historical and literary significance for their themes, purposes, and rhetorical features.
RI.11-12.10	By the end of grade 12, read and comprehend literary nonfiction at the high end of the grades 11-CCR text complexity band independently and proficiently.
Writing	
W.11-12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11-12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11-12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11-12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11-12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.11-12.3e	Provide a conclusion that follows from and reflects on what is

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	experienced, observed, or resolved over the course of the narrative.
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9a	Apply grades 11–12 Reading standards to literature (e.g., “Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics”).
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., “Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy).
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Oral Communication

Grades 9-12
.5 or 1 English Credit

This course includes instruction in how to acquire, analyze, and evaluate information in order to make decisions and establish satisfying relationships. Skill in oral communication helps the student to think logically, clearly, and creatively.

Writing	
W.11-12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11-12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11-12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11-12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11-12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.11-12.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis,

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	reflection, and research.
W.11-12.9a	Apply grades 11–12 Reading standards to literature (e.g., "Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics").
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., "Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy [e.g., The Federalist, presidential addresses]").
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.
SL.11-12.1	Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11–12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
SL.11-12.1a	Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.
SL.11-12.1b	Work with peers to promote civil, democratic discussions and decision-making, set clear goals and deadlines, and establish individual roles as needed.
SL.11-12.1c	Propel conversations by posing and responding to questions that probe reasoning and evidence; ensure a hearing for a full range of positions on a topic or issue; clarify, verify, or challenge ideas and conclusions; and promote divergent and creative perspectives.
SL.11-12.1d	Respond thoughtfully to diverse perspectives; synthesize comments, claims, and evidence made on all sides of an issue; resolve contradictions when possible; and determine what additional information or research is required to deepen the investigation or complete the task.
SL.11-12.2	Integrate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, orally) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.
SL.11-12.3	Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, assessing the stance, premises, links among ideas, word choice, points of emphasis, and tone used.
SL.11-12.4	Present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization,

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.
SL.11-12.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
SL.11-12.6	Adapt speech to a variety of contexts and tasks, demonstrating a command of formal English when indicated or appropriate. (See grades 11–12 Language standards 1 and 3 here for specific expectations.)

SREB Literacy Ready Course

Grade 12
1 English Credit

In 2011, SREB began forming a regional partnership of states and experts to develop a readiness course in disciplinary literacy. The courses were designed to help college-bound students reach their state's college and career-readiness benchmarks before high school graduation.

The Readiness Courses is designed to assist students who are preparing for postsecondary education—meaning they do not reach the state's college- and career-readiness benchmarks on either the ACT, SAT, or other assessment—to become prepared and reach those benchmarks.

This course is best suited for the middle range of students, not those who can succeed in Advanced Placement courses or who are severely behind. The course is built with rigor, innovative instructional strategies, and a concentration on contextual learning that departs from procedural memorization and focuses on engaging the students in a real-world context. The course provides literacy strategies that allow students to read and comprehend all manner of texts and genres in every core discipline. In short, this course targets students with weaknesses and college-ready skill gaps and re-educate them in new ways to ensure they are prepared for postsecondary-level pursuits.

The course is available free of charge to any district, school or teacher who wishes to download it from the SREB website, after a simple registration process. The full course and additional resources, including informational publications, policy briefs, state information and slide presentations, is also available on the website at SREB.org/Ready.

The SREB Readiness Course titled Literacy Ready is an innovative, dynamic course built to help students master the literacy skills needed for three core subject areas — English, social science and science. Literacy Ready consists of six units: two in history, two in English and two in science. Content of the discipline is at the forefront of the curriculum; while the disciplinary literacy skills are emphasized through reading and writing assignments based on the content. Units are focused on truly understanding how to read and interpret texts in the discipline on a college level. They are designed to be used as steppingstones, with the first module in each subject less rigorous and demanding than the last.

English (Supplemental Fourth-Year or Senior English)

Both units are designed to address the following essential question: "How is the exponential increase of information that we process in all forms of media affecting the way we live?"

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Unit 1: Informational

The first unit engages students in reading informational text from Nicholas Carr's *The Shallows: What the Internet is Doing to Our Brains*, as well as a number of related supplemental texts. Students practice the following reading skills with an English disciplinary focus: literary epistemology; reading for argument, claim and evidence; reading for rhetorical strategies and patterns; and reading for internal and external connections. The unit conclusion engages students in collecting evidence for a stance-based synthesis presentation on a topic drawn from the central text. Students use feedback received from peers and from the teacher to revise their syntheses and submit a synthesis essay.

Unit 2: Literary

The second unit moves into literary study, using *Ubik* by Philip K. Dick as the central text. In this unit, students read the central text and a variety of related supplemental texts. They practice the following reading skills with an English disciplinary focus: literary epistemology, close reading; inference, interpretation of rhetorical strategies and patterns; and reading for internal and external connections. The unit conclusion involves students in collecting and presenting evidence for a literary argument essay on one of three topics related to the central text. With a draft of the literary argument in hand, students participate in a debate related to a common question drawn from the theme of the novel.

Science (Biology)

Each unit has a different theme associated with science. The first unit evaluates science claims in health and nutrition, while the second requires students to dig further to understand DNA structure and the future of biotechnology.

Unit 1: Nutrition

In this unit, students are introduced to disciplinary literacy in the sciences. Students learn strategies for reading multiple types of text, including science textbooks, research articles and news articles. They also learn a variety of ways to write about science—from personal reflection to public consumption—and to comprehend science information in multiple representations, including animations, diagrams, charts and tables.

Unit 2: DNA and Biotechnology

In this unit, students extend their understanding of reading and writing in the sciences as they read research articles and textbook material, take notes from lecture videos and make predictions using scientific models. The text material in this second science unit is more complex in both content and composition than the material in the first unit. Additionally, students are asked to write in more depth as they prepare and present an evidence-based scientific poster in a research symposium.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Social Science (U.S. History or Government)

Units are unified by the topic "concepts of liberty and freedom."

Unit 1: Civil Rights Movement

The first unit focuses on the Civil Rights Movement and the changes that took place over the period of the 1960s. Students draw information from a textbook chapter, a film, a lecture, and a number of primary source documents as they learn to read history, to recognize implicit and explicit claims and evidence, to write a historical account and to form arguments.

Unit 2: U.S. Foreign Affairs

The second unit focuses on U.S. involvement in foreign affairs: the Cuban Missile Crisis and the Vietnam War. In this unit, students read multiple texts as well, but more emphasis is placed on writing historical arguments based on their reading. The texts and sources in this unit are more complex than in the first.

Survey of African American Writing

Grades 9-12
.5 or 1 English Credit

The Survey of African American Writing course is a survey course that draws upon a compilation of genres, themes, styles, and language used by various writers of African-American descent. The student will recognize and appreciate contributions of selected authors through reading, speaking, and viewing selected works and by researching and writing.

Reading Literature	
RL.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RL.11-12.2	Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account; provide an objective summary of the text.
RL.11-12.3	Analyze the impact of the author's choices regarding how to develop and relate elements of a story or drama (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).
RL.11-12.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.)
RL.11-12.5	Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.
RL.11-12.6	Analyze a case in which grasping a point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).
RL.11-12.7	Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text.
RL.11-12.9	Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.
RL.11-12.10	By the end of grade 12, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 11–CCR text complexity band independently and proficiently.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Reading Informational Text	
RI.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.11-12.2	Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.
RI.11-12.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
RI.11-12.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in Federalist No. 10).
RI.11-12.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.
RI.11-12.6	Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text.
RI.11-12.7	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
RI.11-12.8	Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning (e.g., in U.S. Supreme Court majority opinions and dissents) and the premises, purposes, and arguments in works of public advocacy.
RI.11-12.9	Analyze seventeenth-, eighteenth-, and nineteenth-century foundational U.S. documents of historical and literary significance for their themes, purposes, and rhetorical features.
RI.11-12.10	By the end of grade 12, read and comprehend literary nonfiction at the high end of the grades 11-CCR text complexity band independently and proficiently.
Writing	
W.11-12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11-12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11-12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11-12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11-12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.11-12.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9a	Apply grades 11–12 Reading standards to literature (e.g., “Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics”).
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., “Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy).
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION

Survey of Twentieth Century Writing

Grades 9-12
.5 or 1 English Credit

The Survey of Twentieth Century Writing course covers major writers and themes in the Americas and Western Europe for the period from World War I to the present time. The student will recognize major themes present in twentieth century writing and will draw parallels to history and present day concerns. As a result of this course, students will have a greater awareness of events and writings that have shaped and been part of the ideas and culture of the twentieth century.

Reading Literature	
RL.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RL.11-12.2	Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account; provide an objective summary of the text.
RL.11-12.3	Analyze the impact of the author's choices regarding how to develop and relate elements of a story or drama (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).
RL.11-12.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.)
RL.11-12.5	Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.
RL.11-12.6	Analyze a case in which grasping a point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).
RL.11-12.7	Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.)
RL.11-12.9	Demonstrate knowledge of twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

RL.11-12.10	By the end of grade 12, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 11–CCR text complexity band independently and proficiently.
Reading Informational Text	
RI.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.11-12.2	Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.
RI.11-12.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
RI.11-12.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text.
RI.11-12.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.

W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
W.11-12.3a	Engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.11-12.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.11-12.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole and build toward a particular tone and outcome (e.g., a sense of mystery, suspense, growth, or resolution).
W.11-12.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9a	Apply grades 11–12 Reading standards to literature (e.g., “Demonstrate knowledge of twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics”).
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., “Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy).
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Technical and Workplace Writing

Grades 9-12
.5 or 1 English Credit

The Technical and Workplace Writing course focuses on the various kinds of written communication currently occurring in a variety of workplaces and careers. In this course, students examine actual examples of written materials produced to communicate within the workplace as well as outside the workplace for the customer and general public. Through reviewing examples and through instruction, students will gain a sense of general principles of communication, learn how audience and purpose shape the form and content of the written piece, and discern how organization, wording, accuracy and specificity of details, typography, visuals, design, grammar, usage, and mechanics contribute to effective communication. Students will apply what they have learned by creating a variety of kinds of written communication. Since conveying information is at the heart of much of workplace and technical writing, students will practice gathering information through research as well as communicate information through various kinds of writing.

The course should be taught so that it offers challenge. Writings should include pieces requiring more sophistication or complexity: delivering or justifying news or a stance, persuading or manipulating the reader's opinions or emotions, and explaining complex processes. Students will produce individual pieces as well as participate in group review of their writings. Through these experiences of working with others, they will practice the language skills of explaining, persuading, and negotiating, and learn the importance and effect of their words.

Reading Informational Text	
RI.11-12.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.
RI.11-12.2	Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.
RI.11-12.3	Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.
RI.11-12.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in Federalist No. 10).
RI.11-12.5	Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.
RI.11-12.6	Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

RI.11-12.7	Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
RI.11-12.8	Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning (e.g., in U.S. Supreme Court majority opinions and dissents) and the premises, purposes, and arguments in works of public advocacy (e.g., The Federalist, presidential addresses).
RI.11-12.9	Analyze seventeenth-, eighteenth-, and nineteenth-century foundational U.S. documents of historical and literary significance (including The Declaration of Independence, the Preamble to the Constitution, the Bill of Rights, and Lincoln's Second Inaugural Address) for their themes, purposes, and rhetorical features.
RI.11-12.10	By the end of grade 12, read and comprehend literary nonfiction at the high end of the grades 11-CCR text complexity band independently and proficiently.
Writing	
W.11-12.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.11-12.1a	Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences claim(s), counterclaims, reasons, and evidence.
W.11-12.1b	Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level, concerns, values, and possible biases.
W.11-12.1c	Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.11-12.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.11-12.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.11-12.2a	Introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.11-12.2b	Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.11-12.2c	Use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.11-12.2d	Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.
W.11-12.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.11-12.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.11-12.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.11-12.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
W.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
W.11-12.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.11-12.9b	Apply grades 11–12 Reading standards to literary nonfiction (e.g., "Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning [e.g., in U.S. Supreme Court Case majority opinions and dissents] and the premises, purposes, and arguments in works of public advocacy [e.g., The Federalist, presidential addresses]").
W.11-12.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.
W.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 11–12.)
Language	
L.11-12.1	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

L.11-12.1a	Apply the understanding that usage is a matter of convention, can change over time, and is sometimes contested.
L.11-12.1b	Resolve issues of complex or contested usage, consulting references (e.g., Merriam-Webster's Dictionary of English Usage, Garner's Modern American Usage) as needed.
L.11-12.2	Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.
L.11-12.2a	Observe hyphenation conventions.
L.11-12.2b	Spell correctly.
L.11-12.3	Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening.
L.11-12.3a	Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; apply an understanding of syntax to the study of complex texts when reading.
L.11-12.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.
L.11-12.4a	Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.
L.11-12.4b	Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).
L.11-12.4c	Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage.
L.11-12.4d	Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).
L.11-12.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.
L.11-12.5a	Interpret figures of speech (e.g., hyperbole, paradox) in context and analyze their role in the text.
L.11-12.5b	Analyze nuances in the meaning of words with similar denotations.
L.11-12.6	Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

World Literature

Grades 9-12
.5 or 1 English Credit

The World Literature course is an examination of literary works that have contributed significantly to the thinking of humankind and have contributed greatly to various cultures. In this course, students will read a variety of masterpieces and influential literary works. The course may be organized by theme, genre, or chronology. The one-semester World Literature course may focus mainly on one time period or span centuries to show the range of literary heritage, whereas the one-year course will require reading of literature from the ancient classical period to the twentieth century. In either case, the teacher will need to determine whether the course will include mainly one or two genres or cover many genres, such as plays, poetry, novels, and short stories. The teacher also has the freedom to determine the particular countries and cultures that the works will represent. In the one-semester course, however, at least one work should be chosen to represent the literature of each: (a) Classical Greece or Rome, (b) Great Britain, (c) Europe, (d) the Americas, and (e) either Asia or Africa.

Reading Literature	
RL.9-10.1	Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
RL.9-10.2	Determine a theme or central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an objective summary of the text.
RL.9-10.3	Analyze how complex characters (e.g., those with multiple or conflicting motivations) develop over the course of a text, interact with other characters, and advance the plot or develop the theme.
RL.9-10.4	Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language evokes a sense of time and place; how it sets a formal or informal tone).
RL.9-10.5	Analyze how an author's choices concerning how to structure a text, order events within it (e.g., parallel plots), and manipulate time (e.g., pacing, flashbacks) create such effects as mystery, tension, or surprise.
RL.9-10.6	Analyze a particular point of view or cultural experience reflected in a work of literature from outside the United States, drawing on a wide reading of world literature.
RL.9-10.7	Analyze the representation of a subject or a key scene in two different artistic mediums, including what is emphasized or absent in each treatment (e.g., Auden's "Musée des Beaux Arts" and Breughel's Landscape with the Fall of Icarus).
RL.9-10.8	Not applicable to literature.
RL.9-10.9	Analyze how an author draws on and transforms source material in a specific

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

	work (e.g., how Shakespeare treats a theme or topic from Ovid or the Bible or how a later author draws on a play by Shakespeare).
RL.9-10.10	By the end of grade 9, read and comprehend literature, including stories, dramas, and poems, in the grades 9-10 text complexity band proficiently, with scaffolding as needed at the high end of the range.
Writing	
W.9-10.1	Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
W.9-10.1a	Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among claim(s), counterclaims, reasons, and evidence.
W.9-10.1b	Develop claim(s) and counterclaims fairly, supplying evidence for each while pointing out the strengths and limitations of both in a manner that anticipates the audience's knowledge level and concerns.
W.9-10.1c	Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.
W.9-10.1d	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.9-10.1e	Provide a concluding statement or section that follows from and supports the argument presented.
W.9-10.2	Write informative/explanatory texts to examine and convey complex ideas, concepts, and information clearly and accurately through the effective selection, organization, and analysis of content.
W.9-10.2a	Introduce a topic; organize complex ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
W.9-10.2b	Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
W.9-10.2c	Use appropriate and varied transitions to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.
W.9-10.2d	Use precise language and domain-specific vocabulary to manage the complexity of the topic.
W.9-10.2e	Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.
W.9-10.2f	Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).
W.9-10.3	Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

W.9-10.3a	Engage and orient the reader by setting out a problem, situation, or observation, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events.
W.9-10.3b	Use narrative techniques, such as dialogue, pacing, description, reflection, and multiple plot lines, to develop experiences, events, and/or characters.
W.9-10.3c	Use a variety of techniques to sequence events so that they build on one another to create a coherent whole.
W.9-10.3d	Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters.
W.9-10.3e	Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
W.9-10.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Grade-specific expectations for writing types are defined in standards 1–3 above.)
W.9-10.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience. (Editing for conventions should demonstrate command of Language standards 1–3 up to and including grades 9–10.)
W.9-10.6	Use technology, including the Internet, to produce, publish, and update individual or shared writing products, taking advantage of technology's capacity to link to other information and to display information flexibly and dynamically.
W.9-10.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
W.9-10.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation.
W.9-10.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.
W.9-10.9a	Apply grades 9–10 Reading standards to literature (e.g., "Analyze how an author draws on and transforms source material in a specific work [e.g., how Shakespeare treats a theme or topic from Ovid or the Bible or how a later author draws on a play by Shakespeare]").
W.9-10.10	Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

Advanced Placement: English Language and Composition

Grades 9-12
1 English Credit

The College Board, a national organization, sponsors this course, through which college credit may be earned if the student chooses to take and passes the AP examination and if the college in question accepts the credit. To teach this course for the first time or for information, teachers should contact their principal, guidance counselor, or AP coordinator at their school. If further assistance or an order form for the teacher's guide and other helpful materials is needed, contact:

The College Board
45 Columbus Avenue
New York, NY 10023
Phone: (212) 713-8000

An AP course in English Language and Composition engages students in becoming skilled readers of prose written in a variety of rhetorical contexts, and in becoming skilled writers who compose for a variety of purposes. Both their writing and their reading should make students aware of the interactions among a writer's purposes, audience expectations, and subjects, as well as the way genre conventions and the resources of language contribute to effectiveness in writing.[7]

According to the College Board, the goals of an AP English Language and Composition course are diverse because the college composition course is one of the most varied in the curriculum. Although the college course provides students with opportunities to write about a variety of subjects from a variety of disciplines and to demonstrate an awareness of audience and purpose, the overarching objective in most first-year writing courses is to enable students to write effectively and confidently in their college courses across the curriculum and in their professional and personal lives. Most composition courses emphasize the expository, analytical and argumentative writing that forms the basis of academic and professional communication, as well as the personal and reflective writing that fosters the development of writing facility in any context. In addition, most composition courses teach students that the expository, analytical and argumentative writing they must do in college is based on reading as well as on personal experience and observation. Composition courses, therefore, teach students to read primary and secondary sources carefully, to synthesize material from these texts in their own compositions, and to cite sources using conventions recommended by professional organizations such as the Modern Language Association (MLA), the University of Chicago Press (The Chicago Manual of Style), the American Psychological Association (APA) and the Council of Biology Editors (CBE).
As in the college course, the purpose of the AP English Language and Composition course is to enable students to read complex texts with understanding and to write prose of sufficient

[7] This description is taken from the Advanced Placement Course Description.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

richness and complexity to communicate effectively with mature readers. An AP English Language and Composition course should help students move beyond such programmatic responses as the five-paragraph essay that provides an introduction with a thesis and three reasons, body paragraphs on each reason, and a conclusion that restates the thesis. Although such formulaic approaches may provide minimal organization, they often encourage unnecessary repetition and fail to engage the reader. Students should be encouraged to place their emphasis on content, purpose and audience and to allow this focus to guide the organization of their writing.

College writing programs recognize that skill in writing proceeds from students' awareness of their own composing processes: the way they explore ideas and draft and revise their work. This experience of the process of composing is the essence of the first-year writing course, and the AP English Language and Composition course should emphasize this process, asking students to write essays that proceed through several stages or drafts, with revision aided by teacher and peers. Although these extended, revised essays are not part of the AP Exam, the experience of writing them will help make students more self-aware and flexible writers and thus may help their performance on the exam itself. The various AP English Language Released Exams and AP Central® (www.apcentral.collegeboard.com) provide sample student essay responses to exercises that can be useful as timed writing assignments and as the basis for extended writing projects.

An AP English Language and Composition course may be organized in a variety of ways. It might be organized thematically around a group of ideas or issues, using a variety of works and examining rhetorical strategies and stylistic choices. A course focusing on the theme of liberty, for example, might use such writers as John Stuart Mill, Frederick Douglass, Toni Morrison, Susan B. Anthony, Joseph Sobran, Elie Wiesel, Emile Zola and Mary Wollstonecraft to examine the wealth of approaches to subject and audience that these writers display. Another possibility is to organize a course around sequences of assignments devoted to writing in particular forms (argumentative, narrative, expository) or to group readings and writing assignments by form, theme or voice, asking students to identify writers' strategies and then practice them themselves. Still another alternative is to use genre as an organizing principle for a course, studying how the novel, compared to the autobiography, offers different possibilities for writers, and how classical debate or argument influences us in ways that are not the same as those used in consensus building. The study of language itself — differences between oral and written discourse, formal and informal language, historical changes in speech and writing — is often a productive organizing strategy for teachers.
Whatever form the course takes, students write in both informal and formal contexts to gain authority and learn to take risks in writing. Imitation exercises, journal keeping, collaborative writing and in-class responses are all good ways of helping students become increasingly aware of themselves as writers and of the techniques employed by the writers they read. As well as engaging in varied writing tasks, students become acquainted with a wide variety of prose styles from many disciplines and historical periods and gain understanding of the connections between writing and interpretive skill in reading (see the AP English Language and Composition Teacher's Guide for ideas on readings and sample curricula). Concurrently, to reflect the

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

increasing importance of graphics and visual images in texts published in print and electronic media, students are asked to analyze how such images both relate to written texts and serve as alternative forms of text themselves. In addition, the informed use of research materials and the ability to synthesize varied sources (to evaluate, use and cite sources) are integral parts of the AP English Language and Composition course. Students move past assignments that allow for the uncritical citation of sources and, instead, take up projects that call on them to evaluate the legitimacy and purpose of sources used. One way to help students synthesize and evaluate their sources in this way is the researched argument paper.

Research helps students to formulate varied, informed arguments. Unlike the traditional research paper, in which works are often summarized but not evaluated or used to support the writer's own ideas, the researched argument requires students to consider each source as a text that was itself written for a particular audience and purpose. Researched argument papers remind students that they must sort through disparate interpretations to analyze, reflect upon, and write about a topic. When students are asked to bring the experience and opinions of others into their essays in this way, they enter into conversations with other writers and thinkers. The results of such conversations are essays that use citations for substance rather than show, for dialogue rather than diatribe.

While the AP English Language and Composition course assumes that students already understand and use Standard English grammar, it also reflects the practice of reinforcing writing conventions at every level. Therefore, occasionally the exam may contain multiple-choice questions on usage to reflect the link between grammar and style. The intense concentration on language use in the course enhances students' ability to use grammatical conventions appropriately and to develop stylistic maturity in their prose. Stylistic development is nurtured by emphasizing the following:

- a wide-ranging vocabulary used appropriately and effectively;
- a variety of sentence structures, including appropriate use of subordination and coordination;
- logical organization, enhanced by specific techniques to increase coherence, such as repetition, transitions and emphasis;
- a balance of generalization and specific illustrative detail; and
- an effective use of rhetoric, including controlling tone, establishing and maintaining voice, and achieving appropriate emphasis through diction and sentence structure.

When students read, they should become aware of how stylistic effects are achieved by writers' linguistic choices. Since imaginative literature often highlights such stylistic decisions, fiction and poetry clearly can have a place in the AP English Language and Composition course. The main purpose of including such literature is to aid students in understanding rhetorical and linguistic choices, rather than to study literary conventions.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Because the AP course depends on the development of interpretive skills as students learn to write and read with increasing complexity and sophistication, it is intended to be a full-year course. Teachers at schools that offer only a single semester block for AP are encouraged to advise their AP English Language and Composition students to take an additional semester of advanced English in which they continue to practice the kind of writing and reading emphasized in the AP class. Upon completing the AP English Language and Composition course, then, students should be able to:

- analyze and interpret samples of good writing, identifying and explaining an author's use of rhetorical strategies and techniques;
- apply effective strategies and techniques in their own writing;
- create and sustain arguments based on readings, research and/or personal experience;
- write for a variety of purposes;
- produce expository, analytical and argumentative compositions that introduce a complex central idea and develop it with appropriate evidence drawn from primary and/or secondary sources, cogent explanations and clear transitions;
- demonstrate understanding and mastery of standard written English as well as stylistic maturity in their own writings;
- demonstrate understanding of the conventions of citing primary and secondary sources;
- move effectively through the stages of the writing process, with careful attention to inquiry and research, drafting, revising, editing and review;
- write thoughtfully about their own process of composition;
- revise a work to make it suitable for a different audience;
- analyze image as text; and
- evaluate and incorporate reference documents into researched papers.

An AP English Literature and Composition course engages students in the careful reading and critical analysis of imaginative literature. Through the close reading of selected texts, students deepen their understanding of the ways writers use language to provide both meaning and pleasure for their readers. As they read, students consider a work's structure, style and themes, as well as such smaller-scale elements as the use of figurative language, imagery, symbolism and tone.[8]

The course includes intensive study of representative works from various genres and periods, concentrating on works of recognized literary merit such as those by the authors listed on pages 52–53. The pieces chosen invite and reward rereading and do not, like ephemeral works in such popular genres as detective or romance fiction, yield all (or nearly all) of their pleasures of thought and feeling the first time through. The AP English Literature and Composition Development Committee agrees with Henry David Thoreau that it is wisest to read the best books first; the committee also believes that such reading should be accompanied by thoughtful discussion and writing about those books in the company of one's fellow students.

Reading

Reading in an AP course is both wide and deep. This reading necessarily builds upon and complements the reading done in previous English courses so that by the time students complete their AP course, they will have read works from several genres and periods — from the 16th to the 21st century. More importantly, they will have gotten to know a few works well. In the course, they read deliberately and thoroughly, taking time to understand a work's complexity, to absorb its richness of meaning, and to analyze how that meaning is embodied in literary form. In addition to considering a work's literary artistry, students reflect on the social and historical values it reflects and embodies. Careful attention to both textual detail and

[8] This description is taken from the Advanced Placement Course Description.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

historical context provides a foundation for interpretation, whatever critical perspectives are brought to bear on the literary works studied.

A generic method for the approach to such close reading involves the following elements: the experience of literature, the interpretation of literature and the evaluation of literature. By experience, we mean the subjective dimension of reading and responding to literary works, including precritical impressions and emotional responses. By interpretation, we mean the analysis of literary works through close reading to arrive at an understanding of their multiple meanings. By evaluation, we mean both an assessment of the quality and artistic achievement of literary works and a consideration of their social and cultural values. All three of these aspects of reading are important for an AP English Literature and Composition course.

Moreover, each corresponds to an approach to writing about literary works. Writing to understand a literary work may involve writing response and reaction papers, along with annotation, freewriting and keeping some form of a reading journal. Writing to explain a literary work involves analysis and interpretation and may include writing brief focused analyses on aspects of language and structure. Writing to evaluate a literary work involves making and explaining judgments about its artistry and exploring its underlying social and cultural values through analysis, interpretation and argument.

In short, students in an AP English Literature and Composition course read actively. The works taught in the course require careful, deliberative reading. And the approach to analyzing and interpreting the material involves students in learning how to make careful observations of textual detail, establish connections among their observations, and draw from those connections a series of inferences leading to an interpretive conclusion about the meaning and value of a piece of writing.

Most of the works studied in the course were written originally in English, including pieces by African, Australian, Canadian, Indian and West Indian authors. Some works in translation may also be included (e.g., Greek tragedies, Russian or Latin American fiction). The actual choice is the responsibility of the AP teacher, who should consider previous courses in the school's curriculum. In addition, the AP teacher should ensure that AP students will have studied, at some point in their high school years, literature from both British and American writers, as well as works written from the 16th century to contemporary times. In addition to British and American literature, teachers are encouraged to include in their curricula other literature in English. (See the AP English Literature and Composition Teacher's Guide for sample curricula.) In an ongoing effort to recognize the widening cultural horizons of literary works written in English, the AP English Literature Development Committee will consider and include diverse authors in the representative reading lists. Issues that might, from a specific cultural viewpoint, be considered controversial, including references to ethnicities, nationalities, religions, races, dialects, gender or class, are often represented artistically in works of literature. The Development Committee is committed to careful review of such potentially controversial material. Still, recognizing the universal value of literary art that probes difficult and harsh life experiences and so deepens understanding, the committee emphasizes that fair representation

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

of issues and peoples may occasionally include controversial material. Since AP students have chosen a program that directly involves them in college-level work, the AP English Literature and Composition Exam depends on a level of maturity consistent with the age of 12th-grade students who have engaged in thoughtful analysis of literary texts. The best response to a controversial detail or idea in a literary work might well be a question about the larger meaning, purpose or overall effect of the detail or idea in context. AP students should have the maturity, the skill and the will to seek the larger meaning through thoughtful research. Such thoughtfulness is both fair and owed to the art and to the author.

Although neither linguistic nor literary history is the principal focus in the AP course, students gain awareness that the English language that writers use has changed dramatically through history, and that today it exists in many national and local varieties. They also become aware of literary tradition and the complex ways in which imaginative literature builds upon the ideas, works and authors of earlier times. Because the Bible and Greek and Roman mythology are central to much Western literature, students should have some familiarity with them. These religious concepts and stories have influenced and informed Western literary creation since the Middle Ages, and they continue to provide material for modern writers in their attempts to give literary form to human experience. Additionally, the growing body of works written in English reflecting non-Western cultures may require students to have some familiarity with other traditions.

Writing

Writing is an integral part of the AP English Literature and Composition course and exam. Writing assignments focus on the critical analysis of literature and include expository, analytical and argumentative essays. Although critical analysis makes up the bulk of student writing for the course, well-constructed creative writing assignments may help students see from the inside how literature is written. Such experiences sharpen their understanding of what writers have accomplished and deepen their appreciation of literary artistry. The goal of both types of writing assignments is to increase students' ability to explain clearly, cogently, even elegantly, what they understand about literary works and why they interpret them as they do.
To that end, writing instruction includes attention to developing and organizing ideas in clear, coherent and persuasive language. It includes study of the elements of style. And it attends to matters of precision and correctness as necessary. Throughout the course, emphasis is placed on helping students develop stylistic maturity, which, for AP English, is characterized by the following:

- a wide-ranging vocabulary used with denotative accuracy and connotative resourcefulness;
- a variety of sentence structures, including appropriate use of subordinate and coordinate constructions;
- a logical organization, enhanced by specific techniques of coherence such as repetition, transitions and emphasis;

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

- a balance of generalization with specific illustrative detail; and
- an effective use of rhetoric, including controlling tone, maintaining a consistent voice, and achieving emphasis through parallelism and antithesis.

The writing required in an AP English Literature and Composition course is thus more than a mere adjunct to the study of literature. The writing that students produce in the course reinforces their reading. Since reading and writing stimulate and support one another, they are taught together in order to underscore both their common and their distinctive elements.

It is important to distinguish among the different kinds of writing produced in an AP English Literature and Composition course. Any college- level course in which serious literature is read and studied includes numerous opportunities for students to write and rewrite. Some of this writing is informal and exploratory, allowing students to discover what they think in the process of writing about their reading. Some of the writing involves research, perhaps negotiating differing critical perspectives. Much writing involves extended discourse in which students develop an argument or present an analysis at length. In addition, some writing assignments should encourage students to write effectively under the time constraints they encounter on essay exams in college courses in many disciplines, including English.

The various AP English Literature and Composition Released Exams and AP Central provide sample student essay responses written under exam conditions —with an average time of 40 minutes for students to write an essay response. These essays were written in response to two different types of questions: (1) an analysis of a passage or poem in which students are required to discuss how particular literary elements or features contribute to meaning; and (2) an “open’’ question in which students are asked to select a literary work and discuss its relevant features in relation to the question provided. Students can be prepared for these free-response questions through exercises analyzing short prose passages and poems and through practicing with “open’’ analytical questions. Such exercises need not always be timed; instead, they can form the basis for extended writing projects.
Because the AP course depends on the development of interpretive skills as students learn to write and read with increasing complexity and sophistication, the AP English Literature and Composition course is intended to be a full-year course. Teachers at schools that offer only a single semester block for AP are encouraged to advise their AP English Literature and Composition students to take an additional semester of advanced English in which they continue to practice the kind of writing and reading emphasized in their AP class.

Mississippi College- and Career- Readiness Standards for English Language Arts

Compensatory English

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

Compensatory English I

.5 or 1 Elective Credit

Students in English I in need of instructional support, intervention, or remediation may be enrolled in the Compensatory English I course under the following stipulations:

The Compensatory course:

1. must be taken in concert with MS CCRS English I;
2. includes content supportive of the accompanying English I course, and;
3. may be taken as an elective, but will not satisfy the number of Carnegie units in English required for graduation.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Compensatory English II

.5 or 1 Elective Credit

Students in English II in need of instructional support, intervention, or remediation may be enrolled in the Compensatory English II course under the following stipulations:

The Compensatory course:

1. must be taken in concert with MS CCRS English II;
2. includes content supportive of the accompanying English II course, and;
3. may be taken as an elective, but will not satisfy the number of Carnegie units in English required for graduation.

APPENDIX

MISSISSIPPI
DEPARTMENT OF
EDUCATION
Ensuring a bright future for every child

GLOSSARY

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Absolute phrase: A noun phrase with one modifier, often a participial phrase, following the noun headword. An absolute phrase can explain a cause or condition. Ex: *The temperature having dropped suddenly, we decided to build a fire in the fireplace*, or it can add a detail or a point of focus, Ex: *The children rushed out the schoolhouse door, their voices filling the playground with shouts of freedom.*

Adages/proverbs: Short sayings that describe what is perceived to be an important fact or familiar wisdom.

Adjectival: Any structure (word, phrase, or clause) that fills the role of an adjective and functions as an adjective normally does, modifying a noun. Ex: The house on the corner is new.

Adverbial: Any structure (word, phrase, or clause) that functions as a modifier of a verb and fills the role of an adverb. Ex: We drove to the airport to pick up Uncle Louie. *To the airport* is an adverbial prepositional phrase and *to pick up Uncle Louie* is an adverbial infinitive phrase, both modifying the verb *drove*.

Affix: A morpheme or a meaningful part of a word that is attached before or after a root to modify its meaning; a category that includes prefixes, suffixes, and infixes.

Alliteration: The repetition of initial consonant sounds in words such as *Peter Piper picked*.

Allusion: Reference to a mythological, literary, or historical person, place, or thing.

Alternate claim: A statement that supports the same overall concept as the original claim but with a different goal.

Analogy: Comparison of two things to illustrate common aspects.

Anecdote: A short and interesting story or an amusing event delivered to demonstrate a point and make readers or listeners laugh.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Aphorism: A statement of some general principle expressed memorably by condensing a large amount of wisdom into very few words. Ex: “Give a man a mask and he will tell you the truth” (Wilde).

Argument: A logical way of presenting a belief, conclusion, or stance. Effective arguments are supported by reasoning and evidence.

Audience: A writer’s targeted reader or readers.

Author’s purpose: An author’s main reason for writing. A writer’s purpose may be to entertain, to inform, to persuade, to teach a moral lesson, or to reflect on an experience. An author may have more than one purpose for writing.

Autobiography: A written account of an author’s own life.

Biography: An account of a person’s life written by another person.

Blending: Combining parts of a spoken word into a whole representation of the word. For example, /p/ /oo/ /l/ can be blended together to form the word pool.

Cause and effect: Text structure in which the author presents one or more causes and then describes the resulting effects.

Central message (central idea): The main idea of a fictional text; the central message may be directly stated or implied.

Chronology: Text structure in which the author uses numerical or chronological order to present items or events.

Claim: An arguable statement that a writer asks a reader to accept.

Clause: A word group consisting of a subject and predicate.

Coherence: Continuity of meaning that enables others to make sense of a text.

Collaborative conversations: Opportunities for students to interact with a wide range of their peers to reflect on their own ideas, to reflect on the ideas of others, and to practice using academic language.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Comparative adjectives and adverbs: Adjectives or adverbs used to compare one person, thing, or group with another person, thing, or group.

Comparison and contrast: Text structure in which the author compares and contrasts two or more similar events, topics, or objects.

Concrete words and phrases: Words or phrases used to describe characteristics and/or qualities that can be perceived through the senses.

Conflict: A struggle or clash between opposing characters, forces, or emotions.

Conjunctive adverb: A conjunction with an adverbial emphasis that connects two clauses. Common conjunctive adverbs are *however, therefore, nevertheless, and moreover*. Ex: Chocolate is delicious; however, I try my best to stay away from it.

Connotation: Implicit rather than explicit meaning of a word. It consists of the suggestions, associations, and emotional overtones attached to a word.

Consonant-Vowel-Consonant (CVC) words: An example of a continuum of word type classified according to the level of decoding difficulty. CVC words are easily decodable. Ex: bat, mat, dog, pig.

Context: The language that surrounds a given word or phrase (linguistic context) or the field of meaningful associations that surround a given word or phrase (experiential context).

Conventions: The surface features of writing, including mechanics, usage, and sentence formation.

Coordinating conjunction: Used to show a relationship between words, phrases, or clauses. Ex: 1) The flag was red, white, and blue; 2) Small but strong, Jamie won first place.

Correlative conjunction: Conjunction used to join words, phrases, or clauses. Ex: Either Mary or Tori will cook dinner.

Decoding: Using knowledge of the conventions of spelling-sound relationships and knowledge about pronunciation of irregular words to derive a pronunciation of written words.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Demonstratives: Demonstrative pronouns and demonstrative adjectives modify nouns. Demonstrative adjectives indicate exactly which noun the speaker is referencing and where it is relative to the position of the speaker. Ex: These shoes are uncomfortable. Demonstrative pronouns take the place of a noun phrase. Ex: The bread you are eating is made from wheat. →That is made from wheat.

Denotation: Exact, literal definition of a word independent of any emotional association or secondary meaning.

Dependent clause: A clause that fills a role in a sentence (such as adverbial, adjectival, or nominal) and that cannot stand independently as a sentence. Ex: *He climbed until he was exhausted* (adverbial clause); *I wonder where I put my keys* (nominal clause functioning as a direct object).

Derivational suffix: A type of bound morpheme; a suffix, such as –ity, -ive, and –ly, that can change the part of speech of the root or base word to which it is added.

Description: Text structure that presents a topic, along with the attributes, specifics, or setting information that describes that topic.

Detail: Fact revealed by the author or speaker that supports the attitude or tone in a piece of poetry or prose. In informational texts, details provide information to support the author's main point.

Determiner: A structure-class word that marks or signals a noun; appears as the first word in a noun phrase before the noun and before any modifiers in the phrase. Ex: The telephone is a necessary invention.

Dialect: A distinctive variety of a language spoken by members of an identifiable regional group, nation, etc.

Dialogue: Spoken exchanges between characters in a dramatic or literary work, usually between two or more speakers.

Dictating: The process of writing down what someone else has said; a way for a parent or teacher to record a child's ideas when the writing demands surpass the child's writing skills.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Domain specific vocabulary: Words that are specific to a domain or field of study and key to understanding a new concept within a text. These words are often referred to as Tier Three words.

Drama: The general term for performances in which actors impersonate the actions and speech of fictional or historical characters (or non-human entities) for the entertainment of an audience, either on a stage or by means of a broadcast.

Emergent literacy and emergent reader texts: The skills, knowledge, and attitudes that are developmental precursors to conventional forms of reading and writing; emergent reader texts support the acquisition of these skills.

Euphemism: A mild or indirect word or expression substituted for one considered to be too harsh or blunt when referring to something unpleasant or embarrassing.

Evidence: Supporting information a writer or speaker uses to prove a claim.

Explicit textual evidence: Information that is directly stated in a text.

Exposition: One of the classifications of discourse whose function is to inform, to instruct, or to present ideas and general truths. Exposition presents information, provides explanations and definitions, and compares and contrasts.

Fable: Brief story that teaches a moral or practical lesson about life.

Fantasy: Story employing imaginary characters living in fictional settings where the rules of the real world are altered for effect.

Fiction: Imaginative literary works representing invented rather than actual persons, places, and/or events.

Figurative language: An expression that departs from the accepted literal sense or from the normal order of words; an extension of this definition includes the use of sound for emphasis, including onomatopoeia, alliteration, assonance, and consonance.

Firsthand account: An event or topic based on an author's personal experience. Examples include diaries, autobiographies, and letters.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Firsthand narration: Narration in which the narrator is either involved in or witnesses the events in a story.

Flashback: Scene that interrupts the action of a work to show a previous event.

Fluency: In reading, fluency refers to the ability to read with sufficient speed to support understanding.

Folktale: Short story from the oral tradition that reflects the mores and beliefs of a particular culture.

Formal English: A writing or speaking style characterized by traditional grammatical structure and conservative vocabulary.

Genre: Category used to classify literary and other works by form, technique, or content.

Grammar: The system and structure of a language.

Grapheme: A letter or letter combination that spells a phoneme; can be one, two, three, or four letters in English. (Ex: e, ei, igh, eigh).

Graphic: Pictorial representation of data or ideas using columns, matrices, or other formats.

High frequency words: A small group of words (300-500) that account for a large percentage of the words in print and can be regular or irregular words (i.e., Dolch or Fry). Often, they are referred to as “sight words” since automatic recognition of these words is required for fluent reading.

Idiom: a phrase or expression that differs from the literal meaning of the words. Ex: It’s time to let the cat out of the bag.

Imagery: Multiple words or a continuous phrase that a writer uses to represent persons, objects, actions, feelings, and ideas descriptively by appealing to the senses.

Independent clause: A clause that can stand by itself as a simple sentence, can be combined with one or more independent clauses in a compound sentence, and can serve as the main clause in a complex sentence**.**

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Ex:

The roof leaks.

The roof leaks, and the floor sags.

Whenever it rains, the roof leaks.

Inflection: A type of bound morpheme; a grammatical ending that does not change the part of speech of a word but marks its tense, number, or degree in English (e.g., -s, -ed, -ing).

Inference: Act or process of deriving logical conclusions from premises known or assumed to be true; the conclusions drawn from this process.

Informal discourse: Language characterized by non-technical vocabulary, simple sentence structure, and less formal language.

Informational texts: Nonfiction texts that contain facts and information; also referred to as expository texts.

Introductory elements: Clauses, phrases, and words that appear before the main clause in a sentence.

Irony: Tension that arises from the discrepancy, either between what one says and what one means (verbal irony), between what a character believes and what a reader knows (dramatic irony), or between what occurs and what one expects to occur (situational irony).

Irregular verb: A verb that does not form its past tense and past participle by adding –ed, -d, or –t, as regular verbs do. Ex: sing, sang, sung; go, went, gone.

Literary heritage: Works by authors whose writing influenced and continues to influence the public language, thinking, history, literary culture, and politics of a nation. These works comprise the literary and intellectual capital drawn on by later writers.

Letter sound correspondence (also sound symbol correspondences): The rules and patterns by which letters and letter combinations represent speech sounds.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Literary nonfiction: Text that conveys factual information. The text may or may not employ a narrative structure and characteristics such as dialogue. Additionally, literary nonfiction may also persuade, inform, explain, describe, or amuse.

Main idea: The central thought of a nonfiction text.

Memoir: Type of autobiography that usually focuses on a single time period or historical event.

Metaphor: A thing, idea, or action referred to by a word or expression normally reserved for another thing, idea, or action to suggest a common quality shared between the two. Ex: "All the world's a stage…"

Meter: The measured pattern of rhythmic accents in poems.

Modal auxiliary verb: A verb that combines with another verb to indicate mood or tense. Ex: I will go to the doctor next week.

Mood (a): The form of a verb that indicates the writer's attitude toward a statement as it is made. Ex: I wish I could go.

Mood (b): Atmosphere or predominant emotion in a literary work.

Morphology: The study of the meaningful units in a language and how they are combined in word formation.

Motivation: Circumstance or set of circumstances that prompt a character to act a certain way or that determine the outcome of a situation.

Multi-syllabic words: Words with more than one syllable. The average number of syllables in the words students read should increase steadily throughout the grades.

Myth: Traditional story accepted as history, which serves to explain the worldview of a people, usually in supernatural or imaginative terms.

Mythology: A body of related myths most often regarded as fictional stories containing deeper truths.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Narration: The process of relating a sequence of events.

Narrative: A story about fictional or real events.

Narrator: One who tells, or is assumed to be telling, the story in a given narrative.

Nuance: A subtle difference in meaning, expression, or sound.

Onset-rime: The natural division of a syllable into two parts, the onset coming before the vowel and the rime including the vowel and what follows it (e.g., pl-an, shr-ill).

Opinion piece: Writing in which a personal opinion is expressed about a topic. As grade levels progress, the writer must support a point of view with reasons and/or information.

Opposing claim: A statement that is the opposite of an original claim.

Oxymoron: A figure of speech that combines two usually contradictory terms in a compressed paradox, as in the word *bittersweet* or the phrase *living death*.

Pace: The speed and rhythm at which the events unfold in a story or scene. A variety of devices, such as structure and word choice, are used to control the speed and rhythm of a story or scene, and how quickly the story unfolds depends upon the needs of the story. A story unfolds more quickly during more intense scenes and within short stories or adventure stories**.**

Paradox: A statement or expression so surprisingly self-contradictory as to provoke the reader into seeking another sense or context in which it would be true. Wordsworth's line "the Child is the father of the Man" and Shakespeare's "the truest poetry is the most feigning" are literary examples.

Parallel plots: Correspondences between larger elements of dramatic or narrative works, such as the relation of a subplot, usually involving characters of lesser importance (and often of lower social status), to the main plot.

Parallel structure/Parallelism: Two or more of the same grammatical structures that are coordinated and given equal weight.

Paraphrase: A reader's own version of a writer's essential information.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Participial: A present or past participle together with its subject or complements and/or modifiers. Ex: *Still clutching their pizza in their hands, the kids left the room.*

Participle: The verb forms that appear in verb phrases after the auxiliary verbs *to be*, as in *I was eating* (present participle), and *to have*, as in *I have eaten* (past participle). Participle is also the term used to refer to the present or past participle in its role as an adjectival, as a modifier in a noun phrase. *The band members, wearing their snazzy new uniforms, proudly marched onto the field*.

Personification: Metaphor that gives inanimate objects or abstract ideas human characteristics.

Perspective: Position, stance, or viewpoint from which something is considered or evaluated.

Persuasion (persuasive writing): Form of discourse whose function is to convince an audience or to prove or refute a point of view of an issue.

Phoneme: A speech sound that combines with others in a language system to make words; English has 40 to 44 phonemes, according to various linguists.

Phoneme isolation: Recognizing individual sounds in a word (e.g., /p/ is the first sound in the word *pan*).

Phonemic awareness: The ability to notice, think about, or manipulate the individual phonemes (sounds) in words. It is the ability to understand that sounds in spoken language work together to make words. This term is used to refer to the highest level of phonological awareness: awareness of individual phonemes in words.

Phonetic spelling: The process of listening for each sound in a word and representing each sound with a letter or combination of letters.

Phonics: The study of the relationships between letters and the sounds they represent; the term is also used as a descriptor for code-based instruction in reading.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Phonological awareness: One's sensitivity to, or explicit awareness of, the phonological structure of words in one's language. This is an "umbrella" term that is used to refer to a student's sensitivity to any aspect of phonological structure in language. It encompasses awareness of individual words in sentences, syllables, and onset-rime segments as well as awareness of individual phonemes.

Plagiarism: The theft of ideas (such as the plots of narrative or dramatic works) or of written passages or works, where these are passed off as one's own work without acknowledgement of their true origin. Plagiarism is not easily separable from imitation, adaptation, or pastiche, but is usually distinguished by its dishonest intention.

Plot: Sequence of events or actions in a short story, novel, or narrative poem.

Point of View: Perspective or vantage point from which a literary work is told or the way in which the author reveals characters, actions, and ideas.

Precise language: Vivid, descriptive words that describe a topic.

Prefix: A morpheme that precedes a root and that contributes to or modifies the meaning of a word.

Problem/Solution: Text structure in which the main ideas are organized into two parts: a problem and a subsequent solution that responds to the problem, or a question and an answer that responds to the question.

Procedural text: Text that conveys information in the form of directions for accomplishing a task. A distinguishing characteristic of this text type is that it is composed of discrete steps to be performed in a strict sequence with an implicit end product or goal.

Progressive verb form: A verb form that indicates a continuing action or one that was in progress when something else occurred; consists of some form of the auxiliary verb *be* followed by a verb with *ing* on the end.

Prompting: Questions posed during reading to check for understanding.

Prose: A form of language that has no formal metrical structure. It applies a natural flow of speech rather than rhythmic structure.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Pronoun-antecedent agreement: Correspondence in gender and number between a pronoun and the word or word group to which a pronoun refers.

Purpose: Specific reason or reasons for writing. Purpose conveys what the readers have to gain by reading the selection; it is also the objective or the goal that the writer wishes to establish.

Rate: The speed at which a person reads.

Reason: The logical support behind an argument.

Relative adverbs: Adverbs that introduce relative clauses. The most common relative adverbs are where, when, and why.

Relative clause: A dependent clause that provides more information about a noun.

Relative pronouns: Pronouns that introduce relative clauses. The most common relative pronouns are who, whom, whose, which, and that.

Regular verb: A verb that forms its past tense and participle by the addition of –d or –ed to the present tense form.

Retelling: Recalling the content of what was read or heard.

Repetition: Deliberate use of any element of language more than once: sound, word, phrase, sentence, grammatical pattern, or rhythmical pattern.

Rhetoric: The art of using words to persuade in writing or speaking. Writers frequently use three modes of persuasion: **ethos** (persuasive appeal based on the character and credibility of the writer or speaker) **pathos** (persuasion by an appeal to emotion), and **logos** (persuasion by an appeal to logic).

Rhetorical devices and features: Techniques used by a writer to persuade an audience.

Rhyme: Repetition of sounds in two or more words or phrases that appear close to each other in a poem. *End rhyme* occurs at the end of lines; *internal rhyme* occurs within a line; *Slant rhyme* is approximate rhyme; a *rhyme scheme* is the pattern of end rhymes.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Rhyming words: Sharing identical or at least similar medial and final phonemes in the last syllable. Because English has a writing system with a deep orthography, words can rhyme without sharing similar orthography (e.g. *suite* and *meet*).

Rhythm: Regular recurrence and speed of sound and stresses in a poem or work of prose.

Root: A bound morpheme, usually of Latin origin, that cannot stand alone but is used to form a family of words with related meanings.

Register: A variety of language used in specified kinds of formal and informal situations.

Sarcasm: The use of verbal irony in which a person appears to be praising something but is actually insulting it.

Satire: Prose in which witty language is used to convey insults or scorn.

Scaffolding: Refers to the support that is given to students in order for them to arrive at the correct answer. Scaffolding may be embedded in the features of the instructional design such as starting with simpler skills and building progressively to more difficult skills. The ultimate goal of scaffolding is to lead students to greater independence.

Scene: In a drama, scenes represent actions happening in one place at one time. In narrative works, the term applies to a dramatic method of narration that presents events at roughly the same pace at which they are supposed to occur.

Secondhand account: An event or topic based on an author's research rather than on personal experience.

Segmentation: Breaking down a spoken word into word parts by inserting a pause between each part. Words can be segmented at the word level (in the case of compound words), at the syllable level, at the onset-rime level, and at the phoneme level.

Sensory details: Words or phrases that can be recognized or described through sight, sound, touch, smell, or taste.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Setting: The time and place in which events in a short story, novel, or narrative poem take place.

Sequence: Text structure in which ideas are grouped on the basis of order or time.

Shades of meaning: Small differences in meaning between words that are similar.

Simile: An explicit comparison between two different things, actions, or feelings using the words like or as. Ex: He was as quiet as a mouse.

Soliloquy: A dramatic speech uttered by one character speaking aloud while alone (or under the impression of being alone). The speaker reveals his or her inner thoughts to the audience through either direct address or self-communication.

Sonnet: Fourteen-line lyric poem, usually written in iambic pentameter.

Spatial words: Signal words that emphasize location.

Spelling patterns and generalizations: The generalizing principles and recognizable patterns that aid in learning to spell.

Stage directions: Words in a dramatic script that define an actor's actions, movements, and attitudes.

Standard English: The most widely accepted and understood form of expression in English in the United States.

Stanza: A division of a poem that is composed of two or more lines.

Style: A writer's characteristic manner of employing language.

Subordinating conjunction: A word or phrase used to introduce a subordinate clause.

Suffix: A derivational morpheme (added to a root or base word) that often changes the word's part of speech and modifies its meaning.

Summary: A condensed version of a larger reading in which a writer uses his or her own words to express the main idea and relevant details of the text.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Superlative adjectives or adverbs: Adjectives or adverbs used to compare one person, thing, or group with all others in its class.

Syllable: The unit of pronunciation that is organized around a vowel; it may or may not have consonants before or after the word.

Symbol: Object, person, place, or action that has both a meaning in itself and that stands for something larger than itself, such as a quality, attitude, belief, or value.

Syntax: Arrangement of words and order of grammatical elements in a sentence.

Technical meaning: Words or groups of words that relate to a specific process or activity.

Temporal words and phrases: Signal words or phrases used to refer to time or sequence of events.

Tension: The feeling or experience of the reader or audience as a story unfolds, especially the closer the reader or audience approaches the climax of a story. The feelings and experience can include increased involvement or interest, dread, anticipation, thrill, or uncertainty. An author may create tension through pacing, foreshadowing, actions, word choice, sentence or text structure, dramatic irony, and other techniques and devices.

Text complexity band: Readability levels assigned to determine text difficulty after using a formula to calculate factors such as sentence and word length and frequency of unfamiliar words.

Text features: Additional information about a text, including headings, captions, illustrations, boldface words, graphs, diagrams, and glossaries that help readers comprehend a text.

Textual evidence: Support lifted directly from a text to support inferences, claims, and assertions. Using textual evidence demands that readers engage with the text and share the specific aspects of the text that influence their thinking.

Theme: Central meaning of a literary work. A literary work can have more than one theme.

MISSISSIPPI DEPARTMENT OF EDUCATION
Ensuring a bright future for every child

Third person narration: Narration in which the narrator stands outside the events in a story.

Tone: A writer's or speaker's attitude toward a subject, character, or audience conveyed through the author's choice of words and detail. Tone can be serious, humorous, sarcastic, objective, etc.

Traditional literature: The songs, stories, myths, and proverbs of a people handed down orally before they were written.

Transitional words and phrases: Words and phrases used to create logical links between ideas expressed in writing.

Trait: Distinguishing feature, as of a person's character.

Understatement: A kind of irony that deliberately represents something as being much less that it really is; the opposite of hyperbole or overstatement.

Verse: Any single, long line of a poetry composition. Verse can, however, also refer to a stanza or any other part of a poem.

Voice: Distinctive style or manner of expression of an author or of a character.

Introduction

Mission Statement

The Mississippi Department of Education is dedicated to student success including the improvement of student achievement in mathematics in order to produce citizens who are capable of making complex decisions, solving complex problems, and communicating fluently in a technological society. The *2016 Mississippi College- and Career-Readiness Standards for Mathematics* ("The Standards") provide a consistent, clear understanding of what students are expected to know and be able to do by the end of each grade level and course. The standards are designed to be robust and relevant to the real world, reflecting the knowledge and skills that students need for success in college and careers and to compete in the global economy.

Purpose

In an effort to closely align instruction for students who are progressing toward postsecondary study and the workforce, the *2016 Mississippi College- and Career-Readiness Standards for Mathematics* include grade- and course-specific standards for K-12 mathematics.

The primary purpose of this document is to provide a basis for curriculum development for Grades K-12 mathematics teachers, outlining what students should know and be able to do by the end of each grade level and course. Courses for grades K-12 are based on the *Mississippi College- and Career-Readiness Standards (MS CCRS) for Mathematics*. Mississippi-specific courses that were revised to align with the (*MS CCRS) for Mathematics* include Pre-Calculus (renamed Algebra III) and Calculus.

The Southern Regional Education Board (SREB) Math Ready course is included as a transition to college mathematics courses.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Implementation

The required year for the *2016 Mississippi College- and Career-Readiness Standards for Mathematics* is school year 2016-2017.

Technology

The Mississippi Department of Education (MDE) strongly encourages the use of technology in all mathematics classrooms. Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

The appropriate use of instructional technology is integrated throughout the *2016 Mississippi College- and Career-Readiness Standards for Mathematics.* Teaching strategies at each grade level and in every secondary course incorporate technology in the form of calculators, software, or on-line internet resources. The graphing calculator is an integral part of mathematics courses beginning with Grade 6.

The MDE believes strongly in the Principles and Standards for School Mathematics Technology Principle of the National Council for Teachers of Mathematics (NCTM):

> "Calculators and computers are reshaping the mathematical landscape, and school mathematics should reflect those changes. Students can learn more mathematics more deeply with the appropriate and responsible use of technology. They can make and test conjectures. They can work at higher levels of generalization or abstraction. In the mathematics classrooms envisioned in *Principles and Standards*, every student has access to technology to facilitate his or her mathematics learning. Technology also offers options for students with special needs. Some students may benefit from the more constrained and engaging task situations possible with computers. Students with physical challenges can become much more engaged in mathematics using special technologies. Technology cannot replace the mathematics teacher, nor can it be used as a replacement for basic understandings and intuitions. The teacher must make prudent decisions about when and how to use technology and should ensure that the technology is enhancing students' mathematical thinking."
> (NCTM, 2013, **http://www.nctm.org**.)

College- and Career-Readiness Standards for Mathematics Overview

College- and Career-Readiness Standards for Mathematics

For over a decade, research studies of mathematics education in high-performing countries have pointed to the conclusion that the mathematics curriculum in the United States must become substantially more focused and coherent in order to improve mathematics achievement in this country. To deliver on the promise of common standards, the standards must address the problem of a curriculum that is "a mile wide and an inch deep." These Standards are a substantial answer to that challenge. Aiming for clarity and specificity, these Standards endeavor to follow a design that not only stresses conceptual understanding of key ideas, but also by continually returning to organizing principles such as place value or the laws of arithmetic to structure those ideas.

Understanding Mathematics

These Standards define what students should understand and be able to do in their study of mathematics. Asking a student to understand something means asking a teacher to assess whether the student has understood it. But what does mathematical understanding look like? One hallmark of mathematical understanding is the ability to justify, in a way appropriate to the student's mathematical maturity, why a particular mathematical statement is true or where a mathematical rule comes from. There is a world of difference between a student who can summon a mnemonic device to expand a product such as $(a + b)(x + y)$ and a student who can explain where the mnemonic comes from. The student who can explain the rule understands the mathematics, and may have a better chance to succeed at a less familiar task such as expanding $(a + b + c)(x + y)$. Mathematical understanding and procedural skill are equally important, and both are assessable using mathematical tasks of sufficient richness.

The Standards set grade-specific expectations but do not define the intervention methods or materials necessary to support students who are well below or well above grade-level expectations. It is also beyond the scope of the Standards to define the full range of supports appropriate for English language learners and for students with special needs. At the same time, all students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary for college and/or careers. The Standards should be read as allowing for the widest possible range of students to participate fully from the outset, along with appropriate accommodations to ensure maximum participation of students with special education needs. For example, for students with reading disabilities the use of Braille, screen reader technology, or other assistive devices should be made available. In addition, while writing, these students should have access to a scribe, computer, or speech-to-text technology in their classroom. In a similar vein, speaking and listening should be interpreted broadly to include sign language. No set of grade-specific standards can fully reflect the great variety in abilities, needs, learning rates, and achievement levels of students in any given classroom. However, the Standards do provide clear signposts along the way to the goal of College- and Career-Readiness for all students.

Standards for Mathematical Practice

The Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important "processes and proficiencies" with longstanding importance in mathematics education. The first of these are the NCTM process standards of problem solving, reasoning and proof, communication, representation, and connections. The second are the strands of mathematical proficiency specified in the National Research Council's report *Adding It Up*: adaptive reasoning, strategic competence, conceptual understanding (comprehension of mathematical concepts, operations and relations), procedural fluency (skill in carrying out procedures flexibly, accurately, efficiently and appropriately), and productive disposition (habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one's own efficacy).

1. Make sense of problems and persevere in solving them.

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

2. Reason abstractly and quantitatively.

Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to *decontextualize*—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to *contextualize*, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

3. Construct viable arguments and critique the reasoning of others.

Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

4. Model with mathematics.

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

5. Use appropriate tools strategically.

Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a

website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

6. Attend to precision.

Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

7. Look for and make use of structure.

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see 7 × 8 equals the well-remembered 7 × 5 + 7 × 3, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the 14 as 2 × 7 and the 9 as 2 + 7. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 – 3(x – y)^2$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers x and y.

8. Look for and express regularity in repeated reasoning.

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation $(y – 2)/(x – 1) = 3$. Noticing the regularity in the way terms cancel when expanding $(x – 1)(x + 1)$, $(x – 1)(x^2 + x + 1)$, and $(x – 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

Connecting the Standards for Mathematical Practice to the 2016 Mississippi College- and Career-Readiness Standards for Mathematics

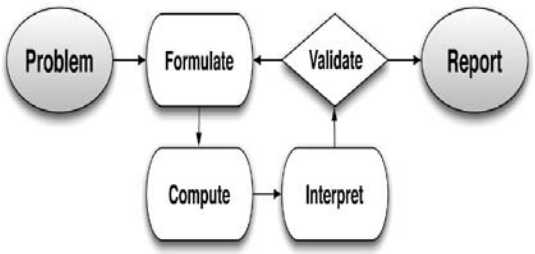
The Standards for Mathematical Practice describe ways in which developing student practitioners of the discipline of mathematics increasingly ought to engage with the subject matter as they grow in mathematical maturity and expertise throughout the elementary, middle and high school years. Designers of curricula, assessments, and professional development should all attend to the need to connect the mathematical practices to the Standards in mathematics instruction.

The Standards are a balanced combination of procedure and understanding. Expectations that begin with the word “understand” are often especially good opportunities to connect the practices to the content. Students who lack understanding of a topic may rely on procedures too heavily. Without a flexible base from which to work, they may be less likely to consider analogous problems, represent problems coherently, justify conclusions, apply the mathematics to practical situations, use technology mindfully to work with the mathematics, explain the mathematics accurately to other students, step back for an overview, or deviate from a known procedure to find a shortcut. In short, a lack of understanding effectively prevents a student from engaging in the mathematical practices.

In this respect, those content standards which set an expectation of understanding are potential “points of intersection” between the Standards for Mathematical Content and the Standards for Mathematical Practice. These points of intersection are intended to be weighted toward central and generative concepts in the school mathematics curriculum that most merit the time, resources, innovative energies, and focus necessary to qualitatively improve the curriculum, instruction, assessment, professional development, and student achievement in mathematics.

Modeling (High School Courses only)

Modeling standards are noted throughout the high school courses with an asterisk (*). *Modeling* links classroom mathematics and statistics to everyday life, work, and decision-making. *Modeling* is the process of choosing and using appropriate mathematics and statistics to analyze empirical situations, to understand them better, and to improve decisions. Quantities and their relationships in physical, economic, public policy, social, and everyday situations can be modeled using mathematical and statistical methods. When making mathematical models, technology is valuable for varying assumptions, exploring consequences, and comparing predictions with data.



Making mathematical models is a Standard for Mathematical Practice, and specific *Modeling* standards appear throughout the high school standards. The basic modeling cycle above involves (1) identifying variables in the situation and selecting those that represent essential features, (2) formulating a model by creating and selecting geometric, graphical, tabular, algebraic, or statistical representations that describe relationships between the variables, (3) analyzing and performing operations on these relationships to draw conclusions, (4) interpreting the results of the mathematics in terms of the original situation, (5) validating the conclusions by comparing them with the situation, and then either improving the model or, if it is acceptable, (6) reporting on the conclusions and the reasoning behind them. Choices, assumptions, and approximations are present throughout this cycle.

College- and Career-Readiness Standards for Mathematics Scaffolding Document

2016 Mississippi College- and Career-Readiness Standards Scaffolding Document

Purpose

The primary purpose of the 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document is located at **http://www.mde.k12.ms.us/ESE/ccr.**

Organization of the 2016 Mississippi College- and Career-Standards Scaffolding Document

The 2016 Mississippi College- and Career-Readiness Standards Scaffolding Document is divided by grade level. Within each grade level, the Scaffolding Document is separated into the mathematical domains **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking** (Grades K-5); **Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions, Geometry**, and **Statistics & Probability**.

Each standard is then broken down into three categories: Prerequisite Knowledge, Conceptual Understanding, and Evidence of Knowledge. The Prerequisite Knowledge column lists the skills that students should have mastered in previous grades in order to work towards mastery of the grade-specific standard. In other words, this column details what a student needs to *KNOW* before mastering the grade-specific standard. The Conceptual Understanding column explains the deeper understanding of concepts—not actions or skills—that are required for mastery of the grade specific standard. In other words, this column explains what a student needs to *UNDERSTAND* before mastering the grade-specific standard. The last column, Evidence of Knowledge, explains what student mastery looks like, including what work a student produces to exhibit mastery of the grade-specific standard. In other words, this column describes what a student needs to *DO* to show mastery of the grade-specific standard.

College- and Career-Readiness Standards for Mathematics (Grades K-5)

Fluency/Fluently Defined

Throughout the *2016 Mississippi College- and Career-Readiness Standards for Mathematics* Grades K-5 standards, the words fluency and fluently will appear in bold, italicized, and underlined font (for example: ***fluently***). With respect to student performance and effective in-class instruction, the expectations for mathematical fluency are explained below:

Fluency is not meant to come at the expense of understanding, but is an outcome of a progression of learning and sufficient thoughtful practice. It is important to provide the conceptual building blocks that develop understanding in tandem with skill along the way to fluency; the roots of this conceptual understanding often extend one or more grades earlier in the standards than the grade when fluency is finally expected.

Wherever the word *fluently* appears in a MS CCR content standard, the word means quickly and accurately. It is important to understand that this is not explicitly tied to assessment purposes, but means more or less the same as when someone is said to be fluent in a foreign language. To be fluent is to flow: Fluent isn't halting, stumbling, or reversing oneself.

A key aspect of fluency in this sense is that it is not something that happens all at once in a single grade but requires attention to student understanding along the way. It is important to ensure that sufficient practice and extra support are provided at each grade to allow all students to meet the standards that call explicitly for fluency.

Grade K

In Kindergarten, instruction should focus on two critical areas: (1) representing, relating, and operating on whole numbers- initially with sets of objects; and (2) describing shapes and space. More learning time in Kindergarten should be devoted to number than to other topics. Each critical area is described below.

(1) Students use numbers, including written numerals, to represent quantities and to solve quantitative problems, such as counting objects in a set; counting out a given number of objects; comparing sets or numerals; and modeling simple joining and separating situations with sets of objects, or eventually with equations such as 5 + 2 = 7 and 7 – 2 = 5. (Kindergarten students should see addition and subtraction equations, and student writing of equations in kindergarten is encouraged, but it is not required.) Students choose, combine, and apply effective strategies for answering quantitative questions, including quickly recognizing the cardinalities of small sets of objects, counting and producing sets of given sizes, counting the number of objects in combined sets, or counting the number of objects that remain in a set after some are taken away.

(2) Students describe their physical world using geometric ideas (e.g., shape, orientation, spatial relations) and vocabulary. They identify, name, and describe basic two-dimensional shapes, such as squares, triangles, circles, rectangles, and hexagons, presented in a variety of ways (e.g., with different sizes and orientations), as well as three-dimensional shapes such as cubes, cones, cylinders, and spheres. They use basic shapes and spatial reasoning to model objects in their environment and to construct more complex shapes.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade K

Counting and Cardinality (CC)	
Know number names and the count sequence	
K.CC.1	Count to 100 by ones and by tens.
K.CC.2	Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
K.CC.3	Write numbers from 0 to 20. Represent a number of objects with a written numeral 0–20 (with 0 representing a count of no objects).
Count to tell the number of objects	
K.CC.4	Understand the relationship between numbers and quantities; connect counting to cardinality. a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object. b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted. c. Understand that each successive number name refers to a quantity that is one larger.
K.CC.5	Count to answer "how many?" questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1–20, count out that many objects.
Compare numbers	
K.CC.6	Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.[1]
K.CC.7	Compare two numbers between 1 and 20 presented as written numerals.
Operations and Algebraic Thinking (OA)	
Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from	
K.OA.1	Represent addition and subtraction*, in which all parts and whole of the problem are within 10,* with objects, fingers, mental images, drawings[2], sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.
K.OA.2	Solve addition and subtraction word problems *within 10 involving situations of adding to, taking from, putting together and taking apart with unknowns in all positions* by using objects or drawings to represent the problem.
K.OA.3	Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by using objects or drawings, and record each decomposition by a drawing or equation (e.g., 5 = 2 + 3 and 5 = 4 + 1).

Grade K

K.OA.4	For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation.
K.OA.5	***Fluently*** add and subtract within 5.
Number and Operations in Base Ten (NBT)	
Work with numbers 11-19 to gain foundations for place value	
K.NBT.1	Compose and decompose numbers from 11 to 19 into ten ones and some further ones to understand that these numbers are composed of ten ones and one, two, three, four, five, six, seven, eight, or nine ones, e.g., by using objects or drawings, and record each composition or decomposition by a drawing or equation (e.g., 18 = 10 + 8).
Measurement and Data (MD)	
Describe and compare measurable attributes	
K.MD.1	Describe measurable attributes of objects, such as length or weight. Describe several measurable attributes of a single object.
K.MD.2	Directly compare two objects with a measurable attribute in common, to see which object has "more of"/"less of" the attribute, and describe the difference. *For example, directly compare the heights of two children and describe one child as taller/shorter.*
Classify objects and count the number of objects in each category	
K.MD.3	Classify objects into given categories; count the numbers of objects in each category and sort the categories by count.[3]
Geometry (G)	
Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres)	
K.G.1	Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as *above, below, beside, in front of, behind*, and *next to.*
K.G.2	Correctly name shapes regardless of their orientations or overall size.
K.G.3	Identify shapes as two-dimensional (lying in a plane, "flat") or three-dimensional ("solid").
Analyze, compare, create, and compose shapes	
K.G.4	Analyze and compare two- and three-dimensional shapes, in different sizes and orientations, using informal language to describe their similarities, differences, parts (e.g., number of sides and vertices/"corners") and other attributes (e.g., having sides of equal length).

Grade K

K.G.5	Model objects in the world by drawing two-dimensional shapes and building three-dimensional shapes.
K.G.6	Compose simple shapes to form larger shapes. *For example, "Can you join these two triangles with full sides touching to make a rectangle?"*

[1] Include groups with up to ten objects.

[2] Drawings need not show details, but should show the mathematics in the problem. (This applies wherever drawings are mentioned in the Standards.)

[3] Limit category counts to be less than or equal to 10.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 1

In Grade 1, instruction should focus on four critical areas: (1) developing understanding of addition, subtraction, and strategies for addition and subtraction within 20; (2) developing understanding of whole number relationships and place value, including grouping in tens and ones; (3) developing understanding of linear measurement and measuring lengths as iterating length units; and (4) reasoning about attributes of, and composing and decomposing geometric shapes. Each critical area is described below.

(1) Students develop strategies for adding and subtracting whole numbers based on their prior work with small numbers. They use a variety of models, including discrete objects and length-based models (e.g., cubes connected to form lengths), to model add-to, take-from, put-together, take-apart, and compare situations to develop meaning for the operations of addition and subtraction, and to develop strategies to solve arithmetic problems with these operations. Students understand connections between counting and addition and subtraction (e.g., adding two is the same as counting on two). They use properties of addition to add whole numbers and to create and use increasingly sophisticated strategies based on these properties (e.g., "making tens") to solve addition and subtraction problems within 20. By comparing a variety of solution strategies, children build their understanding of the relationship between addition and subtraction.

(2) Students develop, discuss, and use efficient, accurate, and generalizable methods to add within 100 and subtract multiples of 10. They compare whole numbers (at least to 100) to develop understanding of and solve problems involving their relative sizes. They think of whole numbers between 10 and 100 in terms of tens and ones (especially recognizing the numbers 11 to 19 as composed of a ten and some ones). Through activities that build number sense, they understand the order of the counting numbers and their relative magnitudes.

(3) Students develop an understanding of the meaning and processes of measurement, including underlying concepts such as iterating (the mental activity of building up the length of an object with equal-sized units) and the transitivity principle for indirect measurement.[1]

(4) Students compose and decompose plane or solid figures (e.g., put two triangles together to make a quadrilateral) and build understanding of part-whole relationships as well as the properties of the original and composite shapes. As they combine shapes, they recognize them from different perspectives and orientations, describe their geometric attributes, and determine how they are alike and different, to develop the background for measurement and for initial understandings of properties such as congruence and symmetry.

Grade 1 (continued)

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

[1] Students should apply the principle of transitivity of measurement to make indirect comparisons, but they need not use this technical term.

Grade 1

Operations and Algebraic Thinking (OA)	
Represent and solve problems involving addition and subtraction	
1.OA.1	Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.[2]
1.OA.2	Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.
Understand and apply properties of operations and the relationship between addition and subtraction	
1.OA.3	Apply properties of operations as strategies to add and subtract.[3] *Examples: If 8 + 3 = 11 is known, then 3 + 8 = 11 is also known. (Commutative property of addition.) To add 2 + 6 + 4, the second two numbers can be added to make a ten, so 2 + 6 + 4 = 2 + 10 = 12. (Associative property of addition.)*
1.OA.4	Understand subtraction as an unknown-addend problem. *For example, subtract 10 – 8 by finding the number that makes 10 when added to 8.*
Add and subtract within 20	
1.OA.5	Relate counting to addition and subtraction (e.g., by counting on 2 to add 2).
1.OA.6	Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., 8 + 6 = 8 + 2 + 4 = 10 + 4 = 14); decomposing a number leading to a ten (e.g., 13 – 4 = 13 – 3 – 1 = 10 – 1 = 9); using the relationship between addition and subtraction (e.g., knowing that 8 + 4 = 12, one knows 12 – 8 = 4); and creating equivalent but easier or known sums (e.g., adding 6 + 7 by creating the known equivalent 6 + 6 + 1 = 12 + 1 = 13).
Work with addition and subtraction equations	
1.OA.7	Understand the meaning of the equal sign, and determine if equations involving addition and subtraction are true or false. *For example, which of the following equations are true and which are false? 6 = 6, 7 = 8 – 1, 5 + 2 = 2 + 5, 4 + 1 = 5 + 2.*
1.OA.8	Determine the unknown whole number in an addition or subtraction equation relating three whole numbers. *For example, determine the unknown number that makes the equation true in each of the equations 8 + ? = 11, 5 = ☐ – 3, 6 + 6 = ☐.*

Grade 1

Number and Operations in Base Ten (NBT)	
Extend the counting sequence	
1.NBT.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
Understand place value	
1.NBT.2	Understand that the two digits of a two-digit number represent amounts of tens and ones. Understand the following as special cases: a. 10 can be thought of as a bundle of ten ones — called a "ten." b. The numbers from 11 to 19 are composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones. c. The numbers 10, 20, 30, 40, 50, 60, 70, 80, 90 refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones).
1.NBT.3	Compare two two-digit numbers based on meanings of the tens and ones digits, recording the results of comparisons with the symbols >, =, and <.
Use place value understanding and properties of operations to add and subtract	
1.NBT.4	Add within 100, including adding a two-digit number and a one-digit number, and adding a two-digit number and a multiple of 10, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten.
1.NBT.5	Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used.
1.NBT.6	Subtract multiples of 10 in the range 10–90 from multiples of 10 in the range 10–90 (positive or zero differences), using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.
Measurement and Data (MD)	
Measure lengths indirectly and by iterating length units	
1.MD.1	Order three objects by length; compare the lengths of two objects indirectly by using a third object.
1.MD.2	Express the length of an object as a whole number of length units, by laying multiple copies of a shorter object (the length unit) end to end; understand that the length measurement of an object is the number of same-size length units that span it with no gaps or overlaps. *Limit to contexts where the object being measured is spanned by a whole number of length units with no gaps or overlaps*.

Grade 1

Tell and write time with respect to a clock and a calendar	
1.MD.3a	Tell and write time in hours and half-hours using analog and digital clocks.
1.MD.3b	Identify the days of the week, the number of days in a week, and the number of weeks in each month.
Represent and interpret data	
1.MD.4	Organize, represent, and interpret data with up to three categories; ask and answer questions about the total number of data points, how many in each category, and how many more or less are in one category than in another.
Work with money	
1.MD.5a	Identify the value of all U.S. coins (penny, nickel, dime, quarter, half-dollar, and dollar coins). Use appropriate cent and dollar notation (e.g., 25¢, $1).
1.MD.5b	Know the comparative values of all U.S. coins (e.g., a dime is of greater value than a nickel).
1.MD.5c	Count like U.S. coins up to the equivalent of a dollar.
1.MD.5d	Find the equivalent value for all greater value U.S. coins using like value smaller coins (e.g., 5 pennies equal 1 nickel; 10 pennies equal dime, but not 1 nickel and 5 pennies equal 1 dime).
Geometry (G)	
Reason with shapes and their attributes	
1.G.1	Distinguish between defining attributes (e.g., triangles are closed and three-sided) versus non-defining attributes (e.g., color, orientation, overall size); build and draw shapes to possess defining attributes.
1.G.2	Compose two-dimensional shapes (rectangles, squares, trapezoids, triangles, half-circles, and quarter-circles) or three-dimensional shapes (cubes, right rectangular prisms, right circular cones, and right circular cylinders) to create a composite shape, and compose new shapes from the composite shape.[4]
1.G.3	Partition circles and rectangles into two and four equal shares, describe the shares using the words *halves, fourths*, and *quarters*, and use the phrases *half of, fourth of*, and *quarter of*. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing into more equal shares creates smaller shares.

[2] See Glossary, Table 1.

[3] Students need not use formal terms for these properties.

[4] Students do not need to learn formal names such as “right rectangular prism.”

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 2

In Grade 2, instruction should focus on four critical areas: (1) extending understanding of base-ten notation; (2) building fluency with addition and subtraction; (3) using standard units of measure; and (4) describing and analyzing shapes. Each critical area is described below.

(1) Students extend their understanding of the base-ten system. This includes ideas of counting in fives, tens, and multiples of hundreds, tens, and ones, as well as number relationships involving these units, including comparing. Students understand multi-digit numbers (up to 1000) written in base-ten notation, recognizing that the digits in each place represent amounts of thousands, hundreds, tens, or ones (e.g., 853 is 8 hundreds + 5 tens + 3 ones).

(2) Students use their understanding of addition to develop fluency with addition and subtraction within 100. They solve problems within 1000 by applying their understanding of models for addition and subtraction, and they develop, discuss, and use efficient, accurate, and generalizable methods to compute sums and differences of whole numbers in base-ten notation, using their understanding of place value and the properties of operations. They select and accurately apply methods that are appropriate for the context and the numbers involved to mentally calculate sums and differences for numbers with only tens or only hundreds.

(3) Students recognize the need for standard units of measure (centimeter and inch) and they use rulers and other measurement tools with the understanding that linear measure involves an iteration of units. They recognize that the smaller the unit, the more iterations they need to cover a given length.

(4) Students describe and analyze shapes by examining their sides and angles. Students investigate, describe, and reason about decomposing and combining shapes to make other shapes. Through building, drawing, and analyzing two- and three-dimensional shapes, students develop a foundation for understanding area, volume, congruence, similarity, and symmetry in later grades.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 2

Operations and Algebraic Thinking (OA)	
Represent and solve problems involving addition and subtraction	
2.OA.1	Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.[1]
Add and subtract within 20	
2.OA.2	Fluently add and subtract within 20 using mental strategies[2]. By end of Grade 2, know from memory all sums of two one-digit numbers.
Work with equal groups of objects to gain foundations for multiplication	
2.OA.3	Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express an even number as a sum of two equal addends.
2.OA.4	Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends.
Number and Operations in Base Ten (NBT)	
Understand place value	
2.NBT.1	Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones; e.g., 706 equals 7 hundreds, 0 tens, and 6 ones. Understand the following as special cases: a. 100 can be thought of as a bundle of ten tens — called a “hundred.” b. The numbers 100, 200, 300, 400, 500, 600, 700, 800, 900 refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones).
2.NBT.2	Count within 1000; skip-count by 5s starting at any number ending in 5 or 0. Skip-count by 10s and 100s starting at any number.
2.NBT.3	Read and write numbers to 1000 using base-ten numerals, number names, and expanded form.
2.NBT.4	Compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using >, =, and < symbols to record the results of comparisons.
Use place value understanding and properties of operations to add and subtract	
2.NBT.5	***Fluently*** add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction..
2.NBT.6	Add up to four two-digit numbers using strategies based on place value and properties of operations.

Grade 2

2.NBT.7	Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds.
2.NBT.8	Mentally add 10 or 100 to a given number 100–900, and mentally subtract 10 or 100 from a given number 100–900.
2.NBT.9	Explain why addition and subtraction strategies work, using place value and the properties of operations.[3]

Measurement and Data (MD)

Measure and estimate lengths in standard units	
2.MD.1	Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.
2.MD.2	Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen.
2.MD.3	Estimate lengths using units of inches, feet, centimeters, and meters.
2.MD.4	Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit.
Relate addition and subtraction to length	
2.MD.5	Use addition and subtraction within 100 to solve word problems involving lengths that are given in the same units, e.g., by using drawings (such as drawings of rulers) and equations with a symbol for the unknown number to represent the problem.
2.MD.6	Represent whole numbers as lengths from 0 on a number line diagram with equally spaced points corresponding to the numbers 0, 1, 2, ..., and represent whole-number sums and differences within 100 on a number line diagram.
Work with time with respect to a clock and a calendar, and work with money	
2.MD.7	Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m.
2.MD.8a	Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies, using $ and ¢ symbols appropriately. *Example: If you have 2 dimes and 3 pennies, how many cents do you have?*
2.MD.8b	Fluently use a calendar to answer simple real world problems such as “How many weeks are in a year?” or “James gets a $5 allowance every 2 months, how much money will he have at the end of each year?”
Represent and interpret data	
2.MD.9	Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units.

Grade 2

2.MD.10	Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put-together, take-apart, and compare problems[4] using information presented in a bar graph.

Geometry (G)

	Reason with shapes and their attributes
2.G.1	Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces.[5] Identify triangles, quadrilaterals, pentagons, hexagons, and cubes.
2.G.2	Partition a rectangle into rows and columns of same-size squares and count to find the total number of them.
2.G.3	Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words *halves, thirds, half of, a third of*, etc., and describe the whole as two halves, three thirds, four fourths. Recognize that equal shares of identical wholes need not have the same shape.

[1] See Glossary, Table 1.

[2] See standard 1.OA.6 for a list of mental strategies.

[3] Explanations may be supported by drawings or objects.

[4] See Glossary, Table 1.

[5] Sizes are compared directly or visually, not compared by measuring.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 3

In Grade 3, instruction should focus on four critical areas: (1) developing understanding of multiplication and division and strategies for multiplication and division within 100; (2) developing understanding of fractions, especially unit fractions (fractions with a numerator of 1); (3) developing understanding of the structure of rectangular arrays and of area; and (4) describing and analyzing two-dimensional shapes. Each critical area is described below.

(1) Students develop an understanding of the meanings of multiplication and division of whole numbers through activities and problems involving equal-sized groups, arrays, and area models; multiplication is finding an unknown product, and division is finding an unknown factor in these situations. For equal-sized group situations, division can require finding the unknown number of groups or the unknown group size. Students use properties of operations to calculate products of whole numbers, using increasingly sophisticated strategies based on these properties to solve multiplication and division problems involving single-digit factors. By comparing a variety of solution strategies, students learn the relationship between multiplication and division.

(2) Students develop an understanding of fractions, beginning with unit fractions. Students view fractions in general as being built out of unit fractions, and they use fractions along with visual fraction models to represent parts of a whole. Students understand that the size of a fractional part is relative to the size of the whole. For example, 1/2 of the paint in a small bucket could be less paint than 1/3 of the paint in a larger bucket, but 1/3 of a ribbon is longer than 1/5 of the same ribbon because when the ribbon is divided into 3 equal parts, the parts are longer than when the ribbon is divided into 5 equal parts. Students are able to use fractions to represent numbers equal to, less than, and greater than one. They solve problems that involve comparing fractions by using visual fraction models and strategies based on noticing equal numerators or denominators.

(3) Students recognize area as an attribute of two-dimensional regions. They measure the area of a shape by finding the total number of same-size units of area required to cover the shape without gaps or overlaps, a square with sides of unit length being the standard unit for measuring area. Students understand that rectangular arrays can be decomposed into identical rows or into identical columns. By decomposing rectangles into rectangular arrays of squares, students connect area to multiplication, and justify using multiplication to determine the area of a rectangle.

(4) Students describe, analyze, and compare properties of two-dimensional shapes. They compare and classify shapes by their sides and angles, and connect these with definitions of shapes. Students also relate their fraction work to geometry by expressing the area of part of a shape as a unit fraction of the whole.

Grade 3 (continued)

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 3

Operations and Algebraic Thinking (OA)	
Represent and solve problems involving multiplication and division	
3.OA.1	Interpret products of whole numbers, e.g., interpret 5 × 7 as the total number of objects in 5 groups of 7 objects each. *For example, describe a context in which a total number of objects can be expressed as 5 × 7.*
3.OA.2	Interpret whole-number quotients of whole numbers, e.g., interpret 56 ÷ 8 as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. *For example, describe a context in which a number of shares or a number of groups can be expressed as 56 ÷ 8.*
3.OA.3	Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.[1]
3.OA.4	Determine the unknown whole number in a multiplication or division equation relating three whole numbers, with factors 0-10. *For example, determine the unknown number that makes the equation true in each of the equations 8 × ? = 48, 5 = ? ÷ 3, 6 × 6 = ?.*
Understand properties of multiplication and the relationship between multiplication and division	
3.OA.5	Apply properties of operations as strategies to multiply and divide.[2] *Examples: If 6 × 4 = 24 is known, then 4 × 6 = 24 is also known. (Commutative property of multiplication.) 3 × 5 × 2 can be found by 3 × 5 = 15, then 15 × 2 = 30, or by 5 × 2 = 10, then 3 × 10 = 30. (Associative property of multiplication.) Knowing that 8 × 5 = 40 and 8 × 2 = 16, one can find 8 × 7 as 8 × (5 + 2) = (8 × 5) + (8 × 2) = 40 + 16 = 56. (Distributive property.)*
3.OA.6	Understand division as an unknown-factor problem, where a remainder does not exist. For example, find 32 ÷ 8 by finding the number that makes 32 when multiplied by 8 with no remainder
Multiply and divide within 100	
3.OA.7	***Fluently*** multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that 8 × 5 = 40, one knows 40 ÷ 5 = 8) or properties of operations. Know from memory all products of two one-digit numbers; and fully understand the concept when a remainder does not exist under division.
Solve problems involving the four operations, and identify and explain patterns in arithmetic	
3.OA.8	Solve two-step (two operational steps) word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding[3]. Include problems with whole dollar amounts

Grade 3

3.OA.9	Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. *For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.*

Number and Operations in Base Ten (NBT)

Use place value understanding and properties of operations to perform multi-digit arithmetic [4]

3.NBT.1	Use place value understanding to round whole numbers to the nearest 10 or 100.
3.NBT.2	Fluently add and subtract (including subtracting across zeros) within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. Include problems with whole dollar amounts.
3.NBT.3	Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g., 9 × 80, 5 × 60) using strategies based on place value and properties of operations.

Number and Operations—Fractions [5] (NF)

Develop understanding of fractions as numbers

3.NF.1	Understand a fraction 1/*b* as the quantity formed by 1 part when a whole is partitioned into *b* equal parts; understand a fraction *a/b* as the quantity formed by *a* parts of size 1/*b*.
3.NF.2	Understand a fraction as a number on the number line; represent fractions on a number line diagram. a. Represent a fraction 1/*b* on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into *b* equal parts. Recognize that each part has size 1/*b* and that the endpoint of the part based at 0 locates the number 1/*b* on the number line. b. Represent a fraction *a/b* on a number line diagram by marking off *a* lengths 1/*b* from 0. Recognize that the resulting interval has size *a/b* and that its endpoint locates the number *a/b* on the number line.
3.NF.3	Explain equivalence of fractions in special cases, and compare fractions by reasoning about their size. a. Understand two fractions as equivalent (equal) if they are the same size, or the same point on a number line. Recognize that comparisons are valid only when the two fractions refer to the same whole. b. Recognize and generate simple equivalent fractions, e.g., 1/2 = 2/4, 4/6 = 2/3. Explain why the fractions are equivalent, e.g., by using a visual fraction model. c. Express whole numbers as fractions, and recognize fractions that are equivalent to whole numbers. *Examples: Express 3 in the form 3 = 3/1; recognize that 6/1 = 6; locate 4/4 and 1 at the same point of a number line diagram.* d. Compare two fractions with the same numerator or the same denominator by reasoning about their size. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with the symbols >, =, or <, and justify the conclusions, e.g., by using a visual fraction model.

Grade 3

Measurement and Data (MD)

Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects	
3.MD.1	Tell and write time to the nearest minute and measure time intervals in minutes. Solve word problems involving addition and subtraction of time intervals in minutes, e.g., by representing the problem on a number line diagram.
3.MD.2	Measure and estimate liquid volumes and masses of objects using standard units of grams (g), kilograms (kg), and liters (l).[6] Add, subtract, multiply, or divide to solve one-step word problems involving masses or volumes that are given in the same units, e.g., by using drawings (such as a beaker with a measurement scale) to represent the problem.[7]
Represent and interpret data	
3.MD.3	Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step "how many more" and "how many less" problems using information presented in scaled bar graphs. *For example, draw a bar graph in which each square in the bar graph might represent 5 pets.*
3.MD.4	Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters.
Geometric measurement: understand concepts of area and relate area to multiplication and to addition	
3.MD.5	Recognize area as an attribute of plane figures and understand concepts of area measurement. a. A square with side length 1 unit, called "a unit square," is said to have "one square unit" of area, and can be used to measure area. b. A plane figure which can be covered without gaps or overlaps by *n* unit squares is said to have an area of *n* square units.
3.MD.6	Measure areas by counting unit squares (square cm, square *m*, square *in*, square *ft*, and improvised units).
3.MD.7	Relate area to the operations of multiplication and addition. a. Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths. b. Multiply side lengths to find areas of rectangles with whole-number side lengths (where factors can be between 1 and 10, inclusively) in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning. c. Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths a and $b + c$ is the sum of $a \times b$ and $a \times c$. Use area models to represent the distributive property in mathematical reasoning. d. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real world problems. Recognize area as additive.

Grade 3

Geometric measurement: recognize perimeter as an attribute of plane figures and distinguish between linear and area measures	
3.MD.8	Solve real world and mathematical problems involving perimeters of polygons, including: finding the perimeter given the side lengths, finding an unknown side length, and exhibiting (including, but not limited to: modeling, drawing, designing, and creating) rectangles with the same perimeter and different areas or with the same area and different perimeters.

Geometry (G)

Reason with shapes and their attributes	
3.G.1	Understand that shapes in different categories (e.g., rhombuses, rectangles, circles, and others) may share attributes (e.g., having four sides), and that the shared attributes can define a larger category (e.g., quadrilaterals). Recognize rhombuses, rectangles, and squares as examples of quadrilaterals, and draw examples of quadrilaterals that do not belong to any of these subcategories.
3.G.2	Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole. *For example, partition a shape into 4 parts with equal area, and describe the area of each part as 1/4 of the area of the shape*.

[1] See Glossary, Table 2.

[2] Students need not use formal terms for these properties.

[3] This standard is limited to problems posed with whole numbers and having whole-number answers; students should know how to perform operations in the conventional order when there are no parentheses to specify a particular order (Order of Operations).

[4] A range of algorithms may be used.

[5] Grade 3 expectations in this domain are limited to fractions with denominators 2, 3, 4, 6, and 8.

[6] Excludes compound units such as cm^3 and finding the geometric volume of a container.

[7] Excludes multiplicative comparison problems (problems involving notions of “times as much”; see Glossary, Table 2).

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 4

In Grade 4, instruction should focus on three critical areas: (1) developing understanding and fluency with multi-digit multiplication, and developing understanding of dividing to find quotients involving multi-digit dividends; (2) developing an understanding of fraction equivalence, addition and subtraction of fractions with like denominators, and multiplication of fractions by whole numbers; and (3) understanding that geometric figures can be analyzed and classified based on their properties, such as having parallel sides, perpendicular sides, particular angle measures, and symmetry. Each critical area is described below.

(1) Students generalize their understanding of place value to 1,000,000, understanding the relative sizes of numbers in each place. They apply their understanding of models for multiplication (equal-sized groups, arrays, and area models), place value, and properties of operations, in particular the distributive property, as they develop, discuss, and use efficient, accurate, and generalizable methods to compute products of multi-digit whole numbers. Depending on the numbers and the context, they select and accurately apply appropriate methods to estimate or mentally calculate products. They develop fluency with efficient procedures for multiplying whole numbers; understand and explain why the procedures work based on place value and properties of operations; and use them to solve problems. Students apply their understanding of models for division, place value, properties of operations, and the relationship of division to multiplication as they develop, discuss, and use efficient, accurate, and generalizable procedures to find quotients involving multi-digit dividends. They select and accurately apply appropriate methods to estimate and mentally calculate quotients, and interpret remainders based upon the context.

(2) Students develop understanding of fraction equivalence and operations with fractions. They recognize that two different fractions can be equal (e.g., 15/9 = 5/3), and they develop methods for generating and recognizing equivalent fractions. Students extend previous understandings about how fractions are built from unit fractions, composing fractions from unit fractions, decomposing fractions into unit fractions, and using the meaning of fractions and the meaning of multiplication to multiply a fraction by a whole number.

(3) Students describe, analyze, compare, and classify two-dimensional shapes. Through building, drawing, and analyzing two-dimensional shapes, students deepen their understanding of properties of two-dimensional objects and the use of them to solve problems involving symmetry.

Grade 4 (continued)

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 4

Operations and Algebraic Thinking (OA)	
Use the four operations with whole numbers to solve problems	
4.OA.1	Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
4.OA.2	Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.[1]
4.OA.3	Solve multistep (two or more operational steps) word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
Gain familiarity with factors and multiples	
4.OA.4	Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.
Generate and analyze patterns	
4.OA.5	Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. *For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.*
Number and Operations in Base Ten [2] (NBT)	
Generalize place value understanding for multi-digit whole numbers	
4.NBT.1	Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. *For example, recognize that 700 ÷ 70 = 10 by applying concepts of place value and division.*
4.NBT.2	Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.
4.NBT.3	Use place value understanding to round multi-digit whole numbers to any place.

Grade 4

Use place value understanding and properties of operations to perform multi-digit arithmetic	
4.NBT.4	***Fluently*** add and subtract (including subtracting across zeros) multi-digit whole numbers using the standard algorithm.
4.NBT.5	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
4.NBT.6	Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Number and Operations—Fractions [3] (NF)	
Extend understanding of fraction equivalence and ordering	
4.NF.1	Recognizing that the value of "n" cannot be 0, explain why a fraction a/b is equivalent to a fraction (n × a)/ (n × b) by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.
4.NF.2	Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as 1/2. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols >, =, or <, and justify the conclusions, e.g., by using a visual fraction model.
Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers	
4.NF.3	Understand a fraction *a/b* with *a* > 1 as a sum of fractions 1/*b*. a. Understand addition and subtraction of fractions as joining and separating parts referring to the same whole. b. Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model (including, but not limited to: concrete models, illustrations, tape diagram, number line, area model, etc.). Examples: 3/8 = 1/8 + 1/8 + 1/8 ; 3/8 = 1/8 + 2/8 ; 2 1/8 = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8. c. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction. d. Solve word problems involving addition and subtraction of fractions referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem.

Grade 4

4.NF.4	Apply and extend previous understandings of multiplication to multiply a fraction by a whole number. a. Understand a fraction *a/b* as a multiple of *1/b*. *For example, use a visual fraction model to represent 5/4 as the product 5 × (1/4), recording the conclusion by the equation 5/4 = 5 × (1/4).* b. Understand a multiple of *a/b* as a multiple of *1/b*, and use this understanding to multiply a fraction by a whole number. *For example, use a visual fraction model to express 3 × (2/5) as 6 × (1/5), recognizing this product as 6/5. (In general, n × (a/b) = (n × a)/b.)* c. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat 3/8 of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers do you expect your answer to lie?
Understand decimal notation for fractions, and compare decimal fractions	
4.NF.5	Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100.[4] *For example, express 3/10 as 30/100, and add 3/10 + 4/100 = 34/100.*
4.NF.6	Use decimal notation for fractions with denominators 10 or 100. *For example, rewrite 0.62 as 62/100; describe a length as 0.62 meters; locate 0.62 on a number line diagram*.
4.NF.7	Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols >, =, or <, and justify the conclusions, e.g., by using a visual model.
Measurement and Data (MD)	
Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit	
4.MD.1	Know relative sizes of measurement units within one system of units including km, m, cm, mm; kg, g, mg; lb, oz.; l, ml; hr, min, sec. Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. For example, know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36),…
4.MD.2	Use the four operations to solve word problems involving • intervals of time • money • distances • liquid volumes • masses of objects including problems *involving simple fractions or decimals*, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.

Grade 4

4.MD.3	Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor*.
Represent and interpret data	
4.MD.4	Make a line plot to display a data set of measurements in fractions of a unit (1/2, 1/4, 1/8). Solve problems involving addition and subtraction of fractions by using information presented in line plots. *For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection.*
Geometric measurement: understand concepts of angle and measure angles	
4.MD.5	Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement: a. An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through 1/360 of a circle is called a "one-degree angle," and can be used to measure angles. b. An angle that turns through *n* one-degree angles is said to have an angle measure of *n* degrees.
4.MD.6	Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.
4.MD.7	Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure. Example: Find the missing angle using an equation. 
Geometry (G)

Draw and identify lines and angles, and classify shapes by properties of their lines and angles	
4.G.1	Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.

Grade 4

4.G.2	Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.
4.G.3	Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry.

[1] See Glossary, Table 2.

[2] Grade 4 expectations in this domain are limited to whole numbers less than or equal l to 1,000,000.

[3] Grade 4 expectations in this domain are limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100.

[4] Students who can generate equivalent fractions can develop strategies for adding fractions with unlike denominators in general. But addition and subtraction with unlike denominators in general is not a requirement at this grade.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 5

In Grade 5, instruction should focus on three critical areas: (1) developing fluency with addition and subtraction of fractions, and developing understanding of the multiplication of fractions and of division of fractions in limited cases (unit fractions divided by whole numbers and whole numbers divided by unit fractions); (2) extending division to 2-digit divisors, integrating decimal fractions into the place value system and developing understanding of operations with decimals to hundredths, and developing fluency with whole number and decimal operations; and (3) developing understanding of volume. Each critical area is described below.

(1) Students apply their understanding of fractions and fraction models to represent the addition and subtraction of fractions with unlike denominators as equivalent calculations with like denominators. They develop fluency in calculating sums and differences of fractions, and make reasonable estimates of them. Students also use the meaning of fractions, of multiplication and division, and the relationship between multiplication and division to understand and explain why the procedures for multiplying and dividing fractions make sense. (Note: this is limited to the case of dividing unit fractions by whole numbers and whole numbers by unit fractions.)

(2) Students develop understanding of why division procedures work based on the meaning of base-ten numerals and properties of operations. They finalize fluency with multi-digit addition, subtraction, multiplication, and division. They apply their understandings of models for decimals, decimal notation, and properties of operations to add and subtract decimals to hundredths. They develop fluency in these computations, and make reasonable estimates of their results. Students use the relationship between decimals and fractions, as well as the relationship between finite decimals and whole numbers (i.e., a finite decimal multiplied by an appropriate power of 10 is a whole number), to understand and explain why the procedures for multiplying and dividing finite decimals make sense. They compute products and quotients of decimals to hundredths efficiently and accurately.

(3) Students recognize volume as an attribute of three-dimensional space. They understand that volume can be measured by finding the total number of same-size units of volume required to fill the space without gaps or overlaps. They understand that a 1-unit by 1-unit by 1-unit cube is the standard unit for measuring volume. They select appropriate units, strategies, and tools for solving problems that involve estimating and measuring volume. They decompose three-dimensional shapes and find volumes of right rectangular prisms by viewing them as decomposed into layers of arrays of cubes. They measure necessary attributes of shapes in order to determine volumes to solve real world and mathematical problems.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations,**

Grade 5 (continued)

Geometry, Statistics & Probability (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 5

Operations and Algebraic Thinking (OA)	
Write and interpret numerical expressions	
5.OA.1	Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.
5.OA.2	Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. *For example, express the calculation "add 8 and 7, then multiply by 2" as 2 × (8 + 7). Recognize that 3 × (18932 + 921) is three times as large as 18932 + 921, without having to calculate the indicated sum or product.*
Analyze patterns and relationships	
5.OA.3	Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. *For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.*
Number and Operations in Base Ten (NBT)	
Understand the place value system	
5.NBT.1	Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left (e.g., *"In the number 3.33, the underlined digit represents 3/10, which is 10 times the amount represented by the digit to its right (3/100) and is 1/10 the amount represented by the digit to its left (3))*.
5.NBT.2	Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.
5.NBT.3	Read, write, and compare decimals to thousandths. a. Read and write decimals to thousandths using base-ten numerals, number names, and expanded form, e.g., 347.392 = 3 × 100 + 4 × 10 + 7 × 1 + 3 × (1/10) + 9 × (1/100) + 2 × (1/1000). b. Compare two decimals to thousandths based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.
5.NBT.4	Use place value understanding to round decimals to any place.
Perform operations with multi-digit whole numbers and with decimals to hundredths	
5.NBT.5	***Fluently*** multiply multi-digit whole numbers using the standard algorithm.
5.NBT.6	Find whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

Grade 5

5.NBT.7	Add, subtract, multiply, and divide decimals to hundredths, using concrete models (to include, but not limited to: base ten blocks, decimal tiles, etc.) or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.
Number and Operations—Fractions (NF)	
Use equivalent fractions as a strategy to add and subtract fractions	
5.NF.1	Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. *For example, 2/3 + 5/4 = 8/12 + 15/12 = 23/12. (In general, a/b + c/d = (ad + bc)/bd.)*
5.NF.2	Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. *For example, recognize an incorrect result 2/5 + 1/2 = 3/7, by observing that 3/7 < 1/2.*
Apply and extend previous understandings of multiplication and division to multiply and divide fractions	
5.NF.3	Interpret a fraction as division of the numerator by the denominator ($a/b = a \div b$). Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. *For example, interpret 3/4 as the result of dividing 3 by 4, noting that 3/4 multiplied by 4 equals 3, and that when 3 wholes are shared equally among 4 people each person has a share of size 3/4. If 9 people want to share a 50-pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?*
5.NF.4	Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction. a. Interpret the product $(a/b) \times q$ as a parts of a partition of q into b equal parts; equivalently, as the result of a sequence of operations $a \times q \div b$. *For example, use a visual fraction model to show (2/3) × 4 = 8/3, and create a story context for this equation. Do the same with (2/3) × (4/5) = 8/15. (In general, (a/b) × (c/d) = ac/bd.)* b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.
5.NF.5	Interpret multiplication as scaling (resizing), by: a. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication. b. Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence $a/b = (n \times a)/(n \times b)$ to the effect of multiplying a/b by 1.
5.NF.6	Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.

Grade 5

5.NF.7	Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions.[1] a. Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. *For example, create a story context for (1/3) ÷ 4, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that (1/3) ÷ 4 = 1/12 because (1/12) × 4 = 1/3*. b. Interpret division of a whole number by a unit fraction, and compute such quotients. *For example, create a story context for 4 ÷ (1/5), and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that 4 ÷ (1/5) = 20 because 20 × (1/5) = 4.* c. Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions, e.g., by using visual fraction models and equations to represent the problem. *For example, how much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?*
Measurement and Data (MD)	
Convert like measurement units within a given measurement system	
5.MD.1	Convert among different-sized standard measurement units within a given measurement system (customary and metric) (e.g., convert 5 cm to 0.05 m), and use these conversions in solving multi-step, real world problems.
Represent and interpret data	
5.MD.2	Make a line plot to display a data set of measurements in fractions of a unit (1/2, 1/4, 1/8). Use operations on fractions for this grade to solve problems involving information presented in line plots. *For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would contain if the total amount in all the beakers were redistributed equally.*
Geometric measurement: understand concepts of volume and relate volume to multiplication and to addition	
5.MD.3	Recognize volume as an attribute of solid figures and understand concepts of volume measurement. a. A cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume. b. A solid figure which can be packed without gaps or overlaps using *n* unit cubes is said to have a volume of *n* cubic units.
5.MD.4	Measure volumes by counting unit cubes, using cubic cm, cubic in, cubic ft, and improvised units.

Grade 5

5.MD.5	Relate volume to the operations of multiplication and addition and solve real world and mathematical problems involving volume. a. Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volumes, e.g., to represent the associative property of multiplication. b. Apply the formulas $V = l \times w \times h$ and $V = b \times h$ for rectangular prisms to find volumes of right rectangular prisms with whole-number edge lengths in the context of solving real world and mathematical problems. c. Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.
Geometry (G)	
Graph points on the coordinate plane to solve real-world and mathematical problems	
5.G.1	Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g., *x*-axis and *x*-coordinate, *y*-axis and *y*-coordinate).
5.G.2	Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.
Classify two-dimensional figures into categories based on their properties	
5.G.3	Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category. *For example, all rectangles have four right angles and squares are rectangles, so all squares have four right angles.*
5.G.4	Classify two-dimensional figures in a hierarchy based on properties.

[1] Students able to multiply fractions in general can develop strategies to divide fractions in general, by reasoning about the relationship between multiplication and division. But division of a fraction by a fraction is not a requirement at this grade.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

College- and Career-Readiness Standards for Mathematics (Grades 6-8)

Grade 6

In Grade 6, instruction should focus on four critical areas: (1) connecting ratio and rate to whole number multiplication and division and using concepts of ratio and rate to solve problems; (2) completing understanding of division of fractions and extending the notion of number to the system of rational numbers, which includes negative numbers; (3) writing, interpreting, and using expressions and equations; and (4) developing understanding of statistical thinking. Each critical area is described below.

(1) Students use reasoning about multiplication and division to solve ratio and rate problems about quantities. By viewing equivalent ratios and rates as deriving from, and extending, pairs of rows (or columns) in the multiplication table, and by analyzing simple drawings that indicate the relative size of quantities, students connect their understanding of multiplication and division with ratios and rates. Thus students expand the scope of problems for which they can use multiplication and division to solve problems, and they connect ratios and fractions. Students solve a wide variety of problems involving ratios and rates.

(2) Students use the meaning of fractions, the meanings of multiplication and division, and the relationship between multiplication and division to understand and explain why the procedures for dividing fractions make sense. Students use these operations to solve problems. Students extend their previous understandings of number and the ordering of numbers to the full system of rational numbers, which includes negative rational numbers, and in particular negative integers. They reason about the order and absolute value of rational numbers and about the location of points in all four quadrants of the coordinate plane.

(3) Students understand the use of variables in mathematical expressions. They write expressions and equations that correspond to given situations, evaluate expressions, and use expressions and formulas to solve problems. Students understand that expressions in different forms can be equivalent, and they use the properties of operations to rewrite expressions in equivalent forms. Students know that the solutions of an equation are the values of the variables that make the equation true. Students use properties of operations and the idea of maintaining the equality of both sides of an equation to solve simple one-step equations. Students construct and analyze tables, such as tables of quantities that are in equivalent ratios, and they use equations (such as $3x = y$) to describe relationships between quantities.

(4) Building on and reinforcing their understanding of number, students begin to develop their ability to think statistically. Students recognize that a data distribution may not have a definite center and that different ways to measure center yield different values. The median measures center in the sense that it is roughly the middle value. The mean measures center in the sense that it is the value that each data point would take on if the total of the data values were redistributed equally, and also in the sense that it is a balance point. Students recognize that a measure of variability (interquartile range or mean absolute deviation) can also be useful for

Grade 6 (continued)

summarizing data because two very different sets of data can have the same mean and median yet be distinguished by their variability. Students learn to describe and summarize numerical data sets, identifying clusters, peaks, gaps, and symmetry, considering the context in which the data were collected.

Students in Grade 6 also build on their work with area in elementary school by reasoning about relationships among shapes to determine area, surface area, and volume. They find areas of right triangles, other triangles, and special quadrilaterals by decomposing these shapes, rearranging or removing pieces, and relating the shapes to rectangles. Using these methods, students discuss, develop, and justify formulas for areas of triangles and parallelograms. Students find areas of polygons and surface areas of prisms and pyramids by decomposing them into pieces whose area they can determine. They reason about right rectangular prisms with fractional side lengths to extend formulas for the volume of a right rectangular prism to fractional side lengths. They prepare for work on scale drawings and constructions in Grade 7 by drawing polygons in the coordinate plane.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 6

Ratios and Proportional Relationships (RP)	
Understand ratio concepts and use ratio reasoning to solve problems	
6.RP.1	Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. *For example, "The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak." "For every vote candidate A received, candidate C received nearly three votes."*
6.RP.2	Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship. *For example, "This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is 3/4 cup of flour for each cup of sugar." "We paid $75 for 15 hamburgers, which is a rate of $5 per hamburger."*[1]
6.RP.3	Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. a. Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios. b. Solve unit rate problems including those involving unit pricing and constant speed. *For example, if it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?* c. Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent. d. Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities.
The Number System (NS)	
Apply and extend previous understandings of multiplication and division to divide fractions by fractions	
6.NS.1	Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. *For example, create a story context for (2/3) ÷ (3/4) and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that (2/3) ÷ (3/4) = 8/9 because 3/4 of 8/9 is 2/3. (In general, (a/b) ÷ (c/d) = ad/bc.) How much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 3/4-cup servings are in 2/3 of a cup of yogurt? How wide is a rectangular strip of land with length 3/4 mi and area 1/2 square mi?*
Compute fluently with multi-digit numbers and find common factors and multiples	
6.NS.2	***Fluently*** divide multi-digit numbers using the standard algorithm.
6.NS.3	***Fluently*** add, subtract, multiply, and divide multi-digit decimals using the standard algorithm for each operation.

Grade 6

6.NS.4	Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor. *For example, express 36 + 8 as 4 (9 + 2).*
Apply and extend previous understandings of numbers to the system of rational numbers	
6.NS.5	Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, credits/debits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation.
6.NS.6	Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates. a. Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., -(-3) = 3, and that 0 is its own opposite. b. Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes. c. Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane.
6.NS.7	Understand ordering and absolute value of rational numbers. a. Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. *For example, interpret –3 > –7 as a statement that –3 is located to the right of –7 on a number line oriented from left to right*. b. Write, interpret, and explain statements of order for rational numbers in real-world contexts. *For example, write –3 ℃ >-7 ℃ to express the fact that –3 ℃ is warmer than -7 ℃*. c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. *For example, for an account balance of –30 dollars, write |–30| = 30 to describe the size of the debt in dollars.* d. Distinguish comparisons of absolute value from statements about order. *For example, recognize that an account balance less than –30 dollars represents a debt greater than 30 dollars.*
6.NS.8	Solve real-world and mathematical problems by graphing points in all four quadrants of the coordinate plane. Include use of coordinates and absolute value to find distances between points with the same first coordinate or the same second coordinate.

Grade 6

6.NS.9	Apply and extend previous understandings of addition and subtraction to add and subtract integers; represent addition and subtraction on a horizontal or vertical number line diagram. a. Describe situations in which opposite quantities combine to make 0. *For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged*. b. Understand $p + q$ as the number located a distance $\|q\|$ from p, in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of integers by describing real-world contexts. c. Understand subtraction of integers as adding the additive inverse, $p – q = p + (–q)$. Show that the distance between two integers on the number line is the absolute value of their difference, and apply this principle in real-world contexts. d. Apply properties of operations as strategies to add and subtract integers.

Expressions and Equations (EE)

Apply and extend previous understandings of arithmetic to algebraic expressions	
6.EE.1	Write and evaluate numerical expressions involving whole-number exponents.
6.EE.2	Write, read, and evaluate expressions in which letters stand for numbers. a. Write expressions that record operations with numbers and with letters standing for numbers. *For example, express the calculation "Subtract y from 5" as 5 – y.* b. Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. *For example, describe the expression 2 (8 + 7) as a product of two factors; view (8 + 7) as both a single entity and a sum of two terms.* c. Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). *For example, use the formulas $V = s^3$ and $A = 6 s^2$ to find the volume and surface area of a cube with sides of length $s = 1/2$.*
6.EE.3	Apply the properties of operations to generate equivalent expressions. *For example, apply the distributive property to the expression 3 (2 + x) to produce the equivalent expression 6 + 3x; apply the distributive property to the expression 24x + 18y to produce the equivalent expression 6 (4x + 3y); apply properties of operations to y + y + y to produce the equivalent expression 3y.*
6.EE.4	Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them). *For example, the expressions y + y + y and 3y are equivalent because they name the same number regardless of which number y stands for*.
Reason about and solve one-variable equations and inequalities	
6.EE.5	Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true.
6.EE.6	Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set.

Grade 6

6.EE.7	Solve real-world and mathematical problems by writing and solving equations of the form $x + p = q$ and $px = q$ for cases in which p, q and x are all nonnegative rational numbers.
6.EE.8	Write an inequality of the form $x > c$ or $x < c$ to represent a constraint or condition in a real-world or mathematical problem. Recognize that inequalities of the form $x > c$ or $x < c$ have infinitely many solutions; represent solutions of such inequalities on number line diagrams.

Represent and analyze quantitative relationships between dependent and independent variables	
6.EE.9	Use variables to represent two quantities in a real-world problem that change in relationship to one another. • Write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, thought of as the independent variable. • Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation. *For example, in a problem involving motion at constant speed, list and graph ordered pairs of distances and times, and write the equation d = 65t to represent the relationship between distance and time.*

Geometry (G)

Solve real-world and mathematical problems involving area, surface area, and volume	
6.G.1	Find the area of right triangles, other triangles, special quadrilaterals, and polygons by composing into rectangles or decomposing into triangles and other shapes; apply these techniques in the context of solving real-world and mathematical problems.
6.G.2	Find the volume of a right rectangular prism with fractional edge lengths by packing it with unit cubes of the appropriate unit fraction edge lengths, and show that the volume is the same as would be found by multiplying the edge lengths of the prism. Apply the formulas $V = lwh$ and $V = bh$ to find volumes of right rectangular prisms with fractional edge lengths in the context of solving real-world and mathematical problems.
6.G.3	Draw polygons in the coordinate plane given coordinates for the vertices; use coordinates to find the length of a side joining points with the same first coordinate or the same second coordinate. Apply these techniques in the context of solving real-world and mathematical problems.
6.G.4	Represent three-dimensional figures using nets made up of rectangles and triangles, and use the nets to find the surface area of these figures. Apply these techniques in the context of solving real-world and mathematical problems.

Statistics and Probability (SP)

Develop understanding of statistical variability	
6.SP.1	Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answers. *For example, "How old am I?" is not a statistical question, but "How old are the students in my school?" is a statistical question because one anticipates variability in students' ages.*
6.SP.2	Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread, and overall shape.
6.SP.3	Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary with a single number.

Grade 6

Summarize and describe distributions	
6.SP.4	Display numerical data in plots on a number line, including dot plots, histograms, and box plots.
6.SP.5	Summarize numerical data sets in relation to their context, such as by: a. Reporting the number of observations. b. Describing the nature of the attribute under investigation, including how it was measured and its units of measurement. c. Giving quantitative measures of center (median and/or mean) and variability (interquartile range), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context in which the data were gathered. d. Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered.

[1] Expectations for unit rates in this grade are limited to non-complex fractions.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 7

In Grade 7, instruction should focus on four critical areas: (1) developing understanding of and applying proportional relationships; (2) developing understanding of operations with rational numbers and working with expressions and linear equations; (3) solving problems involving scale drawings and informal geometric constructions, and working with two- and three-dimensional shapes to solve problems involving area, surface area, and volume; and (4) drawing inferences about populations based on samples. Each critical area is described below.

(1) Students extend their understanding of ratios and develop understanding of proportionality to solve single- and multi-step problems. Students use their understanding of ratios and proportionality to solve a wide variety of percent problems, including those involving discounts, interest, taxes, tips, and percent increase or decrease. Students solve problems about scale drawings by relating corresponding lengths between the objects or by using the fact that relationships of lengths within an object are preserved in similar objects. Students graph proportional relationships and understand the unit rate informally as a measure of the steepness of the related line, called the slope. They distinguish proportional relationships from other relationships.

(2) Students develop a unified understanding of number, recognizing fractions, decimals (that have a finite or a repeating decimal representation), and percents as different representations of rational numbers. Students extend addition, subtraction, multiplication, and division to all rational numbers, maintaining the properties of operations and the relationships between addition and subtraction, and multiplication and division. By applying these properties, and by viewing negative numbers in terms of everyday contexts (e.g., amounts owed or temperatures below zero), students explain and interpret the rules for adding, subtracting, multiplying, and dividing with negative numbers. They use the arithmetic of rational numbers as they formulate expressions and equations in one variable and use these equations to solve problems.

(3) Students continue their work with area from Grade 6, solving problems involving the area and circumference of a circle and surface area of three-dimensional objects. In preparation for work on congruence and similarity in Grade 8 they reason about relationships among two-dimensional figures using scale drawings and informal geometric constructions, and they gain familiarity with the relationships between angles formed by intersecting lines. Students work with three-dimensional figures, relating them to two-dimensional figures by examining cross-sections. They solve real-world and mathematical problems involving area, surface area, and volume of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes and right prisms.

(4) Students build on their previous work with single data distributions to compare two data distributions and address questions about differences between populations. They begin informal work with random sampling to generate data sets and learn about the importance of representative samples for drawing inferences.

Grade 7 (continued)

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 7

Ratios and Proportional Relationships (RP)

Analyze proportional relationships and use them to solve real-world and mathematical problems

7.RP.1	Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. *For example, if a person walks 1/2 mile in each 1/4 hour, compute the unit rate as the complex fraction $^{1/2}/_{1/4}$ miles per hour, equivalently 2 miles per hour.*
7.RP.2	Recognize and represent proportional relationships between quantities. a. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin. b. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships. c. Represent proportional relationships by equations. *For example, if total cost t is proportional to the number n of items purchased at a constant price p, the relationship between the total cost and the number of items can be expressed as t = pn.* d. Explain what a point (*x, y*) on the graph of a proportional relationship means in terms of the situation, with special attention to the points (0, 0) and (1, *r*) where *r* is the unit rate.
7.RP.3	Use proportional relationships to solve multistep ratio and percent problems. *Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.*

The Number System (NS)

Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers

7.NS.1	Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. a. Describe situations in which opposite quantities combine to make 0. *For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged*. b. Understand $p + q$ as the number located a distance $\|q\|$ from p, in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts. c. Understand subtraction of rational numbers as adding the additive inverse, $p – q = p + (–q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts. d. Apply properties of operations as strategies to add and subtract rational numbers.

Grade 7

7.NS.2	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. a. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as (–1)(–1) = 1 and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. b. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts. c. Apply properties of operations as strategies to multiply and divide rational numbers. d. Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.
7.NS.3	Solve real-world and mathematical problems involving the four operations with rational numbers.[1]

Expressions and Equations (EE)

	Use properties of operations to generate equivalent expressions
7.EE.1	Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.
7.EE.2	Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. *For example, a + 0.05a = 1.05a means that "increase by 5%" is the same as "multiply by 1.05."*
	Solve real-life and mathematical problems using numerical and algebraic expressions and equations
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making $25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or $2.50, for a new salary of $27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*
7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. a. Solve word problems leading to equations of the form px + q = r and p(x + q) = r, where p, q, and r are specific rational numbers. Solve equations of these forms ***fluently***. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width? b. Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$, where p, q, and r are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem. *For example: As a salesperson, you are paid $50 per week plus $3 per sale. This week you want your pay to be at least $100. Write an inequality for the number of sales you need to make, and describe the solutions.*

Grade 7

Geometry (G)	
Draw, construct, and describe geometrical figures and describe the relationships between them	
7.G.1	Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.
7.G.2	Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.
7.G.3	Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.
Solve real-life and mathematical problems involving angle measure, area, surface area, and volume	
7.G.4	Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
7.G.5	Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
7.G.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.
Statistics and Probability (SP)	
Use random sampling to draw inferences about a population	
7.SP.1	Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.
7.SP.2	Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. *For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data. Gauge how far off the estimate or prediction might be.*
Draw informal comparative inferences about two populations	
7.SP.3	Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability on either team; on a dot plot, the separation between the two distributions of heights is noticeable.

Grade 7

7.SP.4	Use measures of center and measures of variability (i.e. inter-quartile range) for numerical data from random samples to draw informal comparative inferences about two populations. For example, decide whether the words in a chapter of a seventh-grade science book are generally longer than the words in a chapter of a fourth-grade science book.
Investigate chance processes and develop, use, and, evaluate probability models	
7.SP.5	Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.
7.SP.6	Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. *For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times.*
7.SP.7	Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. *For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.* b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. *For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?*
7.SP.8	Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. b. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event. c. Design and use a simulation to generate frequencies for compound events. *For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?*

[1] Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Grade 8

For Math Grade 8, a one-credit course, instruction should focus on 3 critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; and (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem. Each critical area is described below.

(1) Students use linear equations and systems of linear equations to represent, analyze, and solve a variety of problems. Students recognize equations for proportions ($y/x = m$ or $y = mx$) as special linear equations ($y = mx + b$), understanding that the constant of proportionality (m) is the slope, and the graphs are lines through the origin. They understand that the slope (m) of a line is a constant rate of change, so that if the input or x-coordinate changes by an amount A, the output or y-coordinate changes by the amount $m \cdot A$. Students also use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom). At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and y-intercept) in terms of the situation.

Students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation. Students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line. Students use linear equations, systems of linear equations, linear functions, and their understanding of slope of a line to analyze situations and solve problems.

(2) Students grasp the concept of a function as a rule that assigns to each input exactly one output. They understand that functions describe situations where one quantity determines another. They can translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and they describe how aspects of the function are reflected in the different representations.

(3) Students use ideas about distance and angles, how they behave under translations, rotations, reflections, and dilations, and ideas about congruence and similarity to describe and analyze two-dimensional figures and to solve problems. Students show that the sum of the angles in a triangle is the angle formed by a straight line, and that various configurations of lines give rise to similar triangles because of the angles created when a transversal cuts parallel lines. Students understand the statement of the Pythagorean Theorem and its converse, and can explain why the Pythagorean Theorem holds, for example, by decomposing a square

Grade 8 (continued)

in two different ways. They apply the Pythagorean Theorem to find distances between points on the coordinate plane, to find lengths, and to analyze polygons. Students complete their work on volume by solving problems involving cones, cylinders, and spheres.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Grade 8

The Number System (NS)	
Know that there are numbers that are not rational, and approximate them by rational numbers	
8.NS.1	Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational number.
8.NS.2	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., π^2). *For example, by truncating the decimal expansion of $\sqrt{2}$, show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.*
Expressions and Equations (EE)	
Work with radicals and integer exponents	
8.EE.1	Know and apply the properties of integer exponents to generate equivalent numerical expressions. *For example, $3^2 \times 3^{-5} = 3^{-3} = 1/3^3 = 1/27$.*
8.EE.2	Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$, where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational.
8.EE.3	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. *For example, estimate the population of the United States as 3×10^8 and the population of the world as 7×10^9, and determine that the world population is more than 20 times larger.*
8.EE.4	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology.
Understand the connections between proportional relationships, lines, and linear equations	
8.EE.5	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. *For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed.*
8.EE.6	Use similar triangles to explain why the slope m is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at b.

Grade 8

Analyze and solve linear equations and pairs of simultaneous linear equations	
8.EE.7	Solve linear equations in one variable. a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers). b. Solve linear equations and inequalities with rational number coefficients, including those whose solutions require expanding expressions using the distributive property and collecting like terms.
8.EE.8	Analyze and solve pairs of simultaneous linear equations. a. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. *For example, $3x + 2y = 5$ and $3x + 2y = 6$ have no solution because $3x + 2y$ cannot simultaneously be 5 and 6.* c. Solve real-world and mathematical problems leading to two linear equations in two variables. *For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.*
Functions (F)	
Define, evaluate, and compare functions	
8.F.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. [1]
8.F.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.*
8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. *For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line.*
Use functions to model relationships between quantities	
8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.

Grade 8

8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.
Geometry (G)	
Understand congruence and similarity using physical models, transparencies, or geometry software	
8.G.1	Verify experimentally the properties of rotations, reflections, and translations a. Lines are taken to lines, and line segments to line segments of the same length. b. Angles are taken to angles of the same measure. c. Parallel lines are taken to parallel lines.
8.G.2	Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.
8.G.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.
8.G.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.
8.G.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. *For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.*
Understand and apply the Pythagorean Theorem	
8.G.6	Explain a proof of the Pythagorean Theorem and its converse.
8.G.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.
8.G.8	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.
Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres	
8.G.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.
Statistics and Probability (SP)	
Investigate patterns of association in bivariate data	
8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.

Grade 8

8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.
8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. *For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.*
8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. *For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?*

[1] Function notation is not required in Grade 8.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Acceleration in Middle School

There are some students who are able to move through the mathematics quickly. These students may choose to take high school mathematics beginning in eighth grade or earlier so they can take college-level mathematics in high school. Students who are capable of moving more quickly deserve thoughtful attention, both to ensure that they are challenged and that they are mastering the full range of mathematical content and skills—without omitting critical concepts and topics. Care must be taken to ensure that students master and fully understand all important topics in the mathematics curriculum, and that the continuity of the mathematics learning progression is not disrupted. In particular, the Standards for Mathematical Practice ought to continue to be emphasized in these cases.

To prepare students for high school mathematics in eighth grade, the MDE has developed a well-crafted sequence of **compacted courses**. The term "compacted" means to compress content, which requires a faster pace to complete, as opposed to skipping content. These compacted courses are designed for districts offering the Traditional Pathway (Algebra I – Geometry – Algebra II) high school sequence, and the other for districts using an Integrated Pathway sequence (Integrated Math I – Integrated Math II – Integrated Math III) which is commonly found internationally. A snapshot of the content standards in each Pathway is available on pages 135-136. Both Pathways are based on the idea that content should compact 3 years of content into 2 years, at most. As a result, Grades 7, 8, and 9 were compacted into Grades 7 and 8 (a 3:2 compaction). Whereas, some 8th grade content is addressed in the 7th grade courses, and high school content is addressed in 8th grade.

The Compacted Traditional sequence compacts MS CCRS Grade 7, MS CCRS Grade 8, and high school MS CCRS Algebra I into two years. Upon successful completion of this Pathway, students will be ready for MS CCRS Geometry or MS CCRS Algebra II in high school. The Compacted Integrated sequence compacts MS CCRS Grade 7, MS CCRS Grade 8, and MS CCRS Integrated Mathematics I into two years. At the end of 8th grade, these students will be ready for MS CCRS Integrated Mathematics II in high school. While the MS CCRS Grades K-7 effectively prepare students for algebra I in 8th grade, some standards from 8th grade have been placed in the Compacted Mathematics Grade 7 course to make the Compacted Mathematics Grade 8 courses more manageable- regardless of the Pathway chosen.

1. **Compacted courses should include the same Mississippi College- and Career-Readiness Standards as the non-compacted courses.**

   It is recommended to compact three years of material into two years, rather than compacting two years into one. The rationale is that mathematical concepts are likely to be omitted when trying to squeeze two years of material into one. This is to be avoided, as the standards have been carefully developed to define clear learning progressions through the major mathematical domains. Moreover, the compacted courses should not sacrifice attention to the Mathematical Practices Standard.

Acceleration in Middle School (continued)

2. **Decisions to accelerate students into the Mississippi College- and Career-Readiness Standards for high school mathematics before ninth grade should not be rushed.**

   Placing students into tracks too early should be avoided at all costs. It is not recommended to compact the standards before grade seven. In this document, compaction begins in seventh grade for both the traditional and integrated (international) pathways.

3. **Decisions to accelerate students into high school mathematics before ninth grade should be based on solid evidence of student learning.**

   Research has shown discrepancies in the placement of students into "advanced" classes by race/ethnicity and socioeconomic background. While such decisions to accelerate are almost always a joint decision between the school and the family, serious efforts must be made to consider solid evidence of student learning in order to avoid unwittingly disadvantaging the opportunities of particular groups of students.

4. **A menu of challenging options should be available for students after their third year of mathematics—and all students should be strongly encouraged to take mathematics in all years of high school.**

   Traditionally, students taking high school mathematics in the eighth grade are expected to take a Pre-Calculus or Algebra III course in their junior years and then Calculus in their senior years. This is a good and worthy goal, but it should not be the only option for students. An array of challenging options will keep mathematics relevant for students, and give them a new set of tools for their futures in college and career.

Secondary Sequence Options

Students will progress according to grade level through the sixth grade. Beginning in the seventh grade, students are given course sequence options based on academic progress, teacher recommendation, and parental consent. Below are **suggested** secondary course sequence options:

Suggested Secondary Course Sequence Options for Mathematics

Grade Level	OPTION 1	OPTION 2	OPTION 3
7	Grade 7	Compacted Grade 7	Compacted Grade 7
8	Grade 8	Compacted Grade 8 (with Algebra I) **or** Compacted Grade 8 (with Integrated Math I)	Compacted Grade 8 (with Algebra I) **or** Compacted Grade 8 (with Integrated Math I)
9	Algebra I **or** Integrated Math I	Geometry **or** Integrated Math II	Algebra II **or** Integrated Math II
10	Geometry **or** Integrated Math II	Algebra II **or** Integrated Math III	Geometry **or** Integrated Math III
11	Algebra II **or** Integrated Math III	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course
12	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course

High School Conceptual Categories

The high school standards specify the mathematics that all students should study in order to be college and career ready. Additional mathematics that students might learn in order to take advanced courses are included in the Advanced Mathematics Plus and Algebra III courses.

The high school standards are listed in conceptual categories:

- Number and Quantity
- Algebra
- Functions
- Modeling
- Geometry
- Statistics and Probability

Conceptual categories portray a coherent view of high school mathematics; a student's work with functions, for example, crosses a number of traditional course boundaries, potentially up through and including calculus.

Modeling is best interpreted not as a collection of isolated topics but in relation to other standards. Making mathematical models is a Standard for Mathematical Practice, and specific modeling standards appear throughout the high school standards indicated by an asterisk (*). The asterisk (*) symbol sometimes appears on the heading for a group of standards; in that case, it should be understood to apply to all standards in that group.

High School —Number and Quantity Conceptual Category

Numbers and Number Systems. During the years from kindergarten to eighth grade, students must repeatedly extend their conception of number. At first, "number" means "counting number": 1, 2, 3... Soon after that, 0 is used to represent "none" and the whole numbers are formed by the counting numbers together with zero. The next extension is fractions. At first, fractions are barely numbers and tied strongly to pictorial representations. Yet by the time students understand division of fractions, they have a strong concept of fractions as numbers and have connected them, via their decimal representations, with the base-ten system used to represent the whole numbers. During middle school, fractions are augmented by negative fractions to form the rational numbers. In Grade 8, students extend this system once more, augmenting the rational numbers with the irrational numbers to form the real numbers. In high school, students will be exposed to yet another extension of number, when the real numbers are augmented by the imaginary numbers to form the complex numbers.

With each extension of number, the meanings of addition, subtraction, multiplication, and division are extended. In each new number system—integers, rational numbers, real numbers, and complex numbers—the four operations stay the same in two important ways: They have the commutative, associative, and distributive properties and their new meanings are consistent with their previous meanings.

Extending the properties of whole-number exponents leads to new and productive notation. For example, properties of whole-number exponents suggest that $(5^{1/3})^3$ should be $5^{(1/3)3} = 5^1 = 5$ and that $5^{1/3}$ should be the cube root of 5.

Calculators, spreadsheets, and computer algebra systems can provide ways for students to become better acquainted with these new number systems and their notation. They can be used to generate data for numerical experiments, to help understand the workings of matrix, vector, and complex number algebra, and to experiment with non-integer exponents.

Quantities. In real world problems, the answers are usually not numbers but quantities: numbers with units, which involves measurement. In their work in measurement up through Grade 8, students primarily measure commonly used attributes such as length, area, and volume. In high school, students encounter a wider variety of units in modeling, e.g., acceleration, currency conversions, derived quantities such as person-hours and heating degree days, social science rates such as per-capita income, and rates in everyday life such as points scored per game or batting averages. They also encounter novel situations in which they themselves must conceive the attributes of interest. For example, to find a good measure of overall highway safety, they might propose measures such as fatalities per year, fatalities per year per driver, or fatalities per vehicle-mile traveled. Such a conceptual process is sometimes called quantification. Quantification is important for science, as when surface area suddenly "stands out" as an important variable in evaporation. Quantification is also important for companies, which must conceptualize relevant attributes and create or choose suitable measures for them.

High School—Algebra Conceptual Category

Expressions. An expression is a record of a computation with numbers, symbols that represent numbers, arithmetic operations, exponentiation, and, at more advanced levels, the operation of evaluating a function. Conventions about the use of parentheses and the order of operations assure that each expression is unambiguous. Creating an expression that describes a computation involving a general quantity requires the ability to express the computation in general terms, abstracting from specific instances.

Reading an expression with comprehension involves analysis of its underlying structure. This may suggest a different but equivalent way of writing the expression that exhibits some different aspect of its meaning. For example, $p + 0.05p$ can be interpreted as the addition of a 5% tax to a price p. Rewriting $p + 0.05p$ as $1.05p$ shows that adding a tax is the same as multiplying the price by a constant factor.

Algebraic manipulations are governed by the properties of operations and exponents, and the conventions of algebraic notation. At times, an expression is the result of applying operations to simpler expressions. For example, $p + 0.05p$ is the sum of the simpler expressions p and $0.05p$. Viewing an expression as the result of operation on simpler expressions can sometimes clarify its underlying structure.

A spreadsheet or a computer algebra system (CAS) can be used to experiment with algebraic expressions, perform complicated algebraic manipulations, and understand how algebraic manipulations behave.

Equations and inequalities. An equation is a statement of equality between two expressions, often viewed as a question asking for which values of the variables the expressions on either side are in fact equal. These values are the solutions to the equation. An identity, in contrast, is true for all values of the variables; identities are often developed by rewriting an expression in an equivalent form.

The solutions of an equation in one variable form a set of numbers; the solutions of an equation in two variables form a set of ordered pairs of numbers, which can be plotted in the coordinate plane. Two or more equations and/or inequalities form a system. A solution for such a system must satisfy every equation and inequality in the system.

An equation can often be solved by successively deducing from it one or more simpler equations. For example, one can add the same constant to both sides without changing the solutions, but squaring both sides might lead to extraneous solutions. Strategic competence in solving includes looking ahead for productive manipulations and anticipating the nature and number of solutions.

Some equations have no solutions in a given number system, but have a solution in a larger system. For example, the solution of $x + 1 = 0$ is an integer, not a whole number; the solution of $2x + 1 = 0$ is a rational number, not an integer; the solutions of $x^2 – 2 = 0$ are real numbers, not rational numbers; and the solutions of $x^2 + 2 = 0$ are complex numbers, not real numbers.

High School—Algebra Conceptual Category (continued)

The same solution techniques used to solve equations can be used to rearrange formulas. For example, the formula for the area of a trapezoid, $A = ((b_1+b_2)/2)h$, can be solved for h using the same deductive process. Inequalities can be solved by reasoning about the properties of inequality. Many, but not all, of the properties of equality continue to hold for inequalities and can be useful in solving them.

Connections to Functions and Modeling. Expressions can define functions, and equivalent expressions define the same function. Asking when two functions have the same value for the same input leads to an equation; graphing the two functions allows for finding approximate solutions of the equation. Converting a verbal description to an equation, inequality, or system of these is an essential skill in modeling.

High School—Functions Conceptual Category

Functions describe situations where one quantity determines another. For example, the return on $10,000 invested at an annualized percentage rate of 4.25% is a function of the length of time the money is invested. Because we continually make theories about dependencies between quantities in nature and society, functions are important tools in the construction of mathematical models.

In school mathematics, functions usually have numerical inputs and outputs and are often defined by an algebraic expression. For example, the time in hours it takes for a car to drive 100 miles is a function of the car's speed in miles per hour, v; the rule $T(v) = 100/v$ expresses this relationship algebraically and defines a function whose name is T.

The set of inputs to a function is called its domain. We often infer the domain to be all inputs for which the expression defining a function has a value, or for which the function makes sense in a given context.

A function can be described in various ways, such as by a graph (e.g., the trace of a seismograph); by a verbal rule, as in, "I'll give you a state, you give me the capital city;" by an algebraic expression like $f(x) = a + bx$; or by a recursive rule. The graph of a function is often a useful way of visualizing the relationship of the function models, and manipulating a mathematical expression for a function can throw light on the function's properties.

Functions presented as expressions can model many important phenomena. Two important families of functions characterized by laws of growth are linear functions, which grow at a constant rate, and exponential functions, which grow at a constant percent rate. Linear functions with a constant term of zero describe proportional relationships.

A graphing utility or a computer algebra system can be used to experiment with properties of these functions and their graphs and to build computational models of functions, including recursively defined functions.

Connections to Expressions, Equations, Modeling, and Coordinates. Determining an output value for a particular input involves evaluating an expression; finding inputs that yield a given output involves solving an equation. Questions about when two functions have the same value for the same input lead to equations, whose solutions can be visualized from the intersection of their graphs. Because functions describe relationships between quantities, they are frequently used in modeling. Sometimes functions are defined by a recursive process, which can be displayed effectively using a spreadsheet or other technology.

High School—Modeling Conceptual Category

Modeling links classroom mathematics and statistics to everyday life, work, and decision-making. Modeling is the process of choosing and using appropriate mathematics and statistics to analyze empirical situations, to understand them better, and to improve decisions. Quantities and their relationships in physical, economic, public policy, social, and everyday situations can be modeled using mathematical and statistical methods. When making mathematical models, technology is valuable for varying assumptions, exploring consequences, and comparing predictions with data.

A model can be very simple, such as writing total cost as a product of unit price and number bought, or using a geometric shape to describe a physical object like a coin. Even such simple models involve making choices. It is up to us whether to model a coin as a three-dimensional cylinder, or whether a two-dimensional disk works well enough for our purposes. Other situations—modeling a delivery route, a production schedule, or a comparison of loan amortizations—need more elaborate models that use other tools from the mathematical sciences. Real-world situations are not organized and labeled for analysis; formulating tractable models, representing such models, and analyzing them is appropriately a creative process. Like every such process, this depends on acquired expertise as well as creativity.

Some examples of such situations might include:

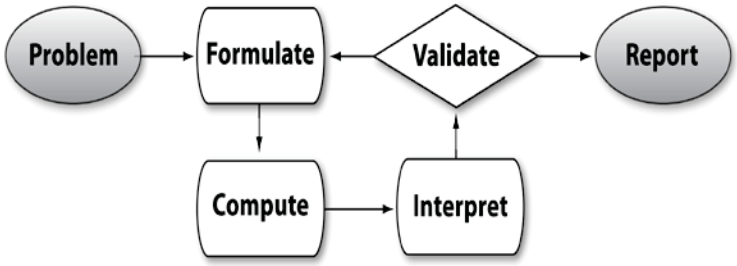
- Estimating how much water and food is needed for emergency relief in a devastated city of 3 million people, and how it might be distributed.
- Planning a table tennis tournament for 7 players at a club with 4 tables, where each player plays against each other player.
- Designing the layout of the stalls in a school fair so as to raise as much money as possible.
- Analyzing stopping distance for a car.
- Modeling savings account balance, bacterial colony growth, or investment growth.
- Engaging in critical path analysis, e.g., applied to turnaround of an aircraft at an airport.
- Analyzing risk in situations such as extreme sports, pandemics, and terrorism.
- Relating population statistics to individual predictions.

In situations like these, the models devised depend on a number of factors: How precise an answer do we want or need? What aspects of the situation do we most need to understand, control, or optimize? What resources of time and tools do we have? The range of models that we can create and analyze is also constrained by the limitations of our mathematical, statistical, and technical skills, and our ability to recognize significant variables and relationships among them. Diagrams of various kinds, spreadsheets and

Modeling Conceptual Category (continued)

other technology, and algebra are powerful tools for understanding and solving problems drawn from different types of real-world situations.

One of the insights provided by mathematical modeling is that essentially the same mathematical or statistical structure can sometimes model seemingly different situations. Models can also shed light on the mathematical structures themselves, for example, as when a model of bacterial growth makes more vivid the explosive growth of the exponential function.



The basic modeling cycle is summarized in the diagram. It involves (1) identifying variables in the situation and selecting those that represent essential features, (2) formulating a model by creating and selecting geometric, graphical, tabular, algebraic, or statistical representations that describe relationships between the variables, (3) analyzing and performing operations on these relationships to draw conclusions, (4) interpreting the results of the mathematics in terms of the original situation, (5) validating the conclusions by comparing them with the situation, and then either improving the model or, if it is acceptable, (6) reporting on the conclusions and the reasoning behind them. Choices, assumptions, and approximations are present throughout this cycle.

In descriptive modeling, a model simply describes the phenomena or summarizes them in a compact form. Graphs of observations are a familiar descriptive model—for example, graphs of global temperature and atmospheric CO_2 over time.

Analytic modeling seeks to explain data on the basis of deeper theoretical ideas, albeit with parameters that are empirically based; for example, exponential growth of bacterial colonies (until cut-off mechanisms such as pollution or starvation intervene) follows from a constant reproduction rate. Functions are an important tool for analyzing such problems. Graphing utilities, spreadsheets, computer algebra systems, and dynamic geometry software are powerful tools that can be used to model purely mathematical phenomena (e.g., the behavior of polynomials) as well as physical phenomena.

Modeling Standards. *Modeling is best interpreted not as a collection of isolated topics but rather in relation to other standards. Making mathematical models is a Standard for Mathematical Practice, and specific modeling standards appear throughout the high school standards indicated by an asterisk (*).*

Geometry Conceptual Category

An understanding of the attributes and relationships of geometric objects can be applied in diverse contexts—interpreting a schematic drawing, estimating the amount of wood needed to frame a sloping roof, rendering computer graphics, or designing a sewing pattern for the most efficient use of material.

Although there are many types of geometry, school mathematics is devoted primarily to plane Euclidean geometry, studied both synthetically (without coordinates) and analytically (with coordinates). Euclidean geometry is characterized most importantly by the Parallel Postulate that through a point not on a given line there is exactly one parallel line. (Spherical geometry, in contrast, has no parallel lines.)

During high school, students begin to formalize their geometry experiences from elementary and middle school, using more precise definitions and developing careful proofs. Later in college some students develop Euclidean and other geometries carefully from a small set of axioms.

The concepts of congruence, similarity, and symmetry can be understood from the perspective of geometric transformation. Fundamental are the rigid motions: translations, rotations, reflections, and combinations of these, all of which are here assumed to preserve distance and angles (and therefore shapes generally). Reflections and rotations each explain a particular type of symmetry, and the symmetries of an object offer insight into its attributes—as when the reflective symmetry of an isosceles triangle assures that its base angles are congruent.

In the approach taken here, two geometric figures are defined to be congruent if there is a sequence of rigid motions that carries one onto the other. This is the principle of superposition. For triangles, congruence means the equality of all corresponding pairs of sides and all corresponding pairs of angles. During the middle grades, through experiences drawing triangles from given conditions, students notice ways to specify enough measures in a triangle to ensure that all triangles drawn with those measures are congruent. Once these triangle congruence criteria (ASA, SAS, and SSS) are established using rigid motions, they can be used to prove theorems about triangles, quadrilaterals, and other geometric figures.

Similarity transformations (rigid motions followed by dilations) define similarity in the same way that rigid motions define congruence, thereby formalizing the similarity ideas of “same shape” and “scale factor” developed in the middle grades. These transformations lead to the criterion for triangle similarity that two pairs of corresponding angles are congruent.
The definitions of sine, cosine, and tangent for acute angles are founded on right triangles and similarity, and, with the Pythagorean Theorem, are fundamental in many real-world and theoretical situations. The Pythagorean Theorem is generalized to non-right triangles by the Law of Cosines. Together, the Laws of Sines and Cosines embody

Geometry Conceptual Category (continued)

the triangle congruence criteria for the cases where three pieces of information suffice to completely solve a triangle. Furthermore, these laws yield two possible solutions in the ambiguous case, illustrating that Side-Side-Angle is not a congruence criterion.

Analytic geometry connects algebra and geometry, resulting in powerful methods of analysis and problem solving. Just as the number line associates numbers with locations in one dimension, a pair of perpendicular axes associates pairs of numbers with locations in two dimensions. This correspondence between numerical coordinates and geometric points allows methods from algebra to be applied to geometry and vice versa. The solution set of an equation becomes a geometric curve, making visualization a tool for doing and understanding algebra. Geometric shapes can be described by equations, making algebraic manipulation into a tool for geometric understanding, modeling, and proof. Geometric transformations of the graphs of equations correspond to algebraic changes in their equations.

Dynamic geometry environments provide students with experimental and modeling tools that allow them to investigate geometric phenomena in much the same way as computer algebra systems allow them to experiment with algebraic phenomena.

Connections to Equations. The correspondence between numerical coordinates and geometric points allows methods from algebra to be applied to geometry and vice versa. The solution set of an equation becomes a geometric curve, making visualization a tool for doing and understanding algebra. Geometric shapes can be described by equations, making algebraic manipulation into a tool for geometric understanding, modeling, and proof.

Statistics and Probability* Conceptual Category

Decisions or predictions are often based on data—numbers in context. These decisions or predictions would be easy if the data always sent a clear message, but the message is often obscured by variability. Statistics provides tools for describing variability in data and for making informed decisions that take it into account.

Data are gathered, displayed, summarized, examined, and interpreted to discover patterns and deviations from patterns. Quantitative data can be described in terms of key characteristics: measures of shape, center, and spread. The shape of a data distribution might be described as symmetric, skewed, flat, or bell shaped, and it might be summarized by a statistic measuring center (such as mean or median) and a statistic measuring spread (such as standard deviation or interquartile range). Different distributions can be compared numerically using these statistics or compared visually using plots. Knowledge of center and spread are not enough to describe a distribution. Which statistics to compare, which plots to use, and what the results of a comparison might mean, depend on the question to be investigated and the real-life actions to be taken.

Randomization has two important uses in drawing statistical conclusions. First, collecting data from a random sample of a population makes it possible to draw valid conclusions about the whole population, taking variability into account. Second, randomly assigning individuals to different treatments allows a fair comparison of the effectiveness of those treatments. A statistically significant outcome is one that is unlikely to be due to chance alone, and this can be evaluated only under the condition of randomness. The conditions under which data are collected are important in drawing conclusions from the data; in critically reviewing uses of statistics in public media and other reports, it is important to consider the study design, how the data were gathered, and the analyses employed as well as the data summaries and the conclusions drawn.

Random processes can be described mathematically by using a probability model: a list or description of the possible outcomes (the sample space), each of which is assigned a probability. In situations such as flipping a coin, rolling a number cube, or drawing a card, it might be reasonable to assume various outcomes are equally likely. In a probability model, sample points represent outcomes and combine to make up events; probabilities of events can be computed by applying the Addition and Multiplication Rules. Interpreting these probabilities relies on an understanding of independence and conditional probability, which can be approached through the analysis of two-way tables. Technology plays an important role in statistics and probability by making it possible to generate plots, regression functions, and correlation coefficients, and to simulate many possible outcomes in a short amount of time.

Connections to Functions and Modeling. Functions may be used to describe data; if the data suggest a linear relationship, the relationship can be modeled with a regression line, and its strength and direction can be expressed through a correlation coefficient.

Compacted Mathematics Grade 7

In Compacted Mathematics Grade 7, a one-credit course, instruction should focus on four critical areas from Grade 7: (1) applying proportional relationships; (2) developing understanding of operations with rational numbers and working with expressions and linear equations; (3) solving problems involving scale drawings and informal geometric constructions, and working with two- and three-dimensional shapes to solve problems involving area, surface area, and volume; and (4) drawing inferences about populations based on samples. Each critical area is described below.

(1) Students extend their understanding of ratios and develop understanding of proportionality to solve single- and multi-step problems. Students use their understanding of ratios and proportionality to solve a wide variety of percent problems, including those involving discounts, interest, taxes, tips, and percent increase or decrease. Students solve problems about scale drawings by relating corresponding lengths between the objects or by using the fact that relationships of lengths within an object are preserved in similar objects. Students graph proportional relationships and understand the unit rate informally as a measure of the steepness of the related line, called the slope. They distinguish proportional relationships from other relationships.

(2) Students develop a unified understanding of number, recognizing fractions, decimals (that have a finite or a repeating decimal representation), and percents as different representations of rational numbers. Students extend addition, subtraction, multiplication, and division to all rational numbers, maintaining the properties of operations and the relationships between addition and subtraction, and multiplication and division. By applying these properties, and by viewing negative numbers in terms of everyday contexts (e.g., amounts owed or temperatures below zero), students explain and interpret the rules for adding, subtracting, multiplying, and dividing with negative numbers. They use the arithmetic of rational numbers as they formulate expressions and equations in one variable and use these equations to solve problems.

(3) Students continue their work with area from Grade 6, solving problems involving the area and circumference of a circle and surface area of three-dimensional objects. In preparation for work on congruence and similarity in Grade 8 they reason about relationships among two-dimensional figures using scale drawings and informal geometric constructions, and they gain familiarity with the relationships between angles formed by intersecting lines. Students work with three-dimensional figures, relating them to two-dimensional figures by examining cross-sections. They solve real-world problems involving area, surface area, and volume of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes and right prisms.

(4) Students build on their previous work with single data distributions to compare two data distributions and address questions about differences between populations. They begin informal work with random sampling to generate data sets and learn about the importance of representative samples for drawing inferences.

Compacted Mathematics Grade 7 (continued)

In Compacted Mathematics Grade 7, instruction should focus on three critical areas from Grade 8: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence. Each critical area is described below.

(1) Students use linear equations and systems of linear equations to represent, analyze, and solve a variety of problems. Students recognize equations for proportions ($y/x = m$ or $y = mx$) as special linear equations ($y = mx + b$), understanding that the constant of proportionality (m) is the slope, and the graphs are lines through the origin. They understand that the slope (m) of a line is a constant rate of change, so that if the input or x-coordinate changes by an amount A, the output or y-coordinate changes by the amount $m \cdot A$. Students also use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom). At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and y-intercept) in terms of the situation.

Students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation. Students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line. Students use linear equations, systems of linear equations, linear functions, and their understanding of slope of a line to analyze situations and solve problems.

(2) Students grasp the concept of a function as a rule that assigns to each input exactly one output. They understand that functions describe situations where one quantity determines another. They can translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and they describe how aspects of the function are reflected in the different representations.

(3) Students use ideas about distance and angles, how they behave under translations, rotations, reflections, and dilations, and ideas about congruence and similarity to describe and analyze two-dimensional figures and to solve problems. Students show that the sum of the angles in a triangle is the angle formed by a straight line, and that various configurations of lines give rise to similar triangles because of the angles created when a transversal cuts parallel lines.

Compacted Mathematics Grade 7 (continued)

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Compacted Mathematics Grade 7

Ratios and Proportional Relationships

Analyze proportional relationships and use them to solve real-world and mathematical problems

7.RP.1	Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. *For example, if a person walks 1/2 mile in each 1/4 hour, compute the unit rate as the complex fraction $^{1/2}/_{1/4}$ miles per hour, equivalently 2 miles per hour.*
7.RP.2	Recognize and represent proportional relationships between quantities. a. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin. b. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships. c. Represent proportional relationships by equations. *For example, if total cost t is proportional to the number n of items purchased at a constant price p, the relationship between the total cost and the number of items can be expressed as t = pn.* d. Explain what a point (*x, y*) on the graph of a proportional relationship means in terms of the situation, with special attention to the points (0, 0) and (1, *r*) where *r* is the unit rate.
7.RP.3	Use proportional relationships to solve multistep ratio and percent problems. *Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.*

The Number System

Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers

7.NS.1	Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. a. Describe situations in which opposite quantities combine to make 0. *For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged*. b. Understand $p + q$ as the number located a distance $\|q\|$ from p, in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts. c. Understand subtraction of rational numbers as adding the additive inverse, $p – q = p + (–q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts. d. Apply properties of operations as strategies to add and subtract rational numbers.

Compacted Mathematics Grade 7

7.NS.2	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. a. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as (–1)(–1) = 1 and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. b. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts. c. Apply properties of operations as strategies to multiply and divide rational numbers. d. Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.
7.NS.3	Solve real-world and mathematical problems involving the four operations with rational numbers.[1]
Know that there are numbers that are not rational, and approximate them by rational numbers	
8.NS.1	Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational number.
8.NS.2	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., π^2). *For example, by truncating the decimal expansion of $\sqrt{2}$, show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.*
Expressions and Equations	
Use properties of operations to generate equivalent expressions	
7.EE.1	Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.
7.EE.2	Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. *For example, a + 0.05a = 1.05a means that "increase by 5%" is the same as "multiply by 1.05."*
Solve real-life and mathematical problems using numerical and algebraic expressions and equations	
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making $25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or $2.50, for a new salary of $27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*

Compacted Mathematics Grade 7

7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. a. Solve word problems leading to equations of the form px + q = r and p(x + q) = r, where p, q, and r are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width? b. Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$, where p, q, and r are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem. *For example: As a salesperson, you are paid $50 per week plus $3 per sale. This week you want your pay to be at least $100. Write an inequality for the number of sales you need to make, and describe the solutions.*
Work with radicals and integer exponents	
8.EE.1	Know and apply the properties of integer exponents to generate equivalent numerical expressions. *For example,* $3^2 \times 3^{-5} = 3^{-3} = 1/3^3 = 1/27$.
8.EE.2	Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$, where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational.
8.EE.3	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. *For example, estimate the population of the United States as* 3×10^8 *and the population of the world as* 7×10^9*, and determine that the world population is more than 20 times larger.*
8.EE.4	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology.
Understand the connections between proportional relationships, lines, and linear equations	
8.EE.5	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. *For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed.*
8.EE.6	Use similar triangles to explain why the slope m is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at b.

Compacted Mathematics Grade 7

Analyze and solve linear equations and pairs of simultaneous linear equations	
8.EE.7	Solve linear equations in one variable. a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers). b. Solve linear equations and inequalities with rational number coefficients, including those whose solutions require expanding expressions using the distributive property and collecting like terms.
Geometry	
Draw, construct, and describe geometrical figures and describe the relationships between them	
7.G.1	Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.
7.G.2	Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.
7.G.3	Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.
Solve real-life and mathematical problems involving angle measure, area, surface area, and volume	
7.G.4	Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
7.G.5	Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
7.G.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.
Understand congruence and similarity using physical models, transparencies, or geometry software	
8.G.1	Verify experimentally the properties of rotations, reflections, and translations a. Lines are taken to lines, and line segments to line segments of the same length. b. Angles are taken to angles of the same measure. c. Parallel lines are taken to parallel lines.

Compacted Mathematics Grade 7

8.G.2	Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.
8.G.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.
8.G.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.
8.G.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. *For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.*
Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres	
8.G.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.
Statistics and Probability	
Use random sampling to draw inferences about a population	
7.SP.1	Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.
7.SP.2	Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. *For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data. Gauge how far off the estimate or prediction might be.*
Draw informal comparative inferences about two populations	
7.SP.3	nformally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability on either team; on a dot plot, the separation between the two distributions of heights is noticeable.
7.SP.4	Use measures of center and measures of variability (i.e. inter-quartile range) for numerical data from random samples to draw informal comparative inferences about two populations. For example, decide whether the words in a chapter of a seventh-grade science book are generally longer than the words in a chapter of a fourth-grade science book.

Compacted Mathematics Grade 7

Investigate chance processes and develop, use, and, evaluate probability models	
7.SP.5	Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.
7.SP.6	Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. *For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times.*
7.SP.7	Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. *For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.* b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. *For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?*
7.SP.8	Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. b. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event. c. Design and use a simulation to generate frequencies for compound events. *For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?*

[1] Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Compacted Mathematics Grade 8 (with Algebra I)

In Compacted Mathematics Grade 8 (with Algebra I), a one-credit course, instruction should focus on three critical areas from Grade 8: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; and (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem. Each critical area is described below.

(1) Students use linear equations and systems of linear equations to represent, analyze, and solve a variety of problems. Students recognize equations for proportions ($y/x = m$ or $y = mx$) as special linear equations ($y = mx + b$), understanding that the constant of proportionality (m) is the slope, and the graphs are lines through the origin. They understand that the slope (m) of a line is a constant rate of change, so that if the input or x-coordinate changes by an amount A, the output or y-coordinate changes by the amount $m \cdot A$. Students also use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom). At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and y-intercept) in terms of the situation.

Students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation. Students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line. Students use linear equations, systems of linear equations, linear functions, and their understanding of slope of a line to analyze situations and solve problems.

(2) Students grasp the concept of a function as a rule that assigns to each input exactly one output. They understand that functions describe situations where one quantity determines another. They can translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and they describe how aspects of the function are reflected in the different representations.

(3) Students use ideas about distance and angles, how they behave under translations, rotations, reflections, and dilations, and ideas about congruence and similarity to describe and analyze two-dimensional figures and to solve problems. Students show that the sum of the angles in a triangle is the angle formed by a straight line, and that various configurations of lines give rise to similar triangles

Compacted Mathematics Grade 8 (with Algebra I) (continued)

because of the angles created when a transversal cuts parallel lines. Students understand the statement of the Pythagorean Theorem and its converse, and can explain why the Pythagorean Theorem holds, for example, by decomposing a square in two different ways. They apply the Pythagorean Theorem to find distances between points on the coordinate plane, to find lengths, and to analyze polygons. Students complete their work on volume by solving problems involving cones, cylinders, and spheres.

In Algebra I, the fundamental purpose of this course is to formalize and extend the mathematics that students learned in the middle grades. Because it is built on the middle grades standards, this is a more ambitious version of Algebra I than has generally been offered. Instruction should focus on five critical areas: (1) analyze and explain the process of solving equations and inequalities: (2) learn function notation and develop the concepts of domain and range; (3) use regression techniques; (4) create quadratic and exponential expressions; and (5) select from among these functions to model phenomena. Each critical area is described below.

(1) By the end of eighth grade, students have learned to solve linear equations in one variable and have applied graphical and algebraic methods to analyze and solve systems of linear equations in two variables. Now, students analyze and explain the process of solving an equation. Students develop fluency writing, interpreting, and translating between various forms of linear equations and inequalities, and using them to solve problems. They master the solution of linear equations and apply related solution techniques and the laws of exponents to the creation and solution of simple exponential equations.

(2) In earlier grades, students define, evaluate, and compare functions, and use them to model relationships between quantities. In this unit, students will learn function notation and develop the concepts of domain and range. They explore many examples of functions, including sequences; they interpret functions given graphically, numerically, symbolically, and verbally, translate between representations, and understand the limitations of various representations. Students build on and informally extend their understanding of integer exponents to consider exponential functions. They compare and contrast linear and exponential functions, distinguishing between additive and multiplicative change. Students explore systems of equations and inequalities, and they find and interpret their solutions. They interpret arithmetic sequences as linear functions and geometric sequences as exponential functions.

Compacted Mathematics Grade 8 (with Algebra I) (Continued)

(3) This area builds upon prior students' prior experiences with data, providing students with more formal means of assessing how a model fits data. Students use regression techniques to describe approximately linear relationships between quantities. They use graphical representations and knowledge of the context to make judgments about the appropriateness of linear models. With linear models, they look at residuals to analyze the goodness of fit.

(4) In this area, students build on their knowledge from unit 2, where they extended the laws of exponents to rational exponents. Students apply this new understanding of number and strengthen their ability to see structure in and create quadratic and exponential expressions. They create and solve equations, inequalities, and systems of equations involving quadratic expressions.

(5) In this area, students consider quadratic functions, comparing the key characteristics of quadratic functions to those of linear and exponential functions. They select from among these functions to model phenomena. Students learn to anticipate the graph of a quadratic function by interpreting various forms of quadratic expressions. In particular, they identify the real solutions of a quadratic equation as the zeros of a related quadratic function. Students expand their experience with functions to include more specialized functions—absolute value, step, and those that are piecewise-defined.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Compacted Mathematics Grade 8 (with Algebra I)

Number and Quantity	
The Real Number System (N-RN)	
Use properties of rational and irrational numbers	
N-RN.3	Explain why: • the sum or product of two rational numbers is rational; • the sum of a rational number and an irrational number is irrational; and • the product of a nonzero rational number and an irrational number is irrational.
Quantities (N-Q)*	
Reason quantitatively and use units to solve problems	
N-Q.1	Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.* [Refer to *Quantities* section of the High School *Number and Quantity* Conceptual Category in the previous pages of this document.]
N-Q.3	Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*
Algebra	
Expressions and Expressions (EE)	
Analyze and solve linear equations and pairs of simultaneous linear equations	
8.EE.8	Analyze and solve pairs of simultaneous linear equations. a. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. *For example, 3x + 2y = 5 and 3x + 2y = 6 have no solution because 3x + 2y cannot simultaneously be 5 and 6.* c. Solve real-world and mathematical problems leading to two linear equations in two variables. *For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.*
Seeing Structure in Expressions (A-SSE)	
Interpret the structure of expressions	
A-SSE.1	Interpret expressions that represent a quantity in terms of its context.* a. Interpret parts of an expression, such as terms, factors, and coefficients. b. Interpret complicated expressions by viewing one or more of their parts as a single entity. *For example, interpret $P(1+r)^n$ as the product of P and a factor not depending on P.*

Compacted Mathematics Grade 8 (with Algebra I)

A-SSE.2	Use the structure of an expression to identify ways to rewrite it. *For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.*
Write expressions in equivalent forms to solve problems	
A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* a. Factor a quadratic expression to reveal the zeros of the function it defines. b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines. c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression 1.15^t can be rewritten as $[1.15^{1/12}]^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*
Arithmetic with Polynomials and Rational Expressions (A-APR)	
Perform arithmetic operations on polynomials	
A-APR.1	Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.
Understand the relationship between zeros and factors of polynomials	
A-APR.3	Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial (limit to 1st- and 2nd-degree polynomials).
Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. *[Note this standard appears in future courses with a slight variation in the standard language.]*
A-CED.3	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. *For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.**
A-CED.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.**
Reasoning with Equations and Inequalities (A-REI)	
Understand solving equations as a process of reasoning and explain the reasoning	

Compacted Mathematics Grade 8 (with Algebra I)

A-REI.1	Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.
Solve equations and inequalities in one variable	
A-REI.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.
A-REI.4	Solve quadratic equations in one variable. a. Use the method of completing the square to transform any quadratic equation in x into an equation of the form $(x – p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form. b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions.
Solve systems of equations	
A-REI.5	Given a system of two equations in two variables, show and explain why the sum of equivalent forms of the equations produces the same solution as the original system.
A-REI.6	Solve systems of linear equations algebraically, exactly, and graphically while focusing on pairs of linear equations in two variables.
Represent and solve equations and inequalities graphically	
A-REI.10	Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations y = f(x) and y = g(x) intersect are the solutions of the equation f(x) = g(x); find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where f(x) and/or g(x) are linear, quadratic, absolute value, and exponential functions. *
A-REI.12	Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.
Functions	
Functions (F)	
Define, evaluate, and compare functions	
8.F.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. [1]
8.F.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.*

Compacted Mathematics Grade 8 (with Algebra I)

8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. *For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line.*
Use functions to model relationships between quantities	
8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.
8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.
Interpreting Functions (F-IF)	
Understand the concept of a function and use function notation	
F-IF.1	Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.
F-IF.2	Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
F-IF.3	Recognize that sequences are functions whose domain is a subset of the integers..
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**
F-IF.5	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. *For example, if the function h(n) gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*

Compacted Mathematics Grade 8 (with Algebra I)

Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* a. Graph functions (linear and quadratic) and show intercepts, maxima, and minima.. b. Graph square root and piecewise-defined functions, including absolute value functions.
F-IF.8	Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function. a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression or steps for calculation from a context.
Build new functions from existing functions	
F-BF.3	Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $kf(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. *Include recognizing even and odd functions from their graphs and algebraic expressions for them.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	
F-LE.1	Distinguish between situations that can be modeled with linear functions and with exponential functions.* a. Prove that linear functions grow by equal differences over equal intervals and that exponential functions grow by equal factors over equal intervals. b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another. c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.
F-LE.2	Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*

Compacted Mathematics Grade 8 (with Algebra I)

Interpret expressions for functions in terms of the situation they model	
F-LE.5	Interpret the parameters in a linear or exponential function in terms of a context.*
Geometry	
Geometry (G)	
Understand and apply the Pythagorean Theorem	
8.G.6	Explain a proof of the Pythagorean Theorem and its converse.
8.G.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.
8.G.8	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.
Statistics and Probability	
Statistics and Probability (SP)	
Investigate patterns of association in bivariate data	
8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.
8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.
8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. *For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.*
8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. *For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?*
Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.1	Represent and analyze data with plots on the real number line (dot plots, histograms, and box plots).*
S-ID.2	Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.*

Compacted Mathematics Grade 8 (with Algebra I)

S-ID.3	Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.5	Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.*
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* b. Informally assess the fit of a function by plotting and analyzing residuals. c. Fit a linear function for a scatter plot that suggests a linear association.
Interpret linear models	
S-ID.7	Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.*
S-ID.8	Compute (using technology) and interpret the correlation coefficient of a linear fit.*
S-ID.9	Distinguish between correlation and causation.*

[1] Function notation is not required at Grade 8

* Modeling Standards (**High School standards only**)

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Compacted Mathematics Grade 8 (with Integrated Math I)

In Compacted Mathematics Grade 8 (with Integrated Math I), a one-credit course, instruction should focus on three critical areas from Grade 8: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; and (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem. Each critical area is described below.

(1) Students use linear equations and systems of linear equations to represent, analyze, and solve a variety of problems. Students recognize equations for proportions ($y/x = m$ or $y = mx$) as special linear equations ($y = mx + b$), understanding that the constant of proportionality (m) is the slope, and the graphs are lines through the origin. They understand that the slope (m) of a line is a constant rate of change, so that if the input or x-coordinate changes by an amount A, the output or y-coordinate changes by the amount $m \cdot A$. Students also use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom). At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and y-intercept) in terms of the situation. Students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation. Students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line. Students use linear equations, systems of linear equations, linear functions, and their understanding of slope of a line to analyze situations and solve problems.

(2) Students grasp the concept of a function as a rule that assigns to each input exactly one output. They understand that functions describe situations where one quantity determines another. They can translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and they describe how aspects of the function are reflected in the different representations.

(3) Students use ideas about distance and angles, how they behave under translations, rotations, reflections, and dilations, and ideas about congruence and similarity to describe and analyze two-dimensional figures and to solve problems. Students show that the sum of the angles in a triangle is the angle formed by a straight line, and that various configurations of lines give rise to similar triangles because of the angles created when a transversal cuts parallel lines. Students

Compacted Mathematics Grade 8 (with Integrated Math I)
(continued)

understand the statement of the Pythagorean Theorem and its converse, and can explain why the Pythagorean Theorem holds, for example, by decomposing a square in two different ways. They apply the Pythagorean Theorem to find distances between points on the coordinate plane, to find lengths, and to analyze polygons. Students complete their work on volume by solving problems involving cones, cylinders, and spheres.

In Integrated Mathematics I, the fundamental purpose of this course is to formalize and extend the mathematics that students learned in the middle grades. The critical areas deepen and extend understanding of linear relationships, in part by contrasting them with exponential phenomena, and in part by applying linear models to data that exhibit a linear trend. Integrated Mathematics I uses properties and theorems involving congruent figures to deepen and extend understanding of geometric knowledge from prior grades. The final unit in the course ties together the algebraic and geometric ideas studied. The Mathematical Practice Standards apply throughout each course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. Each critical area is described below.

(1) By the end of eighth grade students have had a variety of experiences working with expressions and creating equations. In this first unit, students continue this work by using quantities to model and analyze situations, to interpret expressions, and by creating equations to describe situations.

(2) In earlier grades, students define, evaluate, and compare functions, and use them to model relationships between quantities. In this unit, students will learn function notation and develop the concepts of domain and range. They move beyond viewing functions as processes that take inputs and yield outputs and start viewing functions as objects in their own right. They explore many examples of functions, including sequences; they interpret functions given graphically, numerically, symbolically, and verbally, translate between representations, and understand the limitations of various representations. They work with functions given by graphs and tables, keeping in mind that, depending upon the context, these representations are likely to be approximate and incomplete. Their work includes functions that can be described or approximated by formulas as well as those that cannot. When functions describe relationships between quantities arising from a context, students reason with the units in which those quantities are measured. Students build on and informally extend their understanding of integer exponents to consider exponential functions. They compare and contrast linear and exponential functions, distinguishing between additive and multiplicative change. They interpret arithmetic sequences as linear functions and geometric sequences as exponential functions.

Compacted Mathematics Grade 8 (with Integrated Math I)
(continued)

(3) By the end of eighth grade, students have learned to solve linear equations in one variable and have applied graphical and algebraic methods to analyze and solve systems of linear equations in two variables. This unit builds on these earlier experiences by asking students to analyze and explain the process of solving an equation and to justify the process used in solving a system of equations. Students develop fluency writing, interpreting, and translating between various forms of linear equations and inequalities, and using them to solve problems. They master the solution of linear equations and apply related solution techniques and the laws of exponents to the creation and solution of simple exponential equations. Students explore systems of equations and inequalities, and they find and interpret their solutions. All of this work is grounded on understanding quantities and on relationships between them.

(4) This area builds upon prior students' prior experiences with data, providing students with more formal means of assessing how a model fits data. Students use regression techniques to describe approximately linear relationships between quantities. They use graphical representations and knowledge of the context to make judgments about the appropriateness of linear models. With linear models, they look at residuals to analyze the goodness of fit.

(5) In previous grades, students were asked to draw triangles based on given measurements. They also have prior experience with rigid motions: translations, reflections, and rotations and have used these to develop notions about what it means for two objects to be congruent. In this unit, students establish triangle congruence criteria, based on analyses of rigid motions and formal constructions. They solve problems about triangles, quadrilaterals, and other polygons. They apply reasoning to complete geometric constructions and explain why they work.

(6) Building on their work with the Pythagorean Theorem in 8th grade to find distances, students use a rectangular coordinate system to verify geometric relationships, including properties of special triangles and quadrilaterals and slopes of parallel and perpendicular lines.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Compacted Mathematics Grade 8 (with Integrated Math I)

Number and Quantity

Quantities (N-Q)*

Reason quantitatively and use units to solve problems

N-Q.1	Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.*
N-Q.3	Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*

Algebra

Expressions and Expressions (EE)

Analyze and solve linear equations and pairs of simultaneous linear equations

8.EE.8	Analyze and solve pairs of simultaneous linear equations. a. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. *For example, 3x + 2y = 5 and 3x + 2y = 6 have no solution because 3x + 2y cannot simultaneously be 5 and 6.* c. Solve real-world and mathematical problems leading to two linear equations in two variables. *For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.*

Seeing Structure in Expressions (A-SSE)

Interpret the structure of expressions

A-SSE.1	Interpret expressions that represent a quantity in terms of its context.* a. Interpret parts of an expression, such as terms, factors, and coefficients. b. Interpret complicated expressions by viewing one or more of their parts as a single entity. *For example, interpret $P(1+r)^n$ as the product of P and a factor not depending on P.*

Write expressions in equivalent forms to solve problems

A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression 1.15^t can be rewritten as $[1.15^{1/12}]^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

Compacted Mathematics Grade 8 (with Integrated Math I)

Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.* *[Note this standard appears in future courses with a slight variation in the standard language.]*
A-CED.3	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. *For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.**
A-CED.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.**
Reasoning with Equations and Inequalities (A-REI)	
Solve equations and inequalities in one variable	
A-REI.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.
Solve systems of equations	
A-REI.5	Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.
A-REI.6	Solve systems of linear equations algebraically, exactly, and graphically while focusing on pairs of linear equations in two variables.
Represent and solve equations and inequalities graphically	
A-REI.10	Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, quadratic, absolute value, and exponential functions.*
A-REI.12	Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.

Compacted Mathematics Grade 8 (with Integrated Math I)

Functions	
Functions (F)	
Define, evaluate, and compare functions	
8.F.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. [1]
8.F.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.*
8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. *For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line.*
Use functions to model relationships between quantities	
8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.
8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.
Interpreting Functions (F-IF)	
Understand the concept of a function and use function notation	
F-IF.1	Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.
F-IF.2	Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
F-IF.3	Recognize that sequences are functions whose domain is a subset of the integers.

Compacted Mathematics Grade 8 (with Integrated Math I)

Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**
F-IF.5	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. *For example, if the function h(n) gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* a. Graph functions (linear and quadratic) and show intercepts, maxima, and minima.
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression or steps for calculation from a context.
F-BF.2	Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	
F-LE.1	Distinguish between situations that can be modeled with linear functions and with exponential functions.* a. Prove that linear functions grow by equal differences over equal intervals and that exponential functions grow by equal factors over equal intervals. b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another. c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

Compacted Mathematics Grade 8 (with Integrated Math I)

F-LE.2	Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*
Interpret expressions for functions in terms of the situation they model	
F-LE.5	Interpret the parameters in a linear or exponential function in terms of a context.*
Geometry	
Geometry (G)	
Understand and apply the Pythagorean Theorem	
8.G.6	Explain a proof of the Pythagorean Theorem and its converse.
8.G.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.
8.G.8	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.
Congruence (G-CO)	
Experiment with transformations in the plane	
G-CO.1	Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
G-CO.2	Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
G-CO.3	Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
G-CO.4	Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
G-CO.5	Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
Understand congruence in terms of rigid motions	
G-CO.6	Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.

Compacted Mathematics Grade 8 (with Integrated Math I)

G-CO.7	Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.
G-CO.8	Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.
Prove geometric theorems	
G-CO.9	Prove theorems about lines and angles. *Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.*
G-CO.10	Prove theorems about triangles. *Theorems include: measures of interior angles of a triangle sum to 180°; base angles of isosceles triangles are congruent; the segment joining midpoints of two sides of a triangle is parallel to the third side and half the length; the medians of a triangle meet at a point.*
G-CO.11	Prove theorems about parallelograms. *Theorems include: opposite sides are congruent, opposite angles are congruent, the diagonals of a parallelogram bisect each other, and conversely, rectangles are parallelograms with congruent diagonals.*
Statistics and Probability	
Statistics and Probability (SP)	
Investigate patterns of association in bivariate data	
8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.
8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.
8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. *For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.*
8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. *For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?*

Compacted Mathematics Grade 8 (with Integrated Math I)

Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.1	Represent and analyze data with plots on the real number line (dot plots, histograms, and box plots).*
S-ID.2	Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.*
S-ID.3	Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.5	Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.*
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* c. Fit a linear function for a scatter plot that suggests a linear association.
Interpret linear models	
S-ID.7	Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.*
S-ID.8	Compute (using technology) and interpret the correlation coefficient of a linear fit.*
S-ID.9	Distinguish between correlation and causation.*

[1] Function notation is not required at Grade 8

* Modeling Standards (**High School standards only**)

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

College- and Career-Readiness Standards for Mathematics (Grades 9-12)

Secondary Sequence Options

Students will progress according to grade level through the sixth grade. Beginning in the seventh grade, students are given course sequence options based on academic progress, teacher recommendation, and parental consent. Below are suggested secondary course sequence options:

Suggested Secondary Course Sequence Options for Mathematics

Grade Level	OPTION 1	OPTION 2	OPTION 3
7	Grade 7	Compacted Grade 7	Compacted Grade 7
8	Grade 8	Compacted Grade 8 (with Algebra I) **or** Compacted Grade 8 (with Integrated Math I)	Compacted Grade 8 (with Algebra I) **or** Compacted Grade 8 (with Integrated Math I)
9	Algebra I **or** Integrated Math I	Geometry **or** Integrated Math II	Algebra II **or** Integrated Math II
10	Geometry **or** Integrated Math II	Algebra II **or** Integrated Math III	Geometry **or** Integrated Math III
11	Algebra II **or** Integrated Math III	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course
12	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course	Algebra III, Advanced Mathematics Plus, Calculus, AP Calculus, AP Statistics, Dual Credit/Dual Enrollment or SREB Math Ready Course

High School Overview

The high school standards specify the mathematics that all students should study in order to be college and career ready. Additional mathematics that students might learn in order to take advanced courses are included in the Advanced Mathematics Plus and Algebra III courses. The high school standards are listed in conceptual categories:

- Number and Quantity
- Algebra
- Functions
- Modeling
- Geometry
- Statistics and Probability

Conceptual categories portray a coherent view of high school mathematics; a student's work with functions, for example, crosses a number of traditional course boundaries, potentially up through and including calculus.

Modeling is best interpreted not as a collection of isolated topics but in relation to other standards. Making mathematical models is a Standard for Mathematical Practice, and specific modeling standards appear throughout the high school standards indicated by an asterisk (*). The asterisk (*) symbol sometimes appears on the heading for a group of standards; in that case, it should be understood to apply to all standards in that group.

High School—Number and Quantity Conceptual Category

Numbers and Number Systems. During the years from kindergarten to eighth grade, students must repeatedly extend their conception of number. At first, "number" means "counting number": 1, 2, 3... Soon after that, 0 is used to represent "none" and the whole numbers are formed by the counting numbers together with zero. The next extension is fractions. At first, fractions are barely numbers and tied strongly to pictorial representations. Yet by the time students understand division of fractions, they have a strong concept of fractions as numbers and have connected them, via their decimal representations, with the base-ten system used to represent the whole numbers. During middle school, fractions are augmented by negative fractions to form the rational numbers. In Grade 8, students extend this system once more, augmenting the rational numbers with the irrational numbers to form the real numbers. In high school, students will be exposed to yet another extension of number, when the real numbers are augmented by the imaginary numbers to form the complex numbers.

With each extension of number, the meanings of addition, subtraction, multiplication, and division are extended. In each new number system—integers, rational numbers, real numbers, and complex numbers—the four operations stay the same in two important ways: They have the commutative, associative, and distributive properties and their new meanings are consistent with their previous meanings.

Extending the properties of whole-number exponents leads to new and productive notation. For example, properties of whole-number exponents suggest that $(5^{1/3})^3$ should be $5^{(1/3)3} = 5^1 = 5$ and that $5^{1/3}$ should be the cube root of 5.

Calculators, spreadsheets, and computer algebra systems can provide ways for students to become better acquainted with these new number systems and their notation. They can be used to generate data for numerical experiments, to help understand the workings of matrix, vector, and complex number algebra, and to experiment with non-integer exponents.

Quantities. In real world problems, the answers are usually not numbers but quantities: numbers with units, which involves measurement. In their work in measurement up through Grade 8, students primarily measure commonly used attributes such as length, area, and volume. In high school, students encounter a wider variety of units in modeling, e.g., acceleration, currency conversions, derived quantities such as person-hours and heating degree days, social science rates such as per-capita income, and rates in everyday life such as points scored per game or batting averages. They also encounter novel situations in which they themselves must conceive the attributes of interest. For example, to find a good measure of overall highway safety, they might propose measures such as fatalities per year, fatalities per year per driver, or fatalities per vehicle-mile traveled. Such a conceptual process is sometimes called quantification. Quantification is important for science, as when surface area suddenly "stands out" as an important variable in evaporation. Quantification is also important for companies, which must conceptualize relevant attributes and create or choose suitable measures for them.

High School—Algebra Conceptual Category

Expressions. An expression is a record of a computation with numbers, symbols that represent numbers, arithmetic operations, exponentiation, and, at more advanced levels, the operation of evaluating a function. Conventions about the use of parentheses and the order of operations assure that each expression is unambiguous. Creating an expression that describes a computation involving a general quantity requires the ability to express the computation in general terms, abstracting from specific instances.

Reading an expression with comprehension involves analysis of its underlying structure. This may suggest a different but equivalent way of writing the expression that exhibits some different aspect of its meaning. For example, $p + 0.05p$ can be interpreted as the addition of a 5% tax to a price p. Rewriting $p + 0.05p$ as $1.05p$ shows that adding a tax is the same as multiplying the price by a constant factor.

Algebraic manipulations are governed by the properties of operations and exponents, and the conventions of algebraic notation. At times, an expression is the result of applying operations to simpler expressions. For example, $p + 0.05p$ is the sum of the simpler expressions p and $0.05p$. Viewing an expression as the result of operation on simpler expressions can sometimes clarify its underlying structure.

A spreadsheet or a computer algebra system (CAS) can be used to experiment with algebraic expressions, perform complicated algebraic manipulations, and understand how algebraic manipulations behave.

Equations and inequalities. An equation is a statement of equality between two expressions, often viewed as a question asking for which values of the variables the expressions on either side are in fact equal. These values are the solutions to the equation. An identity, in contrast, is true for all values of the variables; identities are often developed by rewriting an expression in an equivalent form.

The solutions of an equation in one variable form a set of numbers; the solutions of an equation in two variables form a set of ordered pairs of numbers, which can be plotted in the coordinate plane. Two or more equations and/or inequalities form a system. A solution for such a system must satisfy every equation and inequality in the system.

An equation can often be solved by successively deducing from it one or more simpler equations. For example, one can add the same constant to both sides without changing the solutions, but squaring both sides might lead to extraneous solutions. Strategic competence in solving includes looking ahead for productive manipulations and anticipating the nature and number of solutions.

Some equations have no solutions in a given number system, but have a solution in a larger system. For example, the solution of $x + 1 = 0$ is an integer, not a whole number; the solution of $2x + 1 = 0$ is a rational number, not an integer; the solutions of $x^2 – 2 = 0$ are real numbers, not rational numbers; and the solutions of $x^2 + 2 = 0$ are complex numbers, not real numbers.

High School—Algebra Conceptual Category (continued)

The same solution techniques used to solve equations can be used to rearrange formulas. For example, the formula for the area of a trapezoid, $A = ((b_1+b_2)/2)h$, can be solved for h using the same deductive process.

Inequalities can be solved by reasoning about the properties of inequality. Many, but not all, of the properties of equality continue to hold for inequalities and can be useful in solving them.

Connections to Functions and Modeling. Expressions can define functions, and equivalent expressions define the same function. Asking when two functions have the same value for the same input leads to an equation; graphing the two functions allows for finding approximate solutions of the equation. Converting a verbal description to an equation, inequality, or system of these is an essential skill in modeling.

High School—Functions Conceptual Category

Functions describe situations where one quantity determines another. For example, the return on $10,000 invested at an annualized percentage rate of 4.25% is a function of the length of time the money is invested. Because we continually make theories about dependencies between quantities in nature and society, functions are important tools in the construction of mathematical models.

In school mathematics, functions usually have numerical inputs and outputs and are often defined by an algebraic expression. For example, the time in hours it takes for a car to drive 100 miles is a function of the car's speed in miles per hour, v; the rule $T(v) = 100/v$ expresses this relationship algebraically and defines a function whose name is T.

The set of inputs to a function is called its domain. We often infer the domain to be all inputs for which the expression defining a function has a value, or for which the function makes sense in a given context.

A function can be described in various ways, such as by a graph (e.g., the trace of a seismograph); by a verbal rule, as in, "I'll give you a state, you give me the capital city;" by an algebraic expression like $f(x) = a + bx$; or by a recursive rule. The graph of a function is often a useful way of visualizing the relationship of the function models, and manipulating a mathematical expression for a function can throw light on the function's properties.

Functions presented as expressions can model many important phenomena. Two important families of functions characterized by laws of growth are linear functions, which grow at a constant rate, and exponential functions, which grow at a constant percent rate. Linear functions with a constant term of zero describe proportional relationships.

A graphing utility or a computer algebra system can be used to experiment with properties of these functions and their graphs and to build computational models of functions, including recursively defined functions.

Connections to Expressions, Equations, Modeling, and Coordinates. Determining an output value for a particular input involves evaluating an expression; finding inputs that yield a given output involves solving an equation. Questions about when two functions have the same value for the same input lead to equations, whose solutions can be visualized from the intersection of their graphs. Because functions describe relationships between quantities, they are frequently used in modeling. Sometimes functions are defined by a recursive process, which can be displayed effectively using a spreadsheet or other technology.

High School—Modeling Conceptual Category

Modeling links classroom mathematics and statistics to everyday life, work, and decision-making. Modeling is the process of choosing and using appropriate mathematics and statistics to analyze empirical situations, to understand them better, and to improve decisions. Quantities and their relationships in physical, economic, public policy, social, and everyday situations can be modeled using mathematical and statistical methods. When making mathematical models, technology is valuable for varying assumptions, exploring consequences, and comparing predictions with data.

A model can be very simple, such as writing total cost as a product of unit price and number bought, or using a geometric shape to describe a physical object like a coin. Even such simple models involve making choices. It is up to us whether to model a coin as a three-dimensional cylinder, or whether a two-dimensional disk works well enough for our purposes. Other situations—modeling a delivery route, a production schedule, or a comparison of loan amortizations—need more elaborate models that use other tools from the mathematical sciences. Real-world situations are not organized and labeled for analysis; formulating tractable models, representing such models, and analyzing them is appropriately a creative process. Like every such process, this depends on acquired expertise as well as creativity.

Some examples of such situations might include:

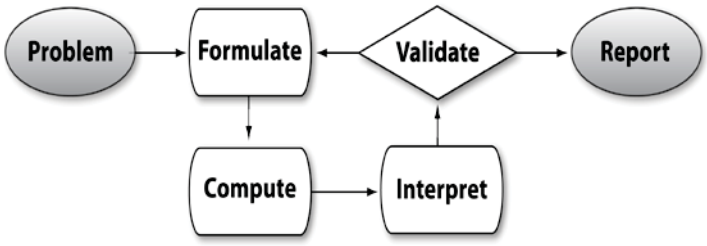
- Estimating how much water and food is needed for emergency relief in a devastated city of 3 million people, and how it might be distributed.
- Planning a table tennis tournament for 7 players at a club with 4 tables, where each player plays against each other player.
- Designing the layout of the stalls in a school fair so as to raise as much money as possible.
- Analyzing stopping distance for a car.
- Modeling savings account balance, bacterial colony growth, or investment growth.
- Engaging in critical path analysis, e.g., applied to turnaround of an aircraft at an airport.
- Analyzing risk in situations such as extreme sports, pandemics, and terrorism.
- Relating population statistics to individual predictions.

In situations like these, the models devised depend on a number of factors: How precise an answer do we want or need? What aspects of the situation do we most need to understand, control, or optimize? What resources of time and tools do we have? The range of models that we can create and analyze is also constrained by the limitations of our mathematical, statistical, and technical skills, and our ability to recognize significant variables and relationships among them. Diagrams of various kinds, spreadsheets and

High School—Modeling Conceptual Category (continued)

other technology, and algebra are powerful tools for understanding and solving problems drawn from different types of real-world situations.

One of the insights provided by mathematical modeling is that essentially the same mathematical or statistical structure can sometimes model seemingly different situations. Models can also shed light on the mathematical structures themselves, for example, as when a model of bacterial growth makes more vivid the explosive growth of the exponential function.



The basic modeling cycle is summarized in the diagram. It involves (1) identifying variables in the situation and selecting those that represent essential features, (2) formulating a model by creating and selecting geometric, graphical, tabular, algebraic, or statistical representations that describe relationships between the variables, (3) analyzing and performing operations on these relationships to draw conclusions, (4) interpreting the results of the mathematics in terms of the original situation, (5) validating the conclusions by comparing them with the situation, and then either improving the model or, if it is acceptable, (6) reporting on the conclusions and the reasoning behind them. Choices, assumptions, and approximations are present throughout this cycle.

In descriptive modeling, a model simply describes the phenomena or summarizes them in a compact form. Graphs of observations are a familiar descriptive model—for example, graphs of global temperature and atmospheric CO_2 over time.

Analytic modeling seeks to explain data on the basis of deeper theoretical ideas, albeit with parameters that are empirically based; for example, exponential growth of bacterial colonies (until cut-off mechanisms such as pollution or starvation intervene) follows from a constant reproduction rate. Functions are an important tool for analyzing such problems.

Graphing utilities, spreadsheets, computer algebra systems, and dynamic geometry software are powerful tools that can be used to model purely mathematical phenomena (e.g., the behavior of polynomials) as well as physical phenomena.

Modeling Standards. *Modeling is best interpreted not as a collection of isolated topics but rather in relation to other standards. Making mathematical models is a Standard for Mathematical Practice, and specific modeling standards appear throughout the high school standards indicated by an asterisk (*).*

High School—Geometry Conceptual Category

An understanding of the attributes and relationships of geometric objects can be applied in diverse contexts—interpreting a schematic drawing, estimating the amount of wood needed to frame a sloping roof, rendering computer graphics, or designing a sewing pattern for the most efficient use of material.

Although there are many types of geometry, school mathematics is devoted primarily to plane Euclidean geometry, studied both synthetically (without coordinates) and analytically (with coordinates). Euclidean geometry is characterized most importantly by the Parallel Postulate that through a point not on a given line there is exactly one parallel line. (Spherical geometry, in contrast, has no parallel lines.)

During high school, students begin to formalize their geometry experiences from elementary and middle school, using more precise definitions and developing careful proofs. Later in college some students develop Euclidean and other geometries carefully from a small set of axioms.

The concepts of congruence, similarity, and symmetry can be understood from the perspective of geometric transformation. Fundamental are the rigid motions: translations, rotations, reflections, and combinations of these, all of which are here assumed to preserve distance and angles (and therefore shapes generally). Reflections and rotations each explain a particular type of symmetry, and the symmetries of an object offer insight into its attributes—as when the reflective symmetry of an isosceles triangle assures that its base angles are congruent.

In the approach taken here, two geometric figures are defined to be congruent if there is a sequence of rigid motions that carries one onto the other. This is the principle of superposition. For triangles, congruence means the equality of all corresponding pairs of sides and all corresponding pairs of angles. During the middle grades, through experiences drawing triangles from given conditions, students notice ways to specify enough measures in a triangle to ensure that all triangles drawn with those measures are congruent. Once these triangle congruence criteria (ASA, SAS, and SSS) are established using rigid motions, they can be used to prove theorems about triangles, quadrilaterals, and other geometric figures.

Similarity transformations (rigid motions followed by dilations) define similarity in the same way that rigid motions define congruence, thereby formalizing the similarity ideas of “same shape” and “scale factor” developed in the middle grades. These transformations lead to the criterion for triangle similarity that two pairs of corresponding angles are congruent.

The definitions of sine, cosine, and tangent for acute angles are founded on right triangles and similarity, and, with the Pythagorean Theorem, are fundamental in many

High School—Geometry Conceptual Category (continued)

real-world and theoretical situations. The Pythagorean Theorem is generalized to non-right triangles by the Law of Cosines. Together, the Laws of Sines and Cosines embody the triangle congruence criteria for the cases where three pieces of information suffice to completely solve a triangle. Furthermore, these laws yield two possible solutions in the ambiguous case, illustrating that Side-Side-Angle is not a congruence criterion.

Analytic geometry connects algebra and geometry, resulting in powerful methods of analysis and problem solving. Just as the number line associates numbers with locations in one dimension, a pair of perpendicular axes associates pairs of numbers with locations in two dimensions. This correspondence between numerical coordinates and geometric points allows methods from algebra to be applied to geometry and vice versa. The solution set of an equation becomes a geometric curve, making visualization a tool for doing and understanding algebra. Geometric shapes can be described by equations, making algebraic manipulation into a tool for geometric understanding, modeling, and proof. Geometric transformations of the graphs of equations correspond to algebraic changes in their equations.

Dynamic geometry environments provide students with experimental and modeling tools that allow them to investigate geometric phenomena in much the same way as computer algebra systems allow them to experiment with algebraic phenomena.

Connections to Equations. The correspondence between numerical coordinates and geometric points allows methods from algebra to be applied to geometry and vice versa. The solution set of an equation becomes a geometric curve, making visualization a tool for doing and understanding algebra. Geometric shapes can be described by equations, making algebraic manipulation into a tool for geometric understanding, modeling, and proof.

High School—Statistics and Probability Conceptual Category

Decisions or predictions are often based on data—numbers in context. These decisions or predictions would be easy if the data always sent a clear message, but the message is often obscured by variability. Statistics provides tools for describing variability in data and for making informed decisions that take it into account.

Data are gathered, displayed, summarized, examined, and interpreted to discover patterns and deviations from patterns. Quantitative data can be described in terms of key characteristics: measures of shape, center, and spread. The shape of a data distribution might be described as symmetric, skewed, flat, or bell shaped, and it might be summarized by a statistic measuring center (such as mean or median) and a statistic measuring spread (such as standard deviation or interquartile range). Different distributions can be compared numerically using these statistics or compared visually using plots. Knowledge of center and spread are not enough to describe a distribution. Which statistics to compare, which plots to use, and what the results of a comparison might mean, depend on the question to be investigated and the real-life actions to be taken.

Randomization has two important uses in drawing statistical conclusions. First, collecting data from a random sample of a population makes it possible to draw valid conclusions about the whole population, taking variability into account. Second, randomly assigning individuals to different treatments allows a fair comparison of the effectiveness of those treatments. A statistically significant outcome is one that is unlikely to be due to chance alone, and this can be evaluated only under the condition of randomness. The conditions under which data are collected are important in drawing conclusions from the data; in critically reviewing uses of statistics in public media and other reports, it is important to consider the study design, how the data were gathered, and the analyses employed as well as the data summaries and the conclusions drawn.

Random processes can be described mathematically by using a probability model: a list or description of the possible outcomes (the sample space), each of which is assigned a probability. In situations such as flipping a coin, rolling a number cube, or drawing a card, it might be reasonable to assume various outcomes are equally likely. In a probability model, sample points represent outcomes and combine to make up events; probabilities of events can be computed by applying the Addition and Multiplication Rules. Interpreting these probabilities relies on an understanding of independence and conditional probability, which can be approached through the analysis of two-way tables. Technology plays an important role in statistics and probability by making it possible to generate plots, regression functions, and correlation coefficients, and to simulate many possible outcomes in a short amount of time.

Connections to Functions and Modeling. Functions may be used to describe data; if the data suggest a linear relationship, the relationship can be modeled with a regression line, and its strength and direction can be expressed through a correlation coefficient.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr.**

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Algebra I

In Algebra I, a one-credit course, the fundamental purpose of this course is to formalize and extend the mathematics that students learned in the middle grades. Because it is built on the middle grades standards, this is a more ambitious version of Algebra I than has generally been offered. Instruction should focus on five critical areas: (1) analyze and explain the process of solving equations and inequalities: (2) learn function notation and develop the concepts of domain and range; (3) use regression techniques; (4) create quadratic and exponential expressions; and (5) select from among these functions to model phenomena. Each critical area is described below.

(1) By the end of eighth grade, students have learned to solve linear equations in one variable and have applied graphical and algebraic methods to analyze and solve systems of linear equations in two variables. Now, students analyze and explain the process of solving an equation. Students develop fluency writing, interpreting, and translating between various forms of linear equations and inequalities, and using them to solve problems. They master the solution of linear equations and apply related solution techniques and the laws of exponents to the creation and solution of simple exponential equations.

(2) In earlier grades, students define, evaluate, and compare functions, and use them to model relationships between quantities. In this unit, students will learn function notation and develop the concepts of domain and range. They explore many examples of functions, including sequences; they interpret functions given graphically, numerically, symbolically, and verbally, translate between representations, and understand the limitations of various representations. Students build on and informally extend their understanding of integer exponents to consider exponential functions. They compare and contrast linear and exponential functions, distinguishing between additive and multiplicative change. Students explore systems of equations and inequalities, and they find and interpret their solutions. They interpret arithmetic sequences as linear functions and geometric sequences as exponential functions.

(3) This area builds upon prior students' prior experiences with data, providing students with more formal means of assessing how a model fits data. Students use regression techniques to describe approximately linear relationships between quantities. They use graphical representations and knowledge of the context to make judgments about the appropriateness of linear models. With linear models, they look at residuals to analyze the goodness of fit.

High School—Algebra I (continued)

(4) In this area, students build on their knowledge from unit 2, where they extended the laws of exponents to rational exponents. Students apply this new understanding of number and strengthen their ability to see structure in and create quadratic and exponential expressions. They create and solve equations, inequalities, and systems of equations involving quadratic expressions.

(5) In this area, students consider quadratic functions, comparing the key characteristics of quadratic functions to those of linear and exponential functions. They select from among these functions to model phenomena. Students learn to anticipate the graph of a quadratic function by interpreting various forms of quadratic expressions. In particular, they identify the real solutions of a quadratic equation as the zeros of a related quadratic function. Students expand their experience with functions to include more specialized functions—absolute value, step, and those that are piecewise-defined.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Algebra I

Number and Quantity

The Real Number System (N-RN)

Use properties of rational and irrational numbers

N-RN.3	Explain why: • the sum or product of two rational numbers is rational; • the sum of a rational number and an irrational number is irrational; and • the product of a nonzero rational number and an irrational number is irrational.

Quantities (N-Q) *

Reason quantitatively and use units to solve problems

N-Q.1	Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.* [Refer to the *Quantities* section of the High School *Number and Quantity* Conceptual Category in the previous pages of this document.]
N-Q.3	Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*

Algebra

Seeing Structure in Expressions (A-SSE)

Interpret the structure of expressions

A-SSE.1	Interpret expressions that represent a quantity in terms of its context.* a. Interpret parts of an expression, such as terms, factors, and coefficients. b. Interpret complicated expressions by viewing one or more of their parts as a single entity. *For example, interpret* $P(1+r)^n$ *as the product of P and a factor not depending on P.*
A-SSE.2	Use the structure of an expression to identify ways to rewrite it. *For example, see* $x^4 - y^4$ *as* $(x^2)^2 - (y^2)^2$ *thus recognizing it as a difference of squares that can be factored as* $(x^2 - y^2)(x^2 + y^2)$.

Write expressions in equivalent forms to solve problems

A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* a. Factor a quadratic expression to reveal the zeros of the function it defines. b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines. c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression* 1.15^t *can be rewritten as* $[1.15^{1/12}]^{12t} \approx 1.012^{12t}$ *to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

Algebra I

Arithmetic with Polynomials and Rational Expressions (A-APR)	
Perform arithmetic operations on polynomials	
A-APR.1	Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.
Understand the relationship between zeros and factors of polynomials	
A-APR.3	Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial (limit to 1st- and 2nd-degree polynomials).
Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.* *[Note this standard appears in future courses with a slight variation in the standard language.*]
A-CED.3	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. *For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.**
A-CED.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.**
Reasoning with Equations and Inequalities (A-REI)	
Understand solving equations as a process of reasoning and explain the reasoning	
A-REI.1	Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.
Solve equations and inequalities in one variable	
A-REI.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.

Algebra I

A-REI.4	Solve quadratic equations in one variable. a. Use the method of completing the square to transform any quadratic equation in x into an equation of the form $(x – p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form. b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions.
Solve systems of equations	
A-REI.5	Given a system of two equations in two variables, show and explain why the sum of equivalent forms of the equations produces the same solution as the original system.
A-REI.6	Solve systems of linear equations algebraically, exactly, and graphically while focusing on pairs of linear equations in two variables.
Represent and solve equations and inequalities graphically	
A-REI.10	Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, quadratic, absolute value, and exponential functions.*
A-REI.12	Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.
Functions	
Interpreting Functions (F-IF)	
Understand the concept of a function and use function notation	
F-IF.1	Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.
F-IF.2	Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
F-IF.3	Recognize that sequences are functions whose domain is a subset of the integers.
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**

Algebra I

F-IF.5	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. *For example, if the function h(n) gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* a. Graph functions (linear and quadratic) and show intercepts, maxima, and minima. b. Graph square root and piecewise-defined functions, including absolute value functions.
F-IF.8	Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function. a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression or steps for calculation from a context.
Build new functions from existing functions	
F-BF.3	Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $k\,f(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. *Include recognizing even and odd functions from their graphs and algebraic expressions for them.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	
F-LE.1	Distinguish between situations that can be modeled with linear functions and with exponential functions.* a. Prove that linear functions grow by equal differences over equal intervals and that exponential functions grow by equal factors over equal intervals. b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another. c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

F-LE.2	Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*
Interpret expressions for functions in terms of the situation they model	
F-LE.5	Interpret the parameters in a linear or exponential function in terms of a context.*
Statistics and Probability *	
Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.1	Represent and analyze data with plots on the real number line (dot plots, histograms, and box plots).*
S-ID.2	Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.*
S-ID.3	Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.5	Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.*
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* b. Informally assess the fit of a function by plotting and analyzing residuals. c. Fit a linear function for a scatter plot that suggests a linear association.
Interpret linear models	
S-ID.7	Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.*
S-ID.8	Compute (using technology) and interpret the correlation coefficient of a linear fit.*
S-ID.9	Distinguish between correlation and causation.*

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Geometry

The fundamental purpose of the course in Geometry a one-credit course, is to formalize and extend students' geometric experiences from the middle grades. Students explore more complex geometric situations and deepen their explanations of geometric relationships, moving towards formal mathematical arguments. Important differences exist between this Geometry course and the historical approach taken in Geometry classes. Close attention should be paid to the introductory content for the Geometry conceptual category found in the high school MS CCRS ~~CCSS~~. The Mathematical Practice Standards apply throughout each course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. The six critical areas of this course include (1) building a thorough understanding of translations, reflections, and rotations; (2) developing the understanding of similarity and several theorems; (3) extension of formulas for 2-dimensional and 3-dimensional objects (4) extension of 8th grade geometric concepts of lines; (5) prove basic theorems about circles; and (6) work with experimental and theoretical probability. Each critical area is described below:

(1) In previous grades, students were asked to draw triangles based on given measurements. They also have prior experience with rigid motions: translations, reflections, and rotations and have used these to develop notions about what it means for two objects to be congruent. In this unit, students establish triangle congruence criteria, based on analyses of rigid motions and formal constructions. They use triangle congruence as a familiar foundation for the development of formal proof. Students prove theorems—using a variety of formats—and solve problems about triangles, quadrilaterals, and other polygons. They apply reasoning to complete geometric constructions and explain why they work.

(2) Students apply their earlier experience with dilations and proportional reasoning to build a formal understanding of similarity. They identify criteria for similarity of triangles, use similarity to solve problems, and apply similarity in right triangles to understand right triangle trigonometry, with particular attention to special right triangles and the Pythagorean Theorem. Students develop the Laws of Sines and Cosines in order to find missing measures of general (not necessarily right) triangles, building on students' work with quadratic equations done in the first course. They are able to distinguish whether three given measures (angles or sides) define 0, 1, 2, or infinitely many triangles.

(3) Students' experience with two-dimensional and three-dimensional objects is extended to include informal explanations of circumference, area and volume formulas. Additionally, students apply their knowledge of two-dimensional shapes to consider the shapes of cross-sections and the result of rotating a two-dimensional object about a line.

High School—Geometry (continued)

(4) Building on their work with the Pythagorean theorem in 8th grade to find distances, students use a rectangular coordinate system to verify geometric relationships, including properties of special triangles and quadrilaterals and slopes of parallel and perpendicular lines, which relates back to work done in the first course. Students continue their study of quadratics by connecting the geometric and algebraic definitions of the parabola.

(5) Students prove basic theorems about circles, such as a tangent line is perpendicular to a radius, inscribed angle theorem, and theorems about chords, secants, and tangents dealing with segment lengths and angle measures. They study relationships among segments on chords, secants, and tangents as an application of similarity. In the Cartesian coordinate system, students use the distance formula to write the equation of a circle when given the radius and the coordinates of its center. Given an equation of a circle, they draw the graph in the coordinate plane, and apply techniques for solving quadratic equations, which relates back to work done in the first course, to determine intersections between lines and circles or parabolas and between two circles.

(6) Building on probability concepts that began in the middle grades, students use the languages of set theory to expand their ability to compute and interpret theoretical and experimental probabilities for compound events, attending to mutually exclusive events, independent events, and conditional probability. Students should make use of geometric probability models wherever possible. They use probability to make informed decisions.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Geometry

Geometry	
Congruence (G-CO)	
Experiment with transformations in the plane	
G-CO.1	Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
G-CO.2	Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
G-CO.3	Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
G-CO.4	Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
G-CO.5	Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
Understand congruence in terms of rigid motions	
G-CO.6	Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
G-CO.7	Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.
G-CO.8	Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.
Prove geometric theorems	
G-CO.9	Prove theorems about lines and angles. *Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.*
G-CO.10	Prove theorems about triangles. *Theorems include: measures of interior angles of a triangle sum to 180°; base angles of isosceles triangles are congruent; the segment joining midpoints of two sides of a triangle is parallel to the third side and half the length; the medians of a triangle meet at a point.*
G-CO.11	Prove theorems about parallelograms. *Theorems include: opposite sides are congruent, opposite angles are congruent, the diagonals of a parallelogram bisect each other, and conversely, rectangles are parallelograms with congruent diagonals.*

Geometry

Make geometric constructions	
G-CO.12	Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.). *Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.*
G-CO.13	Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.
Similarity, Right Triangles, and Trigonometry (G-SRT)	
Understand similarity in terms of similarity transformations	
G-SRT.1	Verify experimentally the properties of dilations given by a center and a scale factor: a. A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged. b. The dilation of a line segment is longer or shorter in the ratio given by the scale factor.
G-SRT.2	Given two figures, use the definition of similarity in terms of similarity transformations to decide if they are similar; explain using similarity transformations the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides.
G-SRT.3	Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.
Prove theorems involving similarity	
G-SRT.4	Prove theorems about triangles. *Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity.*
G-SRT.5	Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.
Define trigonometric ratios and solve problems involving right triangles	
G-SRT.6	Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles.
G-SRT.7	Explain and use the relationship between the sine and cosine of complementary angles.
G-SRT.8	Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems.*
Circles (G-C)	
Understand and apply theorems about circles	
G-C.1	Prove that all circles are similar.

Geometry

G-C.2	Identify and describe relationships among inscribed angles, radii, and chords. *Include the relationship between central, inscribed, and circumscribed angles; inscribed angles on a diameter are right angles; the radius of a circle is perpendicular to the tangent where the radius intersects the circle.*
G-C.3	Construct the inscribed and circumscribed circles of a triangle, and prove properties of angles for a quadrilateral inscribed in a circle.
Find arc lengths and areas of sectors of circles	
G-C.5	Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector.
Expressing Geometric Properties with Equations (G-GPE)	
Translate between the geometric description and the equation for a conic section	
G-GPE.1	Derive the equation of a circle of given center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation.
Use coordinates to prove simple geometric theorems algebraically	
G-GPE.4	Use coordinates to prove simple geometric theorems algebraically. *For example, prove or disprove that a figure defined by four given points in the coordinate plane is a rectangle; prove or disprove that the point (1, √3) lies on the circle centered at the origin and containing the point (0, 2).*
G-GPE.5	Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).
G-GPE.6	Find the point on a directed line segment between two given points that partitions the segment in a given ratio.
G-GPE.7	Use coordinates to compute perimeters of polygons and areas of triangles and rectangles, e.g., using the distance formula.*
Geometric Measurement and Dimension (G-GMD)	
Explain volume formulas and use them to solve problems	
G-GMD.1	Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. *Use dissection arguments, Cavalieri's principle, and informal limit arguments.*
G-GMD.3	Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.*
Visualize relationships between two-dimensional and three-dimensional objects	
G-GMD.4	Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects.

Geometry

Modeling with Geometry (G-MG)	
Apply geometric concepts in modeling situations	
G-MG.1	Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).*
G-MG.2	Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).*
G-MG.3	Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).*

* Modeling Standards

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Algebra II

In Algebra II, a one-credit course, students build on their work with linear, quadratic, and exponential functions, to extend their repertoire of functions to include polynomial, rational, and radical functions. Students work closely with the expressions that define the functions, and continue to expand and hone their abilities to model situations and to solve equations, including solving quadratic equations over the set of complex numbers and solving exponential equations using the properties of logarithms. The Mathematical Practice Standards apply throughout this course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. The four critical areas of this course include (1) working extensively with polynomial operations; (2) building connections between geometry and trigonometric ratios; (3) understanding of a variety of function families; and (4) explore statistical data. Each critical area is described below:

(1) Students develop the structural similarities between the system of polynomials and the system of integers. Students draw on analogies between polynomial arithmetic and base-ten computation, focusing on properties of operations, particularly the distributive property. Students connect multiplication of polynomials with multiplication of multi-digit integers, and division of polynomials with long division of integers. Students identify zeros of polynomials, including complex zeros of quadratic polynomials, and make connections between zeros of polynomials and solutions of polynomial equations. The unit culminates with the fundamental theorem of algebra. A central theme of this unit is that the arithmetic of rational expressions is governed by the same rules as the arithmetic of rational numbers.

(2) Building on their previous work with functions, and on their work with trigonometric ratios and circles in Geometry, students now use the coordinate plane to extend trigonometry to model periodic phenomena.

(3) Students synthesize and generalize what they have learned about a variety of function families. They extend their work with exponential functions to include solving exponential equations with logarithms. They explore the effects of transformations on graphs of diverse functions, including functions arising in an application, in order to abstract the general principle that transformations on a graph always have the same effect regardless of the type of the underlying function. They identify appropriate types of functions to model a situation, they adjust parameters to improve the model, and they compare models by analyzing appropriateness of fit and making judgments about the domain over which a model is a good fit. The description of modeling as "*the process of choosing and using mathematics and statistics to analyze empirical situations, to understand them better, and to make decisions*" is at the heart of this unit. The narrative discussion and diagram of the modeling cycle should be considered when knowledge of functions, statistics, and geometry is applied in a modeling context.

High School—Algebra II (continued)

(4) Students see how the visual displays and summary statistics they learned in earlier grades relate to different types of data and to probability distributions. They identify different ways of collecting data—including sample surveys, experiments, and simulations—and the role that randomness and careful design play in the conclusions that can be drawn

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Algebra II

Number and Quantity	
The Real Number System (N-RN)	
Extend the properties of exponents to rational exponents	
N-RN.1	Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. *For example, we define $5^{1/3}$ to be the cube root of 5 because we want $[5^{1/3}]^3 = 5^{(1/3)\,3}$ to hold, so $[5^{1/3}]^3$ must equal 5.*
N-RN.2	Rewrite expressions involving radicals and rational exponents using the properties of exponents.
Quantities (N-Q) *	
Reason quantitatively and use units to solve problems	
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.*
The Complex Number System (N-CN)	
Perform arithmetic operations with complex numbers	
N-CN.1	Know there is a complex number *i* such that $i^2 = -1$, and every complex number has the form $a + bi$ with *a* and *b* real.
N-CN.2	Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.
Use complex numbers in polynomial identities and equations	
N-CN.7	Solve quadratic equations with real coefficients that have complex solutions.
Algebra	
Seeing Structure in Expressions (A-SSE)	
Interpret the structure of expressions	
A-SSE.2	Use the structure of an expression to identify ways to rewrite it. *For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.*
Write expressions in equivalent forms to solve problems	
A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression 1.15t can be rewritten as $[1.15^{1/12}]^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

Algebra II

A-SSE.4	Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. *For example, calculate mortgage payments.**
Arithmetic with Polynomials and Rational Expressions (A-APR)	
Understand the relationship between zeros and factors of polynomials	
A-APR.2	Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number a, the remainder on division by $x – a$ is $p(a)$, so $p(a) = 0$ if and only if $(x – a)$ is a factor of $p(x)$.
A-APR.3	Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial (limit to 1st- and 2nd-degree polynomials).
Use polynomial identities to solve problems	
A-APR.4	Prove polynomial identities and use them to describe numerical relationships. *For example, the polynomial identity* $(x^2 + y^2)^2 = (x^2 – y^2)^2 + (2xy)^2$ *can be used to generate Pythagorean triples.*
Rewrite rational expressions	
A-APR.6	Rewrite simple rational expressions in different forms; write $a(x)/b(x)$ in the form $q(x) + r(x)/b(x)$, where $a(x)$, $b(x)$, $q(x)$, and $r(x)$ are polynomials with the degree of $r(x)$ less than the degree of $b(x)$, using inspection, long division, or, for the more complicated examples, a computer algebra system.
Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. *[Note this standard appears in previous courses with a slight variation in the standard language.]*
	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
Reasoning with Equations and Inequalities (A-REI)	
Understand solving equations as a process of reasoning and explain the reasoning	
A-REI.1	Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.
A-REI.2	Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.

Algebra II

Solve equations and inequalities in one variable	
A-REI.4	Solve quadratic equations in one variable. b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions.

Solve systems of equations	
A-REI.6	Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
A-REI.7	Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. *For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$.*
Represent and solve equations and inequalities graphically	
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.*

Functions

Interpreting Functions (F-IF)

Understand the concept of a function and use function notation	
F-IF.3	Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. *For example, the Fibonacci sequence is defined recursively by f(0) = f(1) = 1, f(n+1) = f(n) + f(n-1) for n ≥ 1.*
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*

Algebra II

Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior. e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.
F-IF.8	Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function. b. Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as y = (1.02)t, y = (0.97)t, y = (1.01)12t, y = (1.2)t/10, and classify them as representing exponential growth and decay.
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression, a recursive process, or steps for calculation from a context. b. Combine standard function types using arithmetic operations. *For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.*
F-BF.2	Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.*
Build new functions from existing functions	
F-BF.3	Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $k\,f(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. *Include recognizing even and odd functions from their graphs and algebraic expressions for them.*
F-BF.4	Find inverse functions. a. Solve an equation of the form $f(x) = c$ for a simple function f that has an inverse and write an expression for the inverse. *For example, $f(x) = 2x^3$ or $f(x) = (x+1)/(x-1)$ for $x \neq 1$.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	

Algebra II

F-LE.2	Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*
F-LE.3	Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function.*
F-LE.4	For exponential models, express as a logarithm the solution to $ab^{ct} = d$ where a, c, and d are numbers and the base b is 2, 10, or e; evaluate the logarithm using technology.*
Interpret expressions for functions in terms of the situation they model	
F-LE.5	Interpret the parameters in a linear or exponential function in terms of a context.*
Trigonometric Functions (F-TF)	
Extend the domain of trigonometric functions using the unit circle	
F-TF.1	Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.
F-TF.2	Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.

Geometry

Expressing Geometric Properties with Equations (G-GPE)	
Translate between the geometric description and the equation for a conic section	
G-GPE.2	Derive the equation of a parabola given a focus and directrix.

Statistics and Probability*

Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.4	Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve.*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.*
Making Inferences and Justifying Conclusions (S-IC)	

	Understand and evaluate random processes underlying statistical experiments
S-IC.1	Understand statistics as a process for making inferences about population parameters based on a random sample from that population.*

Algebra II

S-IC.2	Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. *For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?**
Make inferences and justify conclusions from sample surveys, experiments, and observational studies	
S-IC.3	Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.*
S-IC.4	Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.*
S-IC.5	Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.*
S-IC.6	Evaluate reports based on data.*
Conditional Probability and the Rules of Probability (S-CP)	
Understand independence and conditional probability and use them to interpret data	
S-CP.1	Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").*
S-CP.2	Understand that two events *A* and *B* are independent if the probability of *A* and *B* occurring together is the product of their probabilities, and use this characterization to determine if they are independent.*
S-CP.3	Understand the conditional probability of *A* given *B* as *P*(*A* and *B*)/*P*(*B*), and interpret independence of *A* and *B* as saying that the conditional probability of *A* given *B* is the same as the probability of *A*, and the conditional probability of *B* given *A* is the same as the probability of *B*.*
S-CP.4	Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. *For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results.**
S-CP.5	Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. *For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer.**

Use the rules of probability to compute probabilities of compound events in a uniform probability model	
S-CP.6	Find the conditional probability of *A* given *B* as the fraction of *B*'s outcomes that also belong to *A*, and interpret the answer in terms of the model.*
S-CP.7	Apply the Addition Rule, *P*(*A* or *B*) = *P*(*A*) + *P*(*B*) – *P*(*A* and *B*), and interpret the answer in terms of the model.*

* Modeling Standards

8. Look for and express regularity in repeated reasoning.

High School—Integrated Mathematics I

The fundamental purpose of Integrated Mathematics I, a one-credit course, is to formalize and extend the mathematics that students learned in the middle grades. The critical areas deepen and extend understanding of linear relationships, in part by contrasting them with exponential phenomena, and in part by applying linear models to data that exhibit a linear trend. Integrated Mathematics I uses properties and theorems involving congruent figures to deepen and extend understanding of geometric knowledge from prior grades. The final critical area in the course ties together the algebraic and geometric ideas studied. The Mathematical Practice Standards apply throughout this course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. The six critical focus areas of this course include (1)working with quantities to model and analyze situations; (2) exploring sequences and their relationships to functions; (3) working and translating between the various forms of linear equations and inequalities; (4) fitting data to a particular model; (5) establishing triangle congruency; and (6) verifying geometric relationships. Each critical area is described below:

(1) By the end of eighth grade students have had a variety of experiences working with expressions and creating equations. In this first critical focus area, students continue this work by using quantities to model and analyze situations, to interpret expressions, and by creating equations to describe situations.

(2) In earlier grades, students define, evaluate, and compare functions, and use them to model relationships between quantities. In this unit, students will learn function notation and develop the concepts of domain and range. They move beyond viewing functions as processes that take inputs and yield outputs and start viewing functions as objects in their own right. They explore many examples of functions, including sequences; they interpret functions given graphically, numerically, symbolically, and verbally, translate between representations, and understand the limitations of various representations. They work with functions given by graphs and tables, keeping in mind that, depending upon the context, these representations are likely to be approximate and incomplete. Their work includes functions that can be described or approximated by formulas as well as those that cannot. When functions describe relationships between quantities arising from a context, students reason with the units in which those quantities are measured. Students build on and informally extend their understanding of integer exponents to consider exponential functions. They compare and contrast linear and exponential functions, distinguishing between additive and multiplicative change. They interpret arithmetic sequences as linear functions and geometric sequences as exponential functions.

(3) By the end of eighth grade, students have learned to solve linear equations in one variable and have applied graphical and algebraic methods to analyze and

High School—Integrated Mathematics I (continued)

solve systems of linear equations in two variables. This critical area builds on these earlier experiences by asking students to analyze and explain the process of solving an equation and to justify the process used in solving a system of equations. Students develop fluency writing, interpreting, and translating between various forms of linear equations and inequalities, and using them to solve problems. They master the solution of linear equations and apply related solution techniques and the laws of exponents to the creation and solution of simple exponential equations. Students explore systems of equations and inequalities, and they find and interpret their solutions. All of this work is grounded on understanding quantities and on relationships between them.

(4) This critical area builds upon prior students' prior experiences with data, providing students with more formal means of assessing how a model fits data. Students use regression techniques to describe approximately linear relationships between quantities. They use graphical representations and knowledge of the context to make judgments about the appropriateness of linear models. With linear models, they look at residuals to analyze the goodness of fit.

(5) In previous grades, students were asked to draw triangles based on given measurements. They also have prior experience with rigid motions: translations, reflections, and rotations and have used these to develop notions about what it means for two objects to be congruent. In this area, students establish triangle congruence criteria, based on analyses of rigid motions and formal constructions. They solve problems about triangles, quadrilaterals, and other polygons. They apply reasoning to complete geometric constructions and explain why they work.

(6) Building on their work with the Pythagorean Theorem in 8th grade to find distances, students use a rectangular coordinate system to verify geometric relationships, including properties of special triangles and quadrilaterals and slopes of parallel and perpendicular lines.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Integrated Mathematics I

Number and Quantity

Quantities (N-Q) *

Reason quantitatively and use units to solve problems

N-Q.1	Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.*
N-Q.3	Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*

Algebra

Seeing Structure in Expressions (A-SSE)

Interpret the structure of expressions

A-SSE.1	Interpret expressions that represent a quantity in terms of its context.* a. Interpret parts of an expression, such as terms, factors, and coefficients. b. Interpret complicated expressions by viewing one or more of their parts as a single entity. *For example, interpret $P(1+r)^n$ as the product of P and a factor not depending on P.*

Write expressions in equivalent forms to solve problems

A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression 1.15^t can be rewritten as $[1.15^{1/12}]^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

Creating Equations (A-CED) *

Create equations that describe numbers or relationships

A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.* *[Note this standard appears in future courses with a slight variation in the standard language.]*
A-CED.3	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. *For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.**
A-CED.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.**

Integrated Mathematics I

Reasoning with Equations and Inequalities (A-REI)	
Solve equations and inequalities in one variable	
A-REI.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.
Solve systems of equations	
A-REI.5	Given a system of two equations in two variables, show and explain why the sum of equivalent forms of the equations produces the same solution as the original system.
A-REI.6	Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
Represent and solve equations and inequalities graphically	
A-REI.10	Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, ~~polynomial,~~ rational, absolute value and exponential~~, and logarithmic~~ functions.*
A-REI.12	Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.
Functions	
Interpreting Functions (F-IF)	
Understand the concept of a function and use function notation	
F-IF.1	Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.
F-IF.2	Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
F-IF.3	Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. *For example, the Fibonacci sequence is defined recursively by* $f(0) = f(1) = 1$, $f(n+1) = f(n) + f(n-1)$ *for* $n \geq 1$.
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**

Integrated Mathematics I

F-IF.5	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. *For example, if the function h(n) gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* a. Graph functions (linear and quadratic) and show intercepts, maxima, and minima.
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression, a recursive process, or steps for calculation from a context.
F-BF.2	Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	
F-LE.1	Distinguish between situations that can be modeled with linear functions and with exponential functions.* a. Prove that linear functions grow by equal differences over equal intervals and that exponential functions grow by equal factors over equal intervals. b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another. c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.
F-LE.2	Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*
F-LE.3	Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function.*
Interpret expressions for functions in terms of the situation they model	
F-LE.5	Interpret the parameters in a linear or exponential function in terms of a context.*

Integrated Mathematics I

Geometry

Congruence (G-CO)

Experiment with transformations in the plane	
G-CO.1	Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
G-CO.2	Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
G-CO.3	Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
G-CO.4	Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
G-CO.5	Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
Understand congruence in terms of rigid motions	
G-CO.6	Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
G-CO.7	Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.
G-CO.8	Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.
Prove geometric theorems	
G-CO.9	Prove theorems about lines and angles. *Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.*
G-CO.10	Prove theorems about triangles. *Theorems include: measures of interior angles of a triangle sum to 180°; base angles of isosceles triangles are congruent; the segment joining midpoints of two sides of a triangle is parallel to the third side and half the length; the medians of a triangle meet at a point.*
G-CO.11	Prove theorems about parallelograms. *Theorems include: opposite sides are congruent, opposite angles are congruent, the diagonals of a parallelogram bisect each other, and conversely, rectangles are parallelograms with congruent diagonals.*

Integrated Mathematics I

Statistics and Probability *

Interpreting Categorical and Quantitative Data (S-ID)

Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.1	Represent and analyze data with plots on the real number line (dot plots, histograms, and box plots).*
S-ID.2	Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.*
S-ID.3	Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.5	Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.*
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* c. Fit a linear function for a scatter plot that suggests a linear association.
Interpret linear models	
S-ID.7	Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.*
S-ID.8	Compute (using technology) and interpret the correlation coefficient of a linear fit.*
S-ID.9	Distinguish between correlation and causation.*

* Modeling Standards

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Integrated Mathematics II

The focus of Integrated Mathematics II, a one-credit course, is on quadratic expressions, equations, and functions; comparing their characteristics and behavior to those of linear and exponential relationships from Integrated Mathematics I as organized into 6 critical areas. The need for extending the set of rational numbers arises and real and complex numbers are introduced so that all quadratic equations can be solved. The link between probability and data is explored through conditional probability and counting methods, including their use in making and evaluating decisions. The study of similarity leads to an understanding of right triangle trigonometry and connects to quadratics through Pythagorean relationships. Circles, with their quadratic algebraic representations, bring more depth to the course. The Mathematical Practice Standards apply throughout each course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. The six critical areas of this course include (1) exploring the distinction between rational and irrational numbers; (2) expending expertise of functions into piece-wise functions and quadratics; (3) focusing on the structure of expressions; (4) exploring compound events; (5) building a formal understanding of similarity; and (6) proving basic theorems about circles. Each critical area is described below:

(1) Students extend the laws of exponents to rational exponents and explore distinctions between rational and irrational numbers by considering their decimal representations. Students learn that when quadratic equations do not have real solutions the number system must be extended so that solutions exist, analogous to the way in which extending the whole numbers to the negative numbers allows x+1 = 0 to have a solution. Students explore relationships between number systems: whole numbers, integers, rational numbers, real numbers, and complex numbers. The guiding principle is that equations with no solutions in one number system may have solutions in a larger number system.

(2) Students consider quadratic functions, comparing the key characteristics of quadratic functions to those of linear and exponential functions. They select from among these functions to model phenomena. Students learn to anticipate the graph of a quadratic function by interpreting various forms of quadratic expressions. In particular, they identify the real solutions of a quadratic equation as the zeros of a related quadratic function.
When quadratic equations do not have real solutions, students learn that that the graph of the related quadratic function does not cross the horizontal axis. They expand their experience with functions to include more specialized functions—absolute value, step, and those that are piecewise-defined.

(3) Students begin this critical area by focusing on the structure of expressions, rewriting expressions to clarify and reveal aspects of the relationship they represent. They create and solve equations, inequalities, and systems of equations involving exponential and quadratic expressions.

High School—Integrated Mathematics II (continued)

(4) Students use the languages of set theory to expand their ability to compute and interpret theoretical and experimental probabilities for compound events, attending to mutually exclusive events, independent events, and conditional probability. Students should make use of geometric probability models wherever possible. They use probability to make informed decisions.

(5) Students apply their earlier experience with dilations and proportional reasoning to build a formal understanding of similarity. They identify criteria for similarity of triangles, use similarity to solve problems, and apply similarity in right triangles to understand right triangle trigonometry, with particular attention to special right triangles and the Pythagorean Theorem. It is in this unit that students develop facility with geometric proof. They use what they know about congruence and similarity to prove theorems involving lines, angles, triangles, and other polygons. They explore a variety of formats for writing proofs.

(6) In this area students prove basic theorems about circles, such as a tangent line is perpendicular to a radius, inscribed angle theorem, and theorems about chords, secants, and tangents dealing with segment lengths and angle measures. In the Cartesian coordinate system, students use the distance formula to write the equation of a circle when given the radius and the coordinates of its center, and the equation of a parabola with vertical axis when given an equation of its directrix and the coordinates of its focus. Given an equation of a circle, they draw the graph in the coordinate plane, and apply techniques for solving quadratic equations to determine intersections between lines and circles or a parabola and between two circles. Justifying common formulas for circumference, area, and volume of geometric objects, especially those related to circles is also explored.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Integrated Mathematics II

Number and Quantity	
The Real Number System (N-RN)	
Extend the properties of exponents to rational exponents	
N-RN.1	Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. *For example, we define $5^{1/3}$ to be the cube root of 5 because we want $[5^{1/3}]^3 = 5^{(1/3)\,3}$ to hold, so $[5^{1/3}]^3$ must equal 5.*
N-RN.2	Rewrite expressions involving radicals and rational exponents using the properties of exponents.
Use properties of rational and irrational numbers	
N-RN.3	Explain why: • the sum or product of two rational numbers is rational; • the sum of a rational number and an irrational number is irrational; and • the product of a nonzero rational number and an irrational number is irrational.
Quantities (N-Q) *	
Reason quantitatively and use units to solve problems	
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.*
The Complex Number System (N-CN)	
Perform arithmetic operations with complex numbers	
N-CN.1	Know there is a complex number i such that $i^2 = -1$, and every complex number has the form $a + bi$ with a and b real.
N-CN.2	Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.
Use complex numbers in polynomial identities and equations	
N-CN.7	Solve quadratic equations with real coefficients that have complex solutions.
Algebra	
Seeing Structure in Expressions (A-SSE)	
Interpret the structure of expressions	
A-SSE.1	Interpret expressions that represent a quantity in terms of its context.* b. Interpret complicated expressions by viewing one or more of their parts as a single entity. *For example, interpret $P(1+r)^n$ as the product of P and a factor not depending on P.*

Integrated Mathematics II

A-SSE.2	Use the structure of an expression to identify ways to rewrite it. *For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.*
Write expressions in equivalent forms to solve problems	
A-SSE.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.* a. Factor a quadratic expression to reveal the zeros of the function it defines. b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.
Arithmetic with Polynomials and Rational Expressions (A-APR)	
Perform arithmetic operations on polynomials	
A-APR.1	Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.
Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.* *[Note this standard appears in previous courses with a slight variation in the standard language.*]
A-CED.3	Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. *
A-CED.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.**
Reasoning with Equations and Inequalities (A-REI)	
Understand solving equations as a process of reasoning and explain the reasoning	
A-REI.1	Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.
Solve equations and inequalities in one variable	

Integrated Mathematics II

A-REI.4	Solve quadratic equations in one variable. a. Use the method of completing the square to transform any quadratic equation in x into an equation of the form $(x – p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form. b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions.
Solve systems of equations	
A-REI.6	Solve systems of linear equations algebraically, exactly, approximately, and graphically while focusing on pairs of linear equations in two variables.
A-REI.7	Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. *For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$.*
Functions	
Interpreting Functions (F-IF)	
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**
F-IF.5	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. *For example, if the function h(n) gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* a. Graph linear and quadratic functions and show intercepts, maxima, and minima. b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions. e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.

Integrated Mathematics II

F-IF.8	Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function. a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context. b. Use the properties of exponents to interpret expressions for exponential functions. *For example, identify percent rate of change in functions such as* $y = (1.02)^t$, $y = (0.97)^t$, $y = (1.01)^{12t}$, $y = (1.2)^{t/10}$, *and classify them as representing exponential growth and decay.*
F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities.* a. Determine an explicit expression, a recursive process, or steps for calculation from a context. b. Combine standard function types using arithmetic operations. *For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.*
Build new functions from existing functions	
F-BF.3	Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $k\,f(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. *Include recognizing even and odd functions from their graphs and algebraic expressions for them.*
Geometry	
Similarity, Right Triangles, and Trigonometry (G-SRT)	
Understand similarity in terms of similarity transformations	
G-SRT.1	Verify experimentally the properties of dilations given by a center and a scale factor: a. A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged. b. The dilation of a line segment is longer or shorter in the ratio given by the scale factor.
G-SRT.2	Given two figures, use the definition of similarity in terms of similarity transformations to decide if they are similar; explain using similarity transformations the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides.
G-SRT.3	Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.

Integrated Mathematics II

Prove theorems using similarity	
G-SRT.4	Prove theorems about triangles. *Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity.*
G-SRT.5	Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.
Define trigonometric ratios and solve problems involving right triangles	
G-SRT.6	Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles.
G-SRT.7	Explain and use the relationship between the sine and cosine of complementary angles.
G-SRT.8	Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems.*
Geometric Measurement and Dimension (G-GMD)	
Explain volume formulas and use them to solve problems	
G-GMD.1	Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. *Use dissection arguments, Cavalieri's principle, and informal limit arguments.*
G-GMD.3	Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.*
Statistics and Probability *	
Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* b. Informally assess the fit of a function by plotting and analyzing residuals.
Conditional Probability and the Rules of Probability (S-CP)	
Understand independence and conditional probability and use them to interpret data	
S-CP.1	Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").*
S-CP.2	Understand that two events *A* and *B* are independent if the probability of *A* and *B* occurring together is the product of their probabilities, and use this characterization to determine if they are independent.*

Integrated Mathematics II

S-CP.3	Understand the conditional probability of *A* given *B* as *P*(*A* and *B*)/*P*(*B*), and interpret independence of *A* and *B* as saying that the conditional probability of *A* given *B* is the same as the probability of *A*, and the conditional probability of *B* given *A* is the same as the probability of *B*.*
S-CP.4	Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. *For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results.**
S-CP.5	Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. *For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer.**
Use the rules of probability to compute probabilities of compound events in a uniform probability model	
S-CP.6	Find the conditional probability of *A* given *B* as the fraction of *B*'s outcomes that also belong to *A*, and interpret the answer in terms of the model.*
S-CP.7	Apply the Addition Rule, *P*(*A* or *B*) = *P*(*A*) + *P*(*B*) – *P*(*A* and *B*), and interpret the answer in terms of the model.*

* Modeling Standards

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Integrated Mathematics III

It is in Mathematics III, a one-credit course, that students pull together and apply the accumulation of learning that they have from their previous courses, with content grouped into four critical areas, organized into units. They apply methods from probability and statistics to draw inferences and conclusions from data. Students expand their repertoire of functions to include polynomial, rational, and radical functions. They expand their study of right triangle trigonometry to include general triangles. And, finally, students bring together all of their experience with functions and geometry to create models and solve contextual problems. The Mathematical Practice Standards apply throughout this course and, together with the content standards, prescribe that students experience mathematics as a coherent, useful, and logical subject that makes use of their ability to make sense of problem situations. The four critical areas of this course include (1) working extensively with statistics and probability; (2) culminating work with the Fundamental Theorem of Algebra; (3) understanding of periodic phenomena; and (4) exploring function fitting. Each critical area is described below:

(1) In this area, students see how the visual displays and summary statistics they learned in earlier grades relate to different types of data and to probability distributions. They identify different ways of collecting data—including sample surveys, experiments, and simulations—and the role that randomness and careful design play in the conclusions that can be drawn.

(2) This area develops the structural similarities between the system of polynomials and the system of integers. Students draw on analogies between polynomial arithmetic and base-ten computation, focusing on properties of operations, particularly the distributive property. Students connect multiplication of polynomials with multiplication of multi-digit integers, and division of polynomials with long division of integers. Students identify zeros of polynomials and make connections between zeros of polynomials and solutions of polynomial equations. The area culminates with the fundamental theorem of algebra. Rational numbers extend the arithmetic of integers by allowing division by all numbers except 0. Similarly, rational expressions extend the arithmetic of polynomials by allowing division by all polynomials except the zero polynomial. A central theme of this unit is that the arithmetic of rational expressions is governed by the same rules as the arithmetic of rational numbers.

(3) Students develop the Laws of Sines and Cosines in order to find missing measures of general (not necessarily right) triangles. They are able to distinguish whether three given measures (angles or sides) define 0, 1, 2, or infinitely many triangles. This discussion of general triangles open up the idea

High School—Integrated Mathematics III (continued)

of trigonometry applied beyond the right triangle—that is, at least to obtuse angles. Students build on this idea to develop the notion of radian measure for angles and extend the domain of the trigonometric functions to all real numbers. They apply this knowledge to model simple periodic phenomena.

(4) Students synthesize and generalize what they have learned about a variety of function families. They extend their work with exponential functions to include solving exponential equations with logarithms. They explore the effects of transformations on graphs of diverse functions, including functions arising in an application, in order to abstract the general principle that transformations on a graph always have the same effect regardless of the type of the underlying functions. They identify appropriate types of functions to model a situation, they adjust parameters to improve the model, and they compare models by analyzing appropriateness of fit and making judgments about the domain over which a model is a good fit. The description of modeling as "the process
of choosing and using mathematics and statistics to analyze empirical situations, to understand them better, and to make decisions" is at the heart of this area. The narrative discussion and diagram of the modeling cycle should be considered when knowledge of functions, statistics, and geometry is applied in a modeling context.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Integrated Mathematics III

Number and Quantity	
Quantities (N-Q) *	
Reason quantitatively and use units to solve problems	
N-Q.2	Define appropriate quantities for the purpose of descriptive modeling.*
Algebra	
Seeing Structure in Expressions (A-SSE)	
Interpret the structure of expressions	
A-SSE.2	Use the structure of an expression to identify ways to rewrite it. *For example, see* $x^4 - y^4$ *as* $(x^2)^2 - (y^2)^2$*, thus recognizing it as a difference of squares that can be factored as* $(x^2 - y^2)(x^2 + y^2)$.
Write expressions in equivalent forms to solve problems	
A-SSE.4	Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. *For example, calculate mortgage payments.**
Arithmetic with Polynomials and Rational Expressions (A-APR)	
Understand the relationship between zeros and factors of polynomials	
A-APR.2	Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number a, the remainder on division by $x - a$ is $p(a)$, so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$.
A-APR.3	Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial (limit to 1st- and 2nd-degree polynomials).
Use polynomial identities to solve problems	
A-APR.4	Prove polynomial identities and use them to describe numerical relationships. *For example, the polynomial identity* $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ *can be used to generate Pythagorean triples.*
Rewrite rational expressions	
A-APR.6	Rewrite simple rational expressions in different forms; write $a(x)/b(x)$ in the form $q(x) + r(x)/b(x)$, where $a(x)$, $b(x)$, $q(x)$, and $r(x)$ are polynomials with the degree of $r(x)$ less than the degree of $b(x)$, using inspection, long division, or, for the more complicated examples, a computer algebra system.

Integrated Mathematics III

Creating Equations (A-CED) *	
Create equations that describe numbers or relationships	
A-CED.1	Create equations and inequalities in one variable and use them to solve problems. *Include equations arising from linear and quadratic functions, and simple rational and exponential functions.**
A-CED.2	Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.* *[Note this standard appears in previous courses with a slight variation in the standard language.]*
Reasoning with Equations and Inequalities (A-REI)	
Understand solving equations as a process of reasoning and explain the reasoning	
A-REI.1	Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.
A-REI.2	Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.
Represent and solve equations and inequalities graphically	
A-REI.11	Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.*
Functions	
Interpreting Functions (F-IF)	
Interpret functions that arise in applications in terms of the context	
F-IF.4	For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. *Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.**
F-IF.6	Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior. e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.

Integrated Mathematics III

F-IF.9	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*
Building Functions (F-BF)	
Build new functions from existing functions	
F-BF.3	Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $k\,f(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. *Include recognizing even and odd functions from their graphs and algebraic expressions for them.*
F-BF.4	Find inverse functions. a. Solve an equation of the form $f(x) = c$ for a simple function f that has an inverse and write an expression for the inverse. *For example, $f(x) = 2x^3$ or $f(x) = (x+1)/(x-1)$ for $x \neq 1$.*
Linear, Quadratic, and Exponential Models (F-LE) *	
Construct and compare linear, quadratic, and exponential models and solve problems	
F-LE.4	For exponential models, express as a logarithm the solution to $ab^{ct} = d$ where a, c, and d are numbers and the base b is 2, 10, or e; evaluate the logarithm using technology.*
Trigonometric Functions (F-TF)	
Extend the domain of trigonometric functions using the unit circle	
F-TF.1	Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.
F-TF.2	Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.
Model periodic phenomena with trigonometric functions	
F-TF.5	Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.*
Prove and apply trigonometric identities	
F-TF.8	Prove the Pythagorean identity $\sin(\Theta)^2 + \cos(\Theta)^2 = 1$ and use it to find $\sin(\Theta)$, $\cos(\Theta)$, or $\tan(\Theta)$, given $\sin(\Theta)$, $\cos(\Theta)$, or $\tan(\Theta)$ and the quadrant of the angle.

Integrated Mathematics III

Geometry

Congruence (G-CO)

Make geometric constructions

G-CO.12	Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.). *Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.*
G-CO.13	Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.

Circles (G-C)

Understand and apply theorems about circles

G-C.1	Prove that all circles are similar.
G-C.2	Identify and describe relationships among inscribed angles, radii, and chords. *Include the relationship between central, inscribed, and circumscribed angles; inscribed angles on a diameter are right angles; the radius of a circle is perpendicular to the tangent where the radius intersects the circle.*
G-C.3	Construct the inscribed and circumscribed circles of a triangle, and prove properties of angles for a quadrilateral inscribed in a circle.

Find arc lengths and areas of sectors of circles

G-C.5	Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector.

Expressing Geometric Properties with Equations (G-GPE)

Translate between the geometric description and the equation for a conic section

G-GPE.1	Derive the equation of a circle of given center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation.
G-GPE.2	Derive the equation of a parabola given a focus and directrix.

Use coordinates to prove simple geometric theorems algebraically

G-GPE.4	Use coordinates to prove simple geometric theorems algebraically. *For example, prove or disprove that a figure defined by four given points in the coordinate plane is a rectangle; prove or disprove that the point (1, √3) lies on the circle centered at the origin and containing the point (0, 2).*
G-GPE.5	Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).

Integrated Mathematics III

G-GPE.6	Find the point on a directed line segment between two given points that partitions the segment in a given ratio.
G-GPE.7	Use coordinates to compute perimeters of polygons and areas of triangles and rectangles, e.g., using the distance formula.*
Geometric Measurement and Dimension (G-GMD)	
Visualize relationships between two-dimensional and three-dimensional objects	
G-GMD.4	Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects.
Modeling with Geometry (G-MG)	
Apply geometric concepts in modeling situations	
G-MG.1	Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).*
G-MG.2	Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).*
G-MG.3	Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).*
Statistics and Probability *	
Interpreting Categorical and Quantitative Data (S-ID)	
Summarize, represent, and interpret data on a single count or measurement variable	
S-ID.4	Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve.*
Summarize, represent, and interpret data on two categorical and quantitative variables	
S-ID.6	Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.* a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. *Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.* b. Informally assess the fit of a function by plotting and analyzing residuals.
Making Inferences and Justifying Conclusions (S-IC)	
Understand and evaluate random processes underlying statistical experiments	
S-IC.1	Understand statistics as a process for making inferences about population parameters based on a random sample from that population.*

Integrated Mathematics III

S-IC.2	Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. *For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?**
Make inferences and justify conclusions from sample surveys, experiments, and observational studies	
S-IC.3	Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.*
S-IC.4	Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.*
S-IC.5	Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.*
S-IC.6	Evaluate reports based on data.*

* Modeling Standards

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Advanced Mathematics Plus

Advanced Mathematics Plus, a one-credit math course, specifies the mathematics that students should study in order to be college and career ready. The Advanced Mathematics Plus Course includes rigorous mathematical standards that will prepare students for collegiate courses dealing with higher-level trigonometric, algebraic, and calculus concepts. This course was designed to be a fourth year math course. Throughout the duration of this course, teachers should make every effort to ensure the Standards for Mathematical Practice are addressed.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Advanced Mathematics Plus

Number and Quantity

The Complex Number System (N-CN)

Perform arithmetic operations with complex numbers	
N-CN.3	Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers.
Represent complex numbers and their operations on the complex plane	
N-CN.4	Represent complex numbers on the complex plane in rectangular and polar form (including real and imaginary numbers), and explain why the rectangular and polar forms of a given complex number represent the same number.
N-CN.5	Represent addition, subtraction, multiplication, and conjugation of complex numbers geometrically on the complex plane; use properties of this representation for computation. *For example,* $(-1 + \sqrt{3}\,i)^3 = 8$ *because* $(-1 + \sqrt{3}\,i)$ *has modulus 2 and argument 120°.*
N-CN.6	Calculate the distance between numbers in the complex plane as the modulus of the difference, and the midpoint of a segment as the average of the numbers at its endpoints.
Use complex numbers in polynomial identities and equations	
N-CN.8	Extend polynomial identities to the complex numbers. *For example, rewrite* $x^2 + 4$ *as* $(x + 2i)(x - 2i)$.
N-CN.9	Know the Fundamental Theorem of Algebra; show that it is true for quadratic polynomials.

Vector and Matrix Quantities (N-VM)

Represent and model with vector quantities	
N-VM.1	Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., $\boldsymbol{v}$, $\lvert\boldsymbol{v}\rvert$, $\lVert\boldsymbol{v}\rVert$, v).
N-VM.2	Find the components of a vector by subtracting the coordinates of an initial point from the coordinates of a terminal point.
N-VM.3	Solve problems involving velocity and other quantities that can be represented by vectors.

Advanced Mathematics Plus

Perform operations on vectors	
N-VM.4	Add and subtract vectors. a. Add vectors end-to-end, component-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes. b. Given two vectors in magnitude and direction form, determine the magnitude and direction of their sum. c. Understand vector subtraction $\boldsymbol{v} - \boldsymbol{w}$ as $\boldsymbol{v} + (-\boldsymbol{w})$, where $-\boldsymbol{w}$ is the additive inverse of $\boldsymbol{w}$, with the same magnitude as $\boldsymbol{w}$ and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise.
N-VM.5	Multiply a vector by a scalar. a. Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as $c(v_x, v_y) = (cv_x, cv_y)$. b. Compute the magnitude of a scalar multiple $c\boldsymbol{v}$ using $\|\|c\boldsymbol{v}\|\| = \|c\|v$. Compute the direction of $c\boldsymbol{v}$ knowing that when $\|c\|v \neq 0$, the direction of $c\boldsymbol{v}$ is either along $\boldsymbol{v}$ (for $c > 0$) or against $\boldsymbol{v}$ (for $c < 0$).
Perform operations on matrices and use matrices in applications	
N-VM.6	Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.
N-VM.7	Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled.
N-VM.8	Add, subtract, and multiply matrices of appropriate dimensions.
N-VM.9	Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties.
N-VM.10	Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse.
N-VM.11	Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors.
N-VM.12	Work with 2 × 2 matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area.

Algebra

Arithmetic with Polynomials and Rational Expressions (A-APR)

Use polynomial identities to solve problems	
A-APR.5	Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of x and y for a positive integer n, where x and y are any numbers, with coefficients determined for example by Pascal's Triangle.[1]

Advanced Mathematics Plus

Rewrite rational expressions	
A-APR.7	Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.
Reasoning with Equations and Inequalities (A-REI)	
Solve systems of equations	
A-REI.8	Represent a system of linear equations as a single matrix equation in a vector variable.
A-REI.9	Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension 3 × 3 or greater).
Functions	
Interpreting Functions (F-IF)	
Analyze functions using different representations	
F-IF.7	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* d. Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.
Building Functions (F-BF)	
Build a function that models a relationship between two quantities	
F-BF.1	Write a function that describes a relationship between two quantities. * c. Compose functions. *For example, if T(y) is the temperature in the atmosphere as a function of height, and h(t) is the height of a weather balloon as a function of time, then T(h(t)) is the temperature at the location of the weather balloon as a function of time.*
Build new functions from existing functions	
F-BF.4	Find inverse functions. b. Verify by composition that one function is the inverse of another. c. Read values of an inverse function from a graph or a table, given that the function has an inverse. d. Produce an invertible function from a non-invertible function by restricting the domain.
F-BF.5	Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents.

Advanced Mathematics Plus

Trigonometric Functions (F-TF)	
Extend the domain of trigonometric functions using the unit circle	
F-TF.3	Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi/3$, $\pi/4$ and $\pi/6$, and use the unit circle to express the values of sine, cosine, and tangent for $\pi–x$, $\pi+x$, and $2\pi–x$ in terms of their values for x, where x is any real number.
F-TF.4	Use the unit circle to explain symmetry (odd and even) and periodicity of trigonometric functions.
Model periodic phenomena with trigonometric functions	
F-TF.5	Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.*
F-TF.6	Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse to be constructed.
F-TF.7	Use inverse functions to solve trigonometric equations that arise in modeling contexts; evaluate the solutions using technology, and interpret them in terms of the context. *
Prove and apply trigonometric identities	
F-TF.9	Prove the addition and subtraction formulas for sine, cosine, and tangent and use them to solve problems.

Geometry

Similarity, Right Triangles, and Trigonometry (G-SRT)	
Apply trigonometry to general triangles	
G-SRT.9	Derive the formula $A = ½\ ab\ sin(C)$ for the area of a triangle by drawing an auxiliary line from a vertex perpendicular to the opposite side.
G-SRT.10	Prove the Laws of Sines and Cosines and use them to solve problems.
G-SRT.11	Understand and apply the Law of Sines and the Law of Cosines to find unknown measurements in right and non-right triangles (e.g., surveying problems, resultant forces).
Circles (G-C)	
Understand and apply theorems about circles	
G-C.4	Construct a tangent line from a point outside a given circle to the circle.

Advanced Mathematics Plus

Expressing Geometric Properties with Equations (G-GPE)
Translate between the geometric description and the equation for a conic section

G-GPE.3	Derive the equations of ellipses and hyperbolas given the foci, using the fact that the sum or difference of distances from the foci is constant.
Geometric Measurement and Dimension (G-GMD)	
Explain volume formulas and use them to solve problems	
G-GMD.2	Give an informal argument using Cavalieri's principle for the formulas for the volume of a sphere and other solid figures.

Statistics and Probability *

Conditional Probability and the Rules of Probability (S-CP)	
Use the rules of probability to compute probabilities of compound events in a uniform probability model	
S-CP.8	Apply the general Multiplication Rule in a uniform probability model, P(A and B) = P(A)P(B|A) = P(B)P(A|B), and interpret the answer in terms of the model.*
S-CP.9	Use permutations and combinations to compute probabilities of compound events and solve problems.*
Using Probability to Make Decisions (S-MD)	
Calculate expected values and use them to solve problems	
S-MD.1	Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions.*
S-MD.2	Calculate the expected value of a random variable; interpret it as the mean of the probability distribution.*
S-MD.3	Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. *For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes.**
S-MD.4	Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. *For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?**

Advanced Mathematics Plus

Use probability to evaluate outcomes of decisions	
S-MD.5	Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values. * a. Find the expected payoff for a game of chance. *For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant*. b. Evaluate and compare strategies on the basis of expected values. *For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.**
S-MD.6	Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).*
S-MD.7	Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).*

[1] The Binomial Theorem can be proved by mathematical induction or by a combinatorial argument.

* Modeling Standards

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Algebra III

Algebra III, a one-credit course, includes content standards from the *2007 Mississippi Mathematics Framework Revised* Pre-Calculus course and the Mississippi College- and Career-Readiness Standards for Mathematics; and covers those skills and objectives necessary for success in courses higher than Algebra II and Integrated Mathematics III. Topics of study include sequences and series, functions, and higher order polynomials. Polynomial functions provide the context for higher-order investigations. Topics are addressed from a numeric, graphical, and analytical perspective. Technology is to be used to enhance presentation and understanding of concepts. The instructional approach should provide opportunities for students to work together collaboratively and cooperatively as they solve routine and non-routine problems. Communication strategies should include reading, writing, speaking, and critical listening as students present and evaluate mathematical arguments, proofs, and explanations about their reasoning. Algebra III is typically taken by students who have successfully completed Algebra II and Geometry.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

.

Algebra III

Number and Quantity

Explore and illustrate the characteristics and operations connecting sequences and series	
1	Express sequences and series using recursive and explicit formulas.
2	Evaluate and apply formulas for arithmetic and geometric sequences and series.
3	Calculate limits based on convergent and divergent series.
4	Evaluate and apply infinite geometric series.
5	Extend the meaning of exponents to include rational numbers.
6	Simplify expressions with fractional exponents to include converting from radicals.
7	Factor algebraic expressions containing fractional exponents.

Algebra

Analyze and manipulate functions	
8	Determine characteristics of graphs of parent functions (domain/range, increasing/decreasing intervals, intercepts, symmetry, end behavior, and asymptotic behavior).
9	Determine the end behavior of polynomial functions.
Use polynomial identities to solve problems	
10	Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2)^2 = (x^2 – y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.
11	Verify the Binomial Theorem by mathematical induction or by a combinatorial argument.
12	Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of x and y for a positive integer n, where x and y are any numbers, with coefficients determined for example by Pascal's Triangle.
13	Write rational expressions in simplest form. (*For e*xample $\frac{x^3 - x^2 - x + 1}{x^3 + x^2 - x - 1} = \frac{x - 1}{x + 1}$).
14	Decompose a rational function into partial fractions.
15	Determine asymptotes and holes of rational functions, explain how each was found, and relate these behaviors to continuity.
Perform operations on expressions, equations, inequalities and polynomials	
16	Add, subtract, multiply and divide rational expressions.
17	Solve polynomial and rational inequalities. Relate results to the behavior of the graphs.

Algebra III

18	Find the composite of two given functions and find the inverse of a given function. Extend this concept to discuss the identity function f(x) = x.
19	Simplify complex algebraic fractions (with/without variable expressions and integer exponents) to include expressing $\frac{f(x+h)-f(x)}{h}$ as a single simplified fraction when f(x) = $\frac{1}{1-x}$ for example.
20	Find the possible rational roots using the Rational Root Theorem.
21	Find the zeros of polynomial functions by synthetic division and the Factor Theorem.
22	Graph and solve quadratic inequalities.

Functions

	Analyze functions using different representations
23	Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.
24	Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.
	Build a function that models a relationship between two quantities
25	Compose functions. *For example, if T(y) is the temperature in the atmosphere as a function of height, and h(t) is the height of a weather balloon as a function of time, then T(h(t)) is the temperature at the location of the weather balloon as a function of time.*
	Build new functions from existing functions
26	Verify by composition that one function is the inverse of another.
27	Read values of an inverse function from a graph or a table, given that the function has an inverse.
28	Produce an invertible function from a non-invertible function by restricting the domain.
29	Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents.
	Extend the domain of trigonometric functions using the unit circle
30	Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi/3$, $\pi/4$ and $\pi/6$, and use the unit circle to express the values of sine, cosine, and tangent for $\pi-x$, $\pi+x$, and $2\pi-x$ in terms of their values for x, where x is any real number.
31	Use the unit circle to explain symmetry (odd and even) and periodicity of trigonometric functions.

Algebra III

	Model periodic phenomena with trigonometric functions
32	Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.*
33	Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse to be constructed.
34	Use inverse functions to solve trigonometric equations that arise in modeling contexts; evaluate the solutions using technology, and interpret them in terms of the context.
	Prove and apply trigonometric identities
35	Prove the addition and subtraction formulas for sine, cosine, and tangent and use them to solve problems.
36	Prove the Pythagorean identity $\sin^2(\theta) + \cos^2(\theta) = 1$ and use it to find $\sin(\theta)$, $\cos(\theta)$, or $\tan(\theta)$ given $\sin(\theta)$, $\cos(\theta)$, or $\tan(\theta)$ and the quadrant of the angle.

Geometry

	Recognize, sketch, and transform graphs of functions
37	Graph piecewise defined functions and determine continuity or discontinuities.
38	Describe the attributes of graphs and the general equations of parent functions (linear, quadratic, cubic, absolute value, rational, exponential, logarithmic, square root, cube root, and greatest integer).
39	Explain the effects of changing the parameters in transformations of functions.
40	Predict the shapes of graphs of exponential, logarithmic, rational, and piece-wise functions, and verify the prediction with and without technology.
41	Relate symmetry of the behavior of even and odd functions.
	Apply trigonometry to general triangles
42	Derive the formula $A = 1/2\ ab \sin(C)$ for the area of a triangle by drawing an auxiliary line from a vertex perpendicular to the opposite side.
43	Prove the Laws of Sines and Cosines and use them to solve problems.
44	Understand and apply the Law of Sines and the Law of Cosines to find unknown measurements in right and non-right triangles (e.g., surveying problems, resultant forces).

Statistics and Probability

	Explore and apply fundamental principles of probability.
45	Analyze expressions in summation and factorial notation to solve problems.
46	Prove statements using mathematical induction.

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—Calculus

Calculus, a one-credit course, includes content standards from the *2007 Mississippi Mathematics Framework Revised.* This course focuses on the mathematics of change. The major focus is on differential and integral calculus. The use of graphing calculators and other technologies are major components of the course. The instructional approach should provide opportunities for students to work together collaboratively and cooperatively as they solve routine and non-routine problems. Communication strategies should include reading, writing, speaking, and critical listening as students present and evaluate mathematical arguments, proofs, and explanations about their reasoning. This one-credit course is designed for the student who has been successful in Algebra II, Integrated Mathematics III, or Algebra III.

The content of this document is centered on the mathematics domains of **Counting and Cardinality** (Grade K), **Operations and Algebraic Thinking; Numbers and Operations in Base Ten** (Grades K-5); **Numbers and Operations—Fractions** (Grades 3-5); **Measurement and Data** (Grades K-5); **Ratios and Proportional Relationships** (Grades 6-7); **the Number System, Expressions & Equations, Geometry, Statistics & Probability** (Grades 6-8); **Functions** (Grade 8), and the high school conceptual categories of **Number and Quantity**, **Algebra**, **Functions**, **Modeling, Geometry**, and **Statistics & Probability**. Instruction in these domains and conceptual categories should be designed to expose students to experiences, which reflect the value of mathematics, to enhance students' confidence in their ability to do mathematics, and to help students communicate and reason mathematically.

Calculus

Number and Quantity

Compute and determine the reasonableness of results in mathematical and real world situations	
1	Estimate limits from graphs or tables.
2	Estimate numerical derivatives from graphs or tables of data.
3	Prove statements using mathematical induction.

Algebra

Demonstrate basic knowledge of functions, including their behavior and characteristics	
4	Predict and explain the characteristics and behavior of functions and their graphs (domain, range, increasing/decreasing intervals, intercepts, symmetry, and end behavior).
5	Investigate, describe, and determine asymptotic behavior using tables, graphs, and analytical methods
6	Determine and justify the continuity and discontinuity of functions
Evaluate limits and communicate an understanding of the limiting process	
7	Solve mathematical situations and application problems involving or using derivatives, including exponential, logarithmic, and trigonometric functions.
8	Calculate limits using algebraic methods.
9	Verify the behavior and direction of non-determinable limits.
Use the definition and formal rules of differentiation to compute derivatives	
10	State and apply the formal definition of a derivative.
11	Apply differentiation rules to sums, products, quotients, and powers of functions.
12	Use the chain rule and implicit differentiation.
13	Describe the relationship between differentiability and continuity.
Apply derivatives to find solutions in a variety of situations	
15	Define a derivative and explain the purpose/utility of the derivative.
16	Apply the derivative as a rate of change in varied contexts, including velocity, speed, and acceleration.
17	Apply the derivative to find tangent lines and normal lines to given curves at given points.
18	Predict and explain the relationships between functions and their derivatives.
19	Model rates of change to solve related rate problems.
20	Solve optimization problems.

Calculus

Employ various integration properties and techniques to evaluate integrals	
21	State and apply the First and Second Fundamental Theorem of Calculus.
22	Apply the power rule and u-substitution to evaluate indefinite integrals.

Geometry

Use geometric concepts to gain insights into, answer questions about, and graph various implications of differentiation	
23	Demonstrate and explain the differences between average and instantaneous rates of change.
24	Apply differentiation techniques to curve sketching
25	Apply Rolle's Theorem and the Mean Value Theorem and their geometric consequences.
26	Identify and apply local linear approximations.
27	Analyze curves with attention to non-decreasing functions (monotonicity) and concavity.

Statistics and Probability

Adapt integration methods to model situations to problems	
28	Apply integration to solve problems of area.
29	Utilize integrals to model and find solutions to real-world problems such as calculating displacement and total distance traveled.
Apply appropriate techniques, tools, and formulas to determine values for the definite integral	
30	Interpret the concept of definite integral as a limit of Riemann sums over equal subdivisions.

5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

High School—SREB Math Ready

The Southern Region Education Board (SREB) Math Ready Course, a one-credit course, is designed to assist students who are in need of a fourth year mathematics preparatory course prior to entering college. This course is best suited for students who have not mastered skills needed for Advanced Placement courses. The course is built with rigor, innovative instructional strategies, and a concentration on contextual learning that departs from procedural memorization and focuses on engaging the students in a real-world context. In short, this course targets students with weaknesses and college-ready skill gaps and re-educates them in new ways to ensure they are prepared for postsecondary-level mathematics.

The Math Ready course focuses on the key readiness standards from the *MS CCRS,* as well as, the eight Standards for Mathematical Practice needed for students to be ready to undertake postsecondary academic or career preparation in non-STEM fields or majors. The course addresses content standards taught throughout high school, including content from Algebra I, Geometry, and Algebra II that are essential for college and careers.

The SREB Math Ready Course consists of seven mandatory modules (or units): algebraic expressions, equations, measurement and proportional reasoning, linear functions, linear systems of equations, quadratic functions, exponential functions, and an optional module on summarizing and interpreting statistical data. While this course covers the basics in math practices and reviews the procedural steps needed to be successful in math, it is designed to be taught in a new, engaging way based heavily on conceptual teaching and learning. Eight units comprise this course. They are described below.

Unit 1: Algebraic Expressions
The algebraic expressions unit was designed to solidify student understanding of expressions while providing the students with an opportunity to have success early in the course. The recurring theme integrated in this unit focuses on engaging students using and expanding the concepts found within purposefully chosen activities. Through guided lessons, students will manipulate, create and analyze algebraic expressions, and look at the idea of whether different sets of numbers are closed under certain operations.

Unit 2: Equations
The equations unit calls for students to construct and evaluate problems that involve one or two steps while seeking understanding of how and why equations and inequalities are used in their daily lives. Students also use the structure of word problems and equations to rewrite and solve equations in different forms revealing different relationships.

High School—SREB Math Ready (continued)

Unit 3: Measurement and Proportional Reasoning
This unit deals with unit conversions, using proportions for scaling, and area and volume. The unit requires higher-order thinking and number sense in order to get to the true intent of the standards covered. It is useful in helping students make connections with math and science or other subjects.

Unit 4: Linear Functions
This unit takes students back to the foundation of all high school mathematics—an in-depth study of linear functions. Along with allowing students to differentiate between relations that are functions and those that are not, the unit helps students specifically examine characteristics of linear functions. By looking closely at linear functions in multiple forms, students are expected to graph and write equations, as well as interpret their meaning in context of the slope and y-intercept. Students conclude with a project allowing them to collect their own data and write a line of best fit from that data.

Unit 5: Linear Systems of Equations
The systems unit deals with solving systems of linear equations. This involves helping students classify solutions (one, none or infinitely many), as well as set up and solve problems using systems of equations. Students also choose the best way to solve a system of equations and explain their solutions.

Unit 6: Quadratic Functions
This unit is an expansive look at quadratic functions: their graphs, tables and algebraic functions. It stresses multiple approaches to graphing, solving and understanding quadratics, as students explore, make conjectures and draw conclusions in group-work settings. In this unit, students explore and learn from multiple applications of quadratics. The unit assumes students have seen quadratics before but may not have a concrete, transferrable understanding of quadratic functions. The unit does not cover algebraic manipulations (multiplying and factoring), as these are addressed in previous units.

Unit 7: Exponential Functions
This unit develops students' fluency in exponential functions through varying real-life financial applications/inquiries.

Unit 8: Summarizing and Interpreting Statistical Data (*optional*)
In this unit, students further develop skills to read, analyze, and communicate (using words, tables, and graphs) relationships and patterns found in data sets of one or more variables. Students learn how to choose the appropriate statistical tools and measurements to assist in analysis, communicate results, and read and inter interpret graphs, measurements, and formulas which are crucial skills in a world overflowing with data. Students explore these concepts while modeling real contexts based on data they collect.

School districts that are interested in offering this course should visit **http://www.sreb.org/page/1684/math_ready.html** to review and download course materials.

High School—Advanced Placement (AP)

Calculus AB
Calculus BC

*Note: Since AP Course Descriptions are updated regularly, please visit AP Central® (**apcentral.collegeboard.org**) to determine whether a more recent Course Description is available.*

AP courses in Calculus consist of a full high school academic year of work, and are one-credit courses comparable to calculus courses in colleges and universities. It is expected that students who take an AP course in calculus will seek college credit, college placement, or both from institutions of higher learning.

The AP Program includes specifications for two calculus courses and the exam for each course. The two courses and the two corresponding exams are designated as Calculus AB and Calculus BC.

Calculus AB can be offered as an AP course by any school that can organize a curriculum for students with mathematical ability. Calculus AB is designed to be taught over a full high school academic year. It is possible to spend some time on elementary functions and still teach the Calculus AB curriculum within a year. However, if students are to be adequately prepared for the Calculus AB Exam, most of the year must be devoted to the topics in differential and integral calculus. These topics are the focus of the AP Exam questions.

Calculus BC is a full-year course in the calculus of functions of a single variable. It includes all topics taught in Calculus AB plus additional topics, but both courses are intended to be challenging and demanding; they require a similar depth of understanding of common topics.

A *Calculus AB* subscore is reported based on performance on the portion of the Calculus BC Exam devoted to Calculus AB topics. Both courses described here represent college-level mathematics for which most colleges grant advanced placement and/or credit. Most colleges and universities offer a sequence of several courses in calculus, and entering students are placed within this sequence according to the extent of their preparation, as measured by the results of an AP Exam or other criteria. Appropriate credit and placement are granted by each institution in accordance with local policies.

The content of *Calculus BC* is designed to qualify the student for placement and credit in a course that is one course beyond that granted for Calculus AB. Many colleges provide statements regarding their AP policies in their catalogs and on their websites.

High School—Advanced Placement (AP) (continued)

Calculus AB
Calculus BC

Success in AP Calculus is closely tied to the preparation students have had in courses leading up to their AP courses. Students should have demonstrated mastery of material from courses that are the equivalent of four full years of high school mathematics before attempting calculus. These courses should include the study of algebra, geometry, coordinate geometry, and trigonometry, with the fourth year of study including advanced topics in algebra, trigonometry, analytic geometry, and elementary functions. Even though schools may choose from a variety of ways to accomplish these studies — including beginning the study of high school mathematics in grade 8; encouraging the election of more than one mathematics course in grade 9, 10, or 11; or instituting a program of summer study or guided independent study — it should be emphasized that eliminating preparatory course work in order to take an AP course is not appropriate.

Calculus AB and Calculus BC are primarily concerned with developing the students' understanding of the concepts of calculus and providing experience with its methods and applications. The courses emphasize a multi-representational approach to calculus, with concepts, results, and problems being expressed graphically, numerically, analytically, and verbally. The connections among these representations also are important.

Technology should be used regularly by students and teachers to reinforce the relationships among the multiple representations of functions, to confirm written work, to implement experimentation, and to assist in interpreting results. Through the use of the unifying themes of derivatives, integrals, limits, approximation, and applications and modeling, the course becomes a cohesive whole rather than a collection of unrelated topics. These themes are developed using all the functions listed in the prerequisites.

Goals of AP Calculus AB and AP Calculus BC:

- Students should be able to work with functions represented in a variety of ways: graphical, numerical, analytical, or verbal. They should understand the connections among these representations.

- Students should understand the meaning of the derivative in terms of a rate of change and local linear approximation, and should be able to use derivatives to solve a variety of problems.

- Students should understand the meaning of the definite integral both as a limit of Riemann sums and as the net accumulation of change, and should be able to use integrals to solve a variety of problems.

High School—Advanced Placement (AP) (continued)

Calculus AB
Calculus BC

- Students should understand the relationship between the derivative and the definite integral as expressed in both parts of the Fundamental Theorem of Calculus.

- Students should be able to communicate mathematics and explain solutions to problems both verbally and in written sentences.
- Students should be able to model a written description of a physical situation with a function, a differential equation, or an integral.

- Students should be able to use technology to help solve problems, experiment, interpret results, and support conclusions.

- Students should be able to determine the reasonableness of solutions, including sign, size, relative accuracy, and units of measurement.

- Students should develop an appreciation of calculus as a coherent body of knowledge and as a human accomplishment.

High School—Advanced Placement (AP) Statistics

*Note: Since AP Course Descriptions are updated regularly, please visit AP Central® (**apcentral.collegeboard.org**) to determine whether a more recent Course Description is available.*

The AP statistics course, a one-credit course, introduces students to the major concepts and tools for collecting, analyzing and drawing conclusions from data. Students are exposed to four broad conceptual themes:

1. Exploring Data: Describing patterns and departures from patterns
2. Sampling and Experimentation: Planning and conducting a study
3. Anticipating Patterns: Exploring random phenomena using probability and simulation
4. Statistical Inference: Estimating population parameters and testing hypotheses

Students who successfully complete the course and exam may receive credit, advanced placement or both for a one-semester introductory college statistics course. This does not necessarily imply that the high school course should be one semester long. Each high school needs to determine the length of its AP Statistics course to best serve the needs of its students. The four themes are described below.

I. **Exploratory analysis of data makes use of graphical and numerical techniques to study patterns and departures from patterns**.
In examining distributions of data, students should be able to detect important characteristics, such as shape, location, variability and unusual values. From careful observations of patterns in data, students can generate conjectures about relationships among variables. The notion of how one variable may be associated with another permeates almost all of statistics, from simple comparisons of proportions
through linear regression. The difference between association and causation must accompany this conceptual development throughout.

II. Data must be collected according to a well-developed plan if valid information is to be obtained.
If data are to be collected to provide an answer to a question of interest, a careful plan must be developed. Both the type of analysis that is appropriate and the nature of conclusions that can be drawn from that analysis depend in a critical way on how the data was collected. Collecting data in a reasonable way, through either sampling or experimentation, is an essential step in the data analysis process.

III. Probability is the tool used for anticipating what the distribution of data should look like under a given model.
Random phenomena are not haphazard: they display an order that emerges only in the long run and is described by a distribution. The mathematical description

High School—Advanced Placement (AP) Statistics (continued)

of variation is central to statistics. The probability required for statistical inference is not primarily axiomatic or combinatorial but is oriented toward using probability distributions to describe data.

IV. Statistical inference guides the selection of appropriate models.
Models and data interact in statistical work: models are used to draw conclusions from data, while the data are allowed to criticize and even falsify the model through inferential and diagnostic methods. Inference from data can be thought of as the process of selecting a reasonable model, including a statement in probability language, of how confident one can be about the selection.

Compensatory Mathematics Course Description

Students in need of instructional support, intervention or remediation may be enrolled in a Compensatory Mathematics course under the following stipulations: The Compensatory mathematics course:

1. must be taken in concert with a credit-bearing course at the same grade level;
2. includes content supportive of the accompanying credit-bearing course;
3. should make every attempt to incorporate the Standards for Mathematical Practice; and
4. may be taken as an elective, but **will not** satisfy the number of mathematics Carnegie units required for graduation.

Foundations of Algebra Course

Foundations of Algebra is a one-math credit course offered only to 9th grade students. The primary purpose of the *Foundations of Algebra* course is to provide a basis for curriculum development for rising 9t grade students in need of substantial support prior to taking Algebra I. The content of the *Foundations of* Algebra course focuses on equations, inequalities, functions, polynomials, geometry, and statistics as well as the standards of mathematical practice. The standards for this course were developed based on core content that should have been mastered by the end of the grade 8 and key skills that will be introduced in Algebra I. These standards are indicated in red font.

Additional standards have been developed to ensure conceptual understanding. Students who have already successfully completed Algebra I may not take this course. Teachers of this course are encouraged to incorporate real-world contexts, appropriate manipulatives, and technology to assist students in developing the conceptual understanding needed to master course content.

Foundations of Algebra Course

Equations and Inequalities	
1	Interpret key features of an expression (i.e., terms, factors, and coefficients). (A-SSE.1a)
2	Create expressions that can be modeled by a real-world context.
3	Use the structure of an expression to identify ways to rewrite it. (A-SSE.2)
4	Simplify and evaluate numerical and algebraic expressions. (7.EE.1)
5	Compare and contrast an expression and an equation and give examples of each.
6	Given an equation, solve for a specified variable of degree one (i.e. *isolate a variable*). (6.EE.7, 7.EE.4)
7	Fluently solve and check multi-step equations and inequalities with an emphasis on the distributive property, variables on both sides, and rational coefficients. Explain each step when solving a multi-step equation and inequality. Justify each step using the properties of real numbers.
8	Solve word problems leading to equations of the form $px + q = r$ and $p(x + q) = r$, where p, q, and r are specific rational numbers. Solve equations of these forms fluently. (7.EE.4a)
9	Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$, where p, q, and r are specific rational numbers. Solve inequalities of these forms fluently. (7.EE.4b)
10	Graph the solution point of an equation and the solution set of an inequality in one variable on a horizontal number line. For inequalities, be able to interpret and write the solution set in a variety of ways (e.g., set notation).
11	Justify when linear equations in one variable will yield one solution, infinitely many solutions, or no solution. (8.EE.7a)
Functions	
12	Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. Use function notation, where appropriate. (F-IF.1, F-IF.2)
13	Compare and contrast a function and a relation. Use appropriate strategies to assess whether a given situation represents a function or a relation (e.g,. the vertical line test).
14	Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. (F-IF.7)
15	Determine the rate of change of a linear function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. (8.F.4) Use the rate of change to determine if two lines are parallel, perpendicular, or neither.
16	Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values. (8.F.4)
17	Create and graph the equation of a linear function given the rate of change and y-intercept. Compare and contrast up to three linear functions written in a various forms (i.e., point-slope, slope-intercept, standard form).
18	Given two points, a graph, a table of values, a mapping, or a real-world context determine the linear function that models this information. Fluently convert between the point-slope, slope-intercept, and standard form of a line.

Foundations of Algebra Course

19	Create and identify the parent function for linear and quadratic functions in the Coordinate Plane.
20	Compare the properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.* (Limited to linear and quadratic functions only.) (8.F.2)
21	Describe the following characteristics of linear and quadratic parent functions by inspection: domain/range, increasing/decreasing intervals, intercepts, symmetry, and asymptotic behavior. Identify each characteristic in set notation or words, where appropriate. (Algebra III, standard 8)
22	Graph a system of two functions, *f(x)* and *g(x)*, on the same Coordinate Plane by hand for simple cases, and with technology for complicated cases. Explain the relationship between the point(s) of intersection and the solution to the system. Determine the solution(s) using technology, a tables of values, substitution, or successive approximations. (Limited to linear and quadratic functions only.) (8.EE.7b, A-REI.6, A-REI.11)
23	With accuracy, graph the solutions to a linear inequality in two variables as a half-plane, and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes on the same Coordinate Plane. (A-REI.12) Construct graphs of linear inequalities and systems of linear inequalities without technology. Use appropriate strategies to verify points that may or may not belong to the solution set.
24	Identify real-world contexts that can be modeled by a system of inequalities in two variables. (Limited to three inequalities.)
25	Identify when systems of equations and inequalities have constraints. (A-CED.3)
26	Perform simple translations on linear functions given in a variety of forms (e.g., two points, a graph, a table of values, a mapping, slope-intercept form, or standard form). Explain the impact on the parent function when the slope is greater than one or less than one and the effect of increasing/decreasing the y-intercept.
27	Given the graph of function in the form $f(x) + k$, $kf(x)$, $f(kx)$, or $f(x + k)$, where k belongs to the set of integers, identify the domain/range, increasing/decreasing intervals, intercepts, symmetry, and asymptotic behavior, where appropriate. (F-BF.3) Identify each characteristic in set notation or as an inequality, where appropriate. (Limited to linear and quadratic functions only.)
28	Identify and graph real-world contexts that can be modeled by a quadratic equation.
29	Solve quadratic equations in standard form by factoring, graphing, tables, and the Quadratic Formula. Know when the Quadratic Formula might yield complex solutions and the location of the solutions in relationship to the x-axis. Know suitable alternatives for the terminology "*solution of a quadratic"* and when each is appropriate to use.
30	Understand the relationship between the constants of a quadratic equation and the attributes of the graph. Recognize the relationship between the value of the discriminant and the type and number of solutions (i.e., *predict the characteristics of a graph given the equation*).

Polynomials

31	Describe and identify a polynomial of degree one, two, three and four by examining a polynomial expression or a graph.

Foundations of Algebra Course

32	Add and subtract polynomials using appropriate strategies (e.g. by using Algebra Tiles).
33	Factor polynomials using the greatest common factor and factor quadratics that have only rational zeros.
34	Justify why some polynomials are prime over the rational number system.
35	Use the zeros of a polynomial to construct a rough graph of the function. (A-APR.3)
	Geometry
36	Explain and apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions. (8.G.7)
37	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system. (8.G.8)
38	Fluently use formulas and/or appropriate measuring tools to find length and angle measures, perimeter, area, volume, and surface area of polygons, circles, spheres, cones, cylinders, pyramids, and composite or irregular figures. Use them to solve real-world and mathematical problems. (8.G.9)
39	Solve real-world and mathematical problems involving two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms. (7.G.6,)
	Statistics
40	Without technology, fluently calculate the measures of central tendency (mean, median, mode), measures of spread (range, interquartile range), and understand the impact of extreme values (outliers) on each of these values. (6.SP.5, 8.SP.1, S-ID.3) Justify which measure is appropriate to use when describing a data set or a real-world context.
41	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association. (8.SP.1)
42	Know when it is and is not appropriate to use a linear model to make predictions about a data set beyond a given set of values. Explain extrapolation and interpolation and the impact both have on predicted values.
43	For scatter plots that suggest a linear association, informally fit a straight line and predict the equation for the line of best fit. (8.SP.2)
44	Justify the relationship between the correlation coefficient and the rate of change for the line of best fit.
45	Understand the difference between correlation and causation and identify real-world contexts that depict each of them. (S-ID.9)

.

Foundations of Algebra Course

Additional Resource

2016 Mississippi College- and Career-Standards Scaffolding Document

The primary purpose of the *2016 Mississippi College- and Career-Readiness Standards Scaffolding Document* is to provide teachers with a deeper understanding of the Standards as they plan for classroom instruction. Based on the 2016 Mississippi College- and Career-Readiness Standards for Mathematics, this document provides a close analysis of the requirements for student mastery. Because of the rigor and depth of the Standards, scaffolding instruction to meet the needs of all learners is essential to individual success. The Scaffolding Document will aid teachers' understanding of how to teach the Standards through a natural progression of student mastery. The Scaffolding Document can be found at **http://www.mde.k12.ms.us/ESE/ccr**.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

MISSISSIPPI

EDUCATION
Ensuring a bright future for every child

Glossary

Glossary

Note: The words that are defined here pertain to courses derived from the *Mississippi College- and Career-Readiness Standards* for Mathematics.

- **Absolute value**. The distance a number is from zero. Distance is expressed as a positive value.
- **Addend**. A number that is added to another.
- **Addition and subtraction within 5, 10, 20, 100, or 1000**. Addition or subtraction of two whole numbers with whole number answers, and with sum or minuend in the range 0-5, 0-10, 0-20, or 0-100, respectively. Example: 8 + 2 = 10 is an addition within 10, 14 – 5 = 9 is a subtraction within 20, and 55 – 18 = 37 is a subtraction within 100.
- **Additive inverses**. Two numbers whose sum is 0 are additive inverses of one another. Example: 3/4 and – 3/4 are additive inverses of one another because 3/4 + (– 3/4) = (– 3/4) + 3/4 = 0.
- **Algebra**. The part of mathematics in which patterns and properties of numbers are generalized using variables in expressions, equations, and formulas.
- **Associative property of addition**. See Table 3 in this Glossary.
- **Associative property of multiplication**. See Table 3 in this Glossary.
- **Bivariate data**. Pairs of linked numerical observations. Example: a list of heights and weights for each player on a football team.
- **Box plot**. (Also called a box-and-whisker plot) A method of visually displaying a distribution of data values by using the median, quartiles, and extremes of the data set. A box shows the middle 50% of the data.[1]
- **Coefficient**. The multiplicative factor of a term.
- **Commutative property**. See Table 3 in this Glossary.
- **Complex fraction**. A fraction A/B where A and/or B are fractions (B nonzero).
- **Computation algorithm**. A set of predefined steps applicable to a class of problems that gives the correct result in every case when the steps are carried out correctly. *See also:* computation strategy.

Glossary (continued)

- **Computation strategy**. Purposeful manipulations that may be chosen for specific problems, may not have a fixed order, and may be aimed at converting one problem into another. *See also:* computation algorithm.

- **Congruent**. Two plane or solid figures are congruent if one can be obtained from the other by rigid motion (a sequence of rotations, reflections, and translations).

- **Constant**. Any well-defined real number in an expression or equation that has a fixed value. For example, in the equation x + 5 = 9, 5 and 9 are both constants.

- **Counting on**. A strategy for finding the number of objects in a group without having to count every member of the group. For example, if a stack of books is known to have 8 books and 3 more books are added to the top, it is not necessary to count the stack all over again. One can find the total by *counting on*—pointing to the top book and saying "eight," following this with "nine, ten, eleven. There are eleven books now."

- **Difference**. The result of removing a quantity from a set. The difference describes how much one quantity differs from another quantity. For example, in the equation 10 – 2 = 8, 8 is the difference.

- **Dilation**. A transformation that moves each point along the ray through the point emanating from a fixed center, and multiplies distances from the center by a common scale factor.

- **Dividend**. The quantity to be divided.

- **Divisor**. The quantity by which another quantity, the dividend, is to be divided.

- **Dot plot.** *See:* line plot.

- **Expanded form**. A multi-digit number is expressed in expanded form when it is written as a sum of single-digit multiples of powers of ten. For example, 643 = 600 + 40 + 3.

- **Expected value.** For a random variable, the weighted average of its possible values, with weights given by their respective probabilities.

- **First quartile**. For a data set with median *M*, the first quartile is the median of the data values less than *M*. Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the first quartile is 6.[2] *See also:* median, third quartile, interquartile range.

Glossary (continued)

- **Fraction**. A number expressible in the form *a*/*b* where *a* is a whole number and *b* is a positive whole number. (The word *fraction* in these standards always refers to a non-negative number.) *See also:* rational number.

- **Identity property of 0**. See Table 3 in this Glossary.

- **Independently combined probability models**. Two probability models are said to be combined independently if the probability of each ordered pair in the combined model equals the product of the original probabilities of the two individual outcomes in the ordered pair.

- **Integer**. A number expressible in the form *a* or –*a* for some whole number *a*.

- **Interquartile Range**. A measure of variation in a set of numerical data, the interquartile range is the distance between the first and third quartiles of the data set. Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the interquartile range is 15 – 6 = 9. *See also:* first quartile, third quartile.

- **Line plot**. A method of visually displaying a distribution of data values where each data value is shown as a dot or mark above a number line. Also known as a dot plot.[3]

- **Mean**. A measure of center in a set of numerical data, computed by adding the values in a list and then dividing by the number of values in the list. [4] *Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the mean is 21.*

- **Measures of Center**. A measure of central tendency is a value that attempts to describe a set of data by identifying the central position of the data set (as representative of a "typical" value in the set). The measures of central tendency are called the mean, median, and mode.

- **Measures of Variability**. A measure that describes how spread out or scattered a set of data is. It is also known as measures of dispersion or measures of spread. Some measures of variation are called the range, interquartile range, and standard deviation.

- **Median**. A measure of center in a set of numerical data. The median of a list of values is the value appearing at the center of a sorted version of the list—or the mean of the two central values, if the list contains an even number of values. Example: For the data set {2, 3, 6, 7, 10, 12, 14, 15, 22, 90}, the median is 11.

- **Midline**. In the graph of a trigonometric function, the horizontal line halfway between its maximum and minimum values.

Glossary (continued)

- **Minuend**. A quantity from which another is to be subtracted. For example, in the equation 10 – 2 = 8, 10 is the minuend.

- **Mode**. The number which appears most often in a set of data.

- **Multiplication and division within 100**. Multiplication or division of two whole numbers with whole number answers, and with product or dividend in the range 0-100. Example: 72 ÷ 8 = 9.

- **Multiplicative inverses**. Two numbers whose product is 1 are multiplicative inverses of one another. Example: 3/4 and 4/3 are multiplicative inverses of one another because 3/4 × 4/3 = 4/3 × 3/4 = 1.

- **Number line diagram.** A diagram of the number line used to represent numbers and support reasoning about them. In a number line diagram for measurement quantities, the interval from 0 to 1 on the diagram represents the unit of measure for the quantity.

- **Percent rate of change.** A rate of change expressed as a percent. Example: if a population grows from 50 to 55 in a year, it grows by 5/50 = 10% per year.

- **Polygon**. A plane, closed two-dimensional figure formed by segments that do not cross. Some examples include: triangles, rectangles, and pentagons.

- **Probability**. A number between 0 and 1 used to quantify likelihood for processes that have uncertain outcomes (such as tossing a coin, selecting a person at random from a group of people, tossing a ball at a target, or testing for a medical condition).

- **Probability distribution.** The set of possible values of a random variable with a probability assigned to each.

- **Probability model.** A probability model is used to assign probabilities to outcomes of a chance process by examining the nature of the process. The set of all outcomes is called the sample space, and their probabilities sum to 1. *See also:* uniform probability model.

- **Product**. The result when two or more numbers are multiplied together.

- **Properties of equality**. See Table 4 in this Glossary.

- **Properties of inequality**. See Table 5 in this Glossary.

- **Properties of operations**. See Table 3 in this Glossary.

Glossary (continued)

- **Quadrilateral**. A polygon formed by four lines segments.

- **Qualitative data**. Qualitative data is information that describes something, usually characteristics or categories relating to, measuring, or measured by the quality of something rather than its quantity.

- **Quantitative data**. Quantitative data is data expressing a certain quantity, amount, or range. Usually, there are measurements of units relating to, measuring, or measured by the quantity of something rather than its quality.

- **Quantity**. How much there is of something.

- **Quotient**. The result of division. Division is the determination of how many groups can be formed or how many are in each group.

- **Random variable.** An assignment of a numerical value to each outcome in a sample space.

- **Rational expression.** A quotient of two polynomials with a non-zero denominator.

- **Rational number**. A number expressible in the form a/b or $-a/b$ for some fraction a/b. The rational numbers include the integers.

- **Rectangle**. A quadrilateral and/or parallelogram where every angle is a right angle.

- **Rectilinear figure.** A polygon all angles of which are right angles.

- **Regular Polygon.** A polygon is “regular” only when all angles are equal and all sides are equal. Otherwise, it is an *irregular polygon*.

- **Reflection**. A rigid transformation in which the resulting figure (image) is the mirror image of the original figure (pre-image). A transformation where each point in a shape appears at an equal distance on the opposite side of a given the line of reflection.

- **Repeating decimal**. The decimal form of a rational number. *See also:* terminating decimal.

- **Rhombus**. A quadrilateral and/or equilateral parallelogram; a plane two-dimensional figure with opposite sides parallel and opposite angles parallel. Plural rhombi or rhombuses.

Glossary (continued)

- **Rigid motion**. A transformation of points in space consisting of a sequence of one or more translations, reflections, and/or rotations. Rigid motions are here assumed to preserve distances and angle measures.

- **Rotation**. A rigid transformation where a figure is turned about a given, fixed point.

- **Sample space.** In a probability model for a random process, a list of the individual outcomes that are to be considered.

- **Scatter plot**. A graph in the coordinate plane representing a set of bivariate data. For example, the heights and weights of a group of people could be displayed on a scatter plot.[5]

- **Similarity transformation**. A rigid motion followed by a dilation.

- **Square**. An equilateral, equiangular parallelogram; a plane two-dimensional, four-sided regular polygon with all sides equal and all internal angles equal to right angles.

- **Subtrahend**. A quantity to be subtracted from another. For example, in the equation 10 – 2 = 8, 2 is the subtrahend.

- **Sum**. The result of addition. Addition means to add to a set or combine sets.

- **Tape diagram**. A drawing that looks like a segment of tape, used to illustrate number relationships. Also known as a strip diagram, bar model, fraction strip, or length model.

- **Term**. Either a single number or variable, or numbers and variables multiplied together. Terms are separated by + or – signs. For example, in the equation 4x – 7 = 5, 4x, 7, and 5 are all terms.

- **Terminating decimal.** A decimal is called terminating if its repeating digit is 0.

- **Third quartile**. For a data set with median *M*, the third quartile is the median of the data values greater than *M*. Example: For the data set {2, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the third quartile is 15. *See also:* median, first quartile, interquartile range.

- **Translation**. A rigid transformation that moves every point in a figure a constant distance in a specified direction.

Glossary (continued)

- **Transitivity principle for indirect measurement.** If the length of object A is greater than the length of object B, and the length of object B is greater than the length of object C, then the length of object A is greater than the length of object C. This principle applies to measurement of other quantities as well.

- **Trapezoid**. A quadrilateral with at least one set of parallel sides.

- **Uniform probability model**. A probability model which assigns equal probability to all outcomes. *See also:* probability model.

- **Variable**. A letter or other symbol used in an expression to represent an unspecified number; it may have many values, one value, or no possible value depending on its use. In a polynomial, the variables correspond to the base symbols themselves stripped of coefficients and any powers or products.

- **Vector.** A quantity with magnitude and direction in the plane or in space, defined by an ordered pair or triple of real numbers.

- **Visual fraction model.** A tape diagram, number line diagram, or area model.

- **Whole numbers**. The numbers 0, 1, 2, 3…

[1] Adapted from Wisconsin Department of Public Instruction, **http://dpi.wi.gov/standards/mathglos.html,** accessed March 2, 2010.

[2] Many different methods for computing quartiles are in use. The method defined here is sometimes called the Moore and McCabe method. See Langford, E., "Quartiles in Elementary Statistics," *Journal of Statistics Education* Volume 14, Number 3 (2006).

[3] Adapted from Wisconsin Department of Public Instruction, *op. cit*.

[4] To be more precise, this defines the *arithmetic mean*.

[5] Adapted from Wisconsin Department of Public Instruction, *op. cit*.

Tables

Tables 1-5

TABLE 1. Common addition and subtraction situations.[6]

	Result Unknown	Change Unknown	Start Unknown
Add to	Two bunnies sat on the grass. Three more bunnies hopped there. How many bunnies are on the grass now? 2 + 3 = ?	Two bunnies were sitting on the grass. Some more bunnies hopped there. Then there were five bunnies. How many bunnies hopped over to the first two? 2 + ? = 5	Some bunnies were sitting on the grass. Three more bunnies hopped there. Then there were five bunnies. How many bunnies were on the grass before? ? + 3 = 5
Take from	Five apples were on the table. I ate two apples. How many apples are on the table now? 5 – 2 = ?	Five apples were on the table. I ate some apples. Then there were three apples. How many apples did I eat? 5 – ? = 3	Some apples were on the table. I ate two apples. Then there were three apples. How many apples were on the table before? ? – 2 = 3

	Total Unknown	Addend Unknown	Both Addends Unknown[1]
Put Together/ Take Apart[2]	Three red apples and two green apples are on the table. How many apples are on the table? 3 + 2 = ?	Five apples are on the table. Three are red and the rest are green. How many apples are green? 3 + ? = 5, 5 – 3 = ?	Grandma has five flowers. How many can she put in her red vase and how many in her blue vase? 5 = 0 + 5, 5 = 5 + 0 5 = 1 + 4, 5 = 4 + 1 5 = 2 + 3, 5 = 3 + 2

	Difference Unknown	Bigger Unknown	Smaller Unknown
Compare[3]	("How many more?" version): Lucy has two apples. Julie has five apples. How many more apples does Julie have than Lucy? ("How many fewer?" version): Lucy has two apples. Julie has five apples. How many fewer apples does Lucy have than Julie? 2 + ? = 5, 5 – 2 = ?	(Version with "more"): Julie has three more apples than Lucy. Lucy has two apples. How many apples does Julie have? (Version with "fewer"): Lucy has 3 fewer apples than Julie. Lucy has two apples. How many apples does Julie have? 2 + 3 = ?, 3 + 2 = ?	(Version with "more"): Julie has three more apples than Lucy. Julie has five apples. How many apples does Lucy have? (Version with "fewer"): Lucy has 3 fewer apples than Julie. Julie has five apples. How many apples does Lucy have? 5 – 3 = ?, ? + 3 = 5

[1]These take apart situations can be used to show all the decompositions of a given number. The associated equations, which have the total on the left of the equal sign, help children understand that the = sign does not always mean makes or results in but always does mean is the same number as.
[2]Either addend can be unknown, so there are three variations of these problem situations. Both Addends Unknown is a productive extension of this basic situation, especially for small numbers less than or equal to 10.
[3]For the Bigger Unknown or Smaller Unknown situations, one version directs the correct operation (the version using more for the bigger unknown and using less for the smaller unknown). The other versions are more difficult.

[6] Adapted from Box 2-4 of Mathematics Learning in Early Childhood, National Research Council (2009, pp.32, 33).

TABLE 2. Common multiplication and division situations.[7]

	Unknown Product	Group Size Unknown ("How many in each group?" Division)	Number of Groups Unknown ("How many groups?" Division)
	$3 \times 6 = ?$	$3 \times ? = 18$, and $18 \div 3 = ?$	$? \times 6 = 18$, and $18 \div 6 = ?$
Equal Groups	There are 3 bags with 6 plums in each bag. How many plums are there in all? *Measurement example.* You need 3 lengths of string, each 6 inches long. How much string will you need altogether?	If 18 plums are shared equally into 3 bags, then how many plums will be in each bag? *Measurement example.* You have 18 inches of string, which you will cut into 3 equal pieces. How long will each piece of string be?	If 18 plums are to be packed 6 to a bag, then how many bags are needed? *Measurement example.* You have 18 inches of string, which you will cut into pieces that are 6 inches long. How many pieces of string will you have?
Arrays,[4] Area[5]	There are 3 rows of apples with 6 apples in each row. How many apples are there? *Area example.* What is the area of a 3 cm by 6 cm rectangle?	If 18 apples are arranged into 3 equal rows, how many apples will be in each row? *Area example.* A rectangle has area 18 square centimeters. If one side is 3 cm long, how long is a side next to it?	If 18 apples are arranged into equal rows of 6 apples, how many rows will there be? *Area example.* A rectangle has area 18 square centimeters. If one side is 6 cm long, how long is a side next to it?
Compare	A blue hat costs $6. A red hat costs 3 times as much as the blue hat. How much does the red hat cost? *Measurement example.* A rubber band is 6 cm long. How long will the rubber band be when it is stretched to be 3 times as long?	A red hat costs $18 and that is 3 times as much as a blue hat costs. How much does a blue hat cost? *Measurement example.* A rubber band is stretched to be 18 cm long and that is 3 times as long as it was at first. How long was the rubber band at first?	A red hat costs $18 and a blue hat costs $6. How many times as much does the red hat cost as the blue hat? *Measurement example.* A rubber band was 6 cm long at first. Now it is stretched to be 18 cm long. How many times as long is the rubber band now as it was at first?
General	$a \times b = ?$	$a \times ? = p$, and $p \div a = ?$	$? \times b = p$, and $p \div b = ?$

[4]The language in the array examples shows the easiest form of array problems. A harder form is to use the terms rows and columns: The apples in the grocery window are in 3 rows and 6 columns. How many apples are in there? Both forms are valuable.

[5]Area involves arrays of squares that have been pushed together so that there are no gaps or overlaps, so array problems include these especially important measurement situations.

[7] The first examples in each cell are examples of discrete things. These are easier for students and should be given before the measurement examples.

Table 3. The properties of operations. Here a, b and c stand for arbitrary numbers in a given number system. The properties of operations apply to the rational number system, the real number system, and the complex number system.

Associative property of addition	$(a + b) + c = a + (b + c)$
Commutative property of addition	$a + b = b + a$
Additive identity property of 0	$a + 0 = 0 + a = a$
Existence of additive inverses	For every a there exists $-a$ so that $a + (-a) = (-a) + a = 0$.
Associative property of multiplication	$(a \times b) \times c = a \times (b \times c)$
Commutative property of multiplication	$a \times b = b \times a$
Multiplicative identity property of 1	$a \times 1 = 1 \times a = a$
Existence of multiplicative inverses	For every $a \neq 0$ there exists $1/a$ so that $a \times 1/a = 1/a \times a = 1$.
Distributive property of multiplication over addition	$a \times (b + c) = a \times b + a \times c$

Table 4. The properties of equality. Here a, b and c stand for arbitrary numbers in the rational, real, or complex number systems.

Reflexive property of equality	$a = a$
Symmetric property of equality	If $a = b$, then $b = a$.
Transitive property of equality	If $a = b$ and $b = c$, then $a = c$.
Addition property of equality	If $a = b$, then $a + c = b + c$.
Subtraction property of equality	If $a = b$, then $a - c = b - c$.
Multiplication property of equality	If $a = b$, then $a \times c = b \times c$.
Division property of equality	If $a = b$ and $c \neq 0$, then $a \div c = b \div c$.
Substitution property of equality	If $a = b$, then b may be substituted for a in any expression containing a.

Table 5. The properties of inequality. Here a, b and c stand for arbitrary numbers in the rational or real number systems.

Exactly one of the following is true: $a < b$, $a = b$, $a > b$.
If $a > b$ and $b > c$ then $a > c$.
If $a > b$, then $b < a$.
If $a > b$, then $-a < -b$.
If $a > b$, then $a \pm c > b \pm c$.
If $a > b$ and $c > 0$, then $a \times c > b \times c$.
If $a > b$ and $c < 0$, then $a \times c < b \times c$.
If $a > b$ and $c > 0$, then $a \div c > b \div c$.
If $a > b$ and $c < 0$, then $a \div c < b \div c$.

Introduction

Mission Statement

The Mississippi Department of Education is dedicated to student success, which includes improving student achievement in science, equipping citizens to solve complex problems, and establishing fluent communication skills within a technological environment. The Mississippi College- and Career-Readiness Standards provide a consistent, clear understanding of what students are expected to know and be able to do by the end of each grade level or course. The standards are designed to be robust and relevant to the real world, reflecting the knowledge and skills that students need for success in college and careers and allowing students to compete in the global economy.

Purpose

In an effort to closely align instruction for students who are progressing toward postsecondary study and the workforce, the *2018 Mississippi College- and Career-Readiness Standards for Science* includes grade- and course-specific standards for K-12 science.

This document is designed to provide K-12 science teachers with a basis for curriculum development. In order to prepare students for careers and college, it outlines what knowledge students should obtain, and the types of skills students must master upon successful completion of each grade level. The *2018 Mississippi College- and Career-Readiness Standards (MS CCRS) for Science* replaces the *2010 Mississippi Science Framework*. These new standards reflect national expectations while focusing on postsecondary success, but they are unique to Mississippi in addressing the needs of our students and teachers. The standards' content centers around three basic content strands of science: life science, physical science, and Earth and space science. Instruction in these areas is designed for a greater balance between content and process. Teachers are encouraged to transfer more ownership of the learning process to students, who can then direct their own learning and develop a deeper understanding of science and engineering practices, critical analysis, and knowledge. Doing so will produce students that will become more capable, independent, and scientifically literate adults.

Implementation

The *2018 Mississippi College- and Career-Readiness Standards (MS CCRS) for Science* will be implemented during the 2018-2019 school year.

2018 Mississippi College- and Career-Readiness Standards for Science Overview

Research and Background Information

In today's modern world and complex society, our students are required to possess sufficient knowledge of science and engineering to become vigilant consumers of scientific and technological information. To meet the growing challenges facing our future workforce, the National Research Council (NRC) published a research-based report on teaching and learning science in a 2012 document titled *A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas* (NRC, 2012). This document proposes a new approach to K-12 science education through the integration of science and engineering practices (SEPs), crosscutting concepts, disciplinary core ideas, and engineering design within the context of science instruction.

Core Elements in the Use and Design of the *MS CCRS for Science*

The *MS CCRS for Science* are goals that reflect what a student should know and be able to do. This document does not dictate a manner or methods of teaching. The standards in this document are not sequenced for instruction and do not prescribe classroom activities, materials, or instruction strategies. These standards are end-of year expectations for each grade or course. The standards are intended to drive relevant and rigorous instruction that emphasizes student mastery of both disciplinary core ideas (concepts) and application of science and engineering practices (skills) to support student readiness for citizenship, college, and careers.

The *MS CCRS for Science* document was built by adapting and extending information from *A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas* (NRC, 2012) and combining with Mississippi's previous science framework process strands (i.e., science as inquiry, unifying concepts and processes, science and technology, science in personal and social perspectives, and the history and nature of science). These concepts connect information across the science content strands (i.e., life science, physical science, and Earth and space science) with the disciplinary core ideas (e.g., ecology and interdependence, motions, forces, and energy, Earth systems and cycles) and are essential to both scientists and engineers because they identify common properties and processes found in practice.

The core elements are integrated across standards and performance objectives in each grade and course. A brief description of each core element is presented below.

1. Nature of Science: Science and Engineering Practices (SEPs) replaced the Inquiry Strand included in the *2010 Mississippi Science Framework*. Beyond integration within the standards, these practices must be mastered by students to produce a more scientifically literate citizenry and to develop students that are more excited about STEM (Science, Technology, Engineering, and Mathematics) topics and careers. Inquiry verbs, along with the SEPs, are woven throughout the standards, especially in the performance objectives. Each has a deliberate placement to indicate the depth of understanding expected of students.

   The practices describe the behaviors that scientists engage in as they investigate and build models and theories about the natural world. They also describe the key set of engineering practices that engineers use as they design and build models and systems. These practices work together (overlap and interconnect) and are not separated in the study and investigation of science concepts. For example, the practice of *mathematical and computational thinking* may include some aspects of *analyzing and interpreting data*. The data often come from *planning and carrying out an investigation*. The writing task force for the *MS CCRS for Science* incorporated this language into the

performance objectives to emphasize the importance of a student-centered science classroom and not a teacher-centered classroom. A list of these eight practices is listed below.

a. **Ask Questions (science) and Define Problems (engineering)**
b. **Develop and Use Models**
c. **Plan and Conduct Investigations**
d. **Analyze and Interpret Data**
e. **Use Mathematical and Computational Thinking**
f. **Construct Explanations (science) and Design Solutions (engineering)**
g. **Engage in Scientific Argument from Evidence**
h. **Obtain, Evaluate, and Communicate Information**

2. Crosscutting concepts: These seven, binding concepts were adopted directly from the National Research Council's *A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas* (2012) and should be woven into instruction for every grade and course. Crosscutting concepts are designed to help students see the unity of the sciences. Students often are confused when they study ecosystems for three weeks, then weather for two weeks, and finally motion and forces for several weeks. A concept is crosscutting if it communicates a scientific way of thinking about a subject and it applies to many different disciplines of science and engineering. Crosscutting concepts are sometimes called "the ties that bind." The seven concepts are listed below.

   a. **Patterns**
   b. **Cause and effect: Mechanism and explanation**
   c. **Scale, proportion, and quantity**
   d. **Systems and system models**
   e. **Energy and matter: Flows, cycles, and conservation**
   f. **Structure and function**
   g. **Stability and change**

3. Technology: If Mississippi students are to compete on a global stage and exit high school prepared for college, career, and life, technology should be used in the classroom in a way that suits 21st-century learners and reflects the modern workplace. Technology is essential in teaching and learning of science; it influences and enhances students' learning. Flexible access, customized delivery, and increased convenience for the user are core tenets. K-12 learners have fundamentally changed over the past few decades, and our classrooms should adapt to accommodate them. Dr. Ruben Puentedura's SAMR (Substitution, Augmentation, Modification, and Redefinition) model is a resource that can be considered by teachers, administrators, and technology staff as they integrate meaningful and appropriate digital learning experiences into the classroom. At the basic level, technology enhances instruction.

4. Science and society: This core element assures exploration of science's impacts on society and the feedback loop that must be cultivated and sustained to continue improvement of systems.

5. History of science: Because most modern-day scientific advancement derives from past discoveries, it is essential that students understand the breakthroughs that make today's work possible.

6. Engineering design process (EDP) is the method of devising a system, component, or process to meet desired needs. Engineering standards are represented in some performance objectives with grade-banded, specific wording that prompts educators to approach learning and exploration using the engineering process. These performance objectives are marked with an *. It is important to

note that the EDP is flexible. Most students will approach the process in various ways. The EDP is also a cycle—there is no official start or end point. Students can begin at any step, focus on just one step, move back and forth between steps, or repeat the cycle. Professional development and teacher resources will be developed for Mississippi teachers as EDP is incorporated into Mississippi standards.

Students should be provided a safe environment for failure without consequence, which is one of the most powerful drivers in learning. Providing many opportunities for students to fail, learn, and try again, with appropriate levels of support, fosters a deeper level of understanding and greater student interest and engagement.

Other Important Core Elements

Mathematics is integrated throughout the science standards document because it is essential to the scientific process, requiring students to quantify, analyze, and present results. Students must be familiar with data analysis, critical thinking, and recording their own data; students must organize and analyze it before presenting their findings. Analysis of scientific studies and publications from a quantitative perspective is also very important.

English/language arts skills are also integrated into the science standards. Students will be required to read informational text for understanding as well as process and critique information. Students must be able to articulate a critical point of view using proper terminology. In addition, the K-4 science curriculum should be increasingly tied to language arts to lay the foundation for students to have access to science before fifth grade.

Content Strands and Disciplinary Core Ideas

Science (and engineering) fields can be divided into three content-strand domains based on relative content presented in strands, extending from kindergarten to eighth grade. Grouping content in this way allows for vertical alignment of competencies and objectives to better organize content distribution. Content strands are not included in the Grades 9-12 course organization, which allows for a more logical, sequential placement and flow of content. Content strands are subdivided into 10 disciplinary core ideas in which standards and performance objectives for science content can be placed in grades K-8.

K-8 content strands with the 10 disciplinary core ideas include:

Life Science

1. Hierarchical Organization
2. Reproduction and Heredity
3. Ecology and Interdependence
4. Adaptations and Diversity

Physical Science

5. Organization of Matter and Chemical Interactions
6. Motions, Forces, and Energy

Earth and Space Science

7. Earth's Structure and History
8. Earth and the Universe
9. Earth Systems and Cycles
10. Earth's Resources

Structure of the Standards Document

The organization and structure of this standards document are as follows:

- Grade-band overview: An overview that describes the general content and themes for the grade-level band or the high school courses. Outputs and outcomes are provided along with examples of, and references to, science and engineering practices and connecting concepts.

- Grade-level or course overview: An overview that describes the specific content and themes for each grade level and/or high school course. The K-8 standards are presented with each grade focused on a grade-level theme. High school courses provide an overview of the major ideas and strategies to use when planning instruction for the course.

- Content strand: Domains into which science fields can be divided based on relative content extending from kindergarten to eighth grade. In grades K through 8, the content strands are organized into three distinct areas: (1) life science, (2) physical science, and (3) Earth and space science. For the Grade 9-12 courses, the content areas are organized around the core ideas of each course.

- Disciplinary core ideas: Subdivision of the main content strands providing recurring ideas from the three content strands. The core ideas are the key organizing principles for the development of learning units. The K-8 vertical alignment is designed in a spiral arrangement, which places emphasis on one of the three content strands in each grade level. All content strands will be found in each grade level, but all disciplinary core ideas will not be found in every grade level in K-8 due to the spiral arrangement of content.

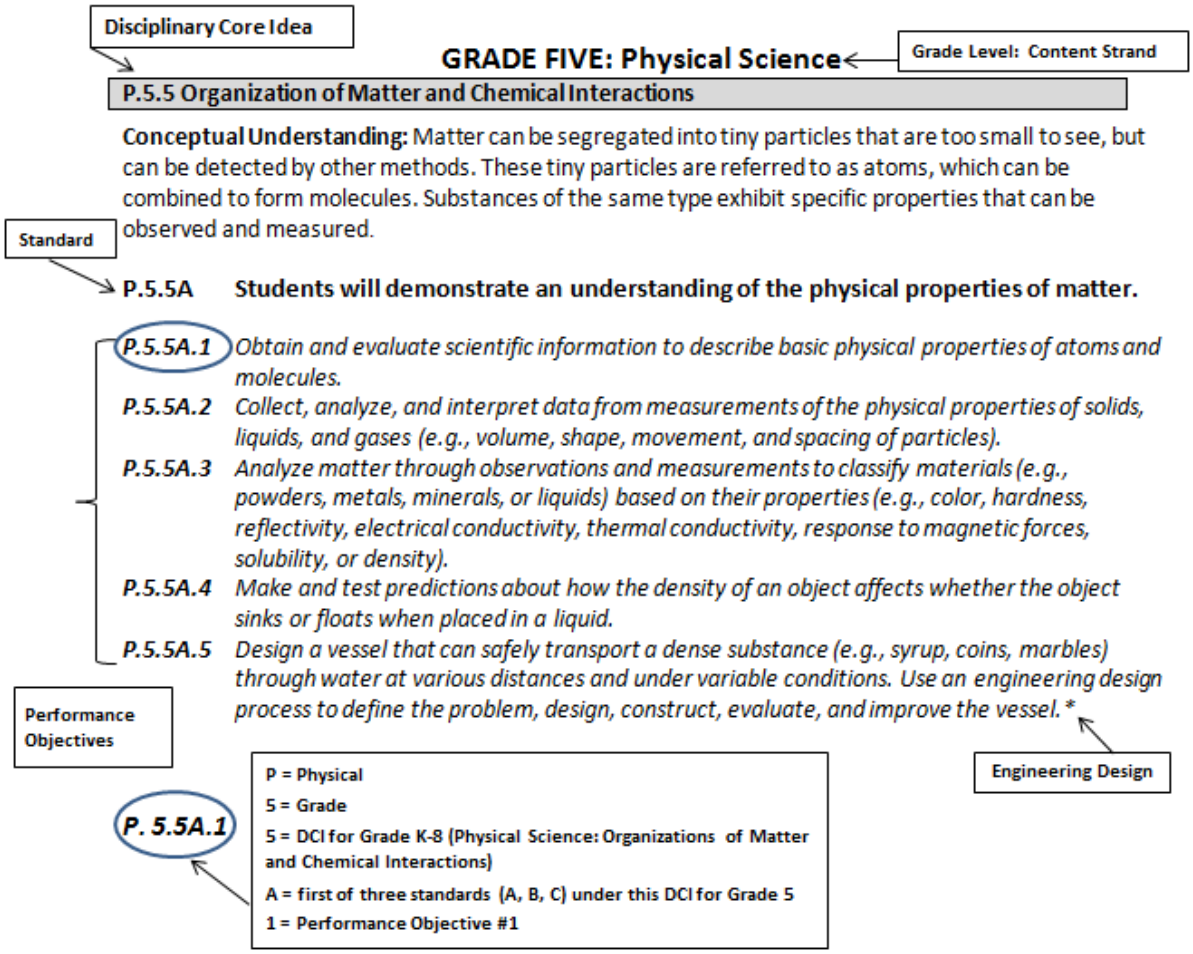
- Conceptual understanding: Statements of the core ideas for which student should demonstrate an understanding. Some grade level and/or course topics include more than one conceptual understanding with each guiding the intent of the standards.

- Content standards: Written below each disciplinary core ideas and conceptual understanding, the standards are a general statement of what students should know and be able to do because of instruction.

- Performance objectives: Detailed statements of content and skills to be mastered by the students. Performance objectives are specific statements of what students know and can do because of the science instruction at that level. These statements contain SEP and inquiry verb language.

Standards will appear in the following format:

Grade-Band Overview
Grade Level Theme (K-8)
Grade Level (K-8) or Course Overview (9-12)
Grade Level: Content Strand (K-8); Course Name (9-12)
    Disciplinary Core Idea (DCI)
    Conceptual Understanding
    Standard
    Performance Objectives



Safety in the Science Classroom

The National Science Teachers Association (NSTA) encourages K–12 school leaders and teachers to promote and support the use of science activities in science instruction and work to avoid and reduce injury. NSTA provides the following guidelines for school leaders and teachers to develop safety programs that include the effective management of chemicals, implement safety training for teachers and others, and create school environments that are as safe as possible (NSTA 2013).

1) National Science Teacher Association's *Safety in the Science Classroom*, accessible at http://www.nsta.org/docs/SafetyInTheScienceClassroom.pdf.
2) An extensive list of safety resources is available at http://www.nsta.org/safety/.

Support Documents and Resources

The MDE will develop support documents after these standards have been approved by the State Board of Education. Local districts, schools, and teachers may use these documents to construct standards-based science curriculum, allowing them to customize content to fit their students' needs and match available instructional materials. The support documents will include suggested resources, instructional strategies, essential knowledge, and detailed information about the core elements (e.g., SEPs, crosscutting concepts).

Professional development efforts will be aligned with the standards and delivered in accord with teacher resources to help expand expertise in delivering student-centered lessons (e.g., inquiry-based learning, 5-E instructional models, or other best practices in STEM teaching). The most successful national models and programs will be referenced for a capacity-building effort that can develop a more effective culture of science education in Mississippi.

Investigate, Apply, and Understand

It is important that the pedagogical paradigm of Mississippi's science classroom reflects the nature of the content being learned. The essence of science is natural to children and includes discovery, observation, questioning, design, testing, failure, iteration, and hands-on application. Research-based approaches such as inquiry-based (IB), project-based, and discovery learning are all pedagogical pathways that make sense, especially in the science classroom. Mississippi's science teachers are encouraged to embrace the growth mindset and constantly seek to upgrade classroom approaches by experimenting and adopting methods that excite students to learn and become functional, autonomous learners and contributors. Students should be provided increased maneuverability in the classroom to formulate their own ideas to investigate and understand the scientific and engineering design processes.

GRADES K-2 OVERVIEW

Students in Grades K-2 are naturally curious about their world and learn best through hands-on experiences. Teachers must consider the students' developmental level to provide appropriate learning experiences so that students will understand the nature of science. Therefore, investigations using the five senses should be an integral part of scientific inquiry. Recognizing and observing patterns are also important, and students should be given experiences with living things to help them build their scientific understanding. Learning opportunities should also facilitate the development of language-process skills and mathematical concepts, while the students develop the ability to observe and then communicate observations. Students need to be supplied with the appropriate materials and equipment necessary to complete scientific investigations.

Each grade is developed around a theme:

- Kindergarten – Change in the Natural World
- Grade 1 – Discovering Patterns and Constructing Explanations
- Grade 2 – Systems, Order, and Organization

In kindergarten, students are introduced to the concept of change. They learn to generate questions, conduct structured experiments, sort, classify, sequence, and predict to communicate those findings. In first grade, students build on the knowledge gained from kindergarten and make deeper connections by examining evidence, observing patterns, and formulating explanations. By second grade, students learn to organize and categorize their findings, which establish a foundation for logical thinking. They also use abstract reasoning and interpretation of observations to draw conclusions from their investigations.

The core science content utilizes hands-on classroom instruction to reinforce the seven crosscutting concepts (i.e., patterns; cause and effect; scale, portion, and quantity; systems and system models; energy and matter; structure and function; and stability and change).

SEPs are in life science, physical science, and Earth and space science. The SEPs are designed so that students may develop skills and apply knowledge to solve real-life problems. While presented as distinct skill sets, the eight practices intentionally overlap and interconnect as students explore the science concepts. Some examples of specific skills students should develop in grades K-2 are listed below.

1. Generate questions and investigate the differences between liquids and solids and develop awareness that a liquid can become a solid and vice versa.
2. Develop and use models to predict weather conditions associated with seasonal patterns and changes.
3. Conduct an investigation to provide evidence that vibrations create sound (e.g., pluck a guitar string) and that sound can create vibrations (e.g., feeling sound through a speaker).
4. Analyze and interpret data from observations and measurements to describe local weather conditions (including temperature, wind, and forms of precipitation).
5. Compare and measure the length of solid objects using technology and mathematical representations. Analyze and communicate findings.
6. Construct an explanation for the general pattern of change in daily temperatures by measuring and calculating the difference between morning and afternoon temperatures.
7. Obtain and evaluate informational texts and other media to generate and answer questions about water sources and human uses of clean water.

Curricula and instructions that integrate science and engineering practices should reflect the skills outlined above.

The Engineering Design Process (EDP) is a step-by-step method of devising a system, component, or process to meet desired needs. This is similar to the "scientific method" which is taught to young scientists. However, the EDP is a flexible process. Students can begin at any step, focus on just one step, move back and forth between steps, or repeat the cycle. Engineering standards are represented in some performance objectives with grade-banded, specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.** Professional development and teacher resources will be developed for teachers as EDP is incorporated into Mississippi standards.

Each K-2 standard allows students to be active doers of science rather than passive observers. This approach creates an opportunity for student learning and engages the pupil in the scientific investigation process.

KINDERGARTEN

Theme: Change in the Natural World

In kindergarten, students observe the changes in the natural world and identify how animals use their senses to recognize the changes. As language and vocabulary develops, students recognize that plants and animals change and report findings about the changes throughout the life cycle. Students conduct an investigation to determine the needs of plants to grow and use quantitative measurement to chart growth over time. Students learn that change occurs when plants and animals do not get the food, water, and space needed for growth. Students develop and use models to describe the seasonal changes in the environment. Students develop questions and conduct a structured investigation to determine how sunlight affects the temperature of sand, soil, rocks, and water. Using an engineer design process, students then construct a structure to reduce the temperature of a play area. Students recognize that scientists observe changes in the natural world and use investigations, charts, drawings, sketches, and models to communicate these changes. Students need to recognize that scientists observe the natural world and use investigations, charts, drawings, sketches, and models to communicate ideas.

KINDERGARTEN: Life Science

L.K.1 Hierarchical Organization

Conceptual Understanding: Objects in the environment can be classified as living and nonliving. Living things include plants and animals. All living things reproduce, grow, develop, respond to stimuli, and die; and nonliving things do not. Living things require air, food, water, and an environment in which to live. Acting as scientists, students will observe the natural world and use investigations, charts, drawings, sketches, and models to communicate ideas.

L.K.1A Students will demonstrate an understanding of living and nonliving things.

L.K.1A.1 *With teacher guidance, conduct an investigation of living organisms and nonliving objects in various real-world environments to define characteristics of living organisms that distinguish them from nonliving things (e.g., playground, garden, school grounds).*

L.K.1A.2 *With teacher support, gain an understanding that scientists are humans who use observations to learn about the natural world. Obtain information from informational text or other media about scientists who have made important observations about living things (e.g. Carl Linnaeus, John James Audubon, Jane Goodall).*

Conceptual Understanding: All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water, and air. Animals (including humans) use their senses to learn about the world around them.

L.K.1B Students will demonstrate an understanding of how animals (including humans) use their physical features and their senses to learn about their environment.

L.K.1B.1 *Develop and use models to exemplify how animals use their body parts to (a) obtain food and other resources, (b) protect themselves, and (c) move from place to place.*

L.K.1B.2 *Identify and describe examples of how animals use their sensory body parts (eyes to detect light and movement, ears to detect sound, skin to detect temperature and touch, tongue to taste, and nose to detect smell).*

KINDERGARTEN: Life Science

L.K.2 Reproduction and Heredity

Conceptual Understanding: Plants and animals change in form as they go through stages in the life cycle. Young plants and animals are very much like their parents and other plants and animals of the same kind, but they can also vary in many ways.

L.K.2 Students will demonstrate an understanding of how living things change in form as they go through the general stages of a life cycle.

L.K.2.1 *Use informational text or other media to make observations about plants as they change during the life cycle (e.g., germination, growth, reproduction, and death) and use models (e.g., drawing, writing, dramatization, or technology) to communicate findings.*

L.K.2.2 *Construct explanations using observations to describe and model the life cycle (birth, growth, adulthood, death) of a familiar mammal (e.g., dog, squirrel, rabbit, deer).*

L.K.2.3 *With teacher guidance, conduct a structured investigation to observe and measure (comparison of lengths) the changes in various individuals of a single plant species from seed germination to adult plant. Record observations using drawing or writing.*

L.K.2.4 *Use observations to explain that young plants and animals are like but not exactly like their parents (i.e., puppies look similar, but not exactly like their parents).*

KINDERGARTEN: Life Science

L.K.3 Ecology and Interdependence

Conceptual Understanding: The environment consists of many types of living things including plants and animals. Living things depend on the land, water, and air to live and grow.

L.K.3A Students will demonstrate an understanding of what animals and plants need to live and grow.

L.K.3A.1 *With teacher guidance, conduct a structured investigation to determine what plants need to live and grow (water, light, and a place to grow). Measure growth by directly comparing plants with other objects.*

L.K.3A.2 *Construct explanations using observations to describe and report what animals need to live and grow (food, water, shelter, and space).*

Conceptual Understanding: Interdependence exists between plants and animals within an environment. Living things can only survive in areas where their needs for air, water, food, and shelter are met.

L.K.3B Students will demonstrate an understanding of the interdependence of living things and the environment in which they live.

L.K.3B.1 *Observe and communicate that animals get food from plants or other animals. Plants make their own food and need light to live and grow.*

L.K.3B.2 *Create a model habitat which demonstrates interdependence of plants and animals using an engineering design process to define the problem, design, construct, evaluate, and improve the habitat.**

KINDERGARTEN: Life Science

L.K.4 Adaptations and Diversity

Conceptual Understanding: When animals do not get what they need to survive, they will die. Some types of plants and animals are now extinct because they were unable to adapt when the environment changed. There are similarities between some present-day animals and extinct animals.

L.K.4 **Students will demonstrate an understanding that some groups of plants and animals are no longer living (extinct) because they were unable to meet their needs for survival.**

L.K.4.1 *Obtain information from informational text or other media to document and report examples of different plants or animals that are extinct.*

L.K.4.2 *Observe and report how some present-day animals resemble extinct animals (i.e., elephants resemble wooly mammoths).*

KINDERGARTEN: Physical Science

P.K.5 Organization of Matter and Chemical Interactions

Conceptual Understanding: Matter exists in different states, including solid and liquid forms. Water can exist as a solid or a liquid. Solid objects can be described and sorted according to their attributes. Different properties are suited for different purposes.

P.K.5A **Students will demonstrate an understanding of the solid and liquid states of matter.**

P.K.5A.1 *Generate questions and investigate the differences between liquids and solids and develop awareness that a liquid can become a solid and vice versa.*

P.K.5A.2 *Describe and compare the properties of different materials (e.g., wood, plastic, metal, cloth, paper) and classify these materials by their observable characteristics (visual, aural, or natural textural) and by their physical properties (weight, volume, solid or liquid, and sink or float).*

Conceptual Understanding: Many objects can be built from a smaller set of pieces (e.g., blocks, construction sets). Most objects can be broken down into various component pieces and any piece of uniform matter (e.g., a sheet of paper, a block of wood,) can be subdivided into smaller pieces of the same material. If pieces of the original object are damaged or removed, the object may not have the same properties or work the same.

P.K.5B. **Students will demonstrate an understanding of how solid objects can be constructed from a smaller set.**

P.K.5B.1 *Use basic shapes and spatial reasoning to model large objects in the environment using a set of small objects (e.g., blocks, construction sets).*

P.K.5B.2 *Analyze a large composite structure to describe its smaller components using drawing and writing.*

P.K.5B.3 *Explain why things may not work the same if some of the parts are missing.*

KINDERGARTEN: Earth and Space Science

E.K.8 Earth and the Universe

Conceptual Understanding: Seasonal changes occur as the Earth orbits the sun. These seasonal changes repeat in a pattern. Patterns of sunrise and sunset can be described and predicted.

E.K.8A Students will demonstrate an understanding of the pattern of seasonal changes on the Earth.

E.K.8A.1 *Construct an explanation of the pattern of the Earth's seasonal changes in the environment using evidence from observations.*

Conceptual Understanding: The sun is the source of heat and light for the solar system. This heat can impact Earth's natural resources. Living things depend upon the effects of the sun (warms the land, air, water, and helps plants grow) to survive.

E.K.8B Students will demonstrate an understanding that the Sun provides the Earth with heat and light.

E.K.8B.1 *With teacher guidance, generate and answer questions to develop a simple model, which describes observable patterns of sunlight on the Earth's surface (day and night).*

E.K.8B.2 *With teacher guidance, develop questions to conduct a structured investigation to determine how sunlight affects the temperature of the Earth's natural resources (e.g., sand, soil, rocks, and water).*

E.K.8B.3 *Develop a device (i.e., umbrella, shade structure, or hat) which would reduce heat from the sun (temperature) using an engineering design process to define the problem, design, construct, evaluate, and improve the device.**

KINDERGARTEN: Earth and Space Science

E.K.10 Earth's Resources

Conceptual Understanding: Humans use Earth's resources for everything they do. Choices that humans make to live comfortably can affect the world around them. Recycling, reusing, and reducing consumption of natural resources is important in protecting our Earth's environment. Humans can make choices that reduce their impact on Earth's environment.

E.K.10 Students will demonstrate an understanding of how humans use Earth's resources.

E.K.10.1 *Participate in a teacher-led activity to gather, organize and record recyclable materials data on a chart or table using technology. Communicate results.*

E.K.10.2 *With teacher guidance, develop questions to conduct a structured investigation to determine ways to conserve Earth's resources (i.e., reduce, reuse, and recycle) and communicate results.*

E.K.10.3 *Create a product from the reused materials that will meet a human need (e.g., pencil holder, musical instrument, bird feeder). Use an engineering design process to define the problem, design, construct, evaluate, and improve the product.**

GRADE ONE

Theme: Discovering Patterns and Constructing Explanations

In Grade 1, students build on the language, vocabulary, and mathematical concepts developed in kindergarten to construct explanations stemming from patterns observed in the natural environment. Students conduct investigations to determine what plants need to live and grow. They test predictions, discover patterns in plant and animal life cycles, and construct explanations about plant needs for growth and survival. Students use an engineering design process to solve the problem of plant overcrowding in a garden. Students observe plant adaptations, such as trees shedding leaves, or leaves turning toward the sun, and establish the cause and effect relationship between adaptations and environmental changes. Students describe, compare, and analyze daily weather data to determine weather patterns in different seasons. They use an engineering design process to create a system to better plan and respond to severe weather. Students investigate light and sound to find materials that light passes through and materials that change sound. They construct a device that uses light and/or sound to communicate over a distance. Students develop investigations and make predictions about patterns in the natural world. Acting as scientists, students observe the natural world and use investigations, charts, drawings, sketches, and models to communicate ideas.

GRADE ONE: Life Science

L.1.1 Hierarchical Organization

Conceptual Understanding: All living things reproduce, grow, develop, respond to stimuli, and die. Living things require air, food, water, and an environment in which to live. Plants are living things, and each plant part (roots, stem, leaves, and fruit) helps them survive, grow, and reproduce.

L.1.1 Students will demonstrate an understanding of the basic needs and structures of plants.

L.1.1.1 *Construct explanations using first-hand observations or other media to describe the structures of different plants (i.e., root, stem, leaves, flowers, and fruit). Report findings using drawings, writing, or models.*

L.1.1.2 *Obtain information from informational text and other media to describe the function of each plant part (roots absorb water and anchor the plant, leaves make food, the stem transports water and food, petals attract pollinators, flowers produce seeds, and seeds produce new plants).*

L.1.1.3 *Design and conduct an experiment that shows the absorption of water and how it is transported through the plant. Report observations using drawings, sketches, or models.*

L.1.1.4 *Create a model which explains the function of each plant structure (roots, stem, leaves, petals, flowers, seeds).*

L.1.1.5 *With teacher support, gain an understanding that scientists are humans who use observations and experiments to learn about the natural world. Obtain information from informational text or other media about scientists who have made important observations about plants (e.g., Theophrastus, Gregor Mendel, George Washington Carver, Katherine Esau).*

GRADE ONE: Life Science

L.1.2 Reproduction and Heredity

Conceptual Understanding: Plants and animals change with each stage of life. Plants have predictable and observable characteristics at each developmental stage (germination, growth, reproduction, and seed dispersal). Most plants are stationary so they depend upon animals or the wind for seed dispersal. Plants and animals are similar to their parents and resemble other plants and animals of the same kind.

L.1.2 **Students will demonstrate an understanding of how living things change in form as they go through the general stages of a life cycle.**

L.1.2.1 *Investigate, using observations and measurements (non-standard units), flowering plants (pumpkins, peas, marigolds, or sunflowers) as they change during the life cycle (i.e., germination, growth, reproduction, and seed dispersal). Use drawings, writing, or models to communicate findings.*

L.1.2.2 *Obtain, evaluate, and communicate information through labeled drawings, the life cycle (egg, larva, pupa, adult) of pollinating insects (e.g., bees, butterflies).*

GRADE ONE: Life Science

L.1.3 Ecology and Interdependence

Conceptual Understanding: The needs of plants must be met to survive. Sunlight, water, nutrients, and space to grow are necessary for plant growth and repair.

L.1.3A **Students will demonstrate an understanding of what plants need from the environment for growth and repair.**

L.1.3A.1 *Conduct structured investigations to make and test predictions about what plants need to live, grow, and repair including water, nutrients, sunlight, and space. Develop explanations, compare results, and report findings.*

Conceptual Understanding: Animals, such as insects, depend on other living organisms for food. Many plants depend on insects or other animals for pollination or to move their seeds around so the plant can survive.

L.1.3B **Students will demonstrate an understanding of the interdependence of flowering plants and pollinating insects.**

L.1.3B.1 *Identify the body parts of a pollinating insect (e.g., bee, butterfly) and describe how insects use these parts to gather nectar or disburse pollen. Report findings using drawings, writing, or models.*

GRADE ONE: Life Science

L.1.4 Adaptations and Diversity

Conceptual Understanding: Plants respond to stimuli (e.g., turn their leaves to the sun, use tendrils to grab and support) to adapt to changes in the environment. There are distinct environments in the world that support certain types of plants. Plants have features that help them survive in their environment.

L.1.4 Students will demonstrate an understanding of the ways plants adapt to their environment in order to survive.

L.1.4.1 *Explore the cause and effect relationship between plant adaptations and environmental changes (i.e., leaves turning toward the sun, leaves changing color, leaves wilting, or trees shedding leaves).*

L.1.4.2 *Describe how the different characteristics of plants help them to survive in distinct environments (e.g., rain forest, desert, grasslands, forests).*

L.1.4.3 *Create a solution for an agricultural problem (i.e. pollination, seed dispersal, over-crowding). Use an engineering design process to define the problem, design, construct, evaluate, and improve the solution.**

GRADE ONE: Physical Science

P.1.6 Motions, Forces, and Energy

Conceptual Understanding: Some objects allow light to pass through them and some objects do not allow any light to pass through them, creating shadows. Very hot objects give off light. Objects reflect light, and objects can only be seen when light is reflected off them. Mirrors and prisms can be used to change the direction of a light beam-

P.1.6A Students will demonstrate an understanding that light is required to make objects visible.

P.1.6A.1 *Construct explanations using first-hand observations or other media to describe how reflected light makes an object visible.*

P.1.6A.2 *Use evidence from observations to explain how shadows form and change with the position of the light source.*

Conceptual Understanding: Vibrations of matter can create sound, and sound can make an object vibrate. Humans use sound and light to communicate over long distances.

P.1.6B Students will demonstrate an understanding of sound.

P.1.6B.1 *Conduct an investigation to provide evidence that vibrations create sound (e.g., pluck a guitar string) and that sound can create vibrations (e.g., feeling sound through a speaker).*

P.1.6B.2 *Create a device that uses light and/or sound to communicate over a distance (e.g., signal lamp with a flashlight). Use an engineering design process to define the problem, design, construct, evaluate, and improve the device.**

GRADE ONE: Earth and Space Science

E.1.9 Earth's Systems and Cycles

Conceptual Understanding: Weather is a combination of temperature, sunlight, wind, snow, or rain in a particular place at a particular time. People measure weather conditions (temperature, precipitation) to describe and record the weather and to notice patterns over time. Temperature and precipitation can change with the seasons. Some kinds of severe weather (hurricane, tornado, flood, and drought) are more likely to occur in certain regions. Meteorologists forecast severe weather so that communities can prepare for and respond appropriately.

E.1.9A Students will demonstrate an understanding of the patterns of weather by describing, recording, and analyzing weather data to answer questions about daily and seasonal weather patterns.

E.1.9A.1 *Analyze and interpret data from observations and measurements to describe local weather conditions (including temperature, wind, and forms of precipitation).*

E.1.9A.2 *Develop and use models to predict weather conditions associated with seasonal patterns and changes.*

E.1.9A.3 *Construct an explanation for the general pattern of change in daily temperatures by measuring and calculating the difference between morning and afternoon temperatures.*

E.1.9A.4 *Obtain and communicate information about severe weather conditions to explain why certain safety precautions are necessary.*

Conceptual Understanding: The Earth is made of different materials, including rocks, soil, and water (nonliving things). Plants and animals, including humans, depend on the Earth's land, water, and air to live and grow. Animals, including humans, can change the environment (e.g., shape of the land, the flow of water).

E.1.9B Students will demonstrate an understanding of models (drawings or maps) to describe how water and land are distributed on Earth.

E.1.9B.1 *Locate, classify, and describe bodies of water (oceans, rivers, lakes, and ponds) on the Earth's surface using maps, globes, or other media.*

E.1.9B.2 *Generate and answer questions to explain the patterns and location of frozen and liquid bodies of water on earth using maps, globes, or other media.*

E.1.9B.3 *With teacher guidance, plan and conduct a structured investigation to determine how the movement of water can change the shape of the land on earth.*

GRADE ONE: Earth and Space Science

E.1.10 Earth's Resources

Conceptual Understanding: Water is essential to life on earth. Humans and other living things are dependent on clean water to survive. Water is an Earth material, and like all of Earth's resources, the amount of water is limited. Continued health and survival of humans are dependent on solutions that maintain clean water sources.

E.1.10 Students will demonstrate an understanding of human dependence on clean and renewable water resources.

E.1.10.1 *Obtain and evaluate informational texts and other media to generate and answer questions about water sources and human uses of clean water.*

E.1.10.2 *Communicate solutions that will reduce the impact of humans on the use and quality of water in the local environment.*

E.1.10.3 *Create a device that will collect free water to meet a human need (e.g., household drinking water, watering plants/animals, cleaning). Use an engineering design process to define the problem, design, construct, evaluate, and improve the device.**

GRADE TWO

Theme: Systems, Order, and Organization

In Grade 2, students organize plants and animals according to their physical characteristics and recognize that living things are part of a larger system. Students construct models showing the characteristics of animals that help them survive in their environments, and construct scientific arguments explaining how animals can make major and minor changes in the environment. Students conduct investigations to find and report evidence where plants and animals compete or cooperate with other plants in a system before identifying the adaptations that help them survive in that environment. Students investigate the relationship between friction and the motion of an object by changing the strength, direction, and speed of pushes and pulls. Students use an engineering design process to construct a ramp that will reduce or increase friction to solve a problem, such as rolling a baby carriage safely down a steep ramp.

GRADE TWO: Life Science

L.2.1 Hierarchical Organization

Conceptual Understanding: Animals have unique physical and behavioral characteristics that enable them to survive in their environment. Animals can be classified based on physical characteristics.

L.2.1 Students will demonstrate an understanding of the classification of animals based on physical characteristics.

L.2.1.1 *Compare and sort groups of animals with backbones (vertebrates) from groups of animals without backbones (invertebrates).*

L.2.1.2 *Classify vertebrates (mammals, fish, birds, amphibians, and reptiles) based on their physical characteristics.*

L.2.1.3 *Compare and contrast physical characteristics that distinguish classes of vertebrates (i.e., reptiles compared to amphibians).*

L.2.1.4 *Construct a scientific argument for classifying vertebrates that have unusual characteristics, such as bats, penguins, snakes, salamanders, dolphins, and duck-billed platypuses (i.e., bats have wings yet they are mammals).*

GRADE TWO: Life Science

L.2.2 Reproduction and Heredity

Conceptual Understanding: Plants and animals experience different life cycles as they grow and develop. Plants and animals exhibit predictable characteristics at each developmental stage throughout the life cycle.

L.2.2 Students will demonstrate an understanding of how living things change in form as they go through the general stages of a life cycle.

L.2.2.1 *Use observations through informational texts and other media to observe the different stages of the life cycle of trees (i.e., pines, oaks) to construct explanations and compare how trees change and grow over time.*

L.2.2.2 *Construct explanations using first-hand observations or other media to describe the life cycle of an amphibian (birth, growth/development, reproduction, and death). Communicate findings.*

GRADE TWO: Life Science

L.2.3 Ecology and Interdependence

Conceptual Understanding: Animals thrive in environments where their needs (air, water, food, and shelter) are met. The environment where plants and animals live sometimes changes slowly and sometimes changes rapidly. If living things are unable to adapt to changes in the environment, they may not survive.

L.2.3A Students will demonstrate an understanding of the interdependence of living things and the environment in which they live.

L.2.3A.1 *Evaluate and communicate findings from informational text or other media to describe how animals change and respond to rapid or slow changes in their environment (fire, pollution, changes in tide, availability of food/water).*

L.2.3A.2 *Construct scientific arguments to explain how animals can make major changes (e.g., beaver dams obstruct streams, or large deer populations destroying crops) and minor changes to their environments (e.g., ant hills, crawfish burrows, mole tunnels). Communicate findings.*

Conceptual Understanding: All animals and plants need food to provide energy for activity and raw materials for growth Animals and plants have physical features and behaviors that help them survive in their environment. All living things in an environment interact with each other in different ways and for different reasons.

L.2.3B Students will demonstrate an understanding of the interdependence of living things.

L.2.3B.1 *Evaluate and communicate findings from informational text or other media to describe and to compare how animals interact with other animals and plants in the environment (i.e., predator-prey relationships, herbivore, carnivore, omnivore).*

L.2.3B.2 *Conduct an investigation to find evidence where plants and animals compete or cooperate with other plants and animals for food or space. Present findings (i.e., using technology or models).*

GRADE TWO: Life Science

L.2.4 Adaptations and Diversity

Conceptual Understanding: Living things need air, food, water, and space to survive. Different environments support different types of plants and animals. Animals have adaptations allowing them to grow and survive in the climate of their specific environment.

L.2.4 Students will demonstrate an understanding of the ways animals adapt to their environment in order to survive.

L.2.4.1 *Evaluate and communicate findings from informational text or other media to describe how plants and animals use adaptations to survive (e.g., ducks use webbed feet to swim in lakes and ponds, cacti have waxy coatings and spines to grow in the desert) in distinct environments (e.g., polar lands, saltwater and freshwater, desert, rainforest, woodlands).*

L.2.4.2 *Create a solution exemplified by animal adaptations to solve a human problem in a specific environment (e.g., snowshoes are like hare's feet or flippers are like duck's feet). Use an engineering design process to define the problem, design, construct, evaluate, and improve the solution.**

GRADE TWO: Physical Science

P.2.5 Organization of Matter and Chemical Interactions

Conceptual Understanding: Matter exists in different states, including solid, liquid, and gas forms. Solids have a definite shape, weight, and size (length). Liquids have a definite size (volume) but not a definite shape. A gas has neither definite shape nor size (volume). Changes to matter can result from changes in temperature. Some changes may or may not be reversible (i.e., melting or freezing versus burning a cake).

P.2.5 Students will demonstrate an understanding of the properties of matter.

P.2.5.1 *Conduct a structured investigation to collect, represent, and analyze categorical data to classify matter as solid, liquid, or gas. Report findings and describe a variety of materials according to observable physical properties (e.g., size, color, texture, opacity, solubility).*

P.2.5.2 *Compare and measure the length of solid objects using technology and mathematical representations. Analyze and communicate findings.*

P.2.5.3 *Compare the weight of solid objects and the volume of liquid objects. Analyze and communicate findings.*

P.2.5.4 *Construct scientific arguments to support claims that some changes to matter caused by heating can be reversed, and some changes cannot be reversed.*

GRADE TWO: Physical Science

P.2.6 Motions, Forces, and Energy

Conceptual Understanding: An object at rest will stay at rest unless it is pushed or pulled by an unbalanced force. Pushes and pulls can have different strengths, directions, or speeds. Friction occurs when two objects make contact. Friction can change the motion of an object, the speed of an object, and can also create heat. Friction can be increased or decreased.

P.2.6 Students will demonstrate an understanding of how the motion of objects is affected by pushes, pulls, and friction on an object.

P.2.6.1 *Conduct a structured investigation to collect, represent, and analyze data from observations and measurements to demonstrate the effects of pushes and pulls with different strengths and directions. Communicate findings (e.g., models or technology).*

P.2.6.2 *Generate and answer questions about the relationship between (1) friction and the motion of objects and (2) friction and the production of heat.*

P.2.6.3 *Develop a plan to change the force (push or pull) of friction to solve a human problem (e.g., improve the ride on a playground slide or make a toy car or truck go faster). Use an engineering design process to define the problem, design, construct, evaluate, and improve the plan.**

GRADE TWO: Earth and Space Science

E.2.8 Earth and the Universe

Conceptual Understanding: Patterns of the Sun, Moon, and stars can be observed, described, and predicted. The sun is the source of heat and light for the solar system. Seasonal changes occur as the Earth orbits the Sun because of the tilt of the Earth on its axis. At night, one can see light from stars and sunlight being reflected from the moon. Telescopes make it possible to observe the Moon and the planets in greater detail. Space exploration continues to help humans understand more about the universe.

E.2.8 Students will demonstrate an understanding of the appearance, movements, and patterns of the sun, moon, and stars.

E.2.8.1 *Recognize that there are many stars that can be observed in the night sky and the Sun is the Earth's closest star.*

E.2.8.2 *With teacher guidance, observe, describe, and predict the seasonal patterns of sunrise and sunset. Collect, represent, and interpret data from internet sources to communicate findings.*

E.2.8.3 *Observe and compare the details in images of the moon and planets using the perspective of the naked eye, telescopes, and data from space exploration.*

E.2.8.4 *With teacher support, gain an understanding that scientists are humans who use observations and experiments to learn about space. Obtain information from informational text or other media about scientists who have made important discoveries about objects in space (e.g., Galileo Galilei, Johannes Kepler, George Ellery Hale, Jill Tarter) or the development of technologies (e.g., various telescopes and detection devices, computer modeling, and space exploration).*

E.2.8.5 *Use informational text and other media to observe, describe and predict the visual patterns of motion of the Sun (sunrise, sunset) and Moon (phases).*

E.2.8.6 *Create a model that will demonstrate the observable pattern of motion of the Sun or Moon. Use an engineering design process to define the problem, design, construct, evaluate, and improve the model.**

GRADE TWO: Earth and Space Science

E.2.10 Earth's Resources

Conceptual Understanding: Earth is made of different materials, including rocks, sand, soil, and water. An Earth material is a resource that comes from Earth. Earth materials can be classified by their observable properties. Human life and health are heavily dependent on these materials. Understanding how to best conserve these resources will continue to be a major challenge for humans.

E.2.10 Students will demonstrate an understanding of how humans use Earth's resources.

E.2.10.1 *Use informational text, other media, and first-hand observations to investigate, analyze and compare the properties of Earth materials (including rocks, soils, sand, and water).*

E.2.10.2 *Conduct an investigation to identify and classify everyday objects that are resources from the Earth (e.g., drinking water, granite countertops, clay dishes, wood furniture, or gas grill). Classify these objects as renewable and nonrenewable resources.*

E.2.10.3 *Use informational text and other media to summarize and communicate how Earth materials are used (e.g., soil and water to grow plants; rocks to make roads, walls or building; or sand to make glass).*

E.2.10.4 *Use informational text, other media, and first-hand observations to investigate and communicate the process and consequences of soil erosion.*

E.2.10.5 *With teacher guidance, investigate possible solutions to prevent or repair soil erosion.*

GRADES 3-5 OVERVIEW

Upper elementary is a pivotal time to enhance students' scientific literacy and active engagement in science and engineering practices. Students use their experiences from structured investigations in kindergarten through Grade 2 to begin planning their own investigations to answer scientific questions. Because science foundations created at this level are key in developing students for college and career readiness, the cultivation of opportunities for inquiry-based activities and experiences that emphasize the problem solving and the engineering design process is critical.

The standards for Grades 3-5 have been developed around the following crosscutting concepts or themes:

- Grade 3 – Interactions Within an Environment
- Grade 4 – Energy and Change
- Grade 5 – Interdependence of Systems

In Grade 3, students are expected to engage in the engineering design process and conduct research and communicate their understanding of each standard in a variety of ways. In Grade 4, students will observe, research, and conduct investigations to discover patterns related to energy and change in the world around them. In Grade 5, students will model, provide evidence to support arguments, and obtain and display data about relationships among a variety of systems. Because of this yearlong study, students will gain content knowledge and tools to provide evidence and support arguments about the ways systems across content areas are interconnected and interdependent.

The core science content utilizes hands-on classroom instruction to reinforce the seven crosscutting concepts (i.e., patterns; cause and effect; scale, portion, and quantity; systems and system models; energy and matter; structure and function; and stability and change.

SEPs are in life science, physical science, and Earth and space science. The SEPs are designed so that students may develop skills and apply knowledge to solve real-life problems. While presented as distinct skill sets, the eight practices intentionally overlap and interconnect as students explore the science concepts. Some examples of specific skills students should develop in Grades 3-5 are listed below.

1. Ask questions to predict how natural or man-made changes in a habitat cause plants and animals to respond in different ways, including hibernating, migrating, responding to light, death, or extinction (e.g., sea turtles, the dodo bird, or nocturnal species).
2. Develop and use models to explain the unique and diverse life cycles of organisms other than humans (e.g., flowering plants, frogs, or butterflies) including commonalities (e.g., birth, growth, reproduction, or death).
3. Plan and conduct scientific investigations to classify different materials as either an insulator or conductor of electricity.
4. Analyze and interpret data to describe and predict how natural processes (e.g., weathering, erosion, deposition, earthquakes, tsunamis, hurricanes, or storms) affect Earth's surface.
5. Collect, analyze, and interpret data from measurements of the physical properties of solids, liquids, and gases (e.g., volume, shape, movement, and spacing of particles).
6. Construct explanations about regional climate differences using maps and long-term data from various regions.
7. Construct scientific arguments to support claims about the importance of astronomy in navigation and exploration, including the use of telescopes, compasses, and star charts.

8. Obtain and evaluate scientific information regarding the characteristics of different ecosystems and the organisms they support (e.g., salt and fresh water, deserts, grasslands, forests, rain forests, or polar tundra lands).

Curricula and instructions that integrate science and engineering practices should reflect the skills outlined above.

The Engineering Design Process (EDP) is a step-by-step method of devising a system, component, or process to meet desired needs. This is similar to the "scientific method" which is taught to young scientists. However, the EDP is a flexible process. Students can begin at any step, focus on just one step, move back and forth between steps, or repeat the cycle. Engineering standards are represented in some performance objectives with grade-banded, specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.** Professional development and teacher resources will be developed for teachers as EDP is incorporated into Mississippi standards.

Each standard in Grades 3, 4, and 5 allows students to be active doers of science rather than passive observers of science. This approach creates an opportunity for student learning and engages the pupil in the scientific investigation process. Therefore, students need to be supplied with the appropriate resources and materials to complete scientific investigations.

GRADE THREE

Theme: Interactions within an Environment

In Grade 3, students will increase their use of science and engineering practices for obtaining, recording, charting, and analyzing data in the study of a variety of environments. The crosscutting concept can be seen in life science through an organism's ability to grow, develop, survive, obtain food/energy, and reproduce within a given environment. In physical science, the concept is developed through a study of matter and its properties and their interactions based on environmental changes and surroundings. The study of Earth science in third grade investigates surface features affected by one or more of Earth's spheres and human impacts on the environment. Students are expected to engage in the engineering design process and conduct research and communicate their understanding of each standard in a variety of ways. Because of this yearlong study, students will gain content knowledge and tools to provide evidence and support arguments about the ways matter and organisms interact and are affected by the environment.

GRADE THREE: Life Science

L.3.1 Hierarchical Organization

Conceptual Understanding: Plants and animals have physical characteristics and features that allow them to receive information from the environment. Structural adaptations within groups of plants and animals allow them to better survive and reproduce in an environment.

L.3.1 Students will demonstrate an understanding of internal and external structures in plants and animals and how they relate to their growth, survival, behavior, and reproduction within an environment.

L.3.1.1 *Examine evidence to communicate information that the internal and external structures of animals (e.g., heart, stomach, bone, lung, brain, skin, ears, appendages) function to support survival, growth, and behavior.*

L.3.1.2 *Examine evidence to communicate information that the internal and external structures of plant (e.g., thorns, leaves, stems, roots, or colored petals) function to support survival, growth, behavior, and reproduction.*

L.3.1.3 *Obtain and communicate examples of physical features or behaviors of vertebrates and invertebrates and how these characteristics help them survive in particular environments, (e.g., animals hibernate, migrate, or estivate to stay alive when food is scarce or temperatures are not favorable).*

GRADE THREE: Life Science

L.3.2 Reproduction and Heredity

Conceptual Understanding: Scientists have identified and classified many types of plants and animals. Some characteristics and traits that organisms have are inherited, and some result from interactions with the environment.

L.3.2 Students will demonstrate an understanding that through reproduction, the survival and physical features of plants and animals are inherited traits from parent organisms but can also be influenced by the environment.

L.3.2.1 *Identify traits and describe how traits are passed from parent organism(s) to offspring in plants and animals.*

L.3.2.2 *Describe and provide examples of plant and animal offspring from a single parent organism (e.g., bamboo, fern, or starfish) as being an exact replica with identical traits as the parent organism.*

L.3.2.3 *Describe and provide examples of offspring from two parent organisms as containing a combination of inherited traits from both parent organisms.*

L.3.2.4 *Obtain and communicate data to provide evidence that plants and animals have traits inherited from both parent organisms and that variations of these traits exist in groups of similar organisms (e.g., flower colors in pea plants or fur color and pattern in animal offspring).*

L.3.2.5 *Research to justify the concept that traits can be influenced by the environment (e.g., stunted growth in normally tall plants due to insufficient water, changes in an arctic fox's fur color due to light and/or temperature, or flamingo plumage).*

GRADE THREE: Life Science

L.3.4 Adaptations and Diversity

Conceptual Understanding: When the environment or habitat changes, some plants and animals survive and reproduce, some move to new locations, and some die. Scientists can obtain historical information from fossils to provide evidence of both the organism and environments in which they lived.

L.3.4 Students will demonstrate an understanding of how adaptations allow animals to satisfy life needs and respond both physically and behaviorally to their environment.

L.3.4.1 *Obtain data from informational text to explain how changes in habitats (both those that occur naturally and those caused by organisms) can be beneficial or harmful to the organisms that live there.*

L.3.4.2 *Ask questions to predict how natural or man-made changes in a habitat cause plants and animals to respond in different ways, including hibernating, migrating, responding to light, death, or extinction (e.g., sea turtles, the dodo bird, or nocturnal species).*

L.3.4.3 *Analyze and interpret data to explain how variations in characteristics among organisms of the same species may provide advantages in surviving, finding mates, and reproducing (e.g., plants with larger thorns being less likely to be eaten by predators or animals with better camouflage colorations being more likely to survive and bear offspring).*

L.3.4.4 *Define and improve a solution to a problem created by environmental changes and any resulting impacts on the types of density and distribution of plant and animal populations living in the environment (e.g., replanting sea oats in coastal areas or developing or preserving wildlife corridors and green belts). Use an engineering design process to define the problem, design, construct, evaluate, and improve the environment.**

L.3.4.5 *Construct scientific argument using evidence from fossils of plants and animals that lived long ago to infer the characteristics of early environments (e.g., marine fossils on dry land, tropical plant fossils in arctic areas, or fossils of extinct organisms in any environment).*

GRADE THREE: Physical Science

P.3.5 Organization of Matter and Chemical Interactions

Conceptual Understanding: Matter is made up of particles that are too small to be seen. Even though the particles are very small, the movement and spacing of these particles determine the basic properties of matter. Matter exists in several different states and is classified based on observable and measurable

properties. Matter can be changed from one state to another when heat (i.e., thermal energy) is added or removed.

P.3.5 Students will demonstrate an understanding of the physical properties of matter to explain why matter can change states between a solid, liquid, or gas dependent upon the addition or removal of heat.

P.3.5.1 *Plan and conduct scientific investigations to determine how changes in heat (i.e., an increase or decrease) change matter from one state to another (e.g., melting, freezing, condensing, boiling, or evaporating).*

P.3.5.2 *Develop and use models to communicate the concept that matter is made of particles too small to be seen that move freely around in space (e.g., inflation and shape of a balloon, wind blowing leaves, or dust suspended in the air).*

P.3.5.3 *Plan and conduct investigations that particles speed up or slow down with addition or removal of heat.*

GRADE THREE: Physical Science

P.3.6 Motions, Forces, and Energy

Conceptual Understanding: Magnets are a specific type of solid that can attract and repel certain other kinds of materials, including other magnets. There are some materials that are neither attracted to nor repelled by magnets. Because of their special properties, magnets are used in various ways. Magnets can exert forces—a push or a pull—on other magnets or magnetic materials, causing energy transfer between them, even when the objects are not touching.

P.3.6 Students will demonstrate an understanding of magnets and the effects of pushes, pulls, and friction on the motion of objects.

P.3.6.1 *Compare and contrast the effects of different strengths and directions of forces on the motion of an object (e.g., gravity, polarity, attraction, repulsion, or strength).*

P.3.6.2 *Plan an experiment to investigate the relationship between a force applied to an object (e.g., friction, gravity) and resulting motion of the object.*

P.3.6.3 *Research and communicate information to explain how magnets are used in everyday life.*

P.3.6.4 *Define and solve a simple design problem by applying scientific ideas about magnets (e.g., can opener, door latches, paperclip holders, finding studs in walls, magnetized paint). Use an engineering design process to define the problem, design, construct, evaluate, and improve the magnet.**

GRADE THREE: Earth and Space Science

E.3.7 Earth's Structure and History

Conceptual Understanding: Since its formation, the Earth has undergone a great deal of geological change driven by its composition and systems. Scientists use many methods to learn more about the history and age of Earth. Earth materials include rocks, soils, water, and gases. Rock is composed of different combinations of minerals. Smaller rocks come from the breakage and weathering of bedrock and larger rocks. Soil is made partly from weathered rock, partly from plant remains, and contains many living organisms.

E.3.7A Students will demonstrate an understanding of the various processes involved in the rock cycle, superposition of rock layers, and fossil formation.

E.3.7A.1 *Plan and conduct controlled scientific investigations to identify the processes involved in forming the three major types of rock, and investigate common techniques used to identify them.*

E.3.7A.2 *Develop and use models to demonstrate the processes involved in the development of various rock formations, including superposition, and how those formations can fracture and move over time.*

E.3.7A.3 *Ask questions to generate testable hypotheses regarding the formation and location of fossil types, including their presence in some sedimentary rock.*

Conceptual Understanding: Earth has an active mantle, which interacts with the Earth's crust to drive plate tectonics and form new rocks. Resulting surface features change through interactions with water, air, and living things. Waves, wind, water, and ice shape and reshape the Earth's land surface by eroding rock and soil in some areas and depositing them in other areas. Scientists use many methods to learn more about the history and age of Earth.

E.3.7B Students will demonstrate an understanding of the composition of Earth and the processes which change Earth's landforms.

E.3.7B.1 *Obtain and evaluate scientific information (e.g. using technology) to describe the four major layers of Earth and the varying compositions of each layer.*

E.3.7B.2 *Develop and use models to describe the characteristics of Earth's continental landforms and classify landforms as volcanoes, mountains, valleys, canyons, planes, and islands.*

E.3.7B.3 *Develop and use models of weathering, erosion, and deposition processes which explain the appearance of various Earth features (e.g., the Grand Canyon, Arches National Park in Utah, Plymouth Bluff in Columbus, or Red Bluff in Marion County, Mississippi).*

E.3.7B.4 *Compare and contrast constructive (e.g., deposition, volcano) and destructive (e.g., weathering, erosion, earthquake) processes of the Earth.*

GRADE THREE: Earth and Space Science

E.3.9 Earth's Systems and Cycles

Conceptual Understanding: The Earth's land can be situated above or submerged below water. Water in the atmosphere changes states according to energy levels driven by the sun and its interactions with various Earth components, both living and non-living. The downhill movement of water as it flows to the ocean shapes the appearance of the land.

E.3.9 Students will demonstrate an understanding of how the Earth's systems (i.e., geosphere, hydrosphere, atmosphere, and biosphere) interact in multiple ways to affect Earth's surface materials and processes.

E.3.9.1 *Develop models to communicate the characteristics of the Earth's major systems, including the geosphere, hydrosphere, atmosphere, and biosphere (e.g., digital models, illustrations, flip books, diagrams, charts, tables).*

E.3.9.2 *Construct explanations of how different landforms and surface features result from the location and movement of water on Earth's surface (e.g., watersheds, drainage basins, deltas, or rivers).*

E.3.9.3 *Use graphical representations to communicate the distribution of freshwater and saltwater on Earth (e.g., oceans, lakes, rivers, glaciers, groundwater, or polar ice caps).*

GRADE THREE: Earth and Space Science

E.3.10 Earth's Resources

Conceptual Understanding: Earth is made of materials that provide resources for human activities, and their use affects the environment in multiple ways. Some resources are renewable and others are not.

E.3.10 Students will demonstrate an understanding that all materials, energy, and fuels that humans use are derived from natural sources.

E.3.10.1 *Identify some of Earth's resources that are used in everyday life such as water, wind, soil, forests, oil, natural gas, and minerals and classify as renewable or nonrenewable.*

E.3.10.2 *Obtain and communicate information to exemplify how humans attain, use, and protect renewable and nonrenewable Earth resources.*

E.3.10.3 *Use maps and historical information to identify natural resources in the state connecting (a) how resources are used for human needs and (b) how the use of those resources impacts the environment.*

E.3.10.4 *Design a process for cleaning a polluted environment (e.g., simulating an oil spill in the ocean or a flood in a city and creating a solution for containment and/or cleanup). Use an engineering design process to define the problem, design, construct, evaluate, and improve the environment.**

GRADE FOUR

Theme: Energy and Systems

In Grade 4, students will observe, research, and conduct investigations to discover patterns related to energy and change in the world around them. The crosscutting concept can be seen in life science through the study of human body systems, including their functions, interactions, and reliance upon other systems within the body. In physical science, the concept is developed through a study of energy in the forms of heat, light, sound, and electricity, as well as the conservation and transfer of energy from one form to another. The study of Earth science in fourth grade investigates the driving force of energy as it relates to the water cycle and changes in patterns of weather and climate. Students are expected to engage in engineering design practices, conduct research, and communicate their understanding of each standard in a variety of ways. Because of this yearlong study, students will gain research and process skills to build content knowledge that will support arguments about the ways energy and change relate to the world around us.

GRADE FOUR: Life Science

L.4.1 Hierarchical Organization

Conceptual Understanding: All organisms need energy for growth and development. Animals have specialized structures and systems for obtaining and processing energy. These structures and systems cannot function properly without adequate nourishment. Living organisms can be adversely affected by environmental conditions or disease.

L.4.1 Students will demonstrate an understanding of the organization, functions, and interconnections of the major human body systems.

L.4.1.1 *Use technology or other resources to research and discover general system function (e.g., machines, water cycle) as they relate to human organ systems and identify organs that work together to create organ systems.*

L 4.1.2 *Obtain and communicate data to describe patterns that indicate the nature of relationships between human organ systems, which interact with one another to control digestion, respiration, circulation, excretion, movement, coordination, and protection from infection.*

L.4.1.3 *Construct models of organ systems (e.g. circulatory, digestive, respiratory, muscular, skeletal, nervous) to demonstrate both the unique function of the system and how multiple organs and organ systems work together to accomplish more complex functions.*

L.4.1.4 *Research and communicate how noninfectious diseases (e.g. diabetes, heart disease) and infectious diseases (e.g. cold, flu) serve to disrupt the function of the body system.*

L.4.1.5 *Using informational text, investigate how scientific fields, medical specialties, and research methods help us find new ways to maintain a healthy body and lifestyle (e.g. diet, exercise, vaccines, and mental health).*

GRADE FOUR: Life Science

L.4.2 Reproduction and Heredity

Conceptual Understanding: Scientists have identified and classified many types of plants and animals. Each plant or animal has a unique pattern of growth and development called a life cycle. All of Earth's cycles are driven by energy which can be traced back to the sun.

L.4.2 Students will demonstrate an understanding of life cycles, including familiar plants and animals (e.g., reptiles, amphibians, or birds).

L.4.2.1 *Compare and contrast life cycles of familiar plants and animals.*

L.4.2.2 *Develop and use models to explain the unique and diverse life cycles of organisms other than humans (e.g., flowering plants, frogs, or butterflies) including commonalities (e.g., birth, growth, reproduction, or death).*

GRADE FOUR: Physical Science

P.4.6 Motions, Forces, and Energy

Conceptual Understanding: As different forms of energy, heat and electricity can be produced in different ways and are transferred and conducted from one form or object to another. Some materials can be conductors or insulators of heat energy. Electricity can be transferred from place to place by electric currents to produce motion, sound, heat, or light.

P.4.6A Students will demonstrate an understanding of the common sources and uses of heat and electric energy and the materials used to transfer heat and electricity.

P.4.6A.1 *Obtain and communicate information to compare how different processes (including burning, friction, and electricity) serve as sources of heat energy.*

P.4.6A.2 *Plan and conduct scientific investigations to classify different materials as either an insulator or conductor of electricity.*

P.4.6A.3 *Develop models demonstrating how heat and electrical energy can be transformed into other forms of energy (e.g., motion, sound, heat, or light).*

P.4.6A.4 *Develop models that demonstrate the path of an electric current in a complete, simple circuit (e.g., lighting a light bulb or making a sound).*

P.4.6A.5 *Use informational text and technology resources to communicate technological breakthroughs made by historical figures in electricity (e.g. Alessandro Volta, Michael Faraday, Nicola Tesla, Thomas Edison, incandescent light bulbs, batteries, Light Emitting Diodes).*

P.4.6A.6 *Design a device that converts any form of energy from one form to another form (e.g., construct a musical instrument that will convert vibrations to sound by controlling varying pitches, a solar oven that will convert energy from the sun to heat energy, or a simple circuit that can be used to complete a task). Use an engineering design process to define the problem, design, construct, evaluate, and improve the device.**

Conceptual Understanding: Light, as a form of energy, has specific properties, including brightness. Light travels in a straight line until it strikes an object. The way light behaves when it strikes an object depends on the object's properties.

P.4.6B Students will demonstrate an understanding of the properties of light as forms of energy.

P.4.6B.1 *Construct scientific evidence to support the claim that white light is made up of different colors. Include the work of Sir Isaac Newton to communicate results.*

P.4.6B.2 *Obtain and communicate information to explain how the visibility of an object is related to light.*

P.4.6B.3 *Develop and use models to communicate how light travels and behaves when it strikes an object, including reflection, refraction, and absorption.*

P.4.6B.4 *Plan and conduct scientific investigations to explain how light behaves when it strikes transparent, translucent, and opaque materials.*

Conceptual Understanding: Sound, as a form of energy, is produced by vibrating objects (matter) and has specific properties, including pitch and volume. Sound travels through air and other materials and is used to communicate information in various forms of technology.

P.4.6C Students will demonstrate an understanding of the properties of sound as a form of energy.

P.4.6C.1 *Plan and conduct scientific investigations to test how different variables affect the properties of sound (i.e., pitch and volume).*

P.4.6C.2 *In relation to how sound is perceived by humans, analyze and interpret data from observations and measurements to report how changes in vibration affect the pitch and volume of sound.*

P.4.6C.3 *Obtain and communicate information about scientists who pioneered in the science of sound, (e.g., Alexander Graham Bell, Robert Boyle, Daniel Bernoulli, and Guglielmo Marconi).*

GRADE FOUR: Earth and Space Science

E.4.9 Earth's Systems and Cycles

Conceptual Understanding: Earth's atmosphere is a mixture of gases, including water vapor and oxygen. Water, which is found almost everywhere on Earth, including the atmosphere, changes form and cycles between Earth's surface to the air and back again. This cycling of water is driven by energy from the sun. The movement of water in the water cycle is a major process that influences weather conditions. Clouds form during this cycle and various types of precipitation result.

E.4.9A Students will demonstrate an understanding of how the water cycle is propelled by the sun's energy.

E.4.9A.1 *Develop and use models to explain how the sun's energy drives the water cycle. (e.g., evaporation, condensation, precipitation, transpiration, runoff, and groundwater).*

Conceptual Understanding: Scientists record patterns in weather conditions over time and across the globe to make predictions about what kind of weather might occur next. Climate describes the range of an area's typical weather conditions and the extent to which those conditions vary over long periods of time.

E.4.9B Students will demonstrate an understanding of weather and climate patterns.

E.4.9B.1 *Analyze and interpret data (e.g., temperature, precipitation, wind speed/direction, relative humidity, or cloud types) to predict changes in weather over time.*

E.4.9B.2 *Construct explanations about regional climate differences using maps and long-term data from various regions.*

E.4.9B.3 *Design weather instruments utilized to measure weather conditions (e.g., barometer, hygrometer, rain gauge, anemometer, or wind vane). Use an engineering design process to define the problem, design, construct, evaluate, and improve the weather instrument.**

Conceptual Understanding: Earth's oceans and landforms can be affected in various ways by natural processes in one or more of Earth's spheres (i.e., atmosphere, biosphere, geosphere, and hydrosphere). Humans cannot eliminate natural hazards caused by these processes but can take steps to reduce their impacts. Human activities can affect the land and oceans in positive and negative ways.

E.4.9C Students will demonstrate an understanding of how natural processes and human activities affect the features of Earth's landforms and oceans.

E.4.9C.1 *Analyze and interpret data to describe and predict how natural processes (e.g., weathering, erosion, deposition, earthquakes, tsunamis, hurricanes, or storms) affect Earth's surface.*

E.4.9C.2 *Develop and use models of natural processes to explain the effect of the movement of water on the ocean shore zone, including beaches, barrier islands, estuaries, and inlets (e.g., marshes, bays, lagoons, fjord, or sound).*

E.4.9C.3 *Construct scientific arguments from evidence to support claims that human activities, such as conservation efforts or pollution, affect the land, oceans, and atmosphere of Earth.*

E.4.9C.4 *Research and explain how systems (i.e., the atmosphere, geosphere, and/or hydrosphere), interact and support life in the biosphere.*

E.4.9C.5 *Obtain and communicate information about severe weather phenomena (e.g., thunderstorms, hurricanes, or tornadoes) to explain steps humans can take to reduce the impact of severe weather events.*

GRADE FOUR: Earth and Space Science

E.4.10 Earth's Resources

Conceptual Understanding: Energy and fuels are derived from natural sources and human use of these materials affects the environment in multiple ways. Due to limited natural resources, humans are exploring the use of abundant solar, water, wind, and geothermal energy resources to develop innovative, high-tech renewable energy systems.

E.4.10 Students will demonstrate an understanding of the various sources of energy used for human needs along with their effectiveness and possible impacts.

E.4.10.1 *Organize simple data sets to compare energy and pollution output of various traditional, non-renewable resources (e.g. coal, crude oil, wood).*

E.4.10.2 *Use technology or informational text to investigate, evaluate, and communicate various forms of clean energy generation.*

GRADE FIVE

Theme: Interdependence of Systems

In Grade 5, students will model processes, provide evidence to support arguments, and obtain and display data about relationships among a variety of systems. The crosscutting concept can be seen in life science through the transfer of energy from the sun into all parts of a food web and ecosystem. In physical science, the concept is developed through a study of matter and an examination of forces and motion through the lens of gravity's effect on an object. The study of Earth and space science in fifth grade investigates the Earth in the universe, relationships between the bodies of our solar system, and human interaction with the Earth. Students are expected to engage in the engineering design process and conduct research to communicate their understanding of each standard in a variety of ways, including ELA connections to speaking and writing and mathematics connections to measurements using the metric system. Because of this yearlong study, students will gain content knowledge and tools to provide evidence and support arguments about the ways systems across content areas are interconnected and interdependent.

GRADE FIVE: Life Science

L.5.3 Ecology and Interdependence

Conceptual Understanding: All organisms need energy to live and grow. Energy is obtained from the sun. Cells transform the energy that organisms need to perform essential life functions through a complex sequence of reactions in which chemical energy is transferred from one system of interacting molecules to another.

L.5.3A Students will demonstrate an understanding of photosynthesis and the transfer of energy from the sun into chemical energy necessary for plant growth and survival.

L.5.3A.1 *Research and communicate the basic process of photosynthesis that is used by plants to convert light energy into chemical energy that can be stored and released to fuel an organism's activities.*

L.5.3A.2 *Analyze environments that do not receive direct sunlight and devise explanations as to how photosynthesis occurs, either naturally or artificially.*

Conceptual Understanding: A major role an organism serves in an ecosystem can be described by the way in which it obtains its energy. Energy is transferred within an ecosystem by producers, consumers, or decomposers. A healthy ecosystem is one in which a diverse population of life forms can meet their needs in a relatively stable web of life.

L.5.3B Students will demonstrate an understanding of a healthy ecosystem with a stable web of life and the roles of living things within a food chain and/or food web, including producers, primary and secondary consumers, and decomposers.

L.5.3B.1 *Obtain and evaluate scientific information regarding the characteristics of different ecosystems and the organisms they support (e.g., salt and fresh water, deserts, grasslands, forests, rain forests, or polar tundra lands).*

L.5.3B.2 *Develop and use a food chain model to classify organisms as producers, consumers, or decomposers. Trace the energy flow to explain how each group of organisms obtains energy.*

L.5.3B.3 *Design and interpret models of food webs to justify what effects the removal or the addition of a species (i.e., introduced or invasive) would have on a specific population and/or the ecosystem as a whole.*

L.5.3B.4 *Communicate scientific or technical information that explains human positions in food webs and our potential impacts on these systems.*

GRADE FIVE: Physical Science

P.5.5 Organization of Matter and Chemical Interactions

Conceptual Understanding: Matter can be segregated into tiny particles that are too small to see, but can be detected by other methods. These tiny particles are referred to as atoms, which can be combined to form molecules. Substances exhibit specific properties that can be observed and measured.

P.5.5A Students will demonstrate an understanding of the physical properties of matter.

P.5.5A.1 *Obtain and evaluate scientific information to describe basic physical properties of atoms and molecules.*

P.5.5A.2 *Collect, analyze, and interpret data from measurements of the physical properties of solids, liquids, and gases (e.g., volume, shape, movement, and spacing of particles).*

P.5.5A.3 *Analyze matter through observations and measurements to classify materials (e.g., powders, metals, minerals, or liquids) based on their properties (e.g., color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, solubility, or density).*

P.5.5A.4 *Make and test predictions about how the density of an object affects whether the object sinks or floats when placed in a liquid.*

P.5.5A.5 *Design a vessel that can safely transport a dense substance (e.g., syrup, coins, marbles) through water at various distances and under variable conditions. Use an engineering design process to define the problem, design, construct, evaluate, and improve the vessel.**

Conceptual Understanding: Substances of the same type can be classified by their similar, observable properties. Substances can be combined in a variety of ways. A mixture is formed when two or more kinds of matter are physically combined. Solutions are a special type of mixture in which one substance is distributed evenly into another substance. When the physical properties of the components in a mixture are not changed, they can be separated in different physical ways.

P.5.5B Students will demonstrate an understanding of mixtures and solutions.

P.5.5B.1 *Obtain and evaluate scientific information to describe what happens to the properties of substances in mixtures and solutions.*

P.5.5B.2 *Analyze and interpret data to communicate that the concentration of a solution is determined by the relative amount of solute versus solvent in various mixtures.*

P.5.5B.3 *Investigate how different variables (e.g., temperature change, stirring, particle size, or surface area) affect the rate at which a solute will dissolve.*

P.5.5B.4 *Design an effective system (e.g., sifting, filtration, evaporation, magnetic attraction, or floatation) for separating various mixtures. Use an engineering design process to define the problem, design, construct, evaluate, and improve the system.**

Conceptual Understanding: Physical properties can be observed and measured without changing the composition of matter. A physical change occurs when the matter's physical appearance is altered while leaving the composition of the matter unchanged. When two or more substances are mixed together, a new substance with different properties can sometimes be formed, but the total amount (i.e., mass) of the substances is conserved (i.e., total mass stays the same). In a chemical change, the composition of the original matter is altered to create a new substance. A different compound is present at the completion of the chemical change.

P.5.5C Students will demonstrate an understanding of the difference between physical and chemical changes.

P.5.5C.1 *Analyze and communicate the results of chemical changes that result in the formation of new materials (e.g., decaying, burning, rusting, or cooking).*

P.5.5C.2 *Analyze and communicate the results of physical changes to a substance that results in a reversible change (e.g., changes in states of matter with the addition or removal of energy, changes in size or shape, or combining/separating mixtures or solutions).*

P.5.5C.3 *Analyze and interpret data to support claims that when two substances are mixed, the total weight of matter is conserved.*

GRADE FIVE: Physical Science

P.5.6 Motions, Forces, and Energy

Conceptual Understanding: Gravity is a force that draws objects to Earth. This force acting on an object near Earth's surface pulls that object toward the planet's center. The motion of an object can be described in terms of its position, direction, and speed. Multiple factors determine the rate and motion of an object. Other than Earth, any celestial objects will exert varying gravitational pulls on other objects according to their mass and density.

P.5.6 Students will demonstrate an understanding of the factors that affect the motion of an object through a study of Newton's Laws of Motion.

P.5.6.1 *Obtain and communicate information describing gravity's effect on an object.*

P.5.6.2 *Predict the future motion of various objects based on past observation and measurement of position, direction, and speed.*

P.5.6.3 *Develop and use models to explain how the amount or type of force, both contact and non-contact, affects the motion of an object.*

P.5.6.4 *Plan and conduct scientific investigations to test the effects of balanced and unbalanced forces on the speed and/or direction of objects in motion.*

P.5.6.5 *Predict how a change of force, mass, and/or friction affects the motion of an object to convert potential energy into kinetic energy.*

P.5.6.6 *Design a system to increase the effects of friction on the motion of an object (e.g., non-slip surfaces or vehicle braking systems or flaps on aircraft wings). Use an engineering design process to define the problem, design, construct, evaluate, and improve the system.**

GRADE FIVE: Earth and Space Science

E.5.8 Earth and the Universe

Conceptual Understanding: Astronomy is the study of celestial objects in our solar system and beyond. A solar system includes one or more suns (stars) and all other objects orbiting in that system. Planets in our night sky change positions and are not always visible from Earth as they orbit our sun. Stars that can be seen in the night sky lie beyond our solar system and appear in patterns called constellations. Constellations can be used for navigation and appear to move together across the sky because of Earth's rotation and revolution around the sun.

E.5.8A Students will demonstrate an understanding of the locations of objects in the universe.

E.5.8A.1 *Develop and use scaled models of Earth's solar system to demonstrate the size, composition (i.e., rock or gas), location, and order of the planets as they orbit the Sun.*

E.5.8A.2 *Use evidence to argue why the sun appears brighter than other stars.*

E.5.8A.3 *Describe how constellations appear to move from Earth's perspective throughout the seasons (e.g., Ursa Major, Ursa Minor, and Orion).*

E.5.8A.4 *Construct scientific arguments to support claims about the importance of astronomy in navigation and exploration, including the use of telescopes, compasses, and star charts.*

Conceptual Understanding: Earth orbits around the sun as the moon orbits around Earth. The revolution and rotation of Earth on a tilted axis provide evidence of patterns that can be observed, studied, and predicted.

E.5.8B Students will demonstrate an understanding of the principles that govern moon phases, day and night, appearance of objects in the sky, and seasonal changes.

E.5.8B.1 *Analyze and interpret data from observations and research (e.g., from NASA, NOAA, or the USGS) to explain patterns in the location, movement, and appearance of the moon throughout a month and over the course of a year.*

E.5.8B.2 *Develop and use a model of the Earth-Sun-Moon system to analyze the cyclic patterns of lunar phases, solar and lunar eclipses, and seasons.*

E.5.8B.3 *Develop and use models to explain the factors (e.g., tilt, revolution, and angle of sunlight) that result in Earth's seasonal changes.*

E.5.8B.4 *Obtain information and analyze how our understanding of the solar system has evolved over time (e.g., Earth-centered model of Aristotle and Ptolemy compared to the Sun-centered model of Copernicus and Galileo).*

GRADE FIVE: Earth and Space Science

E.5.10 Earth's Resources

Conceptual Understanding: Human activities can impact natural processes and availability of resources. To reduce impacts on the environment (including humans), various best practices can be used. New and improved conservation practices are constantly being developed and tested.

E.5.10 Students will demonstrate an understanding of the effects of human interaction with Earth and how Earth's natural resources can be protected and conserved.

E.5.10.1 *Collect and organize scientific ideas that individuals and communities can use to conserve Earth's natural resources and systems (e.g., implementing watershed management practices to conserve water resources, utilizing no-till farming to improve soil fertility, reducing emissions to abate air pollution, or recycling to reduce landfill waste).*

E.5.10.2 *Design a process for better preparing communities to withstand manmade or natural disasters (e.g., removing oil from water or soil, systems that reduce the impact of floods, structures that resist hurricane forces). Use an engineering design process to define the problem, design, construct, evaluate, and improve the disaster plan.**

GRADES 6-8 OVERVIEW

Critical to middle school students is the foundation needed to be successful in high school science. In Grades 6-8, students use an integrated science curriculum to develop and plan controlled investigations and create more explicit and detailed models and explanations. Students must have opportunities to develop the skills necessary to engage in scientific and technical reasoning that are necessary for success in college, careers, and citizenship.

Because of using an integrated science model, the development of themes for each grade became necessary to assure continuity of thought processes.

- Grade 6 – Structure and Function
- Grade 7 – Systems and Cycles
- Grade 8 – Cause and Effect

In Grade 6, students need more tangible concepts, but by Grade 8, the complexity of the content increases to abstract cause and effect relationships. Explaining patterns and making predictions based on an understanding of cause and effect allows students to conceptualize and describe the relationships among natural phenomena. By building complexity into the standards, student skill sets are further strengthened as they prepare for high school courses.

The core science content utilizes hands-on classroom instruction to reinforce the seven crosscutting concepts (i.e., patterns; cause and effect; scale, portion, and quantity; systems and system models; energy and matter; structure and function; and stability and change).

SEPs are in life science, physical science, and Earth and space science. The SEPs are designed so that students may develop skills and apply knowledge to solve real-life problems. While presented as distinct skill sets, the eight practices intentionally overlap and interconnect as students explore the science concepts. Some examples of specific skills students should develop in Grades 6-8 are listed below.

1. Ask questions to explain how density of matter (observable in various objects) is affected by a change in heat and/or pressure.
2. Develop and use models to show relationships among the increasing complexity of multicellular organisms (cells, tissues, organs, organ systems, organisms) and how they serve the needs of the organism.
3. Conduct simple investigations about the performance of waves to describe their behavior (e.g., refraction, reflection, transmission, and absorption) as they interact with various materials (e.g., lenses, mirrors, and prisms).
4. Analyze and interpret data to explain how the processes of photosynthesis, and cellular respiration (aerobic and anaerobic) work together to meet the needs of plants and animals.
5. Use mathematical computation and diagrams to calculate the sum of forces acting on various objects.
6. Construct an explanation for how climate is determined in an area using global and surface features (e.g. latitude, elevation, shape of the land, distance from water, global winds, and ocean currents).
7. Engage in scientific argument based on current evidence to determine whether climate change happens naturally or is being accelerated through the influence of man.
8. Obtain and evaluate scientific information to explain the relationship between seeing color and the transmission, absorption, or reflection of light waves by various materials.

Curricula and instructions that integrate science and engineering practices should reflect the skills outlined above.

The Engineering Design Process (EDP) is a step-by-step method of devising a system, component, or process to meet desired needs. This is similar to the "scientific method" which is taught to young scientists. However, the EDP is a flexible process. Students can begin at any step, focus on just one step, move back and forth between steps, or repeat the cycle. Engineering standards are represented in some performance objectives with grade-banded, specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.** Professional development and teacher resources will be developed for teachers as EDP is incorporated into Mississippi standards.

The use of science and engineering practices and crosscutting concepts will actively engage students in science, building on their natural curiosity and encouraging further study in science and engineering fields. As science also requires the ability to think and reason, students will therefore also develop the skills necessary to be successful in college, career, and society.

GRADE SIX

Theme: Structure and Function

Grade 6 students need concrete opportunities to engage with natural phenomena. The integration of Earth and space, life, and physical sciences gives students many opportunities to explore the relationship of structure and function in the world around them. By analyzing the macro- and microscopic world, the role of cells in life functions, the interdependence in ecosystems, the diversity of life on Earth, the relationship between force and motion, and the organization and interactions of objects in the universe, Grade 6 students can make claims and provide evidence about structure-function relationships in different scientific domains.

GRADE SIX: Life Science

L.6.1 Hierarchical Organization

Conceptual Understanding: Living things are distinguished from nonliving things by several characteristics. All living things are comprised of one (unicellular) or more (multicellular) cells, which are the smallest units of life. Cells carry out life functions and undergo cell division using specialized structures that allow them to acquire energy and water, grow, reproduce, dispose of waste, and survive. Multicellular organisms are organized in a hierarchy of increasing complexity with related, specialized structures and functions.

L.6.1 Students will demonstrate an understanding that living things range from simple to complex organisms, are organized hierarchically, and function as whole living systems.

L.6.1.1 *Use argument supported by evidence in order to distinguish between living and non-living things, including viruses and bacteria.*

L.6.1.2 *Obtain and communicate evidence to support the cell theory.*

L.6.1.3 *Develop and use models to explain how specific cellular components (cell wall, cell membrane, nucleus, chloroplast, vacuole, and mitochondria) function together to support the life of prokaryotic and eukaryotic organisms to include plants, animals, fungi, protists, and bacteria (not to include biochemical function of cells or cell part).*

L.6.1.4 *Compare and contrast different cells in order to classify them as a protist, fungus, plant, or animal.*

L.6.1.5 *Provide evidence that organisms are unicellular or multicellular.*

L.6.1.6 *Develop and use models to show relationships among the increasing complexity of multicellular organisms (cells, tissues, organs, organ systems, organisms) and how they serve the needs of the organism.*

GRADE SIX: Life Science

L.6.3 Ecology and Interdependence

Conceptual Understanding: All organisms depend on biotic and abiotic factors for survival. When any environmental factor changes, a corresponding change in diversity and population of organisms will also occur. The environment and the organism in which it lives are therefore interdependent.

L.6.3 Students will demonstrate an understanding of the relationships among survival, environmental changes, and diversity as they relate to the interactions of organisms, populations, and the environment.

L.6.3.1 *Use scientific reasoning to explain differences between biotic and abiotic factors that demonstrate what living organisms need to survive.*

L.6.3.2 *Develop and use models to describe the levels of organization within ecosystems (species, populations, communities, ecosystems, and biomes).*

L.6.3.3 *Analyze cause and effect relationships to explore how changes in the physical environment (limiting factors, natural disasters) can lead to population changes within an ecosystem.*

L.6.3.4 *Investigate organism interactions in a competitive or mutually beneficial relationship (predation, competition, cooperation, or symbiotic relationships).*

L.6.3.5 *Develop and use food chains, webs, and pyramids to analyze how energy is transferred through an ecosystem from producers (autotrophs) to consumers (heterotrophs, including humans) to decomposers.*

GRADE SIX: Life Science

L.6.4 Adaptation and Diversity

Conceptual Understanding: Because living organisms are so diverse, scientists have created a system by which living things are organized into groups according to their characteristics (physical and/or genomic) for identification and research purposes. The kingdoms are very diverse but also have quite a bit in common. Organisms exhibit structural and behavioral characteristics such as adaptations, patterns of growth and development, and life cycles that increase their chances of reproduction and survival in a changing environment.

L.6.4 Students will demonstrate an understanding of classification tools and models such as dichotomous keys to classify representative organisms based on the characteristics of the kingdoms: Archaebacteria, Eubacteria, Protists, Fungi, Plants, and Animals.

L.6.4.1 *Compare and contrast modern classification techniques (e.g., analyzing genetic material) to the historical practices used by scientists such as Aristotle and Carolus Linnaeus.*

L.6.4.2 *Use classification methods to explore the diversity of organisms in kingdoms (animals, plants, fungi, protists, bacteria). Support claims that organisms have shared structural and behavioral characteristics.*

L.6.4.3 *Analyze and interpret data from observations to describe how fungi obtain energy and respond to stimuli (e.g., bread mold, rotting plant material).*

L.6.4.4 *Conduct investigations using a microscope or multimedia source to compare the characteristics of protists (euglena, paramecium, amoeba) and the methods they use to obtain energy and move through their environment (e.g., pond water).*

L.6.4.5 *Engage in scientific arguments to support claims that bacteria (Archaebacteria and Eubacteria) and viruses can be both helpful and harmful to other organisms and the environment.*

GRADE SIX: Physical Science

P.6.6 Motions, Forces, and Energy

Conceptual Understanding: Newton's Laws describe forces and motion affecting substances in various environments and situations. Motion is determined by the amount of force applied. Focusing on magnetic, frictional, and gravitational forces will provide an understanding of the relationship between distance and contact forces.

P.6.6 Students will demonstrate an understanding of Newton's laws of motion using real world models and examples.

P.6.6.1 *Use an engineering design process to create or improve safety devices (e.g., seat belts, car seats, helmets) by applying Newton's Laws of motion. Use an engineering design process to define the problem, design, construct, evaluate, and improve the safety device.**

P.6.6.2 *Use mathematical computation and diagrams to calculate the sum of forces acting on various objects.*

P.6.6.3 *Investigate and communicate ways to manipulate applied/frictional forces to improve movement of objects on various surfaces (e.g., athletic shoes, wheels on cars).*

P.6.6.4 *Compare and contrast magnetic, electric, frictional, and gravitational forces.*

P.6.6.5 *Conduct investigations to predict and explain the motion of an object according to its position, direction, speed, and acceleration.*

P.6.6.6 *Investigate forces (gravity, friction, drag, lift, thrust) acting on objects (e.g., airplane, bicycle helmets). Use data to explain the differences between the forces in various environments.*

P.6.6.7 *Determine the relationships between the concepts of potential, kinetic, and thermal energy.*

GRADE SIX: Earth and Space Science

E.6.8 Earth and the Universe

Conceptual Understanding: The hierarchical organization of the universe is the result of complex structure and function. Current theories suggest that time began with a period of extremely rapid expansion. Presently, Earth's solar system consists of the Sun and other objects that are held in orbit by the Sun's gravitational force. The interactions of the Earth, the Moon, and the Sun have effects that can be observed on Earth. Various technologies have aided in our understanding of Earth's place in the universe.

E.6.8 Students will demonstrate an understanding of Earth's place in the universe and the interactions of the solar system (sun, planets, their moons, comets, and asteroids) using evidence from multiple scientific resources to explain how these objects are held in orbit around the Sun because of its gravitational pull.

E.6.8.1 *Obtain, evaluate, and summarize past and present theories and evidence to explain the formation and composition of the universe.*

E.6.8.2 *Use graphical displays or models to explain the hierarchical structure (stars, galaxies, galactic clusters) of the universe.*

E.6.8.3 *Evaluate modern techniques used to explore our solar system's position in the universe.*

E.6.8.4 *Obtain and evaluate information to model and compare the characteristics and movements of objects in the solar system (including planets, moons, asteroids, comets, and meteors).*

E.6.8.5 *Construct explanations for how gravity affects the motion of objects in the solar system and tides on Earth.*

E.6.8.6 *Design models representing motions within the Sun-Earth-Moon system to explain phenomena observed from the Earth's surface (positions of celestial bodies, day and year, moon phases, solar and lunar eclipses, and tides).*

E.6.8.7 *Analyze and interpret data from the surface features of the Sun (e.g., photosphere, corona, sunspots, prominences, and solar flares) to predict how these features may affect Earth.*

GRADE SEVEN

Theme: Systems and Cycles

Students relate systems and cycles through analyzing various small scale and large scale phenomena. Using scientific methods, students can connect Earth's systems with the flow of energy in supporting living and nonliving organisms and specific interactions of matter. Students use multiple investigative methods to discover evidence, make claims, and generate explanations about systems and cycles that take place on Earth. A focus on organization and cycles of matter requires students to apply skills and make connections across genres of science since most complex cycles have multiple interactions.

GRADE SEVEN: Life Science

L.7.3 Ecology and Interdependence

Conceptual Understanding: The emphasis is on predicting consistent patterns of interactions among different cycling systems in terms of the relationships between organisms and abiotic components within ecosystems. Rearrangement of food molecules through chemical processes in cellular respiration and photosynthesis is an important part of energy cycling in all life systems. Preservation of biodiversity and consideration of human impacts are themes in maintaining ecosystem services.

L.7.3 Students will demonstrate an understanding of the importance that matter cycles between living and nonliving parts of the ecosystem to sustain life on Earth.

L.7.3.1 *Analyze diagrams to provide evidence of the importance of the cycling of water, oxygen, carbon, and nitrogen through ecosystems to organisms.*

L.7.3.2 *Analyze and interpret data to explain how the processes of photosynthesis, and cellular respiration (aerobic and anaerobic) work together to meet the needs of plants and animals.*

L.7.3.3 *Use models to describe how food molecules (carbohydrates, lipids, proteins) are processed through chemical reactions using oxygen (aerobic) to form new molecules.*

L.7.3.4 *Explain how disruptions in cycles (e.g., water, oxygen, carbon, and nitrogen) affect biodiversity and ecosystem services (e.g., water, food, and medications) which are needed to sustain human life on Earth.*

L.7.3.5 *Design solutions for sustaining the health of ecosystems to maintain biodiversity and the resources needed by humans for survival (e.g., water purification, nutrient recycling, prevention of soil erosion, and prevention or management of invasive species).**

GRADE SEVEN: Physical Science

P.7.5 Organization of Matter and Chemical Interactions

Conceptual Understanding: Matter and its interactions can be distinguished by investigating physical properties (e.g., mass, density, solubility) using chemical processes and experimentation. Changes to substances can either be physical or chemical.

P.7.5A Students will demonstrate an understanding of the physical and chemical properties of matter.

P.7.5A.1 *Collect and evaluate qualitative data to describe substances using physical properties (state, boiling/melting point, density, heat/electrical conductivity, color, and magnetic properties).*

P.7.5A.2 *Analyze and interpret qualitative data to describe substances using chemical properties (the ability to burn or rust).*

P.7.5A.3 *Compare and contrast chemical and physical properties (e.g., combustion, oxidation, pH, solubility, reaction with water).*

Conceptual Understanding: Matter is made of atoms and/or molecules that are in constant motion. The movement of the atoms and molecules depends on the amount of energy in the system at the time. The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.

P.7.5B Students will demonstrate an understanding about the effects of temperature and pressure on physical state, molecular motion, and molecular interactions.

P.7.5B.1 *Make predictions about the effect of temperature and pressure on the relative motion of atoms and molecules (speed, expansion, and condensation) relative to recent breakthroughs in polymer and materials science (e.g. self-healing protective films, silicone computer processors, pervious/porous concrete).*

P.7.5B.2 *Use evidence from multiple scientific investigations to communicate the relationships between pressure, volume, density, and temperature of a gas.*

P.7.5B.3 *Ask questions to explain how density of matter (observable in various objects) is affected by a change in heat and/or pressure.*

Conceptual Understanding: Atoms are the basic building blocks of ordinary elements. Compounds are substances composed of two or more elements. Chemical formulas can be used to describe compounds. The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The element position on the periodic table can also be used to predict the type of bonding that most commonly occurs between the elements.

P.7.5C Students will demonstrate an understanding of the proper use of the periodic table to predict and identify elemental properties and how elements interact.

P.7.5C.1 *Develop and use models that explain the structure of an atom.*

P.7.5C.2 *Use informational text to sequence the major discoveries leading to the current atomic model.*

P.7.5C.3 *Collect, organize, and interpret data from investigations to identify and analyze the relationships between the physical and chemical properties of elements, atoms, molecules, compounds, solutions, and mixtures.*

P.7.5C.4 *Predict the properties and interactions of elements using the periodic table (metals, non-metals, reactivity, and conductors).*

P.7.5C.5 *Describe concepts used to construct chemical formulas (e.g. CH_4, H_20) to determine the number of atoms in a chemical formula.*

P.7.5C.6 *Using the periodic table, make predictions to explain how bonds (ionic and covalent) form between groups of elements (e.g., oxygen gas, ozone, water, table salt, and methane).*

Conceptual Understanding: Changes to substances can either be physical or chemical. Many substances react chemically with other substances to form new substances with different properties. Substances (such as metals or acids) are identified according to their physical or chemical properties. Some chemical reactions release energy and others store energy.

P.7.5D Students will demonstrate an understanding of chemical formulas and common chemical substances to predict the types of reactions and possible outcomes of the reactions.

P.7.5D.1 *Analyze evidence from scientific investigations to predict likely outcomes of chemical reactions.*

P.7.5D.2 *Design and conduct scientific investigations to support evidence that chemical reactions (e.g., cooking, combustion, rusting, decomposition, photosynthesis, and cellular respiration) have occurred.*

P.7.5D.3 *Collect, organize, and interpret data using various tools (e.g., litmus paper, pH paper, cabbage juice) regarding neutralization of acids and bases using common substances.*

P.7.5D.4 *Build a model to explain that chemical reactions can store (formation of bonds) or release energy (breaking of bonds).*

Conceptual Understanding: In a chemical process, the atoms that make up original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants. The total number of each type of atom is conserved, and the mass does not change. As these chemical combinations take place, substances react in various ways, yet matter is always conserved in a reaction.

P.7.5E Students will demonstrate an understanding of the law of conservation of mass.

P.7.5E.1 *Conduct simple scientific investigations to show that total mass is not altered during a chemical reaction in a closed system. Compare results of investigations to Antoine-Laurent Lavoisier's discovery of the law of conservation of mass.*

P.7.5E.2 *Analyze data from investigations to explain why the total mass of the product in an open system appears to be less than the mass of reactants.*

P.7.5E.3 *Compare and contrast balanced and unbalanced chemical equations to demonstrate the number of atoms does not change in the reaction.*

GRADE SEVEN: Earth and Space Science

E.7.9 Earth's Systems and Cycles

Conceptual Understanding: Complex patterns in the movement of air and water in the atmosphere are major determinants of local weather. Global movements of water and its changes in form are propelled by sunlight and gravity. Variations in temperature drive a global pattern of interconnected currents. Interactions between sunlight, oceans, atmosphere, ice, landforms, and living things vary with latitude, altitude, and local and regional geography. Weather is difficult to predict; however, large scale patterns and trends in global climate, such as the gradual increase in average temperature, are more easily observed and predicted.

E.7.9A Students will demonstrate an understanding of how complex changes in the movement and patterns of air and water molecules caused by the sun, winds, landforms, ocean temperatures, and currents in the atmosphere are major determinants of local and global weather patterns.

E.7.9A.1 *Analyze and interpret weather patterns from various regions to differentiate between weather and climate.*

E.7.9A.2 *Analyze evidence to explain the weather conditions that result from the relationship between the movement of water and air masses.*

E.7.9A.3 *Interpret atmospheric data from satellites, radar, and weather maps to predict weather patterns and conditions.*

E.7.9A.4 *Construct an explanation for how climate is determined in an area using global and surface features (e.g. latitude, elevation, shape of the land, distance from water, global winds and ocean currents).*

E.7.9A.5 *Analyze models to explain the cause and effect relationship between solar energy and convection and the resulting weather patterns and climate conditions.*

E.7.9A.6 *Research and use models to explain what type of weather (thunderstorms, hurricanes, and tornadoes) results from the movement and interactions of air masses, high and low pressure systems, and frontal boundaries.*

E.7.9A.7 *Interpret topographic maps to predict how local and regional geography affect weather patterns and make them difficult to predict.*

Conceptual Understanding: Climate changes are defined as significant and persistent changes in an area's average or extreme weather conditions. Changes can occur if any of Earth's systems change (e.g., composition of the atmosphere, reflectivity of Earth's surface). The ocean exerts a major influence on weather and climate by absorbing energy from the sun, releasing it over time, and globally redistributing it through ocean currents. Greenhouse gases in the atmosphere absorb and retain the energy radiated from land and ocean surfaces, thereby regulating Earth's average surface temperature and keeping it habitable. Excess greenhouse gases could cause a detrimental impact on climate over time.

E.7.9B Students will demonstrate an understanding of the relationship between natural phenomena, human activity, and global climate change.

E.7.9B.1 *Read and evaluate scientific or technical information assessing the evidence and bias of each source to explain the causes and effects of climate change.*

E.7.9B.2 *Interpret data about the relationship between the release of carbon dioxide from burning fossil fuels into the atmosphere and the presence of greenhouse gases.*

E.7.9B.3 *Engage in scientific argument based on current evidence to determine whether climate change happens naturally or is being accelerated through the influence of man.*

Conceptual Understanding: The tilt of Earth's spin axis with respect to the plane of its orbit around the sun is important for a habitable Earth. The Earth's spin axis is tilted 23.5 degrees. Earth's axis points in the same direction in space no matter where Earth is in relation to the sun. The seasons are a result of this tilt and are caused by the differential intensity of sunlight on different areas of Earth across the year.

E.7.9C Students will demonstrate an understanding that the seasons are the direct result of the Earth's tilt and the intensity of sunlight on the Earth's hemispheres.

E.7.9C.1 *Construct models and diagrams to illustrate how the tilt of Earth's axis results in differences in intensity of sunlight on the Earth's hemispheres throughout the course of one full revolution around the Sun.*

E.7.9C.2 *Investigate how variations of sunlight intensity experienced by each hemisphere (to include the equator and poles) create the four seasons.*

GRADE EIGHT

Theme: Cause and Effect

Since causes of complex phenomena and systems are not always immediately or physically visible to students, the need to develop abstract thinking skills is a significant outcome for Grade 8. Explaining patterns and making predictions based on an understanding of cause and effect allows students to conceptualize and describe the relationships among natural phenomena. In Grade 8, some examples of the relationships include the role of genetics in reproduction and heredity, the biology that explains unity and diversity, the transfer of energy, the result of dynamic changes to the Earth's surface, and human impact on the biosphere.

GRADE EIGHT: Life Science

L.8.2 Reproduction and Heredity

Conceptual Understanding: Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. The process of passing genetic information to offspring is inheritance. During sexual reproduction, genetic information is passed to offspring resulting in similarities and differences between parental organisms and their offspring. There are advantages and disadvantages of the two types of reproduction.

L.8.2A Students will demonstrate an understanding of how sexual reproduction results in offspring with genetic variation while asexual reproduction results in offspring with identical genetic information.

L.8.2A.1 *Obtain and communicate information about the relationship of genes, chromosomes, and DNA, and construct explanations comparing their relationship to inherited characteristics.*

L.8.2A.2 *Create a diagram of mitosis and explain its role in asexual reproduction, which results in offspring with identical genetic information.*

L.8.2A.3 *Construct explanations of how genetic information is transferred during meiosis.*

L.8.2A.4 *Engage in discussion using models and evidence to explain that sexual reproduction produces offspring that have a new combination of genetic information different from either parent.*

L.8.2A.5 *Compare and contrast advantages and disadvantages of asexual and sexual reproduction.*

Conceptual Understanding: Inheritance is the key process causing similarities between parental organisms and their offspring. Organisms that reproduce sexually transfer genetic information (DNA) to their offspring. This transfer of genetic information through inheritance leads to greater similarity among individuals within a population than between populations. Genetic changes can accumulate through natural selection or mutation that can lead to the evolution of species. Humans can manipulate genetic information using technology.

L.8.2B Students will demonstrate an understanding of the differences in inherited and acquired characteristics and how environmental factors (natural selection) and the use of technologies (selective breeding, genetic engineering) influence the transfer of genetic information.

L.8.2B.1 *Construct an argument based on evidence for how environmental and genetic factors influence the growth of organisms.*

L.8.2B.2 *Use various scientific resources to research and support the historical findings of Gregor Mendel to explain the basic principles of heredity.*

L.8.2B.3 *Use mathematical and computational thinking to analyze data and make predictions about the outcome of specific genetic crosses (monohybrid Punnett Squares) involving simple dominant/recessive traits.*

L.8.2B.4 *Debate the ethics of artificial selection (selective breeding, genetic engineering) and the societal impacts of humans changing the inheritance of desired traits in organisms.*

Conceptual Understanding: Genes are located on the chromosomes of cells, with each chromosome pair containing two variations of each distinct gene. Each distinct gene chiefly controls the production of a specific protein, which in turn affects the traits of the individual. Changes (mutations) in genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits.

L.8.2C Students will demonstrate an understanding that chromosomes contain many distinct genes and that each gene holds the instructions for the production of a specific protein, which in turn affects the traits of an individual.

L.8.2C.1 *Communicate through diagrams that chromosomes contain many distinct genes and that each gene holds the instructions for the production of specific proteins, which in turn affects the traits of the individual (not to include transcription or translation).*

L.8.2C.2 *Construct scientific arguments from evidence to support claims about the potentially harmful, beneficial, or neutral effects of genetic mutations on organisms.*

GRADE EIGHT: Life Science

L.8.4 Adaptation and Diversity

Conceptual Understanding: The scientific theory of evolution underlies the study of biology and provides an explanation for both the diversity of life on Earth and similarities of all organisms at the chemical, cellular, and molecular level. Multiple forms of scientific evidence support the theory of evolution. Adaptations are physical or behavioral changes that are inherited and enhance the ability of an organism to survive and reproduce in a particular environment.

L.8.4A Students will demonstrate an understanding of the process of natural selection, in which variations in a population increase some individuals' likelihood of surviving and reproducing in a changing environment.

L.8.4A.1 *Use various scientific resources to analyze the historical findings of Charles Darwin to explain basic principles of natural selection.*

L.8.4A.2 *Investigate to construct explanations about natural selection that connect growth, survival, and reproduction to genetic factors, environmental factors, food intake, and interactions with other organisms.*

Conceptual Understanding: Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions. The traits of organisms that survive a change in the environment are inherited by offspring and become more common in the population. The traits of organisms that cannot survive a change in the environment are not passed to offspring and become less common. In separated populations, the changes can be large enough that the populations evolve to become separate species. Extinction occurs when the environment changes and the adaptive characteristics of a species, including its behaviors, are insufficient to allow its survival.

L.8.4B Students will demonstrate an understanding of how similarities and differences among living and extinct species provide evidence that changes have occurred in organisms over time and that similarity of characteristics provides evidence of common ancestry.

L.8.4B.1 *Analyze and interpret data (e.g. pictures, graphs) to explain how natural selection may lead to increases and decreases of specific traits in populations over time.*

L.8.4B.2 *Construct written and verbal explanations to describe how genetic variations of traits in a population increase some organisms' probability of surviving and reproducing in a specific environment.*

L.8.4B.3 *Obtain and evaluate scientific information to explain that separated populations, that remain separated, can evolve through mutations to become a new species (speciation).*

L.8.4B.4 *Analyze displays of pictorial data to compare and contrast embryological and homologous/analogous structures across multiple species to identify evolutionary relationships.*

GRADE EIGHT: Physical Science

P.8.6 Motions, Forces, and Energy

Conceptual Understanding: Waves have energy that is transferred when they interact with various types of matter. A repeating pattern of motion allows the transfer of energy from place to place without overall displacement of matter. All types of waves have some features in common. When waves interact, they affect each other resulting in changes to the resonance. Many modern technologies are based on waves and their interactions with matter.

P.8.6 Students will demonstrate an understanding of the properties, behaviors, and application of waves.

P.8.6.1 *Collect, organize, and interpret data about the characteristics of sound and light waves to construct explanations about the relationship between matter and energy.*

P.8.6.2 *Investigate research-based mechanisms for capturing and converting wave energy (frequency, amplitude, wavelength, and speed) into electrical energy.*

P.8.6.3 *Conduct simple investigations about the performance of waves to describe their behavior (e.g., refraction, reflection, transmission, and absorption) as they interact with various materials (e.g., lenses, mirrors, and prisms).*

P.8.6.4 *Use scientific processes to plan and conduct controlled investigations to conclude sound is a wave phenomenon that is characterized by amplitude and frequency.*

P.8.6.5 *Conduct scientific investigations that describe the behavior of sound when resonance changes (e.g., waves in a stretched string and design of musical instruments).*

P.8.6.6 *Obtain and evaluate scientific information to explain the relationship between seeing color and the transmission, absorption, or reflection of light waves by various materials.*

P.8.6.7 *Research the historical significance of wave technology to explain how digitized tools have evolved to encode and transmit information (e.g., telegraph, cell phones, and wireless computer networks).*

P.8.6.8 *Compare and contrast the behavior of sound and light waves to determine which types of waves need a medium for transmission.*

GRADE EIGHT: Earth and Space Science

E.8.7 Earth's Structure and History

Conceptual Understanding: Fossils are preserved remains or traces of organisms that lived in the past. Thousands of layers of sedimentary rock not only provide evidence of the history of Earth itself but also of changes in organisms whose fossil remains have been found in those layers. The collection of fossils and their placement in chronological order (e.g., through the location of rock layers or through radioactive dating) is collectively known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth.

E.8.7 Students will demonstrate an understanding of geological evidence to analyze patterns in Earth's major events, processes, and evolution in history.

E.8.7.1 *Use scientific evidence to create a timeline of Earth's history that depicts relative dates from index fossil records and layers of rock (strata).*

E.8.7.2 *Create a model of the processes involved in the rock cycle and relate it to the fossil record.*

E.8.7.3 *Construct and analyze scientific arguments to support claims that most fossil evidence is an indication of the diversity of life that was present on Earth and that relationships exist between past and current life forms.*

E.8.7.4 *Use research and evidence to document how evolution has been shaped both gradually and through mass extinction by Earth's varying geological conditions (e.g., climate change, meteor impacts, and volcanic eruptions).*

GRADE EIGHT: Earth and Space Science

E.8.9 Earth's Systems and Cycles

Conceptual Understanding: Earth systems and cycles are characterized by cause and effect relationships. All Earth processes are the result of energy flowing and matter cycling within and among the planet's systems. Landforms and water distribution result from constructive and destructive processes. Physical and chemical interactions among rocks, sediments, water, air, and organisms produce soil. Water's movements—both on the land and underground—cause weathering and erosion. Plate tectonics is the unifying theory that explains the past and current crustal movements at the surface. This theory provides a framework for understanding geological history. Mapping land and water patterns based on investigations of rocks and fossils can help forecast the proximity and probability of future events.

E.8.9A Students will demonstrate an understanding that physical processes and major geological events (e.g., plate movement, volcanic activity, mountain building, weathering, erosion) are powered by the Sun and the Earth's internal heat and have occurred over millions of years.

E.8.9A.1 *Investigate and explain how the flow of Earth's internal energy drives the cycling of matter through convection currents between Earth's surface and the deep interior causing plate movements.*

E.8.9A.2 *Explore and debate theories of plate tectonics to form conclusions about past and current movements of rocks at Earth's surface throughout history.*

E.8.9A.3 *Map land and water patterns from various time periods and use rocks and fossils to report evidence of how Earth's plates have moved great distances, collided, and spread apart.*

E.8.9A.4 *Research and assess the credibility of scientific ideas to debate and discuss how Earth's constructive and destructive processes have changed Earth's surface at varying time and spatial scales.*

E.8.9A.5 *Use models that demonstrate convergent and divergent plate movements that are responsible for most landforms and the distribution of most rocks and minerals within Earth's crust.*

E.8.9A.6 *Design and conduct investigations to evaluate the chemical and physical processes involved in the formation of soils.*

E.8.9A.7 *Explain the interconnected relationship between surface water and groundwater*.

Conceptual Understanding: Natural processes can cause sudden or gradual changes to Earth's systems. Some may adversely affect humans such as volcanic eruptions or earthquakes. Mapping the history of natural hazards in a region, combined with an understanding of related geological forces can help forecast the locations and likelihoods of future events.

E.8.9B Students will demonstrate an understanding of natural hazards (volcanic eruptions, severe weather, earthquakes) and construct explanations for why some hazards are predictable and others are not.

E.8.9B.1 *Research and map various types of natural hazards to determine their impact on society.*

E.8.9B.2 *Compare and contrast technologies that predict natural hazards to identify which types of technologies are most effective.*

E.8.9B.3 *Using an engineering design process, create mechanisms to improve community resilience, which safeguard against natural hazards (e.g., building restrictions in flood or tidal zones, regional watershed management, Firewise construction).**

GRADE EIGHT: Earth and Space Science

E.8.10 Earth's Resources

Conceptual Understanding: Humans depend on Earth's land, ocean, atmosphere, and biosphere for many different resources, both renewable and nonrenewable. Human activities have significantly altered the biosphere, sometimes damaging, or destroying natural habitats that could cause extinction or the threat of extinction of many species. Past and present geological events have distributed resources unevenly around the planet; therefore, there has been an increase in, and continued need for, technology to harness available resources and develop alternatives.

E.8.10 Students will demonstrate an understanding that a decrease in natural resources is directly related to the increase in human population on Earth and must be conserved.

E.8.10.1 *Read and evaluate scientific information about advancements in renewable and nonrenewable resources. Propose and defend ways to decrease national and global dependency on nonrenewable resources.*

E.8.10.2 *Create and defend a proposal for reducing the environmental effects humans have on Earth (e.g., population increases, consumer demands, chemical pollution, deforestation, and change in average annual temperature).*

E.8.10.3 *Using scientific data, debate the societal advantages and disadvantages of technological advancements in renewable energy sources.*

E.8.10.4 *Using an engineering design process, develop a system to capture and distribute thermal energy that makes renewable energy more readily available and reduces human impact on the environment (e.g., building solar water heaters, conserving home energy).**

GRADES 9-12 OVERVIEW

The high school curriculum provides essential preparation for all students in Grades 9-12. This experience should promote the development of adequate scientific knowledge to allow students to make informed, critical choices and to succeed in both the workplace and in postsecondary courses.

Content standards are integrated with scientific and engineering practices (SEPs), cross-cutting concepts, and the use of technology to connect information gathered through scientific investigations with real-world applications and engineering solutions to human problems. The nature of science and historical perspectives are critical to understanding the foundation and processes of science, regardless of the scientific discipline.

The eight SEPs should not be considered a stand-alone set of practices, as previously presented, but rather incorporated throughout the set of content objectives. The SEPs are designed so that students may develop skills and apply knowledge to solve real-life problems. While presented as distinct skill sets, the eight practices intentionally overlap and interconnect as students explore the science concepts.

The core science content utilizes hands-on classroom instruction to reinforce the seven crosscutting concepts (i.e., patterns; cause and effect; scale, portion, and quantity; systems and system models; energy and matter; structure and function; and stability and change).

The National Academies' (2012) research-based findings state that "the actual doing of science or engineering can pique students' curiosity, capture their interest and motivate their continued study…" (p. 42). Science curricula should actively engage students in learning through scientific investigations. At least 30% of the course should be dedicated to laboratory experiences, including, but not limited to:

- field studies and field trips
- manipulatives and model
- guided experimentation
- student independent research and/or science fair
- computer-based simulations
- case studies

Technology plays multiple roles in content mastery. It encompasses students' awareness of current technology applications, the use of technology in data collection, and its use by teachers and students in content delivery.

Students need to be supplied with the appropriate materials and equipment necessary to conduct scientific investigations. Student safety and safe practices are primary concerns. For this reason, teachers should adhere to the National Science Teachers Association (NSTA) safety recommendations, which can be accessed at http://www.nsta.org/docs/SafetyInTheScienceClassroom.pdf.

The Engineering Design Process (EDP) is a step-by-step method of devising a system, component, or process to meet desired needs. This is similar to the "scientific method" which is taught to young scientists. However, the EDP is a flexible process. Students can begin at any step, focus on just one step, move back and forth between steps, or repeat the cycle. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.** Professional development and teacher resources will be developed for teachers as EDP is incorporated into Mississippi standards.

Each high school course contains the "Overarching SEPs for Inquiry Extension of Labs" that provides guidance for scientific investigations in all courses.

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

BIOLOGY

Biology, **a one-credit course**, is a laboratory-based course that is designed to build a life science foundation emphasizing patterns, processes, and interactions among organisms. Students are expected to master conceptual understandings based on both individual investigations and the investigations conducted by others. Individual learning experiences are used to support claims and engage in evidence-based arguments. In this way, students explore the organization of life; the interdependence between organisms and their environment; the chemical composition of life; the role of DNA, RNA, and protein in cellular structure and function; inheritance; and evolution. Local resources coupled with external resources, including evidence-based literature, will be used to extend and increase the complexity of these core ideas.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. The recommendation is that students should be actively engaged in inquiry activities, lab experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Biology

BIO.1 Cells as a System

Conceptual Understanding: Biologists have determined that organisms share unique characteristics that differentiate them from non-living things. Organisms range from very simple to extremely complex.

BIO.1A Students will demonstrate an understanding of the characteristics of life and biological organization.

BIO.1A.1 *Develop criteria to differentiate between living and non-living things.*

BIO.1A.2 *Describe the tenets of cell theory and the contributions of Schwann, Hooke, Schleiden, and Virchow.*

BIO.1A.3 *Using specific examples, explain how cells can be organized into complex tissues, organs, and organ systems in multicellular organisms.*

BIO.1A.4 *Use evidence from current scientific literature to support whether a virus is living or non-living.*

Conceptual Understanding: Organisms are composed of four primary macromolecules: carbohydrates, lipids, proteins, and nucleic acids. Metabolism is the sum of all chemical reactions between molecules within cells. Cells continuously utilize materials obtained from the environment and the breakdown of other macromolecules to synthesize their own large macromolecules for cellular structures and functions. These metabolic reactions require enzymes for catalysis.

BIO.1B Students will analyze the structure and function of the macromolecules that make up cells.

BIO.1B.1 *Develop and use models to compare and contrast the structure and function of carbohydrates, lipids, proteins, and nucleic acids (DNA and RNA) in organisms.*

BIO.1B.2 *Design and conduct an experiment to determine how enzymes react given various environmental conditions (i.e., pH, temperature, and concentration). Analyze, interpret, graph, and present data to explain how those changing conditions affect the enzyme activity and the rate of the reactions that take place in biological organisms.*

Conceptual Understanding: Cells are the basic units of all organisms, both prokaryotes and eukaryotes. Prokaryotic and eukaryotic cells differ in key structural features, but both can perform all functions necessary for life.

BIO.1C Students will relate the diversity of organelles to a variety of specialized cellular functions.

BIO.1C.1 *Develop and use models to explore how specialized structures within cells (e.g., nucleus, cytoskeleton, endoplasmic reticulum, ribosomes, Golgi apparatus, lysosomes, mitochondria, chloroplast, centrosomes, and vacuoles) interact to carry out the functions necessary for organism survival.*

BIO.1C.2 *Investigate to compare and contrast prokaryotic cells and eukaryotic cells, and plant, animal, and fungal cells.*

BIO.1C.3 *Contrast the structure of viruses with that of cells, and explain why viruses must use living cells to reproduce.*

Conceptual Understanding: The structure of the cell membrane allows it to be a selectively permeable barrier and maintain homeostasis. Substances that enter or exit the cell must do so via the cell membrane. This transport across the membrane may occur through a variety of mechanisms, including simple diffusion, facilitated diffusion, osmosis, and active transport.

BIO.1D Students will describe the structure of the cell membrane and analyze how the structure is related to its primary function of regulating transport in and out of cells to maintain homeostasis.

BIO.1D.1 *Plan and conduct investigations to prove that the cell membrane is a semi-permeable, allowing it to maintain homeostasis with its environment through active and passive transport processes.*

BIO.1D.2 *Develop and use models to explain how the cell deals with imbalances of solute concentration across the cell membrane (i.e., hypertonic, hypotonic, and isotonic conditions, sodium/potassium pump).*

Conceptual Understanding: Cells grow and reproduce through a regulated cell cycle. Within multicellular organisms, cells repeatedly divide for repair, replacement, and growth. Likewise, an embryo begins as a single cell that reproduces to form a complex, multicellular organism through the processes of cell division and differentiation.

BIO.1E Students will develop and use models to explain the role of the cell cycle during growth, development, and maintenance in multicellular organisms.

BIO.1E.1 *Construct models to explain how the processes of cell division and cell differentiation produce and maintain complex multicellular organisms.*

BIO.1E.2 *Identify and describe the changes that occur in a cell during replication. Explore problems that might occur if the cell does not progress through the cycle correctly (cancer).*

BIO.1E.3 *Relate the processes of cellular reproduction to asexual reproduction in simple organisms (i.e., budding, vegetative propagation, regeneration, binary fission). Explain why the DNA of the daughter cells is the same as the parent cell.*

BIO.1E.4 ***Enrichment:*** *Use an engineering design process to investigate the role of stem cells in regeneration and asexual reproduction, then develop applications of stem cell research to solve human medical conditions.**

Biology

BIO.2 Energy Transfer

Conceptual Understanding: Organisms require energy to perform life functions. Cells are transformers of energy, continuously utilizing a complex sequence of reactions in which energy is transferred from one form to another, for example, from light energy to chemical energy to kinetic energy. Emphasis is on illustrating the inputs and outputs of matter and the transfer and transformation of energy in photosynthesis and cellular respiration. Assessment is limited to identification of the phases (i.e., glycolysis, citric acid cycle, and electron transport chain) in cellular respiration as well as light and light-independent reactions of photosynthesis and does not include specific biochemical reactions within the phases.

BIO.2 Students will explain that cells transform energy through the processes of photosynthesis and cellular respiration to drive cellular functions.

BIO.2.1 *Use models to demonstrate that ATP and ADP are cycled within a cell as a means to transfer energy.*

BIO.2.2 *Develop models of the major reactants and products of photosynthesis to demonstrate the transformation of light energy into stored chemical energy in cells. Emphasize the chemical processes in which bonds are broken and energy is released, and new bonds are formed and energy is stored.*

BIO.2.3 *Develop models of the major reactants and products of cellular respiration (aerobic and anaerobic) to demonstrate the transformation of the chemical energy stored in food to the available energy of ATP. Emphasize the chemical processes in which bonds are broken and energy is released, and new bonds are formed and energy is stored.*

BIO.2.4 *Conduct scientific investigations or computer simulations to compare aerobic and anaerobic cellular respiration in plants and animals, using real world examples.*

BIO.2.5 ***Enrichment:*** *Investigate variables (e.g., nutrient availability, temperature) that affect anaerobic respiration and current real-world applications of fermentation.*

BIO.2.6 ***Enrichment:*** *Use an engineering design process to manipulate factors involved in fermentation to optimize energy production.**

Biology

BIO.3 Reproduction and Heredity

Conceptual Understanding: Somatic cells contain homologous pairs of chromosomes, one member of each pair obtained from each parent, that form a diploid set of chromosomes in each cell. These chromosomes are similar in genetic information but may contain different alleles of these genes. For sexual reproduction, an offspring must inherit a haploid set from each parent. Haploid gametes are formed by meiosis, a specialized cell division in which the chromosome number is reduced by half. During meiosis, members of a homologous pair may exchange information and then are randomly sorted into gametes resulting in genetic variation in sex cells.

BIO.3A Students will develop and use models to explain the role of meiosis in the production of haploid gametes required for sexual reproduction.

BIO.3A.1 *Model sex cell formation (meiosis) and combination (fertilization) to demonstrate the maintenance of chromosome number through each generation in sexually reproducing populations. Explain why the DNA of the daughter cells is different from the DNA of the parent cell.*

BIO.3A.2 *Compare and contrast mitosis and meiosis in terms of reproduction.*

BIO.3A.3 *Investigate chromosomal abnormalities (e.g., Down syndrome, Turner's syndrome, and Klinefelter syndrome) that might arise from errors in meiosis (nondisjunction) and how these abnormalities are identified (karyotypes).*

Conceptual Understanding: Offspring inherit DNA from their parents. The genes contained in the DNA (genotype) determine the traits expressed in the offspring's phenotype. Alleles of a gene may demonstrate various patterns of inheritance. These patterns of inheritance may be followed through multiple generations within families.

BIO.3B Students will analyze and interpret data collected from probability calculations to explain the variation of expressed traits within a population.

BIO.3B.1 *Demonstrate Mendel's law of dominance and segregation using mathematics to predict phenotypic and genotypic ratios by constructing Punnett squares with both homozygous and heterozygous allele pairs.*

BIO.3B.2 *Illustrate Mendel's law of independent assortment using Punnett squares and/or the product rule of probability to analyze monohybrid crosses.*

BIO.3B.3 *Investigate traits that follow non-Mendelian inheritance patterns (e.g., incomplete dominance, codominance, multiple alleles in human blood types, and sex-linkage).*

BIO.3B.4 *Analyze and interpret data (e.g., pedigrees, family, and population studies) regarding Mendelian and complex genetic traits (e.g., sickle-cell anemia, cystic fibrosis, muscular dystrophy, color-blindness, and hemophilia) to determine patterns of inheritance and disease risk.*

Conceptual Understanding: Gene expression results in the production of proteins and thus determines the phenotypes of the organism. Changes in the DNA occur throughout an organism's life. Mutations are a source of genetic variation that may have a positive, negative, or no effect on the organism.

BIO.3C Students will construct an explanation based on evidence to describe how the structure and nucleotide base sequence of DNA determines the structure of proteins or RNA that carry out essential functions of life.

BIO.3C.1 *Develop and use models to explain the relationship between DNA, genes, and chromosomes in coding the instructions for the traits transferred from parent to offspring.*

BIO.3C.2 *Evaluate the mechanisms of transcription and translation in protein synthesis.*

BIO.3C.3 *Use models to predict how various changes in the nucleotide sequence (e.g., point mutations, deletions, and additions) will affect the resulting protein product and the subsequent inherited trait.*

BIO.3C.4 *Research and identify how DNA technology benefits society. Engage in scientific argument from evidence over the ethical issues surrounding the use of DNA technology (e.g., cloning, transgenic organisms, stem cell research, and the Human Genome Project, gel electrophoresis).*

BIO.3C.5 ***Enrichment:*** *Investigate current biotechnological applications in the study of the genome (e.g., transcriptome, proteome, individualized sequencing, and individualized gene therapy).*

Biology

BIO.4 Adaptations and Evolution

Conceptual Understanding: Evolution is a key unifying principle in biology. Differentiating between organic and chemical evolution and the analysis of the gradual changes in populations over time, helps students understand common features and differences between species and thus the relatedness between species. There are several factors that affect how natural selection acts on populations within their environments leading to speciation, extinction, and the current diversity of life on earth.

BIO.4 Students will analyze and interpret evidence to explain the unity and diversity of life.

BIO.4.1 *Use models to differentiate between organic and chemical evolution, illustrating the steps leading to aerobic heterotrophs and photosynthetic autotrophs.*

BIO.4.2 *Evaluate empirical evidence of common ancestry and biological evolution, including comparative anatomy (e.g., homologous structures and embryological similarities), fossil record, molecular/biochemical similarities (e.g., gene and protein homology), and biogeographic distribution.*

BIO.4.3 *Construct cladograms/phylogenetic trees to illustrate relatedness between species.*

BIO.4.4 *Design models and use simulations to investigate the interaction between changing environments and genetic variation in natural selection leading to adaptations in populations and differential success of populations.*

BIO.4.5 *Use Darwin's Theory to explain how genetic variation, competition, overproduction, and unequal reproductive success acts as driving forces of natural selection and evolution.*

BIO.4.6 *Construct explanations for the mechanisms of speciation (e.g., geographic and reproductive isolation).*

BIO.4.7 ***Enrichment:*** *Construct explanations for how various disease agents (bacteria, viruses, chemicals) can influence natural selection.*

Biology

BIO.5 Interdependence of Organisms and Their Environments

Conceptual Understanding: Complex interactions within an ecosystem affect the numbers and types of organisms that survive. Fluctuations in conditions can affect the ecosystem's function, resources, and habitat availability. Ecosystems are subject to carrying capacities and can only support a limited number of organisms and populations. Factors that can affect the carrying capacities of populations are both biotic and abiotic.

BIO.5 Students will Investigate and evaluate the interdependence of living organisms and their environment.

BIO.5.1 *Illustrate levels of ecological hierarchy, including organism, population, community, ecosystem, biome, and biosphere.*

BIO.5.2 *Analyze models of the cycling of matter (e.g., carbon, nitrogen, phosphorus, and water) between abiotic and biotic factors in an ecosystem and evaluate the ability of these cycles to maintain the health and sustainability of the ecosystem.*

BIO.5.3 *Analyze and interpret quantitative data to construct an explanation for the effects of greenhouse gases on the carbon dioxide cycle and global climate.*

BIO.5.4 *Develop and use models to describe the flow of energy and amount of biomass through food chains, food webs, and food pyramids.*

BIO.5.5 *Evaluate symbiotic relationships (e.g., mutualism, parasitism, and commensalism) and other co-evolutionary (e.g., predator-prey, cooperation, competition, and mimicry) relationships within specific environments.*

BIO.5.6 *Analyze and interpret population data, both density-dependent and density-independent, to define limiting factors. Use graphical representations (growth curves) to illustrate the carrying capacity within ecosystems.*

BIO.5.7 *Investigate and evaluate factors involved in primary and secondary ecological succession using local, real world examples.*

BIO.5.8 ***Enrichment:*** *Use an engineering design process to create a solution that addresses changing ecological conditions (e.g., climate change, invasive species, loss of biodiversity, human population growth, habitat destruction, biomagnification, or natural phenomena).**

BIO.5.9 ***Enrichment:*** *Use an engineering design process to investigate and model current technological uses of biomimicry to address solutions to real-world problems.**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

BOTANY

Botany, **a one-half credit course**, is a laboratory-based course applying basic biological principles to the study of plants. Topics include morphological characteristics of each division and variation in their reproduction, physiology, taxonomy, evolution, and the interactions of human society and plants. Laboratory activities, research, the use of technology, and the effective communication of results through various methods are integral components of this course. It is recommended that Botany is taken after the successful completion of Biology.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. The recommendation is that students should actively engage in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Botany

BOT.1 Plant Morphology, Cell Structure, and Function

Conceptual Understanding: Plants are a diverse and important part of the biosphere, providing oxygen, food, and shelter required for other organisms. The diversity of the plant kingdom is characterized by unique traits that are observed to identify the various plant divisions.

BOT.1 Students will investigate the morphology, anatomy, and physiology of plants.

BOT.1.1 *Analyze models (3-D, paper, and/or computer-based) to distinguish the basic morphology of the plant kingdom, with attention to structures and their related functions. Use cladograms or phylogenetic trees to identify evolutionary features that distinguish the plant kingdom from other kingdoms.*

BOT.1.2 *Using microscopes, observe, identify, record, and analyze (e.g., see and draw) cells and cell structures unique to plants. Use data measurements obtained from microscopy to compare the plant cells and organelle sizes between various examples (e.g., elodea, onion, or algae).*

BOT.1.3 *Describe the relationship between the structure and purpose of plant organs (e.g., roots, stems, and leaves).*

BOT.1.4 *Evaluate and explain how bacteria and fungi work symbiotically to enhance plant root function.*

BOT.1.5 *Calculate surface area of leaves/roots, and compare surface areas of various plant specimens to explain adaptations of the various plant types.*

BOT.1.6 *Demonstrate through model development and manipulation an understanding of plant biochemistry.*

BOT.1.7 *Conduct investigations, collect and analyze data, and communicate results that explain the processes of photosynthesis and cellular respiration (e.g., light intensity, light color, light distance, temperature, altering pH, oxygen availability, and carbon dioxide concentration).*

BOT.1.8 ***Enrichment:*** *Use an engineering design process to manipulate a variable of choice to refine a protocol to optimize output of photosynthesis or cellular respiration.**

BOT.1.9 *Communicate the importance of carbon, hydrogen, oxygen, phosphorus, and nitrogen cycles to plant physiology through graphics such as poster or computer presentations.*

BOT.1.10 *Identify and compare various live plant examples to explore plant morphological diversity, including leaf number, structure, and arrangement; root modifications; and flower structure and arrangement. Produce a visual product (e.g., an electronic presentation) to identify and communicate patterns of similarity and differences between the lab specimens.*

BOT.1.11 *Compare and contrast functions of the various characteristics found in plant divisions and utilize dichotomous keys to identify plant species.*

Botany

BOT.2 Plant Evolution

Conceptual Understanding: Plants have been naturally selected to survive in a variety of habitats, from aquatic to arboreal. The development of these characteristics is used to construct cladograms that illustrate the evolution of plants.

BOT.2 Students will identify evolutionary modifications necessary for the terrestrial survival of plants.

BOT.2.1 *Summarize and justify the characteristics of nonvascular algae (blue-green and green algae) and bryophytes that provide evidence of evolution within the plant kingdom.*

BOT.2.2 *Referencing the USDA plants database, identify, compare, and contrast seedless, naked seed, and enclosed-seed modifications for reproduction. Calculate the occurrence of seed types in given habitats.*

BOT.2.3 *Summarize and justify the characteristics of angiosperms and gymnosperms that lead to their success as terrestrial plants.*

BOT.2.4 *Research information to develop, produce, and communicate a scientifically justifiable argument for the rapid amplification and success of angiosperm compared to other plant divisions.*

BOT.2.5 ***Enrichment:*** *Referencing the National Center for Biotechnology Information's gene/protein databases, propose and design a scientifically supportable cladogram or phylogenetic tree that illustrates the evolutionary modifications of the plant kingdom using genetic (DNA) or protein sequence comparisons/alignments.*

Botany

BOT.3 Plant Reproduction

Conceptual Understanding: Reproduction in plants occurs through different methods. Understanding the reproductive methods of plants allows humans to use these methods in agriculture and food development.

BOT.3 Students will characterize the reproductive strategies of plants.

BOT.3.1 *Describe the various processes of asexual reproduction and vegetative propagation used by plants. Communicate the importance of these reproductive methods in regard to human food production.*

BOT.3.2 ***Enrichment:*** *Research and present an agronomically important crop (e.g., potato, sweet potato, pineapple, or strawberry) that is produced via vegetative propagation (non-GMOs) for human consumption. Include evidence-based arguments that identify the potential benefits and negative effects of this method of crop production.*

BOT.3.3 *Compare and contrast the consequences of the following reproductive methods: asexual reproduction, vegetative propagation, and sexual reproduction.*

BOT.3.4 *Plan and conduct comparative flower dissection to identify reproductive structures within the flower.*

BOT.3.5 *Compare the similarities between corresponding plant reproductive structures from a variety of species. Record via drawings of observed dissection specimens, and explain the similarities and differences observed.*

BOT.3.6 *Identify differences in flower structure and shape. Provide a rationale that explains the value of these differences in flower structure to reproductive success (e.g., pollinators, flower shape, smell, color, size, orientation).*

BOT.3.7 *Plan, conduct, and communicate the results of a comparative laboratory investigation of differing fruit types.*

BOT.3.8 *Using laboratory data, correctly categorize fruits, vegetables, nuts, modified stems, or other plant parts. Compare the scientific definitions of these terms to those used by the general public/society and the USDA to categorize food.*

Botany

BOT.4 Society's Reliance on Plants

Conceptual Understanding: Human reliance on plants and plant products began with food and building materials. This use has expanded to include medicine, industrial clean up (phytoremediation) of human-generated byproducts and toxic waste, and plant examples used in biomimicry for solving human problems.

BOT.4 Students will explore the global value of plants and the interaction between humans and plants.

BOT.4.1 *Identify plants used in the bioremediation of an area due to natural processes (e.g., fire), industrial pollution, or wars, and develop and communicate a plan to remediate a habitat impacted by human interactions (e.g., carbon sinks, phytoremediation, or heavy metal detoxification).*

BOT.4.2 ***Enrichment:*** *Use an engineering design process to define a problem, design, construct, evaluate, and improve a habitat impacted by human interactions.**

BOT.4.3 *Investigate historical and modern medicinal uses of plants.*

BOT.4.4 *Investigate the industrial use of plants.*

BOT.4.5 *Explore the impacts (both positive and negative) of plant biotechnology/GMOs on human society. Present findings using digital media or technology, and include evidence using graphs or charts.*

BOT.4.6 ***Enrichment:*** *Use an engineering design process to design and conduct an investigation that uses biomimicry to provide a plant-based solution to an environmental challenge.**

Botany

BOT.5 Plant Adaptations to Varying Habitats

Conceptual Understanding: Before animal life forms can survive within a habitat, there must be an existing plant population. Plants have specific adaptations that allow them to survive in habitats.

BOT.5 Students will explore adaptations that allow plants to survive in various habitats.

BOT.5.1 *Research plants found in various habitats. Analyze how plants use adaptations for survival in these habitats including extreme habitats.*

BOT.5.2 *Relate atmospheric factors to biodiversity (e.g., climate as determined by temperature and precipitation).*

BOT.5.3 *Construct a model using technology that illustrates the levels of succession within a habitat (e.g., graveyard exploration, forest fire area, or reclamation sites).*

BOT.5.4 ***Enrichment:*** *Use an engineering design process to design and build a plant model based on extreme environment criteria to overcome the difficulties presented by this environment. Identify revisions to the proposed model over time.**

Botany

BOT.6 Local Plant Investigations

Conceptual Understanding: The plant diversity within the local environment impacts the health of the ecosystem. The ability to identify the plants within an ecosystem is a skill that will benefit students throughout life.

BOT.6 Students will ask questions, plan, and conduct field investigations on local plant communities.

BOT.6.1 *Conduct transects/plot studies to determine species, biodiversity, or health of a plant community. (Plots may be linear or a quadrat (square or circular) depending on the habitat. (Typically, relative density, relative dominance, and relative frequency of each species are calculated to infer an importance value of the species in the plot.)*

BOT.6.2 *Compare and contrast genomes using plant genetic databases (e.g., BLAST or plant GDB).*

BOT.6.3 ***Enrichment:*** *Use an engineering design process to define a problem, design, construct, evaluate, and improve a societal concern with the aid of plants (e.g., irrigation, water conservation, urban shading, green-space development, food deserts, or other local needs or issues).**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

CHEMISTRY

Chemistry, **a one-credit course,** is an elective and should be a rigorous course to prepare students for careers in science, technology, engineering, integrated STEM activities, and mathematics. Chemistry explores empirical concepts central to all areas of science. These concepts should be explored in-depth using both quantitative and qualitative analysis, computational and experimental rigor, and the use of inquiry-based methods of teaching. To accomplish a level of sophistication and depth, chemistry teachers should extend concepts mastered by students in earlier grades. Cornerstone objectives of chemistry that must be addressed and readdressed throughout the course are dimensional analysis, naming compounds, balancing equations, and stoichiometry. To be successful in Chemistry, it is recommended that students have completed Algebra I (Integrated Math I), and be enrolled in an upper level math course.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should actively engage in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Chemistry

CHE.1 Mathematical and Computational Analysis

Conceptual Understanding: Mathematical and computational analysis is a key component of scientific investigation and prediction of outcomes. These components create a more student-centered classroom.

CHE.1 Students will use mathematical and computational analysis to evaluate problems.

CHE.1.1 *Use dimensional analysis (factor/label) and significant figures to convert units and solve problems.*

CHE.1.2 *Design and conduct experiments using appropriate measurements, significant figures, graphical analysis to analyze data.*

CHE.1.3 ***Enrichment:*** *Research information from multiple appropriate sources and assess the credibility, accuracy, possible bias, and conclusions of each publication.*

Chemistry

CHE.2 Atomic Theory

Conceptual Understanding: Atomic theory is the foundation of modern chemistry concepts. Students must be presented with a solid foundation of the atom and its components. These concepts lead to an understanding of the interactions of these components to explain macro-observations of the world.

CHE.2 **Students will demonstrate an understanding of the atomic structure and the historical developments leading to modern atomic theory.**

CHE.2.1 *Investigate the historical progression leading to the modern atomic theory, including, but not limited to, work done by Dalton, Rutherford's gold foil experiment, Thomson's cathode ray experiment, Millikan's oil drop experiment, and Bohr's interpretation of bright line spectra.*

CHE.2.2 *Construct models (e.g., ball and stick, online simulations, mathematical computations) of atomic nuclei to explain the abundance weighted average (relative mass) of elements and isotopes on the published mass of elements.*

CHE.2.3 *Investigate absorption and emission spectra to interpret explanations of electrons at discrete energy levels using tools such as online simulations, spectrometers, prisms, flame tests, and discharge tubes. Explore both laboratory experiments and real-world examples.*

CHE.2.4 *Research appropriate sources to evaluate the way absorption and emission spectra are used to study astronomy and the formation of the universe.*

Chemistry

CHE.3 Periodic Table

Conceptual Understanding: Modern chemistry is based on the predictability of atomic behavior. Periodic patterns in elements led to the development of the periodic table. Electron configuration is a direct result of this periodic behavior. The predictable behavior of electrons has led to the discovery of new compounds, elements, and atomic interactions. Predictability of atom behavior is a key to understanding ionic and covalent bonding and production of compounds or molecules.

CHE.3 **Students will demonstrate an understanding of the periodic table as a systematic representation to predict properties of elements.**

CHE.3.1 *Explore and communicate the organization of the periodic table, including history, groups, families, family names, metals, nonmetals, metalloids, and transition metals.*

CHE.3.2 *Analyze properties of atoms and ions (e.g., metal/nonmetal/metalloid behavior, electrical/heat conductivity, electronegativity and electron affinity, ionization energy, and atomic/ionic radii) using periodic trends of elements based on the periodic table.*

CHE.3.3 *Analyze the periodic table to identify quantum numbers (e.g., valence shell electrons, energy level, orbitals, sublevels, and oxidation numbers).*

Chemistry

CHE.4 Bonding

Conceptual Understanding: A firm understanding of bonding is necessary to further development of the basic chemical concepts of compounds and chemical interactions.

CHE.4 Students will demonstrate an understanding of the types of bonds and resulting atomic structures for the classification of chemical compounds.

CHE.4.1 *Develop and use models (e.g., Lewis dot, 3-D ball-stick, 3-D printing, or simulation programs such as PhET) to predict the type of bonding between atoms and the shape of simple compounds.*

CHE.4.2 *Use models such as Lewis structures and ball and stick models to depict the valence electrons and their role in the formation of ionic and covalent bonds.*

CHE.4.3 *Predict the ionic or covalent nature of different atoms based on electronegativity trends and/or position on the periodic table.*

CHE.4.4 *Use models and oxidation numbers to predict the type of bond, shape of the compound, and the polarity of the compound.*

CHE.4.5 *Use models of simple hydrocarbons to exemplify structural isomerism.*

CHE.4.6 *Use mathematical and computational analysis to determine the empirical formula and the percent composition of compounds.*

CHE.4.7 *Use scientific investigation to determine the percentage of composition for a substance (e.g., sugar in gum, water and/or unpopped kernels in popcorn, percent water in a hydrate). Compare results to justify conclusions based on experimental evidence.*

CHE.4.8 *Plan and conduct controlled scientific investigations to produce mathematical evidence of the empirical composition of a compound.*

Chemistry

CHE.5 Naming Compounds

Conceptual Understanding: Polyatomic ions (radicals) and oxidation numbers are used to predict how metallic ions, nonmetals, and transition metals are used in naming compounds.

CHE.5 Students will investigate and understand the accepted nomenclature used to identify the name and chemical formulas of compounds.

CHE.5.1 *Use the periodic table and a list of common polyatomic ions as a model to derive chemical compound formulas from compound names and compound names from chemical formulas.*

CHE.5.2 *Generate formulas of ionic and covalent compounds from compound names. Discuss compounds in everyday life and compile lists and uses of these chemicals.*

CHE.5.3 *Generate names of ionic and covalent compounds from their formulas. Name binary compounds, binary acids, stock compounds, ternary compounds, and ternary acids.*

Chemistry

CHE.6 Chemical Reactions

Conceptual Understanding: Understanding chemical reactions and predicting products of these reactions is essential to student success.

CHE.6 Students will demonstrate an understanding of the types, causes, and effects of chemical reactions.

CHE.6.1 *Develop and use models to predict the products of chemical reactions (e.g., synthesis reactions; single replacement; double displacement; and decomposition, including exceptions such as decomposition of hydroxides, chlorates, carbonates, and acids). Discuss and/or compile lists of reactions used in everyday life.*

CHE.6.2 *Plan, conduct, and communicate the results of investigations to demonstrate different types of simple chemical reactions.*

CHE.6.3 *Use mathematics and computational analysis to represent the ratio of reactants and products in terms of masses, molecules, and moles (stoichiometry).*

CHE.6.4 *Use mathematics and computational analysis to support the claim that atoms, and therefore mass, are conserved during a chemical reaction. Give real-world examples (e.g., burning wood).*

CHE.6.5 *Plan and conduct a controlled scientific investigation to produce mathematical evidence that mass is conserved. Use percent error to analyze the accuracy of results.*

CHE.6.6 *Use mathematics and computational analysis to support the concept of percent yield and limiting reagent.*

CHE.6.7 *Plan and conduct a controlled scientific investigation to produce mathematical evidence to predict and confirm the limiting reagent and percent yield in the reaction. Analyze quantitative data, draw conclusions, and communicate findings. Compare and analyze class data for validity.*

Chemistry

CHE.7 Gas Laws

Conceptual Understanding: The comparison and development of the molecular states of matter are an integral part of understanding matter. Pressure, volume, and temperature are imperative to understanding the states of matter.

CHE.7 Students will demonstrate an understanding of the structure and behavior of gases.

CHE.7.1 *Analyze the behavior of ideal and real gases in terms of pressure, volume, temperature, and number of particles.*

CHE.7.2 ***Enrichment:*** *Use an engineering design process to develop models (e.g., online simulations or student interactive activities) to explain and predict the behavior of each state of matter using the movement of particles and intermolecular forces to explain the behavior of matter.**

CHE.7.3 *Analyze and interpret heating curve graphs to explain the energy relationship between states of matter (e.g., thermochemistry-water heating from -20°C to 120°C).*

CHE.7.4 *Use mathematical computations to describe the relationships comparing pressure, temperature, volume, and number of particles, including Boyle's law, Charles's law, Dalton's law, combined gas laws, and ideal gas laws.*

CHE.7.5 ***Enrichment:*** *Use an engineering design process and online simulations or lab investigations to design and model the results of controlled scientific investigations to produce mathematical evidence that confirms the gas-laws relationships.**

CHE.7.6 *Use the ideal gas law to support the prediction of volume, mass, and number of particles produced in chemical reactions (i.e., gas stoichiometry).*

CHE.7.7 *Plan and conduct controlled scientific investigations to produce mathematical evidence that confirms that reactions involving gases conform to the law of conservation of mass.*

CHE.7.8 ***Enrichment:*** *Using gas stoichiometry, calculate the volume of carbon dioxide needed to inflate a balloon to occupy a specific volume. Use an engineering design process to design, construct, evaluate, and improve a simulated air bag.**

Chemistry

CHE.8 Solutions

Conceptual Understanding: Solutions exist as solids, liquids, or gases. Solution concentration is expressed by specifying relative amounts of solute to solvent.

CHE.8 **Students will demonstrate an understanding of the nature of properties of various types of chemical solutions.**

CHE.8.1 *Use mathematical and computational analysis to quantitatively express the concentration of solutions using the concepts such as molarity, percent by mass, and dilution.*

CHE.8.2 *Develop and use models (e.g., online simulations, games, or video representations) to explain the dissolving process in solvents on the molecular level.*

CHE.8.3 *Analyze and interpret data to predict the effect of temperature and pressure on solids and gases dissolved in water.*

CHE.8.4 *Design, conduct, and communicate the results of experiments to test the conductivity of common ionic and covalent compounds in solution.*

CHE.8.5 *Use mathematical and computational analysis to analyze molarity, molality, dilution, and percentage dilution problems.*

CHE.8.6 *Design, conduct, and communicate the results of experiments to produce a specified volume of a solution of a specific molarity, and dilute a solution of a known molarity.*

CHE.8.7 *Use mathematical and computational analysis to predict the results of reactions using the concentration of solutions (i.e., solution stoichiometry).*

CHE.8.8 ***Enrichment:*** *Investigate parts per million and/or parts per billion as it applies to environmental concerns in your geographic region, and reference laws that govern these factors.*

Chemistry (Enrichment)

CHE.9 Acids and Bases (Enrichment)

CHE.9 **Enrichment: Students will understand the nature and properties of acids, bases, and salt solutions.**

CHE.9.1 ***Enrichment:*** *Analyze and interpret data to describe the properties of acids, bases, and salts.*

CHE.9.2 ***Enrichment:*** *Analyze and interpret data to identify differences between strong and weak acids and bases (i.e., dissociation).*

CHE.9.3 ***Enrichment:*** *Plan and conduct investigations using the pH scale to classify acid and base solutions.*

CHE.9.4 ***Enrichment:*** *Analyze and evaluate the Arrhenius, Bronsted-Lowry, and Lewis acid-base definitions.*

CHE.9.5 ***Enrichment:*** *Use mathematical and computational thinking to calculate pH from the hydrogen-ion concentration.*

CHE.9.6 ***Enrichment:*** *Obtain, evaluate, and communicate information about how buffers stabilize pH in acid-base reactions.*

Chemistry (Enrichment)

CHE.10 Thermochemistry (Enrichment)

CHE.10 **Enrichment: Students will understand that energy is exchanged or transformed in all chemical reactions.**

CHE.10.1 ***Enrichment:*** *Construct explanations to explain how temperature and heat flow in terms of the motion of molecules (or atoms).*

CHE.10.2 ***Enrichment:*** *Classify chemical reactions and phase changes as exothermic or endothermic based on enthalpy values. Use a graphical representation to illustrate the energy changes involved.*

CHE.10.3 ***Enrichment:*** *Analyze and interpret data from energy diagrams and investigations to support claims that the amount of energy released or absorbed during a chemical reaction depends on changes in total bond energy.*

CHE.10.4 ***Enrichment:*** *Use mathematical and computational thinking to solve problems involving heat flow and temperature changes, using known values of specific heat and latent heat of phase change.*

Chemistry (Enrichment)

CHE.11 Equilibrium (Enrichment)

CHE.11 Enrichment: Students will understand that chemical equilibrium is a dynamic process at the molecular level.

CHE.11.1 ***Enrichment:*** *Construct explanations to explain how to use Le Chatelier's principle to predict the effect of changes in concentration, temperature, and pressure.*

CHE.11.2 ***Enrichment:*** *Predict when equilibrium is established in a chemical reaction.*

CHE.11.3 ***Enrichment:*** *Use mathematical and computational thinking to calculate an equilibrium constant expression for a reaction.*

Chemistry (Enrichment)

CHE.12 Organic Nomenclature (Enrichment)

CHE.12 Enrichment: Students will understand that the bonding characteristics of carbon allow the formation of many different organic molecules with various sizes, shapes, and chemical properties.

CHE.12.1 ***Enrichment:*** *Construct explanations to explain the bonding characteristics of carbon that result in the formation of basic organic molecules.*

CHE.12.2 ***Enrichment:*** *Obtain information to communicate the system used for naming the basic linear hydrocarbons and isomers that contain single bonds, simple hydrocarbons with double and triple bonds, and simple molecules that contain a benzene ring.*

CHE.12.3 ***Enrichment:*** *Develop and use models to identify the functional groups that form the basis of alcohols, ketones, ethers, amines, esters, aldehydes, and organic acids.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

EARTH AND SPACE SCIENCE

The Earth and space science course, **a one-credit course,** provides opportunities for students to continue to develop and communicate a basic understanding of the Earth and its place in the universe through lab-based activities, integrated STEM activities, inquiry, mathematical expressions, and concept exploration. The Earth and space science course will help students apply scientific concepts in natural settings and guide them to become responsible stewards of Earth's natural resources.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a lab-based course, students are expected to design and conduct investigations using appropriate equipment, measurement, and safety procedures. The recommendation is that students should be actively engaged in inquiry activities, lab experiences, and scientific research for a minimum of 30% of the class time.

Although the standards and performance objectives do not have to be taught in the order presented in this document, they are arranged from the universe, through the solar system, the interacting systems of planet Earth, and the interrelationships between our planet and humans throughout time. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Earth and Space Science

ESS.1 Earth in the Universe

Conceptual Understanding: The planet Earth is a very small part of a very large universe that has developed over a huge expanse of time.

ESS.1.A Students will develop an understanding of the universe, its development, immense size, and composition.

ESS.1A.1 *Describe the Big Bang theory and summarize observations (e.g., cosmic microwave background radiation, Hubble's law, and redshift caused by the Doppler effect) as evidence to support the formation and expansion of the universe.*

ESS.1A.2 *Interpret information from the Hertzsprung -Russell diagram to differentiate types of stars, including our sun, according to size, magnitude, and classification.*

ESS.1A.3 *Organize and interpret data sets for patterns and trends to compare and contrast stellar evolution in order to explain and communicate how a star changes during its life.*

ESS.1A.4 *Research and explain how nuclear fusion in stars and supernova lead to the formation of all other elements.*

Conceptual Understanding: The sun, moon, and planets have predictable patterns that are explained by forces and laws. Patterns of motion in the solar system can be described and predicted based on observations and an understanding of gravity.

ESS.1.B Students will develop an understanding of Earth, the solar system, and the laws that predict the motion of celestial bodies.

ESS.1B.1 *Read and evaluate scientific information for mechanisms/results (e.g., the solar nebular theory) to explain how the solar system was formed. Cite evidence and develop a logical argument.*

ESS.1B.2 *Compare and contrast celestial bodies (e.g., planets, natural satellites, comets, asteroids, and the Oort cloud) and their motion in our solar system (e.g., revolution and rotation). Build an Analemma calendar.*

ESS.1B.3 *Design a model (e.g., a gravity simulation using PVC and a neoprene screen) to demonstrate Kepler's laws and the relationships of the orbits of objects in our solar system. Relate them to Newton's law of universal gravitation and laws of motion.*

Earth and Space Science

ESS.2 Earth Structure and History

Conceptual Understanding: Earth's interior is divided into a solid inner core, a liquid outer core, a pliable mantle, and a solid crust. Even though the crust is solid, it is always in motion and is recycled through time.

ESS.2.A Students will develop an understanding of the structure and composition of Earth and its materials.

ESS.2A.1 *Analyze and interpret data to explain and communicate the differentiation of Earth's internal chemical structure (e.g., core, mantle, and crust) using the production of internal heat from the radioactive decay of unstable isotopes and gravitational energy.*

ESS.2A.2 *Analyze and interpret data to explain and communicate the differentiation of Earth's physical divisions (e.g., lithosphere and asthenosphere) using data from seismic waves and Earth's magnetic field.*

ESS.2A.3 *Investigate the physical and/or chemical characteristics of mineral specimens to identify minerals and mineral deposits/groups (e.g., oxides, carbonates, halides, sulfides, sulfates, silicates, and phosphates). Include the relationship between chemical bonds, chemical formulas, mineral use, and mineral properties.*

ESS.2A.4 *Investigate the physical and/or chemical characteristics of rock specimens to identify and categorize igneous, sedimentary, and metamorphic rocks. Include the processes that generate the transformation of rocks.*

Conceptual Understanding: Radioactive decay lifetimes and isotopic content in rocks provide a way of dating rock formations and thereby fixing the scale of geological time. Plate tectonics is the unifying theory that explains the movements of rocks on Earth's surface and provides a comprehensive account of its geological history. Physical and chemical weathering is a result of the interactions of Earth's geosphere, hydrosphere, atmosphere, and biosphere.

ESS.2.B Students will develop an understanding of the history and evolution of the earth.

ESS.2B.1 *Research, analyze, and evaluate the contributions of William Smith, James Hutton, Nicolaus Steno, Charles Lyell, and others to physical geology.*

ESS.2B.2 *Apply different techniques (e.g., superposition, original horizontality, cross-cutting relationships, lateral continuity, principle of inclusions, fossil succession, and unconformities) to analyze and interpret the relative age of actual sequences, models, or photographs.*

ESS.2B.3 *Use mathematical concepts to calculate the absolute age of earth materials using actual or simulated isotope ratios.*

ESS.2B.4 *Research, analyze, and explain the origin of geologic features and processes that result from plate tectonics, including sea floor spreading, earthquake activity, volcanic activity, mountain building, and location of natural resources.*

ESS.2B.5 *Use mathematical representations to interpret seismic graphs to triangulate the location of an earthquake's epicenter and magnitude and to correlate the frequency and magnitude of an earthquake.*

ESS.2B.6 *Plan and conduct a scientific investigation to determine how factors (e.g., wind velocity, water velocity, ice, and temperature) may affect the rate of weathering.*

ESS.2B.7 ***Enrichment:*** *Use an engineering design process to design a model to simulate the formation of caves and karst topography by groundwater.**

Earth and Space Science

ESS.3 Earth's Systems and Cycles

Conceptual Understanding: Earth's surface is comprised of the geosphere, hydrosphere, atmosphere, and biosphere, all of which are interconnected. The complex and dynamic interactions between these systems have shaped Earth, influenced climate, and shaped the evolution of life.

ESS.3 Students will develop an understanding of Earth's systems and cycles.

ESS.3.1 *Use mathematical representations (e.g., latitude, longitude, and maps) to calculate the angle of noon solar incidence and relate the value to day length, distribution of sunlight, and seasonal change.*

ESS.3.2 ***Enrichment:*** *Use an engineering design process to explore the concepts of passive solar architecture to design a structure that best utilizes solar incidence.**

ESS.3.3 *Explain how temperature and density of ocean water influence circulation.*

ESS.3.4 *Research and communicate information to explain the importance of the transfer of thermal energy among the hydrosphere, geosphere, and atmosphere. Include the unique physical and chemical properties of water, the water cycle, and energy transfer within the rock cycle.*

ESS.3.5 *Analyze and interpret weather data using maps and global weather systems to explain and communicate the relationships among air masses, pressure systems, and frontal boundaries.*

ESS.3.6 *Construct an explanation from data sets to obtain and evaluate scientific information to construct scientific arguments on changes in climate caused by various natural factors (e.g., plate tectonics and continent location and Milankovitch cycles) versus anthropogenic factors (e.g., fossil fuel use and agricultural factors).*

ESS.3.7 *Cite evidence and develop logical arguments to identify the cause and effect relationships of the evolutionary milestones (e.g., photosynthesis and the atmosphere, the evolution of multicellular animals, the development of shells, and the colonization of terrestrial environments by plants and animals) that most profoundly shaped Earth's systems.*

ESS.3.8 *Analyze and interpret the record of shared ancestry, evolution, and extinction as related to natural selection using fossils.*

Earth and Space Science

ESS.4 Earth's Resources and Human Activity

Conceptual Understanding: The dynamic Earth impacts human society. Natural hazards and other geologic events have shaped the course of human history. In addition, humans also impact the Earth through resource extraction and land use.

ESS.4 **Students will develop an understanding of Earth's resources and the impact of human activities.**

ESS.4.1 *Research, evaluate, and communicate about how human life on Earth shapes Earth's systems and responds to the interaction of Earth's systems (e.g., geosphere, hydrosphere, atmosphere, and biosphere). Examine how geochemical and ecological processes interact through time to cycle matter and energy and how human activity alters the rates of these processes.*

ESS.4.2 *Research, assess, and communicate how Earth's systems influence the distribution of life, including how various natural hazards and geologic events (e.g., volcanic eruptions, earthquakes, landslides, tornadoes, and hurricanes) have shaped the course of human history.*

ESS.4.3 *Analyze earthquake and volcanic data to determine patterns that can lead to predicting such hazards and mitigating impact to humans.*

ESS.4.4 ***Enrichment:*** *Use an engineering design process to research, develop, and test models to aid in the responsible management of natural resources (e.g., recycling, composting, and energy usage).**

ESS.4.5 ***Enrichment:*** *Research and communicate regarding geoscience career options (e.g., geologist, petroleum engineer, meteorologist, paleontologist, astronomer, and oceanographer.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

ENVIRONMENTAL SCIENCE

Environmental science, **a one-half credit course**, is a laboratory- or field-based course that explores ways in which the environment shapes living communities. Human sustainability and environmental balance are emphasized. Laboratory activities, research, the use of technology, and the effective communication of results through various methods are integral components of this course, which also emphasizes a student-centered and collaborative classroom environment.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world that increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. The recommendation is that students should be actively engaged in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Environmental Science

ENV.1 Biosphere and Biodiversity

Conceptual Understanding: The biosphere is a system of biomes, each with unique characteristics. These characteristics are classified as biotic or abiotic. The environment in which humans live is dependent on a system of cycles. These biogeochemical cycles are the water, nitrogen, carbon, and phosphorus cycles. The flow of energy within the environment is critical for the success of life. The biodiversity within a biome is fragile and easily affected by human actions. Plant and animal populations are dynamic and are demonstrated through graphical analysis.

ENV.1 Students will investigate the interdependence of diverse living organisms and their interactions with the components of the biosphere.

ENV.1.1 *Identify, investigate, and evaluate the interactions of the abiotic and biotic factors that determine the types of organisms that live in major biomes.*

ENV.1.2 *Evaluate evidence in nonfiction text to explain how biological or physical changes within biomes affect populations and communities and how changing conditions may result in altered ecosystems.*

ENV.1.3 *Use models to explain why the flow of energy through an ecosystem can be illustrated by a pyramid with less energy available at the higher trophic levels compared to lower levels.*

ENV.1.4 *Describe symbiotic relationships (e.g., mutualism, parasitism, and commensalism) and other co-evolutionary (e.g., predator-prey, cooperation, competition, and mimicry) relationships within specific environments.*

ENV.1.5 *Develop and use models to diagram the flow of nitrogen, carbon, and phosphorus through the environment.*

ENV.1.6 *Use mathematics, graphics, and informational text to determine how population density-dependent and density-independent limiting factors affect populations and diversity within ecosystems. Use technology to illustrate and compare a variety of population-growth curves.*

ENV.1.7 *Analyze and interpret quantitative data to construct explanations of how the carrying capacity of an ecosystem may change as the availability of resources changes.*

ENV.1.8 *Utilize data to communicate changes within a given population and the environmental factors that may have impacted these changes (e.g., weather patterns, natural disasters)*

ENV.1.9 *Evaluate and communicate data that explains how human activity may impact biodiversity (e.g., introduction, removal, and reintroduction of an organism within an ecosystem; land usage) and genetic variations of organisms, including endangered and threatened species.*

ENV.1.10 ***Enrichment:*** *Engage in scientific argument from evidence the benefits versus harm of genetically modified organisms.*

Environmental Science

ENV.2 Natural Resources Use and Conservation

Conceptual Understanding: The environment is affected by human demand for its resources. However, through conservation applications, a balance may be reached between human sustainability and the environment.

ENV.2 Students will relate the impact of human activities on the environment, conservation activities, and efforts to maintain and restore ecosystems.

ENV.2.1 *Differentiate between renewable and nonrenewable resources, and compare and contrast the pros and cons of using these resources.*

ENV.2.2 *Investigate and research the pros and cons of using traditional sources of energy (e.g., fossil fuels) and alternative sources of energy (e.g., water, wind, geothermal, biomass/biofuels, solar).*

ENV.2.3 *Compare and contrast biodegradable and nonbiodegradable wastes and their significance in landfills.*

ENV.2.4 *Examine solutions for developing, conserving, managing, recycling, and reusing energy and mineral resources to minimize impacts in natural systems (e.g., agricultural soil use, mining for coal, construction sites, and exploration of petroleum and natural gas sources).*

ENV.2.5 *Research various resources related to water quality and pollution (e.g., nonfictional text, EPA's Surf Your Watershed, MDEQ publications) and communicate the possible effects on the environment and human health.*

ENV.2.6 ***Enrichment:*** *Obtain water from a local source (e.g., stream on campus, rainwater, ditch water) to monitor water quality over time, using a spreadsheet program to graphically represent collected data.*

Environmental Science

ENV.3 Human Activities and Climate Change

Conceptual Understanding: Humans are a part of their environment and may have a detrimental impact on the environment. Using evidence based on scientific research, efforts are underway to repair the environment. Historical and current regional and global models illustrate the changes in the environment.

ENV.3 Students will discuss the direct and indirect impacts of certain types of human activities on the Earth's climate.

ENV.3.1 *Use a model to describe cycling of carbon through the ocean, atmosphere, soil, and biosphere and how increases in carbon dioxide concentrations have resulted in atmospheric and climate changes.*

ENV.3.2 *Interpret data and climate models to predict how global and regional climate change can affect Earth's systems (e.g., precipitation, temperature, impacts on sea level, global ice volumes, and atmosphere and ocean composition).*

ENV.3.3 *Use satellite imagery and other resources to analyze changes in biomes over time (e.g., glacial retreat, deforestation, desertification) and propose strategies to reduce the impact of human activities leading to these issues.*

ENV.3.4 ***Enrichment:*** *Determine mathematically an individual's impact on the environment (carbon footprint, water usage, landfill contribution) and develop a plan to reduce personal contribution.*

Environmental Science

ENV.4 Human Sustainability

Conceptual Understanding: Human health is dependent on the environment. Changes within an environment, whether natural or man-made, may lead to the spread of disease. Sudden environmental changes (e.g., tsunami or volcanic activity) lead to human migration into other areas of the environment. Case studies illustrate the need to intervene in environmental change, when possible, to improve health issues (e.g., smog's effect on asthma patients).

ENV.4 Students will demonstrate an understanding of the interdependence of human sustainability and the environment.

ENV.4.1 *Identify human impact and develop a solution for protection of the atmosphere, considering pollutants (e.g., acid rain, air pollution, smog, ozone layer, or increased levels of greenhouse gases) and the impacts of pollutants on human health (e.g., asthma, COPD, emphysema, and cancer).*

ENV.4.2 *Evaluate data and other information to explain how key natural resources (e.g., water sources, fertile soils, concentrations of minerals, and fossil fuels), natural hazards, and climate changes influence human activity (e.g., mass migrations, human health).*

ENV.4.3 ***Enrichment:*** *Research and analyze case studies to determine the impact of human-related and natural environmental changes on human health and communicate possible solutions to reduce/resolve the dilemma.*

ENV.4.4 ***Enrichment:*** *Explore online resources related to air pollution to determine air quality in a geographic area and communicate the possible effects on the environment and human health.*

ENV.4.5 ***Enrichment:*** *Use an engineering design process to define a problem, design, construct, evaluate, and improve a device or method to reduce or prevent human impact on a natural resource (e.g., build a water filter, design an air purifier, develop a method to prevent parking lot pollution from entering a watershed).**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

FOUNDATIONS OF BIOLOGY

Foundations of Biology, **a one-credit course**, is a research and inquiry-based course designed to give students the basic knowledge needed prior to attempting the rigorous Biology course required for graduation. This course is NOT a required prerequisite for Biology. However, if selected as a science elective, Foundations of Biology should not be taken after the successful completion of Biology. Concepts covered in this course include the history of biology and its impacts on society, the chemistry of life, organization and energy in living systems, the molecular basis of heredity, biological evolution, and ecological principals.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and appropriate safety measures and practices. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Foundations of Biology

FB.1 History of Biology and Impacts on Society

Conceptual Understanding: The history of science is a compilation of the works of many people. To understand science and its applications, the history of scientific experiments and developments must be understood. The needs of society have been the driving force behind numerous advances in science and technology. Advances in science and technology have forever changed, and will continue to change, society.

FB.1 Students will relate the importance of significant historical biological experiments and their impact of these on research, development, and society.

FB.1.1 *Identify and communicate the contributions of famous scientists and their experiments that formed fundamental scientific principles (e.g., Robert Hooke, Schleiden/ Schwann/Virchow, Griffith, Avery/MacLeod/McCarty, Hershey/Chase, Rosalind Franklin, Gregor Mendel, Watson/Crick, Pasteur, and Charles Darwin).*

FB.1.2 *Trace and model the historical development of scientific ideas and theories (e.g., creation of the microscope, discovery of cells/cell theory, discovery of DNA/RNA, double helical shape of DNA, evolution/natural selection, endosymbiosis) through the development of a timeline.*

FB.1.3 *Research, analyze, explain, and communicate how scientific enterprise relates to society and classic inventions (e.g., microscope, blood typing, gel electrophoresis equipment, DNA sequencing technology).*

FB.1.4 ***Enrichment****: Research, analyze, explain, and communicate the influence of society, including cultural components, on the direction and progress of science and technology (e.g., medical treatments, emerging viruses, antibiotic resistance, vaccinations and re-emergent diseases, alternative energy development, and/or biomimicry.*

Foundations of Biology

FB.2 The Chemistry of Life

Conceptual Understanding: Living and non-living things are composed of elements. Elements have the unique ability to form compounds and molecules based on their atomic structures. Water has unique properties that allow it to form solutions with a variety of compounds. Living organisms are composed of biological molecules that interact with water and through chemical reactions, help to maintain homeostasis.

FB.2 **Students will demonstrate an understanding of the structure and interactions of matter and how the organization of matter supports living organisms.**

FB.2.1 *Develop and use simple atomic models to describe the components of elements (e.g., relative position, charges of protons, neutrons, and electrons).*

FB.2.2 *Obtain and use information about elements (e.g., chemical symbol, atomic number, atomic mass, and group or family) to describe the organization of the periodic table.*

FB.2.3 *Relate chemical reactivity to an element's position on the periodic table. Use this information to determine what type of bond will form between elements (ionic, covalent, hydrogen).*

FB.2.4 *Analyze and interpret data to classify common solutions as acids, bases, or neutral. Communicate the importance of pH in living systems.*

FB.2.5 *Investigate how the properties of water (e.g., cohesion, adhesion, heat capacity, solvent properties) contribute to the maintenance of living cells and organisms.*

FB.2.6 *Explain the role of the major biomolecules (carbohydrates, proteins -including enzymes, lipids, and nucleic acids) to the survival of living organisms.*

FB.2.7 ***Enrichment:*** *Explore the structure of biomolecules using molecular models. Relate the structure of biomolecules to their function in living things (discuss types bonding, importance of the strength and weakness of the bond in function, energy in bonds, enzyme function).*

Foundations of Biology

FB.3 Organization and Energy in Living Systems

Conceptual Understanding: Cells are the basic unit of any living organism. All organisms are composed of one (unicellular) or many cells (multicellular). Living things use their cells to acquire energy from their environment to grow and reproduce, and then they respond and adapt to that environment for survival.

FB.3 **Students will demonstrate an understanding of how the structure of living organisms supports the essential functions of life.**

FB.3.1 *Compare and contrast prokaryotic/eukaryotic and plant/animal/bacteria cells.*

FB.3.2 *Use models to investigate and explain structures within living cells that support life (e.g., cytoplasm, cell membrane, cell wall, nucleus, mitochondria, chloroplasts, lysosomes, Golgi, vacuoles, ER, ribosomes, chromosomes, centrioles, cytoskeleton, nucleolus, nuclear membrane).*

FB.3.3 *Compare and contrast active and passive cellular transport. Analyze the movement of water across a cell membrane in hypotonic, isotonic, and hypertonic solutions.*

FB.3.4 *Analyze the relationship between photosynthesis and cellular respiration and explain that relationship in terms of the need for all living things to acquire energy from their environment.*

FB 3.5 *Use models to explain how ADP and ATP cycle to store and release chemical energy using inorganic phosphate.*

FB.3.6 *Compare and contrast the processes and results of mitosis and meiosis.*

FB.3.7 ***Enrichment:*** *Research and orally communicate the possible outcomes of a failure of mitosis (cancer) or meiosis (nondisjunction).*

Foundations of Biology

FB.4 Molecular Basis of Heredity

Conceptual Understanding: One strand of DNA creates a chromosome. Chromosomes have genes, which are simply segments of DNA. The information stored in DNA (in genes on chromosomes) determines the unique characteristics of an individual. DNA is the blueprint for RNA through transcription, which in turn, allows for the creation of a protein through translation. Modern technologies allow humans to manipulate DNA, RNA, and proteins to solve human dilemmas. Using technology to manipulate genetic information is controversial.

FB.4 Students will demonstrate an understanding of how genetic information is transferred from parent to offspring.

FB.4.1 *Compare and contrast the basic structure and function of nucleic acids (e.g., DNA, RNA).*

FB.4.2 *Obtain and communicate information illustrating the relationships among DNA, genes, chromosomes, and proteins to the basis of life.*

FB.4.3 *Use models (e.g., Punnett squares) and mathematical reasoning to describe and predict patterns of inheritance of single genetic traits from parents to offspring (e.g., dominant, and recessive traits, incomplete dominance, codominance, multiple alleles, sex- linkage).*

FB.4.4 *Obtain and communicate information to describe how mutations may affect genetic expression and provide examples.*

FB.4.5 *Research and report genetic technologies that may improve the quality of life (e.g., genetic engineering, cloning, gene splicing, DNA testing).*

FB.4.6 ***Enrichment:*** *Debate the pros and cons of using biotechnology to manipulate genetic information for human purpose (society).*

Foundations of Biology

FB.5 Biological Evolution

Conceptual Understanding: The geologic time scale interpreted from rock strata and fossil evidence provides a way to organize major historical events in Earth's history. Rock strata can document the existence, diversity, extinction, and changes in many life forms. Adaptation by natural selection acting over generations is one important process by which species gradually change to respond to environmental pressures.

FB.5 Students will demonstrate an understanding of Earth's fossil record and its indication of the diversity of life over time.

FB.5.1 *Investigate through research the contributions of scientists to the theory of evolution and evolutionary processes (e.g., Needham, Spallanzani, Redi, Pasteur, Lyell, Lamarck, Malthus, Wallace, Darwin).*

FB.5.2 *Analyze and interpret data to support claims that different types of fossils provide evidence of the diversity of life that has existed on Earth and of the relationships between past and existing life on Earth.*

FB.5.3 *Obtain and communicate information to explain how DNA evidence and fossil records support Darwin's theory of evolution.*

FB.5.4 *Investigate how biological adaptations and genetic variations of traits in a population enhance the probability of survival in an environment (natural selection).*

FB.5.5 ***Enrichment:*** *Create and analyze models that illustrate the relatedness between all living things (cladograms/phylogenic trees).*

Foundations of Biology

FB.6 Ecological Principals

Conceptual Understanding: Ecosystems are dynamic in nature, full of complex interactions that affect the numbers and types of organisms that can survive. Biotic and abiotic factors affect ecosystems, allowing for them to sustain only a limited number of organisms and populations, known as a carrying capacity. There is a delicate balance that exists between the living and non-living things in an ecosystem. Humans can interrupt this balance, causing both local and global environmental issues.

FB.6 Students will understand the interdependence of living organisms and their environment.

FB 6.1 *Compare and contrast biotic and abiotic factors.*

FB 6.2 *Use models to analyze the cycling of matter in an ecosystem (e.g., water, carbon dioxide/oxygen, nitrogen).*

FB.6.3 *Obtain, evaluate, and communicate information to explain relationships that exist between abiotic and biotic components of an ecosystem. Explain how changes in biotic and abiotic components affect the balance of an ecosystem over time.*

FB 6.4 *Develop and use models to discuss the climate, flora, and fauna of the terrestrial and aquatic biomes of the world.*

FB 6.5 *Use models to analyze the flow of energy through food chains, webs, and pyramids.*

FB 6.6 *Engage in scientific argument from evidence to distinguish organisms that exist in symbiotic (mutualism, parasitism, commensalism) or co-evolutionary (predator-prey, cooperation, competition, and mimicry) relationships within ecosystems.*

FB 6.7 ***Enrichment:*** *Design solutions to reduce the impact of human activity on the ecosystem.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

FOUNDATIONS OF SCIENCE LITERACY

Foundations of Science Literacy, **a one-half credit course**, is designed as an inquiry-based ACT science preparation course in which objectives from the *ACT College and Career Readiness Standards – Science* are included. The course also includes basic skills that include analyzing technical texts and graphics (charts, graphs) along with implementing engineering processes and designs to solve problems. It is recommended that Foundations of Science Literacy be taken after the successful completion of Biology.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and appropriate safety measures and practices. Students should design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students. Exemplary lessons and resources will be presented with this course to assist teachers in developing hands-on, project-based strategies for the classroom.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Foundations of Science Literacy

FSL.1 History of Science and Impacts on Society

Conceptual Understanding: The history of science is a compilation of the works of many people. To understand science and its applications, the history of scientific experiments and developments must be understood. The needs of society have been the driving force behind numerous advances in science and technology. Advances in science and technology have forever changed, and will continue to change, society.

FSL.1 **Students will relate the importance of significant historical experiments and their impact on research and development.**

FSL.1.1 *Trace and model the historical development of scientific ideas and theories (e.g., atomic theory, plate tectonics, evolution, genetics, discovery of cells) through the development of a timeline.*

FSL.1.2 *Research, analyze, explain, and communicate how scientific enterprise relates to society and classic inventions (e.g., microscope, telescope, computer, and telephone).*

FSL.1.3 *Identify and communicate the impact of mathematics and technology in the development of scientific thought and the practice of science (e.g., space exploration, the human genome project, and ocean exploration).*

FSL.1.4 ***Enrichment:*** *Research, analyze, explain, and communicate the influence of society, including cultural components, on the direction and progress of science and technology (e.g., medical treatments, antibiotic resistance, alternative energy development, and biomimicry).*

Foundations of Science Literacy

FSL.2 Nature of Technology and Engineering

Conceptual Understanding: Societal demands influence the need for engineering design and technology. The goal of engineering is to design and manufacture useful devices or materials (technologies) to meet societal demands. Global challenges such as climate change, medical treatments, space exploration, food supply, and clean water drive engineering design and technology development to solve societal needs and wants. Engineering practices are critical to undertaking the world's challenges. Exposure to engineering activities sparks interest in the study of science, technology, engineering, and mathematics careers.

FSL.2 Students will identify, research, and communicate the development of technology and engineering practices.

FSL.2.1 *Research and present a technology that was developed through engineering design. Identify its purpose, how it has advanced through alterations in design (e.g., systems that provide homes and businesses with utilities, parking structures, park and recreational structures, and traffic flow), and careers related to its use).*

FSL.2.2 *Use an engineering design process to identify a problem within the local community, and propose and develop a possible solution for that problem.**

FSL.2.3 ***Enrichment****: Use a computer simulation to model the impact of proposed solutions on a complex, real-world problem with numerous criteria and constraints on interactions within and between systems relevant to the problem.**

Foundations of Science Literacy

FSL.3 Nature of Science

Conceptual Understanding: Science is characterized by the systematic gathering of information through various forms of direct and indirect observations, and the testing of this information by methods including, but not limited to, experimentation. By formulating their own questions, planning, and conducting investigations, learners build new meaning, understanding, and knowledge of science. This helps develop their critical thinking, reasoning and decision-making skills that will serve a learner for a lifetime.

FSL.3A Students will apply science and engineering practices and skills to scientific investigations.

FSL.3A.1 *Ask questions and conduct research to generate a hypothesis, determine independent/dependent variables, and appropriate controls for scientific investigations and experiments.*

FSL.3A.2 *Analyze data from simple experiments and construct organized models (e.g., data tables, graphs) detailing results from the experiments.*

FSL.3A.3 *Demonstrate the proper use of safety procedures and scientific laboratory equipment. Select and use appropriate tools and instruments to collect qualitative and quantitative data.*

FSL.3A.4 *Use mathematical and computational thinking to (1) use and manipulate appropriate metric units, (2) express relationships between variables for investigations, and (3) compare or combine data from two or more simple data presentations (e.g., order or sum data from a table, categorize data from a table using a scale from another table).*

FSL.3A.5 *Analyze data sets from experiments for patterns and trends and identify any weaknesses in the experimental designs.*

Conceptual Understanding: Scientists interpret tables, graphs, and diagrams to locate data, examine relationships in the data, and extend those relationships beyond the data. Students should analyze scientific investigations and data presented in passages like those found in the science section of the ACT (e.g., Data Representation, Research Summaries, and Conflicting Viewpoint passages).

FSL.3B Students will apply scientific literacy and thinking skills to analyze and interpret data found in various graphics including, but not limited to, those found in sample ACT science passages.

FSL.3B.1 *Analyze select data from a simple and complex data presentation (e.g., charts, graphs, diagrams).*

FSL.3B.2 *Compare or combine data from two or more simple data presentations (e.g., order or sum data from a table, categorize data from a table using a scale from another table, relationships between data sets).*

FSL.3B.3 *Translate information into a table, graph, or diagram. Determine patterns, trends, and relationships as the values of variables change.*

FSL.3B.4 *Perform a simple interpolation or simple extrapolation using data in a table or graph. Determine and/or use a simple (e.g., linear) mathematical relationship that exists between data.*

FSL.3B.5 *Analyze presented information when given new information (e.g., given a new scenario, how would a given scenario be changed).*

Conceptual Understanding: Scientists understand experimental design and procedures, compare designs and procedures across experiments, and understand how changes in design and procedures affect experimental results. Students should analyze scientific investigations and data presented in passages like those found in the science section of the ACT (e.g., Data Representation, Research Summaries, and Conflicting Viewpoint passages) to understand experimental designs and procedures.

FSL.3C Students will apply scientific literacy and thinking skills to analyze scientific investigations found in various experimental designs including, but not limited to, those found in sample ACT science passages.

FSL.3C.1 *Analyze the methods and choice of tools used in simple and complex experimental designs.*

FSL.3C.2 *Determine the validity of scientific questions (e.g., hypothesis) and variables for complex experimental designs.*

FSL.3C.3 *Select and describe an alternate method for testing a hypothesis.*

FSL.3C.4 *Predict how modifying the experimental design or adding another measurement in an experimental design will affect results of the experiment.*

FSL.3C.5 *Determine which additional trials could be performed in an investigation to enhance the results of an experimental design.*

Conceptual Understanding: Scientists evaluate multiple explanations for the same phenomena to determine their differences, similarities, strengths, and weaknesses, and evaluating the validity of conclusions based on experimental results. They evaluate the validity of conclusions based on experimental results. Students should analyze scientific investigations and data presented in passages like those found in the science section of the ACT (e.g., Data Representation, Research Summaries, and Conflicting Viewpoint passages) to evaluate scientific explanations.

FSL.3D **Students will apply scientific literacy and thinking skills to evaluate theoretical models, inferences, and experimental results found in various experimental designs including, but not limited to, those found in sample ACT science passages.**

FSL.3D.1 *Select the hypothesis, prediction, or conclusion that is, or is not, supported by data presentation or pieces of informational text.*

FSL.3D.2 *Determine whether given information supports or contradicts a hypothesis or conclusion, and provide support for the reasoning.*

FSL.3D.3 *Analyze and interpret data from informational texts and data to (1) reveal patterns and construct meaning (2) support or refute hypotheses, explanations, claims or designs, or (3) evaluate the strength of conclusions.*

FSL.3D.4 *Use new information to make a prediction based on a theoretical model.*

FSL.3D.5 *Select and explain why a hypothesis, prediction, or conclusion is, or is not, supported by two or more data presentations or theoretical models.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.

- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

GENETICS

Genetics, **a one-half credit course**, is a laboratory-based course that explores the principles of classical and molecular genetics. The structure and function relationship of DNA forms the foundation for the study of DNA inheritance, RNA and protein production, and the resulting phenotypes in organisms. Classical Mendelian genetics is explored to analyze patterns of inheritance and genetic variability within populations. Multiple applications of biotechnology are investigated to address a variety of problems in modern society.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, lab experiences, and scientific research (projects) for a minimum of 30% of the class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Genetics

GEN.1 Structure and Function of DNA

Conceptual Understanding: Chromosomes, the carriers of genetic information, are composed of both DNA and proteins. A significant body of evidence generated through multiple experiments by many scientists led to the conclusion that DNA is the universal genetic material. Once this was established, efforts focused on deciphering the structure of DNA and the mechanism through which DNA is passed on to cells with little to no errors. These discoveries formed the foundation of modern molecular genetics.

GEN.1A Students will demonstrate that all cells contain genetic material in the form of DNA.

GEN.1A.1 *Model the biochemical structure, either 3-D or computer-based, of DNA based on the experimental evidence available to Watson and Crick (Chargaff, 1950; Franklin, 1951).*

GEN.1A.2 *Explain the importance of the historical experiments that determined that DNA is the heritable material of the cell (Griffith, 1928; Avery, McCarty & MacLeod, 1944; Hershey & Chase, 1952).*

GEN.1A.3 *Relate the structure of DNA to its specific functions within the cell.*

GEN.1A.4 *Conduct a standard DNA extraction protocol using salt, detergent, and ethanol from various cell types (e.g., plant, animal, fungus). Compare and contrast the consistency and quantity of DNA extracted from various cell types.*

GEN.1A.5 ***Enrichment:*** *Use an engineering design process to refine the methodology to optimize the DNA-extraction process for various cell types.**

GEN.1A.6 *Investigate the structural differences between the genomes (i.e., circular/linear chromosomes and plasmids) found in prokaryotes and eukaryotes.*

Conceptual Understanding: Before a cell divides, the DNA sequence of its chromosomes is replicated, and each daughter cell receives a copy. In multicellular organisms, individual cells grow and then divide via a process called mitosis, thereby allowing the organism to grow.

GEN.1B Students will analyze how the DNA sequence is copied and transmitted to new cells.

GEN.1B.1 *Compare and contrast various proposed models of DNA replication (i.e., conservative, semi-conservative, and disruptive). Evaluate the evidence used to determine the mechanism of DNA replication.*

GEN.1B.2 *Develop and use models to illustrate the mechanics of DNA replication.*

GEN.1B.3 *Microscopically observe and analyze the stages of the cell cycle (G_1-S-G_2-M) to describe the phenomenon, and identify methods at different cell cycle checkpoints through which the integrity of the DNA code is maintained.*

Genetics

GEN.2 Transcription, Translation, and Mutations

Conceptual Understanding: The genetic information stored in the DNA molecule is expressed to produce a protein and result in the formation of an observable trait, or phenotype, in the organism. Gene expression leads to protein production through the processes of transcription in the nucleus and translation in the ribosome.

GEN.2A Students will analyze and explain the processes of transcription and translation in protein production.

GEN.2A.1. *Compare and contrast the structure of RNA to DNA and relate this structure to the different function of each molecule.*

GEN.2A.2 *Describe and model how the process of transcription produces RNA from a DNA template in both prokaryotes and eukaryotes.*

GEN.2A.3 *Develop a model to show the relationship between the components involved in the mechanics of translation at the ribosome.*

GEN.2A.4 Analyze the multiple roles of RNA in translation. Compare the structure and function of tRNA, rRNA, mRNA, and snRNA.

GEN.2A.5 ***Enrichment:*** *Evaluate Beadle and Tatum's "One Gene-One Enzyme Hypothesis" (1941) in the development of the central dogma (DNA →RNA →Protein). Explain how new discoveries, such as alternate splicing of introns, have led to the revision of the central dogma.*

Conceptual Understanding: Mutations may result in the formation of new gene alleles, alter protein structure, and produce new phenotypes.

GEN.2B Students will determine the causes and effects of mutations in DNA.

GEN.2B.1 *Identify factors that cause mutations (e.g., environmental, errors in replication, and viral infections).*

GEN.2B.2 *Explain how these mutations may result in changes in protein structure and function.*

GEN.2B.3 *Describe cellular mechanisms that can help to minimize mutations (e.g., cell cycle checkpoints, DNA polymerase proofreading, and DNA repair enzymes).*

GEN.2B.4 *Investigate the role of mutations and the loss of cell cycle regulation in the development of cancers.*

GEN.2B.5 ***Enrichment:*** *Use an engineering design process to research the current status of genetic technology and personalized medicine, then propose and test targeted medical or forensic applications.**

Genetics

GEN.3 Biotechnological Applications

Conceptual Understanding: The application of modern molecular genetics led to the development of recombinant DNA technology and the subsequent explosion of biotechnology applications. Biotechnology and the use of genetically modified organisms have altered many aspects of daily life, including forensics, agriculture, and medicine.

GEN.3 Students will investigate biotechnology applications and bioengineering practices.

GEN.3.1 *Explain and demonstrate the use of various tools and techniques of DNA manipulation and their applications in forensics (e.g., paternity and victim/suspect identification), agriculture (e.g., pesticide or herbicide resistance, improved yields, and improved nutritional value), and personalized medicine (e.g., targeted therapies, cancer treatment, production of insulin and human growth hormone, and engineering insect vectors of human parasites).*

GEN.3.2 *Experimentally demonstrate genetic transformation, protein purification, and/or gel electrophoresis.*

GEN.3.3 ***Enrichment:*** *Use an engineering design process to refine methodology and optimize the process of genetic transformation, protein purification, and/or gel electrophoresis.**

GEN.3.4 ***Enrichment:*** *Develop logical arguments based on scientific evidence for and against ethical concerns regarding biotechnology/bioengineering.*

Genetics

GEN.4 Classic Mendelian Genetics

Conceptual Understanding: Gregor Mendel is known as the "Father of Genetics" due to his work with pea plants, which established that traits are passed from parents to offspring in predictable ways. Mendel's findings formed the foundation from which geneticists can determine the mode of inheritance of various traits (e.g., dominant, recessive, and codominant).

GEN.4 Students will analyze and interpret data collected from probability calculations to explain the inheritance of traits within a population.

GEN.4.1 *Demonstrate Mendel's law of dominance and segregation using mathematics to predict phenotypic and genotypic ratios.*

GEN.4.2 *Illustrate Mendel's law of independent assortment by analyzing multi-trait cross data sets for patterns and trends.*

GEN.4.3 *Investigate traits that follow non-Mendelian inheritance patterns (e.g., incomplete dominance, codominance, multiple alleles, autosomal linkage, sex-linkage, polygenic, and epistasis).*

GEN.4.4 *Construct pedigrees from observed phenotypes. Analyze and interpret data to determine patterns of inheritance and disease risk.*

GEN.4.5 ***Enrichment:*** *Construct maps of genes on a chromosome based on data obtained from 2- and/or 3- point crosses or from recombination frequencies.*

Genetics

GEN.5 Population Genetics

Conceptual Understanding: Most species display considerable amounts of genetic variation. The variation is represented as differences in allele frequencies within the gene pool of populations of a species. Variations in the structure of gene pools form the basis of evolutionary change.

GEN.5 Students will apply population genetic concepts to explain variability of organisms within a population.

GEN.5.1 *Model the inheritance of chromosomes through meiotic cell division and demonstrate how meiosis and sexual reproduction lead to genetic variation in populations.*

GEN.5.2 *Explain how natural selection acts upon genetic variability within a population and may lead to changes in allelic frequencies over time and evolutionary changes in populations.*

GEN.5.3 *Describe processes that cause changes in allelic frequencies (e.g., nonrandom mating, small population size, immigration and emigration, genetic drift, and mutation).*

GEN.5.4 *Apply the Hardy-Weinberg formula to analyze changes in allelic frequencies due to natural selection in a population. Relate these changes to the environmental fitness of the phenotypes.*

GEN.5.5 ***Enrichment:*** *Analyze computer simulations of the effects of natural selection on allelic frequencies in a population.*

GEN.5.6 ***Enrichment:*** *Apply the concept of natural selection to analyze differences in human populations (e.g., skin color, lactose persistence, sickle cell anemia, and malaria).*

GEN.5.7 ***Enrichment:*** *Use genomic databases for sequence analysis and apply the information to species comparisons, evolutionary relationships, and/or determine the molecular basis of inherited disorders.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.

- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

HUMAN ANATOMY AND PHYSIOLOGY

Human Anatomy and Physiology, **a one-credit course**, is a laboratory-based course that investigates the structures and functions of the human body. Core content emphasizes the structure and function of cells, tissues, and organs; organization of the human body and its biochemical composition; the skeletal, muscular, nervous, endocrine, digestive, respiratory, cardiovascular, integumentary, immune, urinary, and reproductive systems; and the impact of diseases on certain systems. Laboratory activities, research, the use of technology, and the effective communication of results through various methods are integral components of this course. It is recommended that Human Anatomy and Physiology be taken after successful completion of Biology.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, lab experiences, and scientific research (projects) for a minimum of 30% of the class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Human Anatomy and Physiology

HAP.1 Physiological Functions/Anatomical Structure

Conceptual Understanding: Anatomists have developed a universal set of reference terms that aid in the identification of body structures with a high degree of specificity. Body organization from simple to complex levels and an introduction to the organ systems forming the body lead to a higher understanding of anatomical structures in the human body.

HAP.1 Students will demonstrate an understanding of how anatomical structures and physiological functions are organized and described using anatomical position.

HAP.1.1 *Apply appropriate anatomical terminology when explaining the orientation of regions, directions, and body planes or sections.*

HAP.1.2 *Locate organs and their applicable body cavities and systems.*

HAP.1.3 *Investigate the interdependence of the various body systems to each other and to the body as a whole.*

Human Anatomy and Physiology

HAP.2 Cells and Tissues

Conceptual Understanding: The smallest structural and functional unit of the human body is the cell. The cell is composed of organelles that perform varied but specific functions. Cells within the human body can metabolize, digest foods, dispose of waste, reproduce, grow, move, and respond to stimuli. Groups of cells that are similar in structure and function form the four types of tissues (epithelial, connective, nervous, and muscle) found in the human body.

HAP.2 Students will demonstrate an understanding of the relationship of cells and tissues that form complex structures of the body.

HAP.2.1 *Analyze the characteristics of the four main tissue types: epithelial, connective, muscle, and nervous. Examine tissues using microscopes and other various technologies.*

HAP.2.2 *Construct a model to demonstrate how the structural organization of cells in a tissue relates to the specialized function of that tissue.*

HAP.2.3 ***Enrichment:*** *Use an engineering design process to research and develop medications (i.e., targeted cancer therapy drugs) that target uncontrolled cancer cell reproduction.**

Human Anatomy and Physiology

HAP.3 Integumentary System

Conceptual Understanding: The integumentary system is composed of epithelial membranes (i.e., skin epidermis, mucosae, and serosae). The connective-tissue synovial membranes cover, insulate, protect, and cushion body organs as well as the entire body. The integumentary system is critical to maintaining homeostasis using internal and external regulators.

HAP.3 Students will investigate the structures and functions of the integumentary system, including the cause and effect of diseases and disorders.

HAP.3.1 *Identify structures and explain the functions of the integumentary system, including layers of skin, accessory structures, and types of membranes.*

HAP.3.2 *Investigate specific mechanisms (e.g., feedback and temperature regulation) through which the skin maintains homeostasis.*

HAP.3.3 *Research and analyze the causes and effects of various pathological conditions (e.g., burns, skin cancer, bacterial/viral infections, and chemical dermatitis).*

HAP.3.4 ***Enrichment:*** *Use an engineering design process to design and model/simulate effective treatments for skin disorders (e.g., tissue grafts).**

Human Anatomy and Physiology

HAP.4 Skeletal System

Conceptual Understanding: The skeletal system is composed of cartilage and bone. Together these supportive tissues form the framework for the body. The skeletal system encloses organs, attaches skeletal muscles, and connects bone, forming joints to aid in movement.

HAP.4 Students will investigate the structures and functions of the skeletal system including the cause and effect of diseases and disorders.

HAP.4.1 *Use models to compare the structure and function of the skeletal system.*

HAP.4.2 *Develop and use models to identify and classify major bones as part of the appendicular or axial skeleton.*

HAP.4.3 *Identify and classify types of joints and their movement.*

HAP.4.4 *Demonstrate an understanding of the growth and development of the skeletal system, differentiating between endochondral and intramembranous ossification.*

HAP.4.5 *Construct explanations detailing how mechanisms (e.g., Ca^{2+} regulation) are used by the skeletal system to maintain homeostasis.*

HAP.4.6 *Research and analyze various pathological conditions (e.g., bone fractures, osteoporosis, bone cancers, various types of arthritis, and carpal tunnel syndrome).*

HAP.4.7 ***Enrichment:*** *Use an engineering design process to develop, model, and test effective treatments for bone disorders (i.e., prosthetics).**

Human Anatomy and Physiology

HAP.5 Muscular System

Conceptual Understanding: The muscular system, with the aid of three types of muscle tissue (skeletal, cardiac, and smooth), provides movement, contour and shape, joint stability, heat generation, and the transportation of materials throughout the body.

HAP.5 Students will investigate the structures and functions of the muscular system, including the cause and effect of diseases and disorders.

HAP.5.1 *Develop and use models to illustrate muscle structure, muscle locations and groups, actions, origins, and insertions.*

HAP.5.2 *Describe the structure and function of the skeletal muscle fiber and the motor unit.*

HAP.5.3 *Explain the molecular mechanism of muscle contraction and relaxation.*

HAP.5.4 *Use models to locate the major muscles and investigate the movements controlled by each muscle.*

HAP.5.5 *Compare and contrast the anatomy and physiology of the three types of muscle tissue.*

HAP.5.6 *Use technology to plan and conduct an investigation that demonstrates the physiology of muscle contraction, muscle fatigue, or muscle tone. Collect and analyze data to interpret results, then explain and communicate conclusions.*

HAP.5.7 *Research and analyze the causes and effects of various pathological conditions, (e.g., fibromyalgia, muscular dystrophy, cerebral palsy, muscle cramps/strains, and tendonitis).*

HAP.5.8 ***Enrichment:*** *Use an engineering design process to develop effective ergonomic devices to prevent muscle fatigue and strain (e.g., carpal tunnel, exoskeletons for paralysis, or training plans to prevent strains/sprains/cramps).**

Human Anatomy and Physiology

HAP.6 Nervous System

Conceptual Understanding: The nervous system is composed of the central nervous system and the peripheral nervous system. These divisions work together to create every thought, action, and sensation that occurs within the body. The exploration of the special senses will provide an understanding of sight, hearing, smell, and taste.

HAP. 6 Students will investigate the structures and functions of the nervous system, including the cause and effect of diseases and disorders.

HAP.6.1 *Describe and evaluate how the nervous system functions and interconnects with all other body systems.*

HAP.6.2 *Analyze the structure and function of neurons and their supporting neuroglia cells (e.g. astrocytes, oligodendrocytes, Schwann cells, microglial).*

HAP.6.3 *Discuss the structure and function of the brain and spinal cord.*

HAP.6.4 *Compare and contrast the structures and functions of the central and peripheral nervous systems. Investigate how the systems interact to maintain homeostasis (e.g., reflex responses, sensory responses).*

HAP.6.5 ***Enrichment:*** *Plan and conduct an experiment to test reflex response rates under varying conditions. Using technology, construct graphs in order to analyze and interpret data to explain and communicate conclusions.*

HAP.6.6 *Describe the major characteristics of the autonomic nervous system. Contrast the roles of the sympathetic and parasympathetic nervous systems in maintaining homeostasis.*

HAP.6.7 *Describe the structure and function of the special senses (i.e., vision, hearing, taste, and olfaction).*

HAP.6.8 *Research and analyze the causes and effects of various pathological conditions (e.g., addiction, depression, schizophrenia, Alzheimer's, sports-related chronic traumatic encephalopathy [CTE], dementia, chronic migraine, stroke, and epilepsy).*

HAP.6.9 ***Enrichment:*** *Use an engineering design process to develop, model, and test preventative devices for neurological injuries and/or disorders (e.g., concussion-proof helmets or possible medications for addiction and depression).**

Human Anatomy and Physiology

HAP.7 Endocrine System

Conceptual Understanding: The endocrine system, using hormones, gives instructions that control growth and development, reproductive capabilities, and the physiological homeostasis of the body systems.

HAP.7 Students will demonstrate an understanding of the major organs of the endocrine system and the associated hormonal production and regulation.

HAP.7.1 *Obtain, evaluate, and communicate information to illustrate that the endocrine glands secrete hormones that help the body maintain homeostasis through feedback mechanisms.*

HAP.7.2 *Discuss the function of each endocrine gland and the various hormones secreted.*

HAP.7.3 *Model specific mechanisms through which the endocrine system maintains homeostasis (e.g., insulin/glucagon and glucose regulation; T_3 / T_4 and metabolic rates; calcitonin/parathyroid and calcium regulation; antidiuretic hormone and water balance; growth hormone; and cortisol and stress).*

HAP.7.4 *Research and analyze the effects of various pathological conditions (e.g., diabetes mellitus, pituitary dwarfism, Graves' disease, Cushing's syndrome, hypothyroidism, and obesity).*

HAP.7.5 ***Enrichment:*** *Use an engineering design process to develop effective treatments for endocrine disorders (e.g., methods to regulate hormonal imbalance).**

Human Anatomy and Physiology

HAP.8 Male and Female Reproductive Systems

Conceptual Understanding: The reproductive system's biological function is to generate offspring for the continuance of our species. Interactions of the egg and sperm, the biological clock, and fertility play critical

roles in the production of an offspring. Proper embryonic development directly depends on the health of the reproductive system.

HAP. 8 Students will investigate the structures and functions of the male and female reproductive system, including the cause and effect of diseases and disorders.

HAP.8.1 *Compare and contrast the structure and function of the male and female reproductive systems.*
HAP.8.2 *Describe the male reproductive anatomy and relate structure to sperm production and release.*
HAP.8.3 *Describe the female reproductive anatomy and relate structure to egg production and release.*
HAP.8.4 *Construct explanations detailing the role of hormones in the regulation of sperm and egg development. Analyze the role of negative feedback in regulation of the female menstrual cycle and pregnancy.*
HAP.8.5 *Evaluate and communicate information about various contraceptive methods to prevent fertilization and/or implantation.*
HAP.8.6 *Describe the changes that occur during embryonic/fetal development, birth, and the growth and development from infancy, childhood, and adolescence to adult.*
HAP.8.7 *Research and analyze the causes and effects of various pathological conditions (e.g., infertility, ovarian cysts, endometriosis, sexually transmitted diseases, and ectopic pregnancy). Research current treatments for infertility.*

Human Anatomy and Physiology

HAP.9 Blood

Conceptual Understanding: Blood is the necessary fluid that transports oxygen and other elements throughout the body and removes waste products. Blood's unique composition allows for grouping into four major blood type groups (A, B, AB, and O). Blood types are based on the presence or absence of inherited antigens on the surface of the red blood cells.

HAP.9 Students will analyze the structure and functions of blood and its role in maintaining homeostasis.

HAP.9.1 *Describe the structure, function, and origin of the cellular components and plasma components of blood.*
HAP.9.2 *Distinguish the cellular difference between the ABO blood groups and investigate blood type differences utilizing antibodies to determine compatible donors and recipients.*
HAP.9.3 *Research and analyze the causes and effects of various pathological conditions (e.g., anemia, malaria, leukemia, hemophilia, and blood doping).*
HAP.9.4 ***Enrichment:*** *Use an engineering design process to develop effective treatments for blood disorders (e.g., methods to regulate blood cell counts or blood doping tests).**

Human Anatomy and Physiology

HAP.10 Cardiovascular System

Conceptual Understanding: The cardiovascular system is composed of the heart and blood vessels. The heart is the mechanism that cycles the blood throughout the body via the blood vessels. Using blood as a carrier, the system transports nutrients, gases, wastes, antibodies, electrolytes, and many other substances to and from the cells of the body. The location, size, and orientation of the heart, blood vessels, veins, arteries, and capillaries are essential in maintaining cardiovascular health. Maintenance of this system is vital.

HAP.10 Students will investigate the structures and functions of the cardiovascular system, including the cause and effect of diseases and disorders.

HAP.10.1 *Design and use models to investigate the functions of the organs of the cardiovascular system.*
HAP.10.2 *Describe the flow of blood through the pulmonary system and systemic circulation.*
HAP.10.3 *Investigate the structure and function of different types of blood vessels (e.g., arteries, capillaries, veins). Identify the role each plays in the transport and exchange of materials.*
HAP.10.4 *Demonstrate the role of valves in regulating blood flow.*
HAP.10.5 *Plan and conduct an investigation to test the effects of various stimuli on heart rate and/or blood pressure. Construct graphs to analyze data and communicate conclusions.*
HAP.10.6 *Research and analyze the effects of various pathological conditions (e.g., hypertension, myocardial infarction, mitral valve prolapse, varicose veins, and arrhythmia).*
HAP.10.7 ***Enrichment:*** *Use an engineering design process to develop, model, and test effective treatments for cardiovascular diseases (e.g., methods to regulate heart rate, artificial replacement valves, open blood vessels, or strengthening leaky valves).**

Human Anatomy and Physiology

HAP.11 Lymphatic System

Conceptual Understanding: The lymphatic system is composed of lymphoid vessels and organs. These vessels assist the cardiovascular system by maintaining blood volume. The lymphoid organs defend the body from pathogens by providing sites for development and maturation of immune system cells. There are multiple disorders of the immune system affecting the human population.

HAP. 11 Students will investigate the structures and functions of the lymphatic system, including the cause and effect of diseases and disorders.

HAP.11.1 *Analyze the functions of leukocytes, lymph, and lymphatic organs in the immune system.*
HAP.11.2 *Compare the primary functions of the lymphatic system and its relationship to the cardiovascular system.*
HAP.11.3 *Compare and contrast the body's non-specific and specific lines of defense, including an analysis of the roles of various leukocytes: basophils, eosinophils, neutrophils, monocytes, and lymphocytes.*
HAP.11.4 *Correlate the functions of the spleen, thymus, lymph nodes, and lymphocytes to the development of immunity.*
HAP.11.5 *Differentiate the role of B-lymphocytes and T-lymphocytes in the development of humoral and cell-mediated immunity and primary and secondary immune responses.*
HAP.11.6 *Investigate various forms of acquired and passive immunity (e.g., fetal immunity, breastfed babies, vaccinations, and plasma donations).*
HAP.11.7 *Research and analyze the causes and effects of various pathological conditions (e.g., viral infections, auto-immune disorders, immunodeficiency disorders, and lymphomas).*

Human Anatomy and Physiology

HAP.12 Respiratory System

Conceptual Understanding: The respiratory system provides the body with an abundant and continuous supply of oxygen and removes carbon dioxide from the body. The organs of this system include the nose, pharynx, larynx, trachea, bronchi and their smaller branches, and the lungs. The interaction of these organs

with the cardiovascular system transports respiratory gases to the tissue cells throughout the body. Interruptions in the mechanics of this system will lead to respiratory distress.

HAP. 12 Students will investigate the structures and functions of the respiratory system, including the cause and effect of diseases and disorders.

HAP.12.1 *Design and use models to illustrate the functions of the organs of the respiratory system.*
HAP.12.2 *Describe structural adaptations of the respiratory tract and relate these structural features to the function of preparing incoming air for gas exchange at the alveolus.*
HAP.12.3 *Identify the five mechanics of gas exchange: pulmonary ventilation, external respiration, transport gases, internal respiration, and cellular respiration.*
HAP.12.4 ***Enrichment:*** *Use an engineering design process to develop a model of the mechanisms that support breathing, and illustrate the inverse relationship between volume and pressure in the thoracic cavity.**
HAP.12.5 *Research and analyze the causes and effects of various pathological conditions (e.g., asthma, bronchitis, pneumonia, and COPD).*
HAP.12.6 *Research and discuss new environmental causes of respiratory distress (e.g., e-cigarettes, environmental pollutants, and changes in inhaled gas composition).*

Human Anatomy and Physiology

HAP.13 Digestive System

Conceptual Understanding: The digestive system processes food so that it can be absorbed and used by the body's cells. The organs of the system are responsible for food ingestion, digestion, absorption, and elimination of the undigested remains from the body.

HAP.13 Students will investigate the structures and functions of the digestive system, including the cause and effect of diseases and disorders.

HAP.13.1 *Analyze the structure-function relationship in organs of the digestive system.*
HAP.13.2 *Use models to describe structural adaptations present in each organ of the tract and correlate the structures to specific processing of food at each stage (e.g., types of teeth; muscular, elastic wall and mucous lining of the stomach; villi and microvilli of the small intestine; and sphincters along the digestive tract).*
HAP.13.3 *Identify the accessory organs (i.e., salivary glands, liver, gallbladder, and pancreas) for digestion and describe their function.*
HAP.13.4 *Plan and conduct an experiment to illustrate the necessity of mechanical digestion for efficient chemical digestion.*
HAP.13.5 *Research and analyze the activity of digestive enzymes within different organs of the digestive tract, connecting enzyme function to environmental factors such as pH.*
HAP.13.6 *Evaluate the role of hormones (i.e., gastrin, leptin, and insulin) in the regulation of hunger and satiety/fullness.*
HAP.13.7 *Research and analyze the causes and effects of various pathological conditions (e.g., GERD/acid reflux, stomach ulcers, lactose intolerance, irritable bowel syndrome, gallstones, appendicitis, and hormonal imbalances and obesity).*
HAP.13.8 ***Enrichment:*** *Use an engineering design process to develop effective treatments for gastrointestinal diseases (e.g., methods to regulate stomach acids or soothe ulcers, treat food intolerance, and dietary requirements/modifications).**

Human Anatomy and Physiology

HAP.14 Urinary System

Conceptual Understanding: The urinary system regulates the body's homeostasis by removing nitrogenous wastes while maintaining water balance, electrolytes, and the blood's acid/base balance within the body. The kidney is the primary filtration and reabsorption organ of the urinary system, controlling the composition of urine and, in turn, regulating blood composition. Improper function of the kidneys could lead to death if not corrected.

HAP.14 Students will investigate the structures and functions of the urinary system, including the cause and effect of diseases and disorders.

HAP.14.1 *Understand the structure and function of the urinary system in relation to maintenance of homeostasis.*

HAP.14.2 *Describe the processes of filtration and selective reabsorption within the nephrons as it relates to the formation of urine and excretion of excess materials in the blood.*

HAP.14.3 *Investigate relationship between urine composition and the maintenance of blood sugar, blood pressure, and blood volume.*

HAP.14.4 ***Enrichment:*** *Conduct a urinalysis to compare the composition of urine from various "patients."*

HAP.14.5 *Develop and use models to illustrate the path of urine through the urinary tract.*

HAP.14.6 *Research and analyze the causes and effects of various pathological conditions and other kidney abnormalities (e.g., kidney stones, urinary tract infections, gout, dialysis, and incontinence).*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

MARINE AND AQUATIC SCIENCE I
MARINE AND AQUATIC SCIENCE II

Marine and Aquatic Science I, **a one-half credit course**, and Marine and Aquatic Science II, **a one-half credit course,** are laboratory-based courses that investigate the biodiversity of salt water and fresh water organisms, including their interactions with the physical and chemical environment. Science and engineering practices, cross-cutting concepts, nature of science, and technology are incorporated into the standards. Special emphases relating to human impacts and career opportunities are integral components of this course. Marine and Aquatic Science I must be taken before Marine and Aquatic Science II. It is recommended that Marine and Aquatic Science I and II be taken after the successful completion of Biology.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a lab-based course, students are expected to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, lab experiences, and scientific research (projects) for a minimum of 30% of the class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Marine and Aquatic Science I

MAQ.1 Water Properties and Quality

Conceptual Understanding: Water is essential to all life on earth. The chemical and physical properties of water allow for all essential processes with biota. Analysis of water quality indicates ecosystem health and balance. Recycling of water throughout the biosphere allows for replenishment of fresh water, but contaminations by human activities are hindering the total amount of potable fresh water.

MAQ.1 Students will develop an understanding of the unique physical and chemical properties of water and how those properties shape life on earth.

MAQ.1.1 *Characterize the physical and chemical properties of water, including specific heat, surface temperature, universal solvent, and hydrogen bonding between water molecules (i.e., cohesion/adhesion/capillary action).*

MAQ.1.2 *Describe the role of water within biological systems (e.g., provides the medium necessary to allow for life processes such as protein synthesis, enzymatic reactions, and passive transport).*

MAQ.1.3 *Diagram, utilizing digital or physical models, the water cycle and how it relates to the total amount of fresh water available to living things at any given time.*

MAQ.1.4 *Collect, analyze, and communicate quantitative data that includes dissolved oxygen, pH, temperature, salinity, mineral content, nitrogen compounds, and turbidity from an aquatic environment (i.e., hydrometer, refractometer, Secchi disk, and chemical test kits).*

MAQ.1.5 *Research, analyze, and communicate current technology and career opportunities available to collect this data on a global scale using CTD, buoy data, or satellites.*

MAQ.1.6 ***Enrichment:*** *Use an engineering design process to reduce the effects of pollution in aquatic ecosystems (e.g., microplastics, garbage patches, oil spills, and eutrophication). Students will design a proposed solution based on current research and/or observations, and develop a model in order to test their design. Data from experimentation will be analyzed, organized graphically, and communicated to classmates to determine the effectiveness of the proposed solution.**

Marine and Aquatic Science I

MAQ.2 Fluid Dynamics

Conceptual Understanding: Fluid dynamics include properties and features of waves, currents, and tides. Each of these is vital for uniformity of temperature and chemical balance within ecosystems. Physical changes can be attributed to the movement of water, including shoreline development, erosion, and island formation. Climate change is influencing changes in our present fluid dynamic models.

MAQ.2 Students will develop an understanding of the principles of fluid dynamics as it relates to both salt and freshwater systems.

MAQ.2.1 *Characterize wave features and wave properties, including wavelength, period, wave speed, breakers, and constructive waves and their effects on shoreline communities (e.g., headlands, embayments, shoreline erosion, and deposition).*

MAQ.2.2 *Survey predictable patterns of tides (i.e., tidal period and range, diurnal, semidiurnal, mixed, spring, and neap tides) to correlate with moon phases in graphical form.*

MAQ.2.3 *Summarize principles related to currents (e.g., global wind patterns, Coriolis effect, Ekman spiral, surface, thermohaline, upwelling, downwelling, El Niño, La Niña, hurricanes, Barrier Island movement).*

MAQ.2.4 *Research, analyze, and communicate scientific arguments to support climate models that predict how global and regional climate change can affect Earth's systems (e.g., precipitation and temperature and their associated impacts on sea level, global ice volumes, and atmosphere and ocean composition).*

MAQ.2.5 *Distinguish among lentic and lotic water systems, including water flow, seasonal overturn, and watershed mapping.*

Marine and Aquatic Science I

MAQ.3 Geological Features

Conceptual Understanding: Plate tectonics explain present geological features that can be described in different aquatic ecosystems. Natural phenomena, such as sea floor spreading, are caused by plate tectonic action. The distance from shoreline and availability of light classifies different areas of the ocean.

MAQ.3 Students will understand the principles of plate tectonics, sea floor spreading, and physical features of oceanic zones.

MAQ.3.1 *Use geospatial data to analyze, explain, and communicate differences among the major geological features of specific aquatic ecosystems (e.g., plate tectonics, continental rise, continental slope, abyssal plain, trenches, sea mounts, island formation, and watersheds).*

MAQ.3.2 *Develop an understanding of plate tectonics to predict certain geological features (e.g., sea floor spreading, paleomagnetic measurements, and orogenesis).*

MAQ.3.3 *Classify zones of the ocean based on distance from shorelines (i.e., intertidal, neritic, oceanic, and benthic zones), temperature, and light availability (i.e., epipelagic, mesopelagic, bathypelagic, abyssopelagic, and hadopelagic).*

MAQ.3.4 *Classify zones of freshwater sources based on the velocity of current, depth, and temperature.*

Marine and Aquatic Science I

MAQ.4 Flora and Fauna

Conceptual Understanding: Unique flora and fauna can be found in different aquatic ecosystems. Their features and unique biochemistry may serve to further the human quality of life. However, human impacts and natural events have altered many of these ecosystems in different ways.

MAQ.4 Students will examine characteristics of specific aquatic ecosystems and the effects of human and natural phenomena on those ecosystems.

MAQ.4.1 *Compare and contrast the unique biotic and abiotic characteristics of the following selected aquatic ecosystems: intertidal zone, wetlands/estuaries, coral reef, barrier islands, continental slope/shelf, abyss, rivers/streams/watersheds, and lakes/ponds.*

MAQ.4.2 *Recognize representative examples of plants and animals that would be specifically adapted to the aquatic ecosystems, and identify adaptations necessary to survive.*

MAQ.4.3 *Determine the niches within trophic levels in the aquatic ecosystems by creating food webs and researching the symbiotic relationships that exist.*

MAQ.4.4 *Research, analyze, and communicate the effects of urbanization and continued expansion by humans on the aquatic ecosystems' biodiversity (e.g., land use changes, erosion and sedimentation, over-fishing, invasive/exotic species, and pollution).*

MAQ.4.5 *Explore the importance of species diversity to the biological resources needed by human populations, including food (e.g., aquaculture and mariculture), medicine, and natural aesthetics.*

MAQ.4.6 *Research, analyze, and communicate the effects of natural phenomena (e.g., hurricanes, floods, drought, and sea-level rise) on the aquatic ecosystems.*

MAQ.4.7 *Research, analyze, and communicate which and in what capacity local, state, and federal regulatory agencies are involved in different aquatic ecosystems, including current environmental policies already in place (e.g., the Clean Water Act and the Endangered Species Act). Research should include, but is not limited to, how humans can preserve animal diversity through the use of habitat creation and conservation, research, legislation, medical and breeding programs, and management of genetic diversity at local and global levels.*

MAQ.4.8 ***Enrichment:*** *Choose an environmental issue that currently exists in one of the aquatic ecosystems and use an engineering design process to propose and develop a possible solution using scientific knowledge and best management practices (BMPs). Create an environmental action plan to include moral, legal, societal, political, and economic decisions that impact animal diversity in both the short and long term. Results from developed plans will be communicated with classmates.**

Marine and Aquatic Science II

MAQ.5 Primary Producers

Conceptual Understanding: Primary producers are the basis of every food web in aquatic ecosystems. While many producers are photosynthetic autotrophs, chemosynthesis is also a common form of energy conversion. Surveying shared and derived characteristics of producers demonstrates evolutionary development. Various methods are currently utilized to measure primary productivity in various ecosystems.

MAQ.5 Students will explore the biodiversity and interactions among aquatic life.

MAQ.5.1 *Survey common primary producers and their roles in primary production in relation to geographical distribution within various aquatic ecosystems.*

MAQ.5.2 *List and describe common autotrophs that may be found in particular aquatic ecosystems, including prokaryotes (e.g., Cyanobacteria and Archaebacteria), protists (e.g., diatoms, dinoflagellates, green algae, kelp, sargassum, and red algae), and plants (e.g., cord grasses, reeds, seagrasses, and mangroves).*

MAQ.5.3 *Recognize characteristics that are shared and derived using graphical representations of primary-producer evolution and develop cladograms/phylogenetic trees.*

MAQ.5.4 *Use dichotomous keys to identify sample producers within an aquatic ecosystem.*

MAQ.5.5 *Paraphrase energy conversion processes (e.g., photosynthesis and chemosynthesis).*

MAQ.5.6 ***Enrichment:*** *Research, analyze, and communicate historical and current methodologies for measuring primary productivity. Use an engineering design process to design and develop improvements to measure primary productivity (e.g., the light and dark bottle method and satellite data).**

Marine and Aquatic Science II

MAQ.6 Invertebrate Consumers

Conceptual Understanding: Many consumers found within aquatic ecosystems range from single-celled protozoa to multicellular invertebrates. While many of these consumers share basic morphological characteristics, derived characters demonstrate evolutionary relationships. Varied adaptations are found among these organisms for successful niches within selected ecosystems.

MAQ.6 Students will investigate characteristics of aquatic invertebrates.

MAQ.6.1 *Characterize aquatic representatives of the following taxa: Protozoa (e.g., foraminiferians, radiolarians, amoeba, and paramecium), Porifera, Cnidaria, Platyhelminthes, Nematoda, Annelida, Rotifera, Mollusca, Arthropoda, Bryozoa, Brachiopoda, and Echinodermata.*

MAQ.6.2 *Identify characteristics that are shared and derived using graphical representations of animal evolution (i.e., cladograms and phylogenetic trees) and develop cladograms and phylogenetic trees.*

MAQ.6.3 *Develop a dichotomous classification key to be used in the identification of sample aquatic invertebrates.*

MAQ.6.4 *Compare and contrast major body plans (e.g., asymmetry, radial, bilateral symmetry, acoelomate, pseudocoelomate, and eucoelomate).*

MAQ.6.5 *Explain various life cycles found among animals (e.g., polyp and medusa in cnidarians, multiple hosts and stages in the platyhelminthic life cycle, and arthropod metamorphosis).*

MAQ.6.6 *Dissect representative taxa (e.g., clam and squid), collect data, compare their internal and external anatomy, analyze, explain, and communicate results.*

MAQ.6.7 *Using key morphological and physiological adaptations found within animal taxa, assess how animals interact with their environment to determine their ecological roles.*

MAQ.6.8 ***Enrichment:*** *Given a niche in a specific environment, use an engineering design process to design an animal, listing characteristics based on your knowledge of shared and derived characters, internal and external anatomy, and how the animal would adapt morphologically and physiologically relative to its ecological role and specific environment.**

Marine and Aquatic Science II

MAQ.7 Vertebrate Consumers

Conceptual Understanding: Other consumers that inhabit aquatic ecosystems are found within Phylum Chordata. While many of these consumers share basic morphological characteristics, derived characteristics demonstrate evolutionary relationships. Various adaptations are found among these organisms for successful niches within selected ecosystems.

MAQ.7 Students will investigate characteristics of aquatic invertebrates.

MAQ.7.1 *Characterize aquatic representatives of the following taxa: Hemichordata, Urochordata, Cephalochordata, and Vertebrata (including Agnatha, Chondrichthyes, Osteichthyes, Amphibia, Reptilia, Aves, and Mammalia).*

MAQ.7.2 *Identify characteristics that are shared and derived using graphical representation of animal evolution, and develop cladograms/phylogenetic trees.*

MAQ.7.3 *Utilize a dichotomous key to identify select aquatic vertebrates.*

MAQ.7.4 *Differentiate various life cycles found among animals (e.g., egg, tadpole, and adult stages of the amphibian life cycle; leathery eggs on land in reptiles; hard-shelled eggs in Aves; placental, marsupial, or monotremes in mammals; viviparous, ovoviviparous, and oviparous animals).*

MAQ.7.5 *Dissect representative taxa (e.g., shark, fish); collect data; compare their internal and external anatomy; and analyze, explain, and communicate results.*

MAQ.7.6 *Using key morphological and physiological adaptations found within aquatic vertebrate taxa, assess how animals interact with their environment to determine their ecological roles.*

MAQ.7.7 ***Enrichment:*** *Given a niche in a specific environment, use an engineering design process to design an animal, listing characteristics based on your knowledge of shared and derived characteristics, internal and external anatomy, and how the animal would adapt morphologically and physiologically relative to its ecological role and specific environment.**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

PHYSICAL SCIENCE

Physical Science, **a one-credit course,** provides opportunities for students to develop and communicate a basic understanding of physics and chemistry through lab-based activities, integrated STEM activities, inquiry, suitable mathematical expressions, and concept exploration. The Physical Science course will prepare students for the transition to other science courses and to become informed citizens of a modern world that is constantly changing. To be successful in Physical Science, it is recommended that students have completed Algebra I (Integrated Math I) or be enrolled in this math course.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should actively engage in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Physical Science

PHS.1 Nature of Matter

Conceptual Understanding: To actively develop scientific investigation, reasoning, and logic skills, this standard develops basic ideas about the characteristics and structure of matter. Matter is anything that has mass and occupies space. All matter is made up of small particles called atoms. Matter can exist as a solid, liquid, gas, or plasma.

PHS.1 Students will demonstrate an understanding of the nature of matter.

PHS.1.1 *Use contextual evidence to describe particle theory of matter. Examine the particle properties of solids, liquids, and gases.*

PHS.1.2 *Use scientific research to generate models to compare physical and chemical properties of elements, compounds, and mixtures.*

PHS.1.3 *Conduct an investigation to determine the identity of unknown substances by comparing properties to known substances.*

PHS.1.4 *Design and conduct investigations to explore techniques in measurements of mass, volume, length, and temperature.*

PHS.1.5 *Design and conduct an investigation using graphical analysis (e.g., line graph) to determine the density of liquids and/or solids.*

PHS.1.6 *Use mathematical and computational analysis to solve density problems. Manipulate the density formula to determine density, volume, or mass or use dimensional analysis to solve problems.*

Physical Science

PHS.2 Atomic Theory

Conceptual Understanding: Many scientists have contributed to our understanding of atomic structure. The atom is the basic building block of matter and consists of subatomic particles (proton, neutron, electron, and quark) that differ in their location, charge, and relative mass.

PHS.2 Students will demonstrate an understanding of both modern and historical theories of atomic structure.

PHS.2.1 *Research and develop models (e.g., 3-D models, online simulations, or ball and stick) to investigate both modern and historical theories of atomic structure. Compare models and contributions of Dalton, Thomson, Rutherford, Bohr, and of modern atomic theory.*

Physical Science

PHS.3 Periodic Table

Conceptual Understanding: The organization of the periodic table allows scientists to obtain information and develop an understanding of concepts of atomic interactions. Developing scientific investigations increases logical reasoning and deduction skills to present the nature of science in the context of key scientific concepts.

PHS.3 Students will analyze the organization of the periodic table of elements to predict atomic interactions.

PHS.3.1 *Use contextual evidence to determine the organization of the periodic table, including metals, metalloids, and nonmetals; symbols; atomic number; atomic mass; chemical families/groups; and periods/series.*

PHS.3.2 *Using the periodic table and scientific methods, investigate the formation of compounds through ionic and covalent bonding.*

PHS.3.3 *Using naming conventions for binary compounds, write the compound name from the formula, and write balanced formulas from the name (e.g., carbon dioxide - CO_2, sodium chloride - NaCl, iron III oxide- Fe2O3, and calcium bromide - $CaBr_2$).*

PHS.3.4 *Use naming conventions to name common acids and common compounds used in classroom labs (e.g., sodium bicarbonate (baking soda), $NaHCO_3$; hydrochloric acid, HCl; sulfuric acid, H_2SO_4 ; acetic acid (vinegar), $HC_2H_3O_2$; and nitric acid, HNO_3).*

PHS.3.5 *Use mathematical and computational analysis to determine the atomic mass of binary compounds.*

Physical Science

PHS.4 The Law of Conservation of Matter and Energy

Conceptual Understanding: The law of conservation of matter and energy states that matter and energy can be transformed in different ways, but the total amount of mass and energy will be conserved. These concepts should be investigated and further developed in the classroom.

PHS.4 Students will analyze changes in matter and the relationship of these changes to the law of conservation of matter and energy.

PHS.4.1 *Design and conduct experiments to investigate physical and chemical changes of various household products (e.g., rusting, sour milk, crushing, grinding, tearing, boiling, and freezing) and reactions of common chemicals that produce color changes or gases.*

PHS.4.2 *Design and conduct investigations to produce evidence that mass is conserved in chemical reactions (e.g., vinegar and baking soda in a Ziploc© bag).*

PHS.4.3 *Apply the concept of conservation of matter to balancing simple chemical equations.*

PHS.4.4 *Use mathematical and computational analysis to examine evidence that mass is conserved in chemical reactions using simple stoichiometry problems (1:1 mole ratio) or atomic masses to demonstrate the conservation of mass with a balanced equation.*

PHS.4.5 *Research nuclear reactions and their uses in the modern world, exploring concepts such as fusion, fission, stars as reactors, nuclear energy, and chain reactions.*

PHS.4.6 *Analyze and debate the advantages and disadvantages of nuclear reactions as energy sources.*

Physical Science

PHS.5 Newton's Laws of Motion

Conceptual Understanding: Kinematics (contact forces) describe the motion of objects using words, diagrams, numbers, graphs, and equations. The goal of any study of kinematics is to develop scientific models to describe and explain the motion of real-world objects. Newton's laws of motion are an example of a tool that can aid in the explanation of motion.

PHS.5 Students will analyze the scientific principles of motion, force, and work.

PHS.5.1 *Research the scientific contributions of Newton, and use models to communicate Newton's principles.*

PHS.5.2 *Design and conduct an investigation to study the motion of an object using properties such as displacement, time of motion, velocity, and acceleration.*

PHS.5.3 *Collect, organize, and interpret graphical data using correct metric units to determine the average speed of an object.*

PHS.5.4 *Use mathematical and computational analyses to show the relationships among force, mass, and acceleration (i.e., Newton's second law).*

PHS.5.5 *Design and construct an investigation using probe systems and/or online simulations to observe relationships between force, mass, and acceleration (F=ma).*

PHS.5.6 *Use an engineering design process and mathematical analysis to design and construct models to demonstrate the law of conservation of momentum (e.g., roller coasters, bicycle helmets, bumper systems).*

PHS.5.7 *Use mathematical and computational representations to create graphs and formulas that describe the relationships between force, work, and energy (i.e., W=Fd, KE=½ mv^2, PE=mgh, W=KE).*

PHS.5.8 *Research the efficiency of everyday machines, and debate ways to improve their economic impact on society (e.g., electrical appliances, transportation vehicles).*

Physical Science

PHS.6 Waves

Conceptual Understanding: Waves are everywhere in nature. Understanding of the physical world is not complete until we understand the nature, properties, and behaviors of waves. Students have experienced transverse and horizontal waves in their everyday lives. The exploration of waves in greater depth will allow students to conceptualize these waves. The goal is to develop various models of waves and apply those models to understanding wave interactions.

PHS.6 Students will explore the characteristics of waves.

PHS.6.1 *Use models to analyze and describe examples of mechanical waves' properties (e.g., wavelength, frequency, speed, amplitude, rarefaction, and compression).*

PHS.6.2 *Analyze examples and evidence of transverse and longitudinal waves found in nature (e.g., earthquakes, ocean waves, and sound waves).*

PHS.6.3 *Generate wave models to explore energy transference.*

PHS.6.4 ***Enrichment:*** *Use an engineering design process to design and build a musical instrument to demonstrate the influence of resonance on music.**

PHS.6.5 *Design and conduct experiments to investigate technological applications of sound (e.g., medical uses, music, acoustics, Doppler effects, and influences of mathematical theory on music).*

PHS.6.6 *Research real-world applications to create models or visible representations of the electromagnetic spectrum, including visible light, infrared radiation, and ultraviolet radiation.*

PHS.6.7 ***Enrichment:*** *Use an engineering design process to design and construct an apparatus that forms images to project on a screen or magnify images using lenses and/or mirrors.**

PHS.6.8 ***Enrichment:*** *Debate the particle/wave behavior of light.*

Physical Science

PHS.7 Energy

Conceptual Understanding: Concepts about different energy forms and energy transformations continue to be expanded and explored in greater depth, leading to the development of more mathematical applications. Focus should be on students actively developing scientific investigations, reasoning, and logic skills.

PHS.7 Students will examine different forms of energy and energy transformations.

PHS.7.1 *Using digital resources, explore forms of energy (e.g., potential and kinetic energy, mechanical, chemical, electrical, thermal, radiant, and nuclear energy).*

PHS.7.2 *Use scientific investigations to explore the transformation of energy from one type to another (e.g., potential to kinetic energy, and mechanical, chemical, electrical, thermal, radiant, and nuclear energy interactions).*

PHS.7.3 *Using mathematical and computational analysis, calculate potential and kinetic energy based on given data. Use equations such as PE=mgh and KE=½ mv^2.*

PHS.7.4 *Conduct investigations to provide evidence of the conservation of energy as energy is converted from one form of energy to another (e.g., wind to electric, chemical to thermal, mechanical to thermal, and potential to kinetic).*

Physical Science

PHS.8 Thermal Energy

Conceptual Understanding: Thermal energy is transferred in the form of heat. Heat is always transferred from an area of high heat to low heat. More complex concepts and terminology related to phase changes are developed, including the distinction between heat and temperature.

PHS.8 Students will demonstrate an understanding of temperature scales, heat, and thermal energy transfer.

PHS.8.1 *Compare and contrast temperature scales by converting between Celsius, Fahrenheit, and Kelvin.*

PHS.8.2 *Apply particle theory to phase change and analyze freezing point, melting point, boiling point, vaporization, and condensation of different substances.*

PHS.8.3 *Relate thermal energy transfer to real world applications of conduction (e.g., quenching metals), convection (e.g., movement of air masses/weather/plate tectonics), and radiation (e.g., electromagnetic).*

PHS.8.4 ***Enrichment:*** *Use an engineering design process to construct a simulation of heat energy transfer between systems. Calculate the calories/joules of energy generated by burning food products. Communicate conclusions based on evidence from the simulation.**

Physical Science

PHS.9 Electricity

Conceptual Understanding: Electrical energy (both battery and circuit energy) is transformed into other forms of energy. Charged particles and magnetic fields are similar because they both store energy. Magnetic fields exert forces on moving charged particles. Students investigate practical uses of these concepts and develop a working understanding of the basic concepts of magnetism and electricity.

PHS.9 Students will explore basic principles of magnetism and electricity (e.g., static electricity, current electricity, and circuits).

PHS.9.1 *Use digital resources and online simulations to investigate the basic principles of electricity, including static electricity, current electricity, and circuits. Use digital resources (e.g., online simulations) to build a model showing the relationship between magnetic fields and electric currents.*

PHS.9.2 *Distinguish between magnets, motors, and generators, and evaluate modern industrial uses of each.*

PHS.9.3 ***Enrichment:*** *Use an engineering design process to construct a working electric motor to perform a task. Communicate the design process and comparisons of task performance efficiencies.**

PHS.9.4 *Use an engineering design process to construct and test conductors, semiconductors, and insulators using various materials to optimize efficiency.**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

PHYSICS

Physics, **a one-credit course,** provides opportunities for students to develop and communicate an understanding of matter and energy through lab-based activities, integrated STEM activities, mathematical expressions, and concept exploration. Concepts covered in this course include kinematics, dynamics, energy, mechanical and electromagnetic waves, and electricity. Laboratory activities, uses of technology, effective communication of results, and research of contemporary scientific theories through various methods are integral components of this course. Science as inquiry is an integral part of the framework, placing emphasis on developing the ability to ask questions, observe, experiment, measure, problem solve, gather data, and communicate findings. Inquiry is not an isolated unit of instruction and must be embedded throughout the content strands. All Physics laboratories need to be well equipped with the materials and apparatuses necessary to allow students to have meaningful experiences in the laboratory. To be successful in Physics, it is recommended that students have completed Algebra I. Geometry, and Algebra II (Integrated Math I, II, II), and be enrolled in an upper level math course.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world to increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a laboratory-based course, students are expected to utilize the science and engineering practices to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should actively engage in inquiry activities, laboratory experiences, and scientific research (projects) for a minimum of 30% of class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Physics

PHY.1 One-Dimensional Motion

Conceptual Understanding: Linear motion of objects is described by displacement, velocity, and acceleration. These concepts should be introduced as computational and investigative phenomena.

PHY.1 Students will investigate and understand how to analyze and interpret data.

PHY.1.1 *Investigate and analyze evidence gained through observation or experimental design regarding the one-dimensional (1-D) motion of objects. Design and conduct experiments to generate and interpret graphical evidence of distance, velocity, and acceleration through motion.*

PHY.1.2 *Interpret and predict 1-D motion based on displacement vs. time, velocity vs. time, or acceleration vs. time graphs (e.g., free-falling objects).*

PHY.1.3 *Use mathematical and computational analysis to solve problems using kinematic equations.*

PHY.1.4 *Use graphical analysis to derive kinematic equations.*

PHY.1.5 *Differentiate and give examples of motion concepts such as distance-displacement, speed-velocity, and acceleration.*

PHY.1.6 *Design and mathematically/graphically analyze quantitative data to explore displacement, velocity, and acceleration of various objects. Use probe systems, video analysis, graphical analysis software, digital spreadsheets, and/or online simulations.*

PHY.1.7 *Design different scenarios, and predict graph shapes for distance/time, velocity/time, and acceleration/time graphs.*

PHY.1.8 *Given a 1D motion graph students should replicate the motion predicted by the graph.*

Physics

PHY.2 Newton's Laws

Conceptual Understanding: Motion and acceleration can be explained by analyzing the contact interaction of objects. This motion and acceleration can be predicted by analyzing the forces (i.e., normal, tension, gravitational, applied, and frictional) acting on the object and applying Newton's laws of motion.

PHY.2 Students will develop an understanding of concepts related to Newtonian dynamics.

PHY.2.1 *Identify forces acting on a system by applying Newton's laws mathematically and graphically (e.g., vector and scalar quantities).*

PHY.2.2 *Use models such as free-body diagrams to explain and predict the motion of an object according to Newton's law of motion, including circular motion.*

PHY.2.3 *Use mathematical and graphical techniques to solve vector problems and find net forces acting on a body using free-body diagrams and/or online simulations.*

PHY.2.4 *Use vectors and mathematical analysis to explore the 2D motion of objects. (i.e. projectile and circular motion).*

PHY.2.5 *Use mathematical and computational analysis to derive simple equations of motion for various systems using Newton's second law (e.g. net force equations).*

PHY.2.6 *Use mathematical and computational analysis to explore forces (e.g., friction, force applied, normal, and tension).*

PHY.2.7 *Analyze real-world applications to draw conclusions about Newton's three laws of motion using online simulations, probe systems, and/or laboratory experiences.*

PHY.2.8 *Design an experiment to determine the forces acting on a stationary object on an inclined plane. Test your conclusions.*

PHY.2.9 *Draw diagrams of forces applied to an object, and predict the angle of incline that will result in unbalanced forces acting on the object.*

PHY.2.10 *Apply the effects of the universal gravitation law to generate a digital/physical graph, and interpret the forces between two masses, acceleration due to gravity, and planetary motion (e.g., situations where g is constant, as in falling bodies).*

PHY.2.11 *Explain centripetal acceleration while undergoing uniform circular motion to explore Kepler's third law using online simulations, models, and/or probe systems.*

Physics

PHY.3 Work and Energy

Conceptual Understanding: Work and energy are synonymous. When investigating mechanical energy, energy is the ability to do work. The rate at which work is done is called power. Efficiency is the ratio of power input to the output of the system. In closed systems, energy is conserved.

PHY.3 Students will develop an understanding of concepts related to work and energy.

PHY.3.1 *Use mathematical and computational analysis to qualitatively and quantitatively analyze the concept of work, energy, and power to explain and apply the conservation of energy.*

PHY.3.2 *Use mathematical and computational analysis to explore conservation of momentum and impulse.*

PHY.3.3 *Through real-world applications, draw conclusions about mechanical potential energy and kinetic energy using online simulations and/or laboratory experiences.*

PHY.3.4 *Design and conduct investigations to compare conservation of momentum and conservation of kinetic energy in perfectly inelastic and elastic collisions using probe systems, online simulations, and/or laboratory experiences.*

PHY.3.5 *Investigate, collect data, and summarize the principles of thermodynamics by exploring how heat energy is transferred from higher temperature to lower temperature until equilibrium is reached.*

PHY.3.6 ***Enrichment****: Design, conduct, and communicate investigations that explore how temperature and thermal energy relate to molecular motion and states of matter.*

PHY.3.7 ***Enrichment:*** *Use mathematical and computational analysis to analyze problems involving specific heat and heat capacity.*

PHY.3.8 ***Enrichment:*** *Research to compare the first and second laws of thermodynamics as related to heat engines, refrigerators, and thermal efficiency.*

PHY.3.9 *Explore the kinetic theory in terms of kinetic energy of ideal gases using digital resources.*

PHY.3.10 ***Enrichment:*** *Research the efficiency of everyday machines (e.g., automobiles, hair dryers, refrigerators, and washing machines).*

PHY.3.11 ***Enrichment:*** *Use an engineering design process to design and build a themed Rube Goldberg-type machine that has six or more steps and complete a desired task (e.g., pop a balloon, fill a bottle, shoot a projectile, or raise an object 35 cm) within an allotted time. Include a poster that demonstrates the calculations of the energy transformation or efficiency of the machine.**

Physics

PHY.4 Waves

Conceptual Understanding: Wave properties are the transfer of energy from one place to another. The investigation of these interactions must include simple harmonic motion, sound, and electromagnetic radiation.

PHY.4 Students will investigate and explore wave properties.

PHY.4.1 *Analyze the characteristics and properties of simple harmonic motions, sound, and light.*

PHY.4.2 *Describe and model through digital or physical means the characteristics and properties of mechanical waves by simulating and investigating properties of simple harmonic motion.*

PHY.4.3 *Use mathematical and computational analysis to explore wave characteristics (e.g., velocity, period, frequency, amplitude, phase, and wavelength).*

PHY.4.4 *Investigate and communicate the relationship between the energy of a wave in terms of amplitude and frequency using probe systems, online simulations, and/or laboratory experiences.*

PHY.4.5 *Design, investigate, and collect data on standing waves and waves in specific media (e.g., stretched string, water surface, and air) using online simulations, probe systems, and/or laboratory experiences.*

PHY.4.6 *Explore and explain the Doppler effect as it relates to a moving source and to a moving observer using online simulations, probe systems, and/or real-world experiences.*

PHY.4.7 *Explain the laws of reflection and refraction, and apply Snell's law to describe the relationship between the angles of incidence and refraction.*

PHY.4.8 *Use ray diagrams and the thin lens equations to solve real-world problems involving object distance from lenses, using a lens bench, online simulations, and/or laboratory experiences.*

PHY.4.9 *Research the different bands of electromagnetic radiation, including characteristics, properties, and similarities/differences.*

PHY.4.10 ***Enrichment:*** *Research the ways absorption and emission spectra are used to study astronomy and the formation of the universe.*

PHY.4.11 ***Enrichment:*** *Research digital nonfictional text to defend the wave-particle duality of light (i.e., wave model of light and particle model of light).*

PHY.4.12 ***Enrichment:*** *Research uses of the electromagnetic spectrum or photoelectric effect.*

Physics

PHY.5 Electricity and Magnetism

Conceptual Understanding: In electrical interactions, electrical energy (whether battery or circuit energy) is transformed into other forms of energy. Charged particles and magnetic fields are similar in that they store energy. Magnetic fields exert forces on moving charged particles. Changing magnetic fields cause electrons in wires to move and thus create a current.

PHY.5 Students will investigate the key components of electricity and magnetism.

PHY.5.1 *Analyze and explain electricity and the relationship between electricity and magnetism.*

PHY.5.2 *Explore the characteristics of static charge and how a static charge is generated using simulations.*

PHY.5.3 *Use mathematical and computational analysis to analyze problems dealing with electric field, electric potential, current, voltage, and resistance as related to Ohm's law.*

PHY.5.4 *Develop and use models (e.g., circuit drawing and mathematical representation) to explain how electric circuits work by tracing the path of electrons, including concepts of energy transformation, transfer, conservation of energy, electric charge, and resistance using online simulations, probe systems, and/or laboratory experiences.*

PHY.5.5 *Design and conduct an investigation of magnetic poles, magnetic flux and magnetic field using online simulations, probe systems, and/or laboratory experiences.*

PHY.5.6 *Use schematic diagrams to analyze the current flow in series and parallel electric circuits, given the component resistances and the imposed electric potential.*

PHY.5.7 *Analyze and communicate the relationship between magnetic fields and electrical current by induction, generators, and electric motors (e.g., microphones, speakers, generators, and motors) using Ampere's and Faraday's laws.*

PHY.5.8 ***Enrichment:*** *Design and construct a simple motor to develop an explanation of how the motor transforms electrical energy into mechanical energy and work.*

PHY.5.9 ***Enrichment:*** *Design and draw a schematic of a circuit that will turn on/off a light from two locations in a room like those found in most homes.*

Physics

PHY.6 Nuclear Energy

Conceptual Understanding: Nuclear energy is energy stored in the nucleus of the atom. The energy holding atoms together is called binding energy. The binding energy is a huge amount of energy. So, at the subatomic scale, the conservation of energy becomes the conservation of mass-energy.

PHY.6 Students will demonstrate an understanding of the basic principles of nuclear energy.

PHY.6.1 *Analyze and explain the concepts of nuclear physics.*

PHY.6.2 *Explore the mass number and atomic number of the nucleus of an isotope of a given chemical element.*

PHY.6.3 *Investigate the conservation of mass and the conservation of charge by writing and balancing nuclear decay equations for alpha and beta decay.*

PHY.6.4 *Simulate the process of nuclear decay using online simulations and/or laboratory experiences and using mathematical computations determine the half-life of radioactive isotopes.*

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

ZOOLOGY I (Invertebrate)
ZOOLOGY II (Vertebrate)

Zoology I, **a one-half credit course**, and Zoology II, **a one-half credit course**, are laboratory-based courses that survey the nine major phyla of the Kingdom Animalia. Morphology, taxonomy, anatomy, and physiology are investigated. Comparative studies are addressed during laboratory observations and dissections. Laboratory activities, research, the use of technology, and the effective communication of results through various methods are integral components of this course. It is recommended that Zoology I and/or Zoology II be taken after the successful completion of Biology.
NOTE: Students do **not** have to complete Zoology I before enrolling in Zoology II. The disciplinary core idea ZOO.1, Evolution, does not have to be repeated in Zoology II if students have successfully completed Zoology I and are continuing study with Zoology II.

The nature of science refers to the foundational concepts that govern the way scientists formulate explanations about the natural world that increase the depth of understanding based on evidence, logic, and innovation. These concepts are expected to appear throughout the course. As a lab-based course, students are expected to design and conduct investigations using appropriate equipment, measurement (SI units), and safety procedures. Students should also design data tables and draw conclusions using mathematical computations and/or graphical analysis. It is recommended that students should be actively engaged in inquiry activities, lab experiences, and scientific research (projects) for a minimum of 30% of the class time.

The standards and performance objectives do not have to be taught in the order presented in this document. The performance objectives are intentionally broad to allow school districts and teachers the flexibility to create a curriculum that meets the needs of their students.

Objectives identified by "**Enrichment:**" are considered enrichment material that may be expanded upon as time permits. Engineering standards are represented in some performance objectives with specific wording that will prompt students to approach learning and exploration using the engineering process. **These performance objectives are marked with an * at the end of the statement.**

Zoology I

ZOO.1 Evolution

Conceptual Understanding: Evolution results from the interaction of four factors: (1) the potential for a species to increase in number, (2) genetic variation occurring within a species due to mutations and sexual reproduction, (3) limited supply of resources needed for survival resulting in competition, and (4) those organisms that are better adapted for an environment survive and reproduce. Genetic information provides evidence of evolution. DNA sequences vary among species, but some similarities remain. By comparing the DNA sequences of different organisms, multiple lines of descent may be inferred. The ongoing branching into multiple lines of descent may also be derived by comparing the amino acid sequences and by examining the anatomical and embryological evidence.

ZOO.1 Students will develop a model of evolutionary change over time.

ZOO.1.1 *Develop and use dichotomous keys to distinguish animals from protists, plants, and fungi.*
ZOO.1.2 *Describe how the fossil record documents the history of life on earth.*
ZOO.1.3 *Recognize that the classification of living organisms is based on their evolutionary history and/or similarities in fossils and living organisms.*

ZOO.1.4 *Construct cladograms or phylogenetic trees to show the evolutionary branches of an ancestral species and its descendants.*

ZOO.1.5 *Design models to illustrate the interaction between changing environments and genetic variation in natural selection leading to adaptations in populations and differential success of populations.*

ZOO.1.6 ***Enrichment:*** *Use an engineering design process to develop an artificial habitat to meet the requirements of a population that has been impacted by human activity.**

Zoology I

ZOO.2 Phyla Porifera and Cnidaria

Conceptual Understanding: Phyla Porifera and Cnidaria are two of the most primitive of animal phyla. They distinguish themselves from other metazoans by their lack of bilateral symmetry. Each phylum has its own anatomy, physiology, and unique role in aquatic ecosystems.

ZOO.2 Students will understand the structure and function of phylum Porifera and phylum Cnidaria and how each adapts to their environments.

ZOO.2.1 *Differentiate among asymmetry, radial symmetry, and bilateral symmetry in an animal's body plan.*

ZOO.2.2 *Identify the anatomy and physiology of a sponge, including how specialized cells within sponges work cooperatively without forming tissues to capture and digest food.*

ZOO.2.3 *Describe the importance of phylum Porifera in aquatic habitats.*

ZOO.2.4 *Create a model, either physical or digital, illustrating the anatomy of a sponge, tracing the flow of water.*

ZOO.2.5 ***Enrichment:*** *Use an engineering design process to determine the quantity of water that may be absorbed per unit in a natural sponge versus a synthetic sponge.**

ZOO.2.6 *Contrast the polyp lifestyle of most Cnidarians with the medusa lifestyle of jellyfish, including how both utilize a single body opening.*

ZOO.2.7 *Describe how nematocysts (stinging cells) of Cnidarians are used for capturing food and for defense.*

ZOO.2.8 ***Enrichment:*** *Utilize an engineering design process to create a simulated nematocyst, including possible biomimicry use.**

ZOO.2.9 *Describe the ecological importance of and human impacts on coral reefs.*

ZOO.2.10 *Create a digital or physical model illustrating the anatomy of a cnidarian, citing similarities and differences between polyps and medusas.*

Zoology I

ZOO.3 Phylum Mollusca

Conceptual Understanding: Phylum Mollusca is one of the most diverse phyla on earth, occupying almost every type of ecosystem. Despite its diversity, mollusks share a basic body plan and are well adapted to their niches within environments.

ZOO.3 Students will understand the structure and function of phylum Mollusca, and how they adapt to their environments.

ZOO.3.1 *Considering the diversity of mollusks, explain how they all share a common body plan (i.e., mantle, visceral mass, and foot).*

ZOO.3.2 *Describe why mollusks are classified as eucoelomates.*
ZOO.3.3 *Explain how the mantle is used in forming the shell.*
ZOO.3.4 *Describe how the radula is used in feeding.*
ZOO.3.5 *Develop a dichotomous key to contrast characteristics of gastropods, bivalves, and cephalopods.*
ZOO.3.6 *Examine how the unique characteristics of cephalopods lead to survival.*
ZOO.3.7 *Create a model comparing the anatomy of gastropods, bivalves, and cephalopods.*
ZOO.3.8 ***Enrichment:*** *Use an engineering design process to model the jet propulsion utilized by cephalopods in mechanical design of fluid systems (e.g., improving hydraulic systems).**

Zoology I

ZOO.4 Phyla Platyhelminthes, Nematoda, and Annelida

Conceptual Understanding: Although the term "worms" may refer to an organism with a long, slender, soft body with bilateral symmetry, worms may be subdivided into phyla based on their unique body plan. These include phyla Platyhelminthes, Nematoda, and Annelida.

ZOO.4 Students will describe the evolution of structure and function of phylum Platyhelminthes, phylum Nematoda, and phylum Annelida.

ZOO.4.1 *Define and describe the closed circulatory system of an annelid.*
ZOO.4.2 *Differentiate between parasitic and free living.*
ZOO.4.3 *Compare and contrast the characteristics and lifestyles of flatworms, roundworms, and segmented worms.*
ZOO.4.4 *Create a model comparing acoelomate, pseudocoelomate, and eucoelomate body plans of Platyhelminthes, Nematoda, and Annelida.*
ZOO.4.5 *Describe the evolutionary importance of the segmented body plans of annelids.*
ZOO.4.6 *Dissect representative taxa, and compare their internal and external anatomy and complexity.*
ZOO.4.7 ***Enrichment:*** *Design, conduct, and communicate results of an experiment demonstrating the importance of flatworms, roundworms, and annelids for human use (e.g., the earthworm in agriculture and the leech in medicine).*
ZOO.4.8 ***Enrichment:*** *Use an engineering design process to design and construct a system to utilize flatworms, roundworms, or annelids to meet a human need.**

Zoology I

ZOO.5 Phylum Arthropoda

Conceptual Understanding: Arthropods are the most successful of animal phyla, inhabiting land, sea, and air. Despite their differences, all arthropods share some characteristics enabling them to be united as one phylum.

ZOO.5 Students will understand the basic structure and function of phylum Arthropoda, and how they demonstrate the characteristics of living things.

ZOO.5.1 *Describe the evolutionary advantages of segmented bodies, hard exoskeletons, and jointed appendages to arthropods and how they contribute to arthropods being the largest phyla in species diversity and the most geographically diverse.*
ZOO.5.2 *Explain how the exoskeleton is used in locomotion, protection, and development.*

ZOO.5.3 ***Enrichment:*** *Use an engineering design process to develop a biomimicry of an arthropod's exoskeleton to meet a human need.**
ZOO.5.4 *Identify organisms and characteristics of chelicerates, crustaceans, and insects.*
ZOO.5.5 *Describe the importance of toxins for arachnids, such as spiders and scorpions.*
ZOO.5.6 *Describe the importance of chela for decapods, such as lobsters and crabs.*
ZOO.5.7 *Differentiate between complete and incomplete metamorphosis in insects' life cycles.*
ZOO.5.8 *Explain the importance of eusociality in insects, such as ants, bees, and termites.*
ZOO.5.9 *Dissect representative taxa, and compare their internal and external anatomy and complexity.*

Zoology I

ZOO.6 Phylum Echinodermata

Conceptual Understanding: Phylum Echinodermata contains complex organisms exhibiting pentaradial symmetry and a sophisticated water vascular system.

ZOO.6 Students will understand the structure and function of phylum Echinodermata, and how they demonstrate the characteristics of living things.

ZOO.6.1 *Recognize that the echinoderms have spines on their skin that are extensions of plates that form from the endoskeleton.*
ZOO.6.2 *Explain how the starfish inverts its stomach for external digestion of food.*
ZOO.6.2 *Describe sea urchins' and sea cucumbers' defense structures and behaviors.*
ZOO.6.3 *Describe the sexual and asexual reproduction of starfish.*
ZOO.6.4 *Describe how the water vascular system is used for locomotion, feeding, and gas exchange.*
ZOO.6.5 *Research, analyze, and communicate implications of applying the regeneration of starfish to human medicine.*
ZOO.6.6 *Dissect representative taxa and compare their internal and external anatomy and complexity.*
ZOO.6.7 ***Enrichment:*** *Use an engineering design process to model the water vascular system in hydraulic systems to meet a societal need.**

Zoology II

ZOO.1 Evolution *

*** This standard does not have to be repeated if students have taken Zoology I during the first term.**

Conceptual Understanding: Evolution results from the interaction of four factors: (1) the potential for a species to increase in number, (2) genetic variation occurring within a species due to mutations and sexual reproduction, (3) limited supply of resources needed for survival resulting in competition, and (4) those organisms that are better adapted for an environment survive and reproduce. Genetic information provides evidence of evolution. DNA sequences vary among species, but some similarities remain. By comparing the DNA sequences of different organisms, multiple lines of descent may be inferred. The ongoing branching into multiple lines of descent may also be derived by comparing the amino acid sequences and by examining the anatomical and embryological evidence.

ZOO.1 Students will develop a model of evolutionary change over time.

ZOO.1.1 *Develop and use dichotomous keys to distinguish animals from protists, plants, and fungi.*
ZOO.1.2 *Describe how the fossil record documents the history of life on earth.*
ZOO.1.3 *Recognize that the classification of living organisms is based on their evolutionary history and/or similarities in fossils and living organisms.*

ZOO.1.4 *Construct cladograms or phylogenetic trees to show the evolutionary branches of an ancestral species and its descendants.*

ZOO.1.5 *Design models to illustrate the interaction between changing environments and genetic variation in natural selection leading to adaptations in populations and differential success of populations.*

ZOO.1.6 ***Enrichment:*** *Use an engineering design process to develop an artificial habitat to meet the requirements of a population that has been impacted by human activity.**

Zoology II

ZOO.7 Phylum Chordata, Classes Chondrichthyes and Osteichthyes

Conceptual Understanding: Of the members of phylum Chordata, fish species are most numerous. These aquatic vertebrates have gills throughout their lives and either have or are descended from ancestors with scales or armor.

ZOO.7 Students will understand the structure and function of phylum Chordata, classes Chondrichthyes and Osteichthyes, and how they demonstrate the characteristics of living things.

ZOO.7.1 *Students will understand why evolutionary changes lead to the diversity of fish and how they have adapted to the different aquatic environments.*

ZOO.7.2 *Compare and contrast the characteristics of class Chondrichthyes and Osteichthyes.*

ZOO.7.3 *Identify specific fish species and characteristics that differentiate class Chondrichthyes (e.g., sharks, skates, and rays).*

ZOO.7.4 *Describe how the body and jaw design of sharks make them adept predators.*

ZOO.7.5 *Label and describe functions of the anatomical features of the bony fish, including internal organs, lateral line system, operculum, swim bladder, and external fins.*

ZOO.7.6 *Research, analyze, and communicate the effects of urbanization and continued expansion by humans on the biodiversity of fish species (e.g., overfishing and invasive species).*

ZOO.7.7 *Dissect representative taxa and compare their internal and external anatomy and complexity.*

ZOO.7.8 ***Enrichment:*** *Use an engineering design process to design a "balloon fish" that has neutral buoyancy (i.e., does not sink or float). Report which materials were used to create the "fish," and predict which materials should be added to make the "fish" sink and which materials would make the "fish" float.**

Zoology II

ZOO.8 Phylum Chordata, Classes Amphibia and Reptilia

Conceptual understanding: The two groups of ectothermic tetrapods—amphibians and reptiles—are similar in appearance, but differ drastically in development and body structure.

ZOO.8 Students will understand the structure and function of phylum Chordata, classes Amphibia and Reptilia, and how they demonstrate the characteristics of living things.

ZOO.8.1 *Understand the evolution of tetrapods and the development of the structure and function of body systems and life cycles.*

ZOO.8.2 *Describe the constraints that require amphibians to spend part of their lives in water and part on land, including the morphological and physiological changes as they pass from one stage of their life cycle to the next.*

ZOO.8.3 *Describe adaptations that have led to reptiles living on land successfully.*

ZOO.8.4 *Define what it means to be ectothermic, and identify ways in which reptiles regulate their body temperature.*
ZOO.8.5 *Describe how snakes use chemosensory to locate and track prey.*
ZOO.8.6 ***Enrichment:*** *Use an engineering design process to model biomimicry of ectothermic temperature regulation or chemosensory detection to meet a societal need.**
ZOO.8.7 *Compare and contrast living and extinct reptiles.*
ZOO.8.8 *Explain the importance of tetrapod evolution.*
ZOO.8.9 *Identify the amniotic egg as the major derived characteristic of reptiles.*
ZOO.8.10 *Dissect representative taxa and compare their internal and external anatomy and complexity.*

Zoology II

ZOO.9 Phylum Chordata, Class Aves

Conceptual understanding: Class Aves, including birds, are endothermic, egg-laying vertebrates with bodies covered in feathers. Although they are descendants of dinosaurs, they have evolved a unique physiology, making most capable of flight.

ZOO.9 Students will understand the structure and function of phylum Chordata, class Aves, and how they demonstrate the characteristics of living things.

ZOO. 9.1 *Trace the evolutionary history of modern birds beginning with the theropods. Relate how today's birds have adapted to changing environments.*
ZOO. 9.2 *Describe the fossil evidence that indicates that birds evolved from two-legged dinosaurs called theropods.*
ZOO. 9.3 *Define the term endothermic, and describe how birds regulate body temperature in extreme environments.*
ZOO. 9.4 ***Enrichment:*** *Use an engineering design process to model biomimicry of endothermic temperature regulation to meet a sustainable need.**
ZOO. 9.5 *Explain how birds of prey use their keen sense of sight to locate and attack prey.*
ZOO. 9.6 *Describe how corvids use their intellect for problem solving and locating food storage.*
ZOO. 9.7 *Explain the importance of the evolution of flight and feathers, including the morphological and physiological adaptations needed to sustain flight.*
ZOO. 9.8 ***Enrichment:*** *Use an engineering design process to utilize a bird's flight adaptations in the development of a flying aircraft (e.g., glider, plane).**
ZOO. 9.9 *Demonstrate how different adaptations of the bird beak and feet allow them to feed and survive in different environments.*
ZOO. 9.10 ***Enrichment:*** *Based on an understanding of biomimicry, use an engineering design process to develop a tool based on a bird's beak/feet to meet a human need. **
ZOO. 9.11 *Describe the parenting behavior of different birds in order to incubate their eggs and care for hatchlings.*
ZOO. 9.12 ***Enrichment:*** *Use an engineering design process to design and construct an incubator for hatching abandoned eggs.**
ZOO. 9.13 *Explain the reasons for bird migration and the innate behavior of migratory birds.*
ZOO. 9.14 *Dissect representative taxa and compare their internal and external anatomy and complexity.*

Zoology II

ZOO.10 Phylum Chordata, Class Mammalia

Conceptual Understanding: Class Mammalia consists of endothermic organisms with hair, a four-chambered heart, a diaphragm, and mammary glands. As inhabitants of every continent, they are successful in a great variety of ecosystems.

ZOO.10 Students will understand the structure and function of phylum Chordata, class Mammalia, and how they demonstrate the characteristics of living things.

ZOO 10.1 *Understand the characteristics and behaviors that distinguish mammals from other phyla, and use characteristics and behaviors to distinguish the major orders, including primates. Explain how human impact has changed the environments of other organisms.*

ZOO 10.2 *Describe the characteristics of the first true mammal.*

ZOO 10.3 *Distinguish among monotremes, marsupials, and eutherians, and describe the importance and differences in the placenta in marsupials and eutherians.*

ZOO 10.4 *Describe characteristics that make primates unique, including investigating how the center of gravity relates to the evolution of bipedalism.*

ZOO 10.5 *Dissect representative taxa and compare their internal and external anatomy and complexity.*

ZOO 10.6 *Explain how human impacts have changed the environment of aquatic and terrestrial organisms (e.g., habitat destruction, urbanization, and climate change).*

ZOO 10.7 ***Enrichment:*** *Use an engineering design process to develop a possible solution to an environmental issue that currently exists in an ecosystem.**

Overarching (start to finish) SEPs for Inquiry Extension of Labs

Ask questions to generate hypotheses for scientific investigations based on empirical evidence and observations and/or ask questions to **clarify or refine** models, explanations, or designs.

Plan and conduct controlled scientific investigations to produce data to answer questions, test hypotheses and predictions, and develop explanations or evaluate design solutions, which require the following:

- Identify dependent and independent variables and appropriate controls.
- Select and use appropriate tools or instruments to collect data, and represent data in an appropriate form.
- Analyze and interpret various types of data sets, using appropriate mathematics, in order to verify or refute the hypothesis or determine an optimal design solution.
- Construct an explanation of observed relationships between variables.
- Communicate scientific and/or technical information in various formats.

Meredith Willis	DeSoto County School District
Chuck Yarborough	MS School for Math and Science

Various sets of standards and standards-related documents were used in the development of the Mississippi College- and Career-Readiness Standards for the Social Studies, including:

- National Council for the Social Studies: ***College, Career, and Civic Life (C3) Framework for Social Studies State Standards: Guidance for Enhancing the Rigor of K-12 Civics, Economics, Geography, and History***
- National Assessment of Educational Progress (NAEP) Framework for Civics, Economics, Geography, and U.S. History
- ACT College- and Career-Readiness (CCR) Benchmarks
- *National Standards for History Education*
- *National Standards for the Social Studies*
- *National Standards for Economic Education*
- *National Standards for Civics and Government,* and
- *National Standards for Geography*

Introduction

Mission Statement

The Mississippi Department of Education (MDE) is dedicated to student success, which includes improving student achievement in the social studies, equipping citizens to solve complex problems, and establishing fluent communication skills, while preparing students for college, career, and civic life. The Mississippi College- and Career-Readiness Standards (CCRS) provide a consistent, clear understanding of what students are expected to know and be able to do by the end of each grade level or course. The standards are designed to be robust and relevant to the real world, reflecting the knowledge and skills that students need for success in college and careers and allowing students to compete in the global economy.

Purpose

This document is designed to provide districts and K-12 social studies teachers with a basis for curriculum development. In order to prepare students for careers and college, it outlines what knowledge students should obtain, and the types of skills students must master upon successful completion of each grade level. The *2018 MS CCRS for the Social Studies* reflect national expectations while focusing on postsecondary success, but they are unique to Mississippi in addressing the needs of our students and teachers. The standards' content centers around three practices: conceptual understanding, fostering inquiry, collaboration and action, and integration of content skills. Instruction in these areas is designed for a greater balance between content and process. Teachers are encouraged to transfer more ownership of the learning process to students, who can then direct their own learning and develop a deeper understanding of the social studies and the problem-solving process. Doing so will produce students that will become more capable, independent, and literate adults.

Implementation

The *2018 MS CCRS for the Social Studies* will be piloted during the 2018-2019 school year and implemented during the 2019-2020 school year.

THE REVISION PROCESS FOR THE MS CCR STANDARDS FOR THE SOCIAL STUDIES

The Social Studies Curriculum Revision Team was selected in June 2016 from nominations by school district superintendents and administrators. The purpose of the team was to revise the *2011 Mississippi Social Studies Framework*. The team was composed of teachers, administrators, and university professors throughout Mississippi.

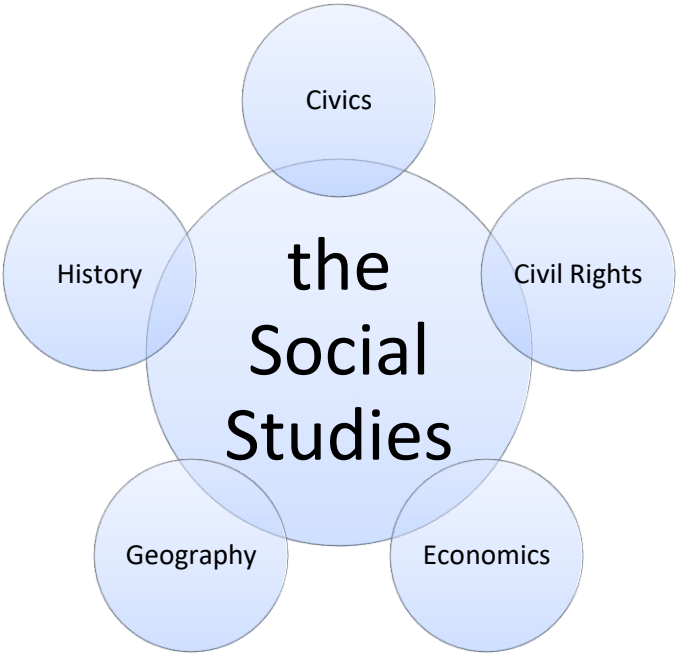
In order to gain a sufficient understanding of the direction of social studies education, the curriculum revision team reviewed the following:

- National Council for the Social Studies: ***College, Career, and Civic Life (C3) Framework for Social Studies State Standards: Guidance for Enhancing the Rigor of K-12 Civics, Economics, Geography, and History***
- National Assessment of Educational Progress (NAEP) Framework for Civics, Economics, Geography, and U.S. History
- ACT College- and Career-Readiness (CCR) Benchmarks
- *National Standards for History Education*
- *National Standards for the Social Studies*
- *National Standards for Economic Education*
- *National Standards for Civics and Government*
- *National Standards for Geography*
- Standards for Advanced Placement programs
- Social Studies standards from other states
- Current literature and research regarding the Social Studies

These resources served as a foundation for the development of the *2018 MS CCRS for the Social Studies*.

STRANDS

The different content strands in social studies combine to give a clear picture of the past and present. Strands also give depth to the social studies curriculum, enabling students to grasp the complexity of events from the past and present and help them acquire critical thinking skills to make informed decisions in the future. The **2018 Mississippi College- and Career-Readiness Standards for the Social Studies** is comprised of five (5) essential content strands: Civics, Civil Rights, Economics, Geography, and History.



Civics Strand

The civics strand should provide students with a basic understanding of civic life, politics, and government. It should help them understand the workings of their own and other political systems as well as the relationship of American politics and government to world affairs. Civics instruction provides a basis for understanding the rights and responsibilities of citizens in American constitutional democracy and a framework for competent and responsible participation. The civics strand should be expanded by related learning experiences, in both school and community, that enable students to learn how to participate in their own governance.

Civil Rights Strand

Mississippi Code 37-13-193 requires the Mississippi Department of Education to work with the Mississippi Civil Rights Education Commission to incorporate civil rights education into the state's K-12 educational programs. Civil rights education, as understood by the writers of this framework, is defined as the mastery of content, skills and values that are learned from a focused and meaningful exploration of civil rights issues (both past and present), locally, nationally and globally. This education should lead learners to understand and appreciate issues such as social justice, power relations, diversity, mutual respect, and civic engagement. Students should acquire a working knowledge of tactics engaged by civil rights activists to achieve social change. Among these are: demonstrations, resistance, organizing, and collective action/unity. The content was incorporated as a content strand throughout the entire K-12 framework at the recommendation of the Mississippi Civil Rights Commission.

Economics Strand

The economic strand should help students gain an understanding of economic concepts, while demonstrating an understanding of economic and financial literacy inn order to make informed financial decisions throughout their lives. The strand is integrated throughout the K-12 curriculum emphasizing economic reasoning. Throughout the K-12 curriculum, students will grasp an understanding of markets and the U.S. economy in a global setting.

Geography Strand

The geography strand equips students with the knowledge, skills, and perspectives of world geography. Students will learn how to use geographic thinking and information to make well-reasoned decisions and to solve personal and community problems. The geography strand will enable students to use geographic perspectives, knowledge, and skills to engage in ethical action with regard to self, other people, other species, and Earth's diverse cultures and natural environments.

History Strand

The history strand investigates events that change the way people live. History is a record of the past, of people who changed society. We learn history from 2 sources: primary and secondary sources. The strand looks into how the past shape does the present, how have people and events changed society, and how have influences of other, more powerful countries, affected countries today.

Sequencing

Kindergarten	Citizenship at Home and School
First Grade	Citizenship at School
Second Grade	School and the Community
Third Grade	Local Government
Fourth Grade	Mississippi Studies and Regions
Fifth Grade	United States History from Pre-Columbian Era to American Revolution
Sixth Grade	Civics and the World
Seventh Grade	Early World History or Compacted
Eighth Grade	United States History from Exploration to 1877

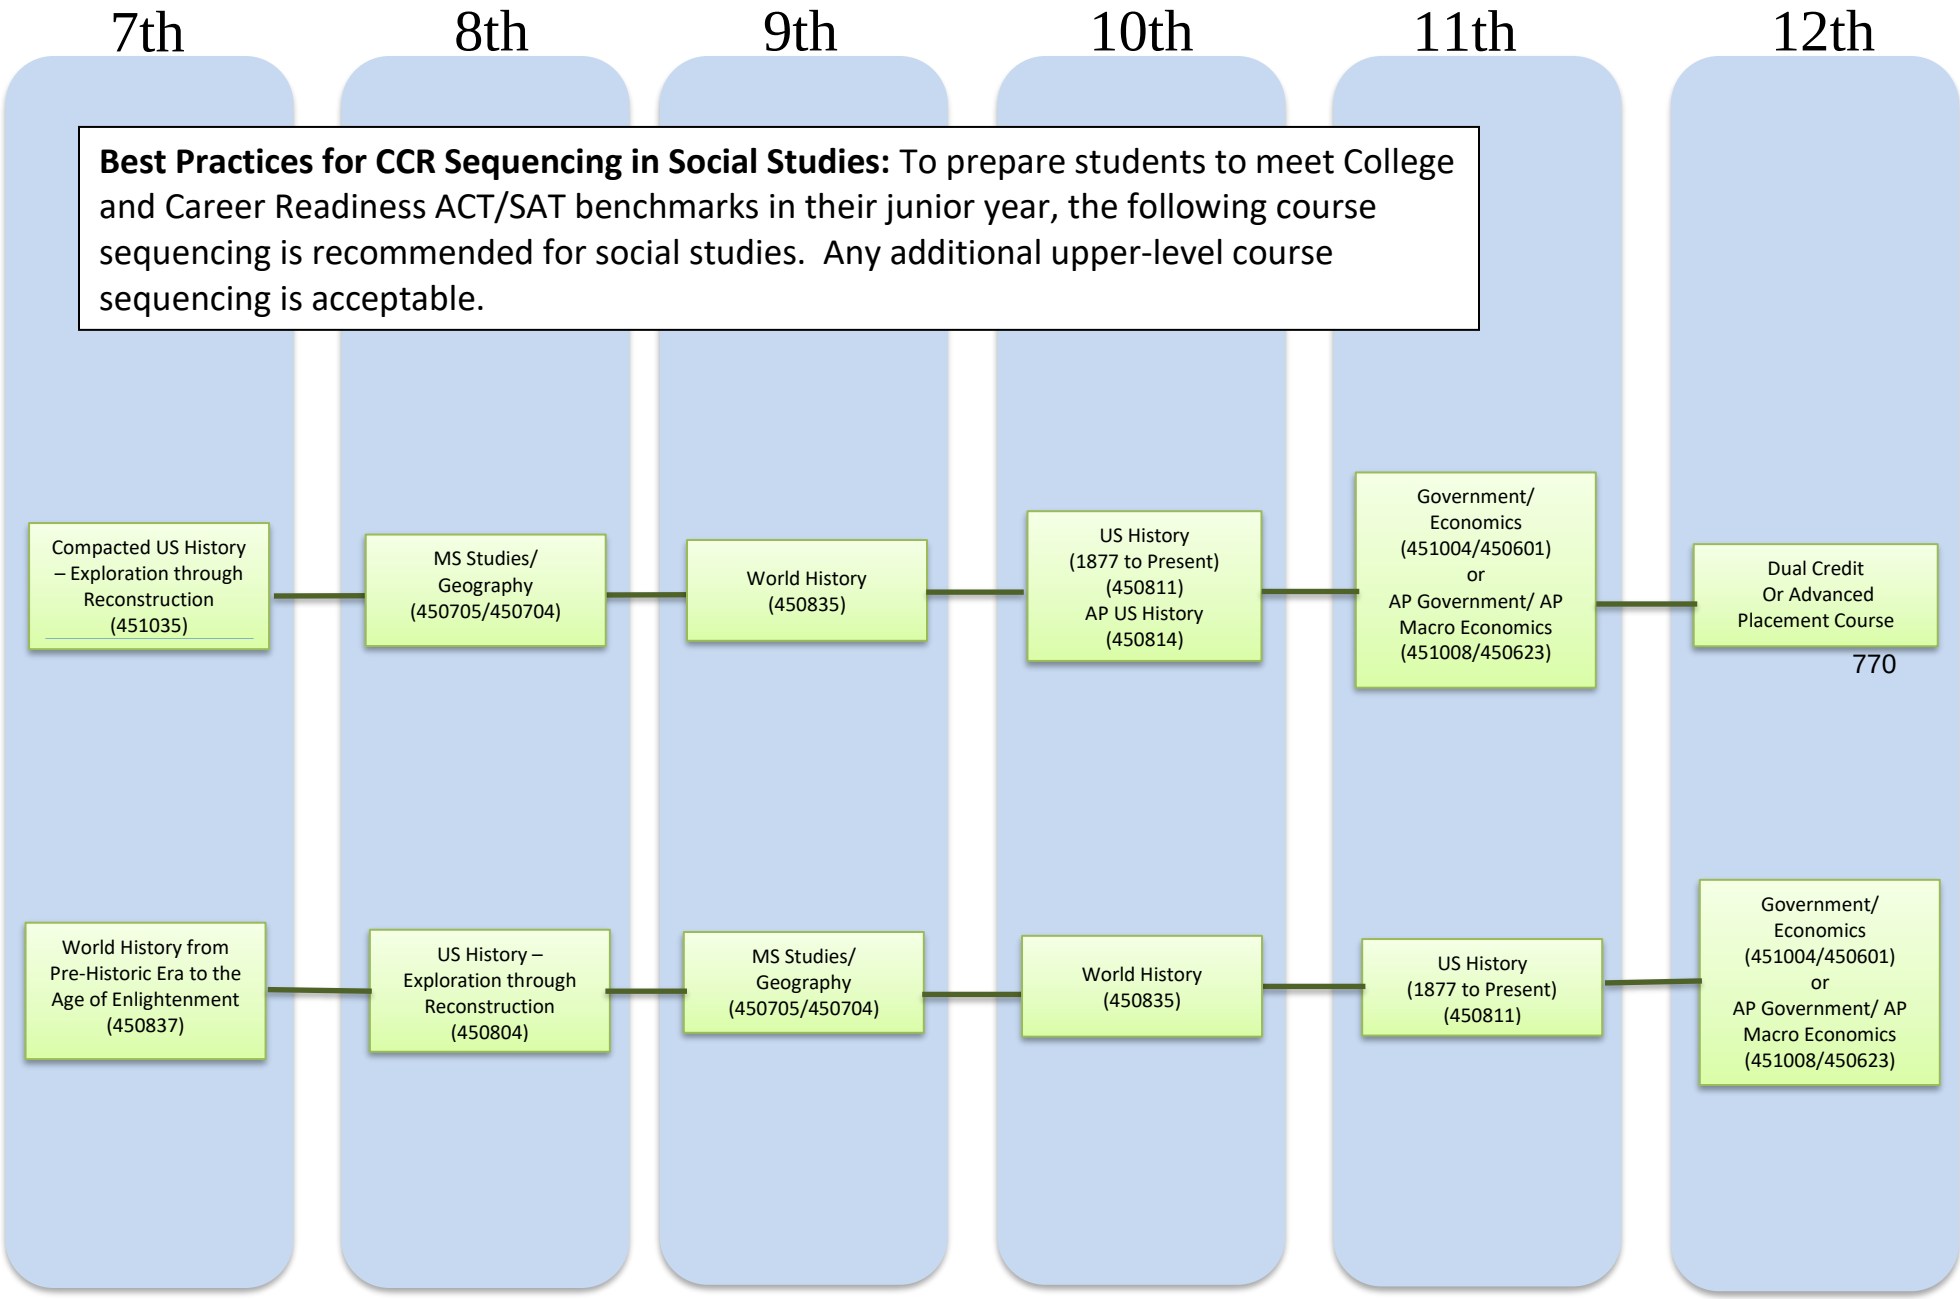
KINDERGARTEN	
THEME: CITIZENSHIP AT HOME AND SCHOOL	
CIVICS	
STANDARD	**OBJECTIVE(S)**
CI.K.1 Examine how individuals play different roles and exercise good citizenship.	1. Identify characteristics of a good citizen. 2. Propose ways on how to be a good citizen at home and in the classroom.
CI.K.2 Demonstrate knowledge of how to be a good citizen.	1. Define citizen, citizenship, rights, and responsibilities. 2. Name rights and responsibilities of individuals. 3. Distinguish the difference between rights and responsibilities. 4. Identify the role of rules. 5. Explain the role of consequences when rules are not followed.
CI.K.3 Describe the role and responsibilities of authority figures.	1. Identify authority figures. 2. Explain the role of an authority figure. 3. Determine the responsibilities of authority figures. 4. Explain how all people can play important roles in a community.
ECONOMICS	
STANDARD	**OBJECTIVE(S)**

Best Practices for CCR Sequencing in Social Studies: To prepare students to meet College and Career Readiness ACT/SAT benchmarks in their junior year, the following course sequencing is recommended for social studies. Any additional upper-level course sequencing is acceptable.



Suggested Course Sequence Secondary Options for 6th – 9th Social Studies

The course codes follow the course names in parentheses. For other options for social studies classes, please refer to the Approved Secondary Course Codes Report. These are the most commonly used courses for secondary level students. Beginning with school year 2015-2016, the following options are available for Social Studies course sequence for middle school:

Grade Level	OPTION 1 (Course Code)	OPTION 2 (Course Code)	OPTION 3 (Course Code)
6	Civics and the World	World History from Pre-Historic Era to Age of Enlightenment (450837)	Civics and the World
7	World History from Pre-Historic Era to Age of Enlightenment (450837)	*Compacted 7th Grade U.S. History from Exploration to Reconstruction and Citizenship (451035)	World History from Pre-Historic Era to Age of Enlightenment (450837)
8	U.S. History from Exploration to Reconstruction (450804)	Mississippi Studies (One semester .5 Carnegie Unit) (450705) / *Compacted Introduction to World Geography (451030) (One semester .5 Carnegie Unit)	U.S. History from Exploration to Reconstruction (450804) Option to add Mississippi Studies (450705) (One semester .5 Carnegie Unit) **and/or** World Geography (One semester .5 Carnegie Unit)
9	Mississippi Studies (450705) / Introduction to World Geography (450704)/ AP Human Geography (450715)	World History from Age of Enlightenment to Present (450835)	World History from Age of Enlightenment to Present (450835)

771

*NOTE: For Option 2, the standards for the World Geography and Citizenship course must be integrated into the U.S. History and the Introduction to World Geography courses taught in the 7th and 8th grades, as outlined in the attached documents.

**NOTE: For Option 3, U.S. History from Exploration to Reconstruction must be taught in the 8th grade. MS Studies and Geography are taught in addition to the U.S. History course as separate courses.

KINDERGARTEN

THEME: CITIZENSHIP AT HOME AND SCHOOL

CIVICS

STANDARD	OBJECTIVE(S)
CI.K.1 Examine how individuals play different roles and exercise good citizenship.	1. Identify characteristics of a good citizen. 2. Propose ways on how to be a good citizen at home and in the classroom.
CI.K.2 Demonstrate knowledge of how to be a good citizen.	1. Define citizen, citizenship, rights, and responsibilities. 2. Name rights and responsibilities of individuals. 3. Distinguish the difference between rights and responsibilities. 4. Identify the role of rules. 5. Explain the role of consequences when rules are not followed.
CI.K.3 Describe the role and responsibilities of authority figures.	1. Identify authority figures. 2. Explain the role of an authority figure. 3. Determine the responsibilities of authority figures. 4. Explain how all people can play important roles in a community.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.K.1 Identify and explain the function of money.	1. Recognize monetary units. 2. Distinguish between spending and saving. 3. Illustrate how money is used in daily life.

E.K.2 Distinguish between goods and services.	1. Define goods and services. 2. Describe examples of the goods and services. 3. Explain how people obtain goods and services. 4. Examine the cost of goods and services provided by the community.
E.K.3 Differentiate between needs and wants of individuals.	1. Define and identify needs and wants. 2. Classify items as wants or needs.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.K.1 Explore the similarities and differences of individuals and families.	1. Define similarities and differences. 2. Examine the benefits of similarities and differences in individuals and families.
CR.K.2 Describe and explain traditions and contributions of various cultures.	1. Define culture. 2. Recognize ways people celebrate their diverse cultural heritage (literature, language, games, songs, dances, holidays, etc.). 3. Analyze ways people celebrate their diverse cultural heritage.
CR.K.3 Explain the cultural diversity in the classroom.	1. Identify unity and diversity. 2. Identify different types of cultural diversity within the classroom. 3. Propose different ways to encourage unity and diversity at home and within the classroom.

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.K.1 Identify a sense of place relative to an individual.	1. Create a map to identify locations of familiar places. 2. Demonstrate terms related to location, direction, size, and distance (up, down, left, right, far, near, etc.).
G.K.2 Describe physical features of the environment.	1. Differentiate between land forms and bodies of water. 2. Identify how physical features impact communities. 3. Describe different ways physical environments may change over time (erosion, hurricanes, etc.).
G.K.3 Recognize maps, graphs, and other representations of the earth.	1. Explain representations of the earth using technology, maps, and globes. 2. Identify cardinal and intermediate directions (e.g., north, northeast, northwest, southeast, southwest, east, and west). 3. Locate the local community, Mississippi and the United States using maps and globes.

774

HISTORY

STANDARD	OBJECTIVE(S)
H.K.1 Recognize symbols, customs, and celebrations representative of our community, Mississippi and the United States.	1. Define symbols and customs. 2. Identify school, community, state and national symbols (e.g., school mascot, community logo, Mississippi state flag, United States flag, American eagle, etc.). 3. State the pledge of allegiance and patriotic songs as expressions of patriotism. 4. Explain historically significant events that shaped America.
H.K.2 Describe the impact of significant historical figures and events.	1. Identify historical figures that are used as symbols of American culture (currency, monuments, and place names, etc.). 2. Examine historical events that are significant to American culture (4th of July, Thanksgiving, Presidents Day, etc.).

FIRST GRADE

THEME: CITIZENSHIP AT SCHOOL

CIVICS

STANDARD	OBJECTIVE(S)
CI.1.1 Examine how individuals play different roles and exercise good citizenship.	1. Identify different family members – both nuclear and extended. 2. Distinguish the difference in responsible behaviors of different individuals within the home, extended family and school that exhibit good citizenship.
CI.1.2 Demonstrate knowledge of how to be a good citizen at home and school.	1. Distinguish characteristics of good citizenship at home and school. 2. Describe individuals who have exemplified good citizenship at home and school.
CI.1.3 Demonstrate a knowledge of authority figures at home and school.	1. Identify authority figures at home and school. 2. Determine why rules are necessary and the consequences of failing to obey them at home and school.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.1.1 Differentiate between needs and wants of individuals at home and school.	1. Describe the differences between needs and wants. 2. Compare and contrast an individual's needs and wants to those of their family. 3. Compare and contrast an individual's needs and want to those of their school and community.
E.1.2 Evaluate how families use goods and services.	1. Identify the types of goods and services used by families. 2. Name the types of goods and services schools may use. 3. Compare and contrast the types of goods and services a family may use to those of a school.

775

E.1.3 Analyze the role of money within a home.	1. Explain the concept of exchange and the use of money to purchase goods and services. 2. Illustrate how work provides income to purchase goods and services for a family.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.1.1 Explore the similarities and differences of families and schools.	1. Define customs and traditions. 2. Describe customs and traditions that play roles within families. 3. Compare customs and traditions within the school and community.
CR.1.2 Describe and explain traditions and contributions of various cultures.	1. Describe celebrations held by members of the class and their families. 2. Determine the origins of customs, holidays, and celebrations within the school community.
CR.1.3 Explain the role of cooperation and compromise within families and school communities.	1. Define cooperation and compromise. 2. Identify examples of cooperation and compromise within the home and school community. 3. Discuss the benefits of cooperation and compromise among different groups.

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.1.1 Identify a sense of place relative to an individual, home and school.	1. Demonstrate terms related to location, direction, size and distance. 2. Explain how seasons, weather and climate and other environmental characteristics of a place affect people and their actions. 3. Describe how the human characteristics of a place such as shelter, clothing, food, activities are based upon geographic location.
G.1.2 Describe physical features of the environment.	1. Define physical features of the environment. 2. Distinguish between landforms such as mountain, hills, lakes, oceans, rivers, etc. 3. Explain how physical features affect how humans use the environment.

G.1.3 Recognize maps, graphs, and other representations of the earth.	1. Construct a map from student's home to school applying cardinal and intermediate directions. 2. Identify on a map or globe the local community, the state of Mississippi, the United States, the continents, and the oceans.

HISTORY

STANDARD	OBJECTIVE(S)
H.1.1 Evaluate how people and events have shaped the local community, state, and nation.	1. Identify contributions of historical figures, such as the Founding Fathers, etc., who have influenced the nation. 2. Name the contributions of historical events, such as the American Revolution, etc., who have influenced the nation.
H.1.2 Compare the ways individuals and groups in the local community and state lived in the past to how we live today.	1. Describe how forms of communication have changed over time. 2. Explain how types of technology and work have changed over time.

777

SECOND GRADE

THEME: CITIZENSHIP AT SCHOOL AND IN THE COMMUNITY

CIVICS

STANDARD	OBJECTIVE(S)
CI.2.1 Examine how individuals play different roles and exercise good citizenship in the local community.	1. Identify different community members and the roles they play. 2. Distinguish behaviors of different individuals in the community that exhibit good citizenship.
CI.2.2 Demonstrate knowledge of how to be a good citizen in the local community.	1. Identify rights and responsibilities of citizens in the community. 2. Compare and contrast rights and responsibilities of community members. 3. Recognize significant values such as common good, liberty, justice, equality, and individual dignity.
CI.2.3 Demonstrate a knowledge of authority figures in the local community.	1. Identify authority figures in the community. 2. Compare the rights and responsibilities of individuals and authority figures in the community. 3. Investigate the difference between rules and laws. 4. Compare the role of consequences when rules and laws are not followed.

778

ECONOMICS

STANDARD	OBJECTIVE(S)
E.2.1 Explain how individual wants and needs impact the production of goods and service.	1. Identify consumers and producers. 2. Explain how individuals' choices determine what goods and services are produced.

E.2.2 Explain the effects of supply and demand on the price of goods and services.	1. Define scarcity and how it relates to goods and services. 2. Evaluate the impact of resources availability on the price of goods.
E.2.3 Differentiate between needs and wants of individuals.	1. Define and identify needs and wants. 2. Classify items as wants or needs.
E.2.3 Identify the role of financial institutions within the community.	1. Identify various types of financial institutions and their role in the community. 2. Identify services provided by the various financial institutions in the community.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.2.1 Illustrate the role of unity and diversity within the community.	1. Define unity and diversity. 2. Describe the role that unity and diversity play within the community.
CR.2.2 Describe and explain how traditions and customs contribute to unity and diversity.	1. Evaluate the qualities that build unity among diverse populations. 2. Recognize the cultural contributions of various groups within our community.
CR.2.3 Explain the role of cooperation and compromise within the community.	1. Define tolerance. 2. Explain the role of tolerance in problem solving within the community. 3. Identify cultural diversity within the community.

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.2.1 Differentiate between different types of maps.	1. Utilize vocabulary related to map skills. 2. Recognize characteristics of a local region including natural resources.
G.2.2 Investigate physical features of the local region.	1. Examine how physical features affect human settlement. 2. Distinguish between urban, rural, suburban, etc. 3. Investigate different types of landforms and their characteristics.
G.2.3 Recognize maps, graphs, and other representations of the earth.	1. Identify representations of the earth using technology, maps, and globes. 2. Identify cardinal and intermediate directions (e.g., north, northeast, northwest, southeast, southwest, east, and west). 3. Locate the Mississippi and the United States using maps and globes.

HISTORY

STANDARD	OBJECTIVE(S)
H.2.1 Evaluate how people and events have shaped the local community, state and nation through primary sources.	1. Identify various primary sources. 2. Use various primary sources to investigate significant people and events of the past. 3. Identify vocabulary to express measurements of time. 4. Compare and contrast historical perspectives of primary sources.
H.2.2 Utilize oral traditions that contributed to the cultural diversity of the community, state and nation.	1. Explore stories, songs, and other expressions of oral traditions. 2. Interpret how oral traditions helped to express important cultural and historical characteristics.

780

THIRD GRADE

THEME: CITIZENSHIP IN LOCAL GOVERNMENT

CIVICS

STANDARD	OBJECTIVE(S)
CI.3.1 Explain how an individual exercises rights and responsibilities within community and local government.	1. Identify core and civic virtues. 2. Compare and contrast figures of authority and their positions pertaining to upholding civic responsibilities.
CI.3.2 Demonstrate knowledge of community and local government.	1. Identify the three branches of government at local level. 2. Demonstrate how and why the local government creates and enforces laws. 3. Analyze why laws are important to a community. 4. Categorize services provided by the local community and government.
CI.3.3 Compare and contrast how all people, not just official leaders, play important roles in local government and portray good citizenship.	1. Categorize the way Americans feel about their rights and responsibilities, e.g. individual rights and freedoms, the common good, and respecting the law. 2. Argue the characteristics of a responsible citizen.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.3.1 Analyze the role of money within a community and local government.	1. Define tax and the purpose of paying taxes. 2. Identify taxable goods and services within the local community. 3. Interpret job sources and availability.

781

E.3.2 Evaluate the role of trade within a community and local government.	1. Define trade. 2. Distinguish between import and export. 3. Identify local products and resources involved in trade with the local community. 4. Investigate the origin of local products for sale in the local community.
E.3.3 Explain how people earn income.	1. Describe the skills and knowledge required to produce certain goods and services. 2. Evaluate the impact of skills and knowledge on an individual's income. 3. Explain how economic development determines where people can choose to live.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.3.1 Explain how a democracy relies on people's responsible participation.	1. Define democracy. 2. Explain the voting process.
CR.3.2 Examine how cultural diversity strengthens the community.	1. Analyze cultural artifacts and the representations of the community. 2. Debate how historical figures respond to cultural changes, needs and concerns of people.
CR.3.3 Examine Declaration of Independence, Constitution, and Bill of Rights in order to recognize basic principles of democracy and civil liberties.	1. Identify civil liberties within the First Amendment. 2. Cite examples of how civil liberties are exercised in the local community.

GEOGRAPHY	
STANDARD	**OBJECTIVE(S)**
G.3.1 Identify ways humans have altered the physical environment.	1. Explain how various industries, such as farming, fishing, timber, etc., have altered the physical environment. 2. Utilize vocabulary associated with human influence on the environment.
G.3.2 Identify ways natural disasters affect the physical environment.	1. Identify characteristics of a natural disaster. 2. Explain how local, state, and national governments cooperate to manage natural disasters. 3. Evaluate how natural disasters can alter settlement patterns.
G.3.3 Explain how technological advancements have influenced the environment.	1. Evaluate how different energy sources have impacted the environment. 2. Explain how communication and technological innovations have altered the environment. 3. Recognize the geographic impact of using oil and various energy sources in the twenty-first century. Ex. Oil, petroleum, nuclear power, and solar power.
G.3.4 Recognize maps, graphs, and other representations of the earth.	1. Evaluate patterns of population distributions.
G.3.5 Describe the relationship between locations of resources and patterns of population distribution.	1. Define renewable and nonrenewable resources. 2. Categorize types of energy resources as renewable and nonrenewable.

783

HISTORY	
STANDARD	**OBJECTIVE(S)**
H.3.1 Identify and describe the different types of government throughout history, such as dictatorship, monarchy, aristocracy, representative democracy, and direct democracy.	1. Explain who held power in each type of government. 2. Compare and contrast the different types of government related to source of authority, limits on power and examples of each. 3. Cite an example of each type of government from history.
H.3.2 Explain the role of Representative Democracy in framing the American government.	1. Explain the roles of the three branches of government. 2. Compare and contrast separation of powers and check and balances. 3. Explain the role of popular sovereignty in maintaining a democracy.
H.3.3 Trace the history of voting rights in America.	1. Define voting, suffrage and franchise. 2. Illustrate the expansion of voting rights in America.

784

FOURTH GRADE

THEME: MISSISSIPPI STUDIES AND REGIONS

CIVICS

STANDARD	OBJECTIVE(S)
CI.4.1 Describe Mississippi's entry into statehood.	1. Describe the process by which the Mississippi territory was admitted to the United States. 2. Define political and geographic reasons for changes in location of Mississippi's state capitol. 3. Examine the structure of local government and its relationship to state government.
CI.4.2 Identify people in positions of power and how they can influence people's rights and freedom.	1. Identify elected leaders of the community and state. 2. Examine the rights and freedoms guaranteed to citizens.
CI.4.3 Identify rights and responsibilities as a citizen of your community and state.	1. Examine responsibilities as citizens, such as obeying rules and laws. 2. Discuss active citizenship and adults' responsibility to vote, to understand important issues, to serve on a jury.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.4.1 Describe Mississippi's economic and military role during the Civil War. Ex: Economic- production of iron products, textiles, and ships, Military- provision of military supplies through ports.	1. Name military leaders from Mississippi during the Civil War. 2. Describe the development of slavery and opposition to slavery in Mississippi. 3. Trace the events that led to the secession of Mississippi from the Union in 1861 and subsequently entering the Civil War. 4. Determine roles of women on the home front and battlefront during and after the Civil War.

785

E.4.2 Evaluate how geographic and economic factors influence life and work in Mississippi.	1. Compare the resources and scarcity of resources in a local region to other regions of Mississippi (e.g., Delta's rich soil vs. coastal waters). 2. Describe the division of labor within Mississippi (e.g., government, industry, and agriculture). 3. Identify the opportunity cost of choices made within Mississippi (e.g., cotton farming vs. soy bean farming, pasture land vs. industrial development, beaches vs. casinos, landfills vs. parks, etc.). 4. Explain the benefits and challenges of global trade for Mississippi. 5. Examine the connections between Mississippi and other states (e.g., economic and political borders such as the Natchez Trace, the Mississippi River, Gulf of Mexico, etc.). 6. Describe the economic impact of natural disasters (e.g., hurricanes, tornadoes, earthquakes, etc.).
E.4.3 Identify economic conditions as a result of the Civil War, including the collapse of the economic structure, destruction of the transportation infrastructure, and high casualty rates.	1. Trace the negative impact of the Civil War and Reconstruction on Mississippi. 2. Explain the use of sharecroppers as a response to the end of slavery. 3. Explore the role of Jim Crow in disenfranchising African Americans.

786

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.4.1 Analyze the Civil Rights Movement to determine the social, political, and economic impact on Mississippi.	1. Name important people of the modern Civil Rights Movement, including Martin Luther King, Jr., Rosa Parks, Medgar Evers, James Meredith, Fannie Lou Hamer, Charles Evers, etc. 2. Identify and explain events of the modern Civil Rights Movement, including the Brown decision of 1954, Jim Crow laws, the Freedom Riders (Goodman, Chaney, Schwerner), the Ole Miss Riots (James Meredith). 3. Describe the benefits of the Civil Rights Act of 1964, the Voting Rights Act of 1965, and the Brown v. Board of Education Supreme Court case of 1954. 4. Define vocabulary associated with the modern Civil Rights Movement including discrimination, prejudice, segregation, integration, suffrage, and rights.
CR.4.2 Examine how culture influences the way people modify and adapt to their environment.	1. Define culture in Mississippi. 2. Recognize ways people celebrate their diverse cultural heritage (literature, language, games, songs, dances, holidays, etc.). 3. Analyze ways people celebrate their diverse cultural heritage.

787

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.4.1 Describe the physical geography of Mississippi.	1. Compare and contrast the ten geographical regions of Mississippi in terms of soil, landforms, etc. 2. Illustrate major natural resources and deposits throughout Mississippi on a map, ex. Oil, agricultural, etc.

G.4.2. Understand how geographic and environmental factors influence life and work.	1. Compare the resources and scarcity of resources in a local region to other regions of Mississippi (e.g., Delta's rich soil vs. coastal waters). 2. Describe the division of labor within Mississippi (e.g., government, industry, and agriculture). 3. Describe the opportunity cost of choices made within Mississippi (e.g., cotton farming vs. soy bean farming, pasture land vs. industrial development, beaches vs. casinos, landfills vs. parks, etc.). 4. Explain the benefits and challenges of global trade for Mississippi. 5. Examine the connections between Mississippi and other states (e.g., economic and political borders such as the Natchez Trace, the Mississippi River, Gulf of Mexico, etc.). 6. Describe the economic impact of natural disasters (e.g., hurricanes, tornadoes, earthquakes, etc.).
G.4.3 Recognize maps, graphs, and other representations of Mississippi.	1. Identify representations of Mississippi using technology, maps, and globes. 2. Distinguish between cardinal and intermediate directions (e.g., north, northeast, northwest, southeast, southwest, east, and west). 3. Locate Mississippi and the United States using maps and globes.

788

HISTORY

STANDARD	OBJECTIVE(S)
H.4.1 Recognize symbols, customs, and celebrations representative of our community, Mississippi and the United States.	1. Define symbols and customs. 2. Identify school, community, state and national symbols (e.g., school mascot, community logo, Mississippi state flag, United States flag, American eagle, etc.). 3. Identify the Pledge of Allegiance and other patriotic songs as expressions of patriotism. 4. Explain historically significant events that shaped America.
H.4.2 Distinguish reasons for European exploration and settlement in Mississippi and the impact of European explorers on trade, health, and land expansion in Mississippi.	1. Label on maps European settlements in early Mississippi, including Fort de Maurepas. 2. Outline on maps and globes, the routes of early explorers to the New World. 3. Describe reasons for conflicts between Europeans and Native Americans in Mississippi, including differing beliefs regarding land ownership, religion, and culture.

H.4.3 Describe Mississippi Antebellum Society.	1. Explain the rise of Mississippi cotton culture. 2. Link cotton culture to the rise of slavery.
H.4.4 Explain how literature, the arts, architecture, and music distinguish Mississippi from other places.	1. Identify Mississippians known for their artwork, music, architecture, and literature. 2. Describe how literature, the arts, architecture, and music affect tourism within the state.
H.4.5 Describe the impact of significant historical figures and events in Mississippi.	1. Identify historical figures that are used as symbols of Mississippi culture (monuments, place names, etc.). 2. Examine historical events that are significant to Mississippi culture.
H.4.6 Compare and contrast between the different Mississippi Native American cultures: Choctaw, Chickasaw, and Natchez.	1. Identify the location of major tribes within Mississippi. 2. Describe the reason for Native American removal in Mississippi and the impact of the removal of Native Americans. 3. Examine how Native American tribes lived, including their homes, roles, beliefs, clothes, games, traditions, and food.

FIFTH GRADE

US HISTORY: PRE-COLUMBIAN TO AMERICAN REVOLUTION

CIVICS

STANDARD	OBJECTIVE(S)
CI.5.1 Explain how weaknesses of the Articles of Confederation led to the Constitution.	1. List the problems of the Articles of Confederation such as lack of executive branch, no taxation power, and weak central government. 2. Identify the contributions of the NorthWest Ordinance. 3. Identify the ideology of Federalists and Anti-Federalists facts. 4. Describe the plans and compromises that contributed to the creation of the Constitution. 5. Explain the features of the Bill of Rights.
CI.5.2 Demonstrate respect for the rights of others in discussion and classroom debates.	1. Participate in negotiating and compromising in the resolution of differences and conflict.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.5.1 Examine the various types of resources required to provide goods and services.	1. Identify the major resources of the U.S. to determine the major industries of those countries in relation to available resources. 2. Examine why certain products are manufactured in particular places, taking into account the weight, transportation availability, costs, and markets.

790

E.5.2 Explain how currency makes exchange easier by comparing a bartering economy to a currency-based economy.	1. Explore the characteristics of a traditional economy. 2. Examine products that are imported into markets within the US based on demand for these products, nothing how this affects the US economy. 3. Distinguish products that are exported from the US to other markets in the Western Hemisphere, noting how this affects the US economy. 4. Examine the meaning of unemployment, inflation, income, and economic growth in the economy.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.5.1 Identify ways that people in roles of power can influence people's rights and freedom.	1. Examine at least one group of people, such as Native Americans, African Americans, women, or another cultural, ethic, or racial minority in the Western Hemisphere, who have struggled for equality and civil rights.
CR.5.2 Describe and explain traditions and contributions of various cultures.	1. Define culture. 2. Recognize ways people celebrate their diverse cultural heritage (literature, language, games, songs, dances, holidays, etc.). 3. Analyze ways people celebrate their diverse cultural heritage.

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.5.1 Locate on a map the physical features of America prior to Exploration.	1. Identify major landforms and bodies of water. 2. Locate on a map of North and South America pre-Columbian civilizations according to geography.
G.5.2 Describe physical features of the environment.	1. Differentiate between landforms and bodies of water. 2. Identify how physical features impact communities. 3. Describe different ways physical environments may change over time (erosion, hurricanes, etc.).

G.5.3 Recognize maps, graphs, and other representations of the earth.	1. Create representations of the earth using technology, maps, and globes. 2. Identify cardinal and intermediate directions (e.g., north, northeast, northwest, southeast, southwest, east, and west). 3. Locate the Mississippi and the United States using maps and globes.

HISTORY

STANDARD	OBJECTIVE(S)
H.5.1 Recognize symbols, customs, and celebrations representative of the United States.	1. Define symbols and customs. 2. Identify school, community, state and national symbols (e.g., United States flag, American eagle, etc.). 3. Compare and contrast the Pledge of Allegiance and other patriotic songs as expressions of patriotism. 4. Explain historically significant events that shaped America.
H.5.2 Examine the reasons and impact for exploration of the New World.	1. Locate and label on a world map the “Old World” and the “New World” along with European countries of Spain, Great Britain or England, France, etc. 2. Identify significant European explorers. 3. Determine economic motivations for European exploration and settlement in the Americas. 4. Locate and label on maps of North and South America land claimed by Spain, France, England, and Portugal. 5. Explain the development and impact of the Columbian Exchange. 6. Analyze the relationship between early European settlers in America and the Native Americans they encountered.

792

H.5.3 Describe reasons for colonization of North America.	1. Identify influential leaders and groups responsible for founding colonial settlements (e.g., John Smith, Virginia; Roger Williams, Rhode Island; William Penn, Pennsylvania; Lord Baltimore, Maryland; William Bradford, Plymouth; John Winthrop, Massachusetts). 2. Trace the development of democratic ideas and discuss the structure of colonial governments that influenced the early colonies (e.g., Magna Carta, Mayflower Compact, representative government, town meetings, rule of law, legislative bodies). 3. Demonstrate an understanding of colonial economic life and labor systems in the Americas (Triangular Trade, indentured servitude, enslaved and free Africans).
H.5.4 Explain major events of the American Revolution and their outcomes.	1. Outline the principles contained in the Declaration of Independence. 2. Identify key battles of the American Revolution (e.g., Lexington and Concord, Bunker Hill, Saratoga, Cowpens, and Yorktown). 3. Describe the roles and contributions of Thomas Jefferson, Samuel Adams, Paul Revere, Patrick Henry, Thomas Paine, George Washington, Haym Solomon, and supporters from other countries to the American cause. 4. Discuss the contributions of ordinary citizens, including African Americans and women, to the American Revolution. 5. Examine efforts to mobilize support for the American Revolution by the Minutemen, Committees of Correspondence, First Continental Congress, Sons of Liberty, boycotts, and the Second Continental Congress. 6. Cite reasons for colonial victory in the American Revolution. 7. Summarize the effect of the Treaty of Paris of 1783 on the development of the United States.
H.5.5 Chart the causes and events leading to the American Revolution. Cite the reasons for the establishment of early colonies in North America.	1. Explain the impact of the French and Indian War on the American Revolution. 2. Describe the colonial reaction to the British Stamp Act, Intolerable Acts, Boston Massacre, and Tea Act.
H.5.6 Differentiate among pre-Columbian civilizations.	1. Name and describe the different pre-Columbian civilizations. 2. Compare and contrast the social systems of pre-Columbian civilizations.

793

H.5.7 Describe the impact of significant historical figures and events.	1. Identify historical figures that are used as symbols of American culture (currency, monuments, and place names, etc.). 2. Examine historical events that are significant to American culture (July 4th, Thanksgiving, Presidents Day, etc.).

794

SIXTH GRADE

CIVICS AND THE WORLD

CIVICS

STANDARD	OBJECTIVE(S)
CI.6.1 Understand the various roles and expectations of citizens throughout the world and apply that understanding to their role as a citizen of their community, state, and nation.	1. Determine how citizenship roles vary within different political structures including but not limited to democratic, totalitarian, and monarchical systems. 2. Explore how citizenship roles vary based on the population, size, and geographic position of a state including but not limited to federal, confederate, and unitary systems. 3. Compare and contrast the many forms of citizenship including, but not limited to: responsible financial activity, active and passive participation in government, being aware of important issues and challenges, and the responsible use of resources. 4. Examine basic human rights and liberties that are at the core of American culture and compare those rights to those listed in the Universal Declaration of Human Rights.
CI.6.2 Examine the challenges of civic engagement in the contemporary world.	1. Compare the positive and negative impacts of changing technologies on expanding the role of citizens throughout the world and the challenges posed by new media sources to obtaining reliable information upon which to make decisions. 2. Evaluate how globalization has changed the rights and responsibilities of citizens in relation to economic disparity and equity. 3. Assess how growing concerns about security have impacted civil liberty protections.

ECONOMICS

STANDARD	OBJECTIVE(S)
E.6.1 Explain the concept of natural resources and how people use and value them.	1. Explain the difference between a “substance” that occurs in the natural environment and a “resource” that has value. 2. Identify and explain the characteristics of renewable and non-renewable resources. 3. Identify the locations and uses of important resources in the contemporary world.

795

E.6.2 Explain the geographic patterns of economic interactions.	1. Identify primary, secondary, and tertiary economic activities in the U.S. and other countries. 2. Distinguish between subsistence and commercial livelihoods. 3. Examine ways that economic interaction and globalization occur in the contemporary world and in the past.

CIVIL RIGHTS

STANDARD	OBJECTIVE(S)
CR.6.1 Identify physical and political factors that contribute to cooperation and conflict among people.	1. Locate and describe different types of territorial divisions. 2. Identify political boundaries that are based on physical and human factors. 3. Investigate how countries cooperate in managing and using Earth's surface. 4. Describe how conflict occurs at the local level because of disagreements over the division, control, and management of Earth's surface.

796

CR.6.2 Formulate an understanding of citizenship roles in Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East and North Africa and Sub-Saharan Africa and how they are influenced by a variety of factors.	1. Draw maps that reflect the physical environment of Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa, and evaluate how that environment impacts local culture. 2. Draw a map that reflects the current political structure of Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa, including countries, major population centers, significant natural features, and capital cities. 3. Select three Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa countries and identify the cultural and historical factors (ex. First Nations, colonization, war and conquest, and religion) that have shaped the civic identity of those cultures and the expectations they have for civic participation. 4. Select three Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa countries and examine the participation of those countries in an increasingly globalized world and compare them to other nations in terms of metrics including GDP per capita, Human Misery Index, Gross National Happiness, Infant and Child Mortality Rates, Life Expectancy, and Literacy Rates. 5. Compare human rights and liberties found in Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa to core American civil values.

797

GEOGRAPHY

STANDARD	OBJECTIVE(S)
G.6.1 Describe the world using the tools of geography including maps, globes, and technological representations.	1. Explain the use of map essentials. 2. Use maps and geospatial technologies to acquire and process information from a spatial perspective. 3. Discuss how experiences and cultures influence perceptions and help people create mental maps.

G.6.2 Explain the concept of place and the factors that give meaning to particular places.	1. Describe the distinguishing physical and human characteristics of different places within the U.S. and around the world. 2. Investigate how people create places as they live in a location and make meaning and build memories there that are unique. 3. Describe how personal, community, or national identities are based, in large part, on places. 4. Explain how place-based identities can sometimes result in stereotypes of people from specific place.
G.6.3 Identify geographic patterns in the environment that result from the processes of Earth's physical systems.	1. Distinguish between atmosphere, biosphere, lithosphere, and hydrosphere. 2. Describe how Earth-Sun relationships regulate seasonal changes in temperature, precipitation, vegetation, and weather patterns at various locations on Earth. 3. Explain major processes that shape the physical environment. 4. Investigate how natural phenomenon shaped the physical environment.
G.6.4 Determine how regions are used to describe the organization of the Earth's surface.	1. Define formal, functional, and perceptual regions and identify physical and human features used as the criteria for establishing them. 2. Recognize major world regions as formal regions and describe the main characteristics that distinguish them as different from one another.
G.6.5 Describe the characteristics and causes of human population changes and migration.	1. Identify the spatial patterns of human population in terms of distribution and density. 2. Explain how physical and human factors impact the migration and population characteristics of a place. 3. Identify major migration patterns in the U.S. and the world and the push/pull factors that drive them.
G.6.6 Describe the patterns of human settlements and the factors that contribute to their formation.	1. Classify spatial patterns of settlement, including types, sizes, and models of settlement. 2. Explain why some locations are better for settlement than others. 3. Describe settlement patterns in association with the location of resources.

798

G.6.7 Compare and contrast ways that humans and the physical environment are impacted by the extraction of resources.	1. Identify and describe ways in which humans modify the physical environment. 2. Explain ways in which people use technology to access resources from the physical environment. 3. Describe examples of how the physical environment provides opportunities and constraints for human activities. 4. Identify and describe the locations of environmental hazards, proximity of human populations to them, and how people respond to natural hazards.

HISTORY

STANDARD	OBJECTIVE(S)
H.6.1 Explain the characteristics and development of culture.	1. Describe the major aspects of culture (religion/belief systems, language, ethnicity, institutions, technology, art, architecture, dress, foods, traditions, etc.). 2. Explain how culture changes as it is passed from one generation to the next. 3. Identify major culture regions of the world and explain how the characteristics of each set it apart from the others.

799

SEVENTH GRADE

EARLY WORLD HISTORY

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
7.1 Illustrate an understanding of the development of civilization in the Nile River Valley. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Inspect how the physical features of Egypt Influenced the development of civilization. 2. Investigate how religion affected the lives of the ancient Egyptians including such aspects as architecture, the afterlife, and mummification. 3. Describe the unique features of ancient Egyptian culture and social class structure. 4. Explain the power structure of the ancient Egyptian government. 5. Determine the significance of the discovery of the Rosetta Stone. 6. Trace the influence of trade on the development of Egypt.
7.2 Examine an understanding of the development of civilization in the river valleys of China. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Summarize the Influence of geographical features on the development of Ancient China. 2. Compare and contrast the origins, foundational beliefs and spread of Confucianism and Taoism. 3. Describe various aspects of culture, including language, art, architecture, and social class. 4. Explain the evolution of imperial government of China. 5. Discuss the development of the Great Wall. 6. Trace the influence of trade on the development of China.
7.3 Demonstrate an understanding of the development of civilization in Indus Valley. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the influence of geographical features on the development of Ancient Indus River Valley. 2. Analyze the influence of Hinduism on the Indian culture and social practices. 3. Describe various aspects of culture, including language, art, architecture. 4. Analyze the power held by each class of the Indian caste system. 5. Trace the influence of trade on the development of Indus River Valley.

800

7.4 Analyze the development of civilizations in ancient Greece. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the influence of geographical features on the development of the civilizations of ancient Greece. 2. Explain how the polytheistic belief system of the ancient Greeks influenced their daily lives. 3. Describe various aspects of Greek culture to include the development of language, art, architecture, social class, and philosophy. 4. Debate the various forms of government to develop in ancient Greece from monarchy, to oligarchy, to democracy. 5. Compare and contrast the civilizations of Athens and Sparta. 6. Trace the influence of trade on the development of Greece.
7.5 Inspect the development Roman Civilization. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how the geographical features of the Italian Peninsula influenced the development of Ancient Rome. 2. Compare and contrast how religion affected the daily lives of the Romans: describe various aspects of Roman culture, including art, language, social class, and recreation. 3. Compare the government structure of Rome in the Monarchy, Republic and the Empire. 4. Trace the influence of trade on the development of Rome.
7.6 Explore and evaluate the development of sub-Saharan civilizations in East, South and West Africa. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how the geographical features of sub-Saharan Africa influenced the development of civilization. 2. Inspect the origins and foundational beliefs of traditional African religions as well as the influence of Islam on the civilizations of sub-Saharan Africa. 3. Describe various aspects of culture, including art, architecture, and class structure in the civilizations that developed south of the Sahara. 4. Explain how the civilizations of sub-Saharan Africa were governed. 5. Trace the influence of trade on the development of sub-Saharan Africa.
7.7 Compare and contrast the developments of early world religions and philosophies. (Strands: Civics, Civil Rights, History)	1. Compare and contrast animism, monotheism, and polytheism. 2. Explain the origins and foundational beliefs of the spread of Christianity, Islam, and Judaism. 3. Inspect the origins and foundational beliefs of the spread of Buddhism and Hinduism.

801

7.8 Assess the Middle Ages and the emergence of nation-states in Europe. (Strands: Civics, Geography, History, Economics)	1. Explain the system of feudalism and its relationship to the development of European monarchies and nation-states, including feudal relationships, the daily life of peasants and serfs, and the manor economy. 2. Debate the effects of the Magna Carta on the feudal system and how it leads to the development of a representative government in England. 3. Summarize the events of the Crusades and explain their lasting effects on Europe. 4. Explain the role and influence of the Roman Catholic Church in medieval Europe. 5. Analyze the economic, political and social effects of the plague on Europe.
7.9 Investigate the impact of the Renaissance and the Reformation on Europe. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the influence of the idea of humanism on the development of the Renaissance. 2. Identify key figures of the Renaissance throughout Europe to include their accomplishments in the arts, music, literature, and architecture. 3. Explain the causes, events and points of contention of both the Reformation and the Counter Reformation. 4. Trace how the Renaissance encouraged the development of trade.

802

SEVENTH GRADE COMPACTED

US HISTORY FROM EXPLORATION TO RECONSTRUCTION/ CIVICS AND THE WORLD

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
7C.1 Understand the various roles and expectations of citizens throughout the world and apply that understanding to their role as a citizen of their community, state, and nation. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare and contrast how citizenship roles vary within different political structures including but not limited to democratic, totalitarian, and monarchical systems. 2. Investigate how citizenship roles vary based on the population, size, and geographic position of a state including but not limited to federal, confederate, and unitary systems. 3. Determine that citizenship takes many forms including but not limited to responsible financial activity, active and passive participation in government, being aware of important issues and challenges, and the responsible use of resources. 4. Develop understanding of basic human rights and liberties that are at the core of American culture and compare those rights to those listed in the Universal Declaration of Human Rights.
7C.2 Examine the challenges of civic engagement in the contemporary world. (Strands: Civics, Civil Rights, History)	1. Compare the positive and negative impacts of changing technologies on expanding the role of citizens throughout the world and the challenges posed by new media sources to obtaining reliable information upon which to make decisions. 2. Evaluate how globalization has changed the rights and responsibilities of citizens in relation to economic disparity and equity. 3. Assess how growing concerns about security have impacted civil liberty protections.

803

7C.3 Formulate an understanding of citizenship roles in Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East and North Africa and Sub-Saharan Africa and how they are influenced by a variety of factors. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Construct maps that reflect the physical environment of Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa and evaluate how that environment impacts local culture. 2. Create a map that reflects the current political structure of Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa including countries, major population centers, significant natural features, and capital cities. 3. Select three Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa countries and identify the cultural and historical factors (ex. First Nations, colonization, war and conquest, and religion) that have shaped the civic identity of those cultures and the expectations they have for civic participation. 4. Select three Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa countries and examine the participation of those countries in an increasingly globalized world and compare them to other nations in terms of metrics including GDP per capita, Human Misery Index, Gross National Happiness, Infant and Child Mortality Rates, Life Expectancy, and Literacy Rates. 5. Compare human rights and liberties found in Western Europe, Eastern Europe, Latin America, South Asia, East Asia, Middle East, North Africa and sub-Saharan Africa to core American civil values.
7C.4 Interpret how regions are used to describe the organization of Earth's surface. (Strands: Civil Rights, Geography)	1. Contrast formal, functional, and perceptual regions and identify physical and human features used as the criteria for establishing them. 2. Recognize major world regions as formal regions and describe the main characteristics that distinguish them as different from one another.
7C.5 Describe the characteristics and causes of human population changes and migration. (Strands: Geography, History, Economics)	1. Distinguish between the spatial patterns of human population in terms of distribution and density. 2. Explain how physical and human factors impact the migration and population characteristics of a place. 3. Trace major migration patterns in the U.S. and the world and the push/pull factors that drive them.

804

7C.6 Differentiate major aspects of the development of the United States from Exploration to 1754. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Create explorers' routes to the New World. 2. Formulate items involved in the Columbian Exchange. 3. Construct the beginning of the Atlantic slave trade with Spaniards in South/Central America. 4. Examine the diversity that emerged with the establishment of colonial America. 5. Contrast how the English Bill of Rights, The Mayflower Compact, and The Virginia House of Burgesses led to the English Colonial idea of self-government. Describe the social structures that formed in the various colonies. 6. Describe the relationships between the various Native American and colonial groups.
7C.7 Evaluate the key people, factors and events which led to the American Revolution and establishment of United States government. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain colonists' roles in the French and Indian War. 2. Recognize and trace the major reasons for English taxes after the French and Indian War and colonial responses from 1763-1774 (Proclamation of 1763, Sugar Act, Stamp Act, Townshend Acts, Boston Massacre, Tea Act, Boston Tea Party, Intolerable Acts, etc.) 3. Identify key figures in the early Revolutionary Era and their contributions (George Washington, Samuel Adams, Crispus Attucks, John Adams, John Hancock, Mercy Otis Warren, etc.)
7C.8 Identify and evaluate the people, places, and documents that caused the founding of the nation and relate their significance to the development of the American constitutional republic. (Strands: Civics, History)	1. Describe the powers given to the Continental Congress by the Articles of Confederation. 2. Analyze the weaknesses of the Articles of Confederation that led to a call for a new constitution. 3. Contrast the major compromises at the Constitutional Convention. 4. Describe the framework of the United States Constitution, including powers of the Legislative, Executive, and Judicial branches. 5. Trace the process of a bill becoming a law. 6. Debate the compromises between Federalists and Anti-Federalists that led to the Bill of Rights.
7C.9 Analyze the challenges and central ideas involved in creating the new nation. (Strands: Civics, History)	1. Evaluate the differences in political opinions of the new federal government that led to the formation of political parties. 2. Assess the importance of George Washington's Presidency and his Farewell Address on the American presidency. 3. Analyze the significance of early Supreme Court cases and explain impacts on the United States (e.g., *Marbury v. Madison, McCulloch v. Maryland, Dartmouth College v. Woodward, Worcester v. Georgia*).

805

7C.10 Interpret the geographical, social, and political causes, challenges, and effects of westward expansion. (Strands: Civics, Geography, History, Economics)	1. Identify the reasons that the United States purchased Louisiana from France. 2. Evaluate the significance of the Lewis and Clark Expedition. 3. Analyze the purpose, challenges, political, racial, religious and economic incentives associated with the concept of Manifest Destiny.
7C.11 Interpret the causes, challenges, and effects of the Industrial Revolution. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Summarize how the Industrial Revolution began in the United States. 2. Identify key people and their contributions in the Industrial Revolution. 3. Trace the development of transportation and communication systems during the Industrial Revolution.
7C.12 Evaluate the impact of the American social and political reforms on developing American society during the first half of the nineteenth century. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Summarize the works of formerly enslaved African Americans who worked to lead others to freedom. 2. Evaluate abolitionists' roles in bringing the reality of slavery to the nation (e.g., Frederick Douglass, William Lloyd Garrison, Harriet Beecher Stowe, etc.). 3. Compare and contrast the philosophies of natural rights expressed in the Declaration of Independence and the Declaration of Sentiments (e.g., phrases such as "all men are created equal, that they are endowed by their Creator with certain unalienable Rights").
7C.13 Examine the social and economic conflicts between the North and South that would eventually led to the American Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Synthesize prior knowledge of the geography of the Northern states and the Industrial Revolution to explain why slavery did not grow in the North. 2. Trace the origins and development of slavery and its impact on the nation's political, social, religious, economic, and cultural development. 3. Analyze the impact of the cotton gin on all social classes and the importance of agriculture in antebellum Mississippi. 4. Identify major legislation and Supreme Court decisions that strived to both overturn and preserve slavery resulting in sectional strife, including: Missouri Compromise, Compromise of 1850, Fugitive Slave Acts, Kansas-Nebraska Act, Bleeding Kansas, Dred Scott Decision, Underground Railroad, Quakers' influence, etc.

806

7C.14 Identify and evaluate the key events and people involved in the American Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the reasons that the North and the South waged war against one another,including: slavery, states' rights. 2. Examine key early battles and plans which shaped decisions in the North and South, including: First Bull Run, Shiloh, Antietam, Vicksburg, Gettysburg, Sherman March, Anaconda Plan, etc. 3. Identify key Northern and Southern political and military leaders. 4. Evaluate the contributions of women, African Americans and other minority groups to the war effort, including: Clara Barton, 54th Massachusetts Regiment, Native Americans. 5. Trace the events that led to northern victory in the Civil War, including: total war, industrial, population, resources, and technological advantages. 6. Analyze key documents and actions (North and South) during the Civil War, including: Emancipation Proclamation, Gettysburg Address, draft laws, income tax.
7C.15 Analyze the Reconstruction efforts in post-Civil War America. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare congressional and presidential reconstruction plans. 2. Trace the economic changes in the post-Civil War South, including: Lincoln's Plan, Wade-Davis Bill, Johnson's Plan, Radical Reconstruction. 3. Distinguish the roles of the Thirteenth, Fourteenth, and Fifteenth Amendments in expanding liberty. 4. Examine the Southern resistance to Reconstruction reforms, including: Black Codes, Jim Crow Laws, Ku Klux Klan, etc.

807

EIGHTH GRADE

US HISTORY: EXPLORATION TO 1877

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
8.1 Examine major aspects of the development of the United States from Exploration to 1754. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace explorers' routes to the New World. 2. Give examples of items involved in the Columbian Exchange. 3. Identify the beginning of the Atlantic slave trade with Spaniards in South/Central America. 4. Examine the diversity that emerged with the establishment of colonial America. 5. Describe how the English Bill of Rights, The Mayflower Compact, and The Virginia House of Burgesses led to the English Colonial idea of self-government. Describe the social structures that formed in the various colonies. 6. Describe the relationships between the various Native American and colonial groups.
8.2 Evaluate the key people, factors and events which led to the American Revolution and establishment of United States government. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain colonists' roles in the French and Indian War. 2. Recognize and trace the major reasons for English taxes after the French and Indian War and colonial responses from 1763-1774 (Proclamation of 1763, Sugar Act, Stamp Act, Townshend Acts, Boston Massacre, Tea Act, Boston Tea Party, Intolerable Acts, etc.). 3. Identify key figures in the early Revolutionary Era (George Washington, Samuel Adams, Crispus Attucks, John Adams, John Hancock, Mercy Otis Warren, etc.). 4. Compare and contrast the decisions that the First Continental Congress and Second Continental Congress made. 5. Examine the immediate events that led to the first shot of the Revolutionary War and the significance of major battles and places (Bunker Hill/Breeds Hill, Long Island, Trenton/Princeton, Saratoga, Valley Forge, Monmouth, Cowpens, Yorktown, Morristown, etc.). 6. Recognize key people's roles during the Revolutionary War (George Washington, Benedict Arnold, Horatio Gates, Nathanael Greene, Henry Knox, Charles Cornwallis, Abigail Adams, Mercy Otis Warren, Deborah Sampson, Loyalists, Patriots, etc.). 7. Summarize the terms of the Treaty of Paris, 1783.

808

8.3 Identify and evaluate the people, places, and documents that caused the founding of the nation and relate their significance to the development of the American constitutional republic. (Strands: Civics, Civil Rights, History)	1. Describe the powers given to the Continental Congress by the Articles of Confederation. 2. Analyze the weaknesses of the Articles of Confederation that led to a call for a new constitution. 3. Identify the major compromises at the Constitutional Convention. 4. Describe the framework of the United States Constitution, including powers of the Legislative, Executive, and Judicial branches. 5. Describe the process of a bill becoming a law. 6. Describe the compromises between Federalists and Anti-Federalists that led to the Bill of Rights.
8.4 Analyze the challenges and central ideas involved in creating the new nation. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate the differences in political opinions of the new federal government that led to the formation of political parties. 2. Distinguish the importance of George Washington's Presidency and his Farewell Address on the American Presidency. 3. Analyze the significance of early Supreme Court cases and explain impacts on the United States, including: *Marbury v. Madison, McCulloch v. Maryland, Dartmouth College v. Woodward, Worcester v. Georgia*. 4. Assess the United States' development and impact of foreign policy, including: response to the French Revolution, Neutrality Proclamation, Alien and Sedition Acts, XYZ Affair, Embargo Act, impressment, War of 1812, Era of Good Feelings, etc.
8.5 Interpret the geographical, social, and political causes, challenges, and effects of westward expansion. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the reasons that the United States purchased Louisiana from France. 2. Discuss the significant of the Lewis and Clark Expedition. 3. Analyze the purpose, challenges, political, racial, religious and economic incentives associated with the concept of Manifest Destiny. 4. Summarize Andrew Jackson's roles in the growing United States, including: Jacksonian Era, "Corrupt Bargain," Democratic Party, Bank War, Nullification Crisis, Indian Removal, etc. 5. Trace Indian Removal including the Cherokees' "Trail of Tears." 6. Explain the causes and effects of Texas Independence and Mexican-American War.

8.6 Interpret the causes, challenges, and effects of the Industrial Revolution. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Summarize how the Industrial Revolution began in the United States. 2. Identify key people and their contributions in the Industrial Revolution. 3. Trace the development of transportation and communication systems during the Industrial Revolution. 4. Compare and contrast the cultural, religious and social impact in American life that resulted from the Industrial Revolution. 5. Assess how geography led to the location of factories, including: rivers, urban areas, etc.
8.7 Evaluate the impact of the American social and political reforms on developing American society during the first half of the nineteenth century. (Strands: Civics, Civil Rights, History)	1. Summarize the works of formerly enslaved African Americans who worked to lead others to freedom. 2. Evaluate abolitionists' roles in bringing the reality of slavery to the nation, including, Frederick Douglass, William Lloyd Garrison, Harriet Beecher Stowe, etc. 3. Compare and contrast the philosophies of natural rights expressed in the Declaration of Independence and the Declaration of Sentiments, including: phrases such as "all men are created equal, that they are endowed by their Creator with certain unalienable Rights." 4. Examine leaders in the women suffrage movement, including: biographies, writings, and speeches of Dorothea Dix, Elizabeth Cady Stanton, Lucretia Mott, Susan B. Anthony, and their influence on women's rights.
8.8 Interpret the social and economic conflicts between the North and South that would eventually led to the American Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Synthesize prior knowledge of the geography of the Northern states and the Industrial Revolution to explain why slavery did not grow in the North. 2. Trace the origins and development of slavery and its impact on the nation's political, social, religious, economic, and cultural development. 3. Analyze the impact of the cotton gin on all social classes and the importance of agriculture in antebellum Mississippi. 4. Identify major legislation and Supreme Court decisions that strived to both overturn and preserve slavery resulting in sectional strife, including: Missouri Compromise, Compromise of 1850, Fugitive Slave Acts, Kansas-Nebraska Act, Bleeding Kansas, Dred Scott Decision, Underground Railroad, Quakers' influence, etc.

810

8.9 Identify and evaluate the key events and people involved in the American Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the reasons that the North and the South waged war against one another, including: slavery, states' rights. 2. Examine key early battles and plans which shaped decisions in the North and South, including: First Bull Run, Shiloh, Antietam, Vicksburg, Gettysburg, Sherman March, Anaconda Plan, etc. 3. Identify key Northern and Southern political and military leaders and their contributions. 4. Evaluate the contributions of women, African Americans and other minority groups to the war effort, including: Clara Barton, 54th Massachusetts Regiment, Native Americans. 5. Trace the events that led to northern victory in the Civil War, including: total war, industrial, population, resources, and technological advantages. 6. Analyze key documents and actions (North and South) during the Civil War, including: Emancipation Proclamation, Gettysburg Address, draft laws, income tax.
8.10 Analyze the Reconstruction efforts in post-Civil War America. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare congressional and presidential reconstruction plans. 2. Trace the economic changes in the post- Civil War South, including: Lincoln's Plan, Wade-Davis Bill, Johnson's Plan, Radical Reconstruction. 3. Distinguish the roles of the Thirteenth, Fourteenth, and Fifteenth Amendments in expanding liberty. 4. Examine the Southern resistance to Reconstruction reforms, including: Black Codes, Jim Crow Laws, Ku Klux Klan, etc.

811

MISSISSIPPI STUDIES

½ CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
MS.1 Examine the geographic features of Mississippi. (Strands: Geography, History, Economics)	1. Identify the physical features of Mississippi, including landforms and soil regions. 2. Differentiate between various geographic regions. 3. Identify and assess the geographic and physical features that set Mississippi apart from other states. 4. Explain how the features of Mississippi contribute to the social and economic development of the state. 5. Evaluate the effects of geographic features (Mississippi River, Gulf Coast) on technological and economic development in Mississippi. 6. Assess the political, economic, and social effects of geographic processes (Great Flood of 1927, Hurricanes Camille and Katrina) on technological and economic development in Mississippi.
MS.2 Compare and contrast the indigenous cultures in Mississippi and assess their lasting impact on its history and traditions. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the impact of Mississippi's geography on the cultural development of its First Nations. 2. Trace the relationships between the various indigenous groups in Mississippi, including their alliances with the Europeans who settled in what would become the Mississippi Territory. 3. Evaluate the impact of native cultures on Mississippi, past and present.
MS.3 Examine the motivations and the effects of European settlement in Mississippi. (Strands: Civics, Geography, History, Economics)	1. Compare and contrast the first French, Spanish and English settlements in Mississippi. 2. Assess the results of European exploration and settlement on the cultural development of Mississippi (e.g. Code Noir). 3. Evaluate the impact of European cultures on modern Mississippi.

812

MS.4 Explain the development of the Mississippi Territory and its evolution to statehood. (Strands: Civics, Geography, History, Economics)	1. Investigate Mississippi in the colonial and revolutionary periods. 2. Examine the conflicts, treaties, and subsequent removal of indigenous Mississippians. 3. Trace the events and legislative processes necessary for Mississippi to gain statehood. 4. Analyze government and political influences throughout the state of Mississippi. 5. Analyze the constitutions of Mississippi and make comparisons to the United States Constitution.
MS.5 Analyze the characteristics of antebellum Mississippi, with an emphasis on the plantation system and the evolution of slavery. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the evolution of slavery in Mississippi. 2. Discuss the conditions that drove the plantation economy in antebellum Mississippi. 3. Contrast the culture and social structure that developed in Mississippi during the antebellum period.
MS.6 Recognize the role of Mississippi during the Civil War and evaluate the effects of Reconstruction within the state. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine the roles and contributions of women and minorities in the Civil War. 2. Analyze the military actions that took place in Mississippi during the Civil War. 3. Detail the effects of the Civil War on Mississippi's economy. 4. Trace the various attempts at reconstruction in Mississippi and the responses to them. 5. Examine the lasting cultural effects of the Civil War and Reconstruction on Mississippi.
MS.7 Examine the economic, political and social changes in post Reconstruction Mississippi. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate the impact of Reconstruction on Mississippi's social structure. 2. Trace the changes in Mississippi's economy and technology in the decades following Reconstruction. 3. Analyze Reconstruction reforms that contributed to the social and economic realities for African Americans during the Jim Crow Era in Mississippi. 4. Examine the changes of the Mississippi Constitution from Reconstruction to 1890.
MS.8 Evaluate the role of Mississippi in the Civil Rights Movement. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the significant figures, groups, events, and strategies of the Civil Rights Movement in Mississippi. 2. Examine the conflict between the Federal and State governments during the Civil Rights Era. 3. Evaluate the lasting impact of the Civil Rights movement on Mississippi.

MS.9 Evaluate the economic characteristics of modern Mississippi. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe Mississippi's modern economy. 2. Analyze the economic development of major industries in Mississippi. 3. Trace Mississippi's global economic relationships. 4. Analyze the current trends and historic record of poverty and wealth distribution in Mississippi.
MS.10 Analyze the structure and function of local and state government in Mississippi. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate the rights and responsibilities of Mississippi citizenship. 2. Identify and describe the duties of three branches of state government. 3. Examine the various forms of local governments and evaluate how they meet the needs of local communities. 4. Compare types of services offered by local and state government to meet the needs of Mississippians.
MS.11 Examine the cultural impact of Mississippi artists, musicians, and writers on the state, nation, and world. (Strands: Civil Rights, Geography, History, Economics)	1. Describe the accomplishments of important Mississippi artists. 2. Analyze how Mississippi's history has impacted artists, musicians, and writers. 3. Examine the role of cultural diversity in the artistic, musical, and literary traditions of Mississippi. 4. Analyze the impact of religious traditions on artistic expressions of Mississippians. 5. Identify locations in Mississippi that have artistic significance.
MS.12 Examine the contributions of various ethnic groups in Mississippi. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Identify the various ethnic groups in Mississippi. 2. Cite evidence of the growing ethnic diversity of Mississippi's populations. 3. Analyze the push and pull factors of migrating to Mississippi. 4. Describe the contributions of various ethnic groups to Mississippi.

814

INTRODUCTION TO GEOGRAPHY

½ CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
ITG.1 Investigate the world using spatial terms, concepts, and thinking and employing maps and other geographic representations, tools, and technologies. (Strands: Geography, History, Economics)	1. Evaluate the advantages and disadvantages of using different maps and geospatial technologies for analyzing spatial distributions and patterns on Earth. 2. Utilize maps and geospatial technologies to explain relationships among peoples, places, and environments. 3. Categorize the geographic organization of people, places, and environments using spatial models.
ITG.2 Assess the nature, genesis, evolution, and meaning of places. (Strands: Geography, History, Economics)	1. Distinguish how the physical and human characteristics of different places contribute to different personal, community, and national identities. 2. Contrast the ways that places change as a result of physical and human processes. 3. Investigate how culture and experience influence people's perceptions of places.
ITG.3 Contrast how regions are used to describe the organization of Earth's surface. (Strands: Geography, History, Economics)	1. Utilize formal, functional, and perceptual delineations of regions to highlight the different understandings they produce. 2. Interpret processes and reasons for regional change. 3. Analyze interactions among regions to show transnational relationships, including the flow of commodities and internet connectivity. 4. Trace how globalization processes produce variable impact on peoples, places, and environments in different regions of the world. 5. Contrast how perceptions of places and regions are based on direct and indirect experiences and that those perceptions can change.

815

ITG.4 Compare and contrast geographic patterns in the environment that result from the processes of Earth's physical systems (atmosphere, biosphere, lithosphere, and hydrosphere). (Strands: Geography, History, Economics)	1. Formulate how the Inter Tropical Convergence Zone migrates seasonally because of Earth-Sun relationships and the effects produced by this on places around the Earth. 2. Illustrate how processes that shape the physical environment produce different conditions in different places on Earth. 3. Compare how ecosystems vary from place to place and over time as a result of physical processes.
ITG.5 Identify and describe the characteristics and processes of human population and migration on Earth. (Strands: Civil Rights, Geography, History, Economics)	1. Analyze the demographic structure of human populations on Earth and the implications of different demographic structures. 2. Trace the changes in human populations that result from changes in the rate of natural increase. 3. Create the major migration streams in the U.S. and the world at present and in the past in terms of time, distance, and cause. 4. Contrast the consequences of migration for people as well as on the origin and destination places.
ITG.6 Apply the complex, multifaceted concept of culture to places on Earth. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate contact between differing cultures. 2. Compose the diffusion of ideas and technologies that causes change in the characteristics and distributions of cultures. 3. Justify how cultural landscapes exist and vary across space and time.
ITG.7 Trace the patterns and networks of economic interdependence on Earth's surface. (Strands: Civics, Geography, History, Economics)	1. Investigate how and why the ratio of primary, secondary, and tertiary livelihoods differs from country to country around the world and has changed over time. 2. Compare and contrast the advantages and disadvantages of subsistence and commercial livelihoods and how people move from one to the other and what the changes have been over time. 3. Analyze the impact of economic interdependence and globalization on places and their populations and environments. 4. Illustrate how integrated transportation and communication networks provide the infrastructure essential to economic interdependence at local to global scales.

816

ITG.8 Analyze boundaries and territorially delimited entities and the cooperation and conflicts that occur among them. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze how different types of territories manage and control Earth's surface in different ways. 2. Compare the advantages and disadvantages of political and other boundaries that are based on physical and human factors. 3. Debate how countries and organizations make agreements to cooperate in managing and using Earth's surface. 4. Estimate how conflict occurs at the international level because of disagreements over the division, control, and management of Earth's surface.
ITG.9 Interpret how human actions modify the physical environment. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Interpret how human-induced changes in one place can affect the physical environment in other places. 2. Measure how the use of technology has changed the scale at which people can modify the physical environment. 3. Debate how the physical environment can accommodate and be endangered by human activities.
ITG.10 Analyze the patterns of human settlements and explain their processes of development and operation. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Diagram the different types of urban land uses and analyze how they are systematically arranged. 2. Compare how human activities have contributed to the development of settlements at particular locations. 3. Contrast how the number and types of services differ for settlements of various sizes (small to large).
ITG.11 Illustrate how human systems develop in response to physical environment conditions. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare how characteristics of the physical environment can be both opportunities and constraints depending on people's knowledge, technology, and choices. 2. Explain the processes that produce various environmental hazards. 3. Formulate how people perceive, prepare, and cope with environmental hazards in different ways, or fail to do so.
ITG.12 Examine the cultural concept of natural resources and the changes in the spatial distribution, quantity, and quality of resources through time and by location. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Categorize how cultures differ in their definition and use of resources. 2. Analyze the current use of renewable, nonrenewable, and flow resources with respect to suitability, viability, and sustainability. 3. Inspect the processes by which the main resources needed in the contemporary world are formed, extracted, refined, and transported.

817

WORLD HISTORY: AGE OF ENLIGHTENMENT TO PRESENT

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
WH.1 Investigate the important ideas and achievements of scientists and philosophers in the Scientific Revolution and the Age of Enlightenment. (Strands: Geography, History, Economics)	1. Identify the new theories of cosmology as described by Nicolaus Copernicus, Galileo Galilei, and Sir Isaac Newton. 2. Compare and contrast the new methods of reasoning as demonstrated by Francis Bacon (inductive reasoning and the scientific method) and Rene Descartes (deductive reasoning). 3. Contrast the opposing views of the Thomas Hobbes and John Locke concerning the domination of absolute governments. 4. Differentiate the influences of developing democratic ideals as perceived by Charles de Montesquieu, Voltaire, and Jean-Jacques Rousseau.
WH.2 Analyze the causes of the French Revolution and its impact on Europe. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine various opinions concerning the development of democratic ideals amidst the economic troubles of the French social classes. 2. Explain the impact of the successful American Revolution on the French call for social equality as expressed in the "Declaration of the Rights of Man and the Citizen" (1789). 3. Examine the geographic and political influence of Napoleon on the concepts of liberalism and nationalism that spread across Europe. 4. Analyze the impact of the revolutionary period on the abolition of the Atlantic slave trade, the emancipation of Spanish America, and the issuance of the Monroe Doctrine by the United States. 5. Evaluate the attempt to return Europe to the rule of absolutism as prescribed by the Congress of Vienna and the creation of the Concert of Europe.

818

WH.3 Examine the origins, impact, and spread of the Agricultural and Industrial Revolutions. (Strands: Civics, Geography, History, Economics)	1. Contrast the important factors that contributed to the beginnings of the Industrial Revolution in England, including a supportive government, inventive people, access to raw materials, and investment wealth. 2. Examine important concepts and inventors during the Agricultural Revolution including Charles Townshend (crop rotation), John Deere (steel plow), Cyrus McCormick (mechanical reaper), and the Enclosure Movement. 3. Evaluate important concepts and inventors during the Industrial Revolution including James Hargreaves (spinning jenny), Eli Whitney (cotton gin), and James Watt (steam engine), Thomas Edison (electrical innovations), and the Bessemer Process. 4. Contrast factors that enhanced or impeded the spread of Industrial Revolution into Eastern Europe and the Far East.
WH.4 Analyze capitalism as the economic philosophy that developed as a result of the Industrial Revolution and compare economic reactions to capitalism including socialism and Marxism. (Strands: Civics, Geography, History, Economics)	1. Compare and contrast the principles of capitalism as developed by economists Adam Smith, Thomas Malthus, and David Ricardo. 2. Examine socialist responses to the Industrial Revolution and the dominance of capitalism including the ideas of Henri Saint-Simon, Charles Fourier, Robert Owen, and the influence of unionism. 3. Compare the development of "scientific socialism" by Karl Marx and Frederick Engels to utopian socialism and capitalism.
WH.5 Analyze the emergence of nationalism and its role in the nineteenth century revolutions, unification movements, and the emergence of multinational empires. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Debate the failure of European monarchs to reestablish absolutism in the wake of the French Revolution during of the revolutionary period of 1848. 2. Examine the shift in the European balance of power that emerged due to Italy's unification, led by Count Camillo Cavour, and Germany's unification, led by Otto von Bismarck. 3. Analyze the characteristics that defined Russia, Austria-Hungary, and the Ottoman Empire as multinational empires. 4. Illustrate events in Russian history that propelled it into the twentieth century including the reign of the Romanov dynasty, Russian expansionism, and emancipation of the serfs. 5. Examine the creation of the dual-monarchy of Austria-Hungary and the ethnic complexity of the Ottoman Empire in Asia and the European Balkan Peninsula. 6. Compare the impact of modern societal changes that improved urban development during the nineteenth century.

WH.6 Investigate the mass movement of rural-to-urban migration as a result of industrialization. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Appraise government reactions to social problems including Britain's and Germany's passage of labor laws, early welfare, and insurance programs. 2. Investigate major social problems and solutions caused by urban overcrowding and lack of environmental control, including the contributions of Baron Haussmann (city redesign), Edwin Chadwick (sanitary conditions), Louis Pasteur, and Joseph Lister (germ theory). 3. Inspect modern intellectual movements and contributions that had international impact, including the ideas Charles Darwin (natural selection), Emmeline Pankhurst (women's suffrage), Marie Curie (radium), Sigmund Freud (psychoanalysis), and Albert Einstein (Atomic Theory of Relativity).
WH.7 Evaluate western imperialism as a force of global change, emphasizing its positive and negative impact on colonized peoples and lands. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Appraise various social justifications for imperialism including the spread of Christianity, democratic ideals, education, and medical advances. 2. Formulate various economics factors for imperialism including raw material / markets, employment for governing countries, and the concept of Social Darwinism as a justification for subjugation over imperial claims. 3. Trace important events in Asian imperialism including the establishment of Chinese spheres of influence by western powers, British colonization of India, Opium War, Hawaiian annexation by the United States, U.S.-Filipino War, Boxer Rebellion, U. S. Open Door Policy, and Russo-Japanese War. 4. Compare important events in the partition of Africa by European powers such as the French occupation of Algeria, Belgium's claim to the Congo, construction of the Suez Canal, defeat of Italy by Ethiopia, Anglo-Boer Wars, and development of "apartheid" in South Africa. 5. Inspect important events in Latin American imperialism by the United States including the Spanish-American War, issuance of the Roosevelt Corollary, and construction of the Panama Canal.

820

WH.8 Examine the causes, effects, and significant events of World War I. (Strands: Civics, Geography, History, Economics)	1. Contrast the primary causes of World War I, including the rise of militarism, alliance systems, nationalism, imperialism, and assassination of Archduke Franz Ferdinand. 2. Examine the role of propaganda as a means to mobilize civilian populations during World War I, particularly evaluating the effect of prolonged trench-warfare (of attrition). 3. Analyze the major geopolitical shift of United States' foreign policy during World War I in order to "make the world safe for democracy," marking the transition from a policy of isolation to an increased role in international affairs. 4. Investigate the issues created by the Treaty of Versailles (1919), including its punitive stance toward Germany, the creation of the League of Nations, the mandate system, and the geopolitical changes that occurred following World War I. 5. Evaluate the physical and economic destruction caused by World War I.
WH.9 Contrast the challenges of the interwar period, emphasizing the rise of totalitarian states. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the Treaty of Versailles as an agent for unrest. 2. Identify how the economic crisis of the Great Depression led to the rise of totalitarian dictators in Italy, Germany, and the U.S.S.R. 3. Justify how the effects of the Great Depression impacted the relationships between the United States and foreign nations, including: the Dawes Plan in Germany and soured relations in Latin America. 4. Evaluate the world-wide decolonization movement, addressing nationalism, democracy, and religious influences pertaining to international conflicts, including: the independence movements within the British Empire, the French Algerian War, and Arab-Israeli conflicts. 5. Examine how civil wars in Russia and China led to the growth and spread of Communism, including: the rise of Vladimir Lenin and the Bolsheviks in Russia and Mao Zedong in China. 6. Analyze Japanese militarism and territorial expansion, including: Manchuria and the Rape of Nanjing.

821

WH.10 Compare and contrast the causes, effects, and significant events of World War II. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze totalitarian aggression by Germany, Italy, Japan, and the Soviet Union, and examine how the administrations of Hitler, Mussolini, Hirohito, and Stalin prompted the outbreak of war. 2. Illustrate the major turning points of World War II in both the European and Pacific theatres, including: the German invasion of Poland, North African Campaign, Battle of Midway, Battle of Stalingrad, D-Day Invasion, and Battle of the Bulge. 3. Trace the geopolitical shifts following World War II, including the bi-polarization of Europe, the creation of Israel, and anti-Semitic responses. 4. Explain how ongoing political and geographic disputes necessitated the creation of the United Nations to successfully maintain global order during periods of international unrest, including: the Atomic Era and the prevention of war crimes and "crimes against humanity."
WH.11 Analyze the period of post-World War II recovery and realignment, emphasizing the social, economic, and political effects of the Cold War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Investigate the international development of the post-World War II world by analyzing various economic, political, and military shifts of the Cold War era, including: effects of the Truman Doctrine and the Marshall Plan in Europe and Southeast Asia, nationalism in Africa and the Middle East, détente in China, and the fall of Communism in the Soviet Union. 2. Formulate the development of the two Cold War superpowers--the United States and the Soviet Union; trace the origin of the Cold War through the Yalta and Potsdam Conferences, Marshall Plan, Truman Doctrine, "Iron Curtain," NATO (North Atlantic Treaty Organization), and Warsaw Pact. 3. Analyze how American democracy and Soviet communism differed in their methods of ideological expansion, including: expansionist efforts of the Soviet Union versus America's policy of containment in Greece and Turkey, Eastern Europe, Germany, South Korea, Vietnam, etc. 4. Trace the political movements of various nationalist groups and their leaders in Latin America, the Middle East, French-Indochina, and Africa, including: Fidel Castro in Cuba, Ho Chi Minh in Vietnam, Gamal Abdel Nasser in Egypt, etc. 5. Illustrate the collapse of the Soviet Union; identify Russia's struggle for democracy, including the impact of liberalism, perestroika (free markets), glasnost (openness), and economic recovery brought on by Mikhail Gorbachev, Ronald Reagan, and Boris Yeltsin.

822

WH.12 Debate the changing role of globalization in the contemporary world. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine issues that helped advance civil and human rights, including the role of Nelson Mandela in South Africa and Martin Luther King Jr. in the United States; also address the impact of humanitarian military engagements such as the Balkan Wars in Kosovo and Bosnia. 2. Examine OPEC's dominance over the world's oil market and its influence in determining the foreign policies of Middle Eastern nations, including: oil embargos, the Iranian Hostage Crisis, and the Gulf Wars. 3. Analyze the aspects of modern domestic and global terrorism including the September 11th attack, the War in Afghanistan, and the rise of ISIS. 4. Assess the impact of global reactions to immigration, national deficits, and anti-austerity movements, including the Arab Spring, British Brexit Movement, and the election of Donald Trump as President of the United States. 5. Debate the impact of modern technology as a prompter of immediate reactions to government policies and discuss the influence of social media on various facets of society and culture.

823

US HISTORY: 1877 TO PRESENT

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
US.1 Westward Expansion: Trace how economic developments and the westward movement impacted regional differences and democracy in the post Reconstruction era. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Illustrate the impact of Manifest Destiny on the economic and technological development of the post-Civil War West, including: mining, the cattle industry, and the transcontinental railroad. 2. Compare the changing role of the American farmer, including: establishment of the Granger movement and the Populist Party and agrarian rebellion over currency issues. 3. Evaluate the Dawes Act for its effect on tribal identity, land ownership, and assimilation of American Indians. 4. Explain the impact of the Populist movement on the role of the federal government in American society.

824

US.2 Industrialization: Analyze industrialization and its impact on the United States in the late 19th and early 20th century. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Interpret the impact of change from workshop to factory on workers' lives, including: The New Industrial Age from 1870 to 1900, the American Federation of Labor of Labor-Congress of Industrial Organizations (AFL-CIO), the Industrial Workers of the World (IWW), the Pullman Strike, the Haymarket Square Riot, and impact of John D. Rockefeller, Andrew Carnegie, Samuel Gompers, Eugene V. Debs, A. Philip Randolph, and Thomas Alva Edison. 2. Compare population percentages, motives, and settlement patterns of immigrants from Asia, Europe, and including: Chinese Exclusion Act regarding immigration quotas. 3. Interpret the impact of the New Industrial Age on life in urban areas, including: working and living conditions, the Labor Union movement, "New Immigrants," Knights of Labor, American Federation of Labor, and the Industrial Workers of the World, the Pullman Strike and the Haymarket Square Riot, Samuel Gompers, Eugene V. Debs, Jane Addams and the Social Gospel. 4. Analyze the effects of laissez-faire economics on business practices in the United States and their effects, including: John D. Rockefeller, Andrew Carnegie, JP Morgan, and Bessemer Process, horizontal and vertical integration, Sherman Anti-trust Act. 5. Trace the evolution from the power of the political machines to Civil Service reform, including: Spoils/patronage system, Tweed Ring, Thomas Nast, and Pendleton Civil Service Act.
US.3 Progressive Movement: Evaluate causes, goals and outcomes of the Progressive Movement. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the impact of media on public opinion during the Progressive Movement, including: Upton Sinclair, Jacob A. Riis, and Ida M. Tarbell, women's suffrage and Temperance Movement. 2. Trace the development of political, social, and cultural movements and subsequent reforms, including: Jim Crow laws, Plessy vs. Ferguson, women's suffrage, temperance movement, Niagara movement, public education, the National Association for the Advancement of Colored People (NAACP), and Marcus Garvey. 3. Compare and contrast presidential domestic policies, including: Theodore Roosevelt, William Taft, and Woodrow Wilson; Trustbusting, Pure Food and Drug Act, Meat Inspection Act, Federal Reserve, Conservation, the Hepburn Act, and the Federal Trade Commission. 4. Trace national legislation resulting from and affecting the Progressive Movement, including: the Sherman Antitrust Act and the Clayton Antitrust Act.

825

US.4 Imperialism/WWI: Assess the domestic and foreign developments that contributed to the emergence of the United States as a world power in the twentieth century. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Investigate causes of the Spanish-American War, including: yellow journalism, the sinking of the Battleship *USS Maine*, and economic interest in Cuba. 2. Evaluate the role of the Rough Riders on the iconic status of President Theodore Roosevelt. 3. Analyze consequences of the Spanish-American War, including: The Treaty of Paris of 1898, insurgency in the Philippines, and territorial expansion in the Pacific and the Caribbean. 4. Trace the involvement of the United States in the Hawaiian Islands for economic and imperialistic interests. 5. Evaluate the role of the Open-Door policy and the Roosevelt Corollary on America's expanded economic and geographic interests. 6. Compare the executive leadership represented by William Howard Taft's Dollar Diplomacy, Theodore Roosevelt's Big Stick Diplomacy, and Woodrow Wilson's Moral Diplomacy. 7. Evaluate the factors that led to US involvement in World War I. 8. Investigate controversies over the Treaty of Versailles of 1919, Woodrow Wilson's Fourteen points, and the League of Nations.

826

US.5 1920s: Debate the impact of social changes and the conflict between traditionalism and modernism in the 1920s. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Debate radio, cinema, and print media for their impact on the creation of mass culture. 2. Analyze works of major American artists and writers, including: F. Scott Fitzgerald, Ernest Hemingway, Langston Hughes, and H.L. Mecken, to characterize the era of the 1920s. 3. Determine the relationship between technological innovations and the creation of increased leisure time. 4. Assess effects of overproduction, stock market speculation, and restrictive monetary policies on the pending economic crisis. 5. Compare and contrast the impact of the Smoot-Hawley Tariff Act on the global economy and the resulting worldwide depression. 6. Analyze the impact of the changes in the 1920s on the economy, society, and culture, including: mass production, the role of credit, the effect of radio in creating a mass culture, and the cultural changes exemplified by the Harlem Renaissance. 7. Debate the causes and effects of the social change and conflict between traditional and modern culture that took place during the 1920s, including: the role of women, the Red Scare, immigration quotas, Prohibition, and the Scopes trial. 8. Examine notable authors of the 1920s, including: John Steinbeck, William Faulkner, and Zora Neale Hurston. 9. Analyze the Great Depression for its impact on the American family, including: Bonus Army, Hoovervilles, Dust Bowl, Dorthea Lange. 10. Investigate conditions created by the Dust Bowl for their impact on migration patterns during the Great Depression.
US.6 Great Depression/New Deal: Analyze the causes and effects of the Great Depression and New Deal. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare the causes of the Great Depression, including: the uneven distribution of wealth; rampant stock market speculation; the collapse of the farm economy; policies of the federal government and the Federal Reserve System; overproduction of industry; and the impact of the Smoot-Hawley Tariff Act. 2. Investigate how President Hoover's initial conservative response to the Great Depression failed. 3. Analyze President Franklin Roosevelt's New Deal as a response to the economic crisis of the Great Depression, including: the effectiveness of New Deal programs in relieving suffering, achieving economic recovery, and promoting organized labor. 4. Evaluate the impact of Franklin D. Roosevelt on the presidency and the New Deal's impact on the expansion of federal power.

827

US.7 WWII at home: Examine the nation's role in World War II and the impacts on domestic affairs. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the isolationist debate as it evolved from the 1920s to the bombing of Pearl Harbor and the subsequent change in United States' foreign policy. 2. Examine roles of significant World War II leaders, including: Franklin D. Roosevelt, Harry S Truman, Dwight D. Eisenhower, and George S Patton. 3. Describe military strategies of World War II, including: blitzkrieg, island-hopping, and amphibious landings. 4. Analyze war crimes committed during World War II, including: The Holocaust, the Bataan Death March, the Nuremberg Trials, including: the post-war Universal Declaration of Human Rights, and the Genocide Convention. 5. Analyze the reasons for and results of dropping atomic bombs on Japan. 6. Describe the mobilization of various industries to meet war needs. 7. Explain how the US expanded the US military through the use of selective service. 8. Trace the way in which the US government took control of the economy through rationing, price controls, limitations on labor unions, the sale of bonds and wage controls. 9. Identify ways in which the roles of women and minorities changed during the war. 10. Summarize the discrimination the Japanese Americans faced during WWII. Include the *Korematsu v. US* supreme court case.

828

US.8 Post WWII to 1960s: Assess changes in the United States including the domestic impact on national security, individual freedoms, and changing culture. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Distinguish between cold war and a conventional war. 2. Locate areas of conflict during the Cold War from 1945 to 1960, including East and West Germany, Hungary, Poland, Cuba, Korea, and China. 3. Analyze the breakdown of relations between the US and USSR after WWII. 4. Identify and explain the steps the US took to contain communism during the Truman and Eisenhower administration. 5. Describe how the Truman doctrine and the Marshall plan deepened the tensions between the US and USSR. 6. Identify the importance of the following on cold war tensions, including: Berlin Blockade, Berlin Airlift, NATO, Warsaw Pact, and Iron Curtain. 7. Evaluate the role, function, and purpose of the United Nations (UN). 8. Examine United States reaction to Communist takeover in China. 9. Summarize the Korean War and its impact on the Cold War. 10. Describe US government efforts to control the spread of communism within the United States and its impact on individual freedoms. 11. Discuss the role of the space race in the cold war taking into account Sputnik, the U-2 incident, and NASA.

829

US.9 Kennedy, Johnson, Nixon: Demonstrate an understanding of domestic and international issues each administration. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the domestic policies and events during the presidencies of Presidents Kennedy, Johnson, and Nixon, including: The New Frontier, Great Society, "the silent majority," the anti-war and counter-cultural movements, the Watergate scandal, including the Supreme Court case, U.S. v. Nixon. 2. Debate the reasons for the nation's changing immigration policy, with emphasis on how the Immigration Act of 1965 and successor acts have transformed American society. 3. Cite and analyze the impact of other minority groups to those of the Civil Rights Movement led predominantly by African Americans, including: AIM, UFW, American Disabilities Act. 4. Describe the changing roles of women in society as reflected in the entry of more women into the labor force and the changing family structure, including Equal Pay Act. 5. Analyze the impact of the environmental movement and the development of environmental protection laws. 6. Explain how the federal, state, and local governments have responded to demographic and social changes, including: population shifts to the suburbs, racial concentrations in the cities, Rustbelt-to-Sunbelt migration, international migration, decline of family farms, increases in out-of-wedlock births, and drug abuse.
US.10 Explain the reaction to Carter's Administration and the emergence of the Conservative movement and its impact on domestic and international issues from 1974 to 1992. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Appraise the influence of the conservative movement on social, economic and environmental issues from 1974 to 1992, including: Moral Majority, Roe vs. Wade, Bakke Case, Love Canal, Three Mile Island, Reaganomics, PACTO, etc. 2. Analyze Reagan's and Bush's pro-active international policies, including: Invasion of Granada, Iran-Contra, SDI, End of the Cold War, Invasion of Panama, and Persian Gulf War.

830

US.11 Civil Rights Movement: Evaluate the impact of the Civil Rights Movement on social and political change in the United States. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the importance of President Truman's order to integrate the U.S. military and the federal government. 2. Trace the federal government's involvement in the modern Civil Rights Movement, including: the abolition of the poll tax, the nationalization of state militias, *Brown versus Board of Education* in 1954, the Civil Rights Acts of 1957 and 1964, and the Voting Rights Act of 1965. 3. Explain contributions of individuals and groups to the modern Civil Rights Movement, including: Martin Luther King, Jr., James Meredith, Medgar Evers, Thurgood Marshall, the Southern Christian Leadership Conference (SCLC), the Student Nonviolent Coordinating Committee (SNCC), the Congress of Racial Equality (CORE), the National Association for the Advancement of Colored People (NAACP), and the civil rights foot soldiers. 4. Describe the development of a Black Power movement, including: the change in focus of the SNCC, the rise of Malcolm X, and Stokely Carmichael and the Black Panther movement. 5. Describe the significance of Martin Luther King, Jr.'s *Letter from a Birmingham Jail* and his *I Have a Dream* speech. 6. Describe the accomplishments of the modern civil rights movement, including: the growth of the African American middle class, increased political power, and declining rates of African American poverty.

831

US.12 1992 to Present: Explain key domestic issues as well as America's role in the changing world from 1992 to present. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine the Contract with America, Impeachment Trial of William "Bill" Clinton, Eminent Domain issues, No Child Left Behind, Hurricane Katrina, and Affordable Care Act of 2010. 2. Describe global trade agreements, terrorist attack of September 11, 2001, Operation Iraqi Freedom and the War in Afghanistan, and the Patriot Act, global terrorism, global climate concerns, immigration, national debt and technological trends. 3. Discuss the Election and 2008 and Barack Obama as the first African-American President and the unconventional Election of 2016 and the advent of Donald Trump. 4. Describe global trade agreements, Contract with America, impeachment trial of William "Bill" Clinton, terrorist attack of September 11, 2001, Operation Iraqi Freedom, war in Afghanistan, Patriot Act, election of the first African-American President Barack Obama, Affordable Care Act of 2010, domestic and global terrorism, global climate concerns, immigration, election of Donald Trump, national debt and technological trends.

832

US Government

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
USG.1 Compare and contrast knowledge and application of the basic concepts of democracy. (Strands: Civics, Civil Rights, History, Economics)	1. Evaluate the fundamental worth and dignity of the individual. 2. Examine the equality of all citizens under the law. 3. Compare and contrast majority rule and minority rights. 4. Debate the necessity of compromise. 5. Contrast the meaning of the freedom of the individual. 6. Compare and contrast the difference between private and civic life. 7. Evaluate the relationship between politics and government.

833

USG.2 Evaluate the foundational American political principles and the historical events, documents and philosophical ideas that shaped the formation of the United States. (Strands: Civics, Civil Rights, History, Economics)	1. Trace the development of Athenian democracy and the Roman republic. 2. Compare and contrast the influence of the Magna Carta, the English Petition of Right, and the English Bill of Rights. 3. Compare the writings of Hobbes, Locke, and Montesquieu. 4. Describe the guarantee of the "rights of Englishmen" that had been violated by the British government through statutory regulation. 5. Analyze the natural rights philosophies expressed in the Declaration of Independence. 6. Evaluate the Articles of Confederation as a ruling document. 7. Examine the importance of Shay's Rebellion in the formation of the Constitution. 8. Compare the backgrounds of the Founding Fathers at the Constitutional Convention. 9. Debate how the U.S. Constitution reflects a balance between the classical republican concern with promotion of the public good and the classical liberal concern with protecting individual rights and discuss how the basic premises of liberal constitutionalism and democracy are joined in the Declaration of Independence as "self-evident truths." 10. Trace how the Founding Fathers' realistic view of human nature led directly to the establishment of a constitutional system that limited the power of the governors and the governed as articulated in the Federalist Papers. 11. Investigate the systems of separated and shared powers, the role of organized interests (Federalist Paper Number 10), checks and balances (Federalist Paper Number 51), the importance of an independent judiciary (Federalist Paper Number 78), enumerated powers, rule of law, federalism, and civilian control of the military. 12. Contrast that the Bill of Rights limits the powers of the federal government and state governments. 13. Critique James Madison's leadership role in securing adoption of the Bill of Rights by the First Congress and its evolution from that time. 14. Debate how the different philosophies and structures of feudalism, mercantilism, socialism, fascism, communism, monarchies, parliamentary systems, and constitutional liberal democracies influence economic policies, social welfare policies, and human rights practices. 15. Compare the various ways in which power is distributed, shared, and limited in systems of shared powers and in parliamentary systems. 16. Compare the advantages and disadvantages of federal, confederal, and unitary systems of government.

834

USG.3 Differentiate the basic organization of the US government and explain the function of each branch of the US government. (Strands: Civics, Civil Rights, History, Economics)	1. Differentiate the functions of the legislative, executive, and judicial branches. 2. Analyze the relationships among the three branches in a system of checks and balances. 3. Investigate different perspectives on the role of government. 4. Examine how the national government influences the public agenda and shapes public policy, including the setting of the public agenda and implementation of it through regulations and executive orders. 5. Debate how public policy is formed: compare the processes of lawmaking at each of the three levels of government, including the role of lobbying and the media. 6. Identify the organization and jurisdiction of federal, state, and local courts and the interrelationships among them. 7. Assess the scope of presidential power and decision making through examination of case studies such as the Cuban Missile Crisis, passage of Great Society legislation, War Powers Act, Gulf War, and Bosnia. 8. Trace the process by which policy is implemented by the bureaucracy at each level. 9. Contrast the organization, jurisdiction, and proceedings of federal courts. 10. Evaluate how John Marshall established the Supreme Court as an independent, co-equal branch of government through his opinion in *Marbury v. Madison*. 11. Analyze how the Supreme Court decides cases by comparing the philosophies of judicial activism and judicial restraint. 12. Evaluate how the judiciary influences public policy by delineating the power of government and safeguarding the rights of the individual.

835

USG.4 Analyze of the role of federalism in addressing the distribution of power between the national, state and local governments. (Strands: Civics, Civil Rights, History, Economics)	1. Explain the relationship of the state governments to the national government. 2. Trace the extent to which power is shared. 3. Identify the powers denied state and national governments. 4. Evaluate the ongoing debate that focuses on the balance of power between state and national governments, especially in terms of funding. 5. Investigate how the amendment process protects both the national and state government. 6. Explain how conflicts between levels of government and branches of government are resolved. 7. Compare the major responsibilities and sources of revenue for state and local governments. 8. Contrast reserved powers and concurrent powers of state governments. 9. Compare and contrast the Ninth and Tenth Amendments and interpretations of the extent of the federal government's power.
USG.5 Compare and contrast civil rights and civil liberties and explain how each have been interpreted and amended throughout American history. (Strands: Civics, Civil Rights, History, Economics).	1. Investigate the Bill of Rights, with emphasis on First Amendment freedoms. 2. Analyze the concept of due process of law as expressed in the 5th and 14th Amendments. 3. Trace selective incorporation of the Bill of Rights. 4. Evaluate the balance between individual liberties and the public interest of order. 5. Assess the statement "It is every citizen's right to be treated equally under the law." 6. Trace the changing interpretations of the Bill of Rights over time, including interpretations of the basic freedoms, including: religion, speech, press, petition, and assembly, articulated in the First Amendment and the due process and equal-protection-of-the law clauses of the Fourteenth Amendment. 7. Analyze judicial activism and judicial restraint and the effects of each policy over the decades, including: the Warren and Rehnquist courts. 8. Evaluate the effects of the Court's interpretations of the Constitution in *Marbury v. Madison*, McCulloch v. Maryland, and *United States v. Nixon*, with emphasis on the arguments espoused by each side in these cases. 9. Investigate the controversies that have resulted over changing interpretations of civil rights, including: *Plessy v. Ferguson*, *Brown v. Board of Education, Miranda v. Arizona, Regents of the University of California v. Bakke, Adarand Constructors, Inc. v. Pena, and United States v. Virginia (VMI).*

836

USG.6 Describe the role and function of linkage institutions such as the media, interest groups, political parties, and political action committees, on the citizens and federal government. (Strands: Civics, Civil Rights, History, Economics)	1. Compare and contrast the role and function of the media, interest groups, political parties, political action committees in a democracy. 2. Analyze the origin, development, and role of political parties, noting those occasional periods in which there was only one major party or were more than two major parties. 3. Trace the history of the nomination process for presidential candidates and the increasing importance of primaries in general elections. 4. Evaluate the roles of polls, campaign advertising, and the controversies over campaign funding. 5. Examine how linkage groups impact primary and general elections, and citizen involvement in campaigns. 6. Identify major interest groups, including: AARP, NRA, ACLU, American Bar Association, American Medical Association, National Chamber of Commerce, and Sierra Club, in terms of their major agenda messages. 7. Evaluate the responsibility of the citizens to thoughtfully evaluate evidence presented by media and interest groups in order to form their political opinions. 8. Evaluate the role of journalism including internet vs. traditional media on the political process. 9. Debate the history and role of Political Action Committees and interest groups on the electoral process. 10. Evaluate the decision *Citizens United v. Federal Election Commission* on campaign financing.

837

USG.7 Describe and evaluate the role, rights, and responsibility of a citizen in the American democracy. (Strands: Civics, Civil Rights, History, Economics)	1. Evaluate the effectiveness of citizen efforts to influence decisions of state and local governments by examining historical or contemporary events. 2. Analyze how individuals, interest groups, and the media influence public policy. 3. Compare the means that citizens use to participate in the political process, including: voting, campaigning, lobbying, filing a legal challenge, demonstrating, petitioning, picketing, and running for political office. 4. Develop and practice a course of action to address local and/or state issues. 5. Analyze trends in voter turnout, the causes and effects of reapportionment and redistricting, with special attention to spatial districting and the rights of minorities, and the function of the Electoral College. 6. Contrast the meaning and importance of each of the rights guaranteed under the Bill of Rights and how each is secured, including: freedom of religion, speech, press, assembly, petition, privacy. 7. Debate how economic rights are secured and their importance to the individual and to society, including: the right to acquire, use, transfer, and dispose of property, the right to choose one's work, the right to join or not join labor unions, copyright and patent. 8. Discuss the individual's legal obligations to obey the law, serve as a juror, and pay taxes. 9. Trace the obligations of civic-mindedness, including: voting, being informed on civic issues, volunteering and performing public service, and serving in the military or alternative service. 10. Describe the reciprocity between rights and obligations, that is, why enjoyment of one's rights entails respect for the rights of others. 11. Explain how one becomes a citizen of the United States, including the process of naturalization, including: literacy, language, and other requirements.

838

Economics

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
E.1 Explain the concepts of scarcity, choice, decision making, and opportunity cost. (Strands: Civics, History, Economics)	1. Identify that scarcity is the condition of not being able to have all of the goods and services that one wants. It exists because human wants for goods and services exceed the quantity of goods and services that can be produced using all available resources. 2. Explain that scarcity is experienced by individuals, governments, and societies. 3. Illustrate that making good choices should involve trading off the expected value of one opportunity against the expected value of its best alternative. 4. Explain the choices people make have both present and future consequences and differ across individuals and societies. 5. Identify that choices made by individuals, firms, or government officials are constrained by the resources to which they have access. 6. Discuss ways that decisions made by individuals, firms, or government officials often have long run unintended consequences that can partially or entirely offset or supplement the initial effects of the decision. 7. Explain the concept of marginal benefit and marginal cost in relationship to choice. 8. Evaluate the role that risk takes in decision making and that risk can be reduced by diversification.

839

E.2 Describe different economic systems and how people work individually or collectively to allocate goods and services. (Strands: Civics, History, Economics)	1. Explain that scarcity requires the use of some distribution method to allocate goods, services, and resources, whether the method is selected explicitly or not. 2. Describe the differences between a market economy, in which allocations result from individuals making decisions as buyers and sellers, and a command economy, in which resources are allocated according to central authority. 3. Identify the three major economic questions: What goods and services will be produced? How will these goods and services be produced? Who will consume them? 4. Compare and contrast how various economics system vary in the extent to which they rely on government directives (central planning) and signals (prices) from private markets to allocate scarce goods, services, and productive resources. 5. Compare the benefits and costs of different allocation methods in order to choose the method that is most appropriate for some specific problem which can result in more effective allocations and a more effective overall allocation system.

840

E.3 Illustrate how voluntary exchanges and trade are reflections of negative and positive incentives resulting in gain for both parties and that specialization in trade can lead to lower costs of production and increased production and consumption. (Strands: Civics, History, Economics)	1. Describe how consumers, producers, workers, savers, investors, and citizens respond to incentives in order to allocate their scarce resources in ways that provide them the highest possible net benefits. 2. Explain how free trade increases worldwide material standards of living. 3. Evaluate gains from free trade and recognize that they are not distributed equally, and some individuals or groups may lose more than they gain when trade barriers are reduced. 4. Explain why even though there are mutual benefits from trade among people in different countries, many nations employ trade barriers to restrict free trade for national defense reasons, to protect key industries, or because some companies and workers are hurt by free trade. 5. Explain why import restrictions by public policies result in consumers paying higher prices and job opportunities and profits in exporting firms may decrease. 6. Explain that labor productivity is output per worker. 7. Evaluate how growing international economic interdependence causes economic conditions and policies in one nation to be increasingly affected by economic conditions and policies in other nations. 8. Describe how individuals and nations have a comparative advantage in the production of goods or services if they can produce a product at a lower opportunity cost than other individuals or nations. 9. Demonstrate that international trade stems mainly from factors that confer comparative advantage, including international differences in the availability of productive resources and differences in relative prices. 10. Explain that transaction costs are costs (not to be confused with the price of the good or service) that are associated with the purchase of a good or service, such as the cost of locating buyers or sellers, negotiating the terms of an exchange, and ensuring that the exchange occurs on the agreed upon terms. When transaction costs decrease, trade increases. 11. Illustrate that an individual, region, or nation can produce at lowest opportunity cost depending on many factors (which may vary over time), including available resources, technology, and political and economic institutions.

841

E.4 Analyze the role of price on the market, the buyer and the seller. (Strands: Civics, History, Economics)	1. Demonstrate that market prices are determined through the buying and selling decisions made by buyers and sellers. 2. Explain that the term 'relative price' refers to the price of one good or service compared to the prices of other goods and services. Relative prices are the basic measures of the relative scarcity of products when prices are set by market forces (supply and demand). 3. Demonstrate that the market clearing or equilibrium price for a good or service is the price at which quantity supplied equals quantity demanded. 4. Explain that if a price is above the market clearing price, it will eventually fall, causing sellers to produce less and buyers to purchase more; if it is below the market clearing price, it will eventually rise, causing sellers to produce more and buyers to purchase less. 5. Explain that market outcomes depend on the resources available to buyers and sellers, and on government policies. 6. Demonstrate that a shortage occurs when buyers want to purchase more than producers want to sell at the prevailing price and that a surplus occurs when producers want to sell more than buyers want to purchase at the prevailing price. 7. Explain that shortages of a product usually result in price increases in a market economy; surpluses usually result in price decreases. 8. Relate the concept of market price to exchange rates which are set in the foreign exchange market. When the exchange rate between two currencies changes, the relative prices of the goods and services traded among countries using those currencies change; as a result, some groups gain, and others lose. 9. Recognize that demand for a product changes when there is a change in consumers' incomes, preferences, the prices of related products, or in the number of consumers in a market. 10. Recognize that the supply of a product changes when there are changes in either the prices of the productive resources used to make the product, the technology used to make the product, the profit opportunities available to producers from selling other products, or the number of sellers in a market. 11. Illustrate that changes in supply or demand cause relative prices to change; in turn, buyers and sellers adjust their purchase and sales decisions. 12. Illustrate how government-enforced price ceilings set below the market-clearing price and government-enforced price floors set above the market-clearing price distort price signals and incentives to producers and consumers. Price ceilings can cause persistent shortages, while price floors can cause persistent surpluses.

842

E.5 Analyze and evaluate the impact the market structures, entrepreneurship and institutions have on the market economy, competition and income. (Strands: Civics, History, Economics)	1. Describe how pursuit of self-interest in competitive markets usually leads to choices and behavior that also promote the national level of well-being. 2. Evaluate how the level of competition in an industry is affected by the ease with which new producers can enter the industry, and by consumers' information about the availability, price and quantity of substitute goods and services. 3. Evaluate how market structures which are dominated by large firms, often competing against only a few other firms, cause prices to be higher than they would be in more competitive markets. 4. Explain how collusion among buyers or sellers reduces the level of competition in a market and that collusion is more difficult in markets with large numbers of buyers and sellers. 5. Identify the household as a major institution in which consumption and production take place. Recognize that banks and other financial institutions channel funds from savers to borrowers and investors. 6. Describe how labor unions have influenced laws created in market economies and, through the process of collective bargaining with employers, labor unions represent some workers in negotiations involving wages, fringe benefits, and work rules. 7. Identify the role that not-for-profit organizations have and that they are established primarily for religious, health, educational, civic, or social purposes and are exempt from certain taxes. 8. Evaluate the roles that property rights, contract enforcement, standards for weights and measures, incorporation and liability rules that affect incentives for people to produce and exchange goods and services have in regulating price and market security. 9. Discuss how entrepreneurs organize resources to produce goods and services because they expect to earn profits. 10. Demonstrate that entrepreneurs (as well as other sellers) earn profits when the revenues they receive from selling the products they sell are greater than the costs of production. 11. Demonstrate that entrepreneurs (as well as other sellers) incur losses when the revenues they receive from selling the products they sell do not cover the costs of production. 12. Compare and contrast positive and negative aspects of entrepreneurship. 13. Evaluate how entrepreneurial decisions are influenced by tax, regulatory, education, and research support policies.

843

	14. Explain and define the different forms of getting income: labor, capital, natural resources, and entrepreneurial talents. 15. Analyze how peoples' incomes, in part, reflect choices they have made about education, training, skill development, and careers. 16. Demonstrate how changes in the structure of the economy, including technology, government policies, the extent of collective bargaining and discrimination, can influence personal income. 17. Illustrate how in a labor market, in the absence of other changes, a higher wage increases the reward for work and reduces the willingness of employers to hire workers.

844

E.6 Evaluate the role of money and its relationship to inflation, unemployment and interest rates in the market economy. (Strands: Civics, History, Economics)	1. Describe the three functions of money: a store of value, a unit of account, and a medium of exchange. 2. Explain how money encourages specialization by decreasing the costs of exchange. 3. Identify inflation and its impact on the value of money. 4. Compare and contrast M-1 and M-2 money in the United States. 5. Explain why deposits in checking accounts are considered money but assets such as stocks and bonds are not. Explain why a credit card should not be considered money. 6. Given a chart, the student will determine in which years inflation occurred given the prices of a market basket of goods and services for three different years. 7. The consumer price index (CPI) is the most commonly used measure of price-level changes. It can be used to compare the price level in one year with price levels in earlier or later periods. 8. The annual inflation rate is the percentage change in the average prices of goods and services over a twelve-month period. 9. Explain how in the long-run, inflation results from increases in a nation's money supply that exceed increases in its output of goods and services. 10. Define an interest rate as the price of money that is borrowed or saved which are determined by the forces of supply and demand. 11. Distinguish between real and nominal interest rates. 12. Evaluate the impact of higher real interest rates on business investment spending and consumer spending on housing, cars, and other major purchases. 13. Describe how expectations of increased inflation may lead to higher interest rates. 14. Examine the types of unemployment. 15. Evaluate why unemployment statistics are imperfect methods of measuring unemployment. 16. Compare and contrast how unexpected inflation imposes costs on many people and benefits others.

845

E.7 Describe economic growth and the causes and effects of economic fluctuations. (Strands: Civics, History, Economics)	1. Describe the characteristics of economic growth in the long and short term. Trace and illustrate how economic growth has been a vehicle for alleviating poverty and raising standards of living. 2. Explain the importance of investing in new physical or human capital on future productivity and consumption, but such investments require the sacrifice of current consumption and entail economic risks. 3. Investigate how lower interest rates encourage investment. 4. Trace how the rate of productivity increase in an economy is strongly affected by the incentives that reward successful innovation and investments (in research and development, and in physical and human capital). 5. Define and explain GDP, its components, and how it can be calculated. 6. Compare and contrast GDP and GDP per capita. 7. Compare and contrast real and nominal GDP. 8. Evaluate the business cycle in terms of fluctuations in real GDP around its potential level.
E.8 Evaluate the role of the government in correcting market failures. (Strands: Civics, History, Economics)	1. Describe the reasons for a market failure. 2. Explain the role for government in the economy is to define, establish, and enforce property rights. 3. Compare and contrast positive and negative externalities on the market. 4. Identify methods the United States government can use to help correct for insufficient output of a positive and excess production of negative externalities, including: such as subsidies, laws, government ownership, income redistribution through tax laws, and price controls. 5. Evaluate the pros and cons of market intervention by the government to correct market failures.

846

E.9 Compare and contrast fiscal and monetary policy. (Strands: Civics, History, Economics)	1. Discuss how fiscal policies are decisions to change spending and taxation levels by the federal government to influence national levels of output, employment, and prices. 2. Describe the short-term and long-term benefits and costs of fiscal policy. 3. Discuss how monetary policy by the Federal Reserve Bank influences the overall levels of employment, output, and prices. 4. Distinguish between a budget deficit, a budget surplus and a balanced budget. 5. Describe why a government debt is created. 6. Evaluate how monetary policies lead to changes in the supply of money, short term interest rates, and the availability of credit. 7. Describe the Federal Reserve System's three major monetary policy tools. 8. Distinguish between the federal funds rate, the discount rate, and the prime rate. 9. Describe the reasons the Federal Reserve would increase interest rate targets.

847

Advanced World Geography

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
AWG.1 Describe and explain the world using spatial terms, concepts, and thinking and employing maps and other geographic representations, tools, and technologies. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the development of geographic tools from early representations of the earth to modern geospatial technologies. 2. Evaluate how different types of geographic tools express the relationships among people, places, and environments. 3. Utilize spatial models to explain the geographic organization of people, places, and environments.
AWG.2 Appraise the nature, origins, evolution, and meaning of places. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Determine how the physical and human characteristics of a place contribute to personal, community, and national identities. 2. Examine the ways that places change as a result of physical and human processes. 3. Distinguish the relative impact of culture and experience in influencing people's perceptions of places.
AWG.3 Determine how regions are used to describe the organization of the Earth's surface. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Distinguish formal, functional, and perceptual designations of regions. 2. Explain the factors that impact the characteristics of a region. 3. Examine the characteristics and role of globalization on regions of the world in terms of economics, culture, and technology. 4. Explain how perceptions of regions and the cultures that inhabit them change as a result of direct and indirect experiences.
AWG.4 Compare and contrast geographic patterns in the environment that result from the processes of Earth's physical systems. (Strands: Civics, History, Economics)	1. Explain how processes that shape the physical environment produce different conditions in different places on Earth. 2. Distinguish the impact of physical processes on different types of ecosystems over time.

848

AWG.5 Evaluate the characteristics and processes of human population and migration on Earth. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Utilize concepts including the crude birth rate, crude death rate, infant mortality rate, fertility rate, natural increase rate, and demographic transition model to explain the characteristics of a population over time. 2. Explain the relationship between the status of women and population patterns in a society. 3. Trace the major migration patterns in the United States and the world in terms of distance, origin, cause, and time. 4. Examine the various ways that nations manage intraregional, interregional, and international population flows. 5. Assess the conditions which produce refugees, asylum seekers, and internally displaced persons and the processes countries utilize to meet their needs.
AWG.6 Examine the characteristics and development of culture. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe the characteristics that come to define a culture over time. 2. Explain the impact of religion on the development and values of a culture. 3. Distinguish characteristics of folk culture and pop culture and examine the role of each in societies. 4. Examine the economic and political factors that affect how and where cultures spread.
AWG.7 Explain the patterns and networks of economic interdependence on Earth's surface. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Categorize economic activities as primary, secondary, or tertiary. 2. Distinguish subsistence and commercial livelihoods and trace how people groups move from one to the other over time. 3. Identify economic globalization and explain its impact on places, populations, and environments. 4. Examine the role of technologies including communications, transportation, and infrastructure in the emergence of global economic interdependence.
AWG.8 Analyze the patterns of human settlements and explain their development and operation. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how human activities have contributed to the development of settlements at particular locations. 2. Distinguish the various types of settlements and explain differences in the number and types of services they provide. 3. Examine patterns of urban land use and development including organizational models and drivers of expansion, decline, and rejuvenation.

849

AWG.9 Describe and analyze boundaries and political entities and the cooperation and conflicts that occur among them. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the advantages and disadvantages of political and other boundaries that are based on physical and human factors. 2. Explain how countries and organizations make agreements to cooperate in managing natural resources. 3. Describe how conflict occurs at the international level because of disagreements over the division, control, and management of natural resources.
AWG.10 Explain how human actions modify the physical environment. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe how human-induced changes in one place can affect the physical environment in other places. 2. Explain how the use of technology has changed the scale at which people can modify the physical environment. 3. Describe how the physical environment can accommodate and be endangered by human activities.
AWG.11 Explain how human systems develop in response to physical environmental conditions. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how characteristics of the physical environment can both hinder and advance development. 2. Explain how processes carried out by humans threaten environmental sustainability. 3. Describe how people perceive, prepare, and cope with environmental hazards and disasters
AWG.12 Evaluate the concept of natural resources and the changes in the spatial distribution, quantity, and quality of resources through time and location. (Strands: Civics, Geography, History, Economics)	1. Describe the role of culture in perceptions and uses of resources. 2. Distinguish and analyze renewable and nonrenewable resources with respect to suitability, viability, and sustainability. 3. Assess how the most common resources of the contemporary world are extracted, refined, and transported.

850

Problems in American Democracy

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
PAD.1 Examine the historical, economic, and political factors that played a role in the shaping of the U.S. Constitution. (Strands: Civics, Geography, History, Economics)	1. Compare and contrast the concepts of state and national sovereignty as illustrated in the Articles of Confederation and the Constitution. 2. Describe the monetary and trade practices of U.S. states in the 1780s and their consequences. 3. Connect the enumerated powers given to the federal government under the Constitution to the national problems that emerged in the 1780s they were meant to address. 4. Analyze the use of the separation of powers as a mechanism for federal accountability and limited powers.
PAD.2 Describe the patterns of conflict and cooperation between the emerging United States and Native Americans from colonial times through the antebellum period. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the major interactions between early American settlers and indigenous tribes during the colonial period that impacted the relationships between the U.S. and native groups following the revolution. 2. Explain the various treaties between the United States and native groups under the Articles of Confederation and the U.S. Constitution and the political and practical limitations to their enforcement. 3. Identify and describe major events and turning points in the relationship between the United States and Native Americans in the early nineteenth century. 4. Assess the impact of westward expansion on Native American populations.

851

PAD.3 Trace the historical factors and institutions that gave rise to the current financial policies, practices, and systems of the U.S. government. (Strands: Civics, Geography, History, Economics)	1. Compare the arguments of Alexander Hamilton, James Madison, and Thomas Jefferson in the debate over the establish of the Bank of the United States in 1791. 2. Outline the key economic processes and events that shaped the emerging banking systems in the United States in the early 1800s including the Second Bank of the United States and the Panic of 1837. 3. Analyze the economic factors that led to the Panic of 1907 and the Federal Reserve Act of 1913. 4. Describe the economic conditions that led to the Great Depression and the federal interventions and safety net programs that developed as a result. 5. Compare and contrast the mechanisms of governance and response of the Federal Reserve to periods of financial instability in the late 1900s and early 2000s.
PAD.4 Assess the development of a system of public education in the United States and its role in facilitating civic, political, and economic engagement. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe the origins and development of early public education in New England from the Colonial Period to the mid-1800s. 2. Explain the conditions and prevailing perspectives in New York State leading up to the passage of the Free Schools Law in 1849. 3. Trace the spread and development of public education throughout the U.S. through the late 1800s and 1900s. 4. Examine the impact of contemporary policies on public education in the U.S., including the No Child Left Behind Act and the emergence of charter schools.
PAD.5 Examine the political, economic, and cultural conditions that led to the U.S. Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe the economic characteristics of the North and South in the early-to-mid-nineteenth century that contributed to sectional political conflict. 2. Trace measures taken during the early 1800s to maintain the balance of power between free and slave states including policies related to the admittance of states into the Union and the management of the western territories. 3. Assess the response of the U.S. government to the secession of southern states following the election of Abraham Lincoln as president.

852

PAD.6 Analyze the effectiveness of Reconstruction policies in the United States following the Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate the efforts to rebuild the Union and restore southern states during Reconstruction. 2. Identify and describe the significance of the 13th, 14th, and 15th amendments to the U.S. Constitution. 3. Assess efforts by former Confederate states to disenfranchise black voters during the late 1800s including the use of poll taxes and literacy tests. 4. Assess economic and cultural conditions in the North that impacted Reconstruction policies.
PAD.7 Evaluate the impact of industrialization of the living conditions of U.S. citizens. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain the geographic and social changes that resulted from industrialization in the U.S. in the late 1800s and early 1900s. 2. Assess challenges faced by workers, especially immigrants, in factories during the early twentieth century. 3. Define muckraker and describe the role of journalism in bringing awareness to concerns and abuses related to industrialization. 4. Identify and explain federal policies created in the early 1900s and then again in the mid-twentieth century to regulate domestic food and drug safety.
PAD.8 Examine how and under what circumstances state governments and the federal government have expanded or constrained the civil and political rights of African-Americans and other groups since the Civil War. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace accomplishments and setbacks related to the enfranchisement of African-Americans during Reconstruction. 2. Describe the social, economic, and political disenfranchisement of African-Americans under the Jim Crow laws. 3. Examine the rise of the Civil Rights Movement in the 1950s and the goals, strategies, and accomplishments of the movement.

853

PAD.9 Describe the major events in U.S. history related to the rights and status of women. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Survey the rights of women in the United States during the Revolutionary Period and the role of women in the war effort. 2. Trace the major accomplishments of the Women's Rights Movement in the mid-nineteenth century and identify the contributions of the movement's leaders including Lucretia Mott, Elizabeth Cady Stanton, Susan B. Anthony, and Sojourner Truth. 3. Trace the events and conditions that led to the ratification of the 19th amendment to the Constitution in 1920 and the efforts of the Women's Rights Movement to address other social and economic inequalities in the years that followed. 4. Describe the rationale for the Equal Rights Amendment (ERA) and trace the efforts to pass the ERA throughout the 1900s.
PAD.10 Examine contemporary challenges faced by American democracy as a result of political, economic, and technological changes. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze how developments in communication technologies including radio, television, and the internet offer challenges in American democracy and how American society and government have responded to those challenges. 2. Trace the development of campaign finance laws from 1907 to present and explain the significance of the Citizens United decision in 2010. 3. Survey problems in American society related to socioeconomic stratification, immigration, and ethnic and religious strife, and evaluate competing perspectives on those problems. 4. Assess the historic impact of journalism and the media on the development of American democracy and describe the role of citizens in determining the reliability and utility of various forms of journalism in civil discourse.

854

HISTORY OF THE ANCIENT MIDDLE EAST, 2000 B.C. TO 1000 A.D.

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
HAME.1 Contrast how geography, economics, and politics have influenced the development of the ancient Middle East. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine the advantages of living in a river valley or coastal region as compared to inland areas of the Middle East. 2. Describe major events in the development and decline of regional empires, including: Egyptian, Assyrian, Babylonian, Medo-Persian, Greek and Roman. 3. Examine the development of Israel as a civilization.
HAME.2 Trace the relationship of people, places, and environments throughout time. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the accomplishments and failures of key people of the Middle East from 2000 B.C. to 100 A.D. 2. Critique the conflicts over the land of Palestine from 2000 B.C. to 100 A.D. 3. Analyze the movements and interactions of various groups of people in the ancient Middle East. 4. Discuss the impact of war and conflict on different groups from 2000 B.C. to 100 A.D.
HAME.3 Examine the contributions made by archaeological work in the Middle East. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Define the science of archaeology. 2. Review archaeological finds in the Middle East. 3. Critique the impact of archaeology related to various documents, including: Hammurabi's Code, the Bible, Dead Sea scrolls, etc.
HAME.4 Describe the impact of science and technology on the historical development of the Middle East. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how technological development transformed agriculture and customs of the ancient Middle East. 2. Describe the transition from the barter system to monetary system, including: coinage, etc.

855

HAME.5 Demonstrate the ability to apply and interpret social studies tools, including: timelines, maps, globes, graphs, compass, technology, political cartoons, primary and secondary documents, charts, etc. (Strands: Geography, History, Economics)	1. Locate and label selected physical features of the Middle East. 2. Compare and contrast ancient political boundaries with those of modern independent nations.
HAME.6 Debate the similarities and differences of ancient Middle Eastern cultures. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare and contrast the religious practices, rituals, and traditions of ancient Middle Eastern cultures. 2. Analyze examples of cultural contributions made by various ancient civilizations of the Middle East. 3. Examine the roles, status, and interaction of diverse groups of people, including: parents, children, men, women, slaves, etc.within various ancient Middle Eastern societies. 4. Analyze selected examples of ancient Middle Eastern literature, including: legends, poetry, prophecy, and wisdom literature, etc.
HAME.7 Analyze the development of social and political systems in the ancient Middle East. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare/contrast political systems of the ancient Middle East. 2. Discuss major political movements from 2000 B.C. to 100 A.D. 3. Describe the warfare, weaponry, and resolution of conflicts in the ancient Middle East. 4. Analyze the development and expansion of various legal systems, including: Hebrew, Roman, Sumerian, Egyptian, etc. 5. Show the impact of various empires on developing social structures of the ancient Middle East. 6. Summarize the effects of early religious teachings on ancient and modern social structures, including: Hebrew, Christian, Roman, Persian, and Egyptian.

856

African American Studies

1 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
AAS.1 Examine the influence of geography on the economic, political, and social development of slavery in the United States. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the economic, political, and social reasons for focusing the slave trade on Africa, including the role of Africans, Europeans, and colonists. 2. Assess the role of geography on the growth and development of slavery. 3. Analyze the impact of the slave trade on Africa and the colonies. 4. Identify and explain the Middle Passage as one of the largest forced migrations in human history.
AAS.2 Analyze the justifications and ramifications of slavery between 1619 and 1860. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the economic, social, religious, and legal justifications for the establishment and continuation of slavery. 2. Identify and evaluate the various ways Africans in America resisted slavery. 3. Analyze the role slavery played in the development of nationalism and sectionalism. 4. Assess the development of the abolitionist movement and its impact on slavery and the nation.
AAS.3 Differentiate between African American life and cultural contributions through 1860. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare and contrast African American urban and rural communities in the North and the South. 2. Analyze the African American family in antebellum America. 3. Trace the development of African American institutions, including: religion, education, and benevolent organizations. 4. Identify and explain the contributions of African Americans in science and the arts.
AAS.4 Evaluate the roles of African Americans during the Civil War and Reconstruction. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze President Lincoln's views on slavery and the status of freed slaves in the United States. 2. Identify and explain the roles of African American soldiers, spies, and slaves to the war effort in both the North and the South, including the 13th U.S. Colored Troops. 3. Analyze the effects of Reconstruction on the legal, political, social, cultural, educational, and economic life of freedmen. 4. Assess the successes and failures of Reconstruction as they relate to African Americans.

857

AAS.5 Analyze the rise of Jim Crow and its effects on the life experiences of African Americans in the late nineteenth and early twentieth centuries. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the economic and social impact of Jim Crow laws on African Americans. 2. Analyze the legal ramifications of segregation laws and court decisions on American society. 3. Compare and contrast the political movements that developed in response to Jim Crow laws, including the Niagara Movement, the NAACP, the Urban League, The Atlanta Compromise, The Farmers' Union Movement, Brotherhood of Sleeping Car Porters, and the Anti-Lynching Crusade. 4. Compare and contrast the African American political and legal personalities of the time period and their impact on American society, including Samuel McElwee, Robert Church Sr., Ida B. Wells, Randolph Miller, and James Napier. 5. Describe the development of African American institutions such as religion, education, and benevolent organizations. 6. Evaluate the economic, cultural, political, and social impact of African American migration within and from the South, including the Exodusters, Benjamin Pap Singleton, and 2nd Great Migration. 7. Describe the impact of African American regiments on the western campaigns, the Spanish American War, and World War I, including Buffalo Soldiers and George Jordan.
AAS.6 Trace the cultural contributions made by African Americans during the Harlem Renaissance. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the literary contributions made by African Americans. 2. Describe the contributions of African Americans to the performing arts, including Fisk Jubilee Singers, W.C. Handy, John Work III, and DeFord Bailey. 3. Describe the contributions of African Americans to the visual arts, including Edmondson Williams. 4. Evaluate the impact of the African American media on American life. 5. Analyze reactions of Americans to the Harlem Renaissance.
AAS.7 Analyze the conditions and contributions of African Americans during the Great Depression and World War II. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Analyze the impact of the Great Depression and the New Deal on the lives of African Americans. 2. Evaluate the continued quest for civil rights in America. 3. Describe the effects of African American "pop" culture of the 1930s and 1940s. 4. Analyze the impact of racism in America during World War II. 5. Evaluate the contributions of African Americans during World War II. 6. Explain how World War II laid the groundwork for the modern Civil Rights Movement.

858

AAS.8 Analyze the successes and failures of the Civil Rights Movement in the United States. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explain how legal victories prior to 1954 inspired and propelled the Civil Rights Movement. 2. Describe the impact of Brown v. Board of Education of Topeka, Kansas and evaluate the resistance and reaction to it. 3. Define various methods used to obtain civil rights. 4. Identify various organizations and their role in the Civil Rights Movement, including the Highlander Folk School. 5. Assess the extent to which the Civil Rights Movement transformed American politics and society. 6. Determine the impact of the Vietnam War on the Civil Rights Movement.
AAS.9 Debate the issues confronting contemporary African Americans in the continuing struggle for equality. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Identify and analyze how the changing political environment has impacted civil rights. 2. Describe how African Americans have responded to or engaged in political conservatism. 3. Compare and contrast the responses of African Americans to the economic, social, and political challenges of contemporary America. 4. Identify and evaluate major contemporary African American issues confronting society, including affirmative action, the educational achievement gap, the wealth gap, poverty, AIDS, and crime. 5. Analyze the impact of immigration and migration on the lives of African Americans in contemporary America. 6. Identify the major contributions of contemporary African Americans in business, education, the arts, politics, sports, science, technology, and society in general, including Wilma Rudolph, Tina Turner, and Oprah Winfrey.

859

Psychology

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
PSY.1 Describe the historical traditions, perspectives, career opportunities, and modern empirical nature of psychological inquiry. (Strands: Civics, Civil Rights, History)	1. Identify the major historical traditions in psychology including structuralism, functionalism, behaviorism, Gestalt psychology, psychodynamics, and humanistic psychology. 2. Explain the influence of various perspectives, including: biological, social, behavioral, cognitive, etc. on approaches to empirical investigation in psychology. 3. Distinguish modern psychological science from historical perspectives on the mind and contemporary and historical examples of pseudo psychology.
PSY.2 Distinguish the various methods and tools employed by researchers to explain human mental and behavioral processes. (Strands: Civics, Civil Rights, History)	1. Explain the scientific method and the role of experimental research in determining cause and effect relationships. 2. Describe and distinguish experimental and non-experimental methods of inquiry in psychological research including controlled experiments, surveys, naturalistic observations, correlational studies, longitudinal studies, and case studies.
PSY.3 Appraise the biological structures and processes that give rise to and influence human behavior and cognitive experiences. (Strands: Civics, Civil Rights, History)	1. Illustrate the structures of a neuron and the process of neural transmission. 2. Identify the role of neurotransmitters on human behavior and cognitive experiences. 3. Sketch the major structures of the brain including the cerebellum, brain stem, limbic system, and cortex, and describe their functions.
PSY.4 Explain the ways in which human sensory and perceptual systems translate and interpret information from the environment. (Strands: Civics, Civil Rights, History)	1. Explain the concept of transduction and outline the ways in which stimuli in the environment are translated into sensory experiences. 2. Demonstrate absolute and difference thresholds as they relate to vision, hearing, smell, taste, and touch. 3. Differentiate between sensation and perception. 4. Examine the factors that influence perception including top-down and bottom-up processing, priming forces, expectancy bias, environmental factors, perceptual sets, and change blindness.

860

PSY.5 Describe the various states of consciousness including sleeping and dreaming and the impact on consciousness of both internal and external factors. (Strands: Civics, Civil Rights, History)	1. Diagram the stages of the sleep cycle and the characteristics and brain wave patterns of each. 2. Examine the major disorders associated with sleep including insomnia, night terrors, sleep apnea, and narcolepsy. 3. Distinguish the impacts of various drugs, including: depressants, stimulants, opiates, and hallucinogens, on consciousness and mental and physical health.
PSY.6 Describe the processes through which humans learn, including behavioral and cognitive learning processes. (Strands: Civics, Civil Rights, History)	1. Interpret the major elements of classical conditioning including conditioned and unconditioned stimuli, conditioned and unconditioned responses, neutral stimuli, acquisition, and stimulus generalization. 2. Explain the development of operant conditioning and evaluate the usefulness of reward versus punishment as it relates to learning. 3. Examine cognitive and observational learning processes.
PSY.7 Combine the elements of memory and concept formation to examine how those cognitive processes contribute to perception and judgment. (Strands: Civics, Civil Rights, History)	1. Diagram the stages of memory formation including the processes of sensory memory, working memory, and long-term memory. 2. Distinguish between concepts, concept hierarchies, schemas, and prototypes.
PSY.8 Distinguish the elements that give rise to emotional experience, explain the various theories of emotion, and summarize the significance of emotional intelligence on mental wellness. (Strands: Civics, Civil Rights, History)	1. Explain the universal nature of emotions and emotional expression including the work of Paul Ekman and Robert Plutchik and the concept of display rules. 2. Compare and contrast theories of emotion, including: James-Lange, Canon-Bard, Shachter-Singer (Two Factor), Cognitive Appraisal, and Opponent Process theories. 3. Discuss emotional intelligence and its impact on mental wellness and interpersonal relationships.
PSY.9 Discuss the role of biological drives and motivations on human behavior and cognitive processes. (Strands: Civics, Civil Rights, History)	1. Distinguish between intrinsic and extrinsic sources of motivation. 2. Describe the concept of need for achievement and its significance in understanding motivational differences among people. 3. Employ Maslow's Hierarchy of Needs to understand human behavioral priorities.

PSY.10 Breakdown the various theories of human cognitive and social development. (Strands: Civics, Civil Rights, History)	1. Recall biological concepts related to human development including genetic structure, prenatal development, and infancy. 2. Trace the physical development and the development of motor skills through early childhood. 3. Diagram Piaget's Stages of Cognitive Development and describe the characteristics of each stage. 4. Compare and contrast cognitive and social perspectives of an individual through Erikson's Psychosocial Stages of Development. 5. Examine theories of moral development including Kohlberg's Stages of Moral Reasoning.
PSY.11 Outline the major personality theories, assessments, and practices of type and trait theorists and justify the practical applications of their work. (Strands: Civics, Civil Rights, History)	1. Compare and contrast Freudian and Neo-Freudian perspectives on personality, including: the Freudian model of the mind, the unconscious mind, psychosexual development, archetypes, neuroticism, basic anxiety, and the inferiority complex. 2. Explain behavioral, social-cognitive, and humanistic concepts related to personality including reciprocal determinism, locus of control, unconditional positive regard, and the fully functioning person. 3. Describe the five-factor model of personality. 4. Explain methods used by researchers to assess personality, including: projective tests and personality inventories.
PSY.12 Outline the historical progression of intelligence research and explain the major theories of intelligence including the work of Charles Spearman, Robert Sternberg, and Howard Gardner. (Strands: Civics, Civil Rights, History)	1. Appraise theories of intelligence including Spearman's g factor, Sternberg's triarchic theory, and Gardner's theory of multiple intelligences. 2. Describe historical and contemporary tools for measuring intelligence, including: the intelligence quotient and the roles they play in categorizing intellectual ability (normal range, intellectual disability, giftedness). 3. Examine the history of cultural bias in intelligence measures and the sociocultural underpinnings of those processes.

862

PSY.13 Formulate the conditions that lead to mental wellness, including a positive self-concept, healthy cognitive processes, and edifying interpersonal relationships. (Strands: Civics, Civil Rights, History)	1. Examine the role of the stress response and its contribution to physical and psychological health. 2. Describe the field of positive psychology and its application of psychological concepts to improve mental well-being. 3. Appraise the role of sleep, self-concept, need for achievement, and interpersonal relationships in establishing healthy cognitive and emotional processes.
PSY.14 Describe major psychological disorders, their symptoms, and classifications. (Strands: Civics, Civil Rights, History)	1. Differentiate the different types of mental illness including mood disorders, dissociative disorders, personality disorders, anxiety disorders, somatoform disorders, and schizophrenia. 2. Employ the DSM-V as a tool for diagnosing mental disorders as illustrated in case studies.
PSY.15 Explain the methods used by mental health professionals to treat people living with mental illness. (Strands: Civics, Civil Rights, History)	1. Distinguish between the work of a psychiatrist and psychologist in treating mental illness. 2. Examine the role of stigma in preventing people from accessing adequate mental healthcare. 3. Compare and contrast psychodynamic, humanistic, and behavioral therapies in the treatment of mental disorders. 4. Describe the usefulness of cognitive therapy, cognitive-behavioral therapy, and group therapies in the treatment of mental disorders.

PSY.16 Describe the influence of social factors on individual cognition and behavior including conformity, obedience, the bystander effect, bias, and polarization. (Strands: Civics, Civil Rights, History)	1. Describe the concept of social role and conformity as illustrated in the Stanford Prison Experiment and other studies. 2. Explain the findings of research into obedience and conformity as illustrated in the work of Stanley Milgram and Solomon Asch. 3. Examine the concepts of bias, polarization, and the bystander effect. 4. Identify the major elements of behavioral economics as evidenced by the research of Amos Tversky, Daniel Kahneman, and Dan Ariely.

SOCIOLOGY

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
SOC.1 Explain the development of sociology as a scientific field of study and the methods used by sociologists to study human social systems. (Strands: Civics, Civil Rights, History)	1. Explore the sociological perspective and the methods used by sociologists to explore that perspective. 2. Identify patterns related to social structures and interactions and the role of the individual in participating in those structures. 3. Trace the growth of sociology from Weber to modern day sociology and explain how theoretical perspectives changed over time. 4. Collect and display various tools used by sociologists to examine aspects of social systems and explain their usefulness in offering insights into social institutions.
SOC.2 Evaluate the role of culture throughout the world. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Define culture. 2. Distinguish the components of symbolic culture. 3. Differentiate between subcultures and countercultures. 4. Identify elements that are culturally universal. 5. Describe the impact of modern technology on cultures throughout the world.

865

SOC.3 Apply theories on life cycle development to explain differences in social interactions and relationships at different points in the life cycle of a human being based on cultural socialization in response to those developmental changes. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Define human nature. 2. Identify major patterns of life cycle change, including: Erikson's Stages of Psychosocial Development, Paget's' Stages of Cognitive Development, and Kohlberg's Stages of Moral Reasoning. 3. Compare the life cycle patterns to human interactions that are common among various social groups composed of diverse demographic patterns. 4. Differentiate the role of women in a variety of cultural and historical contexts, specifically noting the impact of those roles on the greater culture and the historical movements to reduce gender inequality. 5. Explain the various types of family units, the roles of each family member, and the impact of cultural and economic factors on family functioning. 6. Describe societal institutions including schools, churches, non-profit, media, and government organizations, and their impacts on communities and families. 7. Interpret the ways in which cultural and social forces impact an individual's values, behaviors, self-concept, and temperament. 8. Compare how various cultures deal with death and dying.
SOC.4 Examine human behaviors that deviate from social norms including antisocial behavior, violence, criminal activity, and rehabilitative strategies, and their effectiveness. (Strands: Civics, Civil Rights, History, Economics)	1. Define deviance and conformity. 2. Compare various perspectives on deviance including Symbolic Interactionist, Functionalist, and Conflict Perspectives. 3. Examine society's reaction to deviance.
SOC.5 Appraise the role of group dynamics on the behavior of an individual and the impact of group dynamics on the effectiveness and efficiency of work groups in commercial, governmental, and non-profit organizations. (Strands: Civics, Civil Rights, History)	1. Define bureaucracy. 2. Compare the views of Marx and Weber on bureaucracies. 3. Identify the characteristics of a bureaucracy. 4. Explore the problems that exist within bureaucracies that are universal.

866

SOC.6 Describe theories and processes related to human social networks. (Strands: Civics, Civil Rights, History)	1. Trace the development of various types of social groups from hunter-gathering cultures to modern day. 2. Identify various groups within society and their functions including family, secondary groups, reference groups, and social networks. 3. Explain the various dynamics that exist within a group.
SOC.7 Breakdown the economic and social factors that play a role in socioeconomic stratification. (Strands: Civics, Civil Rights, History)	1. Explore the levels of socioeconomic stratification that exist within the United States and globally and compare. 2. Explain how the institutions of society perpetuate social status and hinder social mobility. 3. Identify the consequences of social class on social mobility and access to healthcare, education, and other resources.
SOC.8 Describe the methods by which individuals and groups establish and maintain a sense of identity and their impacts. (Strands: Civics, Civil Rights, History)	1. Examine the role of race in creating an individual's sense of identity. 2. Distinguish between race and ethnicity as defining characteristics. 3. Compare the role of age in various cultures as a measurement of social value.
SOC.9 Describe the roles of various social institutions on maintaining societal norms. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Explore the role of the economic systems in various cultures. 2. Explain the role of education systems in perpetuating societal norms or promoting social mobility. 3. Explain the role of marital and family structures as the basic units of culture. 4. Explore the types and roles of religious institutions and beliefs in various cultures. 5. Distinguish the challenges faced by modern society in providing access to quality healthcare.
SOC.10 Analyze the impacts of various forms of significant social change on society. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Compare and contrast significant social movements, their methods, and their impacts. 2. Explain the historical and modern development of urban spaces and the challenges posed by those spaces including environmental concerns, crime, poverty, and social justice issues. 3. Formulate and explain the values associated with global citizenship in regard to environmental, civic, social, economic, and political action.

LAW RELATED EDUCATION

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
LRE.1 Assess the changes in the legal system and recognize the dynamic natures of the law in the United States over time. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Define justice and law and trace its development in the United States. 2. Discuss the functions of the law, including lawmaking, advocacy, and settling disputes. 3. Describe how court decisions have dynamically altered the American political landscape.
LRE.2 Identify the characteristics of the civil and criminal justice systems; analyze their operations and assess their effectiveness. (Strands: Civics, Civil Rights, History, Economics)	1. Compare and contrast criminal law and civil law. 2. Describe the various types of criminal law, including crimes against the person, crimes against property, and defenses. 3. Illustrate the Criminal Justice Process: the investigation, proceedings before trial, the trial and sentencing and corrections. 4. Identify juvenile justice concerns and differences in the due process procedures. 5. Define civil law and the procedure for a civil case. 6. Identify the differences of various types of civil cases, including: civil wrongs, intentional torts, negligence, strict liability, torts and public policy. 7. Summarize issues and problems confronting the civil and criminal justice systems and assess the effectiveness of each system in resolving these problems.
LRE.3 Compare and contrast the state and federal judicial systems and analyze the relationships between them. (Strands: Civics, Civil Rights, History, Economics)	1. Illustrate the court system on the federal level. 2. Describe the Mississippi judicial system. 3. Contrast the various functions of lawyers in both systems. 4. Compare and contrast the two systems and the role of the citizen and lawyer in each. Analyze the state's right position (e.g. 10th amendment) v. the federal position (e.g. Elastic Clause, etc.).

868

LRE.4 Describe the roles and responsibilities of local, state and federal law enforcement agencies. (Strands: Civics, Civil Rights, History, Economics)	1. Understand the traditional democratic assumptions as they apply to law and law enforcement. 2. Compare and contrast the functions, responsibilities, and jurisdiction of local, state and federal law enforcement agencies. 3. Describe the obligations of the law enforcement communities and the courts in the pre-trial process, including: booking and initial appearance, bail and pretrial release, preliminary hearing, grand jury, felony arraignment and pleas, pretrial motions, and plea bargaining. 4. Describe the obligations of the law enforcement communities and the courts in the trial phase of a case.
LRE.5 Assess the effectiveness of correctional systems in deterring criminal behavior. (Strands: Civics, Civil Rights, History, Economics)	1. Demonstrate an understanding of sentencing and corrections on the state and federal level. 2. Describe the sentencing options available to the courts. 3. Compare and contrast punishment and rehabilitation as functions of the correctional system. 4. Evaluate the function of parole. 5. Discuss the arguments for and against capital punishment. 6. Evaluate data on recidivism to determine the effectiveness of the correctional system on deterring criminal behaviors.
LRE.6 Explain the various ways that the legal system insures civil rights and liberties. (Strands: Civics, Civil Rights, History, Economics)	1 . Distinguish between statutory and Constitutional law. 2 . Explain the ways that the state and federal courts have protected freedom of speech, freedom of the press, freedom of religion, due process, the right to privacy, discrimination, responsibilities in the workplace, and immigration law. 3. Identify major Supreme Court cases that protected the following rights: freedom of speech, freedom of the press, freedom of religion, due process, the right to privacy, discrimination, responsibilities in the workplace, and immigration law.

869

LRE.7 Summarize and evaluate the conflicts resulting from competing interests, conflicting laws and conflicting interpretations of the Constitution. (Strands: Civics, Civil Rights, History, Economics)	1. Investigate conflicts that arose because of differing opinions on civil rights. 2. Trace conflicts that arose because of differing opinions on property rights. 3. Debate conflicts that arose because of differing opinions on issues of liberty v. order such as Red Scare, Patriot Act, rights of labor unions to strike. 4. Evaluate conflicts that arose because of differing opinions on family values, housing and business v. consumer rights.	870

Minority Studies

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
MIN.1 Evaluate the characteristics that may come to define a minority group including distinguishing physical or cultural traits, unequal treatment, involuntary group membership, awareness of subordination, and a strong sense of group solidarity. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Investigate minority groups and determine the underlying factors that result in their marginalization. 2. Compare and contrast the plight of women and the plight of ethnic minorities at various points in history. 3. Identify and describe prominent groups associated with protecting and broadening protections for minority groups including the National Association for the Advancement of Colored People, Southern Poverty Law Center and the American Civil Liberties Union. 4. Examine social and political factors and events that have impacted attitudes and discrimination towards American Muslims and Hispanic Americans in the early twenty-first century. 5. Appraise the concept of minority group as it relates to ethnic minorities, religious minorities, and women.
MIN.2 Trace the group dynamics that play a role in the marginalization of minority groups. (Strands: Civics, Civil Rights, History, Economics)	1. Describe the various causes of prejudice including social distance, economic competition, scapegoating, conflicting social and religious norms, and stereotypes. 2. Describe political and cultural factors that may serve to maintain inequalities experienced by minority groups.
MIN.3 Examine the experiences of Native American populations from the age of exploration to present day. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the historical perspectives on Native American populations by European settlers from the age of exploration to the period of westward expansion. 2. Describe the status of Native Americans during the early history of the United States, westward expansion, and through the twentieth century. 3. Analyze the lasting impact of the historical treatment of Native American populations on their cultures.

871

MIN.4 Examine the Women's Rights Movement from 1848 to present day. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Identify and describe the origins and early leaders of the Women's Rights Movement in the mid-nineteenth century. 2. Trace the major events, achievements, and leaders of the women's suffrage movement leading to the 19th amendment in 1920. 3. Survey the accomplishments of women in the United States during the twentieth century who took on roles and offices that had been traditionally held by men. 4. Analyze the current status of women in the United States with respect to political representation, economic opportunities, healthcare, and shifting social norms.
MIN.5 Describe discrimination faced by Asian-Americans in the late nineteenth and mid-twentieth century. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the migration of ethnic Chinese to the United States in the 19th century and the economic, social, legal, and political factors that contributed to discrimination against them. 2. Investigate the internment of Japanese-Americans during World War II.
MIN.6 Examine the major events, methods, and leaders of the Civil Rights Movement. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Describe the conditions during the mid-twentieth century that led to the Civil Rights Movement including Jim Crow laws and systemic inequality throughout the United States. 2. Evaluate the prominent methods, leaders, and events of the Civil Rights movements culminating in the Civil Rights Act of 1964. 3. Analyze the impact of the Civil Rights Movement on the status of African-Americans and on the American social and political culture in the late twentieth and early twenty-first centuries.
MIN.7 Compare and contrast historically significant events and cultural characteristics related to the plight of minority groups outside of the United States. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Illustrate the major events, minority groups, and people associated with the Holocaust and its global impact. 2. Trace the historical context and major events and people associated with the rise and fall of Apartheid in South Africa. 3. Explain the caste system in India and trace the changes that have occurred in attitudes towards various castes through much of the twentieth century.

872

MIN.8 Examine contemporary issues related to the treatment of minority groups. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Assess the lasting impact of slavery and historic discrimination on economic opportunities and social conditions of African-Americans in the United States in the twenty-first century. 2. Examine contemporary concepts related to the treatment of minority groups including microaggressions and concerns about cultural appropriation. 3. Explain significant events during the early twenty-first century that have resulted in rising tensions between minority populations and law enforcement in some areas of the United States and the significance of technology in the impact of those events.
MIN.9 Assess modern movements to broaden protections for minority groups. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Examine social and political factors and events that have impacted attitudes and discrimination towards American Muslims and Hispanic Americans in the early twenty-first century. 2. Describe significant events of the early twenty-first century related to the expansion and protection of civil liberties for members of the LGBTQ community.

873

HUMANITIES

1/2 CARNEGIE CREDIT

STRANDS: CIVICS, ECONOMICS, CIVIL RIGHTS, GEOGRAPHY, AND HISTORY

STANDARD	OBJECTIVE(S)
HUM.1 Examine the ancient river valley civilizations, including those of Mesopotamia, Egypt, the Indus River Valley, and China. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Trace the development of social, political, citizen responsibility, and economic patterns of early Mesopotamia, Egypt, China and Indus River Valley in their emergence of power. 2. Explain the development of language, writing, technology, and arts of early civilizations, including: Neolithic pottery, Epic of Gilgamesh, Book of Songs, etc. 3. Explain the role of religious traditions, origin of beliefs and customs of early civilizations such as cave art and the Zuni emergence tale.
HUM.2 Examine the location of Greece, its political structure, arts and religious traditions that influenced Greek society. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Locate and recognize the importance of climate and geography on the emergence of civilization in Greece. 2. Trace the development and legacy of social, political, citizen responsibility, and economic patterns of Greece while examining the rise of city-states. 3. Explain the development of language, writing, technology, and arts of Greece through the work of Homer, philosophers, poetry of Sappho, Athenian pottery, Hellenistic culture, and Greek architectural traditions. 4. Explain the role of religious traditions of the Greek gods, origin of mythology, and customs of Greece through the Golden Age.
HUM.3 Analyze ancient Rome by assessing the influence of geography, mythology and development of the Roman Republic. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Locate and recognize the importance of climate and geography on the emergence of civilization in Rome. 2. Trace the development and legacy of social, political, and citizen responsibility of Roman citizens while analyzing Roman Republic, Roman imperialism, Cicero and the politics of rhetoric. 3. Explain the development of language, writing, and arts of Greece through Virgil, Horace and Ovid while observing various Roman architecture and sculptures during that time period. 4. Explain the role of religious traditions of the Roman gods, origin of mythology, and spread of Roman Culture.

874

HUM.4 Students will analyze the social, economic, military conquest and cultural achievements during the medieval time period. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Locate and describe the evolution of nation-states England, France, Spain, and Russia. 2. Discuss the political and social impact of the Crusades, the Mongo conquests, and the fall of Constantinople. 3. Identify the role of Greek, Roman, and Arabic philosophy, medicine, and science during the medieval time period. 4. Trace the emergence of pagan and Christian traditions through the discussion of medieval monastery.
HUM.5 Students will analyze the social, economic, and political changes and cultural achievements during the Renaissance in Europe. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Evaluate the economic infrastructure of the Italian Renaissance. 2. Trace the events related to the rise and political development city-states while examining the Humanistic movement impact on society. 3. Contrast the arts, literary, architecture, and philosophical ideologies with the medieval time period including Shakespeare, Leonardo da Vinci, Michelangelo and Petrich. 4. Identify the Roman Catholic role on society and summarize religious reforms associated with Martin Luther, John Calvin, Henry VII, and their impact on the Reformation.
HUM.6 Students will understand the impact of the Age of Discovery and exploration into Africa, Asia and the Americas. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Locate the triangle trade, migration patterns, and cultural diffusion in colonized areas. 2. Identify the development of social, political, and economic motivation of explorers and conquistadors while analyzing their impact on indigenous peoples. 3. Describe the impact that religion had on the Age of Exploration and the effect that it had on colonized areas.
HUM.7 Students will examine the impact of global trade on various civilizations of the world. (Strands: Civics, Civil Rights, Geography, History, Economics)	1. Locate and explain the development of the Ottoman Empire. 2. Identify the development of social, political, and economic impact on Africa, India, and growth of European nations.

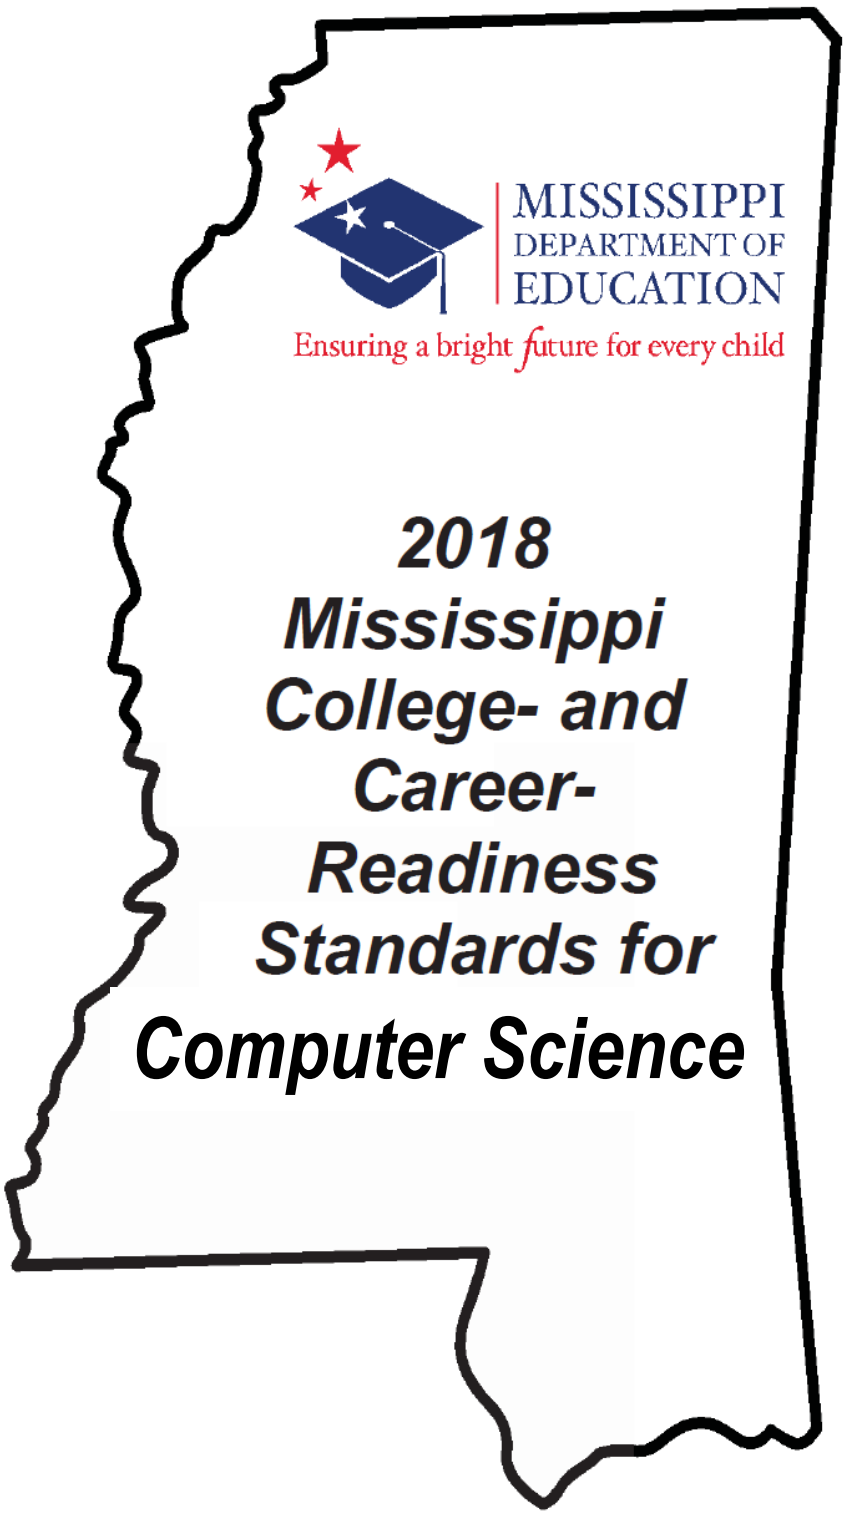
875

876

Support Documents and Resources

The MDE will develop support documents for the MSCCRS for the Social Studies. Local districts, schools, and teachers may use these documents to construct standards-based social studies curriculum, allowing them to customize content to fit their students' needs and match available instructional materials. The support documents will include suggested resources, instructional strategies, and essential knowledge.

Professional development efforts will be aligned with the standards and delivered in accord with teacher resources to help expand expertise in delivering student-centered lessons. For more information, please contact the Office of Secondary Education at 601-359-3461, or visit the MDE website at www.mdek12.org.



2018 Mississippi College- and Career-Readiness Standards for Computer Science

2018 Mississippi College- and Career-Readiness Standards for Computer Science

Carey M. Wright, Ed.D., State Superintendent of Education

Kim S. Benton, Ed.D., Chief Academic Officer

Jean Massey, Executive Director, Office of Secondary Education

Nathan Oakley, Ph.D., Executive Director, Office of Elementary Education and Reading

Mike Mulvihill, Bureau Director, Office of Career and Technical Education

Important notes about Computer Science Standards

- The 2018 Computer Science Standards are in place to serve as guidance for districts moving forward with incorporating computer science content and courses into their schools.
- While these standards are not required to be taught in all schools at this time, they do provide the standards for implementation of computer science curricula and resources.
- All Computer Science courses currently in place, will be aligned to the new 2018 Computer Science Standards.
- Carnegie units earned in Computer Science meet the technology credit needed for graduation and admission to postsecondary schools in MS.

COMPUTER SCIENCE STANDARDS REVIEW COMMITTEE MEMBERS (2017)

Melissa Banks	Mississippi Department of Education
Stacy Brooks	Mississippi Department of Education
Dane Conrad	Hattiesburg Public School District
Tracye Crane	Pontotoc City School District
Mary Dunaway	Rankin County School District
Eva Harvell	Pascagoula-Gautier School District
Kay Heath	Lowndes County School District
Randy Lynn	Maris, West & Baker Advertising/Kids Code Mississippi
Jennifer McCaskill	Rankin County School District
Alice Rainwater	Rankin County School District
Ross Randall	Lamar County School District
Donna Reese	Mississippi State University
Brandon Sesser	East Mississippi Community College, Mayhew
Shelley Songy	Lamar County School District
Kevin Walker	US Army Corp of Engineers, ERDC

COORDINATION AND EDITING (2017)

Sandra Gibson	Research and Curriculum Unit, Mississippi State University
Shelly Hollis	Research and Curriculum Unit, Mississippi State University
Jean Massey	Mississippi Department of Education
Mike Mulvihill	Mississippi Department of Education
Carl Smith	Research and Curriculum Unit, Mississippi State University

COMPUTER SCIENCE STEERING COMMITTEE (2016)

Kameron Ball	C Spire
Melissa Banks	Mississippi Department of Education
David Campbell	Vicksburg Warren Schools
Dane Conrad	Hattiesburg Public School District
Marla Davis	Mississippi Department of Education
Roberto Gallardo	Intelligent Community Institute
Kelley Gonzales	Rankin County School District
Gavin Guynes	Madison County School District
Eva Harvell	Pascagoula-Gautier School District
Kay Heath	Lowndes County School District
Jacqueline Jackson	Jackson State University
Alan Jones	C Spire
Randy Lynn	Maris, West & Baker Advertising/Kids Code Mississippi
Tim Martin	Clinton School District
Jennifer McCaskill	Rankin County School District
Brad Mixon	Booneville School District
Rachel Morgan	Tupelo School District
Mike Mulvihill	Mississippi Department of Education

COMPUTER SCIENCE STEERING COMMITTEE (2016), Continued

Lauren Olsen	Gulfport School District
Rodney Pearson	Mississippi State University
Debbie Raddin	MC STEM Institute
Alice Rainwater	Rankin County School District
Ross Randall	Lamar County School District
Bill Rayburn	FNC, Inc.
Donna Reese	Mississippi State University

Various sets of standards and standards-related documents were used in the development of the Mississippi Computer Science Standards including:

- CSTA K-12 Computer Science Standards: http://www.csteachers.org/page/standards
- The K-12 Computer Science Framework: https://k12cs.org/
- Approved standards from the following states:
  - Massachusetts: http://www.doe.mass.edu/frameworks/dlcs.pdf
  - Wisconsin: https://dpi.wi.gov/sites/default/files/imce/computer-science/ComputerScienceStandardsFINALADOPTED.pdf

Attribution

The K-12 Computer Science Framework, led by the Association for Computing Machinery, Code.org, Computer Science Teachers Association, Cyber Innovation Center, and National Math and Science Initiative in partnership with states and districts, informed the development of this work.

The CSTA Standards Revision Task Force crafted standards by combining concept statements and practices from the Framework. The Task Force also used descriptive material from the Framework when writing examples and clarifying statements to accompany the standards.

For more information about the Framework, please visit k12cs.org.

Introduction

Mission Statement

The Mississippi Department of Education (MDE) is dedicated to student success, which includes improving student achievement in science, equipping citizens to solve complex problems, and establishing fluent communication skills within a technological environment. The Mississippi College- and Career-Readiness Standards provide a consistent, clear understanding of what students are expected to know and be able to do by the end of each grade level or course. The standards are designed to be robust and relevant to the real world, reflecting the knowledge and skills that students need for success in college and careers and allowing students to compete in the global economy.

Purpose

In an effort to closely align instruction for students who are progressing toward postsecondary study and the workforce, the *2018 Mississippi College- and Career-Readiness Standards (MS CCRS) for Computer Science* includes grade- and course-specific standards for K-12 computer science. Mississippi has adapted these standards from the nationally developed *Computer Science Teachers Association K-12 Computer Science Standards, Revised 2017*. (CSTA, 2017)

This document is designed to provide K-12 computer science teachers with a basis for curriculum development. In order to prepare students for careers and college, it outlines what knowledge students should obtain, and the types of skills students must master upon successful completion of each grade level. The *2018 MS CCRS for Computer Science* reflect national expectations while focusing on postsecondary success, but they are unique to Mississippi in addressing the needs of our students and teachers. The standards' content centers around seven practices: fostering an inclusive computing culture, collaborating around computing, recognizing and defining computational problems, developing and using abstractions, creating computational artifacts, testing and refining computational artifacts, and communicating about computing. Instruction in these areas is designed for a greater balance between content and process. Teachers are encouraged to transfer more ownership of the learning process to students, who can then direct their own learning and develop a deeper understanding of computer science and the problem-solving process. Doing so will produce students that will become more capable, independent, and scientifically literate adults.

Implementation

The *2018 MS CCRS for Computer Science* will be implemented during the 2018-2019 school year.

2018 Mississippi College- and Career-Readiness Standards for Computer Science Overview

Research and Background Information

The MDE sponsored research into the state of computer science education in the US beginning in late fall of 2015. Over the course of eight months, this research revealed an enormous shortage in computer scientists across the country and an almost nonexistent K-12 computer science pathway. The Bureau of Labor Statistics predicts a shortage of approximately 1 million computer science workers by 2024, and very few states offered any computer science courses or instruction at the K-12 level in 2015. A Google/Gallup report showed that while 9 out of 10 parents believed that it was important for their child to learn about computer science in school, only 1 in 4 schools across the nation offered any computer science courses (Google/Gallup, 2015). As of June 1, 2016, only five states had computer science standards. (Tilley-Coulson, 2016).

In response to this information, a steering committee was formed to design a plan of action to incorporate computer science education in Mississippi's K-12 schools. This committee was comprised of K-12 administrators, technology directors, and teachers, as well as postsecondary instructors and industry leaders. The committee began meeting in October 2015 and, over the course of the next several months, developed a recommendation to conduct a three-year pilot program during which time the state would explore curricula, teacher licensure, and standards development. Members of the steering committee and other Mississippi educators took part in the review of the national Computer Science Framework development in 2016 and submitted feedback to the writers. Once the framework was completed and the national Computer Science Teacher's Association's Computer Science Standards were revised, members of the steering committee and other Mississippi educators reviewed the standards and, with only minor editorial changes, recommended adopting these standards as a starting place for Mississippi Computer Science Standards. The document that follows is a result of those recommendations.

Computer science and the technologies it enables rest at the heart of our economy and the way we live our lives. To be well-educated citizens in a computing-intensive world and to be prepared for careers in the 21st century, our students must have a clear understanding of the principles and practices of computer science. The Mississippi Computer Science Standards delineate a core set of learning objectives designed to provide the foundation for a complete computer science curriculum and its implementation at the K-12 level. To this end, the Mississippi standards:

- Introduce the fundamental concepts of computer science to all students, beginning at the elementary school level
- Present computer science at the secondary school level in a way that can fulfill a computer science graduation credit
- Encourage additional secondary-level computer science courses that will allow interested students to study facets of computer science in more depth and prepare them for entry into the work force or college
- Increase the availability of rigorous computer science for all students, especially those who are members of underrepresented groups

The standards have been written by educators to be coherent and comprehensible to teachers, administrators, and policy makers. Levels 1A, 1B, 2, and 3A are the computer science standards for **ALL students**. The Level 3B standards are intended for students who wish to pursue the study of computer science in high school beyond what is required for all students (specialty or elective courses).

Connection to the K-12 Computer Science Framework

The *K-12 Computer Science Framework* (k12cs.org) provides overarching, high-level guidance per grade bands, while the standards provide detailed, measurable student performance expectations. The framework was considered as a primary input for the standards development process.

These standards were crafted by combining concept statements and practices from the framework. Descriptive material from the framework was also used when writing examples and clarifying statements to accompany the standards.

Concepts

The core concepts of the K-12 Computer Science Framework represent major content areas in the field of computer science. The core concepts are delineated by multiple subconcepts that represent specific ideas within each concept. The learning progressions for each subconcept provide a thread connecting student learning from kindergarten to 12th grade.

Core concepts of the framework:

- Computing systems
- Networks and the Internet
- Data and analysis
- Algorithms and programming
- Impacts of computing

Each core concept is described in an overview and delineated by multiple subconcepts that represent the specific ideas within that core concept. For example, the data and analysis core concept contains four subconcepts: collection, storage, visualization and transformation, and inference and models. Subconcept overviews are provided to describe the subconcepts and summarize how learning progresses across multiple grade bands.

Crosscutting concepts are themes that illustrate connections among different concept statements. They are integrated into concept statements, instead of existing as an independent dimension of the framework. The crosscutting concepts that are represented in each concept statement are noted in the statement's descriptive material.

Crosscutting concepts of the framework:

- Abstraction
- System relationships
- Human-computer interaction
- Privacy and security
- Communication and coordination

Abstraction: An abstraction is the result of reducing a process or set of information to a set of important characteristics for computational use. Abstractions establish interactions at a level of reduced complexity by managing the more complex details below the level of interaction. An abstraction can be created to generalize a range of situations by picking out common properties minus specific implementations details.

System relationships: The parts of a system are interdependent and organized for a common purpose. A systems perspective provides the opportunity to decompose complex problems into parts that are easier

to understand, develop, fix, and maintain. General systems principles include feedback, control, efficiency, modularity synthesis, emergence, and hierarchy.

Human-computer interaction: Humans interact directly with computers, including as laptops and smartphones, but also other devices, such as cars and home appliances, which have embedded computers. Developing effective and accessible user interfaces involves the integration of technical knowledge and social science and encompasses both designer and user perspectives.

Privacy and security: Privacy is the ability to seclude information and express it selectively. It includes controls for the collection, access, use, storage, sharing, and alteration of information. Security refers to the safeguards surrounding information systems and includes protection from theft or damage to hardware, software, and the information in the systems. Security supports privacy.

Communication and coordination: Processes in computing are characterized by the reliable exchange of information between autonomous agents (communication) that cooperate toward common outcomes that no agent could produce alone (coordination). Communication and coordination are distinct but not independent processes. What is special about computing is the scale at which communication and coordination work.

Core Concepts and Subconcepts Overview

Computing systems

People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

Devices	Many everyday objects contain computational components that sense and act on the world. In early grades, students learn features and applications of common computing devices. As they progress, students learn about connected systems and how the interaction between humans and devices influences design decisions.
Hardware and software	Computing systems use hardware and software to communicate and process information in digital form. In early grades, students learn how systems use both hardware and software to represent and process information. As they progress, students gain a deeper understanding of the interaction between hardware and software at multiple levels within computing systems.
Troubleshooting	When computing systems do not work as intended, troubleshooting strategies help people solve the problem. In early grades, students learn that identifying the problem is the first step to fixing it. As they progress, students learn systematic problem-solving processes and how to develop their own troubleshooting strategies based on a deeper understanding of how computing systems work.

Networks and the Internet

Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing. Networks and communication systems provide greater connectivity in the computing world by providing fast, secure communication and facilitating innovation.

Network communication and organization	Computing devices communicate with each other across networks to share information. In early grades, students learn that computers connect them to other people, places, and things around the world. As they progress, students gain a deeper understanding of how information is sent and received across different types of networks.
Cybersecurity	Transmitting information securely across networks requires appropriate protection. In early grades, students learn how to protect their personal information. As they progress, students learn increasingly complex ways to protect information sent across networks.

Data and analysis

Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

Collection	Data is collected with both computational and noncomputational tools and processes. In early grades, students learn how data about themselves and their world is collected and used. As they progress, students learn the effects of collecting data with computational and automated tools.
Storage	Core functions of computers are storing, representing, and retrieving data. In early grades, students learn how data is stored on computers. As they progress, students learn how to evaluate different storage methods, including the tradeoffs associated with those methods.
Visualization and transformation	Data is transformed throughout the process of collection, digital representation, and analysis. In early grades, students learn how transformations can be used to simplify data. As they progress, students learn about more complex operations to discover patterns and trends and communicate them to others.
Inference and models	Data science is one example where computer science serves many fields. Computer science and science use data to make inferences, theories, or predictions based upon the data collected from users or simulations. In early grades, students learn about the use of data to make simple predictions. As they progress, students learn how models and simulations can be used to examine theories and

understand systems and how predictions and inferences are affected by more complex and larger data sets.

Algorithms and programming

An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

Algorithms	Algorithms are designed to be carried out by both humans and computers. In early grades, students learn about age-appropriate algorithms from the real world. As they progress, students learn about the development, combination, and decomposition of algorithms, as well as the evaluation of competing algorithms.
Variables	Computer programs store and manipulate data using variables. In early grades, students learn that different types of data, such as words, numbers, or pictures, can be used in different ways. As they progress, students learn about variables and ways to organize large collections of data into data structures of increasing complexity.
Control	Control structures specify the order in which instructions are executed within an algorithm or program. In early grades, students learn about sequential execution and simple control structures. As they progress, students expand their understanding to combinations of structures that support complex execution.
Modularity	Modularity involves breaking down tasks into simpler tasks and combining simple tasks to create something more complex. In early grades, students learn that algorithms and programs can be designed by breaking tasks into smaller parts and recombining existing solutions. As they progress, students learn about recognizing patterns to make use of general, reusable solutions for commonly occurring scenarios and clearly describing tasks in ways that are widely usable.
Program development	Programs are developed through a design process that is often repeated until the programmer is satisfied with the solution. In early grades, students learn how and why people develop programs. As they progress, students learn about the tradeoffs in program design associated with complex decisions involving user constraints, efficiency, ethics, and testing.

Impacts of computing

Computing affects many aspects of the world in both positive and negative ways at local, national, and global levels. Individuals and communities influence computing through their behaviors and cultural and social interactions, and in turn, computing influences new cultural practices. An informed and responsible person should understand the social implications of the digital world, including equity and access to computing.

Culture	Computing influences culture—including belief systems, language, relationships, technology, and institutions—and culture shapes how people engage with and access computing. In early grades, students learn how computing can be helpful and harmful. As they progress, students learn about tradeoffs associated with computing and potential future impacts of computing on global societies.
Social interactions	Computing can support new ways of connecting people, communicating information, and expressing ideas. In early grades, students learn that computing can connect people and support interpersonal communication. As they progress, students learn how the social nature of computing affects institutions and careers in various sectors.
Safety, law, and ethics	Legal and ethical considerations of using computing devices influence behaviors that can affect the safety and security of individuals. In early grades, students learn the fundamentals of digital citizenship and appropriate use of digital media. As they progress, students learn about the legal and ethical issues that shape computing practices.

Practices

The *K-12 Computer Science Framework's* practices are the behaviors that computationally literate students use to fully engage with the core concepts of computer science. Concepts and practices are integrated to provide complete experiences for students engaging in computer science. While the practices naturally integrate and overlap with one another, they are displayed in an order that suggests a process for developing computational artifacts. Four of the practices are also called out as aspects of computational thinking. There are seven core practices:

1. Fostering an inclusive computing culture
2. Collaborating around computing
3. Recognizing and defining computational problems
4. Developing and using abstractions
5. Creating computational artifacts
6. Testing and refining computational artifacts
7. Communicating about computing

The practices use a narrative to describe how students should exhibit each practice with increasing sophistication from kindergarten to grade 12. In addition to describing the progression, these narratives also provide some examples of the interrelatedness of the practice statements and the ways in which these statements build upon one another.

Computational thinking

Computational thinking is at the heart of the computer science practices and is delineated by practices 3-6. Practices 1, 2, and 7 are independent, general practices in computer science that complement computational thinking.

Computational thinking refers to the thought processes involved in expressing solutions as computational steps or algorithms that can be carried out by a computer (Cuny, Snyder, & Wing, 2010; Aho, 2011; Lee, 2016). This definition draws on the idea of formulating problems and solutions in a form that can be carried out by an information-processing agent (Cuny, Snyder, & Wing, 2010) and the idea that the solutions should take the specified form of computational steps and algorithms to be executed by a computer (Aho, 2011; Lee, 2016). Computational thinking requires understanding the capabilities of computers, formulating problems to be addressed by a computer, and designing algorithms that a computer can execute. The most effective context and approach for developing computational thinking is learning computer science; they are intrinsically connected.

Computational thinking is essentially a problem-solving process that involves designing solutions that capitalize on the power of computers; this process begins before a single line of code is written. Computers provide benefit in terms of memory, speed, and accuracy of execution. Computers also require people to express their thinking in a formal structure, such as a programming language. Similar to writing notes on a piece of paper to "get your thoughts down," creating a program allows people to externalize their thoughts in a form that can be manipulated and scrutinized. Programming allows students to think about their thinking; by debugging a program, students debug their own thinking (Papert, 1980).

Despite what the name implies, computational thinking is fundamentally a human ability. In other words, "humans process information; humans compute" (Wing, 2008, p. 3718). This nuance is the basis for "unplugged" approaches to computer science (i.e., teaching computer science without computers) and explains how computational thinking can apply beyond the borders of computer science to a variety of disciplines, such as science, technology, engineering, and mathematics (STEM), and also the arts and humanities (Bundy, 2007).

The description of computational thinking in the *K-12 Computer Science Framework* extends beyond the general use of computers or technology in education to include specific skills, such as designing algorithms, decomposing problems, and modeling phenomena. If computational thinking can take place without a computer, conversely, using a computer in class does not necessarily constitute computational thinking. For example, a student is not necessarily using computational thinking when he or she enters data into a spreadsheet and creates a chart. However, this action can include computational thinking if the student creates algorithms to automate the transformation of the data or to power an interactive data visualization.

A computational artifact must be distinguished by evaluating the process used to create it (i.e., computational thinking), in addition to the characteristics of the product itself. For example, the same digital animation may be the result of carefully constructing algorithms that control when characters move and how they interact or simply selecting characters and actions from a predesignated template. In this example, it is the process used to create the animation that defines whether it can be considered a computational artifact. The assessment of computational thinking can be improved by having students explain their decisions and development process (Brennan & Resnick, 2012).

Practice 1: Fostering an inclusive computing culture

Building an inclusive and diverse computing culture requires strategies for incorporating perspectives from people of different genders, ethnicities, and abilities. Incorporating these perspectives involves understanding the personal, ethical, social, economic, and cultural contexts in which people operate. Considering the needs of diverse users during the design process is essential to producing inclusive computational products.

By the end of grade 12, students should be able to:

1.1 Include the unique perspectives of others and reflect on one's own perspectives when designing and developing computational products
1.2 Address the needs of diverse end users during the design process to produce artifacts with broad accessibility and usability
1.3 Employ self- and peer-advocacy to address bias in interactions, product design, and development methods

Practice 2: Collaborating around computing

Collaborative computing is the process of performing a computational task by working in pairs and on teams. Because it involves asking for the contributions and feedback of others, effective collaboration can lead to better outcomes than working independently. Collaboration requires individuals to navigate and incorporate diverse perspectives, conflicting ideas, disparate skills, and distinct personalities. Students should use collaborative tools to effectively work together and to create complex artifacts.

By the end of grade 12, students should be able to:

2.1 Identify complex, interdisciplinary, real-world problems that can be solved computationally
2.2 Create team norms, expectations, and equitable workloads to increase efficiency and effectiveness
2.3 Solicit and incorporate feedback from, and provide constructive feedback to, team members and other stakeholders
2.4 Evaluate and select technological tools that can be used to collaborate on a project

Practice 3: Recognizing and defining computational problems

The ability to recognize appropriate and worthwhile opportunities to apply computation is a skill that develops over time and is central to computing. Solving a problem with a computational approach requires defining the problem, breaking it down into parts, and evaluating each part to determine whether a computational solution is appropriate.

By the end of grade 12, students should be able to:

3.1 Identify complex, interdisciplinary, real-world problems that can be solved computationally
3.2 Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures
3.3 Evaluate whether it is appropriate and feasible to solve a problem computationally

Practice 4: Developing and using abstractions

Abstractions are formed by identifying patterns and extracting common features from specific examples to create generalizations. Using generalized solutions and parts of solutions designed for broad reuse simplifies the development process by managing complexity.

By the end of grade 12, students should be able to:

- 4.1 Extract common features from a set of interrelated processes or complex phenomena
- 4.2 Evaluate existing technological functionalities and incorporate them into new designs
- 4.3 Create modules and develop points of interaction that can apply to multiple situations and reduce complexity
- 4.4 Model phenomena and processes and simulate systems to understand and evaluate potential outcomes

Practice 5: Creating computational artifacts

The process of developing computational artifacts embraces both creative expression and the exploration of ideas to create prototypes and solve computational problems. Students create artifacts that are personally relevant or beneficial to their community and beyond. Computational artifacts can be created by combining and modifying existing artifacts or by developing new artifacts. Examples of computational artifacts include programs, simulations, visualizations, digital animations, robotic systems, and apps.

By the end of grade 12, students should be able to:

- 5.1 Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations
- 5.2 Create a computational artifact for practical intent, personal expression, or to address a societal issue
- 5.3 Modify an existing artifact to improve or customize it

Practice 6: Testing and refining computational artifacts

Testing and refinement is the deliberate and iterative process of improving a computational artifact. This process includes debugging (identifying and fixing errors) and comparing actual outcomes to intended outcomes. Students also respond to the changing needs and expectations of end users and improve the performance, reliability, usability, and accessibility of artifacts.

By the end of grade 12, students should be able to:

- 6.1 Systematically test computational artifacts by considering all scenarios and using test cases
- 6.2 Identify and fix errors using a systematic process
- 6.3 Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility

Practice 7: Communicating about computing

Communication involves personal expression and exchanging ideas with others. In computer science, students communicate with diverse audiences about the use and effects of computation and the appropriateness of computational choices. Students write clear comments, document their work, and communicate their ideas through multiple forms of media. Clear communication includes using precise language and carefully considering possible audiences.

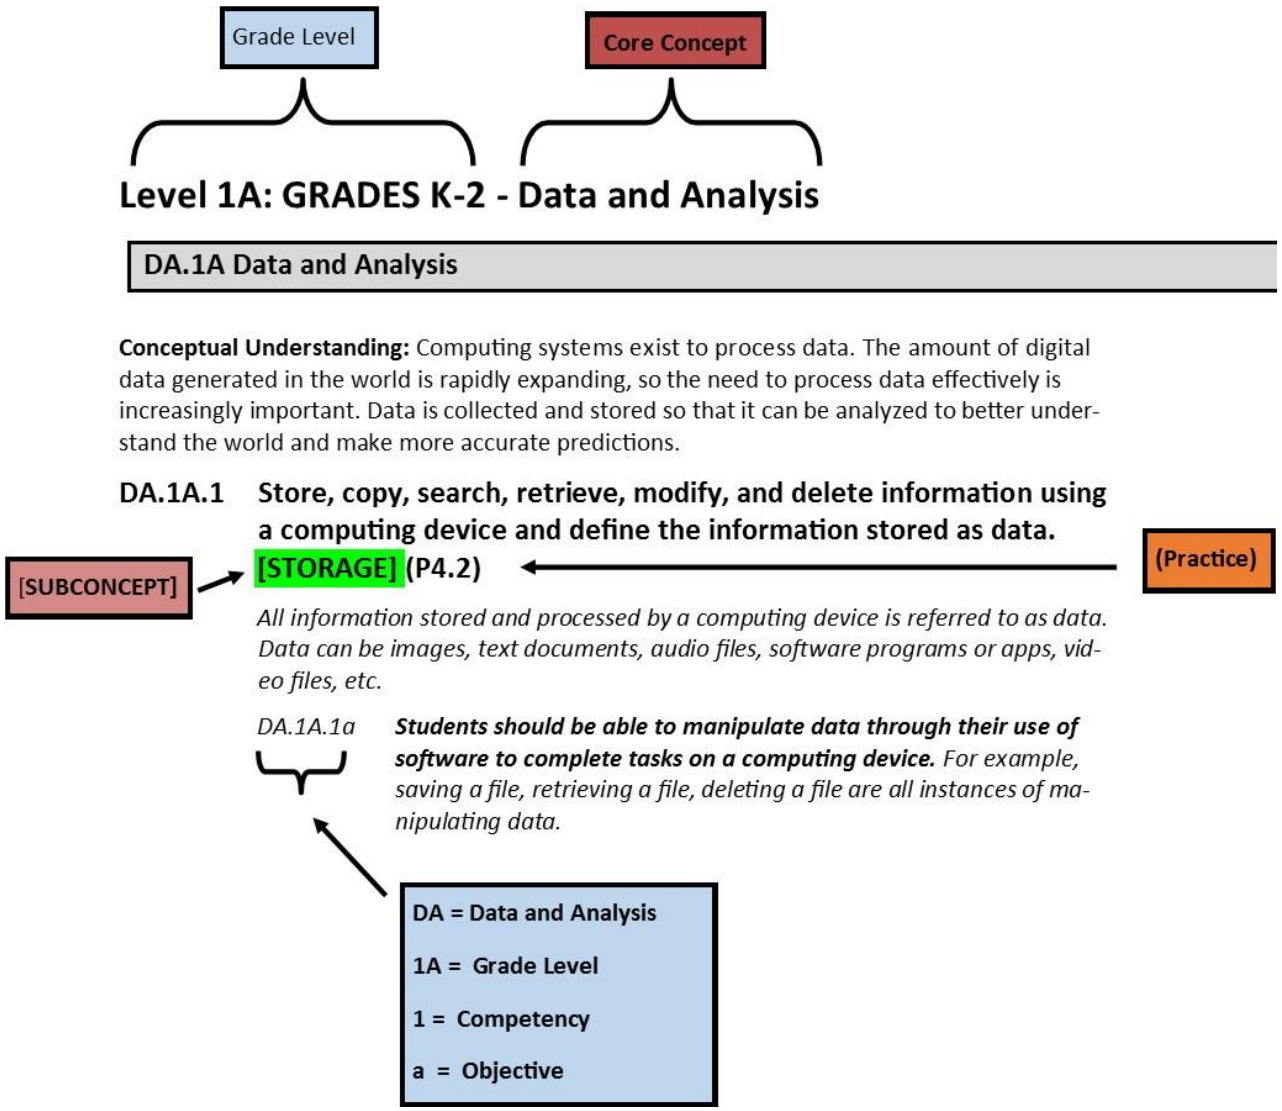
By the end of grade 12, students should be able to:

7.1 Select, organize, and interpret large data sets from multiple sources to support a claim

7.2 Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose

7.3 Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution

Understanding the Computer Science Standards Format



Core concepts	Practices
1. Computing systems 2. Networks and the Internet 3. Data and analysis 4. Algorithms and programming 5. Impacts of computing	1. Fostering an inclusive computing culture 2. Collaborating around computing 3. Recognizing and defining computational problems 4. Developing and using abstractions 5. Creating computational artifacts 6. Testing and refining computational artifacts 7. Communicating about computing

Level 1A: GRADES K-2

Level 1A: GRADES K-2 - Computing Systems

Computing Systems (CS.1A)

Conceptual understanding: People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

CS.1A.1 **Select and operate appropriate software to perform a variety of tasks, and recognize that users have different needs and preferences for the technology they use. [DEVICES] (P1.1)**

CS.1A.1a ***Students should be able to select the appropriate app/program to use for tasks they are required to complete.*** *For example, if students are asked to draw a picture, they should be able to open and use a drawing app/program to complete this task, or if they are asked to create a presentation, they should be able to open and use presentation software.*

CS.1A.1b ***With teacher guidance, students should compare and discuss preferences for software with the same primary functionality.*** *Students could compare different web browsers or word processing, presentation, or drawing programs*

CS.1A.2 **Use appropriate terminology in identifying and describing the function of common physical components of computing systems (hardware). [HARDWARE & SOFTWARE] (P7.2)**

A computing system is composed of hardware and software. Hardware consists of physical components.

CS.1A.2a ***Students should be able to identify and describe the function of external hardware, such as desktop computers, laptop computers, tablet devices, monitors, keyboards, mice, and printers.***

CS.1A.3 **Describe basic hardware and software problems using accurate terminology. [TROUBLESHOOTING] (P6.2, P7.2)**

CS.1A.3a ***Students should be able to communicate a problem with accurate terminology (e.g., when an app or program is not working as expected, a device will not turn on, the sound does not work, etc.).*** *Ideally, students would be able to use simple troubleshooting strategies, including turning a device off and on to reboot it, closing and reopening an app, turning on speakers, or plugging in headphones. These are, however, not specified in the standard, because these problems may not occur.*

Level 1A: GRADES K-2 - Networks and the Internet

Networks and the Internet (NI.1A)

Conceptual understanding: Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing. Networks and communication systems provide greater connectivity in the computing world by providing fast, secure communication and facilitating innovation.

NI.1A.1 **Explain what passwords are and why we use them. [CYBERSECURITY] (P7.3)**
Learning to protect one's device or information from unwanted use by others is an essential first step in learning about cybersecurity. They should appropriately use and protect the passwords they are required to use.

NI.1A.2 **Students should understand that computers connect them to people, places, and things around the world. [NETWORK COMMUNICATION & ORGANIZATION] (P7.3)**

Level 1A: GRADES K-2 - Data and Analysis

Data and Analysis (DA.1A)

Conceptual understanding: Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

DA.1A.1 **Store, copy, search, retrieve, modify, and delete information using a computing device and define the information stored as data. [STORAGE] (P4.2)**
All information stored and processed by a computing device is referred to as data. Data can be images, text documents, audio files, software programs or apps, video files, etc.

DA.1A.1a ***Students should be able to manipulate data through their use of software to complete tasks on a computing device.*** *For example, saving a file, retrieving a file, deleting a file are all instances of manipulating data.*

DA.1A.2 **Collect and present the same data in various visual formats. [COLLECTION, VISUALIZATION, & TRANSFORMATION] (P7.1, P4.4)**
The collection and use of data about the world around them is a routine part of life and influences how people live.

DA.1A.2a ***Students should be able to collect data.*** *For example, students could collect data on the weather, such as sunny days versus rainy days, the temperature at the beginning of the school day and end of the school day, or the inches of rain over the course of a storm. Students could count the number of pieces of each color of candy in a bag of candy, such as Skittles or M&Ms. Students could create surveys of things that interest them, such as favorite foods, pets, or TV shows, and collect answers to their surveys from their peers and others.*

DA.1A.2b ***Students should be able to present data in various visual formats.*** *For example, the data collected could be organized into two or more visualizations, such as a bar graph, pie chart, or pictograph.*

DA.1A.3 **Identify and describe patterns in data visualizations, such as charts or graphs, to make predictions. [INFERENCEE & MODELS] (P4.1)**
All data can be used to make inferences or predictions about the world.

DA.1A.3a ***Students should be able to analyze data in visual formats.*** *For example, students could analyze a graph or pie chart of the colors in a bag of candy or the averages for colors in multiple bags of candy. Students could analyze graphs of temperatures taken at the beginning of the school day and end of the school day.*

DA.1A.3b ***Students should be able to identify patterns and make predictions based on the patterns.*** *For example, students could identify the patterns for which colors are most and least represented in bags of candy, and then make a prediction as to which colors will have most and least in a new bag of candy. Students could*

identify the patterns of when temperatures rise and fall, and predict if they think the temperature will rise or fall at a particular time of the day, based on the pattern observed.

Level 1A: GRADES K-2 - Algorithms and Programming

Algorithms and Programming (AP.1A)

Conceptual understanding: An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

AP.1A.1 Model daily processes by creating and following algorithms (sets of step-by-step instructions) to complete tasks. [ALGORITHMS] (P4.4)

Composition is the combination of smaller tasks into more complex tasks.

AP.1A.1a ***Students should be able to create and follow algorithms****. For example, students could create and follow algorithms for making simple foods, brushing their teeth, getting ready for school, participating in cleanup time. Students may demonstrate understanding visually, orally, or in writing.*

AP.1A.2 Model the way programs store and manipulate data by using numbers or other symbols to represent information. [VARIABLES] (P4.4)

Information in the real world can be represented in computer programs.

AP.1A.2a ***Students should be able to model data storage and manipulation by using representative symbols.*** *For example, students could use thumbs up/down as representations of yes/no, use arrows when writing algorithms to represent direction, or encode and decode words using numbers, pictographs, or other symbols to represent letters or words.*

AP.1A.3 Develop programs with sequences and simple loops to express ideas or address a problem. [CONTROL] (P5.2)

Programming is used as a tool to create products that reflect a wide range of interests. Control structures specify the order in which instructions are executed within a program. Sequences are the order of instructions in a program. For example, if dialogue is not sequenced correctly when programming a simple animated story, the story will not make sense. If the commands to program a robot are not in the correct order, the robot will not complete the task desired. Loops allow for the repetition of a sequence of code multiple times. For example, in a program to show the life cycle of a butterfly, a loop could be combined with move commands to allow continual but controlled movement of the character.

AP.1A.3a ***Students should be able to express ideas or address problems by developing programs with sequences and simple loops.***

AP.1A.4 Decompose (break down) the steps needed to solve a problem into a precise sequence of instructions. [MODULARITY] (P3.2)

Decomposition is the act of breaking down tasks into simpler tasks.

AP.1A.4a ***Students should be able to break down the steps needed to solve a problem into a precise sequence of instructions.*** *For example, students could break down the steps needed to make a peanut butter and jelly sandwich, to brush their teeth, to draw a shape, to move a character across the screen, or to solve a level of a coding app. Students may demonstrate understanding visually, orally, or in*

writing.

AP.1A.5 Develop plans that describe a program's sequence of events, goals, and expected outcomes. [PROGRAM DEVELOPMENT] (P5.1, P7.2)

Creating a plan for what a program will do clarifies the steps that will be needed to create a program and can be used to check if a program is correct.

AP.1A.5a ***Students should be able to develop and visually illustrate the plan for what a program will do.*** *For example, students could create a planning document, such as a story map, a storyboard, or a sequential graphic organizer, to illustrate what their program will do. Students at this stage may complete the planning process with help from their teachers.*

AP.1A.6 Give attribution when using the ideas and creations of others while developing programs. [PROGRAM DEVELOPMENT] (P7.3)

Using computers comes with a level of responsibility.

AP.1A.6a ***Students should credit artifacts that were created by others, such as pictures, music, and code.*** *Credit could be given orally, if presenting their work to the class, or in writing, if sharing work on a class blog or website. Proper attribution at this stage does not require a formal citation, such as in a bibliography or works cited document.*

AP.1A.7 Debug (identify and fix) errors in an algorithm or program that includes sequences and simple loops. [PROGRAM DEVELOPMENT] (P6.2)

Algorithms or programs may not always work correctly.

AP.1A.7a ***Students should be able to use various strategies, such as changing the sequence of the steps, following the algorithm in a step-by-step manner, or trial and error to fix problems in algorithms and programs.***

AP.1A.8 Using correct terminology, describe steps taken and choices made during the iterative process of program development. [PROGRAM DEVELOPMENT] (P7.2)

AP.1A.8a ***Students should be able to talk or write about the goals and expected outcomes of the programs they create and the choices that they made when creating programs.*** *This could be done using coding journals, discussions with a teacher, class presentations, or blogs.*

Level 1A: GRADES K-2 - Impacts of Computing

Impacts of Computing (IC.1A)

Conceptual understanding: Computing affects many aspects of the world in both positive and negative ways at local, national, and global levels. Individuals and communities influence computing through their behaviors and cultural and social interactions, and in turn, computing influences new cultural practices. An informed and responsible person should understand the social implications of the digital world, including equity and access to computing.

IC.1A.1 Compare how people live and work before and after the implementation or adoption of new computing technology. [CULTURE] (P7.0)

Computing technology has positively and negatively changed the way people live and work. In the past, if students wanted to read about a topic, they needed access to a library to find a book about it. Today, students can view and read information on the Internet about a topic or they can download e-books about it directly to a device. Such information may be available in more than one language and could be read to a student, allowing for great accessibility.

IC.1A.1a ***Students should be able to compare how people live and work before and after the implementation or adoption of new computing technology.***

IC.1A.2 Work respectfully and responsibly with others online. [SOCIAL INTERACTIONS] (P2.1)

Online communication facilitates positive interactions, such as sharing ideas with many people, but the public and anonymous nature of online communication also allows intimidating and inappropriate behavior in the form of cyberbullying.

IC.1A.2a ***Students should demonstrate understanding of how to work with others online in a respectful and responsibly way.*** *Students could share their work on blogs or in other collaborative spaces online, taking care to avoid sharing information that is inappropriate or that could personally identify them to others.*

IC.1A.2a ***Students should be able to identify cyberbullying.*** *Students could provide feedback to others on their work in a kind and respectful manner and could tell an adult if others are sharing things they should not share or are treating others in an unkind or disrespectful manner on online collaborative spaces.*

IC.1A.3 Keep login information private and log off of devices appropriately. [SAFETY, LAW, & ETHICS] (P7.3)

People use computing technology in ways that can help or hurt themselves or others. Harmful behaviors, such as sharing private information and leaving public devices logged in, should be recognized and avoided.

IC.1A.3a ***Students should understand that some things like login details, their address, and other personally identifying information is private (secret).***

IC.1A.3b ***Students should know to always log off properly on any device used.***

Level 1B: GRADES 3-5

Level 1B: GRADES 3-5 - Computing Systems

Computing Systems (CS.1B)

Conceptual understanding: People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

CS.1B.1 Describe how internal and external parts of computing devices function to form a system. [DEVICES] (P7.2)

Computing devices often depend on other devices or components. For example, a robot depends on a physically attached light sensor to detect changes in brightness, whereas the light sensor depends on the robot for power. Keyboard input or a mouse click could cause an action to happen or information to be displayed on a screen; this could only happen because the computer has a processor to evaluate what is happening externally and produce corresponding responses.

CS.1B.1a ***Students should describe how devices and components interact using correct terminology.***

CS.1B.2 Model how computer hardware and software work together as a system to accomplish tasks. [HARDWARE & SOFTWARE] (P4.4)

In order for a person to accomplish tasks with a computer, both hardware and software are needed. At this stage, a model should only include the basic elements of a computer system, such as input, output, processor, sensors, and storage.

CS.1B.2a ***Students should model how computer hardware and software work together to accomplish tasks.*** *Students could draw a model on paper or in a drawing program, program an animation to demonstrate it, or demonstrate it by acting this out in some way.*

CS.1B.3 Determine potential solutions to solve simple hardware and software problems using common troubleshooting strategies. [TROUBLESHOOTING] (P6.2)

Although computing systems may vary, common troubleshooting strategies can be used on all of them.

CS.1B.3a ***Students should be able to identify common hardware and software problems.*** *Types of problems students might encounter include the device not responding, no power, no network, app crashing, no sound, or password entry not working.*

CS.1B.3b ***Students should identify and implement various troubleshooting strategies.*** *Such strategies may include rebooting the device, checking for power, checking network availability, closing and reopening an app, making sure speakers are turned on or headphones are plugged in, and making sure that the caps lock key is not on, to solve these problems, when possible.*

Level 1B: GRADES 3-5 - Networks and the Internet

Networks and the Internet (NI.1B)

Conceptual understanding: Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing.

Networks and communication systems provide greater connectivity in the computing world by providing fast, secure communication and facilitating innovation.

NI.1B.1 Model how information is broken down into smaller pieces, transmitted as packets through multiple devices over networks and the Internet, and reassembled at the destination. [NETWORK COMMUNICATION & ORGANIZATION] (P4.4)

Information is sent and received over physical or wireless paths. It is broken down into smaller pieces called packets, which are sent independently and reassembled at the destination.

NI.1B.1a ***Students should demonstrate their understanding of how information flows over networks and the Internet.*** *This could be accomplished, for instance, by drawing a model of the way packets are transmitted, programming an animation to show how packets are transmitted, or demonstrating this through an unplugged activity which has them act it out in some way.*

NI.1B.2 Discuss real-world cybersecurity problems and how personal information can be protected. [CYBERSECURITY] (P3.1, 7.3)

Just as we protect our personal property offline, we also need to protect our devices and the information stored on them. Information can be protected using various security measures. These measures can be physical and/or digital.

NI.1B.2a **Students should be able to explain what passwords are and why we use them, and use strong passwords to protect devices and information from unauthorized access.**

Learning to protect one's device or information from unwanted use by others is an essential first step in learning about cybersecurity. Students are not required to use multiple strong passwords. They should appropriately use and protect the passwords they are required to use.

NI.1B.2b ***Students should be able to list several real-world cybersecurity issues and discuss how personal information can be protected.*** *Students could discuss or use a journaling or blogging activity to explain, orally or in writing, topics that relate to personal cybersecurity issues. Discussion topics could be based on current events related to cybersecurity or topics that are applicable to students, such as the necessity of backing up data to guard against loss, how to create strong passwords and the importance of not sharing passwords, or why we should install and keep antivirus software updated to protect data and systems.*

Level 1B: GRADES 3-5 - Data and Analysis

Data and Analysis (DA.1B)

Conceptual understanding: Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

DA.1B.1 Organize and present collected data visually to highlight relationships and support a claim. [COLLECTION, VISUALIZATION, & TRANSFORMATION] (P7.1)

Raw data has little meaning on its own. Data is often sorted or grouped to provide additional clarity. Organizing data can make interpreting and communicating it to others easier. Data points can be clustered by a number of commonalities. The same data could be manipulated in different ways to emphasize particular aspects or parts of the data set. For example, a data set

of sports teams could be sorted by wins, points scored, or points allowed, and a data set of weather information could be sorted by high temperatures, low temperatures, or precipitation.

DA.1B.1a ***Students should be able to collect data and present the information in an organized way to highlight relationships and support a claim.***

DA.1B.2 Use data to highlight or propose cause-and-effect relationships, predict outcomes, or communicate an idea. [INFERENCE & MODELS] (P7.1)

The accuracy of data analysis is related to how realistically data is represented. Inferences or predictions based on data are less likely to be accurate if the data is not sufficient or if the data is incorrect in some way.

DA.1B.2a ***Students should be able to refer to data to highlight or propose cause-and-effect relationships and predict outcomes when communicating an idea.*** *For example, in order to explore the relationship between speed, time, and distance, students could operate a robot at uniform speed and at increasing time intervals to predict how far the robot travels at that speed. In order to make an accurate prediction, one or two attempts of differing times would not be enough. The robot may also collect temperature data from a sensor, but that data would not be relevant for the task. Students must also make accurate measurements of the distance the robot travels in order to develop a valid prediction. Students could record the temperature at noon each day as a basis to show that temperatures are higher in certain months of the year. If temperatures are not recorded on nonschool days or are recorded incorrectly or at different times of the day, the data would be incomplete and the ideas being communicated could be inaccurate. Students may also record the day of the week on which the data was collected, but this would have no relevance to whether temperatures are higher or lower. In order to have sufficient and accurate data on which to communicate the idea, students might want to use data provided by a governmental weather agency.*

DA.1B.3 Store, copy, search, retrieve, modify, and delete information using a computing device and define the information stored as data. [STORAGE] (P4.2)

All information stored and processed by a computing device is referred to as data. Data can be images, text documents, audio files, software programs or apps, video files, etc.

DA.1B.3a ***Students should be able to manipulate data through their use of software to complete tasks on a computing device.*** *For example, saving, retrieving, and deleting files are all instances of manipulating data.*

Level 1B: GRADES 3-5 - Algorithms and Programming

Algorithms and Programming (AP.1B)

Conceptual Understanding: An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

AP.1B.1 Compare and refine multiple algorithms for the same task and determine which is the most appropriate. [ALGORITHMS] (P6.3, P3.3)

Different algorithms can achieve the same result, though sometimes one algorithm might be

most appropriate for a specific situation.

AP.1B.1a ***Students should be able to look at different ways to solve the same task and decide which would be the best solution.*** *For example, students could use a map and plan multiple algorithms to get from one point to another. They could look at routes suggested by mapping software and change the route to something that would be better based on which route is shortest or fastest or would avoid a problem. Students might compare algorithms that describe how to get ready for school. Another example might be to write different algorithms to draw a regular polygon and determine which algorithm would be the easiest to modify or repurpose to draw a different polygon.*

AP.1B.2 Create programs that use variables to store and modify data. [VARIABLES] (P5.2)

Variables are used to store and modify data.

AP.1B.2a ***Students should understand how to use variables to store and modify data.*** *For example, students may use mathematical operations to add to the score of a game or subtract from the number of lives available in a game. The use of a variable as a countdown timer is another example.*

AP.1B.3 Create programs that include sequences, events, loops, and conditionals. [CONTROL] (P5.2)

Control structures specify the order (sequence) in which instructions are executed within a program and can be combined to support the creation of more complex programs. Events allow portions of a program to run based on a specific action.

AP.1B.3a ***Students should be able to create programs that include sequences, events, loops, and conditionals.*** *For example, students could write a program to explain the water cycle. When a specific component is clicked (event), the program would show information about that part of the water cycle. Conditionals allow for the execution of a portion of code in a program when a certain condition is true. For example, students could write a math game that asks multiplication fact questions and then uses a conditional to check whether or not the answer that was entered is correct. Loops allow for the repetition of a sequence of code multiple times. For example, in a program that produces an animation about a famous historical character, students could use a loop to have the character walk across the screen as they introduce themselves.*

AP.1B.4 Decompose (break down) problems into smaller, manageable subproblems to facilitate the program development process. [MODULARITY] (P3.2)

Decomposition is the act of breaking down tasks into simpler tasks.

AP.1B.4a ***Students should be able to break down problems into smaller, simpler tasks.*** *For example, students could create an animation by separating a story into different scenes. For each scene, they would select a background, place characters, and program actions.*

AP.1B.5 Modify, remix, or incorporate portions of an existing program into one's own work to develop something new or add more advanced features. [MODULARITY] (P5.3)

Programs can be broken down into smaller parts, which can be incorporated into new or existing programs.

AP.1B.5a ***Students should be able to modify and/or reuse portions of an existing program into their own work to create something new.*** *For example, students could modify prewritten code from a single-player game to create a two-player game with slightly different rules, remix and add another scene to an animated story, use code to make a ball bounce from another program in a new basketball game, or modify an image created by another student.*

AP.1B.6 Use an iterative process to plan the development of a program by including others' perspectives and considering user preferences. [PROGRAM DEVELOPMENT] (P1.1, P5.1)

Planning is an important part of the iterative process of program development.

AP.1B.6a ***Students outline key features, time and resource constraints, and user expectations.***

AP.1B.6b ***Students should document the plan as, for example, a storyboard, flowchart, pseudocode, or story map.***

AP.1B.7 Observe intellectual property rights and give appropriate attribution when creating or remixing programs. [PROGRAM DEVELOPMENT] (P7.3)

Intellectual property rights can vary by country, but copyright laws give the creator of a work a set of rights that prevents others from copying the work and using it in ways that they may not like.

AP.1B.7a ***Students should identify instances of remixing, when ideas are borrowed and iterated upon, and credit the original creator.***

AP.1B.7b ***Students should also consider common licenses that place limitations or restrictions on the use of computational artifacts, such as images and music downloaded from the Internet.*** *At this stage, attribution should be written in the format required by the teacher and should always be included on any programs shared online.*

AP.1B.8 Test and debug (identify and fix errors) a program or algorithm to ensure it runs as intended. [PROGRAM DEVELOPMENT] (P6.1, P6.2)

As students develop programs, they should continuously test those programs to see that they do what was expected and fix (debug), any errors.

AP.1B.8a ***Students should be able to identify and debug simple errors in programs they create and in programs created by others.***

AP.1B.9 Take on varying roles, with teacher guidance, when collaborating with peers during the design, implementation, and review stages of program development. [PROGRAM DEVELOPMENT] (P2.2)

Collaborative computing is the process of performing a computational task by working in pairs or on teams. Because it involves asking for the contributions and feedback of others, effective collaboration can lead to better outcomes than working independently.

AP.1B.9a ***Students should take turns in different roles during program development, such as note taker, facilitator, program tester, or "driver" of the computer.***

AP.1B.10 Describe choices made during program development using code comments, presentations, and demonstrations. [PROGRAM DEVELOPMENT] (P7.2)

People communicate about their code to help others understand and use their programs. Another purpose of communicating one's design choices is to show an understanding of one's work.

AP.1B.10a ***Students should explain code choices using comments within the code, presentations, and demonstrations.*** *These explanations could manifest themselves as in-line code comments for collaborators and assessors or as part of a summative presentation, such as a code walk-through or coding journal.*

Level 1B: GRADES 3-5 - Impacts of Computing

Impacts of Computing (IC.1B)

Conceptual Understanding: Computing affects many aspects of the world in both positive and negative ways at local, national, and global levels. Individuals and communities influence computing through their behaviors and cultural and social interactions, and in turn, computing influences new cultural practices. An informed and responsible person should understand the social implications of the digital world, including equity and access to computing.

IC.1B.1 **Discuss computing technologies that have changed the world and express how those technologies influence and are influenced by cultural practices. [CULTURE] (P7.1)**

New computing technology is created and existing technologies are modified for many reasons, including to increase their benefits, decrease their risks, and meet societal needs.

IC.1B.1a ***Students, with guidance from their teacher, should discuss topics that relate to the history of technology and the changes in the world due to technology.*** *Topics could be based on current news content, such as robotics, wireless Internet, mobile computing devices, GPS systems, wearable computing, or how social media has influenced social and political changes.*

IC.1B.2 **Brainstorm ways to improve the accessibility and usability of technology products for the diverse needs and wants of users. [CULTURE] (P1.2)**

The development and modification of computing technology are driven by people's needs and wants and can affect groups differently. Anticipating the needs and wants of diverse end users requires students to purposefully consider potential perspectives of users with different backgrounds, ability levels, points of view, and disabilities.

IC.1B.2a ***Students will demonstrate an understanding of diversity in ability and interests by developing artifacts and tools that use different methods of communication and/or appeal to different users.*** *For example, students may consider using both speech and text when they wish to convey information in a game. They may also wish to vary the types of programs they create, knowing that not everyone shares their own tastes.*

IC.1B.3 **Seek diverse perspectives for the purpose of improving computational artifacts. [SOCIAL INTERACTIONS] (P1.1)**

Computing provides the possibility for collaboration and sharing of ideas and allows the benefit of diverse perspectives.

IC.1B.3a ***Students will collaborate and receive feedback from others.*** *For example, students could seek feedback from other groups in their class or students at another grade level. Or, with guidance from their teacher, they could use video conferencing tools or other online collaborative spaces, such as blogs, wikis, forums, or website comments, to gather feedback from individuals and groups about programming projects.*

IC.1B.4 **Use public domain or creative commons media and refrain from copying or using material created by others without permission. [SAFETY, LAW, & ETHICS] (P7.3)**

Ethical complications arise from the opportunities provided by computing. The ease of sending and receiving copies of media on the Internet, such as video, photos, and music, creates the opportunity for unauthorized use, such as online piracy, and disregard of copyrights.

IC.1B.4a ***Students should consider the licenses on computational artifacts that they wish to use.*** *For example, the license on a downloaded image or audio file may have restrictions that prohibit modification, require attribution, or prohibit use entirely.*

Level 2: GRADES 6-8

Level 2: GRADES 6-8 - Computing Systems

Computing Systems (CS.2)

Conceptual understanding: People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

CS.2.1 **Recommend improvements to the design of computing devices based on an analysis of how users interact with the devices. [DEVICES] (P3.3)**

The study of human-computer interaction (HCI) can improve the design of devices, including both hardware and software.

CS.2.1a ***Students should make recommendations for existing devices (e.g., a laptop, phone, or tablet) or design their own components or interface (e.g., create their own controllers).*** *Teachers can guide students to consider usability through several lenses, including accessibility, ergonomics, and learnability. For example, assistive devices provide capabilities such as scanning written information and converting it to speech.*

CS.2.2 **Design projects that combine hardware and software components to collect and exchange data. [HARDWARE & SOFTWARE] (P5.1)**

Collecting and exchanging data involves input, output, storage, and processing. When possible, students should select the hardware and software components for their project designs by considering factors such as functionality, cost, size, speed, accessibility, and aesthetics.

CS.2.2a ***Students will design projects that use both hardware and software to collect and exchange data.*** *For example, components for a mobile app could include accelerometer, GPS, and speech recognition. The choice of a device that connects wirelessly through a Bluetooth connection versus a physical USB connection involves a tradeoff between mobility and the need for an additional power source for the wireless device.*

CS.2.3 **Systematically identify and fix problems with computing devices and their components. [TROUBLESHOOTING] (P6.2)**

Since a computing device may interact with interconnected devices within a system, problems may not be due to the specific computing device itself but to devices connected to it.

CS.2.3a ***Students will use a structured process to troubleshoot problems with computing systems and ensure that potential solutions are not overlooked.*** *Examples of troubleshooting strategies include following a troubleshooting flow diagram, making changes to software to see if hardware will work, checking connections and settings, and swapping in working components.*

Level 2: GRADES 6-8 - Networks and the Internet

Networks and the Internet (NI.2)

Conceptual Understanding: Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing. Networks and communication systems provide greater connectivity in the computing world by providing

fast, secure communication and facilitating innovation.

NI.2.1 **Model the role of protocols in transmitting data across networks and the Internet. [NETWORK COMMUNICATION & ORGANIZATION] (P4.4)**

Protocols are rules that define how messages between computers are sent. They determine how quickly and securely information is transmitted across networks and the Internet, as well as how to handle errors in transmission.

NI.2.1a ***Students should model how data is sent using protocols to choose the fastest path, to deal with missing information, and to deliver sensitive data securely.*** *For example, students could devise a plan for resending lost information or for interpreting a picture that has missing pieces. The priority at this grade level is understanding the purpose of protocols and how they enable secure and errorless communication. Knowledge of the details of how specific protocols work is not expected.*

NI.2.2 **Explain how physical and digital security measures protect electronic information. [CYBERSECURITY] (P7.2)**

Information that is stored online is vulnerable to unwanted access. Examples of physical security measures to protect data include keeping passwords hidden, locking doors, making backup copies on external storage devices, and erasing a storage device before it is reused. Examples of digital security measures include secure router admin passwords, firewalls that limit access to private networks, and the use of a protocol, such as HTTPS, to ensure secure data transmission.

NI.2.2a ***Students will explain how physical and digital security measures protect electronic information.***

NI.2.3 **Apply multiple methods of encryption to model the secure transmission of information. [CYBERSECURITY] (P4.4)**

Encryption can be as simple as letter substitution or as complicated as modern methods used to secure networks and the Internet.

NI.2.3a ***Students should encode and decode messages using a variety of encryption methods, and they should understand the different levels of complexity used to hide or secure information.*** *For example, students could secure messages using methods like Caesar cyphers or steganography (i.e., hiding messages inside a picture or other data). They can also model more complicated methods, such as public key encryption, through unplugged activities.*

Level 2: GRADES 6-8 - Data and Analysis

Data and Analysis (DA.2)

Conceptual Understanding: Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

DA.2.1 **Represent data using multiple encoding schemes. [STORAGE] (P4.0)**

Data representations occur at multiple levels of abstraction, from the physical storage of bits to the arrangement of information into organized formats (e.g., tables).

DA.2.1a ***Students should represent the same data in multiple ways.*** *For example, students could represent the same color using binary, RGB values, hex codes (low-level representations), as well as forms understandable by people, including words, symbols, and digital displays of the color (high-level representations).*

DA.2.2 **Collect data using computational tools and transform the data to make it more useful and reliable. [COLLECTION, VISUALIZATION, & TRANSFORMATION] (P6.3)**

As students continue to build on their ability to organize and present data visually to support a claim, they will need to understand when and how to transform data for this purpose.

DA.2.2a ***Students should transform data to remove errors, highlight or expose relationships, and/or make it easier for computers to process.*** *The cleaning of data is an important transformation for ensuring consistent format and reducing noise and errors (e.g., removing irrelevant responses in a survey). An example of a transformation that highlights a relationship is representing males and females as percentages of a whole instead of as individual counts.*

DA.2.3 **Refine computational models based on the data they have generated. [INFERENCE & MODELS] (P5.3, P4.4)**

A model may be a programmed simulation of events or a representation of how various data is related.

DA.2.3a ***Students will refine computational models by considering which data points are relevant, how data points relate to each other, and if the data is accurate.*** *For example, students may make a prediction about how far a ball will travel based on a table of data related to the height and angle of a track. The students could then test and refine their model by comparing predicted versus actual results and considering whether other factors are relevant (e.g., size and mass of the ball). Additionally, students could refine game mechanics based on test outcomes in order to make the game more balanced or fair.*

Level 2: GRADES 6-8 - Algorithms and Programming

Algorithms and Programming (AP.2)

Conceptual understanding: An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

AP.2.1 **Use flowcharts and/or pseudocode to address complex problems as algorithms. [ALGORITHMS] (P4.4, P4.1)**

Complex problems are problems that would be difficult for students to solve computationally.

AP.2.1a ***Students will use pseudocode and/or flowcharts to organize and sequence an algorithm that addresses a complex problem, even though they may not actually program the solutions.*** *For example, students might express an algorithm that produces a recommendation for purchasing sneakers based on inputs such as size, colors, brand, comfort, and cost. Testing the algorithm with a wide range of inputs and users allows students to refine their recommendation algorithm and to identify other inputs they may have initially excluded.*

AP.2.2 **Create clearly named variables that represent different data types and perform operations on their values. [VARIABLES] (P5.1, P5.2)**

A variable is like a container with a name, in which the contents may change, but the name (identifier) does not.

AP.2.2a ***When planning and developing programs, students should decide when and how to declare and name new variables.*** *Examples of operations include adding*

points to the score, combining user input with words to make a sentence, changing the size of a picture, or adding a name to a list of people.

AP.2.2b ***Students should use naming conventions to improve program readability.***

AP.2.3 Design and iteratively develop programs that combine control structures, including nested loops and compound conditionals. [CONTROL] (P5.1, P5.2)

Control structures can be combined in many ways. Nested loops are loops placed within loops. Compound conditionals combine two or more conditions in a logical relationship (e.g., using AND, OR, and NOT), and nesting conditionals within one another allows the result of one conditional to lead to another.

AP.2.3a ***Students will design and develop programs that combine control structures.*** *For example, when programming an interactive story, students could use a compound conditional within a loop to unlock a door only if a character has a key AND is touching the door.*

AP.2.4 Decompose problems and subproblems into parts to facilitate the design, implementation, and review of programs. [MODULARITY] (P3.2)

Decomposition facilitates aspects of program development by allowing students to focus on one piece at a time (e.g., getting input from the user, processing the data, and displaying the result to the user). Decomposition also enables different students to work on different parts at the same time.

AP.2.4a ***Students should break down problems into subproblems, which can be further broken down to smaller parts.*** *For example, animations can be decomposed into multiple scenes, which can be developed independently.*

AP.2.5 Create procedures with parameters to organize code and make it easier to reuse. [MODULARITY] (P4.1, P4.3)

AP.2.5a ***Students will create procedures and/or functions that are used multiple times within a program to repeat groups of instructions.*** *These procedures can be generalized by defining parameters that create different outputs for a wide range of inputs. For example, a procedure to draw a circle involves many instructions, but all of them can be invoked with one instruction, such as "drawCircle." By adding a radius parameter, the user can easily draw circles of different sizes.*

AP.2.6 Seek and incorporate feedback from team members and users to refine a solution that meets user needs. [PROGRAM DEVELOPMENT] (P2.3, P1.1)

Development teams that employ user-centered design create solutions (e.g., programs and devices) that can have a large societal impact, such as an app that allows people with speech difficulties to translate hard-to-understand pronunciation into understandable language.

AP.2.6a ***Students should begin to seek diverse perspectives throughout the design process to improve their computational artifacts.*** *Considerations of the end user may include usability, accessibility, age-appropriate content, respectful language, user perspective, pronoun use, color contrast, and ease of use.*

AP.2.7 Incorporate existing code, media, and libraries into original programs and give attribution. [PROGRAM DEVELOPMENT] (P4.2, P5.2, P7.3)

Building on the work of others enables students to produce more interesting and powerful creations.

AP.2.7a ***Students should use portions of code, algorithms, and/or digital media in their own programs and websites.*** *At this level, they may also import libraries and connect to web application program interfaces (APIs). For example, when creating a side-scrolling games, students may incorporate portions of code that create a realistic jump movement from another person's game, and they may*

also import Creative Commons-lessened images to use in the background.

AP.2.7b ***Students should give attribution to the original creator's contributions.***

AP.2.8 Systematically test and refine programs using a range of test cases. [PROGRAM DEVELOPMENT] (P6.1)

Test cases are created and analyzed to better meet the needs of users and to evaluate whether programs function as intended. At this level, testing should become a deliberate process that is more iterative, systematic, and proactive than at lower levels.

AP.2.8a ***Students will test programs by considering potential errors, such as what will happen if a user enters invalid input (e.g., negative numbers and zero instead of positive numbers).***

AP.2.9 Distribute tasks and maintain a project timeline when collaboratively developing computational artifacts. [PROGRAM DEVELOPMENT] (P2.2)

Collaboration is a common and crucial practice in programming development. Often, many individuals and groups work on the interdependent parts of a project together.

AP.2.9a ***Students will work collaboratively in groups.***

AP.2.9b ***Students should assume predefined roles within their teams and manage the project workflow using structured timelines.*** *With teacher guidance, they will begin to create collective goals, expectations, and equitable workloads. For example, students may divide the design stage of a game into planning the storyboard, flowchart, and different parts of the game mechanics. They can then distribute tasks and roles among members of the team and assign deadlines.*

AP.2.9c ***Students should give attribution to the original creators to acknowledge their contributions.***

AP.2.10 Document programs in order to make them easier to follow, test, and debug. [PROGRAM DEVELOPMENT] (P7.2)

Documentation allows creators and others to more easily use and understand a program.

AP.2.10a ***Students should provide documentation for end users that explains their artifacts and how they function.*** *For example, students could provide a project overview and clear user instructions.*

AP.2.10b ***Students should incorporate comments in their product (comments in the code).***

AP.2.10c ***Students should communicate their process using design documents, flowcharts, and presentations.***

Level 2: GRADES 6-8 - Impacts of Computing

Impacts of Computing (IC.2)

Conceptual understanding: Computing affects many aspects of the world in both positive and negative ways at local, national, and global levels. Individuals and communities influence computing through their behaviors and cultural and social interactions, and in turn, computing influences new cultural practices. An informed and responsible person should understand the social implications of the digital world, including equity and access to computing.

IC.2.1 Compare tradeoffs associated with computing technologies that affect people's everyday activities and career options. [CULTURE] (P7.2)

Advancements in computer technology are neither wholly positive nor negative; however, the ways that people use computing technologies have tradeoffs.

IC.2.1a ***Students should consider current events related to broad ideas, including privacy, communication, and automation.*** *For example, driverless cars can*

increase convenience and reduce accidents, but they are also susceptible to hacking. The emerging industry will not only reduce the number of taxi and shared-ride drivers but also create more software engineering and cybersecurity jobs.

IC.2.2 Discuss issues of bias and accessibility in the design of existing technologies. [CULTURE] (P1.2)

IC.2.2a ***Students should test and discuss the usability of various technology tools (e.g., apps, games, and devices) with the teacher's guidance.*** *For example, facial recognition software that works better for lighter skin tones was likely developed with a homogeneous testing group and could be improved by sampling a more diverse population. When discussing accessibility, students may notice that allowing a user to change font sizes and colors will not only make an interface usable for people with low vision but also benefits users in various situations, such as in bright daylight or a dark room.*

IC.2.3 Collaborate with many contributors through strategies such as crowdsourcing or surveys when creating a computational artifact. [SOCIAL INTERACTIONS] (P2.4, P5.2)

Crowdsourcing is gathering services, ideas, or content from a large group of people, especially from the online community. It can be done at the local level (e.g., classroom or school) or global level (e.g., age-appropriate online communities, like Scratch and Minecraft).

IC.2.3a ***Students should collaborate with many contributors.*** *For example, a group of students could combine animations to create a digital community mosaic. They could also solicit feedback from many people though use of online communities and electronic surveys.*

IC.2.4 Describe tradeoffs between allowing information to be public and keeping information private and secure. [SAFETY, LAW, & ETHICS] (P7.2)

Sharing information online can help establish, maintain, and strengthen connections between people. For example, it allows artists and designers to display their talents and reach a broad audience; however, security attacks often start with personal information that is publicly available online. Social engineering is based on tricking people into revealing sensitive information and can be thwarted by being wary of attacks, such as phishing and spoofing.

IC.2.4a ***Students should discuss and describe the benefits and dangers of allowing information to be public or kept private and secure.***

Level 3A: GRADES 9-10

Level 3A: GRADES 9-10 - Computing Systems

Computing Systems (CS.3A)

Conceptual understanding: People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

CS.3A.1 Explain how abstractions hide the underlying implementation details of computing systems embedded in everyday objects. [DEVICES] (P4.1)

Computing devices are often integrated with other systems, including biological, mechanical, and social systems. A medical device can be embedded inside a person to monitor and regulate his or her health, a hearing aid (a type of assistive device) can filter out certain frequencies and magnify others, a monitoring device installed in a motor vehicle can track a person's driving patterns and habits, and a facial recognition device can be integrated into a security system to identify a person. The creation of integrated or embedded systems is not an expectation at this level.

CS.3A.1a ***Students should be able to identify embedded computer systems.***

CS.31.1b ***Students should describe the types of data and procedures that are included in the embedded system and explain how the implementation details are hidden from the user.*** *For example, a students might select a car stereo, identify the types of data (radio station presets, station name or number, volume level) and procedures (increase volume, store/recall saved station, mute) it includes.*

CS.3A.2 Compare levels of abstraction and interactions between application software, system software, and hardware layers. [HARDWARE & SOFTWARE] (P4.1)

At its most basic level, a computer is composed of physical hardware and electrical impulses. Multiple layers of software are built upon the hardware and interact with the layers above and below them to reduce complexity. System software manages a computing device's resources so that software can interact with hardware. System software is used on many different types of devices, such as smart TVs, assistive devices, virtual components, cloud components, and drones. For example, students may explore the progression from voltage to binary signal to logic gates to adders and so on. Knowledge of specific, advanced terms for computer architecture, such as BIOS, kernel, or bus, is not expected at this level.

CS.3A.2a ***Students should be able to distinguish between hardware and software.***

CS.3A.2b ***Students should be able to describe the purpose of and differences between system software (i.e. operating system) and application software (i.e. word processor).***

CS.3A.2c ***Students should be able to describe how software and hardware interact.*** *For example, text-editing software interacts with the operating system to receive input from the keyboard, convert the input to bits for storage, and interpret the bits as readable text to display on the monitor.*

CS.3A.3 Develop guidelines that convey systematic troubleshooting strategies that others can use to identify and fix errors. [TROUBLESHOOTING] (P6.2)

Troubleshooting complex problems involves the use of multiple sources when researching, evaluating, and implementing potential solutions. Troubleshooting also relies on experience,

such as when people recognize that a problem is similar to one they have seen before or adapt solutions that have worked in the past. Examples of complex troubleshooting strategies include resolving connectivity problems, adjusting system configurations and settings, ensuring hardware and software compatibility, and transferring data from one device to another.

CS.3A.3a ***Students should develop guidelines by creating an artifact that conveys systematic troubleshooting strategies (i.e. create a flow chart or a job aid for a help desk employee).***

Level 3A: GRADES 9-10 - Networks and the Internet

Networks and the Internet (NI.3A)

Conceptual understanding: Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing. Networks and communication systems provide greater connectivity in the computing world by providing fast, secure communication and facilitating innovation.

NI.3A.1 Evaluate the scalability and reliability of networks by describing the relationship between routers, switches, servers, topology, and addressing. [NETWORK COMMUNICATION & ORGANIZATION] (P4.1)

Each device is assigned an address that uniquely identifies it on the network. Routers function by comparing IP addresses to determine the pathways packets should take to reach their destination. Switches function by comparing MAC addresses to determine which computers or network segments will receive frames. Students could use online network simulators to experiment with these factors.

NI.3A.1a ***Students should be able to define a MAC address – what is it and how it is used.***

NI.3A.1b ***Students should be able to explain what a router and a switch are and how they work inside a network.***

NI.3A.1c ***Students should be able to define what a server is and how it is used in a network.***

NI.3A.1d ***Students should be able to list various types of network topology and explain why each is used.***

NI.3A.1e ***Students should be able to verbally and visually explain how addressing, routers, switches, and servers all work together in a network.***

NI.3A.2 Give examples to illustrate how sensitive data can be affected by malware and other attacks. [CYBERSECURITY] (P7.2)

Network security depends on a combination of hardware, software, and practices that control access to data and systems. The needs of users and the sensitivity of data determine the level of security implemented. Potential security problems, such as denial-of-service attacks, ransomware, viruses, worms, spyware, and phishing, present threats to sensitive data.

NI.3A.2a ***Students should be able to discuss how sensitive data can be affected by malware and other attacks.*** *Students might reflect on case studies or current events in which governments or organizations experienced data leaks or data loss as a result of these types of attacks.*

NI.3A.3 Recommend security measures to address various scenarios based on factors such as efficiency, feasibility, and ethical impacts. [CYBERSECURITY] (P3.1, 3.3)

Security measures may include physical security tokens, two-factor authentication, and biometric verification. Potential security problems, such as denial-of-service attacks, ransomware, viruses, worms, spyware, and phishing, exemplify why sensitive data should be

securely stored and transmitted. The timely and reliable access to data and information services by authorized users, referred to as availability, is ensured through adequate bandwidth, backups, and other measures.

NI.3A.3a ***Students should understand the different types of security problems and the different types of devices that can be impacted.*** *Potential security problems may include issues such as denial-of-service attacks, ransomware, viruses, worms, spyware, phishing, and social engineering. Some types of devices impacted may include laptops, tablets, cell phones, self-driving cars, ATMs, and others.*

NI.3A.3b ***Students should systematically evaluate different security measures based on efficiency, feasibility, and ethical impacts.*** *Students might address issues such as how efficiency affects feasibility or whether a proposed approach raises ethical concerns.*

NI.3A.4 Compare various security measures considering tradeoffs between the usability and security of a computing system. [CYBERSECURITY] (P6.3)

Security measures may include physical security tokens, two-factor authentication, and biometric verification, but choosing security measures involves tradeoffs between the usability and security of the system. The needs of users and the sensitivity of data determine the level of security implemented.

NI.3A.4a ***Students should be able to explain different types of security measures and discuss the tradeoffs between usability and security.*** *For example, students might discuss computer security policies in place at the local level that present a tradeoff between usability and security, such as a web filter that prevents access to many educational sites but keeps the campus network safe.*

NI.3A.5 Explain tradeoffs when selecting and implementing cybersecurity recommendations. [CYBERSECURITY] (P7.2)

Network security depends on a combination of hardware, software, and practices that control access to data and systems. The needs of users and the sensitivity of data determine the level of security implemented. Every security measure involves tradeoffs between the accessibility and security of the system.

NI.3A.5a ***Students should be able to describe, justify, and document choices they make using terminology appropriate for the intended audience and purpose.*** *Students could debate issues from the perspective of diverse audiences, including individuals, corporations, privacy advocates, security experts, and government.*

Level 3A: GRADES 9-10 - Data and Analysis

Data and Analysis (DA.3A)

Conceptual understanding: Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

DA.3A.1 Translate between different bit representations of real-world phenomena, such as characters, numbers, and images. [STORAGE] (P4.1)

DA.3A.1a ***Students should be able to translate between different bit representations.*** *For example, convert hexadecimal color codes to decimal percentages, ASCII/Unicode representation, or converting binary to base 10.*

DA.3A.1b ***Students should be able to discuss how data sequences can be interpreted in a variety of formats.*** *For example, text, numbers, sound, and images.*

DA.3A.2 Evaluate the tradeoffs in how data elements are organized and where data is stored. [STORAGE] (P3.3)

People make choices about how data elements are organized and where data is stored. These choices affect cost, speed, reliability, accessibility, privacy, and integrity.

DA.3A.2a ***Students should evaluate whether a chosen solution is most appropriate for a particular problem.*** *Students might consider the cost, speed, reliability, accessibility, privacy, and integrity tradeoffs between storing photo data on a mobile device versus in the cloud.*

DA.3A.3 Collect, transform, and organize data to help others better understand a problem. [COLLECTION, VISUALIZATION, & TRANSFORMATION] (P4.4)

People transform, generalize, simplify, and present large data sets in different ways to influence how other people interpret and understand the underlying information. Examples include visualization, aggregation, rearrangement, and application of mathematical operations. People use software tools or programming to create powerful, interactive data visualizations and perform a range of mathematical operations to transform and analyze data.

DA.3A.3a ***Students should use various data collection techniques for different types of computational problems.*** *For example, user surveys, mobile device GPS, social media data sets, etc.*

DA.3A.3b ***Use computational tools to collect, transform, and organize data to help others better understand a problem.***

DA.3A.3c ***Students should use data analysis to identify significant patterns in data sets.***

DA.3A.4 Create and evaluate computational models that represent real-world systems. [INFERENCE & MODELS] (P4.4)

Computational models make predictions about processes or phenomenon based on selected data and features. The amount, quality, and diversity of data and the features chosen can affect the quality of a model and ability to understand a system. Predictions or inferences are tested to validate models.

DA.3A.4a ***Students should create computational models that simulate real-world systems (e.g., ecosystems, epidemics, spread of disease).***

DA.3A.4b ***Students should analyze and evaluate the ability of models and simulations to formulate, refine, and test hypothesis.***

Level 3A: GRADES 9-10 - Algorithms and Programming

Algorithms and Programming (AP.3A)

Conceptual understanding: An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

AP.3A.1 Create prototypes that use algorithms to solve computational problems by leveraging prior student knowledge and personal interests. [ALGORITHMS] (P5.2)

A prototype is a computational artifact that demonstrates the core functionality of a product or process. Prototypes are useful for getting early feedback in the design process and can yield insight into the feasibility of a product. The process of developing computational artifacts

embraces both creative expression and the exploration of ideas to create prototypes and solve computational problems.

AP.3A.1a ***Students create artifacts that are personally relevant or beneficial to their community and beyond.*** *Students should develop artifacts in response to a task or a computational problem that demonstrate the performance, reusability, and ease of implementation of an algorithm.*

AP.3A.2 Use lists and functions to simplify solutions, generalizing computational problems instead of repeatedly using simple variables. [VARIABLES] (P4.1)

AP.3A.2a ***Students should be able to identify common features in multiple segments of code and substitute a single segment that uses lists (arrays) or functions to account for the differences.***

AP.3A.3 Justify the selection of specific control structures when tradeoffs involve implementation, readability, and program performance, and explain the benefits and drawbacks of choices made. [CONTROL] (P5.2)

Implementation includes the choice of programming language, which affects the time and effort required to create a program. Readability refers to how clear the program is to other programmers and can be improved through documentation. The discussion of performance is limited to a theoretical understanding of execution time and storage requirements; a quantitative analysis is not expected. Control structures at this level may include conditional statements, loops, event handlers, and recursion.

AP.3A.3a ***Students should be able to justify by explaining the benefits and drawbacks of the selection of specific control structures with regard to implementation, readability, and program performance.*** *For example, students might compare the readability and program performance of iterative and recursive implementations of procedures that calculate the Fibonacci sequence.*

AP.3A.4 Design and iteratively develop computational artifacts for practical intent, personal expression, or to address a societal issue by using events to initiate instructions. [CONTROL] (P5.2)

In this context, relevant computational artifacts include programs, mobile apps, or web apps. Events can be user-initiated, such as a button press, or system-initiated, such as a timer firing. At previous levels, students have learned to create and call procedures. Here, students design procedures that are called by events.

AP.3A.4a ***Students will design procedures that are called by events.*** *Students might create a mobile app that updates a list of nearby points of interest when the device detects that its location has been changed.*

AP.3A.5 Decompose problems into smaller components through systematic analysis, using constructs such as procedures, modules, and/or objects. [MODULARITY] (P3.2)

AP.3A.5a ***Students should decompose complex problems into manageable subproblems that could potentially be solved with programs or procedures that already exist.*** *For example, students could create an app to solve a community problem by connecting to an online database through an application programming interface (API).*

AP.3A.6 Create artifacts by using procedures within a program, combinations of data and procedures, or independent but interrelated programs. [MODULARITY] (P5.2)

Computational artifacts can be created by combining and modifying existing artifacts or by developing new artifacts. Examples of computational artifacts include programs, simulations, visualizations, digital animations, robotic systems, and apps. Complex programs are designed as systems of interacting modules, each with a specific role, coordinating for a common overall

purpose. Modules allow for better management of complex tasks. The focus at this level is understanding a program as a system with relationships between modules.

AP.3A.6a ***Students will create artifacts by using procedures within a program, combinations of data, and procedures, or independent but interrelated programs.*** *The choice of implementation, such as programming language or paradigm, may vary. Students could incorporate computer vision libraries to increase the capabilities of a robot or leverage open-source JavaScript libraries to expand the functionality of a web application.*

AP.3A.7 Systematically design and develop programs for broad audiences by incorporating feedback from users. [PROGRAM DEVELOPMENT] (P5.1)

Examples of programs could include games, utilities, and mobile applications. Students at lower levels collect feedback and revise programs.

AP.3A.1b ***Students should do so through a systematic process that includes feedback from broad audiences.*** *Students might create a user satisfaction survey and brainstorm distribution methods that could yield feedback from a diverse audience, documenting the process they took to incorporate selected feedback in product revisions.*

AP.3A.8 Evaluate licenses that limit or restrict use of computational artifacts when using resources such as libraries. [PROGRAM DEVELOPMENT] (P7.3)

Examples of software licenses include copyright, freeware, and the many open-source licensing schemes. At previous levels, students adhered to licensing schemes.

AP.3A.8a ***Students should consider licensing implications for their own work, especially when incorporating libraries and other resources.*** *Students might consider two software libraries that address a similar need, justifying their choice based on the library that has the least restrictive license.*

AP.3A.9 Evaluate and refine computational artifacts to make them more usable and accessible. [PROGRAM DEVELOPMENT] (P6.3)

Testing and refinement is the deliberate and iterative process of improving a computational artifact. This process includes debugging (identifying and fixing errors) and comparing actual outcomes to intended outcomes.

AP.3A.9a ***Students should respond to the changing needs and expectations of end users and improve the performance, reliability, usability, and accessibility of artifacts.*** *For example, students could incorporate feedback from a variety of end users to help guide the size and placement of menus and buttons in a user interface.*

AP.3A.10 Design and develop computational artifacts working in team roles using collaborative tools. [PROGRAM DEVELOPMENT] (P2.4)

Collaborative tools could be as complex as source code version control system or as simple as a collaborative word processor. Team roles in pair programming are driver and navigator but could be more specialized in larger teams. As programs grow more complex, the choice of resources that aid program development becomes increasingly important and should be made by the students.

AP.3A.10a ***Students will work in teams using collaborative tools to design and develop computational artifacts.*** *Students might work as a team to develop a mobile application that addresses a problem relevant to the school or community, selecting appropriate tools to establish and manage the project timeline; design, share, and revise graphical user interface elements; and track planned, in-progress, and completed components.*

AP.3A.11 Document design decisions using text, graphics, presentations, and/or demonstrations in the development of complex programs. [PROGRAM DEVELOPMENT] (P7.2)

Complex programs are designed as systems of interacting modules, each with a specific role, coordinating for a common overall purpose. These modules can be procedures within a program; combinations of data and procedures; or independent, but interrelated, programs. The development of complex programs is aided by resources such as libraries and tools to edit and manage parts of the program.

AP.3A.11a ***Students will document design decisions using text, graphics, presentations, and/or demonstrations.***

Level 3A: GRADES 9-10 - Impacts of Computing

Impacts of Computing (IC.3A)

Conceptual understanding: Computing affects many aspects of the world in both positive and negative ways at local, national, and global levels. Individuals and communities influence computing through their behaviors and cultural and social interactions, and in turn, computing influences new cultural practices. An informed and responsible person should understand the social implications of the digital world, including equity and access to computing.

IC.3A.1 Evaluate the ways computing impacts personal, ethical, social, economic, and cultural practices. [CULTURE] (P1.2)

Computing may improve, harm, or maintain practices. Equity deficits, such as minimal exposure to computing, access to education, and training opportunities, are related to larger, systemic problems in society.

IC.3A.1a ***Students should be able to evaluate the accessibility of a product to a broad group of end users, such as people who lack access to broadband or who have various disabilities.***

IC.3A.2b ***Students should also begin to identify potential bias during the design process to maximize accessibility in product design.***

IC.3A.2 Test and refine computational artifacts to reduce bias and equity deficits. [CULTURE] (P1.2)

Biases could include incorrect assumptions developers have made about their user base. Equity deficits include minimal exposure to computing, access to education, and training opportunities.

IC.3A.2a ***Students should begin to identify potential bias during the design process to maximize accessibility in product design and become aware of professionally accepted accessibility standards to evaluate computational artifacts for accessibility.***

IC.3A.3 Demonstrate ways a given algorithm applies to problems across disciplines. [CULTURE] (P3.1)

Computation can share features with disciplines, such as art and music, by algorithmically translating human intention into an artifact.

IC.3A.3a ***Students should be able to identify real-world problems that span multiple disciplines, such as increasing bike safety with new helmet technology, and that can be solved computationally.***

IC.3A.4 Use tools and methods for collaboration on a project to increase connectivity of people in different cultures and career fields. [SOCIAL INTERACTIONS] (P2.4)

Many aspects of society, especially careers, have been affected by the degree of communication afforded by computing. The increased connectivity between people in different cultures and in different career fields has changed the nature and content of many careers.

IC.3A.4a ***Students should explore different collaborative tools and methods used to solicit input from team members, classmates, and others, such as participation in online forums or local communities.*** *For example, students could compare ways different social media tools could help a team become more cohesive*

IC.3A.5 Explain the beneficial and harmful effects that intellectual property laws can have on innovation. [SAFETY, LAW, & ETHICS] (P7.3)

Laws govern many aspects of computing, such as privacy, data, property, information, and identity. These laws can have beneficial and harmful effects, such as expediting or delaying advancements in computing and protecting or infringing upon people's rights. International differences in laws and ethics have implications for computing. For examples, laws that mandate the blocking of some file-sharing websites may reduce online piracy but can restrict the right to access information. Firewalls can be used to block harmful viruses and malware but can also be used for media censorship.

IC.3A.5a ***Students should be aware of intellectual property laws and be able to explain how they are used to protect the interests of innovators and how patent trolls abuse the laws for financial gain.***

IC.3A.6 Explain the privacy concerns related to the collection and generation of data through automated processes that may not be evident to users. [SAFETY, LAW, & ETHICS] (P7.2)

Data can be collected and aggregated across millions of people, even when they are not actively engaging with or physically near the data collection devices. This automated and nonevident collection can raise privacy concerns, such as social media sites mining an account even when the user is not online. Other examples include surveillance video used in a store to track customers for security or information about purchase habits or the monitoring of road traffic to change signals in real time to improve road efficiency without drivers being aware. Methods and devices for collecting data can differ by the amount of storage required, level of detail collected, and sampling rates.

IC.3A.6a ***Students should be able to explain the privacy concerns related to the collection and generation of data through automated processes.***

IC.3A.7 Evaluate the social and economic implications of privacy in the context of safety, law, or ethics. [SAFETY, LAW, & ETHICS] (P7.3)

Laws govern many aspects of computing, such as privacy, data, property, information, and identity. International differences in laws and ethics have implications for computing.

IC.3A.7a ***Students should evaluate the social and economic implications of privacy in the context of safety, law, or ethics.*** *For example, students might review case studies or current events that present an ethical dilemma when an individual's right to privacy is at odds with the safety, security, or wellbeing of a community.*

Level 3B: GRADES 11-12

Level 3B: GRADES 11-12 - Computing Systems

Computing Systems (CS.3B)

Conceptual understanding: People interact with a wide variety of computing devices that collect, store, analyze, and act upon information in ways that can affect human capabilities both positively and negatively. The physical components (hardware) and instructions (software) that make up a computing system communicate and process information in digital form. An understanding of hardware and software is useful when troubleshooting a computing system that does not work as intended.

CS.3B.1 **Categorize the roles of operating system software.**
Examples of roles could include memory management, data storage/retrieval, processes management, and access control. **[HARDWARE & SOFTWARE]** **(P7.2)**

CS.3B.2 **Illustrate ways computing systems implement logic, input, and output through hardware components.**
Examples of components could include logic gates and IO pins. **[TROUBLESHOOTING]** **(P7.2)**

Level 3B: GRADES 11-12 - Networks and the Internet

Networks and the Internet (NI.3B)

Conceptual understanding: Computing devices typically do not operate in isolation. Networks connect computing devices to share information and resources and are an increasingly integral part of computing. Networks and communication systems provide greater connectivity in the computing world by providing fast, secure communication and facilitating innovation.

NI.3B.1 **Describe the issues that impact network functionality (e.g., bandwidth, load, delay, topology).**
Recommend use of free online network simulators to explore how these issues impact network functionality. **[NETWORK COMMUNICATION & ORGANIZATION]** **(P7.2)**

NI.3B.2 **Compare ways software developers protect devices and information from unauthorized access.**
Examples of security concerns to consider: encryption and authentication strategies, secure coding, and safeguarding keys. **[CYBERSECURITY]** **(P7.2)**

Level 3B: GRADES 11-12 - Data and Analysis

Data and Analysis (DA.3B)

Conceptual understanding: Computing systems exist to process data. The amount of digital data generated in the world is rapidly expanding, so the need to process data effectively is increasingly important. Data is collected and stored so that it can be analyzed to better understand the world and make more accurate predictions.

DA.3B.1 **Use data analysis tools and techniques to identify patterns in data representing complex systems.**
For example, identify trends in a dataset representing social media interactions, movie reviews, or shopping patterns. **[COLLECTION, VISUALIZATION, & TRANSFORMATION] (P4.1)**

DA.3B.2 **Select data collection tools and techniques to generate data sets that support a claim or communicate information. [COLLECTION, VISUALIZATION, & TRANSFORMATION] (P7.2)**

DA.3B.3 **Evaluate the ability of models and simulations to test and support the refinement of hypotheses. [INFERENCE & MODELS] (P4.4)**

Level 3B: GRADES 11-12 - Algorithms and Programming

Algorithms and Programming (AP.3B)

Conceptual understanding: An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems. The development process to create meaningful and efficient programs involves choosing which information to use and how to process and store it, breaking apart large problems into smaller ones, recombining existing solutions, and analyzing different solutions.

AP.3B.1 **Describe how artificial intelligence drives many software and physical systems.**
Examples include digital ad delivery, self-driving cars, and credit card fraud detection. **[ALGORITHMS] (P7.2)**

AP.3B.2 **Implement an artificial intelligence algorithm to play a game against a human opponent or solve a problem.**
Games do not have to be complex. Simple guessing games, Tic-Tac-Toe, or simple robot commands will be sufficient. **[ALGORITHMS] (P5.3)**
