B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
C. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:

1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
3. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation.

3.7 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.
B. Clean installed items using methods and materials recommended in writing by manufacturer.

3.8 DEMONSTRATION

A. Bidding contractor shall engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain each system described within this specification for the audio-visual equipment. This training shall include (8) hours, in the blocks of hours that shall be described by the Owner.
B. Upon approval of the above test report by the Architect and at a mutually agreeable time, demonstrate operation of each major component and of the complete installation. After demonstration, assist as required in acceptance testes.
C. Listening Tests:

1. Tests will include subjective evaluation by observers listening at various positions under various operating conditions of the system, intended to test its operation in conformance with its functional requirements.

D. Equipment Tests:

1. Perform any measurements of frequency response, distortion, noise or other characteristics and any operational tests deemed necessary by the Architect to determine conformity with these requirements.

2. If the need for adjustment or modification becomes evident during demonstration and testing, continue working until the installation operates properly.
3. Perform testing to demonstrate the Priority Override Function from the Public Address system.

E. Final Adjustments:

1. Make control adjustments as directed by the Architect. Make a record of these control settings. Provide covers, caps, or shaft locks for controls not used in system operation.

3.9 COMPLETION

A. Warranty service shall commence from 2 years after acceptance. Warranty service shall be provided during standard business hours within 24 hours after notice of concern.
B. Labor and materials provided under scope of project shall be covered under 2 year warranty. Devices shall be free of defects from installation of manufacturer. If an item requires replacement, this shall be provided at no additional cost to owner. If items are abused or rendered inoperable from misuse they shall not be covered under said warranty.
C. A/V integrator shall provide “As Built” documents, 2 sets, to owner. This shall include equipment list, as installed, equipment manuals, and detailed drawings showing as installed wiring details.

1. Provide a digital PDF copy of documentation on a USB Memory stick or CD/DVD for owner.

D. Bidding contractor shall engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain each system described within this specification for the audio-visual equipment. This training shall include Sixteen (16) hours, in the blocks of hours that shall be described by the Owner. These services shall be considered as part of the contract and at no additional fees charged to owner.

END OF SECTION 274100.16

SECTION 275116 - PUBLIC ADDRESS SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Central Control sound system
B. Volume limiter/compressors
C. Speakers
D. Preamplifiers
E. Power amplifiers
F. Equipment cabinet
G. Equipment rack
H. Telephone paging adapters
I. Noise-operated gain controllers
J. Battery backup power unit
K. Conductors and cables

1.3 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”
B. Related Drawings
C. “T” Drawings – Technology Plans
D. Related Sections:
E. Section 271000 – “Structured Cabling”
F. Section 275313 – "Clock Systems"
G. Section 274100 – “Audio Visual Systems”

1.4 GENERAL REQUIREMENTS

A. The conditions of the General Contract (General, Supplementary, and other Conditions) and the General Requirements are hereby made a part of this Section.
B. All bids shall be based on the equipment as specified herein. The catalog numbers and model designations are that of the basis-of-design: Bogen Nyquist E7000 Series IP-Based Communications System.

    1. Approved Alternates:
    2. Telecor Equivalent

C. Contractors who wish to submit alternative equipment shall provide the specifying authority with the appropriate documentation at least 10 business days prior to bid opening. The submitted documentation must provide a feature-by-feature comparison identifying how the proposed equipment meets the operation and functionality of the system described in this specification. Prior to bid date, the contractor shall provide adequate and complete submittal information, which shall include but not be limited to specification sheets, working drawings, shop drawings, and system demonstration. The alternative supplier-contractor must also provide a list to include six installations identical to the proposed system.
D. The contractor shall provide the FCC registration number of the proposed system, where applicable.
E. Final approval of the alternative system shall be determined at the time of job completion. Failure to provide the "precise functional equivalent" shall result in the removal of the alternative system at the contractor's expense.
F. The contractor for this work shall have read all the bidding requirements, the general requirements of division xx, and the contract proposal forms, and shall be held to the execution of this work. The contractor shall be bound by all the conditions and requirements therein.
G. The contractor shall be responsible for providing a complete functional system, including all necessary components whether included in this specification or not.
H. In preparing the bid, the contractor should consider that no claim will be made against the owner for any costs incurred by the contractor for any equipment demonstrations requested by the owner.

1.5 REFERENCE STANDARDS

A. NFPA 70 – National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.6 SCOPE OF WORK

A. The contractor shall supply and install all equipment, accessories, and materials in accordance with these specifications and drawings to provide a complete and operating IP-Based Communications System including but not limited to:

1. The platform shall provide complete Nyquist E7000 intercom and employ state of the art IP Technology including the minimum functions listed.

    a. Intercom call between staff locations and classrooms with Unlimited Station capacity
    b. Interactive Facility Maps
    c. User customizable Announcements with priority
    d. Text-to-Speech Announcements
    e. Emergency Classroom Check-In can be used to enhances campus security
    f. Emergency or Normal Announcements are capable of being recorded and activated by a speed dial on an administrative console, DTMF, wireless panic button, mobile app, web browser or external IP networked system using HTTPS URL-based Application Programming Interface (API)
    g. Internal clock is synchronized with NTP network time server whether on the LAN, WAN or Internet keeping the Scheduled events (Bells) and Announcements accurate within milliseconds.
    h. Audio distribution allow for scheduled or manually activated audio to be activated from the Admin Web UI, contact closure, Admin phone and/or by use of Routines
    i. Unlimited Schedules
    j. Unlimited Time, Paging, and Audio Zones
    k. Unlimited Page Stacking/Queueing

l. Unlimited Scheduled events
m. Unlimited Scheduled Audio events
n. Integrated Internet Radio Source
o. Email Notifications and Alerts the system can send an email with a system event, contact closure, or when a Routine has been activated to name a few
p. Supervised Station Status system can be setup to send an email when a Nyquist device goes offline.
q. Clock / Messaging Display capability improves school communications
r. Alert Filters – Allow facilities to monitor for such as weather events, earthquakes, tornados, tsunami, volcanoes, public health, power outages, and many other National Weather Alerts emergencies and warnings.
s. Multi-Site All Call paging allows authorized users to make normal district wide pages
t. Multi-Facility Emergency All-Call paging allows authorized users to make emergency district wide pages
u. Administrative Graphical User Interface or GUI that can be used by technicians or Administrative: CoS and Roles define who has access to what parts of the GUI
v. Push-to-Talk Microphone
w. Ambient Noise Sensing

B. The system shall have a Routines feature that allows staff to activate via Admin Web UI, dial string, panic button, mobile app, API or with an Admin phone touch interface. Routines can automatically launch a procedure, or sequence of actions, that the E7000 system executes as a result of an input trigger. Routines are designed with school security plans and can support crisis plans for situations such as school lockdown, weather events, or emergency evacuation.

1. Direct Inward Station Access or DISA allows administrator or first responder or emergency personnel with proper login codes to call into the system from outside the school into any classroom, zone, or entire facility with customer supplied SIP enabled Telephone Network. DISA is designed to allow remote monitoring, Facility All-Call or Zone Paging, and two-way conversation from outside the facility.
2. Authorized staff can use the Admin Web UI to configure the Clock/Messaging Display function. They can use it to create messages that will display on monitors connected to the 10-Watt plenum-rated Intercom Modules with HDMI 1.3 (max. 1920 x 1080 @ 24/30 Hz) output or the NQ-GA10PV devices in a selected zone, multiple zones, or to specific stations. When creating the message, you can set several options, including when and how long the messages are displayed, priority of messages, and the appearance of the messages. The schedule programming allows the event names to be displayed analog or digital clock along with day and date on an NQ-GA10PV Display. You can also remove messages from the message queue either manually or via a Routine.
3. The ADA requires that title II entities (State and local governments) and title III entities (businesses and nonprofit organizations that serve the public) communicate effectively with people who have communication disabilities. The goal is to ensure that communication with people with these disabilities is equally effective as communication with people without disabilities. With this in mind the Bogen Nyquist E7000 helps people who have vision disabilities with clear audio paging, messaging and hearing disabilities with visual messaging to any display to assist in communicating.
4. Interactive Facility Maps that are intuitive to use. Simply click on a classroom or area of the GUI and it can initiate an intercom, page or drill to another map level. I addition when the system is in Check-In mode the classroom has a pop up of a room's video feed via the Maps view if equipped. The system shall allow authorized staff to use the Map-based Audio/Video room monitoring during emergency check-in. Systems that don’t have provisions for this are not considered equal.
5. In the event of wide area network or WAN outage every facility must be capable of operating standalone and allow for all features listed within this specification to work. Systems that rely on the WAN to operate shall not be considered for comparison in this bid.

6. Manage Check-In functionality that allows staff to quickly verify that they are aware that a check-in event is underway and are reporting classroom status for their assigned classrooms or areas. For staff to check-in all they have to do is press their Call Switch after they have completed their required check-in procedure. Examples of check-in events include but are not limited to weather related shelter-in-place, safety related lockdown, fire evacuation, room occupancy.
7. The E7000 has a Disable Audio feature that can be activated via contact closure from fire alarm or security system, Admin Web UI, dial string, panic button, mobile app., API or with an Admin phone touch interface. When the E7000 has its Audio Disabled the follow features are disabled: programmed or manually activated audio distribution, Zone Paging, normal announcement files, All-Call Paging, manual normal tones and scheduled event tones.
8. Optional password protection for multi-site emergency all-Call, multi-site all-call, facility page. Emergency all-call page, all-call page, emergency announcement, announcement, zone page, alarm, and tone are used to prevent unauthorized use of the system.
9. Text-to-Speech option allows Admin Web UI users to add custom announcements into the system by simply typing the text that you want converted to speech for this announcement. The system will then generate a .wav file that can be used by the E7000 system. Systems that don't offer Text-to-Speech options shall not be equivalent.
10. Installation Wizards are available for installers to reduce the setup time on major components in the system programming. Included wizards are as follows: Customer Information, Dialing Length, Station, User, Time Zone, Network Time Server, and Zones as a minimum.
11. The public address system shall integrate with the PBX/VoIP within the school for complete access to this system from any handset part of the PBX/VoIP.
12. The public address system shall integrate with the access control system. Upon activation of threat levels in the access control system, the public address system shall broadcast emergency announcements pre-recorded by the Owner. The contractor shall coordinate the pre-recorded messages, testing with the access control system, and configuration of what threat level activates what announcement. Configure these messages with the security consultant, public address designer, and Owner.
13. The public address system shall integrate with the Fire Alarm annunciation system to announce emergencies from the fire-alarm system through the public address system.

1.7 SUBMITTALS

A. Product Data: Provide data showing electrical characteristics and connection requirements. Indicate layout of equipment mounted in racks and cabinets, component interconnecting wiring, and wiring diagrams of field wiring to speakers and remote input devices.
B. Test Results: Indicate satisfactory completion of each recommended by the manufacturer.
C. Manufacturer's installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.
D. Manufacturer's Certificate: Certify that products meet or exceed the specified requirements.
E. Manufacturer's Field Reports: Indicate that installation is complete and system performs according to specified requirements.
F. Project Record Documents: Record actual locations of speakers, control equipment, and outlets for input/outlet connectors.
G. Operation Data: Include instructions for adjusting, operating, and extending the system.
H. Maintenance Data: Include repair procedures and spare parts documentation.
I. Specification sheets on all items including cable types
J. Outline drawing of system control cabinet showing relative position of all major components
K. Shop drawings, detailing integrated electronic communications network system including, but not limited to, the following:

1. Station wiring arrangement
2. Equipment cabinet detail drawing

L. Wiring diagrams showing typical connections for all equipment
M. Numbered Certificate of Completion for installation, programming, and service training, which identifies the installing technician(s) as having successfully completed the Nyquist E7000 technical training course provided by the Bogen Communications, Inc.

1.8 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70 and Federal Communications Commission.
B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience with field service facilities within 100 miles of the project.
C. Supplier Qualifications: Authorized distributor of specified manufacturer with minimum three years documented experience.
D. Installer Qualifications: Authorized installer of specified manufacturer with service facilities within 100 miles of the project.
E. Products: Listed, classified, and labeled as suitable for the purpose intended.
F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.
G. All items of equipment shall be designed by the manufacturer to function as a complete system and shall be accompanied by the manufacturer's complete service notes and drawings detailing all interconnections.
H. The contractor shall be an established communications and electronics contractor that maintains a locally run and operated business and has done so for at least 10 years. The contractor shall be a duly authorized distributor of the equipment supplied with full manufacturer's warranty privileges.
I. The contractor shall show satisfactory evidence, upon request, that he or she maintains a fully equipped service organization capable of furnishing adequate inspection and service to the system. The contractor shall maintain at his or her facility the necessary spare parts in the proper proportion as recommended by the manufacturer to maintain and service the equipment being supplied.

1.9 SINGLE SOURCE RESPONSIBILITY

A. Except where specifically noted otherwise, all equipment supplied shall be the standard product of a single manufacturer of known reputation and a minimum of 30 years of experience in the industry. The supplying contractor shall have attended the manufacturer's installation and service training classes. A certificate of this training shall be provided with the contractor's submittal.

1.10 SAFETY / COMPLIANCE TESTING

A. The communications system and its components shall, where applicable, bear the label of a Nationally Recognized Testing Laboratory (NRTL), such as Environmental Technology Laboratory (ETL), and shall be listed by their re-examination service. All work must be completed in strict accordance with all applicable electrical codes, under direction of a qualified and factory-approved contractor, and to the approval of the owner.

B. Bogen's Nyquist E7000 solution is consistent with those NEMA SB 40-2015 requirements that specifically apply to school paging and intercom systems only as outlined within the ANSI/NEMA SB 40-2015 standards publication.

1.11 IN-SERVICE TRAINING

A. The contractor shall provide a minimum of eight hours of in-service training with this system. These sessions shall be broken into segments, which will facilitate the training of individuals in the operation of this system including Admin Web UI Dashboard operation, Scheduling, and Audio Distribution as a minimum. Operation manuals shall be provided at the time of this training.

1.12 WIRING

A. System wiring and equipment installation shall be in accordance with generally accepted engineering best practices as established by the EIA and the NEC. Wiring shall meet all state and local electrical codes. All wiring shall be tested to be free from grounds and shorts.
B. All system wiring shall be labeled at both ends of the cable. All labeling shall be based on the room 1numbers as indicated in the architectural graphics package.
C. Wiring shall be done per manufacturer's recommendation (Cat 5 or West Penn #357) depending on speaker type. All terminal connections are to be on barrier strips.

1.13 PROTECTION

A. The contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.
B. The contractor shall note on their system drawings, the type and location of these protection devices and all wiring information. Such devices are not to be installed above the ceiling.

1.14 SERVICE AND MAINTENANCE

A. The contractor shall, at the owner's request, make available a service contract offering continuing factory authorized service of this system after the initial hardware and software warranty periods.
B. System shall include software maintenance that includes bug fixes and new feature releases for a period of five years. In addition, the contractor shall provide at the owner's request additional maintenance contracts that are available as one-year, three-year, and five-year extensions. The contractor shall provide a 24-hour response time from call by customer.
C. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.

1.15 WARRANTY

A. The Bogen Nyquist hardware products identified in this specification shall be warranted to be free from defects in materials and workmanship for five (5) years from the date of sale to the original purchaser; except for the NQ-SYSCTRL, NQ-T1100 and NQ-T1000 which each carry a two (2) year warranty. The Bogen Nyquist software products identified on this specification are warranted to be free from defects in material and workmanship for ninety (90) days from the date of sale to the original purchaser.

PART 2 - SYSTEM SPECIFICATION

2.1 MANUFACTURERS

A. Manufacturers, subject to compliance with requirements specifications, provide the following system:

1. Bogen Nyquist E7000 IP-based paging and intercom solution manufactured by Bogen Communications, Inc.

B. The specifying authority must approve any alternative system 10 days prior to bid day.
C. The intent is to establish a standard of quality, function, and features. It is the responsibility of the contractor to ensure that the proposed product meets or exceeds every standard set forth in these specifications.
D. The functions and features specified are vital to the operation of this facility; therefore, inclusion in the list of acceptable manufacturers does not release the contractor from strict compliance with the requirements of this specification.

2.2 EQUIPMENT

A. Install and configure the equipment below as required by the Contract Drawings and functionality of the system in order to furnish a complete, fully-functional Public Address system.

1. Nyquist NQ-SYSCTRL System Controller

a. Configuration and management via a Web-based Graphical User Interface (GUI)
b. Wizard based setup for quick installation
c. Remote access from virtually any PC/MAC, tablet, or mobile device
d. Continuous monitoring of stations and appliances to ensure system operation
e. Dual network adapters to allow the System Controller to operate on two separate networks
f. Music automatically added to music library and playlist from USB port
g. Network-based audio that can be sourced (input) from any number of Nyquist appliances (NQ-P0100, NQ-A2xxx, NQ-A4xxx, etc.)
h. Ample storage for music files, recorded announcements, and call recordings
i. G722 and OPUS audio codec support to deliver superior HD audio quality
j. Convection air cooled; fan-less design for quiet, maintenance-free operation
k. Wall, rack, or shelf mountable

2. Nyquist NQ-E7030 Analog Station Bridge (ASB)

a. 24 station interface supporting analog speakers and call switches
b. 120-Watts of available power at 25-Volts
c. Two dynamic talk paths/amplification channels
d. Support Category G wiring or better
e. 25/70-volt speaker(s), ceiling-mounted, wall-mounted, and paging horns
f. CAN Bus 2.0 interface designed for support of Nyquist Digital Call Switch (DCS) NQ-E7020 that can initiate Normal, Urgent, or Emergency priority calls, all with options for Privacy Mode
g. Analog/Mechanical Call Switches capable of placing Normal, Urgent, or Emergency priority calls, Bogen CA15C rocker style momentary call button
h. Wall, rack, or shelf mountable

3. Nyquist NQ-P0100 Matrix Mixer Pre-Amplifier (MMPA)

    a. No less than four Mic/Line inputs used for analog audio input like AM/FM Tuner or CD Player
    b. Channel 4 configurable for Push-to-Talk MIC application
    c. Line Level output to drive external amplifier
    d. Software programmable configuration and operation

        1) Push-to-Talk Channel
        2) Push-to-Talk Type
        3) Push-to-Talk Zone
        4) Mixer Channels

    e. Configurable built-in DSP

        1) Noise Gate
        2) Compressor/Limiter functions, etc.
        3) Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving
        4) Multi-band Parametric EQ
        5) Variable Low-Cut/High-Pass filters
        6) CH1 can be configured as a digital AES/EBU (AES3) input

    f. USB 2.0 host port, Type-A connector (future use)
    g. Powered by 100V – 240V Universal AC Mains
    h. Wall, rack, or shelf mountable

4. The Nyquist two and four channel amplifiers available in the following number of channels and watts

    a. NQ-A2060 two channel with 60 watts per channel
    b. NQ-A2120 two channel with 120 watts per channel
    c. NQ-A2300 two channel with 300 watts per channel
    d. NQ-A4060 four channel with 60 watts per channel
    e. NQ-A4120 four channel with 120 watts per channel
    f. NQ-A4300 four channel with 300 watts per channel
    g. These amplifiers shall include GUI based DSP controls; 16-band Graphic Equalizer; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band Parametric Equalizer. Outputs shall be provided for 4-, 8-ohm, 25V, and 70V distributed systems.
    h. Bridged or Mono Mode
    i. Integrated Digital Signal Processor

        1) Noise Gate
        2) Compressor/Limiter functions, etc.
        3) Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving
        4) Multi-band Parametric EQ
        5) Variable Low-Cut/High-Pass filters

    j. One Line-Level Input on two channel amplifiers
    k. Two Line-Level Inputs on the four channel amplifiers
    l. 100/1000 GB ethernet connection
    m. USB 2.0 host port, Type-A connector (future use)
    n. 100V – 240V Universal AC Mains
    o. Wall, rack, or shelf mountable

p. The amplifiers shall carry the necessary safety agency listings for both the US and Canada. The amplifier shall employ convection air cooling. Amplifiers that require fans for cooling shall not be considered equal.

5. Nyquist NQ-E7010 Input/Output Controller

a. Power over Ethernet 802.3af compliant
b. 8 x Dry Contact Closure Inputs
c. 8 x Relay Driver Outputs (Open-Collector)
d. USB 2.0 host port, Type-A connector (future use)
e. Software programmable configuration and operation including; Contact Type, Extension, Name, Close Interval, Actions (911, Audio, Alarm, Announcement, All-Call, Multi-Site-Emergency-All-Call, Emergency-Call, Emergency-All-Call, Hourly, Audio-Disabled, No Action, Page, Tone, Enable-Audio and Manual), Action ID, Zones, Close Extension, Dashboard Type, Dashboard Title, Dashboard Scope, Dashboard Text, Dashboard Style, Email and Routines
f. Wall, rack, or shelf mountable

6. Nyquist NQ-GA10P 10-Watt Intercom Module

a. Power over Ethernet 802.3af compliant
b. Low-impedance (8-ohm) speaker output. Designed for use with Drop-In Ceiling Speaker CSD2X2L/U
c. Network-based audio output (paging, intercom, audio distribution)
d. Talkback support
e. Push-to-Talk Microphone that can be routed anywhere over Bogen’s Nyquist network
f. Ambient Noise Sensor connection for Amplifier volume output control
g. DSP-based noise rejection and voice bandwidth optimization
h. Web-based configuration
i. Analog Call Switch support (Bogen CA15C, or equivalent)
j. Digital Call Switch support (Bogen NQ-E7020)
k. Audio Active Control SPDT Relay Output Rated at 2A
l. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
m. Integrated slotted mounting flanges
n. Available PS4815W 48VDC External Power Supply when PoE isn't available

7. Nyquist NQ-GA10PV 10-Watt Intercom Module with HDMI Clock/Messaging Display.

a. HDMI 1.3 (max. 1920 x 1080 @ 24/30 Hz) output that can be configured many ways:

1) Analog Clock with Messaging
2) Digital Clock with Messaging
3) Single Column Messaging
4) Two Column Messaging
5) Three Column Messaging
6) Priority Fullscreen Messaging

b. Power over Ethernet 802.3af compliant
c. Low-impedance (8-ohm) speaker output. Designed for use with Drop-In Ceiling Speaker CSD2X2L/U
d. Network-based audio output (paging, intercom, audio distribution)
e. Talkback support
f. Push-to-Talk Microphone that can be routed anywhere over Bogen’s Nyquist network
g. Ambient Noise Sensor connection for Amplifier volume output control
h. DSP-based noise rejection and voice bandwidth optimization

i. Web-based configuration
j. Analog Call Switch support (Bogen CA15C, or equivalent)
k. Digital Call Switch support (Bogen NQ-E7020)
l. Audio Active Control SPDT Relay Output Rated at 2A
m. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
n. Integrated slotted mounting flanges
o. Available PS4815W 48VDC External Power Supply when PoE isn't available

8. Nyquist NQ-GA20P2 Plenum-Rated 20-Watt Integrated Amplifier

a. Single 20-watt, 8-ohm speaker output
b. Single Balanced Line Output
c. Power over Ethernet Plus (PoE+) 802.3at compliant
d. Nyquist network-based audio output (paging, intercom, audio distribution)
e. Web-based configuration
f. Front panel Power and Status LEDs
g. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
h. Integrated slotted mounting flanges
i. Available PS4830W 48VDC External Power Supply when PoE+ isn't available
j. NQ-T1100 VoIP Admin Phone Color Touch Display (aka Admin Station)
k. 7” 800 x 480-pixel color display with backlight
l. Touch screen display for one touch operation
m. Full-duplex hands-free speakerphone with AEC
n. Call hold
o. Mute
p. Redial, call return, auto answer
q. PoE (802.3af) Class-3 support
r. Headset with EHS support
s. Dual Gigabit Ethernet ports
t. Desk Mountable
u. Optional Wall mount available

9. NQ-T1000 VoIP Staff Phone LCD Display (aka Staff Station)

a. 132 x 64-pixel graphical LCD with backlight
b. Two-port 10/100M Ethernet Switch
c. Full-duplex hands-free speakerphone with AEC
d. Call hold
e. Mute
f. Redial, call return, auto answer
g. PoE (802.3af) Class-3 support
h. Dual-color (red or green) illuminated LEDs for line status information
i. Two 10/100M Ethernet ports
j. Wall or desk mountable

10. Optional third-party equipment support

a. Telephony interface device(s) for FXO/FXS analog port connectivity
b. Third-party hardware FXS gateway support includes:

1) Two port FXS gateway Cisco SPA-112 typically used for analog interface to existing PBX CO port support
2) 24 port FXS gateway Yeastar TA-2400 typically used for analog staff phone support

2.3 COMPONENTS AND DESCRIPTIONS

A. The Nyquist E7000 Series Educational System is a software-based VoIP paging and intercom system.
B. The System must be capable of supporting existing Bogen Multicom 2000 and Bogen Quantum Multicom IP wiring, 25-Volt speakers and analog call-switches, and equivalent competitive systems utilizing the existing architectural numbering scheme. The VoIP capabilities of the Nyquist system will enable the support of the features across the Nyquist appliances within the facility. The following sections define how the system handles each of the features in the system. Systems that do not allow the reuse of existing wiring or numbering scheme shall not be deemed acceptable. Systems that do not allow appliances to be seamlessly integrated via the existing customers LAN are not considered equal.
C. Nyquist E7000 Software

1. The Nyquist E7000 software is pre-installed on a Nyquist NQ-SYSCTRL System Controller or can be optionally installed on a dedicated dealer or customer supplied server. An unlimited number of facilities can be networked into a Nyquist-based District.
2. Audio shall be transmitted between the System Controller and the Nyquist appliances using the customer supplied LAN/WAN using both G.722 and Opus 48k audio encoding and streaming technology to deliver High Definition DVD quality audio. Systems that do not use G.722 and Opus for audio encoding and streaming shall not be deemed equivalent.
3. Installers have the ability to verify that the Nyquist System Controller can access Internet-based URLs required for the system to run properly by clicking on the "Check Internet Site Access" on the license activation wizard. If the installer made mistakes in configuring the network the install has the ability to go back and make changes to the network by clicking on the “Network Wizard” button.
4. The Nyquist software and Nyquist appliances firmware shall be upgradeable via the Nyquist Web UI System Update page that contains a list of available Nyquist software updates. When automatic software check and download are enabled, new software updates will automatically be downloaded and appear in the System Update list, and a dashboard message will be displayed to announce newly available software. Release notes can be viewed for each available update. System updates can be started via the System Update list. The System Update page includes a "Check for System Updates" button that can be used to manually check for and download available Nyquist software updates.
5. Prior to preforming Nyquist updates the technician shall have the ability to verify if the default gateway, Network Time Protocol, and Domain Name Servers are configured and available, to obtain network interface and routing tables status, and to display the Nyquist E7000’s public IP address. See "Check Internet Site Access" under "System Parameters”. The E7000 system can be setup to automatic check for new Nyquist System software and automatic download of new Nyquist System Software
6. It shall be possible for a Nyquist facility to make “station-to-station” calls and “remote facility” All-Call pages to a single facility or to all Nyquist facilities in a district via the Nyquist Web UI or an Admin Station. Systems that require remote viewing software or other application software to be installed/loaded on to additional servers or PCs to make station-to-station calls and remote facility All-Call or district paging shall not be considered equivalent.
7. The Nyquist software is designed to handle all facility and district-wide communications, including but not limited to, inter-facility intercom calling and paging, district-wide Emergency All-Call and local facility point-to-point calls. Via the Nyquist Web UI, every facility shall be configured with the IP addresses of all the other remote facilities within the district. To ensure that these communications are operating correctly at all times the Nyquist appliances are supervised and remote facilities are monitored, if a device or facility has a fault the system can send and/or email and also display a message if a

device changes state. System that don't provide Station Supervision and remote Facility Monitoring shall not be considered.

8. Nyquist can support an unlimited number of facilities; however, the maximum number of simultaneous remote facility intercom calls supported is based on the actual performance of the WAN and the Nyquist System Controller CPU load.
9. The voice quality of the facility calls may vary based on the WAN conditions. The maximum network bandwidth that All-Call and Zone Paging uses is average of 0.086 Mbps (Multicast G.722), and intercom calls average of 0.171 Mbps (unicast, G.722).
10. The system shall facilitate the repetitive playing of Normal or Emergency audio tones or announcements directed to an All-Call or a Paging Zone until stopped by the Nyquist user via the Web UI, an Admin Station, or a dry contact closure connected to the Nyquist I/O Controller NQ-E7010.
11. Through the use of Routines, a trained individual can create a routine that can perform a sequence of events that can include the repetitive playing of normal or emergency audio files, make or break contact closure(s), display different messages in different areas, send email(s), and place a phone call (if equipped) offsite and play a pre-recorded message. Routines can be triggered/started by Application Programming Interface (API) or the playing of normal or emergency audio files, make or break contact closure(s) or almost any feature or function in the E7000 system. The system must also be capable of executing multi-site Routines (e.g., supports District-wide lockdown). Systems that don't provide Routines are not equal.
12. A built-in Master Clock shall be included to automatically control class change bells or other time-based events. The Master Clock shall have an unlimited number of Events that may be programmed into any of the unlimited number of Facilities, unlimited number of Schedules, and unlimited number of Holiday events. The schedules shall be nameable for easy selection when assigning schedules to days or overriding a schedule. Schedules can be overridden via the Admin Web UI or Admin phone.
13. Network Time Synchronization. The system shall be capable of periodically updating/synchronizing the processor's time with a Network Time Server running Network Time Protocol (NTP) via the school's LAN network. Systems that do not provide Network Time Synchronization will not be deemed equivalent. The Nyquist server can be the NTP server for other devices on the LAN such as IP clocks and other IP devices.

D. Nyquist E7000 System Software Application

1. The Nyquist software is pre-installed on the Nyquist System Controller, and upon boot-up, users can log in to the Nyquist application via a web browser that supports WebRTC. Systems that require Com Port redirect software, client PC application, software or serial-to-Ethernet adapters for user access are not deemed equal. Communications between the System Controller and the Web UI(s) shall be via secure Hyper Text Transfer Protocol (HTTPS) connections (i.e., https://).
2. The Nyquist Web UI shall be configured with four different default user access levels, based on four unique user roles. Systems that do not provide unlimited access levels and unlimited number of user roles are not considered equal.
3. The four default roles shall be: admin, optech, operator, and user. These roles provide a starting point/example for administrators to create additional roles
4. Only a user assigned the admin role shall be able to provide access to users, giving them the ability to create, delete, edit, and view system parameters.
5. Only an Administrator shall have the ability to adjust roles and Class of Service (CoS) of users. The roles determine if users can view the definable data objects that can include configuration, alarms, and performance data and if users can perform certain operations based on the user's role and station's CoS. All changes to roles and CoS are effective immediately, without the need to restart the browser or reboot the System controller or server.
6. The Nyquist Web UI Dashboard shall provide full administrative capabilities to manage/operate the following system features:

a. Calling/Paging – Used to access directory, dial pad, Page Exclusion, Call Forwarding, Zone Page, Record Page, Prepending Page, All-Call, Emergency All-Call, Manage Check-in and operate Routines.
b. Multi-Site Calling/Paging – Used for Facility Page, Multi-Site All Call, and Multi-Site Emergency All Call.
c. Tones/Announcements – Used for Tones, Announcements, Alarms, Stop Announcement, Display Message, and Remove Message.
d. View Weekly Schedule – Used to show the current active Bell Schedules.
e. Audio Distribution – Used to distribute audio sources to Stations, Audio Zones or entire facility. Operators can create an unlimited number Audio Distributions as needed by the facility
f. Enable or Disable Audio – Used to place the Nyquist system into Page Exclusion mode (i.e., “mute” the system) when a contact closure is supplied from the fire alarm panel. Systems that do not provide this capability are deemed not equal.

7. Systems that require application software to be installed on a PC to manage the above features shall not be considered.
8. To facilitate installation and configuration of the system, additional Web UI menus are required. The menus shall only be visible to users with the correct roles and CoS. The navigation menus found on the Web UI shall be as follows:

a. System Parameters – Allow installers to adjust core system parameters including Product License, Restart Server, Station Supervision, Email Configuration, System Update, Shut Down Server, Check Internet Site Access, Check Server Status, Edit system tools and adjust all the System Parameters.
b. Zones and Queues – Allow installers to create and modify Paging, Time, and Audio Zones. Installers can also setup Queues that can be used to eliminate feedback.
c. Schedules – Allow installers and administrators to create bell schedules for multiple Schools, predefine alternative schedules to run, prevent the bells from ringing on a holiday, and schedule an announcement to play. The system shall allow an unlimited number of schedules to operate simultaneously within a facility.
d. CoS Configuration – Allow the installer to create, modify, and delete CoS groups that control station access to the following features: Call-in Level, Zone Paging, All-Call Paging, Emergency All-Call, Inter-Facility Call/Page, Audio Distribution, Remote Pickup, Join Conversation, Call Forwarding, Walking Class of Service, External Call Routing, Call Transfer/3-way Calling, Manually Activate Tone Signals, Call Any Station, Manage Recording, Monitor Calls, Monitor Locations, Conference Admin, Conference User, Voicemail, Record Calls, Activate Alarm Signals, Disable Audio, Enable Audio, Allow Callee Auto-answer, District Paging, Inter-Facility Features, Manage Output Contacts, and Execute Routines.
e. Admin Groups – Allow the installer to create, modify, and delete software groupings of admin phones, staff phones, and Admin Web UIs that can ring when a station calls in with a call switch.
f. Stations – Allow the installer to set up, modify, and delete stations; set up Page Exclusion; view Station Status; and add New Stations.
g. Bridge Devices – Allow the installer to configure the Nyquist ASBs.
h. Amplifier Devices – Allow the installer to configure Nyquist Two and Four and PA Amplifiers
i. Audio – Allow the installer to upload and manage Announcements, Playlists, Recordings, Songs, Tones, and Internet Radio Services. The system must support the uploading of both MP3 and WAV files and make Audio file management simple for users. Systems that limit the size of Audio files shall not be considered equal.
j. Users – Allow the installer to manage users by giving them the proper roles and assign extensions if needed.

k. Roles – Allow the installer to grant users rights to Create, Delete, Edit, Restart System, Sort Menu, Systems Update, Manage, Import/Export, Restore, Settings, or View.
l. Facilities – Allow the installer to set up the district wide facilities for remote paging and calling.
m. Outside Lines – Allow the installer to set up FXS and FXO ports for inbound and outbound system calling.
n. SIP Trunks – Allow the installer to set up SIP trunks into the facility for inbound or outbound calling.
o. Call Details – Allow the installer to review the historical system activities that can be used for incident investigation or system troubleshooting.
p. System Backup/Restore – Allow the installer to preform system backups or restores and allow the backups to be scheduled to run automatically.
q. System Logs – Allow the installer to view and export log files, Nyquist-Intercom, and Web Server logs that can be used for troubleshooting and technical assistance.
r. Paging Exclusions – Allow the installer to view and edit stations that are excluded from paging.
s. Firmware – Update firmware for Nyquist speakers and appliances.
t. Routines – Allow installers to create routines that are a sequence of actions, that the Nyquist system executes as a result of an input trigger. Routines can support crisis plans for situations such as school lockdowns, weather events, or emergency evacuations.
u. Alert Filters – Allow installers to select the National Weather Alerts that the facility needs to monitor for such as weather events, earthquakes, tsunami, volcanoes, public health, power outages, and many other emergencies.
v. Systems that do not provide these options as a minimum shall not be considered equal.

E. Nyquist NQ-E7030 Analog Station Bridge

1. The Nyquist NQ-E7030 ASB allows facilities with existing Multicom or Quantum or compatible intercom systems to upgrade to Nyquist. Each ASB supports up to 24 speakers and call switches with 120-Watts of embedded 25 Volt power. The ASB is designed to drive almost any combination of 25 Volt speakers and horns.
2. The Nyquist ASB contains two 120-Watt amplifiers that are used dynamically by the system and allows two simultaneous amplified audio paths through the ASB. Either amplifier can be used for an intercom call and/or program (Paging, Time Tones and Audio) distribution.
3. Each of the 24 station interface ports - Support connections to as many as 24 individual 25 Volt speakers with one 25 Volt speaker connection per interface used for direct communication between the admin area and the classroom via Half-duplex talkback using the speaker as pickup and the 24 dry contact closure-type analog Call Switch connections allow for support of legacy Call-Switches like the CA15C.
4. On the back of the ASB is a CAN Bus 2.0 Interface designed to support the connection of 24 or more Nyquist NQ-E7020 Digital Call Switches DCS that can be associated with the programmed stations. Systems that don’t support Digital Call Switches shall not be considered equal.
5. On the front of the ASB are two (2) x RGB full spectrum LED’s. The POWER LED appears as solid red during initial power up, flashes green during a boot sequence, and appears solid green when fully booted. The STATUS LED uses the following indicators to provide information about the appliance:

    1) Flashing red – No network connection found
    2) Solid blue – The ASB is in an uninitialized state and is not associated to a server. (The server may be in a discovery mode.)

3) Solid green – The ASB is registered to a Nyquist server and is in normal operation
4) Flashing green – The ASB has an IP address but is not registered with the Nyquist server
5) Solid red – The ASB needs to be rebooted or reset so that the Nyquist application can resume
6) Flashing Blue – The ASB is updating.

6. USB 2.0 host port, type A connector designed for future applications.
7. On the front of the ASB you will also find the 10/100 Ethernet network connection. The ASB can be configured with a static IP address or use DHCP for connection to the customers network as required by the Network Administrator
8. The ASB gets its power from a universal mains power supply (100VAC – 240VAC)
9. The Nyquist NQ-E7030 ASB shall be rack, wall, or shelf mountable and shall include the required mounting bracket hardware.

F. Nyquist NQ-P0100 Matrix Mixer Pre-Amplifier (MMPA)

1. The Nyquist NQ-P0100 MMPA is designed to bring external audio into the Nyquist system. The MMPA interfaces with a local sound system by accepting one or more analog audio sources, mixing them, and outputting them to either, a) the network for Audio Distribution, or b) the MMPA's line level output that can then be inserted into an external amplifier to drive local sound system in gyms, cafeterias, auditoriums, etc. The MMPA supports the following:

   a. Four software selectable Line/MIC Input channels via three XLR connectors and four sets of screw-terminals. Input channel four (4) shall be capable of being configured to support a Push-to-Talk microphone Bogen model DDU-250. Channel-1 can be configured as a digital AES/EBU (AES3) input. Line/Monitor output – The MMPA becomes a station on the Nyquist system, allowing users to call it directly or to include it in any of the Page, Time, or Audio Zones and can be direct one-way page by calling it extension.
   b. The MMPA shall support the following features: Line-Level output to drive input on a local amplifier or self-amplified speaker; One USB 2.0 host port (Type-A connector) for future use; two (2) x RGB full spectrum LED status indicators.
   c. Configurable built-in Digital Signal Processing for Noise Gate, Compressor/Limiter functions, etc., Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving, Multi-band Parametric EQ, and Variable Low-Cut/High-Pass filters.
   d. The MMPA is powered by Universal mains supply (100VAC – 240VAC).
   e. The MMPA shall be wall or shelf mountable and shall include the required mounting bracket hardware.

2. The system shall be equipped a minimum of one (1) Nyquist MMPA that allows for up to four user-configurable audio inputs. The MMPA shall support Line, MIC, and digital AES/EBU (AES3) input sources. The system supports an unlimited number of MMPAs.

G. Nyquist NQ-E7010 Input/Output Controller

1. The Nyquist NQ-E7010 I/O Controller is designed to accept contact closure inputs and activate open-collector outputs to drive relay coils. These inputs and outputs are used to trigger events or to be triggered by an event or Routine within the Nyquist system.

   a. PoE Class-1; IEEE 802.3af compliant with Optional 48VDC 15W power supply
   b. Eight Dry Contact Closure Inputs that can be used with Fire Alarm Override Relays, external event triggers (for example, Lockdown Buttons, etc.)

c. Eight Relay Driver Outputs (Open-Collector) for use with Clock Correction (Sync Pulse), response to contact closure inputs, etc.
d. USB 2.0 host port, Type-A connector (future use)
e. Two (2) x RGB full spectrum LED Power and Status indicators

2. The Nyquist NQ-E7010 I/O Controller shall support wall or shelf-mounting options and shall include the required mounting bracket hardware.
3. The Nyquist NQ-E7010 I/O Controller shall be designed for wall or shelf mounting.

H. Bogen Analog Call Switch CA-15C for use with the Nyquist ASB or NQ-GA10P(V)

1. The momentary Call Switch shall be capable of placing a combination of Normal/Urgent/Emergency Calls based on the software configuration of the Call Switch.
2. Normal/Emergency call configuration: Making a Normal call in this mode involves pressing the button on the Call Switch once. A call is then placed to the designated Admin Station. An Emergency call involves pressing the call switch at least four times. The Emergency call is then routed to the designated Admin Station. In both scenarios, the calling station number and call-in level (Normal or Emergency) are displayed on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to an alternative Admin Station or Emergency Link.
3. Urgent/Emergency call configuration: Making an Urgent call in this mode involves pressing the button on the Call Switch once. A call is then placed to the designated Admin Station. An Emergency call involves pressing the button on the Call Switch at least four times. The Emergency call is then routed to the designated Admin Station. In both scenarios, the calling station number and call-in level (Urgent or Emergency) are displayed on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to an alternative Admin Station or Emergency Link.
4. Emergency Only call configuration: Making an Emergency call in this mode involves pressing the Emergency call switch with Call Level Emergency one time. The call is then switched to the Admin Station. This requires the display of the station number and call-in level on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to any Admin Station, including Emergency Link.
5. Emergency Link Transfer - If an Emergency call goes unanswered by the Admin Station and the Emergency link transfer is active, the Emergency call will be forwarded to the loudspeaker associated with the Emergency Link Station. Any station equipped with a loudspeaker can be programmed as the Emergency Link Transfer. Systems that do not provide Emergency Link Transfer shall not be considered equal.
6. In addition to the mechanical click of a Call Switch button press, a call confirmation audio file shall be played on the associated loudspeaker when a call is placed. The three call-in levels shall have distinct audio confirmation messages:

a. Call Placed
b. Urgent Call Placed
c. Emergency Call Placed

I. The Nyquist plenum-rated amplifier shall be a model NQ-GA20P2 20-watt integrated amplifier and shall utilize UL 2043 plenum-rated packaging.

1. One 20 watt 8-ohm speaker output (with PoE+)
2. One Balanced Line Output
3. RJ-45 for Nyquist network connection
4. Power-over-Ethernet Plus (PoE+) 802.3at compliant
5. Nyquist network-based audio output Web-based configuration
6. Power and Status LEDs
7. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package

8. Optional 48VDC External Power Supply (PS4830W; sold separately)

J. The Nyquist plenum-rated amplifier shall be a model NQ-GA20P2 20-watt integrated amplifier and shall utilize UL 2043 plenum-rated packaging. The amplifier shall be capable of being powered with an 802.3at compliant Power-over-Ethernet Plus (PoE+) switch, PoE+ power injector, or 48VDC external power supply PS4830W. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.05% THD+N. The amplifier shall include GUI based configuration. Output shall be provided for both line level or 8-ohm speaker connections. Audio line level output shall be 2.2V RMS @10kΩ (+27 dB) electronically balanced.

K. The Nyquist based two channel amplifier shall be a model [_____], rated at [_____] watts RMS per channel (NQ-A2060/2x60 watts, NQ-A2120/2x120 watts, and NQ-A2300/2x300 watts) with switch selectable 2-Channel or 1-Channel bridged operation. The amplifier shall have one dedicated Balanced Line Input. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.03%. The amplifier shall include GUI based DSP controls; 16-band Graphic Equalize; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band Parametric Equalizer. Outputs shall be provided for 4-, 8-ohm, 25V, and 70V distributed systems. The amplifier shall be rack mountable 1/2 Rack Width - Wall, Rack, or Shelf mountable 1RU and 2RU packages or by using a 19” Rack Mount Kit (NQ-RMK03; sold separately). It shall carry the necessary safety agency listings for both the US and Canada. The amplifier shall employ convection air cooling. Amplifiers that require fans for cooling shall not be considered equal.

L. The Nyquist based four channel amplifier shall be a model [_____], rated at [_____] watts RMS per channel (NQ-A4060/4x60 watts, NQ-A4120/4x120 watts, and NQ-A4300/4x300 watts) with switch selectable 4-Channel or 2-Channel bridged operation. The amplifier shall have two dedicated Balanced Line Inputs with both Phoenix plug and XLR connections for each input. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.03%. The amplifier shall include GUI based DSP controls; 16-band Graphic Equalizer; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band

M. Nyquist NQ-T1100 VoIP Admin Phone – Color Touch Display (Admin Station)

1. The Nyquist Admin Station shall have the following features:

   a. 7” 800 x 480-pixel color display with backlight
   b. Touch screen display for one touch operation
   c. Full-duplex hands-free speakerphone with AEC
   d. Call hold
   e. Mute
   f. Redial, call return, auto answer
   g. PoE (802.3af) Class-3 support
   h. Headset with EHS support
   i. Dual Gigabit Ethernet ports
   j. Desk Mountable
   k. Optional Wall mount capable

2. The Nyquist Admin Station display panel shall show the time of day and day of week, the current bell schedule(s), and the station numbers and call-in priority of staff stations that are calling in. Depending upon the system programming, an Admin Station shall display menus to activate Zone Paging, All-Call Paging, Emergency All-Call Paging, District All-Call paging, alarm signals, and external functions.
3. The Admin Station shall be capable of calling either the loudspeaker or Staff Station at each classroom location.

4. The Admin Station shall display the classroom number of any station that calls 911. This allows front-office administrators to direct emergency personnel to the correct physical location in the building when they arrive. If a system is not connected to outside phone lines, then 911 calls can be routed to a designated station within the facility. The system shall automatically record all 911 calls made from any station. The 911 call recording shall begin as soon as 911 is dialed and continue unit the call is terminated. Recorded calls shall be maintained on the system for later playback review and/or retrieval by authorized personnel and/or authorities. Systems that do not provide this feature will not be deemed equal.

N. Nyquist NQ-T1000 Staff VoIP Phone – LCD Display (Staff Station)

1. Nyquist Staff Station shall have the following features:

   a. 132 x 64-pixel graphical LCD with backlight
   b. Two-port 10/100M Ethernet Switch
   c. Full-duplex hands-free speakerphone with AEC
   d. Call hold
   e. Mute
   f. Redial, call return, auto answer
   g. PoE (802.3af) Class-3 support
   h. Dual-color (red or green) illuminated LEDs for line status information
   i. Two 10/100M Ethernet ports
   j. Wall or desk mountable

2. The classroom Staff Station shall be capable of the following features depending on how the station CoS is configured:

   a. Emergency intercom call – Staff Stations shall be capable of making an Emergency intercom call, which is then routed to the assigned Admin Station. This requires the display of the architectural number and call in level on the Admin Station. Systems that do not provide this feature are not equivalent.
   b. Speed dial
   c. Toggle audio distribution on and off
   d. Call Forward activation and deactivation for All-Calls/Busy/No Answer/Busy or No Answer
   e. Conference Calling
   f. Transfer Call
   g. Dial Administrative station– Staff Stations can allow the user to dial the station number to call to the Admin phone or its associated speaker. The call shall be routed to the Admin Station showing the architectural number that is calling.
   h. Emergency All-Call – An emergency page shall be broadcasted to all the stations in the facility.
   i. Place Outside Call
   j. Remote Answer
   k. Single-Zone/All-Station Page
   l. Call Waiting Tone for Outside Calls – It shall be possible to feed the call waiting tone to the Administrative Phone during a conversation.
   m. Transfer call from VoIP speaker in classroom down to an associated Staff Station
   n. Transfer call from analog speaker in classroom down to an associated Staff Station
   o. Transfer call from VoIP Staff Station in classroom up to an associated VoIP speaker
   p. Transfer call from Staff Station in classroom up to an associated analog speaker

O. Additional Loudspeakers for use with the Nyquist ASB

1. 25-Volt Classroom Speakers shall be Bogen:

    a. Ceiling Mounted Speakers: CSD2X2U Drop-In Ceiling Speaker
    b. Wall Baffle Speakers: MB8TSQ/SL Metal Box Speaker

2. 25-Volt Hallway Speakers shall be Bogen:

    a. Ceiling Mounted Speakers: S810T725PG8U Ceiling Speaker
    b. Wall Baffle Speakers: MB8TSQ/SL Metal Box Speaker

3. 25-Volt Outdoor/Gym/Locker Room Speakers shall be Bogen:

    a. FMH15T mounted in BBSM6 surface-mounted vandal-resistant enclosure/BBFM6 flush-mounted vandal-resistant enclosure with FMHAR8 adapter ring and SGHD8 heavy duty grille
    b. KFLDS30T Wide Dispersion Re-entrant Horn Loudspeakers

4. 25-Volt Pendant Speakers shall be Bogen:

    a. OCS1 Orbit Ceiling Speakers
    b. OPS1 Orbit Pendant Speakers

P. Wire guards shall be provided and installed for each speaker where indicated on the drawings.
Q. Public Address Strobe:

1. Each public address strobe location shall include the following:
2. QTY (1) RDL ACR-1 Audio Relay
3. QTY (1) Altronix RB5 Relay
4. QTY (1) Edwards 53X-G1 Rotating Beacon, 24V, CONFIRM COLOR PRIOR TO PROCUREMENT
5. QTY (1) Edwards WBR Wall Mounting Bracket
6. QTY (1) Altronix SMP-5 Power Supply
7. QTY (1) TA238175 Transformer
8. QTY (1) STI EM121204 Utility Box
9. All required cabling
10. The power supply for the public address strobes shall be located in the data closet / telecommunication room.
11. The strobe shall activate during an all call or direct room call to the room the strobe is located in.

R. Cabling:

1. All cabling shall be plenum rated.
2. The contractor shall provide wiring in raceway for the proper operation of the sound systems as called for in this specification, or as shown on the drawings. The types of cable required are as follows:

    a. Loudspeaker Cable: It shall contain three (3) 22 AWG stranded tinned copper conductors (two (2) aluminum-polyester shielded and one (1) unshielded), plus a #22 AWG copper drain wire in a chrome PVC jacket. Conductors shall be polyethylene insulated with 0.014 inch thickness. Jacket thickness shall be 0.028 inch and overall outer diameter 0.21 inch. Loudspeaker cable shall be Belden or approved equal.
    b. Microphone Cable: Cable shall consist of one (1) pair of 20 AWG stranded, tinned copper conductors, plus a #20 stranded drain wire in a chrome PVC

jacket. Conductors shall be polyethylene insulated and aluminum-polyester shielded. Microphone cable shall be Belden or approved equal.

3. Raceways:
4. Conduit and Boxes: Comply with Section 260533 "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.
5. Outlet boxes shall be not less than 2 inches wide, 3 inches high, and 2½ inches deep.

2.4 SYSTEM CAPABILITIES

A. The communication system shall be a Bogen Nyquist E7000 Series Educational System and shall provide a comprehensive communications network between administrative areas and staff locations throughout the facility.
B. The system shall provide no less than the following features and functions:

1. Software-based, state-of-the-art, Voice over IP (VoIP) paging and intercom solution.
2. The system shall provide a Web User Interface (Web UI) shall allow users to configure and control the system, in accordance with their assigned User Role, from any Web browser enabled PC, Mac, Android or iOS tablet or mobile device.
3. Amplified-voice communication with analog loudspeakers shall use a shielded audio pair when connected to an ASB.
4. The system shall support any combination of the following VoIP phone station types: NQ-T1100 Administrative VoIP Phone – Color Touch Display (Admin Station) or NQ-T1000 Staff VoIP Phone – LCD Display (Staff Station).

    a. All VoIP phone station types shall utilize the same type of field wiring.
    b. There shall be no limit to the number of Admin Stations that can be connected to a facility. Systems that require different head-end equipment to make Admin Stations function, or systems that limit the number of Admin or Staff Stations shall not be deemed acceptable.

5. Future station alterations shall only require the Station Type to be changed in system programming. Alterations shall not require field wiring or system head-end alterations, unless an analog station device is being replaced by a VoIP station device or vice-versa.
6. The system shall be a global non-blocking system. The system shall be capable of unlimited amplified intercom paths per facility. Two amplified intercom paths shall be provided with each ASB for its complement of 24 stations. All hardware, etc., required to achieve the necessary number of amplified-voice intercom channels for this system shall be included in this submittal. ASB amplified-voice intercom channels shall provide voice-activated switching. Systems requiring the use of a push-to-talk switch on administrative telephones shall not be acceptable. There shall be an automatic level control for return speech during amplified-voice communications. The intercom amplifier shall also provide control over the voice switching sensitivity and delay times of the VOX circuitry on the ASB.
7. The system shall provide 911 Dial-Through via outside FXO/FXS lines or SIP trunks to ensure that one or more lines are always available for 911 calls. The 911 Dial-Through is available to any properly configured station (via CoS). When a station dials 911, the 911 call is processed as follows:

    a. Call routes to an Emergency Group where the call can be answered.
    b. The 911 CO lines can be pre-configured and reserved. If the 911 reserved lines are busy, the normal CO lines will be connected to route the 911 calls. If all the normal CO lines are busy, then one of the ongoing calls shall be disconnected and the 911 call shall be placed.

c. When 911 is dialed from any station, its designated Admin Station or Admin Group will receive a message that the station has dialed 911.
d. The system shall automatically record all 911 calls made from any station. The 911 call recording shall begin as soon as 911 is dialed and shall continue until the call is terminated. Recorded calls shall be maintained on the system for later playback review and/or retrieval by authorized personnel and/or authorities.

8. It is of highest importance that Emergency calls from stations receive prompt attention. Therefore, it is important that there be an alternative destination in case the Emergency call does not get answered at the primary location. Details are as follows:

a. Staff-generated Emergency calls shall be treated as the second highest system priority. Therefore, all Emergency calls shall annunciate at the top of the call queue of their respective Admin Station or Admin Group. Should that Emergency call go unanswered for 15 seconds, the call shall be re-routed to an alternative speaker station. Then, a tone will prompt the caller to make a verbal call for help and annunciates to the Emergency link station “Emergency.” During the transfer, the original administrative telephone shall continue to ring the distinctive Emergency Ring. Should the Emergency Transfer-to-Station have an associated Admin Station, it will also ring for the Emergency call.
b. The Emergency Transfer-to-Station shall be software configurable.
c. Systems failing to transfer unanswered Emergency calls or failing to immediately connect to the designated Admin Station shall not be deemed as equal.

9. There shall be a Facility Wide Emergency All-Call feature. The Emergency All-Call shall be accessed from designated Admin Stations or the Nyquist Dashboard or by the activation of an external contact closure that shall give a microphone input Emergency status. The Emergency All-Call function shall have the highest system priority and shall override all other loudspeaker-related functions including Time Tones, Normal All-Call or Zone Pages, or Audio Distribution.

a. Considering that Emergency calls are to be treated with the highest level of concern, systems that do not regard Emergency All-Call with the highest priority shall not be deemed as equal.
b. Upon touching the Directory icon, a menu shall appear on the Admin Station display prompting the user to select the desired menu.
c. The Emergency All-Call shall capture the highest-level system priority and shall be transmitted over all speakers in the facility. It shall also be capable of activating an external control output, which can be used to activate external relays to automatically override volume controls, local sound systems, or strobe circuits.
d. This Emergency All-Call feature can have a four-digit pin number associated with it that would be required to use the feature or override someone that is already using this feature.
e. Systems without Emergency All-Call or systems with All-Call that cannot be activated by external means or that do not capture complete system priority or activate an external relay, shall not be acceptable.

10. There shall be unlimited Alarm Tones (four by default). Each may be accessed by dialing *91 and the two-digit tone number from any Admin Station, SIP Trunk, or FXO/FXS system interface. These Alarm Tones are separate from the Time Tones. Users shall be able to add an unlimited number of Alarm Tones to the system by uploading MP3 or WAV files. Systems that do not allow the user to upload MP3 and WAV files to customize the Alarm Tones or need to use external alarm/tone generators or special software or have less than four Emergency Alarm Tones shall not be acceptable.

11. Upon touching the Directory icon on an Admin Station, a menu shall appear on the display prompting the user to select from the sub-menus. The Alarms sub-menu is the first available. This precludes the user from having to memorize complicated key sequences to access Alarm Tones.
12. There shall be unlimited I/O Controller relay driver outputs accessible and controllable by properly authorized users via an Administrative Web UI. These outputs remain set until accessed and reset. Users shall have the ability to review the status of each relay driver output. Users shall be prompted through fields via a plain English menu, precluding users from having to remember any dialing sequences to control this feature. The system shall support an unlimited number of I/O Controllers, and each I/O Controller shall be able to interact with any and all other I/O Controllers on the system (i.e., an input on one I/O Controller can trigger an output on one or more different I/O Controllers). Systems that require the user to remember complicated dialing schemes or prompt the user via cryptic commands shall not be acceptable.
13. The I/O Controller can create a contact closure when the following operations are performed in the system:

    a. 911 call placed
    b. Audio Distributed
    c. Alarm is played
    d. Announcement is played
    e. All-Call preformed
    f. Multi-Site All-Call performed
    g. Multi-Site Emergency-All-Call
    h. Emergency-Call
    i. Emergency-All-Call
    j. Audio-Disabled
    k. Page

14. The system shall provide software controlled and programmable control outputs for external relay activation for use with strobe lights, magnetic locks, card access systems, motion detectors, cameras, or any low-voltage, dry contact creating device. Systems using dedicated security stations for control of external functions shall not be acceptable.
15. The system shall be capable of interfacing to PSTN/PBX/iPBX via both FXO/FXS line and SIP trunk connectivity.
16. The system shall be capable of providing each facility (i.e., (i.e., Nyquist location) an unlimited number of incoming FXO/FXS or SIP trunk lines that can be designated by the user to ring the designated Day Admin or Night Admin. Where an Admin Station is designated to receive outside line calls, the incoming call’s Caller ID information shall appear on the display. The system shall also provide the ability to make outside line calls from Admin Stations. This ability shall be programmable for each Admin Station and there shall be an unlimited number of CoS available to assign to any station.
17. The system shall be capable of supporting DID, DISA, and Security DISA functions.

    a. The system shall provide a password-protected Security DISA feature that shall only be accessible from authorized Police, Fire, Emergency personnel, or an off-premise security office that monitors the facility’s security system. The Security DISA feature shall function as follows: Upon dialing the Security DISA phone number, the caller will receive a dial tone from the system, after which he or she must enter the assigned Security DISA passcode on the dial pad. Upon confirmation, the system will present the dial tone again and will allow the authorized personnel to dial any station/classroom on the system and monitor the activity without any pre-announce tone or privacy beep. This will allow the authorized personnel to audibly assess the situation and determine what actions need to be taken.

b. All DISA and Security DISA calls shall be automatically recorded by the system for later playback review and/or retrieval by authorized personnel and/or authorities.

18. The system shall provide for field-programmable three-, four-, five-, or six-digit architectural station numbers.
19. There shall be an automatic level control for return speech during amplified-voice communications.
20. Each station loudspeaker shall be assignable to all or any combination of Paging, Time, and/or Audio Zones. Systems that do not provide unlimited Paging, Time, and/or Audio Zones shall not be acceptable.
21. There shall be unlimited schedules with unlimited programmable events per facility. Each event shall sound one user-selected tone or external audio source. It shall be possible to assign each schedule to a day of the week or to manually change schedules from an authorized user via a web-based UI. Systems that do not provide unlimited schedules, events, and tones, or that require software to be installed on a PC to perform these functions shall not be acceptable.

    a. The system shall provide multiple concurrent schedules per facility/location to accommodate split facilities (for example., combined Elementary and Middle School, combined Middle and High School, etc.).
    b. The system must be capable of providing Class Change Music to be played from an external audio source or audio files that are stored in playlists on the system during class change periods or whenever a facility wants music to be played in an area (i.e., (i.e., one or more Time Zones) on an automated schedule.
    c. Each event shall be able to be directed to any one or more of the unlimited Time Zones.
    d. Each of the unlimited Time Zones shall have a programmable, customizable Preannounce Tone and volume control that is unique unto itself.
    e. Each event shall play any of the Normal tones or external audio. Each event may utilize a different tone. For example, the system shall be capable of sending the gymnasium, shop classes, and pool a separate, unique time tone to indicate “clean up.” Minutes later, the entire facility can be sent a different time tone to indicate class change.
    f. Each of the unlimited Time Tones may be manually activated by selected VoIP Admin Phones or via an authorized user with access to the Web UI. These tones shall remain active as long as the telephone remains off-hook or until canceled from the keypad or the Nyquist Web UI.
    g. Systems that do not provide an unlimited number of schedules or do not provide automatic activation of schedules shall not be acceptable.

22. Internal Master Clock shall be included, allowing an unlimited number of events per facility. Systems that do not provide an internal master clock or that must supply an external master clock to meet these specifications shall not be acceptable.
23. The Nyquist E7000 is capable of synchronizing with an NTP server and automatically adjusting the Daylight Savings Time for any time zone in the world. The server that the Nyquist E7000 application is running on can also be used as an NTP server for other systems on the LAN (for example, IP Clocks and control systems).
24. There shall be a Zone Page/All-Call Page feature that is accessible by selected Admin Phones and FXO/FXS or SIP connection to the PSTN or PBX/iPBX.
25. There shall be an option to play a pre-announce tone at any loudspeaker selected for voice paging.
26. There shall be a voice-intercom feature that is accessible by CoS authorized staff phones, all Admin VoIP phones, and Admin Web UIs.

a. There shall be a privacy beep played every 15 seconds at any selected loudspeaker to indicate that an intercom call is in progress.
b. There shall be a pre-announce tone played at any selected loudspeaker for intercom call communication.
c. For special applications, the privacy and pre-announce tone signals shall be capable of being disabled during system initialization.
d. There shall be a switch over to private telephone communications should the person at the classroom loudspeaker pick up his or her Staff Station and dial *3 to transfer the call down to the associated classroom Staff Station.

27. There shall be various levels of telephonic communication accessible by all Admin Stations and Staff Stations.

    a. Staff Stations must be capable of being programmed to ring one Admin Station during day hours and a different Admin Station during night hours. Day and Night start hours shall be configurable. Staff Stations shall be capable of being assigned to any Admin station. Systems that limit the number and assignment of staff call-ins to an Admin Station shall not be acceptable.

28. Each VoIP speaker or ASB speaker equipped with a call switch (analog or digital) shall be configurable as one of three call-in types, as follows:

    a. Normal/Emergency
    b. Urgent/Emergency
    c. Emergency

29. Call buttons programmed for access Normal / Emergency or Urgent / Emergency shall be able to initiate an Emergency call by repeated flashing of the phone's hook switch, or repeated pressing of the DCS or the Call Switch. Systems that require additional switches and/or conductors to initiate an Emergency call, shall not be acceptable.
30. Normal and Urgent calls shall be placed into the queue for the designated Admin Station or Admin Web UI.
31. Each Admin Station call queue shall first be sorted per call priority (for example, Emergency, then Urgent, and then Normal). Calls are sorted within each priority level on a first-in, first-out basis. When a call is answered, it shall automatically be removed from the queue. Systems that do not sort calls per priority and order received shall not be acceptable.

    a. The display shall simultaneously display a minimum of three intercom calls pending.
    b. Additional calls beyond three shall be indicated by a scrolling option on the right-hand side of the screen thus prompting the user that additional calls are waiting.

32. It shall be possible to answer any incoming call by picking up the handset while it is ringing. It shall not be necessary to press any buttons to answer a call unless the call has dropped into the queue.
33. Staff Stations shall receive a dial tone upon going off-hook. Outgoing calls are made by dialing the desired station. Incoming calls can be directed to the telephone or to the associated loudspeaker for a hands-free reply. There shall be a switchover from loudspeaker to private telephone communication when a person picks up the handset, dials *3, and presses Enter/OK.
34. Staff Stations shall be programmable for any type of system access, provided by or restricted by the following CoS options:

    a. CoS Name
    b. Call-in Level

c. Zone Paging
d. All-Call Paging
e. Emergency All-Call
f. Inter-Facility Call/Page
g. Audio Distribution
h. Remote Pickup
i. Join Conversation
j. Call Forwarding
k. Walking Class of Service
l. External Call Routing
m. Call Transfer/3-way Calling
n. Manually Activate Tone Signals
o. Call Any Station
p. Manage Recordings
q. Monitor Calls
r. Monitor Locations
s. Conference Admin
t. Conference User
u. Voicemail
v. Record Calls
w. Activate Alarm Signals
x. Disable Audio
y. Enable Audio
z. Allow Callee Auto-answer
aa. District Paging
bb. Inter-Facility Features
cc. Manage Output Contacts
dd. Execute Routines

35. Each Station in a facility can have a unique CoS programmed with an unlimited number of CoS combinations.
36. Staff Stations shall be able to make a Normal call to any Admin Station by dialing the Admin Station's extension number. Staff Stations shall also be able to initiate an Emergency Intercom Call by dialing ****. Emergency Calls shall ring the Designated Day/Night Admin Station. The system shall provide for each station to have a Personal Identification Number (PIN). By dialing the PIN at any system telephone, the administrator shall have access to Emergency paging regardless of the restrictions on the phone being used.
37. Admin Stations shall receive a dial tone upon going off-hook. Outgoing calls are made by dialing the desired stations. Incoming calls can be directed to the telephone or to the associated loudspeaker for a hands-free reply. There shall be an automatic switchover from loudspeaker to private telephone communication should the person pick up his or her handset.
38. The display shall normally show the time of day and day of week, bell schedule name, and the numbers of a minimum of three stations calling-in, along with the call-in status of each station (Normal, Urgent, Emergency). The Admin Station's display shall indicate the station number being dialed from the Admin Station.
39. The display shall also provide user-friendly menu selections to assist the operator when using the Nyquist system. Displays shall be in English for maximum ease-of-use. Systems that require the operator to memorize long lists of operating symbols or control codes shall not be acceptable.
40. Admin Stations shall be programmable for any type of system access, providing or restricting the following CoS options:

    a. Call-in Level
    b. Zone Paging

c. All-Call Paging
d. Emergency All-Call
e. Inter-Facility Call/Page
f. Audio Distribution
g. Remote Pickup
h. Join Conversation
i. Call Forwarding
j. Walking Class of Service
k. External Call Routing
l. Call Transfer/3-way Calling
m. Manually Activate Tone Signals
n. Call Any Station
o. Manage Recordings
p. Monitor Calls
q. Monitor Locations
r. Conference Admin
s. Conference User
t. Voicemail
u. Record Calls
v. Activate Alarm Signals
w. Disable Audio
x. Enable Audio
y. Allow Callee Auto-answer
z. District Paging
aa. Inter-Facility Features
bb. Manage Output Contacts
cc. Execute Routines

41. Program selection and its distribution or cancellation shall be accomplished from a designated Admin Station with the assistance of the menu display system. Distribution and cancellation shall be to any one or combination of speakers, any Audio Zone or Audio Zones, or All Zones. It shall be possible to provide an unlimited number of program channels for the user to pick from.

    a. It shall be possible via an Admin Station to manually initiate any of the unlimited Normal Tones or Emergency Tones. The Tones shall be separate and distinctly different from the Alarm Tones. The Tone selected shall be capable of being played one time, continuously until it is canceled, or until the administrative display phone is placed back on-hook.
    b. Each Admin Station shall maintain a unique queue of all stations calling that Admin VoIP phone.

42. VoIP Wall Baffle and VoIP Ceiling Speakers shall be configurable as either a VoIP Speaker Only or as44 a VoIP Speaker with DCS.

    a. The Bogen Nyquist VoIP speakers are powered via PoE. Use an 802.3af compliant PoE network switch port or PoE Injector to power these speakers. One PoE network switch port or PoE Injector is required per VoIP speaker.
    b. VoIP speakers can be equipped with a DCS that can be programmed as a Normal/Emergency, Urgent/Emergency, or Emergency Only and shall be able to initiate an Emergency call by touching the DCS one, two, or three times depending on the CoS and current call state of the DCS. If the station is authorized for Privacy Mode, the users can touch and hold for 4 seconds to enable Privacy Mode or hold for four seconds to disable Privacy Mode. Systems that require mechanical, membrane,

or an additional number of switches to initiate an Emergency call, shall not be acceptable.

c. Emergency Calls from VoIP Speaker with DCS shall have priority over the Normal and Urgent calls in the queue on the Admin Stations and will show up at the top of the list. Systems that do not provide priority for Emergency Call shall not be acceptable.
d. Normal and Urgent calls shall be logged into queue for the designated Admin Stations.

    1) Admin Stations shall ring for when they receive a call, and then the call will be removed from the queue when the call is answered or when the Admin Queue times out (default is 30 minutes).

e. Each queue call shall first be sorted by call priority (Emergency, then Urgent, and then Normal). Calls are sorted within each priority level on a first-in, first-out basis. When a call is answered, it shall automatically be removed from the queue. Systems that do not sort calls by priority and order received, shall not be acceptable. The display shall simultaneously show a minimum of three staff calls pending. Additional staff calls beyond three shall be indicated by an arrow pointing down thus prompting the Admin user that additional calls are waiting.
f. It shall be possible to answer any incoming call simply by picking up the handset while it is ringing. It shall not be necessary to hit any buttons to answer a call unless the call has dropped into the queue.

43. System programming shall be from an authorized Nyquist Admin User via any web browser. A valid username and password shall be required to gain access to the following programmable functions:

a. System Parameters – Allow installers to adjust core system parameters.
b. Zones – Allow installers to create and modify Paging, Time, and Audio Zones.
c. Schedules – Allow installers and administrators to create Bell Schedules for the facility, predefine alternative schedules to run. Holiday Events prevent the bells from ringing on a school holiday. The system shall allow an unlimited number of schedules to operate simultaneous within a facility.
d. Admin Groups – Allow the installer to create, modify, and delete software groupings of admin phones that can ring when a station calls in with a call switch.
e. CoS Configuration – Allow the installer to create, modify, and delete CoS groups that can have the following features defined: Call in Level, Zone Paging, All-Call Paging, Emergency All-Call, Inter-Facility Call/Page, Audio Distribution, Remote Pickup, Join Conversation, Call Forwarding, Walking Class of Service, External Call Routing, Call Transfer/3-way Calling, Manually Activate Tone Signals, Call any Station, Manage Recording, Monitor Calls, Monitor Locations, Conference Admin, Conference User, Voicemail, Record Calls, Activate Alarm Signals, Disable Audio, Enable Audio, Allow Callee Auto-answer, District Paging, Inter-Facility Features, and Execute Routines.
f. Stations – Allow the installer to set up, modify, delete stations, set up Page Exclusion, view stations' status, and add a station.
g. Bridge Devices – Allow the installer to install the Nyquist ASBs.
h. Audio – Allow the installer to upload and manage Announcements, Playlists, Announcements, Songs, and Tones. The must support the uploading of both MP3 and WAV files making Audio file management simple for users. Systems that limit the size of Audio files shall not be considered equal.
i. Users – Allow the installer to manage users by giving them the proper Role and assign an Extension if needed.
j. Roles – Allow the installer to limit user to the following: create, delete, edit, restart server, sort menu, systems update, manage, import/export, restore, settings, or view.

k. Facilities – Allow the installer to set up the district wide facilities for remote paging and calling.
l. Outside Line – allow the installer to set up FXS and FXO ports for inbound and outbound system calling.
m. SIP Trunks – allow the installer to set up SIP trunks into the facility for inbound or outbound calling.
n. Call Details – allow the installer to review the historical system activities that can be used for incident investigation or system troubleshooting.
o. System Backup/Restore – allow the installer to preform system backup or restores and allow the backups to be scheduled to run automatically.
p. System Logs – allow the installer to view and export Server, Nyquist-Intercom, and Web Server logs that can be used for trouble shooting and technical assistance.
q. Paging Exclusions – allow the installer to view and edit station that are excluded from paging.
r. Firmware – is used to update Nyquist appliances.
s. Routines – Allow installers to create routines that are a sequence of actions, that the Nyquist system executes as a result of an input trigger. Routines can support crisis plans for situations such as school lockdowns, weather events, or emergency evacuations
t. Alert Filters – Allow installers to select the National Weather Alerts that the facility needs to monitor for such as weather events, earthquakes, tsunami, volcanoes, public health, power outages, and many other emergencies.
u. Help –Provides information about the system, online help topics, and System Administrator Manual.
v. Systems not capable of supporting web-based configuration and control, or require plugins or dedicated application software, shall not be deemed as equal.
w. Systems that require a Serial-to-Ethernet converter, or require additional application software on a PC for configuration and/or control shall not be deemed as equal.

44. Admin Groups
45. Admin Stations can be placed into Admin Groups, which are used if incoming calls are not answered by the assigned Admin Station or the Day or Night Admin associated with the Admin Station. Admin Groups act as an always answer feature by providing an alternate list of Admin Stations. If an incoming call is not answered by the assigned Admin Station within 30 seconds for normal calls or 15 seconds for emergency calls, all Admin Stations in the Admin Group will ring.
46. If Call Forwarding is enabled at the Admin Station, Nyquist tries the forwarded extension. If that station does not answer or is busy, the call timeout is reduced to 15 seconds. After 15 seconds, the call rolls over to the Admin Group.
47. If an Emergency level call receives no answer, the Admin Group will ring if the Day Admin or Night Admin does not answer.
48. Admin Stations can be assigned to multiple Admin Groups. A Day or Night Admin can also be assigned to one or more Admin Groups.
49. Call Detail Reporting

    a. The Call Details feature allows the viewing and/or printing of detail records of every call in a facility in a call log format. Calls include scheduled announcements, paging, and internally and externally made or received telephone calls.

50. System Backup/Restore

    a. The system backup feature allows users with access to back up the system database, voicemail, and recordings.
    b. The system restore allows users with access to perform a system restore of previously backed up database, voicemail, and/or recordings.

c. The installer also can set up an automatic backup that can be performed daily, weekly, or monthly.

51. System Log Files

a. A log file records either events or messages that occur when software runs and is used when troubleshooting the system. The following parts of the Nyquist system generate log files:

1) Server (This provides access to the Debian Linux OS server log files.)
2) Intercom (This provides access to the Intercom application server log files
3) Web Server (This provides access to the web server log files.)

b. From the web-based UI, system logs can be viewed directly or exported via download to a PC, Mac, or Android device and then copied to removable media or attached to an email to technical support.

52. Paging Exclusions

a. For school testing and exams, the administrators shall be able to put stations into Page Exclusion mode. During this time, the stations will only receive Emergency All-Call pages – not music, tones, or All-Calls. Emergency pages will still be heard at the station even if that station is set to exclude paging.

53. Firmware

a. Installers can manage the available firmware. Because the Nyquist E7000 is constantly evolving and changing new versions of firmware will become available and the Firmware section allow installers or authorized users the ability to upload, check for updates, or configure the system to automatically download new firmware for later installation. Systems that can’t automatically check for new software are not considered equivalent.

54. Routines are designed to automatically launch a procedure, or sequence of actions, that the Nyquist system executes as a result of an input trigger.
55. Some of the events (triggered by dashboard, IP Phone, I/O Controller contact, or Routines API) that can be created are as follows:

a. Lockdown Routines
b. Emergency Evacuation Routines
c. Fire Alarm Routines
d. Weather Alert Routines

56. As you can see the power of Routines can support your facilities crisis plans for situations such as lockdown, lockout, weather events, or emergency evacuations.
57. Alert Filters Configuration - The Common Alerting Protocol (CAP) is an international standard format for emergency alerting and public warning. It is designed for all hazards related to weather events, earthquakes, tornado, tsunami, volcanoes, public health, power outages, and many other emergencies.
58. CAP elements and values are used when configuring alert filters for your Nyquist system. This part of the configuration allows installers to select or “Enable” or disable the filters needed for each facility. This filtered information can then be displayed on the NQ-GA10PV through the campus.
59. The growing list of information that can currently be displayed are as follows: 911 Telephone Outage, Administrative Message, Air Quality Alert, Air Stagnation Advisory,

Arroyo And Small Stream Flood Advisory, Ashfall Advisory, Ashfall Warning, Avalanche Advisory, Avalanche Warning, Avalanche Watch, Beach Hazards Statement, Blizzard Warning, Blizzard Watch, Blowing Dust Advisory, Blowing Dust Warning, Brisk Wind Advisory, Child Abduction Emergency, Civil Danger Warning, Civil Emergency Message, Coastal Flood Advisory, Coastal Flood Statement, Coastal Flood Warning, Coastal Flood Watch, Dense Fog Advisory, Dense Smoke Advisory, Dust Advisory, Dust Storm Warning, Earthquake Warning, Evacuation - Immediate, Excessive Heat Warning, Excessive Heat Watch, Extreme Cold Warning, Extreme Cold Watch, Extreme Fire Danger, Extreme Wind Warning, Fire Warning, Fire Weather Watch, Flash Flood Statement, Flash Flood Warning, Flash Flood Watch, Flood Advisory, Flood Statement, Flood Warning, Flood Watch, Freeze Warning, Freeze Watch, Freezing Fog Advisory, Freezing Rain Advisory, Freezing Spray Advisory, Frost Advisory, Gale Warning, Gale Watch, Hard Freeze Warning, Hard Freeze Watch, Hazardous Materials Warning, Hazardous Seas Warning, Hazardous Seas Watch, Hazardous Weather Outlook, Heat Advisory, Heavy Freezing Spray Warning, Heavy Freezing Spray Watch, High Surf Advisory, High Surf Warning, High Wind Warning, High Wind Watch, Hurricane Force Wind Warning, Hurricane Force Wind Watch, Hurricane Local Statement, Hurricane Warning, Hurricane Watch, Hydrologic Advisory, Hydrologic Outlook, Ice Storm Warning, Lake Effect Snow Advisory, Lake Effect Snow Warning, Lake Effect Snow Watch, Lake Wind Advisory, Lakeshore Flood Advisory, Lakeshore Flood Statement, Lakeshore Flood Warning, Lakeshore Flood Watch, Law Enforcement Warning, Local Area Emergency, Low Water Advisory, Marine Weather Statement, Nuclear Power Plant Warning, Radiological Hazard Warning, Red Flag Warning, Rip Current Statement, Severe Thunderstorm Warning, Severe Thunderstorm Watch, Severe Weather Statement, Shelter In Place Warning, Short Term Forecast, Small Craft Advisory, Small Craft Advisory For Hazardous Seas, Small Craft Advisory For Rough Bar, Small Craft Advisory For Winds, Small Stream Flood Advisory, Snow Squall Warning, Special Marine Warning, Special Weather Statement, Storm Surge Warning, Storm Surge Watch, Storm Warning, Storm Watch, Test, Tornado Warning, Tornado Watch, Tropical Depression Local Statement, Tropical Storm Local Statement, Tropical Storm Warning, Tropical Storm Watch, Tsunami Advisory, Tsunami Warning, Tsunami Watch, Typhoon Local Statement, Typhoon Warning, Typhoon Watch, Urban And Small Stream Flood Advisory, Volcano Warning, Wind Advisory, Wind Chill Advisory, Wind Chill Warning, Wind Chill Watch, Winter Storm Warning, Winter Storm Watch, and Winter Weather Advisory.

60. Systems that are not capable of displaying National Weather Service CAP information to give advanced warning to facilities shall not be considered equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with the installer present, for compliance with requirements and other conditions affecting the performance of the Nyquist E7000 Series Educational System.
B. Do not proceed until unsatisfactory conditions have been corrected.

3.2 EQUIPMENT MANUFACTURER'S REPRESENTATIVE

A. All work described herein to be done by the manufacturer's authorized representative shall be provided by a documented factory authorized representative of the basic line of equipment to be utilized.
B. As further qualification for bidding and participating in the work under this specification, the manufacturer's representative shall hold a valid C-10 Contractor's License issued by the Contractor's State License Board of [your state]. The manufacturer's representative shall have

completed at least 10 projects of equal scope, giving satisfactory performance, and shall have been in the business of furnishing and installing sound systems of this type for at least five years. The manufacturer's representative shall be capable of being bonded to ensure the owner of performance and satisfactory service during the guarantee period.

C. The manufacturer's representative shall provide a letter with submittals from the manufacturer of all major equipment stating that the manufacturer's representative is an authorized distributor. This letter shall also state that the manufacturer guarantees service performance for the life of the equipment and that there will always be an authorized distributor assigned to service the area in which the system has been installed.

D. The contractor shall furnish a letter from the manufacturer of the equipment. This letter shall certify that the equipment has been installed according to factory intended practices, that all the components used in the system are compatible, and that all new portions of the systems are operating satisfactorily. Further, the contractor shall furnish a written unconditional guarantee, guaranteeing all parts and all labor for a period of five years after final acceptance of the project by the owner.

3.3 INSTALLATION

A. The installation, adjustment, testing, and final connection of all conduit, wiring, boxes, cabinets, etc., shall conform to local electrical requirements and shall be sized and installed in accordance with the manufacturer’s approved shop drawings.

B. Low-voltage wiring may be run exposed above ceiling areas where they are easily accessible.

C. The contractor shall install the new system at the location shown on the plans.

D. All Staff Stations and Call Switches shall be wall-mounted:

1. Mount at 54" AFF.
2. All wiring should be concealed.
3. Verify exact location with architect.
4. Avoid mounting near doors to prevent students from activating and running out of the rooms.

E. Admin Stations can be desk or wall mounted.

F. Speaker and telephone lines run above ceiling and not in conduit shall be tie-wrapped to a ceiling joist with a maximum spacing of 8' between supports. No wires shall be laid on top of ceiling tile.

G. Connect field cable to each Analog Speaker transformer using UL butt splices for #22 AWG wire.

H. Contractor shall provide a minimum of eight hours of configuration and operational instruction to school personnel.

I. On the first school day following installation of the Nyquist System, the contractor shall provide a technician to stand by and assist in system operation.

J. Mark and label all demarcs IDF and MDF points with destination point numbers. Rooms with more than one outlet shall be marked XXX-1, XXX-2, XXX-3, etc. where XXX is the room number.

K. No graphic room number shall exceed the sequence from 000001 through 899999.

1. All outside speakers shall be on a separate Page Zone and Time Zone.
2. All zones shall be laid out not to exceed 40 Watts (@25V) maximum per zone.
3. All hallway speakers shall be tapped at 1 Watt (@25V) maximum.
4. All outside horns shall be tapped at 3.75 Watts (@25V) maximum.
5. All classroom speakers shall be tapped at ½ Watt (@25V) maximum.
6. Large rooms, such as cafeterias, shall be tapped at 2 Watts (@25V) maximum.

L. Plug disconnect: All major equipment components shall be fully pluggable by means of multi-pin receptacles and matching plugs to provide for ease of maintenance and service.
M. Protection of cables: Cables within terminal cabinets, equipment racks, etc., shall be grouped and bundled (harnessed) as to type and laced with No. 12 cord waxed linen lacing twine or T and B wire-ties, or hook and loop cable management. Edge protection material shall be installed on edges of holes, lips of ducts, or any other point where cables or harnesses cross a metallic edge.
N. Cable identification: Cable conductors shall be color-coded and individual cables shall be individually identified. Each cable identification shall have a unique number located approximately 1-1/2" from cable connection at both ends of cable. Numbers shall be approximately 1/4" in height. These unique numbers shall appear on the As-Built Drawings.
O. Shielding: Cable shielding shall be capable of being connected to common ground at point of lowest audio level and shall be free from ground at any other point. Cable shields shall be terminated in the same manner as conductors.
P. Provide complete “in service" instructions of system operation to school personnel. Assist in programming of telephone system.

3.4 GROUNDING

A. The contractor shall provide equipment grounding connections for Integrated Telecommunications/Time/Audio/Media System as indicated. Tighten connections to comply with tightening torques specified in UL Standard 486A to ensure permanent and effective grounds.
B. The contractor shall provide ground equipment, conductor, and cable shields to eliminate shock hazard and to minimize the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments.
C. The contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.
D. The contractor shall note on their drawings the type and locations of these protection devices and all wiring information.
E. The contractor shall furnish and install a dedicated, isolated earth ground from the central equipment rack and bond to the incoming electrical service ground buss bar.

3.5 INSTALLATION OF SOUND SYSTEM WIRING

A. All installations shall comply with NECA 1.
B. Provide all conduits, conductors, boxes, receptacles, etc. indicated on the Drawings, herein specified, or required for the proper operation of the sound systems.
C. Installation of all sound system wiring and all equipment shall be performed under the direct supervision of a C-EST certified Field Engineer.
D. All Sound System conductors to and between the speakers and the Category 5E consolidation block shall be free from splices or other breaks.

    1. Interconnecting terminals as specified may be used only at terminals of loudspeakers, privacy switches, amplifiers, microphone receptacles, or where directed.

E. All loudspeaker cables shall be terminated in the following manner:

    1. The end connected to the loudspeaker transformer leads shall be neatly soldered and taped where such loudspeakers are not equipped with terminal strips. Where loudspeakers are equipped with terminal strips, the ends shall be equipped with U-type solderless lugs described above.

2. Where two (2) or more loudspeakers are on the same circuit, shall be soldered neatly to terminals of the loudspeaker transformers to form a "loop" circuit.
3. Unused leads or taps of loudspeaker matching transformers shall each be separately taped to insulate the conductors from each other and from grounded parts of the equipment.

F. All connections between/among components within the Central Control Rack shall be performed under the direct supervision of personnel authorized by the manufacturer of the Central Control Rack.
G. All connections of conductors entering the Central Control Rack and terminated at the terminal blocks shall be performed by the Contractor.
H. All connections shall be made under the direct supervision of the Manufacturer's Representative. Connections shall not be made until the Contractor and the Manufacturer's Representative have explained to the Owner's Representative the procedure to be followed.
I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
J. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.
K. All cabling shall be plenum rated and properly gauged per the distances of the devices from the central control station.
L. Install 18” excess cable at each termination at microphone, attenuator, volume control, speaker, and other system outlet.
M. Install 6’ excess cable at each termination at system cabinet.
N. Grounding

1. A dedicated #10 ground wire shall be installed in conduit from the main ground bus of the electrical service and/or adequate building ground and attached to the frame of all the sound racks/cabinets and all required devices. Conduit bonds shall be used only for rack to rack continuities.

3.6 PROTECTION

A. The Contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.
B. The Contractor shall note in his system drawings, the type and location of these protection devices as well as all wiring information. Such devices are not to be installed above the ceiling.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
B. Tests and Inspections:

1. Upon completion of the installation, contractor shall engage a factory-authorized service representative to perform overall performance test in the presence of the Owner’s representative. Provide testing reports and certificate of completion of testing. The test shall include, but not be limited to the following:

a. Loudspeaker Circuits Test

1) Transmit audio signals at normal levels over each loudspeaker circuit for determination of proper loudspeaker volume and clarity.
2) Adjust transformer taps for proper output, as necessary.

b. Input Circuits Test

1) Transmit audio signals at normal levels over each input circuit to determine proper operation of each input circuit. The test shall be performed using each of the two (2) input selector switches over each of the two (2) program channels. Each input source (tuner, CD/MP3 player, Mic., etc.) on the selector switch shall be tested.

c. Load Test

1) Check for proper system operation when the entire system load (all speakers) is applied to either channel.

d. Communications Tests

1) Initiate, by means of the central controls, two-way communications between classroom speaker and PA system.
2) ALL-CALL via Central Controls: Check all speakers in the entire new building
3) Zone paging via central controls.

e. Signal-to-Noise Ratio Test:

1) Measure signal-to-noise ratio of complete system at normal gain settings as follows:

Disconnect microphone at connector or jack closest to it and replace it in the circuit with a signal generator using a 1000-Hz signal. Replace all other microphones at corresponding connectors with dummy loads, each equal in impedance to microphone it replaces. Measure signal-to-noise ratio. Repeat test for each separately controlled zone of loudspeakers.
Minimum acceptance ratio is 50 dB.

f. Distortion Test:

1) Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 50, 200, 400, 1000, 3000, 8000, and 12,000 Hz into each preamplifier channel. For each frequency, measure distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is three percent (3%) total harmonics.

g. Acoustic Coverage Test:

1) Feed pink noise into system using octaves centered at 500 and 4000 Hz. Use sound-level meter with octave-band filters to measure level at five (5) locations in each zone. For spaces with seated audiences, maximum permissible variation in level is plus or minus 2 dB. In addition, the levels between locations in same zone and between locations in adjacent zones must not vary more than plus or minus 3 dB.

h. Power Output Test:

1) Measure electrical power output of each power amplifier at normal gain settings of 50, 1000, and 12,000 Hz. Maximum variation in power output at these frequencies must not exceed plus or minus 1 dB.

i. Signal Ground Test:

1) Measure and report ground resistance at pubic address equipment signal ground. Comply with testing requirements specified in Section 260526 "Grounding and Bonding for Electrical Systems."

j. Inspection:

1) Verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging speaker-line matching transformers.

k. Public address and mass notification systems will be considered defective if they do not pass tests and inspections.
l. Prepare test and inspection reports.
m. Include a record of final speaker-line matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.

3.8 SERVICE/MAINTENANCE/WARRANTY

A. The Contractor shall provide a five (5) year equipment warranty of the installed system against defects in material and workmanship. All materials shall be provided at no expense to the Owner during normal working hours. The warranty period shall begin on the date of acceptance by the Owner/Engineer.
B. The Contractor shall, at the Owner's request, make available a service contract offering continuing factory authorized service of this system after the initial warranty period.
C. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.
D. The Contractor shall submit a written warranty from an authorized distributor of the sound system that the system installed is free from defects in materials and workmanship, for the period of one (1) year from the date of acceptance by the Owner. This warranty shall include all parts and labor.

3.9 DEMONSTRATION – TRAINING

A. Bidding contractor shall engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the public address system.
B. The vendor shall provide various levels of training including Manufacturer provided training as mandated by the Owner.
C. Sixteen (16) hours of training shall be included as part of this specification. These training hours shall be partitioned as the Owner mandates and as required.
D. Train Owner’s personnel on operation and maintenance of each component of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Instructor shall be manufacturer’s training personnel

3.10 GENERAL FIELD POLICY

A. When inspecting or supervising the installation of equipment, manufacturers’ representative shall be accompanied at all times by the technology consultant. In order to make the necessary arrangements, the Owner shall be notified at least forty-eight (48) hours in advance of the manufacturer's representative visit to the School.

B. Any changes of equipment shall be made only with the written permission of the technology consultant.
C. Changes in location of equipment may be made only with the written permission of the technology consultant.
D. All changes of location of equipment (including pull boxes, conduit runs, wire sizes, etc.) shall be incorporated in the As-built Sound/System Intercom Riser Diagram installed in the School.

3.11 DOCUMENTATION

A. Provide the following directly to the Supervisor of Technology Services.

1. One printed copy of all field programming for all components in system
2. One copy of all diagnostic software with a copy of field programming data for each unit

B. One copy of all field wiring runs, location, and end designation of system

END OF SECTION 275116

SECTION 275129.17 - TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Emergency responder communication enhancement system (ERCES) and associated components, including active equipment, battery secondary power source, passive components, and remote annunciator.

1.2 RELATED REQUIREMENTS

A. Section 260526 - Grounding and Bonding for Electrical Systems.

B. Section 260553 - Identification for Electrical Systems.

C. Section 271000 - Structured Cabling.

D. Section 284600 - Fire Detection and Alarm.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authorities having jurisdiction.

B. BDA: Bi-directional amplifier.

C. DAS: Distributed antenna system.

D. ECS: Emergency communications systems.

E. ERCES: Emergency responder communication enhancement system.

F. RF: Radio frequency.

G. UHF: Ultra high frequency.

H. VHF: Very high frequency.

1.4 DEFINITIONS

A. Bi-Directional Amplifier (BDA): Active RF-emitting device, wired with coaxial cables, for amplification of band-selective or multi-band RF signals via uplink to base station and via downlink from base station to portable two-way radios for enhanced signals and improved coverage; also referred to as analog or digital signal boosters.

B. Downlink: Transmission of signals from external source into building.

C. Fiber Distributed Antenna System (DAS) Master/Remote: Active RF-emitting device, wired with fiber-optic backbone, for distributing band-selective or multi-band RF signals via uplink to master/remote station and via downlink from master/remote station to portable two-way radio for enhanced signals and improved coverage.

D. Emergency Responder Communication Enhancement System (ERCES): In-building two-way communication system installed to enhance effective operation of radio communications systems for fire, emergency medical services, or law enforcement agencies within building or structure. System used by firefighters, police, and other emergency services personnel.

E. Public Safety/First Responder: Public safety or first responder agencies charged with responsibility of responding to emergency situations, including law enforcement departments, fire departments, and emergency medical services.

F. Uplink: Transmission of signals from inside building to external source.

1.5 REFERENCE STANDARDS

A. BICSI N1 - Installation Practices for Telecommunications and ICT Cabling and Related Cabling Infrastructure, 1st Edition.

B. ICC (IBC) - International Building Code.

C. ICC (IFC) - International Fire Code.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction.

E. NECA 90 - Standard for Commissioning Building Electrical Systems.

F. NECA/BICSI 607 - Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings.

G. NECA/FOA 301 - Standard for Installing and Testing Fiber Optic Cables.

H. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

I. NFPA 3 - Standard for Commissioning of Fire Protection and Life Safety Systems.

J. NFPA 4 - Standard for Integrated Fire Protection and Life Safety System Testing.

K. NFPA 70 - National Electrical Code.

L. NFPA 72 - National Fire Alarm and Signaling Code.

M. NFPA 101 - Life Safety Code.

N. NFPA 780 - Standard for the Installation of Lightning Protection Systems.

O. NFPA 1225 - Standard for Emergency Services Communications.

P. UL 38 - Standard for Manual Signaling Boxes for Fire Alarm Systems.

Q. UL 2524 - Emergency Responder Communication Enhancement Systems.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Project Site:

a. Coordinate with Owner to allow testing agency to enter property at reasonable time for field testing to confirm required level of radio coverage.

b. Coordinate technical and operational criteria for design with AHJ and license holders, including required frequencies, radio site locations, effectiveness to radiate power from radio sites, maximum propagation delay in microseconds, and application types being used.

c. Store technical and operational criteria with date marked, included with design documents at location approved by AHJ.

2. Installation Locations:

a. Coordinate arrangement of communications equipment with dimensions and clearance requirements of equipment.

b. Coordinate sizes and arrangement of supports and bases with equipment and components.

c. Coordinate work to provide additional framing and materials required for installation.

d. Coordinate work with placement of supports and anchors required for mounting.

e. Verify exact conduit termination locations required for boxes, enclosures, and equipment.

f. Notify Engineer of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

3. Coordinate minimum sizes of conduits with actual type and quantity of cables.

4. Coordinate for power branch circuit protection and identification.

5. Coordinate listing requirements for fire-rated cables or assemblies.

6. Coordinate work to provide power for equipment at required locations.

7. Coordinate work to avoid placement of ductwork, piping, equipment, or other potential obstructions within spaces dedicated for ERCES components.

8. Coordination work with other sections, including fire alarm systems and associated communications cabling.

9. Coordinate roof component locations and pathway work with Engineer. Provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.

10. Coordinate integrated fire protection and life safety system tests in accordance with NFPA 1225.

B. Preinstallation Meetings: Require attendance of affected installers.

1. Convene one week prior to commencing work of this section. Review proposed routing, sequence of installation, and protection requirements for system.

2. Conduct preinstallation meetings to review design and operation of ERCES.

   a. Highlight importance of proper authorizations, operation, and performance to avoid interfering with public safety radio networks.

      Overview criteria for when equipment's transmitted power output is sufficient to require certification of frequency-licensing authority and associated restriction of installing or energizing prior to obtaining simultaneous written authorizations.

C. Sequencing:

1. Conduct meeting with facility representative to review equipment locations.

2. Obtain permits necessary for installation prior to commencement of work. Include permit costs and inspection fees.

3. Do not install active RF-emitting devices until AHJ and license holders concurrently provide prior written authorization.

4. Do not energize active RF-emitting devices until AHJ and license holders concurrently provide prior written authorization.

5. Verify naming convention for equipment identification prior to creation of final drawings, reports, and warning labels, where applicable.

6. Sequence work with affected installers to protect cabling (e.g., overspray painting, physical stress, and insulation damage or covering markings).

7. Do not connect cables on terminals before insulation resistance testing.

D. Scheduling:

1. Arrange access to facility for data collection with facility representative.

2. Where work involves interruption of existing electrical circuit or fire alarm system, arrange interruption with Owner.

1.7 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. See Section 016000 - Product Requirements for additional provisions.

C. Include names of installers, Owner, and system classification information.

D. Product Data: Manufacturer's detailed product data sheet for each component, including wiring diagrams, and cabling or communications wiring length limitations. Catalog pages and product descriptions include ratings, dimensions, finishes, service conditions, and included features.

E. Shop Drawings: Submit installation documentation required for plan review and permitting by AHJ and frequency license holders, including floor plans showing locations of fire alarm system or other interconnects, enlarged drawn to identified scale plan view, and riser diagrams.

1. Show locations of components, circuits, and raceways; mark components with identifiers used in control unit programming.

2. Include elevations and details of proposed equipment arrangements.

3. Include system interconnection schematic riser diagram showing proposed and approved cable size and type; coordinated with floor plans and describing circuit class, survivability, and application-specific information required by NFPA 72.

4. Include typical wiring diagrams for devices, annunciators, and related ERCES equipment.

5. Include requirements and control diagrams for interfacing with other systems.

6. Detailed drawing of annunciators.

F. Certifications:

1. Certification by Contractor that system design complies with Contract Documents.

2. Certification by manufacturer that system design complies with Contract Documents.

G. Design Documents: Submit information required for plan review and permitting by AHJ and frequency license holders, including floor plans, riser diagrams, and description of operation.

1. Include complete listing of software required.

2. Include technical and operational design criteria requirements from AHJ and frequency license holders, including maximum propagation delay in microseconds.

H. Design Data:

1. Power supply calculations demonstrating adequate battery power.

I. RF Survey for ERCES:

1. Include RF measurement drawings for coverage areas and indicate relative RF field strength for each frequency band required.

2. Indicate passed or failed by area based on required technical parameters.

J. Signal booster registry for FCC requirements.

K. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

L. Inspection and Test Reports:

1. Submit inspection and test plan prior to closeout demonstration.
2. Submit documentation of satisfactory inspections and tests.

M. Designer's qualification statement.

N. Manufacturer's qualification statment.

O. Maintenance contractor qualification statement, if different from installer.

P. Testing agency's qualification statement.

Q. Maintenance contract.

R. Operating and Maintenance Data:

1. Complete set of specified design documents, as approved by AHJ and frequency license holders.
2. Additional printed set of project record documents and closeout documents, bound or filed in same manuals.
3. Contact information for firm providing contract maintenance and trouble call-back service.
4. List of recommended spare parts, tools, and instruments for testing.
5. Replacement parts list with current prices, and source of supply.
6. Detailed troubleshooting guide.
7. Preventive maintenance, inspection, and testing schedule complying with NFPA 1225 and ICC (IFC); provide printed copy and computer format acceptable to Owner.
8. Detailed but easy-to-read explanation of procedures requires recording of system trouble events by qualified personnel (e.g., when routine testing is being conducted for fire drills and when entering into contracts for building renovations).

S. Executed warranty.

T. Project Record Documents:

1. Complete set of floor plans showing actual installed locations of components and pathways.
2. As-installed wiring and schematic diagrams, with final terminal identifications.
3. As-programmed operating parameters, including secondary power source pick-up and drop-out settings.

1.8 RF BUILDING SURVEY FOR ERCES

A. Provide building survey for public safety radio signal strength in accordance with NFPA 1225 and ICC (IFC).

B. Survey prior to Date of Substantial Completion and before electrical installations begin.

C. Follow requirements listed in FIELD QUALITY CONTROL under PART 3.

D. Include report summary and recommendation if ERCES design is required.

1.9 QUALITY ASSURANCE

A. Comply with the following:

1. ICC (IBC).
2. ICC (IFC).
3. NFPA 70.
4. NFPA 72.
5. NFPA 101.
6. Code of Federal Regulations.

B. Unless Otherwise Approved by AHJ, Qualifications:

1. Provide qualifications as required by AHJ and frequency license holders.
2. Designer Qualifications:
    a. Designer personnel maintains valid FCC-issued general radio operators license (GROL).
    b. ERCES design performed by RF system designer.
    c. Designer personnel certified and authorized by in-building active RF-emitting equipment manufacturer in requirements for installation and operation of their equipment.
    d. Perform design under direct supervision of Professional Engineer or Registered Communications Distribution Designer experienced in design and licensed in the State in which the Project is located.
    e. Employing BICSI Registered Communications Distribution Designer (RCDD).
    f. Designer personnel maintains NICET Level II, Level III, or Design certified in-building public safety communications (IB-PSC), employed by manufacturer, Contractor, or installer.
3. Manufacturer Qualifications: Company specializing in manufacturing products specified, with at least three years of documented experience.

4. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL), and acceptable to AHJ and frequency license holders.

    a. Register signal booster specified Class A or Class B for applicable FCC requirements and provide proof in submittals:

5. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience and:

    a. Installer personnel maintains valid FCC-issued general radio operators license (GROL).

    b. Supervisors and Installers: Factory-certified by manufacturers of products.

    c. Installer personnel certified and authorized by in-building active RF-emitting equipment manufacturer in accordance with requirements for installation and operation of their equipment.

    d. Employing BICSI Registered Cabling Installation Technicians (RCIT) for supervision of work.

    e. Installer personnel maintains NICET Level II or Level III certified in-building public safety communications (IB-PSC), employed by manufacturer or Contractor.

6. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

    a. Testing personnel certified and authorized by active RF-emitting equipment manufacturer in requirements for installation and operation of their equipment.

    b. Designer personnel maintains valid FCC-issued general radio operators license.

7. Maintenance Contractor Qualifications:

    a. Same entity as installer.

    b. Contract maintenance office located within 200 miles of project site.

C. Approved ERCES and Related Cabling:

1. Provide system type as required by AHJ and frequency license holders.

2. Automatically Activated ERCES: Where negative impact to normal operations of facility occurs, automatic activation requires AHJ approval.

3. Permits: Provide construction and operational permits for active equipment.

4. Obtain written approval from frequency license holders that may be adversely impacted by ERCES, resulting in noise interference.

D. Documents at Project Site: Maintain at project site one copy of manufacturer's instructions, shop drawings, and frequency license holders requirements.

1.10 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Before removing from shipping vehicle, inspect equipment and shipping containers for signs of damage or mishandling.

C. Receive, handle, and store products in accordance with manufacturer's instructions. Store products repacked in manufacturer's original packaging, keep dry, and protect from damage until ready for installation. Do not store products outdoors without cover. Review environment relative humidity conditions and care to avoid condensation within products while stored.

D. Keep products clean and handle them carefully to avoid damage to finish. Protect materials from damage during handling and installation.

E. Unpack and inspect external and internal. Check for loose connections and damaged parts.

F. Confirm nameplate data aligns with submittals, drawings, and specifications.

1. Verify Class A equipment seen labeled on BDA or other signal booster products.

G. Obtain copies of packing slips, maintain current written records of products as they are used, and unboxed group received items for easy verification of quantities throughout installation.

1.11 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.12 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 1-year manufacturer warranty. Complete forms in Owner's name and register with manufacturer.

C. Installer Warranty: Provide 1-year warranty commencing on mm-dd-yyyy. Complete forms in Owner's name and register with installer.

PART 2 PRODUCTS

2.1 TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS

A. General Requirements:

1. Provide new ERCES consisting of equipment, conduit, cabinets, outlet boxes, wiring, connectors, hardware, supports, accessories, components, software, and system programming as required for complete operating system.

2. Comply with the following; where requirements conflict, order of precedence of requirements is as listed:
    a. Requirements of State Fire Marshal.
    b. Requirements of AHJ.
    c. Applicable local codes.
    d. RF system design documents.
    e. Contract Documents.
3. Provide products listed, classified, and labeled as suitable for intended purpose.
4. Monitor primary and secondary power sources for integrity in accordance with NFPA 72, NFPA 1225, and ICC (IFC). For each RF-emitting device and active system component:
    a. Include monitoring for communications links.
    b. Provide automatic supervisory signals for malfunctions.
5. Include integrated, remote, real-time monitoring and control capabilities.
6. Provide repeaters, transmitters, optical-to-RF and RF-to-optical converters, and external filters contained in NEMA EN 10250, Type 4 or Type 4X enclosures.

B. System Performance:

1. Minimum Signal Strength:
    a. Entire Building: 95 percent.
    b. Designated Critical Areas: 99 percent.
    c. Downlink and Uplink Capability:
        1) Provide design for usable voice communication throughout coverage areas.
        2) Provide design to meet technical requirements of applications utilized by public safety system.
        3) Provide minimum delivered audio quality (DAQ) of 3.0 using narrowband analog, digital, or wideband LTE signals, or equivalent bit error rate (BER) or signal-to-interference-plus-noise ratio (SINR) applicable to technology for analog or digital signals.
2. Communication Antenna Density: Design to minimize near-far effect and include ability to reduce gain conditions.

C. Capabilities:

1. Capable of operating on frequencies licensed to public safety agencies in accordance with ICC (IFC).

2. Design system capable of modification or expansion if frequency changes are required by FCC or other frequency-licensing authorities or AHJ.

D. Nonpublic Amplification Safety Systems:

1. Design system for passive components to maintain 20 dB above system gain under operating conditions; maintain minimum 20 dB isolation of donor antenna from other inside antennas.

2. Suspend and correct systems that reduce performance or cause interference with ERCES. Obtain approved resolution from AHJ and frequency license holders.

E. Provide ERCES circuits and interconnects in accordance with NFPA 70.

1. Comply with methods of interconnecting FACUs for automatic supervision in accordance with NFPA 1225, NFPA 72, and NFPA 70.

2. Power Sources:

a. Comply with requirements for power supplies of emergency systems in accordance with NFPA 70.

b. Primary: Dedicated branch circuits from facility power distribution system.

c. Secondary: Storage batteries with capacity to operate system for period specified by ICC (IFC).

1) Provide 12-hour standby for 100 percent system capacity or 2-hour standby when connected to site standby generator.

3. Wiring and Wiring Methods:

a. General Requirements:

1) Comply with requirements for wiring and wiring methods in accordance with NFPA 70.

2) Conductors and Cables Installed Exposed in Spaces Used for Environmental Air (only where specifically permitted): Plenum-rated, listed, and labeled as suitable for use in return air plenums.

3) Special Occupancies: Comply with NFPA 70.

4) Comply with NFPA 70 for wire and cable for plenum, riser, general-purpose, limited-use, and underground applications.

2.2 ACTIVE EQUIPMENT

A. Provide equipment listed and labeled as complying with agency listings and approval requirements as follows:

1. Federal Communications Commission (FCC).
2. Frequency license holders.
3. Other radio licensing authorities.
4. ICC (IFC).
5. NFPA 70.
6. NFPA 72.
7. NFPA 1225.
8. UL 2524.

B. Enclosure: NEMA EN 10250, Type 4.

C. Provide modular design capable of scaling for future expansions. Utilize coax and digital BDA or fiber optic and master-remote DAS design, or design utilizing combination with centralized control, for ERCES.

D. Support Multi-Band Operation:

1. Provide dedicated or dual-band (VHF/UHF) equipment for each frequency range indicated.
2. VHF: 150 MHz to 174 MHz.
3. UHF: 380 MHz to 512 MHz.

E. Active RF-Emitters and Repeaters: Provide devices that support associated FCC requirements for Class A or Class B operation, compatible for intended use in accordance with related ERCES equipment listings and manufacturer requirements.

F. Include built-in oscillation detection, interference protection, and gain control circuitry to reduce gain and maintain operation.

1. Transmit supervisory signal when oscillations are detected.
2. Automatic shutdown when uncorrectable oscillations occur.

G. Equipment with Integral Batteries: See BATTERY SECONDARY POWER SOURCE below for requirements.

2.3 BATTERY SECONDARY POWER SOURCE

A. Provide batteries, charger, circuit protection, and related components as complete system.

B. Provide equipment listed and labeled as complying with agency listings and approval requirements:

1. Federal Communications Commission (FCC).

2. Frequency license holders.
3. Other radio licensing authorities.
4. ICC (IFC).
5. NFPA 70.
6. NFPA 72.
7. NFPA 1225.
8. UL 2524.

C. Enclosure Type:

1. Batteries Requiring Venting: NEMA EN 10250, Type 3R.
2. Batteries Not Requiring Venting: NEMA EN 10250, Type 3R.

D. Provide battery secondary power source compatible for intended use and in accordance with related ERCES equipment listings and manufacturer requirements.

E. Provide power in accordance with NFPA 70, Chapter 7, (i.e., 10 seconds maximum) when primary power is outside of programmed settings.

2.4 PASSIVE COMPONENTS

A. Description: Provide passive component requirements in RF system design as required for complete system, including passive RF-emitters, design frequency range, gain values, radiation patterns or heat maps, voltage standing wave ratio, polarization, power handling, impedance, connector types, environmental ratings, device losses, isolation characteristics, signal rejection, component size, form factor, attenuation values, output accuracy, and thermal stability.

B. Provide passive components compatible for intended use in accordance with related ERCES equipment listings and manufacturer requirements for RF system design, including quantities necessary:

1. Donor antennas.
2. Service antennas.
3. Antenna discharge units as required by NFPA 780 and ICC (IFC).
4. Duplexers.
5. Notch filters.
6. Jumpers and connectors.
7. Tappers and splitters.

C. Enclosure Type:

1. External Filters: NEMA EN 10250, Type 4.

2.5 REMOTE ANNUNCIATOR

A. Provide equipment listed and labeled as complying with agency listings and approval requirements:

1. Federal Communications Commission (FCC).

2. Frequency license holders.

3. Other radio licensing authorities.

4. ICC (IFC).

5. NFPA 70.

6. NFPA 72.

7. NFPA 1225.

8. UL 2524.

B. Provide remote annunciators or operational consoles with status of active equipment.

C. Include visual and labeled indications for system components and devices in accordance with ICC (IFC) and NFPA 1225.

D. Fire Command Centers: Provide ECRES remote annunciator; identify component locations.

E. Include necessary modules for monitoring communications link between in-building ERCES and fire alarm control unit (FACU) for integrity.

2.6 ACCESSORIES

A. Provide components as indicated or as required for connection of fire alarm system to devices and other systems indicated.

B. Provide EoL resistors as required for wiring supervision.

C. Cables for Network Connections:

1. Comply with manufacturer's requirements.

2. See Section 271000.

D. Surge Protection:

1. Line-Voltage Surge Protection: Listed; provide for each line voltage circuit that supplies operating power for ERCES equipment.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify the following:

1. Areas and surfaces are ready to receive system components and equipment.

a. Notify Engineer of conditions that would adversely affect installation or subsequent use.

b. Do not begin installation until unacceptable conditions are corrected.

2. Field measurements are as instructed by manufacturer.

3. Branch circuit wiring installation is completed, tested, and ready for connection to ERCES. Overcurrent protection ratings are consistent with circuit voltage, manufacturer's recommendations, and nameplate data for equipment.

4. Interior of building has been protected from weather.

5. Ratings, configurations, and characteristics of system components are consistent with indicated requirements.

6. Required utilities are available, in proper location, and ready for use.

7. Rough-ins for field connections are in correct locations.

8. System capacities listed in manufacturer's instructions align with designed system.

9. Work likely to damage ERCES has been completed.

3.2 PREPARATION

A. Prior to installation, confirm environment of installation area is clean, with ambient temperature, humidity, and ventilation requirements in accordance with manufacturer’s written instructions.

B. Clean and vacuum in accordance with manufacturer's written instructions. Confirm equipment ventilation holes are absent of obstructions and free for airflow.

C. Clean pathways thoroughly to remove foreign materials before installing conductors and cables.

D. Clean dirt, debris, plaster, and other foreign materials from equipment enclosures, cabinets, and outlet boxes.

E. Clean surfaces to receive adhesive products according to manufacturer's instructions.

F. Follow tool requirements for installation, including torquing adjustments, as listed in manufacturer documentation.

G. Conduct preinstallation inspections and testing in accordance with manufacturer instructions.

3.3 INSTALLATION

A. Concurrent Approvals Required:

1. Provide prior written approval from AHJ and frequency license holders of systems being enhanced.

2. Meet to review their established criteria for installation prior to beginning work.

3. Only frequency license holders have authority to permit powering and operating ERCES. Do not energize system before obtaining additional written approvals.

4. Include expiration date on written approvals, coincident with annual maintenance requirements.

B. Install products in accordance with NFPA 1225, ICC (IFC), state and local codes, manufacturer's instructions, and as indicated on drawings and RF design documents.

C. Comply with the following:

1. BICSI N1.

2. NECA 1.

3. NECA/FOA 301.

4. NECA/BICSI 607.

5. NFPA 70; including requirements for mechanical execution of work.

6. NFPA 72.

D. ERCES Components:

1. UL 2524 Listed and Labeled Equipment: Do not drill holes or field fabricate openings. Mark equipment front with identifier DO NOT DRILL INTO THIS CABINET label.

2. Donor Antenna Mounting:

a. Fixed Permanently: Mount on building where approved by Engineer and AHJ.

E. Interconnects and Branch Circuits:

1. Provide grounding and bonding in accordance with NFPA 70 Article 250, Chapter 8 Communications Systems, and manufacturer's recommendations.

2. Provide dedicated branch circuit for each battery system.

3. Identify system wiring, components, and overcurrent protective devices for branch circuits serving ERCES and related equipment.

4. Provide systems integration and interfacing with other work as required for complete ERCES.

5. Install firestopping to preserve fire resistance rating of partitions and other elements.

F. Troubleshooting and Installer Checks:

1. Field test connectivity periodically during installation process to avoid unexpected troubleshooting.

2. Do not energize system until deficiencies have been corrected.

3.4 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Approval Required Before Installation, Energizing, and Startup; Minimum Two Weeks Notice:

1. Frequency license holders.

2. Engineer.

3. Owner.

4. AHJ.

C. Manufacturer Services: Provide services of manufacturer's field representative to perform systems startup.

D. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

E. Inspection and Testing for Completion:

1. Notify Owner 7 days prior to beginning completion inspections and tests.

2. Notify AHJ and frequency license holders prior to beginning completion inspections and tests. Comply with their requirements for scheduling inspections and tests, and for observation by their personnel.

3. Provide services of installer's supervisor or person with equivalent qualifications to supervise inspection and testing, correction, and adjustments.

4. Prepare for testing by ensuring that work is complete and correct; perform preliminary tests as required.

5. Provide tools, software, and supplies required to accomplish inspection, testing, and document results.

6. Perform inspection and testing in accordance with ICC (IFC), NFPA 1225, and requirements of AHJ or frequency license holders; document each inspection and test.

7. Inspect ERCES and related equipment and components for damage and defects.

8. Test cabling; see Section 271000.

9. Test for proper interfacing with other systems.

10. Nonconforming Work:

    a. Correct defective work, adjust for operation, and retest until entire system complies with Contract Documents.

    b. Replace damaged or defective system components.

F. Coordination of Other Tests and Inspections: Provide access to accommodate tests and inspections by independent testing agency employed by Owner.

G. Perform tests for cable insulation resistance and acceptance testing procedures in accordance with ICC (IFC) and NFPA 1225.

1. Use NICET-certified test equipment for system verifications.

2. Use calibrated portable radios of same make and latest model used by AHJ.

3. Use spectrum analyzer or similar for monitoring oscillations from RF-emitting or other system active equipment.

4. Measure gain values of every ERCES amplifier and review test results against baseline data kept on file for annual testing.

5. Test building coverage for emergency communication systems, inside and outside, to and from the building, for minimum radio coverage indicated in TWO-WAY RADIO COMMUNICATION ENHANCEMENT SYSTEMS under PART 2.

6. Divide Coverage For Testing, Options:

    a. Maximum 20 equal areas, per building floor. From center of area, use two-way communications to and from outside of building for interfacing with AHJ's public system.

        1) Comply with NFPA 1225 and ICC (IFC) maximum square footage per area.

        2) Failing to communicate in more than one test area is failed acceptance test.

    b. Use radios for simultaneous voice quality checks; subjective by testing personnel. Position one radio within 10 ft to indoor antenna and second radio distance farthest away from indoor antenna. Both radios select different frequencies within same band for testing.

        1) Signal strength less than delivered audio quality (DAQ) of 3.0 is failed acceptance test.

7. Nonconforming Work:

    a. Repositioning test location for better test results not allowed.

    b. Alter system to meet coverage requirements and reacceptance test for compliance.

H. Diagnostic Period: After successful completion of inspections and tests, operate system in normal mode for at least 14 days without system or equipment malfunctions.

1. Record system operations and malfunctions.
2. If malfunction occurs, start diagnostic period over after correction of malfunction.
3. Owner will provide attendant operator personnel during diagnostic period; schedule training to allow Owner personnel to perform normal duties.
4. At end of successful diagnostic period, fill out and submit inspection and testing forms.

3.5 ADJUSTING

A. Make amplifier gain adjustments and other system controls to achieve RF design requirements for operation.

B. Adjust each antenna using field strength meter to orient for maximum signal reception.

C. Adjust tightness of mechanical connections to manufacturer's recommended torque settings.

D. Adjust components to eliminate spurious interference.

E. Make adjustments under supervision of manufacturer's field service personnel.

F. Record settings in written report and include with submittals.

3.6 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. Remove dirt and debris from interior of outlet boxes and equipment.

C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish, including repair of scratched or marred surfaces.

D. Comply with federal (EPA), state, and local regulations for battery handling and disposal. Do not spill battery fluids down plumbing drains. Only use containers safe for transportation marked as nonspillable.

3.7 COMMISSIONING

A. See Section 019113 - General Commissioning Requirements for additional requirements.

B. Commissioning of Fire Protection and Life Safety Systems: Comply with NFPA 3.

C. Commissioning Building Electrical Systems: Comply with NECA 90.

D. Functional Tests:

1. Commissioning Provider is witness for acceptance testing and startup to confirm compliance.

E. Support Commissioning Provider in assembling test data and generating reports.

F. Comply with requirements for testing as required by Commissioning Provider for Integrated System Testing.

1. Integrated Fire Protection and Life Safety System Testing: Comply with NFPA 4.

3.8 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals for additional submittals.

B. See Section 017900 - Demonstration and Training for additional requirements.

C. Closeout Demonstration: Demonstrate operation of functions to stakeholders identified in ICC (IFC).

1. Allow minimum of two hours for demonstration of system.

2. Prepare to conduct required tests upon request.

3. Have minimum one copy of operation and maintenance data, preliminary copy of project record drawings, and operator instruction charts available during demonstration.

4. Have authorized technical representative of ERCES manufacturer present during demonstration.

5. Demonstration may be combined with inspection and testing required by AHJ; notify AHJ with enough time to schedule demonstration.

6. Repeat demonstration until successful.

D. Training: Train Owner's personnel on operation and maintenance of system.

1. Accommodate up to 10 attendees.

2. Training Reference: Operation and maintenance manual and additional training materials as required.

3. Provide minimum of two hours of training.

4. Conduct walking tour and describe function, operation, and maintenance of each component.

E. Substantial Completion of project cannot be achieved until:

1. Inspection and testing is successful.

2. Approved operating and maintenance data is delivered.

3. Aspects of operation have been demonstrated to Owner.

4. Final acceptance of ERCES is given by AHJ and frequency license holders.

5. Occupancy permit is granted.

F. Perform post-occupancy instruction within three months after Date of Substantial Completion.

3.9 PROTECTION

A. Protect installed system components from subsequent construction operations.

B. Upon concurrent approval from AHJ and frequency license holders for ERCES operation, maintain continuously.

3.10 MAINTENANCE

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. System requires annual testing for routine maintenance or due to structural changes, additions, remodels, space reconfigurations configurations, or other applications that affect initial coverage areas.

C. Conduct site visit upon Owner's request within one year from mm-dd-yyyy to confirm operation within manufacturer specifications and make additional adjustments to system programming in accordance with ERCES design.

1. If Owner misplaces or does not have baseline amplifier gain values from original acceptance testing, coordinate with Owner to rerun acceptance test to reestablish gain values.

D. Provide separate maintenance contract for service and maintenance of ERCES for manufacturer's warranty period from mm-dd-yyyy.

1. Provide complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with detailed schedule.

2. Include work described below.

E. Perform annual routine inspection, testing, and preventive maintenance in accordance with ICC (IFC), including:

1. Maintain continuous operation of ERCES.

2. In-building coverage test.

3. Test power supplies and batteries for:

a. Loss of input power failure.

b. Loss of communication failure.

c. One-hour load test; extended if power quality symptoms are observed for battery integrity.

4. Measure for loss of signal booster gain and compare to baseline acceptance or commissioning reports. Record measurements in equipment historical logs and include in maintenance service reports.

a. Make adjustments in accordance with manufacturer's instructions for product specifications, and with ERCES design.

5. Maintenance of ERCES active equipment and passive devices connected to system.

6. Repairs are required, unless due to improper use, accidents, or negligence beyond control of maintenance contractor.

7. Coordinate emergency and backup power sources testing for emergency communication systems with Owner.

8. Upon completion of annual test, provide report verifying compliance to Owner and AHJ.

9. Record keeping required by ICC (IFC), frequency license holders, and AHJ.

F. Provide trouble call-back service upon notification by Owner:

1. Provide on-site response within two hours of notification.

2. Include allowance for call-back service during normal working hours at no extra cost to Owner.

3. Owner will pay for call-back service outside of normal working hours on hourly basis, based on actual time spent at site and not including travel time; hourly rate and definition of normal working hours in maintenance contract.

G. Maintain on-site log listing date and time of each inspection and call-back visit, condition of system, nature of trouble, correction performed, and parts replaced. Submit duplicate of each log entry to Owner's representative upon completion of site visit.

H. Comply with Owner's requirements for access to facility and security.

END OF SECTION 275129.17

SECTION 275313 - CLOCK SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY OF WORK

A. This Section specifies materials and accessories for a wireless clock system.

1. Section Includes:

a. Master clock;
b. Repeaters;
c. Secondary analog clock;
d. Secondary digital clock;
e. Elapsed timer control panel.

1.3 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.
B. Section [27 05 00 - Common Work Results for Communications: conductors and cables].
C. Section [27 15 00 - Communications Horizontal Cabling].
D. Section [27 10 53 - Clock System Commissioning].
E. Section [27 51 16 – Public Address System].
F. Related Drawings: “T” Drawings – Technology Plans

1.4 REFERENCE STANDARDS

A. Federal Communications Division (FCC)

1. Part 15 - Code of Federal Regulations.

B. National Fire Protection Association (NFPA).

1. NFPA 70E-[2012], Standard for Electrical safety in the Workplace.

C. US Green Building Council (USGBC).

1. LEED® NC Version 2.2-[2009], LEED (Leadership in Energy and Environmental Design): Green Building Rating System Reference Package For New Construction and Major Renovations.

D. Underwriter's Laboratories (UL)
E. Institute of Electrical and Electronics Engineers (IEEE)

1. IEEE 802.3af-[1998], Standard for Information Technology – Telecommunications and Information Exchange Between Systems.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Co-ordination: Co-ordinate work of this Section with communications and electronics work and with work of other trades for proper time and sequence to avoid construction delays.
B. High Performance Building Submittal Requirements: The contractor or subcontractor must submit the following High Performance Building certification items:

1. A Connecticut High Performance Building Compliance letter shall be provided verifying agreement with relevant High Performance requirements. Information to be supplied includes, but is not limited to:

a. The percentage by weight of recycled content in the product(s). Identify post-consumer and/or pre-consumer recycled content.
b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the product(s).
c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.

2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
3. Product Cut Sheets for all materials that meet the High Building Performance Requirements this Section.
4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC content, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC content).

C. Pre-installation Meeting: Convene pre-installation meeting after Award of Contract and [one week] before starting work of this Section to verify project requirements, substrate conditions and coordination with other building sub-trades, and to review manufacturer's written installation instructions.

1. Comply with Section 01 31 19 - Project Meetings and co-ordinate with other similar pre-installation meetings.
2. Notify attendees 2 weeks prior to meeting and ensure meeting attendees include as minimum:

a. Owner;
b. Consultant;
c. Communications and Electronics Subcontractor;
d. Architect;
e. Manufacturer's Technical Representative

3. Ensure meeting agenda includes review of methods and procedures related to insulation installation including co-ordination with related work.

4. Record meeting proceedings including corrective measures and other actions required to ensure successful completion of work and distribute to each attendee within 1 week of meeting.

1.6 ACTION AND INFORMATIONAL SUBMITTALS

A. Make submittals in accordance with Contract Conditions and Section 01 33 00 - Submittal Procedures.
B. Product Data: Submit product data including manufacturer's literature for clock system materials and accessories, indicating compliance with specified requirements and material characteristics.

1. Submit list on clock system manufacturer's letterhead of materials and accessories to be incorporated into Work.
2. Include product name.
3. Include preparation instructions and recommendations, installation methods, and storage and handling requirements.
4. Include contact information for manufacturer and their representative for this Project.

C. Shop Drawings: Submit shop drawings with information as follows:

1. Diagram of proposed system showing system platform appliance, communication pathway, and schedule of individual device locations.
2. Indicate integration with the Owner's network and servers. Include line diagram of network relationships.
3. Show system power requirements.

D. Samples:

1. Submit one sample of each type of device used on project. Samples will be returned Contractor for incorporation into the Work after Consultant's review.

E. Test Reports:

1. Submit evaluation and test reports or other independent testing agency reports showing compliance with specified performance characteristics and physical properties.

F. Subcontractor Experience: Submit verification of communication and electronics subcontractor's experience.
G. Manufacturer's Authorization: Submit verification that of communication and electronics subcontractor's authorization from clock system manufacturer to perform Work of this section.
H. Sustainable Design (LEED).

1. LEED Submittals: In accordance with Section [01 35 21 – LEED Requirements]

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Supply maintenance data for clock system for incorporation into manual specified in Section 01 78 00 - Closeout Submittals.
B. Sustainable Design Closeout Documentation (LEED).

1. Provide calculations on end-of-project recycling rates, salvage rates, and landfill rates for work of this Section demonstrating percentage of construction wastes which were recycled.

2. Submit verification from recycling facility showing receipt of materials.

C. Record Documentation: In accordance with Section 01 78 00 - Closeout Submittals.

1. List materials used in clock system work.
2. Warranty: Submit warranty documents specified.

1.8 QUALITY ASSURANCE

A. Communications and Electronics Subcontractor Quality Assurance:

1. Work experience of [3] years minimum with work similar to work of this Section.
2. Manufacturer’s authorization to perform work of this section.

B. Supplier’s Accreditation: Use only suppliers accredited by clock system manufacturer.
C. Supplier’s Maintenance Requirements:

1. Ensure local supplier has adequate facility for storage of spare parts for clock system.

D. Sustainability Standards Certification (LEED).

1. LEED submittals: In accordance with Section [01 35 21 - LEED Requirements].

1.9 DELIVERY STORAGE AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver material in accordance with Section 01 61 00 - Common Product Requirements.
2. Deliver materials and accessories in clock system manufacture’s original packaging with identification labels intact and to suit project.
3. Ensure clock system materials are not exposed to moisture during delivery.
4. Replace damaged clock system materials.

B. Storage and Handling Requirements: Store materials off ground in dry location and protected from exposure to fumes and harmful weather conditions and at temperature conditions recommended by manufacturer.

1. Store in original packaging until installed.

C. Packaging Waste Management:

1. Separate and recycle waste packaging materials in accordance with Section [01 74 19 - Construction Waste Management and Disposal].
2. Remove waste packaging materials from site and dispose of packaging materials at appropriate recycling facilities.
3. Collect and separate for disposal, paper, and plastic material in appropriate on-site storage containers for recycling [in accordance with Waste Management Plan].

1.10 WARRANTY

A. Project Warranty: Refer to Contract Conditions for project warranty provisions.

B. Manufacturer's warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to and not intended to limit other rights Owner may have under Contract Conditions.
C. Warranty period: [2] years commencing on Date of Purchase.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis of Design Manufacturer: Sapling Inc., 670 Louis Drive, Warminster, Pennsylvania 18974, USA, Phone: 1-215-322-6063, URL: www.sapling-inc.com.

2.2 WIRELESS CLOCK SYSTEM REQUIREMENTS

A. Ensure clock system components are designed to operate as a wireless clock system and as part of complete system including "fail-proof" design to ensure power interruption does not cause system failure.
B. Ensure system can work in conjunction with existing wiring.
C. Ensure system synchronizes all clocks and devices to each other.
D. Ensure system does not require FCC licensing.
E. Ensure system works in [915-928 MHz][2.5 GHz] frequency range.
F. Ensure system uses frequency-hopping technology.
G. Ensure system is capable of correcting clocks immediately upon receipt of wireless signal.

1. Analog and digital clocks automatically correct themselves on receipt of wireless signal.
2. Include built-in closed-loop system in analog clocks capable of allowing clocks to detect position of hands and bring clocks to correct time even if clocks are manually altered.
3. Ensure analog clocks have diagnostic function capable of allowing user to view how long since clock received wireless signal.
4. Ensure analog clocks are capable of functional tests of electronics and gears.

H. Ensure each individual product is bench tested at manufacturer's facility.

1. Random testing is unacceptable.

I. Ensure each product is designed, assembled, and tested in the United States of America.
J. Basis of Design: Sapling Inc., Wireless Clock System

2.3 WIRELESS SYSTEM MASTER CLOCK

A. Master Clock Type 1: To UL and cUL 863.

1. Ensure master clock includes 10 pre-programmed (S)NTP backup addresses.
2. Ensure master clock is capable of receiving (S)NTP time signal via Ethernet.
3. Ensure master clock is capable of receiving digital signals through RS485 connection.
4. Ensure master clock is capable of correcting secondary clocks for Daylight Saving Time
5. Ensure master clock is capable of customizing Daylight Saving Time, in the event of international use or a change in government regulations.
6. Ensure master clock is capable of outputting RS485 signals.
7. Ensure master clock has two clock circuits capable of outputting signals including:

a. 59 minute correction;
b. 58 minute correction;
c. National Time or Rauland correction;
d. Once a day pulse;
e. Rauland digital correction.

8. Communications Interface: Ensure master clock system is capable of being programmed remotely through online interface accessible through LAN and compatible with Microsoft Internet Explorer and Mozilla Firefox web browsers.

   a. Ensure interface includes functions as follows:

      1) Allow users to schedule bells and other events;
      2) Display features;
      3) Show IP settings;
      4) Show other master clock settings;
      5) Set time and date;
      6) Download or upload master clock settings;
      7) Configure e-mail alerts for various instances.

9. Display: Two row, 20 character LED and backlit LED display and 2 x 8 inch rubber keypad for operator programming.
10. Optional relays: Include relays to ensure master clock is capable of utilizing [8] zones that can be used for scheduling facility systems as follows:

    a. Bells;
    b. Lights;
    c. Other

11. Allow for programming of master clock through 16 button rubber tactile keypad or built-in web interface.
12. Ensure master clock can contain up to 800 events.
13. Ensure master clock can contain up to 255 schedule changes.
14. Clock System: Wireless with transmitter to FCC, Part 15.

    a. Transmitter: Capable of transmitting data to SAL(G) wireless analog and SBL(G) wireless digital clocks, and receiving signal from (S)NTP time server
    b. Automatic bi-annual Daylight Savings Time changes.

15. Countdown for Digital Clocks: Ensure master clock is capable of having digital clocks counting down time between events.
16. Ensure master clock has internal battery to save settings and operate internal real-time clock for 10 years.
17. Input Voltage: 85 V AC – 264 V AC, 50/60 Hz.
18. Basis of design: Sapling Inc., SMA 3000 Series Master Clock.

2.4 WIRELESS SYSTEM SECONDARY CLOCKS

A. Analog Clocks: To UL and cUL 863, designed for wireless system with fully automatic plug and play capability.

   1. Ensure secondary clock is capable of receiving wireless signals from master clock.
   2. Ensure each secondary clock works as an RF signal repeater, establishing a Mesh Network.

3. Clock display: [12] hour white face with black numbers.
4. Ensure analog secondary clock is capable of receiving Sapling wireless signals every two (2) or four (4) hours for battery models and every minute for 24 V / 110V model.
5. Materials:

    a. Dial: Polystyrene
    b. Case: Shallow profile, smooth surface SlimLine ABS
    c. Crystal: Shatter-proof, side-molded, polycarbonate.

6. Hand tolerance:

    a. Hour and minute hands: ±1/4 minute.
    b. Second hand: ± 1/2 minute.

7. Power Requirements: [Battery operated] [24V AC] [24 V DC] [110 V AC, 60 Hz] [220 V AC, 50 Hz].

    a. Batteries: 2 “D” cell batteries.

        1) Basis for design: Duracell Procell “D” Cell batteries.

8. Basis of design: Sapling Inc., SAL(G) Series Wireless Round Clock.

2.5 WIRELESS SYSTEM REPEATERS

A. Network Repeater: Capable of receiving time signal through TCP/IP from master clock and compliant with FCC, Part 15.
B. Input Voltage: 85 V AC – 264 V AC, 50/60 Hz.;

1. Input: RJ45;
2. Input source: Master clock;
3. RF power output: 30 dBM (1 Watt);
4. Frequency hopping technology;
5. Mounting: Wall mount;
6. Housing: 11 x 8 x 17 inches black smooth surface metal enclosure with 7 inch antennae.
7. Basis for design: Sapling Inc., Network Repeater.

C. Wireless Repeater: Capable of wirelessly transmitting and receiving data and compliant with FCC, Part 15.

1. Input Voltage: 85 V AC – 264 V AC, 50/60 Hz.;
2. Input: RS485. Sapling Wireless Communications;
3. Input source: Master clock or Secondary Sapling Wireless Clock;
4. RF power output: 30 dBM (1 Watt);
5. Frequency hopping technology;
6. Mounting: Wall mount;
7. Housing: 11 x 8 x 17 inches black smooth surface metal enclosure.
8. Basis for design: Sapling Inc., Wireless Repeater.

2.6 WIRELESS SYSTEM ACCESSORIES

A. Elapsed Timer Control Panel: Interface capability with [SBL(G) 3200 Series] [SBL(G) 3300 Series] digital clock.:

1. Capable of working with 4-digit or 6-digit digital clocks.
2. Count up functionality from 00:00:00 to 99:59:59.
3. Programmable countdown functionality starting at 99:59:59.
4. Customizable backlit buttons.
5. Ensure timer is capable of controlling digital clock functions.
6. Ensure timer is capable of activating relay at completion of count down on the digital clock (SBL 3300 Series only)
7. Basis of design: Sapling Inc., Digital Elapsed Timer.

B. Signal and Control Circuits: Manufacturer's recommended stranded, single conductors or twisted pair cable.
C. Data Circuits: Category 5 minimum, twisted pair cable.

2.7 SOURCE QUALITY CONTROL

A. Ensure clock system components and accessories are supplied by single manufacturer.

2.8 PRODUCT SUBSTITUTIONS

A. Substitutions: [In accordance with Section 01 23 13 - Product Substitution Procedures] [No substitutions permitted].

PART 3 - EXECUTION

3.1 INSTALLERS

A. Use only installers with [3] years minimum experience with work similar to work of this Section.
B. Ensure all clock system components are installed by single communications and electronics subcontractor.

3.2 EXAMINATION

A. Verification of Conditions: Verify that conditions of substrate previously installed under other Sections or Contracts are acceptable for clock system installation in accordance with manufacturer's written recommendations.

1. Visually inspect substrate in presence of Consultant.
2. Ensure surfaces are free of snow, ice, frost, grease and other deleterious materials.
3. Proceed with installation only after unacceptable conditions have been remedied and after receipt of written approval to proceed from Consultant.

B. Start of clock system installation indicates installer's acceptance of substrate installation conditions.

3.3 SYSTEM INSTALLATION

A. Install clock system in accordance with manufacturer's written recommendations and in accordance with NFPA 70E.
B. Integrate clock system with Owner's electrical and communications network.

C. Install wiring in accordance with requirements of local Authority Having Jurisdiction.

1. Do cabling in accordance with Section [27 15 00 - Communications Horizontal Cabling].

D. Conceal wiring except in unfinished spaces and as approved in writing by Consultant.
E. Install clocks only after painting and other finish work is completed in each room.
F. Install clocks and other devices square and plumb.

3.4 FIELD QUALITY CONTROL

A. Field Inspection: Coordinate field inspection in accordance with Division 01.

3.5 SYSTEM STARTUP

A. At completion of installation and before final acceptance, turn on equipment and ensure equipment is operating properly, and clock system devices and components are functioning.
B. Evaluate and test each device in clock system on room-by-room basis using factory-trained technicians.

1. Fix or replace devices which fail test or are functioning incorrectly.
2. Submit evaluation and report showing results of room-by-room tests and overall system compliance within 3 days of testing being carried out.

3.6 CLEANING

A. Progress Cleaning: Perform cleanup as work progresses [in accordance with Section 01 74 00 - Cleaning and Waste Management].

1. Leave work area clean at end of each day.

B. Final Cleaning: Upon completion, remove surplus materials, rubbish, tools, and equipment [in accordance with Section 01 74 00 – Cleaning and Waste Management].
C. Waste Management:

1. Co-ordinate recycling of waste materials with [01 74 19 - Construction Waste Management and Disposal].
2. Collect recyclable waste and dispose of or recycle field generated construction waste created during construction or final cleaning related to work of this Section.
3. Remove recycling containers and bins from site and dispose of materials at appropriate facility.

3.7 DEMONSTRATION AND TRAINING

A. Arrange system demonstration and training session for Owner’s operation and maintenance personnel.

1. Allow Owner and Consultant [7] days minimum advance notice before training session.

B. Break down system demonstration and training session into logical segments for Owner’s operations and maintenance personnel.

C. Train Owner's maintenance personnel in procedures and schedules involved in operating, troubleshooting, servicing, and preventative maintenance of clock system.
D. Training shall consist of a minimum of two (2) 4-hour training sessions.
E. Deliver two (2) sets of operating instructions and programming manuals for the clock system to the Owner's Representative.
F. Deliver all programming codes and passwords for the system to the Owner's Representative.

3.8 SYSTEM COMMISSIONING

A. Do clock system commissioning in accordance with Division 01.

3.9 PROTECTION

A. Protect installed products and accessories from damage during construction.
B. Repair damage to adjacent materials caused by clock system installation.

END OF SECTION 275313

SECTION 280500 - SECURITY CONDUCTOR CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. System Requirements
B. Cabling

1.3 RELATED REQUIREMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.” OR Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1. Division 07 - Firestopping.
2. Division 26 - Door Hardware: Electrically operated door hardware, for interface with access control system. Includes door hardware with integral request to exit devices.
3. Division 26 - Grounding and Bonding for Electrical Systems.
4. Division 26 - Conduit for Electrical Systems.
5. Division 26 - Identification for Electrical Systems: Identification products and requirements.
6. Division 27 - Structured Cabling: Data cables for access control system IP network connections.
7. Division 28 - Video Surveillance: For interface with access control system.
8. Division 28 -Building Intrusion Detection: For interface with access control system.
9. Division 28 - Fire Detection and Alarm: For interface with access control system.

B. Refer to the following construction documents for Data Room locations and device locations only.

1. “TY” Drawings – Security Plans
2. “T” Drawings – Technology Plans

C. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to ensure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

D. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.
E. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.
F. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.
G. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.
H. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.
I. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements
J. Refer to Division 06, Wood, Plastics, Composites, and coordinate all desk locations and installation details with the Millwork Contractor.
K. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.4 DEFINITIONS

A. “Project Manager” shall mean the Owner’s appointed representative.
B. “As Necessary” shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.
C. “As Required” shall mean work which is required for completed construction and is shown on the drawings or described in the project specification.
D. “Install” shall mean to set in place complete with all mounting facilities and connections as required ready for normal use of service
E. “Substantial Completion” shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.
F. “Conduit” shall include all fittings, sleeves, connections, hangers and other accessories related to such conduit.
G. “Surface Metal Raceway” shall include all fittings, sleeves, connections, hangers and other accessories related to such raceway.
H. “Concealed” shall mean hidden from sight, as in chases, furred spaces, shafts, fixed ceiling or embedded in construction.
I. “Exposed”, shall mean not “concealed” as defined above.
J. “Governmental” shall mean all municipal, state and federal government agencies.
K. The words “Furnish”, “Supply” and “Provide” shall mean purchase, deliver to the job site, protect and provide interim storage and install in accordance with manufacturer’s specifications.
L. Words “Approved Equal” shall mean any product which in the opinion of the Technology Consultant is equal in quality, arrangement, appearance, and performance to the product specified.
M. “Cabling” shall mean cable assembly, raceway, conductors, fittings and any other necessary accessories to make a complete wiring system.
N. “Product” shall mean any item of equipment, material, fixture, apparatus, appliance or accessory installed under this Division.

O. Words in the singular shall also mean and include the plural, wherever the context so indicates, and words in the plural shall mean the singular, wherever the context so indicates.
P. “Contractor” refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.5 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.
B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
C. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
D. UL 294 - Access Control System Units; Current Edition, Including All Revisions.
E. UL 1076 - Proprietary Burglar Alarm Units and Systems; Current Edition, Including All Revisions.
F. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).
G. Installation shall comply with NECA 1-2010 “Standard Practice of Good Workmanship in Electrical Construction”
H. Installation shall comply with NEC/NFPA 70E “Standard for Electrical Safety in the Workplace”
I. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC
J. Installation shall comply with FCC CFR 47 Part 15 Class A “Telecommunications, Radio, Frequency, Digital Device Emission:
K. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).
L. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other installers to provide suitable security wiring for all security systems.

1.7 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.
B. Evidence of Qualifications for Installer:

1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.

4. The Contractor shall submit with the bid a manufacturer's certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer's equipment.
5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:

    a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
    b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
    c. The names and qualifications of security system technicians that shall perform and supervise the work and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.
    d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.

6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security Consultant's request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

C. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.
D. Manufacturer's detailed field-testing procedures.
E. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.

1. Equipment Submittals

    a. Provide a Title Page, with project name, Contractor's name and address, contact information, date of submission, and submission revision number.
    b. Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:

        1) The system type
        2) Model number
        3) Specification sheet page reference

    c. Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
    d. Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
    e. Indicate kinds of materials and finishes for equipment where more than one option is presented.

2. Acceptance Testing Plan

   a. Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
   b. Provide a sample of the test forms to be used for each system and for each component of each system.
   c. Include all tests required by the equipment manufacturer and by this Specification

3. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.

F. CE and FCC Compliance Certificates:
G. Field quality-control reports
H. Current Specified Manufacturer Integrator Certification Letter
I. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office
J. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by Owner. Submit sample of manufacturer’s warranty and documentation of final executed warranty completed in Owner’s name and registered with manufacturer.
K. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

1.8 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70.
2. NFPA 101 (Life Safety Code).
3. The requirements of the local authorities having jurisdiction.
4. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with access control systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.

1. Contract maintenance office located within 100 miles (160 km) of project site.

E. Maintenance Contractor Qualifications: Same entity as installer.
F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.
G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.
H. All work shall comply with the latest editions of the codes as referenced herein.
I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.

J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to the project.
K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.
L. Equipment and materials shall:

1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.
N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:

1. The coordination of their delivery.
2. Their unloading from delivery trucks driven into any point on the property line at grade level.
3. Their safe handling and field storage up to the time of permanent placement in the project.
4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
5. Their field make up and internal wiring as may be necessary for their proper operation.
6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.
P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.

1. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.9 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.
B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.11 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.12 WARRANTY

A. See Division 01 – Closeout Submittals for additional warranty requirements.
B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.

C. Submit manufacturer's standard warranties.

PART 2 - PRODUCTS

2.1 SYSTEM REQUIREMENTS

A. Furnish and install Electronic Security System cabling consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.
B. It is the responsibility of the contractor awarded this project to ensure the cable used is approved by the equipment manufacturer for its intended use and will meet environmental and distance requirements.
C. Shields and twisted wire are required unless PROHIBITED by the Access Control or Intrusion Detection Manufacturer.
D. 20 AWG is a minimum wire size unless PROHIBITED by the Access Control and Intrusion Detection Manufacturer.

2.2 CABLING:

A. All cabling shall be plenum rated.
B. Approved Manufacturer’s:

1. Belden
2. West Penn

C. System Cable: Provide cable as shown below or as recommended by the Manufacturer.

1. Low Voltage Security Alarm Signal Cable shall be twisted, single pair, shielded cable, with shield drain wire, with overall jacket, gauge calculated to compensate for length of run and current requirements. All conductors for security zone signal to be minimum #20 AWG, UL listed. All wires to be color coded. One pair #20 AWG per security device zone required.
2. Low Voltage Security Power, 12 VDC cable shall be minimum of #18 AWG for runs up to 150,’ and a minimum of #16 AWG for runs up to 300,’ twisted, shielded stranded, with shield drain wire, UL listed, jacketed, pair, separate color code from any other power circuits.
3. Electric Lock Power Cable shall be minimum of #14 AWG for runs up to 200’ serving a single lock. Twisted, shielded, stranded, jacketed pair, UL listed, separate color ode from any other power circuits.
4. Composite Cable (Reader, Lock, Monitor, REX): CAT6 jacketed Plenum cable with overall shield, including (6) Conductor Shielded 22AWG w/ripcord, 4-Conductor 22AWG w/ripcord, 4-Conductor 22AWG w/ripcord, and 4-Conductor 18 AWG w/ripcord; or equal with written approval by Security Consultant.
5. Lock Power, at Double Doors: Jacketed Plenum cable, unshielded, 4-conductor 18 AWG (7- strand), unshielded, or approved equal.
6. Request-to-Exit Cable, at Double Doors: Plenum rated jacket, 4-conductor 22 AWG (7-strand), unshielded, or approved equal.
7. Special Control Cable, at Double Emergency Exit Doors with Power Booster: Plenum rated cable, 4-conductor 12 AWG (19 strand), unshielded, or approved equal.
8. Card Reader Cable for second card reader at same portal: 3 Pair Shielded 22AWG or approved equal.
9. Alarm Monitoring: 1Pair Shielded 22AWG, or equal.

10. Area Motion Detector: 2 Pair Shielded 20AWG, or equal.
11. Push Buttons: 2 Conductor 18AWG.
12. Lockdown Buttons: 2 Pair Shielded 18AWG, or equal
13. Data: 2 Pair Shielded 20AWG, or equal.
14. Strobe: 2 Pair Shielded 18AWG, or equal.
15. Network Cable: CAT 6, or as required by Division 27, whichever is more stringent.

D. Cable installed below grade shall be rated for immersion in water.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.
B. Verify that ratings and configurations of system components are consisted with the indicated requirements.
C. Verify that mounting surfaces are ready to receive the system components.
D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.
E. Verify that conditions are satisfactory prior to starting work.
F. Device Locations

1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.
H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install access control system in accordance with NECA 1 (general workmanship).
B. Install products in accordance with manufacturer’s instructions.
C. Unless otherwise indicated, use wiring in conduit.

1. Use suitable listed cables in we locations, including underground raceways.
2. Use suitable listed cables for vertical wire applications.
3. All cabling shall be plenum rated.
4. Install wiring in conduit for the following:

    a. Where required for rough-in.
    b. Where required by the AHJ.
    c. Where exposed to damage.
    d. Where installed outside the building.
    e. For exposed connections from outlet boxes to devices.

5. Conduit: comply with Division 26.
6. Conceal cables unless specifically indicated to be exposed.
7. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
8. Cables in the following areas may be exposed:

a. Equipment Closets

9. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
10. Do not exceed manufacturer's recommended maximum cable length between components.

D. Provide grounding and bonding in accordance with Division 26.
E. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.
F. Install power supplies and other auxiliary components at control stations unless otherwise indicated.
G. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.
H. Wiring may be run in concealed spaces without conduit, in electrical trays (approved by owner), and where otherwise shown on drawings, provided conductors are reasonably protected from mechanical and environmental damage.
I. Conductors run without conduit shall be approved, UL Listed, rated and labeled for Plenum use.
J. Secure wire and cable with approved supports in accordance with the referenced standards and the Authority Having Jurisdiction.
K. Provide cable supports at a minimum of 4-foot intervals.
L. Equipment and devices shall be installed on approved electrical back-boxes. Do not install equipment and devices directly on walls, ceilings or structural components without back- boxes.
M. Secure cables to cabinets, junction boxes, pull boxes and outlet boxes with approved cable clamps.
N. Independently support cables. Do not use other supports i.e., (suspended ceilings, suspended ceiling supporting members, lighting fixtures, mechanical piping, or mechanical ducts).
O. Support cable independently of junction boxes, pull boxes, fixtures, suspended ceiling T- bars, angle supports, and similar items.
P. Support cable using cable trays, D-brackets, support straps, support wires or other approved cable supports.
Q. Fasten cable supports to building structure and surfaces.
R. In shared electrical trays, open ducts, and other cable runs without conduit, separate and strap Access Control cable so that it is clearly distinguishable from all other cables.
S. Clearly mark security system cables at minimum intervals of every 10-feet. Marking shall be with a permanent, printed label, color-coded tag, or other distinguishing marking. Felt tip pen marking on the cable is not acceptable.
T. After installation, and before termination, wiring shall be checked and tested to insure there are no grounds, opens, or shorts on any conductors or shields. In addition, wiring between buildings or underground and all coax cables shall have insulation tested with a megohmmeter and a reading of greater than 20 megohms shall be required to successfully complete the test.
U. Run wires continuously from termination to termination without splices. Splices at junction box locations are not allowed.
V. Water-resistant protection shall be continuous throughout the cable in outdoor surface conduit, poles, in-slab pull-boxes, in-slab conduit, and underground conduit and pull-boxes, and in any areas subject to moisture and/or water infiltration.

1. Splices/Junctions: Provide water-proof protection of splices and junctions, in surface conduit and boxes, in-slab conduit and pull-boxes, underground conduit, and underground pull-boxes, to prevent the entry of moisture or water into cables, splices or connections.
2. Cable Entries: Provide water-blocking sealants at all conduit entries into pull- boxes, junction boxes, back-boxes, cabinets, etc., to prevent the entry of moisture or water into the conduit and cable system.

W. Labeling: Identify wire and cable clearly with permanent labels wrapped around the full circumference within one inch of each connection. Correlate the number designated on the associated Shop or Field Drawings. Assign wire or able designations consistently throughout a given system. Each wire or cable shall carry the same labeled designation over its entire run. Regardless of intermediate terminations.

X. Boxes: Provide a box loop for wire and cable routed through pull boxes or controller panels. Cable loops and bends shall not be at a radius less than that recommended by the manufacturer. Coordinate pull box size with the Division 26 Contractor as necessary to accommodate this requirement.

Y. Wire Lacing and Dressing: Dress, lace, tie or harness wire and cable vertically, horizontally and at right angles to the enclosure surfaces to prevent mechanical stress on electrical connections as required herein and in accordance with accepted professional practice. No wire or cable shall be supported by a connection point.

Z. Non-Coaxial Connections: Make non-coaxial connections and approved splices within terminal cabinets (except microphone or line level) to screw-type barrier blocks with insulated crimp-type spade lugs. Size all lugs properly to assure high electrical integrity. Connect only one (1) wire per spade lug and not more than two (2) lugs per screw terminal.

AA. Non-Coaxial splicing at device locations to equipment with wire leads shall be made with pre-approved wire Dolphin Connectors.

BB. Shielded Cables: Shielded cables shall be insulated. Do not permit shields to contact conduit, raceway, boxes, terminal cabinets or equipment enclosures. Tin terminated shield drain wires and insulate with heat shrinkable tubing.

CC. Coaxial Splices: Coaxial splices, if required and approved, shall be on plate mounted dual - barrel type insulated BNC connectors, secured in such a manner that no stress is placed upon the connector.

DD. Unacceptable Conditions: Correct any unacceptable wiring conditions immediately upon discovery, and upon receiving notice to correct.

EE. Wiring to provide all 120 VAC sources and points of connection to same shall be by the Electrical Contractor.

FF. All wiring, including low voltage power, voice, signal and data communication, shall be installed in approved metal raceway as required. All wiring, conduit and installation shall be in accordance with the latest edition of the National Electrical Code, especially article 725, with conduit fill requirements as though system wiring were 120VAC, (40% conduit fill) and the requirements of Division 26, Electrical Specifications. Up- size conduits from sizes shown on drawings, as necessary not to exceed 40% fill criteria. All conduit shall be ¾” minimum unless otherwise noted on the riser diagrams.

GG. Ensure cabling shield does not touch terminal connections. Provide “one-end” ground on all shields using drain wires at control panels, power supplies, or head end equipment, then to separate and dedicated RF ground via #8 AWG copper cable. Insulate shield at device end with shrink tubing to completely cover shield and drain wire.

HH. Where multiple devices are served by the same shielded cable, shield continuity shall be maintained and properly insulated to eliminate intermittent grounding. Do not bring shield grounds directly to a building electrical ground point of connection. Carefully follow manufacturer’s instructions and advise Engineer accordingly. Shield grounds shall be treated as specified herein unless prohibited by manufacturers.

II. Lay out conduit and cable runs with Electrical and General Contractor prior to installation, and maintain 1’-0” clearance from parallel runs with 120VAC or larger voltage conduit and wiring. Cross 120VAC or larger voltage conduit runs at 90° to reduce EMI and RF induction in security wiring.

JJ. All wires shall be color coded to provide separate identification of intrusion alarm signal, 12 VDC, 24 VAC, or ACS/IDS system data communication, lock power, video signal, VSS alarm input, zone expansion or relay board power and data bus or any other system function. Wires shall be similarly coded for each system serviced throughout the entire installation.

KK. All resistors shall be solder connected or double crimp connected to eliminate any additional circuit resistance. Wires connected to resistors shall be solder-tinned to insure positive solder connection or crimp connection. Resistors shall be insulated with shrink tubing extending a

minimum of 1” either side of resistor. (Unless factory installed and potted as part of magnetic contact construction.)

LL. No intermediate cable splices are allowed without the specific written approval of the Security Consultant. Request clarification and approval prior to installation of any splices.

MM. All alarm circuits shall be tagged at the device end and field control panel end with alarm panel or zone addressing module hardware circuit terminal address numbers.

NN. Transformers and power supplies shall be identified, along with their cable, at both transformer and load fed end of cable.

OO. Each alarm device system cable shall be tagged at both the device and control panel end with the device type (i.e. door contact, motion detector, etc.).

PP. All 12VDC power circuits shall be tagged at each device and 12VDC power supply fused terminal strip with 12VDC panel and fused circuit number.

QQ. All power cables shall be tagged at the device end and power panel end with matching numbers.

RR. All wiring in panels shall be neatly dressed, run parallel wherever possible, and provided with adequate slack for future maintenance and service terminations.

SS. All “unused” wire conductors shall be insulated to eliminate shorts and grounds, tagged with their terminal points and identified as “spare” at each end with a unique spare cable tag identification system.

TT. Minor deviations (relocations) in wire runs to installed mounting locations may be required prior to final acceptance when site conditions affect the equipment’s operation, performance, or purpose. Relocations which require only minimal work (plus or minus 15’) and/or materials shall be made without additional cost or credit.

UU. The Contractor shall note that connection of alarm zone circuits to the ACS/IDS panels will require the installation of end-of-line resistors in each zone circuit. Locate as close to the device as possible to provide as much circuit supervision as possible. EOL resistors shall not be located at the panel for active security circuits. All unused zones shall have the end-of-line resistor mounted in the panel if manufacturers’ requirements so dictate. Where end-of-line resistors are to be mounted at devices that are factory sealed and have factory configured wire leads, the resistor shall be spliced in-line with the leads as close to the device as possible (splices shall be soldered and covered with heat shrink tubing as specified elsewhere in these specifications).

VV. The Contractor shall install panel cover-operated tamper switches in each equipment enclosure, cabinet, housing, to actuate an alarm signal before access to equipment wiring within the enclosure is gained. Tamper switch mounting hardware shall be concealed so that the location of the switch cannot be visually detected from the exterior of the enclosure. These circuits shall be supervised.

WW. All wiring or cable shall be tested for, and be free of, opens and shorts. All wiring shall test free of grounds with the exception of circuits that are intended to be connected to the ground side of protective circuits.

XX. All wire and cables entering equipment cabinets and enclosures shall be grouped and tied inside the enclosures on 6-inch centers with self-locking nylon cable ties. All wiring shall be grouped in an orderly fashion. Under no circumstances is the use of adhesive tapes (electrical or other) permitted for either permanent or temporary ties or wire management.

YY. All stranded wiring that is connected to equipment that has terminal strips or screw lugs shall be terminated with either nylon insulated crimp-on spade lugs, equal to Thomas & Betts STA-KON fork tongue locking type or equivalent, sized for correct wire and screw sizes or shall be solid bare wire attached to screw terminals. Where compression screws are used to cap wiring, wiring shall be tinned to eliminate destranding and consequent poor connection. Each spade lug or wire shall be marked with a self- sticking numbered wire marker and documented on the as-built wiring diagrams.

ZZ. All wiring that is connected to equipment with solder lug connectors shall terminate wire to lug in a solder joint. The solder joint, lug and any bare wire shall be covered with heat shrink tubing. Multi-conductor bare wire ends shall be soldered to prevent de-stranding.

AAA. Each wire and cable shall be clearly marked within each enclosure, junction box, or where termination is made. Wires and cables shall be marked with a clear, heat-shrink system such as

"Shrink Mark" or equivalent, labeling system as manufactured by RayChem. Cable numbers shall be generated on a PC. Felt-tip "Sharpie" type pen markings are unacceptable. Marking documentation shall be included with the detailed wiring diagram to be provided to the Owner on completion of the installation as part of the As-Built documentation in the "Project Manuals".

BBB. Wiring and cables that are installed shall maintain color coding from origination point to termination point. Where paired cable is used, the pairs in the cable shall be maintained in the run. Pairs shall not be separated to form different pairs than those in the original cable. Color coding shall be maintained within the system. Maintaining color coding applies to all type circuits in the system.

CCC. Review wiring type, scheme and tagging for all systems prior to installation, with factory/technical representatives. Advise the engineer of any required modifications prior to wire procurement and installation and obtain approval accordingly. It is the contractor's responsibility to review the system's wiring with the factory representatives and supply the cables which meet their requirements. Where heavier gauge cables are specified by the engineer and such provide enhanced performance reliability, durability or future capacity, they shall be used unless prohibited by the manufacturer.

DDD. Paralleling of multi-conductor cables to "create" a cable of larger wire gauge is prohibited, except at door frame power transfer hinges.

EEE. Wiring diagrams shall be provided in all signal and power panels along with cable schedules, in a clear plastic envelope, for future use in system maintenance and service.

FFF. Run electric lock power circuits so that each electrified locking door opening is wired on its own wire pair to a dedicated fused circuit in the lock power supply.

GGG. Connect no more than five (5) 12VDC security devices to a single pair of 12VDC power wires without the engineer's approval. Terminate these 12VDC power circuits on a dedicated fused outlet in the 12VDC power supply

3.3 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:

1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.
4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

E. Access Control System shall be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.4 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.
B. Clean installed items using methods and materials recommended in writing by manufacturer.
C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.5 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.

3.6 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.7 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.
B. Adjustments:

1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

a. Check cable connections.
b. Check proper operation of access control devices.
c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.
D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.
E. Provide trouble call-back service upon notification by Owner:

1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION 280500

SECTION 280528 - PATHWAYS FOR SECURITY SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
B. Related Drawings

1. “TY” Drawings – Technology Plans

C. Related Sections:

1. Section 271000 – Communication Horizontal
2. Section 280500 – Security Conductor Cables
3. Section 281300 – Access Controls
4. Section 281600 – Intrusion Detection
5. Section 282300 – Video Surveillance

1.3 SUMMARY

A. Section Includes:

1. Metal conduits and fittings.
2. Nonmetallic conduits and fittings.
3. Optical-fiber-cable pathways and fittings.
4. Metal wireways and auxiliary gutters.
5. Nonmetallic wireways and auxiliary gutters.
6. Surface pathways.
7. Boxes, enclosures, and cabinets.
8. Handholes and boxes for exterior underground cabling.

1.4 DEFINITIONS

A. ARC: Aluminum rigid conduit.
B. GRC: Galvanized rigid steel conduit.
C. IMC: Intermediate metal conduit.

1.5 ACTION SUBMITTALS

A. Product Data: For surface pathways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:

1. Structural members in paths of pathway groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Qualification Data: For professional engineer.
C. Seismic Qualification Certificates: For pathway racks, enclosures, cabinets, equipment racks and their mounting provisions, including those for internal components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.

D. Source quality-control reports.

PART 2 - PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AFC Cable Systems, Inc.
2. Allied Tube & Conduit; a Tyco International Ltd. Co.
3. Alpha Wire Company
4. Anamet Electrical, Inc.
5. Electri-Flex Company
6. O-Z/Gedney; a brand of EGS Electrical Group
7. Picoma Industries; Subsidiary of Mueller Water Products, Inc.
8. Republic Conduit
9. Robroy Industries
10. Southwire Company
11. Thomas & Betts Corporation
12. Western Tube and Conduit Corporation
13. Wheatland Tube Company; a division of John Maneely Company

B. General Requirements for Metal Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. GRC: Comply with ANSI C80.1 and UL 6.
D. ARC: Comply with ANSI C80.5 and UL 6A.
E. IMC: Comply with ANSI C80.6 and UL 1242.
F. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch minimum.

G. EMT: Comply with ANSI C80.3 and UL 797.
H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:

a. Material: Steel.
b. Type: Setscrew.

3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.

I. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AFC Cable Systems, Inc.
2. Allied Tube & Conduit; a Tyco International Ltd. Co.
3. Anamet Electrical, Inc.
4. Arnco Corporation
5. CANTEX Inc.
6. CertainTeed Corp.
7. Condux International, Inc.
8. Electri-Flex Company
9. Kraloy
10. Lamson & Sessions; Carlon Electrical Products
11. Niedax-Kleinhuis USA, Inc.
12. RACO; a Hubbell company
13. Thomas & Betts Corporation

B. General Requirements for Nonmetallic Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. RNC: Type EPC-40-PVC complying with NEMA TC 2 and UL 651 unless otherwise indicated.
D. Rigid HDPE: Comply with UL 651A.
E. Continuous HDPE: Comply with UL 651B.
F. RTRC: Comply with UL 1684A and NEMA TC 14.
G. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
H. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3 OPTICAL-FIBER-CABLE PATHWAYS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Alpha Wire Company.
2. Arnco Corporation.
3. Endot Industries Inc.
4. IPEX.
5. Lamson & Sessions; Carlon Electrical Products.

B. Description: Comply with UL 2024; flexible-type pathway, approved for plenum installation unless otherwise indicated.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

2.4 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cooper B-Line, Inc.
2. Hoffman; a Pentair company
3. Mono-Systems, Inc.
4. Square D; a brand of Schneider Electric

B. Description: Sheet metal, complying with UL 870 and NEMA 250 and sized according to NFPA 70.

1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
D. Wireway Covers: Screw-cover type unless otherwise indicated.
E. Finish: Manufacturer's standard enamel finish.

2.5 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Allied Moulded Products, Inc.
2. Hoffman; a Pentair company
3. Lamson & Sessions; Carlon Electrical Products
4. Niedax-Kleinhuis USA, Inc.

B. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.

D. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

E. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

F. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 SURFACE PATHWAYS

A. General Requirements for Surface Pathways:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.

1. Manufacturers: Subject to compliance with requirements, provide products by one (1) of the following:

a. Mono-Systems, Inc.
b. Niedax-Kleinhuis USA, Inc.
c. Panduit Corp
d. Wiremold/Legrand

C. Surface Nonmetallic Pathways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors. Product shall comply with UL-94 V-0 requirements for self-extinguishing characteristics.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. Hubbell Incorporated; Wiring Device-Kellems Division
    b. Lamson & Sessions; Carlon Electrical Products
    c. Mono-Systems, Inc.
    d. Panduit Corp.
    e. Wiremold/Legrand

2.7 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    1. Adalet

B. Cooper Technologies Company; Cooper Crouse-Hinds

    1. EGS/Appleton Electric
    2. Erickson Electrical Equipment Company
    3. Hoffman; a Pentair company
    4. Hubbell Incorporated; Killark Division
    5. Lamson & Sessions; Carlon Electrical Products
    6. Milbank Manufacturing Co.
    7. Molex; Woodhead Brand
    8. Mono-Systems, Inc.
    9. O-Z/Gedney; a brand of EGS Electrical Group
    10. RACO; a Hubbell company
    11. Robroy Industries
    12. Spring City Electrical Manufacturing Company
    13. Stahlin Non-Metallic Enclosures; a division of Robroy Industries
    14. Thomas & Betts Corporation
    15. Wiremold/Legrand

C. General Requirements for Boxes, Enclosures, and Cabinets:

    1. Comply with TIA-569-B.
    2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.

D. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
E. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, aluminum, Type FD, with gasketed cover.
F. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
G. Metal Floor Boxes:

    1. Material: Cast metal.
    2. Type: Fully adjustable.
    3. Shape: Rectangular.
    4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Nonmetallic Floor Boxes: Nonadjustable, rectangular.

1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
J. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.
K. Device Box Dimensions: as specified within the Architectural drawings.
L. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.
M. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, with continuous-hinge cover with flush latch unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures:

a. Material: Plastic.
b. Finished inside with radio-frequency-resistant paint.

3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

PART 3 - EXECUTION

3.1 PATHWAY APPLICATION

A. Indoors: Apply pathway products as specified below unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: EMT.
2. Exposed, Not Subject to Severe Physical Damage: EMT.
3. Exposed and Subject to Severe Physical Damage: GRC. Pathway locations include the following:

a. Loading dock.
b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
c. Mechanical rooms.
d. Gymnasiums.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT. Allow plenum cable in j-hooks or cable tray.
5. Damp or Wet Locations: GRC.
6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway.
7. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: Plenum-type, optical-fiber-cable pathway.
8. Boxes and Enclosures: NEMA 250 Type 1, except use NEMA 250 Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

B. Minimum Pathway Size: ¾-inch trade size. Minimum size for optical-fiber cables is 1 inch.
C. Pathway Fittings: Compatible with pathways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.

2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use setscrew or compression, cast-metal fittings. Comply with NEMA FB 2.10.

D. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
E. Install surface pathways only where indicated on Drawings.
F. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg.

3.2 INSTALLATION

A. Comply with NECA 1, NECA 101, and TIA-569-B for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
B. Keep pathways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.
C. Complete pathway installation before starting conductor installation.
D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
E. Arrange stub-ups so curved portions of bends are not visible above finished slab.
F. Install no more than the equivalent of two (2) 90-degree bends in any pathway run. Support within 12 inches of changes in direction. Utilize long radius ells for all optical-fiber cables.
G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
H. Support conduit within 12 inches of enclosures to which attached.
I. Pathways Embedded in Slabs:

1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot intervals.
2. Arrange pathways to cross building expansion joints at right angles with expansion fittings.
3. Arrange pathways to keep a minimum of 2 inches of concrete cover in all directions.
4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
5. Change from ENT to RNC, Type EPC-40-PVC before rising above floor.

J. Stub-ups to Above Recessed Ceilings:

1. Use EMT, IMC, or RMC for pathways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
L. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.
M. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
N. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus ¼ turn more.

O. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
P. Cut conduit perpendicular to the length. For conduits of 2-inch trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
Q. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.
R. Surface Pathways:

1. Install surface pathway for surface telecommunications outlet boxes only where indicated on Drawings.
2. Install surface pathway with a minimum 2-inch radius control at bend points.
3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight pathway section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

S. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:

1. ¾-Inch Trade Size and Smaller: Install pathways in maximum lengths of 50 feet.
2. 1-Inch Trade Size and Larger: Install pathways in maximum lengths of 75 feet.
3. Install with a maximum of two (2) 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

T. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.
U. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service pathway enters a building or structure.
3. Where otherwise required by NFPA 70.

V. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.
W. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.

d. Attics: 135 deg F temperature change.

3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

X. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
Y. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
Z. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
AA. Support boxes of three (3) gangs or more from more than one (1) side by spanning two (2) framing members or mounting on brackets specifically designed for the purpose.
BB. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
CC. Set metal floor boxes level and flush with finished floor surface.
DD. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.3 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 271000 "Structured Cabling."

3.4 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.5 PROTECTION

A. Protect coatings, finishes, and cabinets from damage or deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 280528

SECTION 281300 - ACCESS CONTROL SYSTEM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.02 SECTION INCLUDES

A. System Requirements
B. Access Control Field Devices
C. Access Control System

1.03 RELATED REQUIREMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.” OR Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
B. Division 07 - Firestopping.
C. Division 08 - Door Hardware: Electrically operated door hardware, for interface with access control system.

    1. Includes door hardware with integral request to exit devices.

D. Division 14 - Hydraulic Elevators: For interface with access control system.
E. Division 26 - Grounding and Bonding for Electrical Systems.
F. Division 26 - Conduit for Electrical Systems.
G. Division 26 - Identification for Electrical Systems: Identification products and requirements.
H. Division 27 - Structured Cabling: Data cables for access control system IP network connections.
I. Division 28 - Video Surveillance: For interface with access control system.
J. Division 28 - Building Intrusion Detection: For interface with access control system.
K. Division 28 - Fire Detection Alarm: For interface with access control system.
L. Refer to the following construction documents for Data Room locations and device locations only.

    1. “TY” Drawings – Security Plans

M. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to insure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

N. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.
O. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.
P. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.
Q. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.
R. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.
S. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements
T. Refer to Division 06, Wood, Plastics, Composites, and coordinate all desk locations and installation details with the Millwork Contractor.
U. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.04 DEFINITIONS

A. API: Application Programming Interface
B. AVI: Audio Video Interleave
C. CA: Certificate Authority
D. CAC: Common Access Card
E. CE: European Union Conformity
F. CPU: Central Processing Unit
G. CSV: Comma Separated Values
H. DNS: Domain Name Server
I. DSM: Door Status Monitor
J. DVR: Digital Video Recorder
K. EACS: Electronic Access Control System
L. FCC: Federal Communications Commission
M. FIPS: Federal Information Processing Standard
N. FIFO: First In – First Out
O. FTP: File Transfer Protocol
P. FRAC: First Responder Authentication Credential
Q. GB: Gigabyte
R. GSOC: Global Security Operations Center
S. GUI: Graphical User Interface
T. HA: High Availability
U. HTML: Hypertext Markup Language
V. 4, H.265: Video Compression Standards
W. I2C: Inter-Integrated Circuit
X. IEEE: Institute of Electrical and Electronics Engineers
Y. I/O: Input / Output
Z. IP: Internet Protocol
AA. IS: Integrated System

BB. JPEG: Joint Photographic Experts Group
CC. LAN: Local Area Network
DD. LDAP: Lightweight Directory Access Protocol
EE. MB: Megabyte
FF. MJPEG: Motion JPEG
GG. MSATA: Mini-Serial Advanced Technology Attachment
HH. MSP: Mobile Security Professional
II. MTBF: Mean-Time Between Failure
JJ. NAS: Network Attached Storage
KK. NAT: Network Address Translation
LL. NBAPI: NetBox Application Programming Interface
MM. NECA: National Electric Code Association
NN. NFPA: National Fire Protection Association
OO. NVR: Network Video Recorder
PP. ODBC: Open Database Connectivity
QQ. OS: Operating System
RR. OVID: Open Video Integration Driver
SS. PDF: Portable Document Format
TT. PIN: Personal Identification Number
UU. PIV: Personal Identity Verification
VV. PoE: Power over Ethernet
WW. PTZ: Pan-Tilt-Zoom
XX. RAID: Redundant Array of Independent Disks
YY. RAM: Random Access Memory
ZZ. REX: Request to Exit
AAA. RFID: Radio Frequency Identification
BBB. RoHS: Restriction of Hazardous Substances
CCC. ROM: Read Only Memory
DDD. RU: Rack Unit
EEE. SFTP: Secure File Transfer Protocol
FFF. SHA: Secure Hash Algorithm
GGG. SIO: Serial Input / Output
HHH. SLA: Sealed Lead-Acid
III. SMS: Security Management System or Short Message Service (text messaging)
JJJ. SSL: Secure Sockets Layer
KKK. SUSP: Software Upgrade and Support Plan
LLL. TCP: Transmission control protocol - connects hosts on the Internet
MMM. TIA: Telecommunications Industry Association
NNN. TLS: Transport Layer Security
OOO. TWIC: Transportation Worker Identification Credential
PPP. UI: User Interface
QQQ. UPS: Uninterruptible Power Supply
RRR. UTP: Unshielded Twisted Pair
SSS. VMS: Video Management System
TTT. WAN: Wide Area Network
UUU. Wi-Fi: Wireless Network
VVV. AS NECESSARY: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.
WWW. AS REQUIRED: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.
XXX. Substantial Completion: Shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.
YYY. Contractor/INTEGRATOR: Refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.05 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.
B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
C. CSBC101.2 & CFSC 102.1 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
D. UL 294 - Access Control System Units; Current Edition, Including All Revisions.
E. UL 1076 - Proprietary Burglar Alarm Units and Systems; Current Edition, Including All Revisions.
F. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).
G. Installation shall comply with NECA 1-2010 “Standard Practice of Good Workmanship in Electrical Construction”
H. Installation shall comply with NEC/NFPA 70E “Standard for Electrical Safety in the Workplace”
I. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC
J. Installation shall comply with FCC CFR 47 Part 15 Class A “Telecommunications, Radio, Frequency, Digital Device Emission:
K. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).
L. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other installers to provide suitable door hardware as required for both access control functionality and code compliance.
2. Coordinate the placement of readers with millwork, furniture, equipment, etc. installed under other sections or by others.
3. Coordinate the work with other installers to provide power for equipment at required locations.
4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meetings:

1. Conduct meeting with facility representative to review reader and equipment locations.
2. Conduct meeting with facility representative and other related equipment manufacturers to discuss access control system interface requirements.

C. Confidentiality of Documents

1. The project documents, consisting of all technical proposals, drawings, specifications, shop drawings, as-built drawings, manufacturer’s literature, etc., shall be considered proprietary information and are to be treated with complete confidentiality. Dissemination of any security system documentation to any party not considered “need-to-know” without a pre-defined and approved agreement will be considered a violation of the contract documents and all pursuant clauses regarding financial penalties, project termination, and/or legal prosecution will apply. The Contractor is to obtain a list of “need-to-know” parties from the Owner and/or Construction Manager.

2. Use of the Contract drawings and specifications is restricted to the original site for which they were prepared. Publication therefore is expressly limited to such use. Re-use, reproduction, storage by any medium or publication by any method in whole or in part is prohibited. Visual contact with the Contract drawings and specifications constitutes prima facie evidence of the acceptance of these restrictions. Unlawful publication, dissemination, and use of these documents carry significant liability and the Owner maintains the right to legally pursue restitution and/or penalty for violation of these confidentiality conditions.
3. All documents marked “DO NOT DUPLICATE” are to be returned to the Construction Manager for proper disposal and handling upon completion of their relevant use.

1.07 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.
B. Evidence of Qualifications for Installer:

1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.
4. The Contractor shall submit with the bid a manufacturer’s certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer’s equipment.
5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:

    a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
    b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
    c. The names and qualifications of security system technicians that shall perform and supervise the work, and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.
    d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.

6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security Consultant’s request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

C. Design Data: Standby battery/UPS Calculations
D. Manufacturer’s Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.

E. Manufacturer's detailed field-testing procedures.
F. Maintenance contracts.
G. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.
H. Shop Drawings:

1. General: General: Bid documents, including drawings, details and specifications are considered conceptual in nature, and provide direction on products and project requirements. Contractor is given a choice of methods that may be incorporated into the system. These choices may affect the overall design, configuration and installation of the proposed system.
2. Contractor Responsibility: Prepare and submit shop drawings, rendered in the latest AutoCAD DWG file format, which show details of all work to ensure proper installation of the work using those materials and equipment specified or allowed under the approved plans and specifications. A complete Shop Drawing submittal drawing package shall consist of Drawings, Equipment Data Sheet Submittals, and an Acceptance Testing Plan.
3. Completeness: The Equipment Submittals, Acceptance Testing Plan, and the Shop Drawings should be submitted as a complete and contiguous package. Partial or unmarked submittals will not be accepted for review.
4. Scheduling: A schedule of shop drawing submissions shall be submitted for the Architect and Owner's Representative review on a form acceptable to the Architect within ten (10) days after award of the Contract. The schedule of shop drawing submissions shall include as a minimum, but not limited to the requirements stated herein.
5. Requirements: Provide the following information complete, and in the manner described herein:

    a. Hardware, Application Software, and Network Requirements: A system description including analysis and calculations used in sizing equipment required by the security systems. The description shall show how the equipment will operate as a system to meet the performance requirements of the systems. The following information shall be supplied as a minimum:

        1) Server(s) processor(s), disk space and memory size
        2) Workstation(s) processor(s), disk space and memory size
        3) Description of facility (field) control equipment (Controllers/Field Panels, Models) and their configuration
        4) Operating System(s) Software, where software is provided or upgraded
        5) Application Software, with Optional and Custom Software Modules supplied in this project
        6) Integration Schemes: Proposed connectivity, software, development requirements, and SDK information, for inter-system communication.
        7) Network bandwidth and reliability requirements
        8) Number and location of LAN ports required
        9) Other specific network requirements, preferences, and constraints
        10) Backup/archive system size and configuration
        11) Start-up operations
        12) System power requirements and Uninterruptible Power Supply (UPS) sizing
        13) Device/Component environmental requirements (cooling and/or heating parameters)

    b. Shop Drawings: Shop Drawings shall be numbered consecutively and shall accurately and distinctly present the following information:

        1) Title Sheet

2) Floor Plans: Showing devices, pull boxes, cabinets, conduits and conductors in their proposed locations with device numbering scheme.
3) Riser Diagram: Showing all conduit relationships between devices shown on the Floor Plans. Show all power sources.
4) Single-Line/Block Diagrams: Show signal relationships of controls and devices within the system.
5) Custom Assembly Diagrams: For each custom assembly such as Access Control Terminal Cabinets, receptacle assemblies, or door control panels, provide an assembly drawing illustrating the appearance of the assembled device. Include dimensions, assembly components, and functional attributes (momentary or alternate action switch, lens color, panel finish)
6) Component Connection Diagrams

    (a) For each equipment component such as a computer, video switcher, camera or video recorder, show the rear elevation of the device and all connectors/terminations as a pictorial.
    (b) Show the wire designations on connectors. Typical wiring detail where multiple of same device is provided.
    (c) Show a schedule of the wire colors connected to the pins on each device connector.

c. Equipment Wiring Diagrams

1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet, including terminals, components and wiring devices.
2) Show the device nomenclature exactly as shown on the single line diagrams.
3) Terminations: Show every termination and terminating cable, with applicable cable and wire numbers matching the single line diagrams.

    (a) Every termination in the system must be documented.
    (b) Termination information may be rendered as a wiring list(s), if properly coordinated with, and referenced to, typical component and single-line diagrams. Otherwise, the Shop Drawings shall show a pictorial of every component in the system, with its terminations.

4) Show wire colors for each terminal.
5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
6) Provide working dimensions and erection dimensions.
7) Arrangements and sectional views
8) Necessary details, including complete information for making connections between work under this Contract, existing work, and work under other Contracts.
9) Stock or standard drawings will not be accepted for review unless full identification and supplementary information is shown thereon in ink or typewritten form.
10) Duplicate of design drawings may be used where each sheet is modified to reflect contractor coordination, specific requirements of the project and multi discipline conditions.
11) Each Drawing or page shall include:

    (a) Project name, Project Number and descriptions.
    (b) Submittal date and space for revision dates.
    (c) Identification of equipment, product or material.
    (d) Name of Contractor and Subcontractor.

(e) Name of Supplier and Manufacturer.
(f) Relation to adjacent structure of material.
(g) Physical dimensions clearly identified.
(h) ASTM and Specifications references.
(i) Identification of deviations from the Contract Documents.
(j) Contractor's stamp, initialed or signed, dated and certifying to review of submittal, certification of field measurements and compliance with Contract.
(k) Location at which the equipment or materials are to be installed. Location shall mean both physical location and location relative to other connected or attached material.

d. Equipment Submittals

1) Provide a Title Page, with project name, Contractor’s name and address, contact information, date of submission, and submission revision number.
2) Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:

(a) The system type
(b) Model number
(c) Specification sheet page reference

3) Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
4) Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
5) Indicate kinds of materials and finishes for equipment where more than one option is presented.

e. Acceptance Testing Plan

1) Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
2) Provide a sample of the test forms to be used for each system and for each component of each system.
3) Include all tests required by the equipment manufacturer and by this Specification

f. Spare Parts List: Submit a list of recommended spare parts for Owner’s review & approval and/or amending. Spare parts shall comprise a minimum of 5% or minimum of 2 each of field devices, device termination boards and a minimum of 1 system controller boards.
g. Training Program

1) Submit a training program 10 working days prior to scheduled training to be followed in training key employees in the operation and maintenance of the installed system at the project site. The proposed training program shall be designed to provide a level of basic competence with the system for selected personnel. These selected personnel shall then be expected to train other personnel as required, utilizing the training that they have been given and the body of training documentation provided by Contractor. This plan shall comply with the requirements stated in the “Training” section, of these Specifications, all stated hours of which shall be considered to be classroom hours.

2) Submit a curriculum to account for, and relate, each subject to actual training time. All required hours shall be accounted for in this curriculum.
3) The training plan shall cover the overall system, each individual system, each subsystem, and each component. The plan shall also cover procedures for database management, normal operations, and failure modes with response procedures for each failure. Each procedural item must be applied to each equipment level.

h. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.
i. Verification: The contractor shall check and acknowledge all shop drawings and shall place his signature on all shop drawings submitted for approval. Contractor's signature shall constitute a representation that all quantities, dimensions, field construction criteria, materials, catalog numbers, performance criteria and similar data have been verified and that, in his opinion, the submittal fully meets the requirements of the Contract Documents.
j. Timeliness: The Contractor shall schedule, prepare and submit a complete shop drawing assembly in accordance with a time-table that will allow his suppliers and manufacturers sufficient time to fabricate, manufacture, inspect test and deliver their respective products to the project site in a timely manner so as to not delay the complete performance of the work.
k. Departure from Contract Requirements: If shop drawings show departures from the Contract requirements, the Contractor shall make specific mention thereof in his letter of transmittal, otherwise review of such submittals shall not constitute review of the departure. Review of the drawings shall constitute review of the specific subject matter for which the drawings were submitted and not of any other structure, materials, equipment, or apparatus shown on the drawings.
l. Contractor Responsibility: The review of shop drawings will be general and shall not relieve the Contractor of responsibility for the accuracy of such drawings, nor for the proper fitting and construction of the work, nor for the furnishing of materials or work required by the Contract. No construction called for by shop drawings shall be initiated until such drawings have been reviewed and approved.
m. Shop Drawing Submittal Review: The procedure in seeking review of the shop drawings shall be as follows:

1) The Contractor shall submit four (4) complete sets and/or electronic PDFs of shop drawings with equipment submittals and other descriptive data with one copy of a letter of transmittal to the Architect for review thirty (30) working days after award of the contract. The letter of transmittal shall contain the project name, Architect’s Project Number, the name of the Contractor, the list of drawings submitted including numbers and titles, requests for any review of departures from the contract requirements and any other pertinent information. Drawings submitted for review shall be full-sized and included with the equipment submittals.
2) Drawings or descriptive data will be stamped "Reviewed", "Furnish as Corrected", "Revise and Resubmit", "Rejected" or ‘Submit Specific Item’ and one copy with a Letter of Transmittal will be transmitted to the Contractor with the return of submitted documents.
3) If a shop drawing or data is stamped "Reviewed" or "Furnish as Corrected", no additional submittal is required for that shop drawing.
4) If a shop drawing or data is stamped "Revise and Resubmit" or “Rejected”, the Contractor shall make the necessary corrections and resubmit the documents as required above. The letter transmitting corrected documents shall indicate that the documents are re-submittals.
5) The Contractor shall revise and resubmit the shop drawing as required, until they are stamped either "Reviewed" or "Furnish as Corrected."

I. Equipment and Software List: Include every piece of equipment and software by product/model name and/or number, manufacturer, serial number, revision number, location, and date of original installation. If factory and/or bench testing regimens are required by the project plan, add pretesting record of each piece of equipment and software, listing name of person testing, date of test, and adjustments made.
J. CE and FCC Compliance Certificates:
K. Field quality-control reports
L. Current Specified Manufacturer Integrator Certification Letter
M. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office
N. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by Owner. Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.
O. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.
P. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.
2. General: The Contractor is responsible for providing accurate drawings and equipment manuals describing and depicting the systems as they are actually installed and operated.
3. Phase One: Notwithstanding requirements specified elsewhere, submit the following labeled as the "Operating and Maintenance Manual" within thirty (30) days after Final Acceptance of the Installation:

a. Record Drawings: Submit two (2) copies of revised versions of drawings as submitted in the "Shop and Field" and "Equipment Wiring Diagrams" Submittals showing actual device locations, conduit routing, wiring and relationships as they were constructed. Include nomenclature showing as-built wire designations and colors. Drawings shall include room numbers coinciding with Owner space planning numbering. Drawings shall be submitted in electronic editable AutoCAD files, in ".dwg" format, on CD or DVD disks.
b. Manuals: Submit two (2) copies of each of the following materials in bound manuals, or electronic PDF copies on CD/DVD discs, with labeled dividers:

1) A final Bill of Material for each system.
2) Equipment Instruction Manuals: Complete, project specific comprehensive instructions for the operation of devices and equipment provided as part of this work.
3) Manufacturers Instruction Manuals: Specification sheets, brochures, Operation Manuals and service sheets published by the manufacturers of the components, devices and equipment provided.
4) Include information for testing, repair, troubleshooting, assembly, disassembly and recommended maintenance intervals.
5) Provide a replacement parts list with current prices. Include list of recommended spare parts, tools, and instruments for testing and maintenance purpose.
6) Performance, Test and Adjustment Data: Comprehensive documentation of performance verification according to parameters specified herein.
7) Warranties: Provide an executed copy of the Warranty Agreement and copies of all manufacturers' Warranty Registration papers as described herein.

1.08 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70.
2. NFPA 101 (Life Safety Code).
3. The requirement of the local authorities having jurisdiction.
4. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
D. Installer qualifications: company specializing in performing the work of this section with minimum three years documented experience with access control systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.

1. Contract maintenance office located within 100 miles (160km) of project site.

E. Maintenance contractor qualifications: same entity as installer.
F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities jurisdiction.
G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.
H. All work shall comply with the latest editions of the codes as referenced herein.
I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.
J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to the project.
K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.
L. Equipment and materials shall:

1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.
N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:

1. The coordination of their delivery.
2. Their unloading from delivery trucks driven into any point on the property line at grade level.
3. Their safe handling and field storage up to the time of permanent placement in the project.

4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
5. Their field make up and internal wiring as may be necessary for their proper operation.
6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.
P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.
Q. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.09 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.
B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.11 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.12 WARRANTY

A. See Division 01 – Closeout Submittals for additional warranty requirements.
B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.
C. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of equipment related to the Access Control System, and control-station equipment that fail in materials or workmanship within specified warranty period.

    1. Warranty Period: The standard manufacturer’s warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

D. The Integrator shall provide all services required to maintain the system in an operational state as specified by the manufacturer for a period of one (1) year after acceptance.
E. Service response shall be within twelve (12) hours of the initial request for service and shall be provided twenty-four (24) hours per day, seven (7) days per week and three hundred sixty-five (365) days per year.
F. Contractor shall include, as part of this warranty, a program for maintenance for each integrated system.

    1. Provide details of coverage, preventive maintenance schedules, exclusions and service rates for all billable time and travel charges.
    2. Maintenance shall include two (2) semi-annual inspections and tests to verify the intended operation of the security system(s). System testing shall include but not be limited to the testing of all devises, fault modes and batteries. A detailed test report indicating these results and any corrective measures shall be furnished to the owner.

G. The Contractor shall provide software and firmware upgrades as required and available to the Owner.
H. Submit manufacturer's standard warranties.

PART 2 - PRODUCTS

2.01 SYSTEM REQUIREMENTS

A. Furnish and install Access Control System consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.
B. The awarded contractor of this section shall furnish and install a network access controlled system into this facility using electronic security devices. This integrated access control system shall incorporate all devices necessary to achieve the specified system, all associated monitoring and recording software, hardware, configuration, testing and training.
C. The contractor awarded this project must include the following licenses and configuration:

    1. Access Control Manufacturer licenses for each camera on the Specified VMS system
    2. Input / Output panels, and network nodes for all access-controlled doors, all door position switches, all duress & lockdown buttons, and all security strobes.
    3. Access Control Manufacturer Licenses for integration with the Specified Intrusion Detection System.
    4. Threat Level, Lockdown button configuration, and Day alarm configuration.
    5. Alarm and notification configuration through the Specified Access Control User Interface GUI.

D. This Access Control System described within this specification shall be fully integrated with the Video Surveillance, Intrusion Detection, Public Address, and Fire Alarm System.
E. All installation, peripheral devices, required licensing and configurations are required as part of this specification to establish a coherent, functional system as described within this bid package.
F. Security control and network cabling to/from the equipment rooms to the controlled doors, as described within the documents shall be furnished and installed by the contractor awarded this project.
G. Any and all additional interconnection cabling required for a functional system shall be furnished and installed by the contractor awarded this portion of work.
H. Final terminations to all devices are required by the Contractor awarded this Section.
I. The Contractor awarded this Section shall furnish and install a complete integrated security system and all associated, terminations, supporting devices, configuration of system, testing and training in accordance with this Bid package.
J. This specification is used to identify the requirements for an integrated access control system. The operator workstation(s) shall be used for database programming and storage of historical events and as a User interface with the Video Surveillance System.
K. This system shall be integrated with the building’s fire alarm system for proper activation of “fail-secure” locking mechanisms.
L. All interconnections required to the fire alarm system shall be terminated by the fire alarm installers and shall be coordinated with the contractor awarded this portion of work.
M. All system configuration(s) shall be included to attain a fully functional system and shall be within the Scope of work of the awarded contractor of this Bid package. This configuration shall include but not be limited to the following:

    1. Configuration of all controlled doors and devices.
    2. Configuration of all cameras shall be managed from the Access Control Platform
    3. Configuration of LAN switches – Active Electronics as required.
    4. Configuration of Access Control platform shall allow for Web access into the Access Control and Video Surveillance systems from all schools and via an internet connection which shall VPN into the owner’s network.

5. Configuration of the Lockdown / Duress / Emergency buttons, as directed by the Security Consultant, Police Department, and Owner.
6. Configuration of the Access Control, Intrusion Detection, and Video Surveillance integration.
7. Configuration of the Day Alarm system, which will notify users of a propped or opened door equipped with door position switches, as directed by the security consultant and Owner.

N. Environmental Conditions: System(s) shall withstand the environmental conditions without mechanical or electrical failure, damage or degradation of its operating capacity Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

2.02 ACCESS CONTROL FIELD DEVICES

A. Access Control Panels:

1. The Access Control Panels shall be Avigilon.
2. Include all required licenses, control panels, and door controllers as required for a fully functional system.

B. Wall Mounted Access Control Security Panel

1. AC-MER-CONT-LP1502

   a. QTY (A/R)

2. AC-MER-CON-MR52

   a. QTY (A/R)

C. Relayed Output Application Blade:

1. AC-MER-CON-MR16OUT

    a. QTY (A/R)

D. Supervised Input Application Blade:

1. AC-MER-CON-MR16IN

    a. QTY (A/R)

E. Power Supplies:

1. AC-LSP-4DR-MER-LCK

    a. QTY (A/R)

2. AC-LSP-8DR-MER-LCK

    a. QTY (A/R)

F. Credential Readers:

1. The selected manufacturer shall be SCHLAGE #MT15 Multi-Technology Wall Mount Reader.

    a. Utilize Mullion Readers where appropriate or required.

G. Licenses:

1. Furnish, install, and configure all licenses required to view all Avigilon cameras on the Avigilon Access Control Platform.
2. All Avigilon Access Controlled Doors shall integrate within the City's existing Access Control Server. Include licenses for each door requiring interface with the Access Control Platform specified within this project.
3. Include all required elevator license and software features to accommodate elevator credential readers as shown on the security drawings.

H. Request to Exit Sensor (REX / RTE):

1. Coordinate with the door hardware vendor and use the Provided Exit Request Touch Bar or Integral Lock Signal Switch, where specified in Division 08.
2. Where integral exit request touch bar is not specified, furnish an install the following:

    a. Manufacturer:

        1) BOSCH

            (a) #DS160
            (b) Approved Equivalent

I. Door Position Switches (Door Contacts):

1. All Door Position Switches shall be Double Pole-Double Throw (DPDT).
2. Door position switches shall be installed by the Contractor. The Contractor shall align, prepare, and fabricate doors and frames to accept specified door position switches. The

Contractor shall be responsible for coordinating the installation, so systems and hardware operate as specified. Door Position Switches will be installed at the top of the door in the first instance. If unable to install on top, then side installation on the handle side is acceptable.

3. Surface Mounted Door Switch: DPDT sensor. Interlogix or approved equal. Surface Mounted Magnetic Switch with armored cable. Route armored cable to junction box and permanently secure to box with clamp or set-screws. Use only where flush-mounted devices cannot be installed.
4. Non-fire rated Doors, Flush Mount:

    a. Interlogix Model 1076C-W or approved equivalent Concealed Magnetic Door Switch.

5. Fire Rated Doors:

    a. General: Contractor shall coordinate access control hardware equipment and installation so as to maintain the Fire Rating of each specific door to the satisfaction of the Local Authority Having Jurisdiction.

J. Lockdown Button:

1. The selected model shall be: Safety Technologies Inc, #SS-2000 or an Approved Equivalent

    a. The lock down button shall be green and labeled “LOCKDOWN”
    b. The lockdown button shall have a key-to-reset function
    c. Include plastic cover – STI #6518

2. Lock-down buttons must be configured to Owner requirements. Minimally, these buttons will have to interface with the Access Control System, Intrusion Detection System, Public Address System and Video Surveillance System.
3. Lock Down buttons shall automatically release fire-alarm hold-open doors.
4. Lock Down buttons shall cause the security strobes to activate. Coordinate configuration and functionality with Security Consultant and Owner.
5. Lockdown shall send emails and text messages to up to 50 users.
6. Lockdown shall notify the Magic Monitor Bricks of an event.
7. Lockdown shall signal a pre-recorded message over the public address system. Coordinate message with public address integrator.
8. Lockdown shall dial-out to the central monitoring company, through the Honeywell intrusion detection panel.

K. Panic / Duress Button

1. The selected model shall be: Sentrol UL Rated #3050 or equivalent. Include bi-color latching LED and single pole, double throw contacts.
2. Panic / Duress buttons must be configured to Owner requirements. Coordinate configuration and functionality with Security Consultant and Owner.

L. Security Strobe Lights:

1. The selected model shall be:

    a. Talkaphone #ETP-EL12/24 or approved equal.
    b. Contractor shall demonstrate that lamps are visible in direct sunlight prior to final installation and approval.
    c. Include low voltage power supplies.

d. Lights shall be controlled through outputs of the Access Control Panel. Coordinate configuration and functionality with Security Consultant and Owner.

M. Door Release Buttons:

1. The selected model shall be:

a. Dortronics #H276-HD29 or an approved equivalent.
b. The door release button shall be engraved with the label “ASSOCIATED DOOR # Push to Release”
c. The door release button shall be mounted to FSR #DSKB_385 Single Gang Table Box.

N. Access Control Source Power:

1. Derive primary Access Control 120VAC power from a designated power source within the telecommunication room, as shown on the T & Y drawings.
2. Power cable shall be protected by conduit.
3. Transformer shall be installed in locked cabinets, protected by tamper switches. Plug-in transformers which are not protected by locked cabinets are not acceptable.
4. Serve all Low Voltage powered devices within the Access Control Cabinet from the Electronics Power Supply.
5. Provide barriers as necessary to separate Class 1 from Class II power.

O. Access Control System Source Power Supplies and Batteries:

1. Furnish and Install Altronix UL Listed Class II power supplies or approved equivalent.
2. Serve all low voltage powered devices within the Access Control Enclosure from the Electronics Power Supply.
3. Capacity: The power supply shall be capable of powering a minimum of 125 percent of the load required at the time of acceptance (25% spare capacity).
4. Power Monitoring: The system shall monitor the loss and restoration of power at the Access Control Panel of both primary and secondary loss of power. Loss and restoration of power shall be displayed at the console, but shall not require resetting the system.
5. Battery Back-up: Provide battery back-up to retain functions of all electronics for a period of four (4) hours upon loss of 120VAC power.

P. Lock Power Supply (LPS)

1. Provide Altronix, UL Listed Class II power supplies within a ventilated, locked, cabinet within the telecommunication rooms as noted on the T & Y drawings, or as otherwise required, to affect proper system performance. Cabinet shall be equipped with a tamper switch, which shall be connected to the Access Control System to provide a supervisory alarm. Power supply shall include separate terminals for each door lock. Power supply voltage shall be required by the hardware supplied locks.
2. Capacity: The power supply shall be capable of powering 200 percent of the load required at the time of acceptance (100% spare capacity).
3. Power Monitoring: The system shall monitor the loss and restoration of power at the Access Control Cabinet. Restoration of power shall be displayed at the console but shall not require resetting the system.
4. Battery Back-Up: Power supplies shall be equipped with integral battery recharging circuits and batteries. If a separate cabinet is used for batteries, the cabinet shall be locked and provided with a tamper switch connected to the Access Control System.

a. Fail Safe Door Locks: Provide four (4) hours of battery backup for Low-Voltage electrified door hardware.
b. Fail-Secure Door Locks: Provide battery backup enough to operate fail-secure door locks 100 times per hour, for four (4) hours.

5. Power supply output may be connected to remove UL-approved distribution board of the same manufacturer mounted within the Access Control Cabinet.
6. Provide a Fire Alarm Interface Relay to interface the LPS to the Access Control system and Fire Alarm System as shown on the contract drawings.
7. Transformers shall be installed in locked cabinets, protected by tamper switches. Plug-in transformers which are not protected by locked cabinets are not acceptable.

Q. Auto Door Actuator Interface Relay: Furnish and install Dayton Model 5YR20N, or equal, with compatible relay base, at automated doors to ensure the Access Control System approved the Credential / Push Plate before actuator motor is engaged.
R. Provide IDEC RTE series interval timer, or equal, for interface with motorized door Push Plates and the Automated Door Operator. This will be used to provide a functional time extension for the interaction of between the Access Control system and the Automated Door Hardware, to avoid damage and prevent unwanted alarms.

1. Unit shall be UL listed and operate on 24VDC.
2. Unit shall mount to UL listed relay socket.
3. Unit shall mount within the door operator housing.

S. Access Control Cabinet:

1. System controllers and field control boards serving a given area shall be installed inside Access Control Cabinets. No controller or control module shall be mounted independently of the cabinet and its power supplies. Refer to the drawings and the following descriptions for details on the Access Control Cabinet construction.

T. Provide Access Control Cabinets as described below, located in the telecommunication rooms where the access control cabling terminates, per the T & Y Drawings, to house all equipment. Each access control cabinet shall contain the following equipment to support the current and future alarm initiating and controlled devices to be connected to the Access Control System:

a. Access Control Cabinet:

1) Indoor: NEMA 2, hinged, locking cabinet by Access Control Manufacturer, Hoffman, or approved equal, sized to fit contents. Lock shall be coordinated with the Owner allowing replacement by the Owner.
2) Outdoor: Stainless steel, NEMA 4X, hinged locking handle cabinet by Access Control Manufacturer, Hoffman, or approved equal, sized to fit contents.
3) Provide door tamper switch and wire into alarm input for each Access Control Cabinet.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.
B. Verify that ratings and configurations of system components are consisted with the indicated requirements.
C. Verify that mounting surfaces are ready to receive the system components.

D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.
E. Verify that conditions are satisfactory prior to starting work.
F. Device Locations

1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.
H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install access control system in accordance with NECA 1 (general workmanship).
B. Install products in accordance with manufacturer's instructions.
C. Unless otherwise indicated, use wiring in conduit.

1. Use suitable listed cables in we locations, including underground raceways.
2. Use suitable listed cables for vertical wire applications.
3. All cabling shall be plenum rated.

D. Install wiring in conduit for the following:

a. Where required for rough-in.
b. Where required by the AHJ.
c. Where exposed to damage.
d. Where installed outside the building.
e. For exposed connections from outlet boxes to devices.

2. Conduit: comply with Division 26.
3. Conceal cables unless specifically indicated to be exposed.
4. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
5. Cables in the following areas may be exposed:

a. Equipment Closets

6. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
7. Do not exceed manufacturer's recommended maximum cable length between components.

E. Provide grounding and bonding in accordance with Division 26.
F. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.
G. Install all devices and infrared illuminators level and plumb.
H. Install power supplies and other auxiliary components at control stations unless otherwise indicated.
I. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.
J. Door Hardware Coordination

1. Doors shall not be locked in path of legal egress unless integrated with the fire alarm for release upon the fire alarm system notification. All access controlled locked door within the path of legal egress must be brought to the attention of the Architect and Security Consultant prior to rough-in.
2. Refer to Section Division 08 for Door Hardware requirements and coordination. Contractor shall work directly with door hardware supplier to ensure the provision of specified mechanical and electronic functionality.
3. Request to Exit Activation: Contractor shall configure the system such that Request to Exit devices and System Controllers will react quickly enough to bypass alarms before a fast-moving individual can reach and open the door. This bypass shall be evaluated and verified by the Contractor on the fully configured and operation Access Control system prior to acceptance testing. When possible, use door hardware with REX devices built into the hardware.
4. Fire Alarm Interface: Electrified locks, strikes and turnstiles which are part of this work and which may be locked in the path of legal exiting, shall be connected to the building Fire Alarm System in accordance with the AHJ requirement such that they automatically unlock in the event of activation of the Fire Alarm System. This shall occur whether the activation is a result of a manual pull station, smoke detector, or sprinkler flow switch.

    a. A fire alarm “general / common alarm relay” shall be programmed at the fire alarm control panel to activate the Access Control System interface relays located in each Lock Power Supply cabinet. The Access Control Contractor shall research and provide all necessary fire alarm system conduit, wire, hardware, and programming to perform required interface.
    b. This interface shall not depend on the Access Control System host or Remove Controllers for its operation. Locate these interface relays electrically ahead of lock power distribution. The Contractor shall supply and install programmed alarm interface relay(s) with sufficient capacity to control the power supplied to all controlled locks.

5. Access Control Lock Configuration

    a. Secured Doors: Doors equipped with electric locks shall be individually programmed for locking and unlocking at specific times of the day. A valid credential presented at a reader will allow the portal to unlock for a programmed period of time.
    b. Stairwell Door Locks:

        1) Stairwell doors which are locked from the stairwell side shall have the capability to be simultaneously unlocked upon a signal from the Fire Command Center, Fire Alarm Panel, or the Access Control Command Center when applicable.
        2) Stairwell locking systems shall, in all respects, comply with the requirements of the Building Codes for “Means of Egress”.
        3) Contractor shall provide clearly labeled switches, in the required locations, to unlock all stairwell doors simultaneously for “non-fire” emergencies. Coordinate wall or desk mounted switch style, with the Owner and the AHJ.
        4) This interface shall not depend on the Access Control System Host or Remote Controllers for its operation. Locate interface relays for each stairwell door electrically ahead of the Access Control System lock control, to independently override the Access Control System Control.

    c. Upon authorization by card reader or manual means, “door force” and “door held open” alarms associated with the portals shall be automatically bypassed (prevented from reporting an alarm) for a duration of time that is programmable on an individual door and individual cardholder basis.

d. The door shall re-lock immediately upon closing, after an authorized access, and the bypass duration shall be immediately truncated. A door position switch will be required at every door for this purpose. The same door position switch shall be used to sense the position of the door for “door forced” and “door held open” alarms.
e. Free Egress Authorization

1) Unless otherwise shown on the plans or described herein, the system shall detect the normal egress of a user at any individual portal and shall bypass any alarm associated with the portal for a duration of time that is programmable on an individual door and individual cardholder basis.
2) Timing shall be independently programmed for each portal during the initial enrollment process. This function allows extended timing for disabled persons to pass through a portal.
3) The timing function shall automatically truncate after an adjustable period (0-4 seconds) after a portal is closed. This feature allows a subsequent alarm at the portal to be detected and prevents the portal from being re-opened without an authorized request.
4) “Request-to-Exit” devices shall be used to signal the system that an individual is ready to exit the secured door. Request-to-Exit devices may include but not be limited to:

(a) Integral Lock Handle Signal Switches
(b) Touch Bars (Electro-Mechanical or Electronic)
(c) Push Bars (Mechanical)
(d) Push Buttons

5) On doors with integral electro-mechanical locking mechanisms (strikes, electrical panic hardware, or electrical mortise locks) the mechanical action of the door hardware shall enable egress without requiring release of the electrical mechanism. The Request-to-Exit device shall not unlock the door.
6) On doors with integral electro-mechanical locking mechanisms (magnetic locks), a Request-to-Exit device may unlock the door, releasing the electrical mechanism for the programmed duration. Refer to the drawings for details and direction.
7) On doors with Intercom Systems or Door Release Buttons, the Contractor shall interconnect the intercom system or door release button to activate the Request to Exit function and unlock the door. The door release request contact shall be connected to an input on the Access Control System, such that an event shall be registered into the Access Control System indicating its operation.

f. Sequences: Verify each door type sequence at each door with the Owner.

1) Doors with Door Position Switches (DPS) and Request-to-Exit (REX) Devices:

(a) DPS and REX contacts shall be wired to Access Control System auxiliary input. Configure the Access Control System to mask the associated DPS alarm for a minimum of 45 seconds. Coordinate the required masking duration with the Owner.
(b) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
(c) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended.

2) Doors with Electronic Locking (EL), DPS and REX devices:

   (a) DPS and REX contacts shall be wired to Access Control System auxiliary input. Configure the Access Control System to mask the associated DPS alarm for a minimum of 45 seconds. Coordinate the required masking duration with the Owner.
   (b) Electronic lock shall be wired to Access Control System auxiliary output. Configure the Access Control System to mask the associated DPS alarm during timed or commanded unlock.
   (c) Electric lock shall be locked and unlocked based on preprogrammed schedules and conditions, and by manual control from the Access Control System client workstations.
   (d) Access Control System shall not cause an alarm event when door is unlocked.
   (e) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
   (f) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended during locked mode.
   (g) REX device shall not unlock the door.

3) Doors with Card Access Control (CR), EL, DPS and REX devices:

   (a) CR, EL, DPS and REX devices shall be wired to a door controller board.
   (b) Electronic lock shall be locked on command from the system at any time.
   (c) Electronic lock shall unlock during a preset time zone or from the system.
   (d) Electronic lock shall be unlocked and shall not require use of card reader during timed unlock mode.
   (e) Access Control System shall not report activity when door is scheduled unlocked.
   (f) During locked mode Card Reader shall unlock the door, mask DPS preventing alarm.
   (g) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended.
   (h) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
   (i) REX device shall not unlock door.

4) Doors with Auto-Operators, Proximity CR, EL, DPS and REX devices:

   (a) Auto-Operator controls, CR, EL, DPS and REX devices shall be wired to a door controller board.

5) Electronic lock shall be locked on command from the system at any time.

   (a) Electronic lock shall unlock during a preset time zone.
   (b) EACS shall not report alarm activity when door is unlocked.
   (c) Auto-Operator door dwell times will meet all ADA/DDA requirements.
   (d) Day mode: proximity card reader shall activate the auto operator to open the door.
   (e) Secure mode: Card reader, auto operator function, shall activate the auto door operator at all times.

(f) Card Reader shall unlock the door, mask the DPS device preventing alarm and allow use of door open pushbuttons. Electronic lock to be unlocked prior to door open mechanism is engaged. Where auto door equipment is not provided with door open pushbuttons, the door shall automatically open after unlocking. NOTE: The exterior door open pushbutton should not function without first presenting a valid access card.
(g) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended during locked mode.
(h) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
(i) Use of push plate shall activate the Access Control System REX, unlock the door and operate the auto door system only after a valid card read.
(j) Door shall report a door held open time when REX (push plate or signal from the door operator) is activated, door is opened from the secured side and the system bypass time has expired during locked mode.
(k) Verify interior push plate is operational in both lock and unlocked modes.
(l) Verify exterior push plate is operational during unlocked mode.
(m) Verify exterior push plate is non-operational until valid card read during locked mode.
(n) Verify exterior push plate is operational after valid card read during locked mode.
(o) Verify door can be manually opened during locked mode from secured side.

g. Doors with Auto-Operators, Dual CR (Mag Stripe and Proximity types), EL, DPS and REX devices:

1) Auto-Operator controls, CR, EL, DPS and REX devices shall be wired to a door controller board.
2) Electric lock shall be locked on command from the system at any time.
3) Electric lock shall unlock during a preset time zone.
4) Door shall not report alarm activity when door is unlocked.
5) Secure mode:

(a) Proximity card reader, auto operator function, shall open the door at all times.
(b) During secure mode the card reader shall operate as item e above.

6) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended during locked mode
7) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
8) Use of push plate shall activate the Access Control System REX, unlock the door and operate the auto door system from the inside; however, the push plate will not operate the door from the exterior (secure) side unless there is a valid access card presented.
9) Door shall report a door held open time when REX (push plate or signal from the door operator) is activated, door is opened from the secured side and the system bypass time has expired during locked mode.
10) Verify interior push plate is operational in both locked and unlocked modes.
11) Verify exterior push plate is operational only during unlocked mode.

12) Verify exterior push plate is non-operational until valid card read during locked mode.
13) Verify exterior push plate is operational after valid card read during locked mode.
14) Verify door can be manually opened during locked mode from secured side.

h. Auto Sliding Doors shall operate similar to Doors with Auto-Operators (as applicable).

1) Contractor to coordinate and confirm door hardware includes electronic remote door locking control capability.
2) Verify sliding door break away feature is not disabled when door is in legal path of egress.

i. Exterior Gates:

1) Insert as defined by hardware group. [Provide gate with electric strike] [Provide gate with electrified mortise handle] CR, EL, DPS, REX wired to input / output / door controller card as required by application.
2) Gate shall operate as described for door with similar access control devices including being tied to the Fire Alarm System via a relay so the gates will unlock on receipt of a fire alarm.

6. Electrical Connections to Door Hardware: Wire connections to door hardware pigtail leads shall be made using the manufacturer-provided quick-connect devices, or by Dolphin insulated dis- placement connectors. Wire nuts and splices are not acceptable.
7. Tamper Devices

a. Terminal cabinets, equipment cabinets, enclosures, power supply cabinets, exposed wireways, and pull and junction boxes with wire connections or splices shall be equipped with tamper switches programmed to report an alarm.
b. Junction boxes requiring tamper switches that are associated with an individual alarmed de- vice (such as a door position switch) may report to the respective device alarm point if end- of-line resistors and the system are configured to support 6-state alarm reporting. Other cabinet and box tamper switches shall report as independent alarm points.
c. Power Supply/Battery Chargers: Power supply/battery chargers shall be connected to alarm monitoring points to provide an "Event" indication of tamper, power failures and other system troubles.

K. Access Control System Connectivity

1. Access Control Network: Access Control Servers, Client Workstations and Controllers shall reside on the Owners' Local Area (LAN) and/or Wide Area Network (WAN) to allow global event activity and shared data interchange.
2. Provide and coordinate with Owner IT adequate network "firewalls" to maintain the security of Access Control System controls and information while connected to shared computer networks and transmission media. Contractor shall coordinate shared resource usage with the Owner, and develop network security schemes acceptable to the Owner to ensure the integrity of the Access Control System.
3. LAN Communications & Connectivity, (Integrated CPU's and Controller's)

a. Provide LAN communications interfaces for the applicable Access Control System Server, Clients and Controllers to support multiple workstation and integration schemes that are part of this work.

b. LAN Communications: Contractor shall utilize the facility's Local Area Network for Access Control System connections and interfaces, as shown on the drawings and described herein.
c. Coordinate with Access Control System equipment and software manufacturers to provide network inter- face devices compatible with the established LAN/WAN network.
d. Coordinate with the Owner's IT Department to provide servers, Access Control System clients, network interface devices, bandwidth utilization, and appurtenances acceptable to the Owner.

4. Controller Communications

a. Between controllers at an individual location, and between controllers located within the same building, the controller network may be implemented using standard, twisted, shielded copper conductors as approved by the system manufacturer. It is also acceptable for controllers to be LAN connected, regardless of location.

L. Duress / Lockdown Alarm System

1. Furnish and install duress / lockdown alarm devices as shown on the Drawings, and as coordinated with final architectural millwork details, millwork shop drawings and consoles.
2. Wire alarm signal circuit using two-conductor twisted, shielded cable per cable specifications. Specified device contains latching L.E.D. Run additional two- conductor cable, dedicated to intrusion detection system, 12VDC power, per cable specifications, to power supply via reset switch at power supply.
3. Each hardwired duress alarm system device shall be wired to an Access Control input panel and intrusion detection remote field input module panels as separate 24 hour security zones.
4. Duress devices associated alarm signal circuitry to be fully supervised for open, short, normal and alarm. Provide required end-of-line resistors to achieve this supervision per manufacturer's specifications. Locate as close to device as possible, preferably in device homerun junction box. Protect wires from button to junction box using miniature Greenfield/stainless steel sheathing.
5. Provide separate 12 VDC, power kill, LED reset switch in security device low voltage power supply cabinet enclosure, and wire duress device LED power through switch. Label switch accordingly.

M. Emergency Standby Power

1. Low-Voltage Equipment: Access Control System Remote Controllers, peripheral devices and Lock Power Sup- plies shall have their own 4-hour battery back-up systems.

a. Power back-up may be in the form of direct DC battery power back-up or by 120VAC Uninterruptable Power Supplies (UPS), depending upon equipment requirements.
b. Lock Power Supplies shall allow fail-secure locks to be operated by the system a minimum of 100 times-per-hour, during this time period. Fail-safe locks shall be maintained for the full 4-hours.
c. Battery back-up systems may be distributed throughout the facility to provide the required emergency power to individual components.
d. Battery back-up systems shall include battery chargers to keep storage batteries at their peak charge.

N. Security System Integration

1. The Contractor shall be responsible for providing hardware and software interfaces to achieve the specified system performance described herein and, by reference, realize absolute and seamless compatibility with the related component systems.
2. The Contractor shall ensure system additions and modifications provided under this scope of work have no negative effect on the individual components and systems, and their core functionality, and no permanent effect beyond that specified or implied by the scope of work.
3. Purpose

    a. Integration is the process of designing, deploying, and configuring independently operating systems with the ability to request, receive, extract, process, and act upon information from other systems.
    b. Successful system integration must address three fundamental issues:

        1) Functionality: What information is needed, how it is to be requested and processed, and what functions or activities need to occur upon receipt of the information.
        2) Connectivity: How systems will be connected to support the communication of information and commands. (Special interfaces, wiring, networks, databases.)
        3) Communication: How information will be communicated between systems. (Instruction sets, language, protocols, formats, priority.)

4. Environment

    a. Integration components shall generally comprise special elements of independent subsystems, and shall be located within, or in close proximity to, the processing components of each independent subsystem. Where subsystems require special hardware or communications interfaces to support integration, the special hardware should be located near the independent subsystem processing components or network appliance, based on the manufacturers' recommendation. See the drawings for details on mounting locations.

5. Infrastructure and Connectivity:

    a. Devices/Appliances: Appliances and devices shall be connected to their respective systems via the applicable communications network.
    b. System LAN/WAN Connectivity: System Servers and microprocessor-based Control Panels, shall reside on the Local Area Network (LAN) or Wide Area Network (WAN) tier designated for integrated components.
    c. Enterprise: LAN networks will be connected to the Wide Area Network, to establish connectivity between remote sites and both the Primary and Alternate Security Operations Center (SOC – room SB05-1).

6. Attributes

    a. The attributes of the integrated environment are primarily defined by the subsystems that are to be integrated. Verify existing system components to be expanded by this project.
    b. Integrated systems comprise the processors, software, electrical control panels, data gathering panels, special data interfaces, and converters required to allow systems to communicate with each other, process information, and allow users to program and perform operations.

7. Functions

a. The system shall provide the following automated processing rules, at a minimum:
b. The object of “Access Control system integration” is to automatically configure the system to display, record, and report appropriate system activity to various elements of the system. Automatic configuration can free operators from difficult control tasks, give the operator more time to respond to events, reduce operator error, and ensure critical system tasks occur consistently.
c. Electronic Access Control system elements shall be electronically integrated in such a way as to enable detection, database records and/or event-initiated instructions to be communicated between system components, to initiate recording, display, communication, and control activities.
d. Event-Initiated Interface, General:

1) The system shall support the capability to send and receive alarm and control messages between the Access Control System and video systems via a LAN communications link, using API, XML, or other industry-standard communication languages and formats, and shall act upon those messages received.
2) The system shall support the capability to send and receive alarm and control messages and alarm signal between the Access Control system and Intrusion Detection System for lockdown / duress / and panic button initiation.
3) Where integration may require the implementation of data interfaces, Contractor shall propose such integration to the Owner for approval, before proceeding with the work.
4) Software routines required to accomplish the required data-interface with external equipment and controls will be fully developed, installed, tested and supported by the Contractor.
5) The manufacturer of each applicable system will also support the data interface and will be engaged by the Contractor to provide on-site technical assistance where required to prepare, repair, configure, and test the system to operational condition.
6) Communication of event information between systems shall take place automatically and immediately when the event is sensed by the System.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.
B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
C. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:

1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.

4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

E. Access Control System shall be considered defective if it does not pass tests and inspections.
F. Prepare test and inspection reports.

3.04 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.
B. Clean installed items using methods and materials recommended in writing by manufacturer.
C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.
B. Demonstration: Demonstrate proper operations of system to Owner and correct deficiencies or make adjustments as directed.
C. Training:

1. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE's designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.
2. General Training Requirements:

a. The security contractor shall submit proposal to conduct training courses for the security personnel in the operation and maintenance of the security systems within this security project.
b. The security contractor shall include training manuals and aids in the quantity as requested by the Owner. The training manuals shall include an agenda, defined objectives for each lesson, and a detailed description of the subject matter for each lesson. All personnel providing the instructions shall be certified by the equipment manufacturer for all applicable hardware and software.
c. Approval of the planned training content and training schedule shall be obtained by the Owner at least 45 days before the training is scheduled.
d. Training shall be provided by qualified, factory trained and certified engineers familiar with each system and its operations and shall be provided at the site for a period of no less than the hours stipulated below.

3. Training Topics:

a. System Administration Training

1) This training shall focus on determining and implementing system operational parameters.
2) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. 8 Hours of Administration training; (2) 4-hour classes.
3) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing.

The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of training; (2) 3-hour classes.

4) This Administrations training shall include:

(a) Overall architecture and configuration of each system.
(b) Use of all system functions.
(c) ID badging design and production.
(d) Card-holder setup and configuration.
(e) Card-holder access level assignment.
(f) Access Door programming.
(g) Alarm setup and implementation.
(h) Data storage and retrieval through reports.
(i) Creation of reports.
(j) System database backup procedures.
(k) Hardware specifications.
(l) Fault diagnosis and corrections.

b. System User Monitoring Training

1) This training shall be for each designated personnel at this school.
2) This training shall focus on day-to-day system operations. Each user shall be capable to start the systems, operate them, recover the systems after a failure, and describe the specific hardware architecture and operation of the systems.
3) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. All System User Training shall be performed at each school within this specification. 8 Hours of User training; (2) 4-hour classes.
4) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of User training; (2) 3-hour classes.
5) Training shall include:

(a) Use of overall system monitoring functions as determined by the security administration staff.
(b) Monitoring alarm events.
(c) Monitoring personnel access into the facility.
(d) Assessing, responding to, and clearing alarms and messages.
(e) Monitoring access door status.
(f) Running routine reports.
(g) General hardware architecture.
(h) Functional operation of each system and interaction between these systems.
(i) All Operator commands.
(j) Database entry.
(k) Report generation.
(l) Alarm assessment.
(m) Simple diagnostics.

c. System Troubleshooting and Maintenance Training

1) Training shall be provided with the internal features and configuration of the security systems so the user can trouble shoot and repair most configuration and physical device problems.

2) The training class shall be conducted so that it is completed approximately 14 days prior to acceptance of the system and final reliability testing. The users shall be included as part of this reliability testing. 8 Hours of training; (2) 4-hour classes.
3) This training shall include:

(a) System networking communications and diagnostics.
(b) Device configuration and programming.
(c) Controller setup.
(d) Wiring and cabling overview.
(e) System Diagnostics.
(f) Software troubleshooting.
(g) Physical layout of each piece of hardware.
(h) Preventive maintenance procedures and schedules.
(i) Calibration procedures.

d. IT Training

1) Training shall be provided information of the security systems to the IT staff. This shall include information as to how each system functions within the LAN/WAN network infrastructures. 4 Hours of training.
2) Topics shall include:

(a) Network topologies.
(b) Maintenance of data security.

4. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.
5. Should the training be deemed as inadequate by the Owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.
6. The Owner reserves the right to request the Contractor to videotape training sessions and turn over video records (DVD format) to Owner as part of the “Owner Project Manuals” and Deliverables.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.
B. Adjustments:

1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

a. Check cable connections.
b. Check proper operation of access control devices.
c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.
D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.
E. Provide trouble call-back service upon notification by Owner:

    1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
    2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION 281300

SECTION 281600 - INTRUSION DETECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”
B. Refer to the following construction documents for Data Room locations and device locations only.

1. “TY” Drawings – Technology Plans

1.2 SUMMARY

A. The scope of work required as part of this project shall include a new intrusion detection system installed into the school.
B. Section Includes:

1. Control Panel
2. Motion Sensors
3. Door Contacts
4. Intrusion detection devices

C. These specifications contain the functional and operational requirements for an integrated intrusion alarm system employing motion detection devices and door contacts as the primary means of intrusion detection for selected interior protection. This procurement shall include all the equipment required at various facilities as shown on the Drawings.
D. Responsibility for the integrated security systems and equipment is specified in the following sections and shall be coordinated with the finish door hardware and Fire Alarm sections.
E. The intrusion system is intended to provide protection of selected facilities against intrusion and for the detecting or discouraging of burglary or vandalism during the hours the facilities are unoccupied and report signal to the Central Station.
F. General: Provide and install an integrated security system and all devices, terminations, associated supporting devices, configuration of system, testing and training in accordance with this Bid package to provide a complete and functional system.
G. The cabling shall be provided and installed by the contractor awarded this project and as described within the construction bid document and referenced on the drawings associated with this bid package. All other cabling required to provide a complete and functional system shall be furnished and installed by the Contractor awarded this portion of work.
H. This specification is used to identify the requirements for integrated Burglar entry systems encompassing door contacts and motion detectors.
I. Responsibility for the integrated security systems and equipment is specified in the following sections and shall be coordinated with the Finish Hardware and Fire Alarm sections of the Phase I Construction.
J. It is the intent of these specifications to procure a fully acceptable, effective and reliable integrated security system. Refer to the Drawings for division of responsibility. These specifications recognize the importance of complete system operation and are not limited to specifying of equipment only. The following are also required from the selected bidder:

1. Proven experience in the security business.
2. Prompt delivery and professional installation including service of equipment as specified.
3. Bidder must provide, for objective evaluation, references, which clearly state and show the effectiveness of proposed equipment and services.
4. Used products will not be acceptable. Manufacturer must satisfactorily demonstrate that he has supplied and will continue to supply products to avoid the obsolescence of equipment installed in the building.
5. All equipment shall be fully guaranteed for twelve (12) months. This guarantee shall become effective from the day of installation completion. When in normal operation, if the equipment is found to be below the manufacturer's specification, repair and replacement of equipment shall be provided. Repairs shall be started within twenty-four (24) hours and completed without delay. Installation contractor shall either stock spares or be capable of obtaining all required replacement parts within twenty-four (24) hours.
6. Extended warranty terms shall be provided by the installing security system integrator at the time of bid.

1.3 SYSTEM DESCRIPTION

A. The system shall be a Intrusion Detection System that includes the following capabilities:

1. Supports up to 128 zones.
2. Supports up to eight (8) separate partitions.
3. Supports up to one hundred fifty (150) users.
4. Provides integrated security, access control, and CCTV switching capability.
5. Provides supervision of peripheral devices.
6. Supports up to ninety-six (96) optional relay outputs.
7. Supports long-range radio (LRR) communication.
8. Provides scheduling capability to allow for automated operations.
9. Supports up to eight (8) alphanumeric paging devices.
10. Supports panel linking.
11. Supports alarm reporting via Internet.
12. Interfaces with automation software.
13. Capable of being installed using existing wiring.

1.4 APPLICABLE STANDARDS

A. All of the work within the scope of this bid shall be performed in accordance with the applicable state, county and city laws and ordinances. The bidder shall be able to obtain all permits and licenses as required in addition to being a licensed contractor. All materials, supplies and equipment being furnished shall be installed in accordance with the latest version of the applicable standards of:

1. OSHA
2. Uniform Building Code
3. Americans with Disabilities Act (ADA)
4. Components of the system shall be of the type approved by Safety and Regulatory Agencies including:

    a. Underwriters' Laboratories (UL), Inc.
    b. Federal Communications Commission (FCC).
    c. Agency approvals and UL Listing declare the system's design, components, and installation shall meet the highest standards.
    d. System installation shall comply with UL 681 and UL 611.

5. Alarm detection systems intended for UL certified fire alarm reporting shall meet the requirements of UL Standard 985, NFPA Standard 72 Chapter 2.
6. The equipment shall comply with Part 68 of the FCC Telephone Requirements Rules.
7. All circuits and equipment shall be installed and protected according to the National Electric Code and any applicable local requirements.

1.5 DEFINITIONS

A. LCD: Liquid-crystal display.
B. LED: Light-emitting diode.
C. PIR: Passive infrared.
D. RFI: Radio-frequency interference.
E. Protected or Protection Zone: A space or area for which an intrusion must be detected and uniquely identified, the sensor or group of sensors assigned to perform the detection, and any interface equipment between sensors and communication link to central-station control unit.

1.6 SUBMITTALS

A. Product Data: Components for sensing, detecting, systems integration, and control, including dimensions and data on features, performance, electrical characteristics, ratings, and finishes.
B. Shop Drawings: Detail assemblies of standard components that are custom assembled for specific application on this Project.

1. Functional Block Diagram: Show single-line interconnections between components including interconnections between components specified in this Section and those furnished under other Sections. Indicate methods used to achieve systems integration. Indicate control, signal, and data communication paths and identify programmable logic controllers, networks, and control interface devices and media to be used. Describe characteristics of network and other data communication lines.
2. Raceway Riser Diagrams: Detail raceway runs required for intrusion detection and for systems integration. Include designation of devices connected by raceway, raceway type, and size, and type and size of wire and cable fill for each raceway run.
3. Device Address List: Coordinate with final system programming.
4. System Wiring Diagrams: Include system diagrams unique to Project. Show connections for all devices, components, and auxiliary equipment. Include diagrams for equipment and for system with all terminals and interconnections identified.
5. Sensor detection patterns and adjustment ranges.

C. Equipment and System Operation Description: Include method of operation and supervision of each component and each type of circuit. Show sequence of operations for manually and automatically initiated system or equipment inputs. Description must cover this specific Project; manufacturer's standard descriptions for generic systems are not acceptable.
D. Field quality-control test reports.
E. Operation and Maintenance Data: For intrusion detection system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. Data for each type of product, including features and operating sequences, both automatic and manual.
2. Central-station control-unit hardware and software data.

F. Warranty: Special warranty specified in this Section.

G. In the event that the installation contractor does not furnish or does not supply sufficient documentation, the owner has the right to engage a separate contractor to attain any or all required documentation. All costs related with this event shall result in a back charge to the installation vendor via a change order.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. An employer of workers, at least one of whom is a technician certified by the National Burglar & Fire Alarm Association.
2. Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
3. A copy of the Contractors Certified Installers Certificate shall be furnished with bid response.

B. Intrusion Detection Systems Integrator Qualifications: An experienced intrusion detection equipment supplier and/or Installer who has completed systems integration work for installations similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. FMG Compliance: FMG-approved and -labeled intrusion detection devices and equipment.

E. Comply with NFPA 70.

F. Electrical Power

1. Normal System Power Supply: 120V, 60Hz, through a locked disconnect device and an isolation transformer in a central-station control unit. Central-station control unit shall supply power to all components connected to it unless otherwise indicated.
2. Power Continuity for Central-Station Control Units: Batteries in power supplies of the central-station control unit and individual system components shall maintain continuous system operation during outages of both the normal and backup ac system supply.

   a. Batteries: Rechargeable, valve-regulated, recombinant, sealed, lead-acid type with nominal ten (10) year life expectancy. Capacity adequate to operate portion of system served, including audible trouble signal devices for up to four (4) hours and audible and visual alarm devices under alarm condition for an additional ten (10) minutes.
   b. Battery Charger: Solid-state fully automatic, variable-charging-rate type. Charger shall recharge fully discharged battery within twenty-four (24) hours.

G. Annunciation: Indicate a change in system condition and switching of system or component to backup power.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer and Installer agree to repair or replace components of intrusion detection devices and equipment that fails in materials or workmanship within specified warranty period.

1. Warranty Period: The standard manufacturer’s warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Approved Manufacturers:

1. Digital Monitoring Products Incorporated (DMP)
2. Bosch G Series Panels
3. The main panel shall be sized to accommodate all the devices within the plans for each school and include an additional headroom of forty percent (40%) expansion.

2.2 CONTROL PANEL

A. Bosch #B9512G or Equivalent

1. QTY (1)

2.3 KEYPAD

A. Bosch #B920 or Equivalent

1. QTY (A/R)

2.4 EXPANSION MODULE

A. Bosch #D299 or Equivalent

1. QTY (A/R)

B. Bosch D9127 or Equivalent

1. QTY (A/R)

2.5 COMMUNICATION DEVICE

A. BOSCH #B44-V
B. BOSCH #B430

2.6 MOTION SENSORS

A. Ceiling Mount: Bosch #DS9370

1. QTY (A/R)

B. Wall Mount: Bosch #ISC-CDL1-W15G

1. QTY (A/R)
2. Include Gimbal Mounting Bracket

2.7 DURESS BUTTON

A. Sentrol #3050

2.8 ENCLOSURE

A. The Control Panel shall be enclosed in a metal cabinet, suitable for wall mounting. The dimensions shall not exceed 14.5 inches in height, 12.5 inches in width or 3 inches in depth.

2.9 ELECTRICAL POWER REQUIREMENTS

A. System Power – The Fire and Burglary Alarm System shall operate using standard 120 volts AC, 50/60 Hz power.

1. Control Primary Power – Transformer power shall be 16.5 VAC, 40VA.
2. Backup Battery – A rechargeable 12 VDC, gel type, lead acid backup battery shall be provided. The battery shall be rated between 7 and 34- ampere hours (AH).
3. Alarm Power – Alarm power shall be 12 VDC, 1.7 amps for each bell output
4. Auxiliary Standby Power – Standby power shall be 12 VDC, 750 mA maximum.
5. Fusing – The battery input, auxiliary, and bell outputs shall be protected using PTC circuit breakers. All outputs shall be power limited.

2.10 SUBSTITUTIONS

A. Substitution of any item shall only be permitted when the Owner waives the specification(s) of a particular product(s) in writing, allowing a substitute item to be bid. It shall be the responsibility of the Contractor requesting the substitution that the proposed item is equivalent in each and every way to the originally specified product stated within this bid specification and drawing package and that it is in the best interest of the Owner to use the proposed substitute.

PART 3 - EXECUTION

3.1 COMMISSIONING OF SYSTEMS AND EQUIPMENT

A. Engage a factory-authorized service representative or technician who is familiar with this project to participate and assist, if necessary, in the functional performance testing of the equipment include in this Division with the Commissioning Agent.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of intrusion detection.

1. Examine roughing-in for embedded and built-in anchors to verify actual locations of intrusion detection connections before intrusion detection installation.
2. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of intrusion detection.

B. Inspect built-in and cast-in anchor installations, before installing intrusion detection, to verify that anchor installations comply with requirements. Prepare inspection reports.

1. Remove and replace anchors where inspections indicate that they do not comply with requirements. Re-inspect after repairs or replacements are made.
2. Perform additional inspections to determine compliance of replaced or additional anchor installations. Prepare inspection reports.

C. For material whose orientation is critical for its performance as a ballistic barrier, verify installation orientation.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SYSTEM INSTALLATION

A. The System shall be installed and tested in accordance with the Manufacturer's Installation instructions. The following conditions are applicable:
B. In order to ensure a complete, functional System, for bidding purposes, where information is not available from the Owner upon request, the worst case condition shall be assumed.
C. Interfaces shall be coordinated with the Owner's representative, where appropriate.
D. All necessary backboxes, pullboxes, connectors, supports, conduit, cable, and wire shall be furnished and installed to provide a complete and reliable System installation.
E. All conduit, cable, and wire shall be installed parallel and square with building lines. Conduit fill shall not exceed forty percent (40%). All wires shall be gathered, labeled and tied to create an orderly installation.
F. Comply with UL 681.

3.4 WIRING INSTALLATION

A. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Use lacing bars and distribution spools. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer. Install conductors parallel with or at right angles to sides and back of enclosure. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.
B. Wires and Cables:

1. Conductors: Size as recommended in writing by system manufacturer, unless otherwise indicated.

C. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
D. Install power supplies and other auxiliary components for detection devices at controllers, unless otherwise indicated or required by manufacturer. Do not install such items near devices they serve.
E. Identify components with engraved, laminated-plastic or metal nameplate for central-station control unit and each terminal cabinet, mounted with corrosion-resistant screws.

3.5 GROUNDING

A. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

B. Signal Ground Terminal: Locate at main equipment rack or cabinet. Isolate from power system and equipment grounding. Provide 5-ohm ground. Measure, record, and report ground resistance.
C. Install grounding electrodes of type, size, location, and quantity indicated.

3.6 FIELD QUALITY CONTROL

A. Pretesting: After installation, align, adjust, and balance system and perform complete pretesting to determine compliance of system with requirements in the Contract Documents. Correct deficiencies observed in pretesting. Replace malfunctioning or damaged items with new ones and retest until satisfactory performance and conditions are achieved. Prepare forms for systematic recording of acceptance test results.

1. Report of Pretesting: After pretesting is complete, provide a letter certifying that installation is complete and fully operable; include names and titles of witnesses to preliminary tests.

B. Perform the following field tests and inspections and prepare reports:

1. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.
2. Operational Tests: Schedule tests after pretesting has been successfully completed. Test all modes of system operation and intrusion detection at each detection device. Test for detection of intrusion and for false alarms in each protected zone. Test for false alarms by simulating activities outside indicated detection patterns.
3. Electrical Tests: Comply with NFPA 72, Section A-7. Minimum required tests are as follows:

a. Verify the absence of unwanted voltages between circuit conductors and ground.
b. Test all conductors for short circuits using an insulation-testing device.
c. With each circuit pair, short circuit at the far end of circuit and measure circuit resistance with an ohmmeter. Record circuit resistance of each circuit on Record Drawings.
d. Verify that each controller is in normal condition as detailed in manufacturer's operation and maintenance manual.
e. Verify that transient surge-protection devices are installed according to manufacturer's written instructions.
f. Test each initiating and indicating device for alarm operation and proper response at central-station control unit.

C. Report of Tests and Inspections: Prepare a written record of tests, inspections, and detailed test results in the form of a test log.
D. Tag all equipment, stations, and other components for which tests have been satisfactorily completed.

3.7 ADJUSTING

A. Occupancy Adjustments: When requested within twelve (12) months of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three (3) visits to Project during other than normal occupancy hours for this purpose. Visits for this purpose shall be in addition to any required by warranty.

3.8 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.
B. Clean installed items using methods and materials recommended in writing by manufacturer.

3.9 DEMONSTRATION – TRAINING

A. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE's designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.
B. The Contractor shall be required to provide all training aids, e.g., notebooks, manuals as required.
C. All training shall be completed a minimum of two (2) weeks prior to system cut over. Training schedule shall be subject to the Owner approval.
D. Training shall be conducted by experienced personnel and supported by training aids. An adequate number and amount of training material shall be provided by the Contractor. The following is considered a minimum.

    1. Functional flow-charts, overall block diagrams, and descriptive material for all software;
    2. Schematic drawings for each of the hardware components;
    3. All procedure manuals, specification manuals, and operating manuals;
    4. As-built drawings.

E. Bidding contractor shall engage a factory-authorized service representative to provide formal training the Owner's maintenance personnel to adjust, operate, and maintain this Intrusion Detection system.
F. Training shall include the following:

    1. User Training; Eight (8) hours of instruction to the users at EACH school within this project shall be included as part of this specification. Eight (8) hours of instruction per school is required.
    2. Administrator Training; Twenty four (24) hours of advanced system administration training to the administrator of this system shall be included as part of this specification.
    3. All training shall be divided up into four (4) hour sessions as mandated by the Owner.

G. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.
H. Should the training be deemed as inadequate by the owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.

END OF SECTION 281600

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 282300 - VIDEO SURVEILLANCE SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. System Requirements
B. Uninterruptible Power Supplies
C. Surge Protection
D. Client Workstations
E. Cameras
F. Video Surveillance Software

1.3 RELATED REQUIREMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.” OR Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
B. Division 07 - Firestopping.
C. Division 08 - Door Hardware: Electrically operated door hardware, for interface with access control system. Includes door hardware with integral request to exit devices.
D. Division 26 - Grounding and Bonding for Electrical Systems.
E. Division 26 - Conduit for Electrical Systems.
F. Division 26 - Identification for Electrical Systems: Identification products and requirements.
G. Division 27 - Structured Cabling: Data cables for access control system IP network connections.
H. Division 28 – Access Control: For interface with access control system.
I. Division 28 - Intrusion Detection: For interface with access control system.
J. Division 26 - Fire Detection and Alarm: For interface with access control system.
K. Refer to the following construction documents for Data Room locations and device locations only.

    1. “TY” Drawings – Technology Plans

L. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to insure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

M. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.
N. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.
O. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.
P. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.
Q. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.
R. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements
S. Refer to Division 27, Telecommunications for all Ethernet Cabling for the Cameras.
T. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.4 DEFINITIONS

A. API: Application Programming Interface
B. AVI: Audio Video Interleave
C. CA: Certificate Authority
D. CAC: Common Access Card
E. CE: European Union Conformity
F. CPU: Central Processing Unit
G. CSV: Comma Separated Values
H. DNS: Domain Name Server
I. DSM: Door Status Monitor
J. DVR: Digital Video Recorder
K. EACS: Electronic Access Control System
L. FCC: Federal Communications Commission
M. FIPS: Federal Information Processing Standard
N. FIFO: First In – First Out
O. FTP: File Transfer Protocol
P. FRAC: First Responder Authentication Credential
Q. GB: Gigabyte
R. GSOC: Global Security Operations Center
S. GUI: Graphical User Interface
T. HA: High Availability
U. HTML: Hypertext Markup Language
V. H.264, H.265: Video Compression Standards
W. I^2C: Inter-Integrated Circuit
X. IEEE: Institute of Electrical and Electronics Engineers
Y. I/O: Input / Output
Z. IP: Internet Protocol
AA. IS: Integrated System
BB. JPEG: Joint Photographic Experts Group

CC. LAN: Local Area Network
DD. LDAP: Lightweight Directory Access Protocol
EE. MB: Megabyte
FF. MJPEG: Motion JPEG
GG. MSATA: Mini-Serial Advanced Technology Attachment
HH. MSP: Mobile Security Professional
II. MTBF: Mean-Time Between Failure
JJ. NAS: Network Attached Storage
KK. NAT: Network Address Translation
LL. NBAPI: NetBox Application Programming Interface
MM. NECA: National Electric Code Association
NN. NFPA: National Fire Protection Association
OO. NVR: Network Video Recorder
PP. ODBC: Open Database Connectivity
QQ. OS: Operating System
RR. OVID: Open Video Integration Driver
SS. PDF: Portable Document Format
TT. PIN: Personal Identification Number
UU. PIV: Personal Identity Verification
VV. PoE: Power over Ethernet
WW. PTZ: Pan-Tilt-Zoom
XX. RAID: Redundant Array of Independent Disks
YY. RAM: Random Access Memory
ZZ. REX: Request to Exit
AAA. RFID: Radio Frequency Identification
BBB. RoHS: Restriction of Hazardous Substances
CCC. ROM: Read Only Memory
DDD. RU: Rack Unit
EEE. SFTP: Secure File Transfer Protocol
FFF. SHA: Secure Hash Algorithm
GGG. SIO: Serial Input / Output
HHH. SLA: Sealed Lead-Acid
III. SMS: Security Management System or Short Message Service (text messaging)
JJJ. SSL: Secure Sockets Layer
KKK. SUSP: Software Upgrade and Support Plan
LLL. TCP: Transmission control protocol - connects hosts on the Internet
MMM. TIA: Telecommunications Industry Association
NNN. TLS: Transport Layer Security
OOO. TWIC: Transportation Worker Identification Credential
PPP. UI: User Interface
QQQ. UPS: Uninterruptible Power Supply
RRR. UTP: Unshielded Twisted Pair
SSS. VMS: Video Management System
TTT. WAN: Wide Area Network
UUU. Wi-Fi: Wireless Network
VVV. AS NECESSARY: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.
WWW. AS REQUIRED: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.
XXX. Substantial Completion: Shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.
YYY. Contractor/INTEGRATOR: Refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.5 REFERENCE STANDARDS

A. 47 CFR 15 - Radio Frequency Devices; current edition.
B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.
C. NECA 303 - Standard for Installing Closed- Circuit Television (CCTV) Systems; 2005.
D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
E. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).
F. Installation shall comply with NECA 1-2010 “Standard Practice of Good Workmanship in Electrical Construction”
G. Installation shall comply with NEC/NFPA 70E “Standard for Electrical Safety in the Workplace”
H. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC
I. Installation shall comply with FCC CFR 47 Part 15 Class A “Telecommunications, Radio, Frequency, Digital Device Emission:
J. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).
K. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of cameras with structural members, ductwork, piping, equipment, luminaires, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
2. Coordinate the work with other installers to provide power for cameras and equipment at required locations.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meetings:

1. Conduct meeting with facility representative to review camera and equipment locations and camera field of view objectives.
2. Conduct meeting with facility representative and other related equipment manufacturers to discuss video surveillance system interface requirements.

C. Confidentiality of Documents

1. The project documents, consisting of all technical proposals, drawings, specifications, shop drawings, as-built drawings, manufacturer’s literature, etc., shall be considered proprietary information and are to be treated with complete confidentiality. Dissemination of any security system documentation to any party not considered “need-to-know” without a pre-defined and approved agreement will be considered a violation of the contract documents and all pursuant clauses regarding financial penalties, project termination, and/or legal prosecution will apply. The Contractor is to obtain a list of “need-to-know” parties from the Owner and/or Construction Manager.
2. Use of the Contract drawings and specifications is restricted to the original site for which they were prepared. Publication therefore is expressly limited to such use. Re-use, reproduction, storage by any medium or publication by any method in whole or in part is

prohibited. Visual contact with the Contract drawings and specifications constitutes prima facie evidence of the acceptance of these restrictions. Unlawful publication, dissemination, and use of these documents carry significant liability and the Owner maintains the right to legally pursue restitution and/or penalty for violation of these confidentiality conditions.

3. All documents marked “DO NOT DUPLICATE” are to be returned to the Construction Manager for proper disposal and handling upon completion of their relevant use.

1.7 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.
B. Evidence of Qualifications for Installer:

1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.
4. The Contractor shall submit with the bid a manufacturer’s certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer’s equipment.
5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:

    a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
    b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
    c. The names and qualifications of security system technicians that shall perform and supervise the work, and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.
    d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.

6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security Consultant’s request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

C. Design Data: Standby battery/UPS Calculations
D. Manufacturer’s Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.

E. Manufacturer's detailed field-testing procedures.
F. Maintenance contracts.
G. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.
H. Shop Drawings:

1. General: General: Bid documents, including drawings, details and specifications are considered conceptual in nature, and provide direction on products and project requirements. Contractor is given a choice of methods that may be incorporated into the system. These choices may affect the overall design, configuration and installation of the proposed system.
2. Contractor Responsibility: Prepare and submit shop drawings, rendered in the latest AutoCAD DWG file format, which show details of all work to ensure proper installation of the work using those materials and equipment specified or allowed under the approved plans and specifications. A complete Shop Drawing submittal drawing package shall consist of Drawings, Equipment Data Sheet Submittals, and an Acceptance Testing Plan.
3. Completeness: The Equipment Submittals, Acceptance Testing Plan, and the Shop Drawings should be submitted as a complete and contiguous package. Partial or unmarked submittals will not be accepted for review.
4. Scheduling: A schedule of shop drawing submissions shall be submitted for the Architect and Owner's Representative review on a form acceptable to the Architect within ten (10) days after award of the Contract. The schedule of shop drawing submissions shall include as a minimum, but not limited to the requirements stated herein.
5. Requirements: Provide the following information complete, and in the manner described herein:

a. Hardware, Application Software, and Network Requirements: A system description including analysis and calculations used in sizing equipment required by the security systems. The description shall show how the equipment will operate as a system to meet the performance requirements of the systems. The following information shall be supplied as a minimum:

1) Server(s) processor(s), disk space and memory size
2) Workstation(s) processor(s), disk space and memory size
3) Description of facility (field) control equipment (Controllers/Field Panels, Models) and their configuration
4) Operating System(s) Software, where software is provided or upgraded
5) Application Software, with Optional and Custom Software Modules supplied in this project
6) Integration Schemes: Proposed connectivity, software, development requirements, and SDK information, for inter-system communication.
7) Network bandwidth and reliability requirements
8) Number and location of LAN ports required
9) Other specific network requirements, preferences, and constraints
10) Backup/archive system size and configuration
11) Start-up operations
12) System power requirements and Uninterruptible Power Supply (UPS) sizing
13) Device/component environmental requirements (cooling and/or heating parameters)

b. Shop Drawings: Shop Drawings shall be numbered consecutively and shall accurately and distinctly present the following information:

1) Title Sheet

2) Floor Plans: Showing devices, pull boxes, cabinets, conduits and conductors in their proposed locations with device numbering scheme.
3) Riser Diagram: Showing all conduit relationships between devices shown on the Floor Plans. Show all power sources.
4) Single-Line/Block Diagrams: Show signal relationships of controls and devices within the system.
5) Custom Assembly Diagrams: For each custom assembly such as Access Control Terminal Cabinets, receptacle assemblies, or door control panels, provide an assembly drawing illustrating the appearance of the assembled device. Include dimensions, assembly components, and functional attributes (momentary or alternate action switch, lens color, panel finish)
6) Component Connection Diagrams

For each equipment component such as a computer, video switcher, camera or video recorder, show the rear elevation of the device and all connectors/terminations as a pictorial.
Show the wire designations on connectors. Typical wiring detail where multiple of same device is provided.
Show a schedule of the wire colors connected to the pins on each device connector.

c. Equipment Wiring Diagrams

1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet, including terminals, components and wiring devices.
2) Show the device nomenclature exactly as shown on the single line diagrams.
3) Terminations: Show every termination and terminating cable, with applicable cable and wire numbers matching the single line diagrams.

Every termination in the system must be documented.
Termination information may be rendered as a wiring list(s), if properly coordinated with, and referenced to, typical component and single-line diagrams. Otherwise, the Shop Drawings shall show a pictorial of every component in the system, with its terminations.

4) Show wire colors for each terminal.
5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
6) Provide working dimensions and erection dimensions.
7) Arrangements and sectional views
8) Necessary details, including complete information for making connections between work under this Contract, existing work, and work under other Contracts.
9) Stock or standard drawings will not be accepted for review unless full identification and supplementary information is shown thereon in ink or typewritten form.
10) Duplicate of design drawings may be used where each sheet is modified to reflect contractor coordination, specific requirements of the project and multidiscipline conditions.
11) Each Drawing or page shall include:

Project name, Project Number and descriptions.
Submittal date and space for revision dates.
Identification of equipment, product or material.
Name of Contractor and Subcontractor.
Name of Supplier and Manufacturer.
Relation to adjacent structure of material.
Physical dimensions clearly identified.

ASTM and Specifications references.
Identification of deviations from the Contract Documents.
Contractor's stamp, initialed or signed, dated and certifying to review of submittal, certification of field measurements and compliance with Contract.
Location at which the equipment or materials are to be installed. Location shall mean both physical location and location relative to other connected or attached material.

d. Equipment Submittals

1) Provide a Title Page, with project name, Contractor’s name and address, contact information, date of submission, and submission revision number.
2) Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:

The system type
Model number
Specification sheet page reference

3) Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
4) Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
5) Indicate kinds of materials and finishes for equipment where more than one option is presented.

e. Acceptance Testing Plan

1) Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
2) Provide a sample of the test forms to be used for each system and for each component of each system.
3) Include all tests required by the equipment manufacturer and by this Specification

f. Spare Parts List: Submit a list of recommended spare parts for Owner’s review & approval and/or amending. Spare parts shall comprise a minimum of 5% or minimum of 2 each of field devices, device termination boards and a minimum of 1 system controller boards.
g. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.
h. Verification: The contractor shall check and acknowledge all shop drawings and shall place his signature on all shop drawings submitted for approval. Contractor's signature shall constitute a representation that all quantities, dimensions, field construction criteria, materials, catalog numbers, performance criteria and similar data have been verified and that, in his opinion, the submittal fully meets the requirements of the Contract Documents.
i. Timeliness: The Contractor shall schedule, prepare and submit a complete shop drawing assembly in accordance with a time-table that will allow his suppliers and manufacturers sufficient time to fabricate, manufacture, inspect test and deliver their respective products to the project site in a timely manner so as to not delay the complete performance of the work.
j. Departure from Contract Requirements: If shop drawings show departures from the Contract requirements, the Contractor shall make specific mention thereof in

his letter of transmittal, otherwise review of such submittals shall not constitute review of the departure. Review of the drawings shall constitute review of the specific subject matter for which the drawings were submitted and not of any other structure, materials, equipment, or apparatus shown on the drawings.

k. Contractor Responsibility: The review of shop drawings will be general and shall not relieve the Contractor of responsibility for the accuracy of such drawings, nor for the proper fitting and construction of the work, nor for the furnishing of materials or work required by the Contract. No construction called for by shop drawings shall be initiated until such drawings have been reviewed and approved.

l. Shop Drawing Submittal Review: The procedure in seeking review of the shop drawings shall be as follows:

1) The Contractor shall submit four (4) complete sets and/or electronic PDFs of shop drawings with equipment submittals and other descriptive data with one copy of a letter of transmittal to the Architect for review thirty (30) working days after award of the contract. The letter of transmittal shall contain the project name, Architect's Project Number, the name of the Contractor, the list of drawings submitted including numbers and titles, requests for any review of departures from the contract requirements and any other pertinent information. Drawings submitted for review shall be full-sized and included with the equipment submittals.
2) Drawings or descriptive data will be stamped "Reviewed", "Furnish as Corrected", "Revise and Resubmit", "Rejected" or 'Submit Specific Item' and one copy with a Letter of Transmittal will be transmitted to the Contractor with the return of submitted documents.
3) If a shop drawing or data is stamped "Reviewed" or "Furnish as Corrected", no additional submittal is required for that shop drawing.
4) If a shop drawing or data is stamped "Revise and Resubmit" or "Rejected", the Contractor shall make the necessary corrections and resubmit the documents as required above. The letter transmitting corrected documents shall indicate that the documents are re-submittals.
5) The Contractor shall revise and resubmit the shop drawing as required, until they are stamped either "Reviewed" or "Furnish as Corrected."

I. Equipment and Software List: Include every piece of equipment and software by product/model name and/or number, manufacturer, serial number, revision number, location, and date of original installation. If factory and/or bench testing regimens are required by the project plan, add pretesting record of each piece of equipment and software, listing name of person testing, date of test, and adjustments made.

J. CE and FCC Compliance Certificates:

K. Field quality-control reports

L. Current Specified Manufacturer Integrator Certification Letter

M. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office

N. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by Owner. Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

O. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

P. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.
2. General: The Contractor is responsible for providing accurate drawings and equipment manuals describing and depicting the systems as they are actually installed and operated.
3. Phase One: Notwithstanding requirements specified elsewhere, submit the following labeled as the "Operating and Maintenance Manual" within thirty (30) days after Final Acceptance of the Installation:

    a. Record Drawings: Submit two (2) copies of revised versions of drawings as submitted in the "Shop and Field" and "Equipment Wiring Diagrams" Submittals showing actual device locations, conduit routing, wiring and relationships as they were constructed. Include nomenclature showing as-built wire designations and colors. Drawings shall include room numbers coinciding with Owner space planning numbering. Drawings shall be submitted in electronic editable AutoCAD files, in ".dwg" format, on CD or DVD disks.
    b. Manuals: Submit two (2) copies of each of the following materials in bound manuals, or electronic PDF copies on CD/DVD discs, with labeled dividers:

        1) A final Bill of Material for each system.
        2) Equipment Instruction Manuals: Complete, project specific comprehensive instructions for the operation of devices and equipment provided as part of this work.
        3) Manufacturers Instruction Manuals: Specification sheets, brochures, Operation Manuals and service sheets published by the manufacturers of the components, devices and equipment provided.
        4) Include information for testing, repair, troubleshooting, assembly, disassembly and recommended maintenance intervals.
        5) Provide a replacement parts list with current prices. Include list of recommended spare parts, tools, and instruments for testing and maintenance purpose.
        6) Performance, Test and Adjustment Data: Comprehensive documentation of performance verification according to parameters specified herein.
        7) Warranties: Provide an executed copy of the Warranty Agreement and copies of all manufacturers' Warranty Registration papers as described herein.

1.8 QUALITY ASSURANCE

A. Comply with the following:

    1. NFPA 70.
    2. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with video surveillance systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.

    1. Contract maintenance office located within 100 miles (160 km) of project site.

E. Maintenance Contractor Qualifications: Same entity as installer.
F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.
G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.
H. All work shall comply with the latest editions of the codes as referenced herein.
I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.
J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to the Owner.
K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.
L. Equipment and materials shall:

1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.
N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:

1. The coordination of their delivery.
2. Their unloading from delivery trucks driven into any point on the property line at grade level.
3. Their safe handling and field storage up to the time of permanent placement in the project.
4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
5. Their field make up and internal wiring as may be necessary for their proper operation.
6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of

how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.

P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.

1. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.9 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NECA 303.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.11 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.12 WARRANTY

A. See Division 01 – Closeout Submittals for additional warranty requirements.
B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.
C. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of equipment related to the Access Control System, and control-station equipment that fail in materials or workmanship within specified warranty period.

    1. Warranty Period: The standard manufacturer’s warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

D. The Integrator shall provide all services required to maintain the system in an operational state as specified by the manufacturer for a period of one (1) year after acceptance.
E. Service response shall be within twelve (12) hours of the initial request for service and shall be provided twenty-four (24) hours per day, seven (7) days per week and three hundred sixty-five (365) days per year.
F. Contractor shall include, as part of this warranty, a program for maintenance for each integrated system.

    1. Provide details of coverage, preventive maintenance schedules, exclusions and service rates for all billable time and travel charges.
    2. Maintenance shall include two (2) semi-annual inspections and tests to verify the intended operation of the security system(s). System testing shall include but not be limited to the testing of all devises, fault modes and batteries. A detailed test report indicating these results and any corrective measures shall be furnished to the owner.

G. The Contractor shall provide software and firmware upgrades as required and available to the Owner.
H. Submit manufacturer's standard warranties.

PART 2 - PRODUCTS

2.1 SYSTEM REQUIREMENTS

A. Furnish and install Video Surveillance System consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.
B. The awarded contractor of this section shall furnish and install a network Video Surveillance (VSS) system into this facility using electronic security devices. This integrated VSS shall incorporate all devices necessary to achieve the specified system, all associated monitoring and recording software, hardware, configuration, testing and training.
C. The contractor awarded this project must include the following licenses and configuration:

    1. VSS licenses for each camera on the Specified Access Control System

D. The contractor shall provide a rack mounted UPS for each equipment rack provided for powering all equipment located within the equipment rack. The UPS shall be supplied with an auto-shutdown feature to allow an automatic orderly shutdown of the connected server. The auto-shutdown feature shall be connected to and programmed to shut down any servers contained within the equipment rack being powered from the UPS.
E. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.
F. This VSS described within this specification shall be fully integrated with the Access Control and Intrusion Detection System.
G. All installation, peripheral devices, required licensing and configurations are required as part of this specification to establish a coherent, functional system as described within this bid package.
H. Security Ethernet cabling from the indicated Telecommunication Rooms to the Specified Cameras as described within the documents shall be furnished and installed by the contractor awarded Division 27.
I. Any and all additional interconnection cabling required for a functional system shall be furnished and installed by the contractor awarded this portion of work.
J. Final terminations to all devices are required by the Contractor awarded this Section.
K. The Contractor awarded this Section shall furnish and install a complete integrated security system and all associated, terminations, supporting devices, configuration of system, testing and training in accordance with this Bid package.
L. This specification is used to identify the requirements for an integrated VSS. The operator workstation(s) shall be used for database programming and storage of historical events and as a User interface with the Access Control System.
M. Within the VMS, the Contractor shall create floor plan maps that include camera icons appropriately placed according to actual location. Upon clicking a camera icon, the video feed associated with that camera shall automatically be called up and displayed.
N. System Design Intent:

1. It is the intention of this system design to provide a fully functional Video Surveillance System for, minimally, the following features:

    a. The end user shall be able to access live or recorded video from within the VSS software and shall have the following capabilities:

        1) The end user shall have the ability to pause, stop, resume, fast forward, frame advance, rewind, and move to a different time window.
        2) The user shall be able to quickly switch between live and recorded video.
        3) The user shall be able to view multiple video feeds simultaneously.
        4) Upon alarm input to the IDS or ACS, a predetermined video feed or feeds that are associated with that alarm shall automatically display in the Access Control System Software window. This video window shall have the capability to display recorded (IE 10 seconds prior to alarm) video.
        5) Within the VSS software window, the end user shall have the ability to call up and display live video from any camera. This shall include the ability to display multiple live camera views simultaneously through a matrix view.
        6) Within the VMS, the end user shall have the ability to export recorded video to a local hard drive or to a removable media (such as CD or USB drive). The system shall automatically watermark this video file for future proof of authenticity.

O. System Functionality Overview:

1. System shall provide high-quality delivery and processing of IP-based video and control data using standard Ethernet-based networks.
2. System shall have seamless integration of all video surveillance and control functions.
3. Graphical user interface software shall manage all IP-based video matrix switching and camera control functions and recording and archive/retrieval management. IP system shall also be capable of integrating into larger system environments.
4. System design shall include all necessary compression software for high-performance, dual-stream, Motion JPEG and H.264 video.
5. All camera signals shall be compressed to H.264, encoded, and delivered onto the network for processing and control by the IP video-management software.
6. Camera system units shall be ruggedly built and designed for extreme adverse environments, complying with NEMA Type environmental standards.
7. The Camera's recorded images shall include masking of the unwanted areas within each camera view to minimize storage space. These recorded images shall be defined with the Owner and technology consultant.
8. Configuration of the Video Server to utilize two (2) Ethernet connections and Network Interface cards; one (1) for incoming video and recording and one (1) to send recorded video to the storage device.
9. Video management software shall be configured for the following.

    a. Recorded Video Compression Rate: H.264
    b. Frame Recorded Per Second: Fifteen (15).
    c. Resolution should be set at the highest obtainable from each camera specified.
    d. Stored data shall be saved for thirty (30) calendar days.
    e. Interior cameras shall record eighteen (18) hours per day.
    f. Exterior cameras shall record twenty-four (24) hours per day.
    g. Include 10% headroom storage.
    h. Include subtotal for processing and management software.
    i. Each camera "Field of View" shall be coordinated with the assistance of the Owner and/or the Security Consultant.

P. System Configuration Overview:

1. All system configuration(s) shall be included to attain a fully functional system and shall be within the Scope of work of the awarded Contractor of this section. This configuration shall include but not be limited to the following:

    a. Configuration of all cameras to be managed via the Video Management software.
    b. Configuration of Video Surveillance Server to view/record/access all cameras.
    c. Configuration of the Video Surveillance Servers to monitor all connected cameras for video loss. Video loss detection shall create an alarm on the VMS, alert any connected workstation, and simultaneously send an email to the system administrator conveying the video loss condition.
    d. Configuration of video storage devices with the server.
    e. Configuration of Browser Based Client for up to (4) users groups.
    f. Configuration of the Video Storage Server per the manufacturer's established best practices.
    g. Configuration of the Video Management Server per the manufacturer's established best practices.
    h. Configuration of the Video Mobile Server per the manufacturer's established best practices.
    i. Integration with the Owner's Active Directory.
    j. Configuration of LAN switches – Active Electronics, as related to the systems specified within this document. Including VLANS and IP addressing shall be as indicated by the Owner.

k. The Contractor shall coordinate any/all network connections with the Owner IT Department prior to making any physical connections to the Owner's network components. Failure to follow this directive may result in expenditures for repair and troubleshooting by the Owner's IT department or 3rd party IT contractor/vendor. Such expenditures to remedy any issues caused by incorrect coordination by the Contractor shall be borne by the Contractor.

l. The contractor will be responsible for establishing the security of all IP devices, servers, and VMS storage from adversary compromise (internal or external) in conjunction with the owner's IT Department.

m. The cost of investigation, repairs, and reprogramming resulting from any security breaches during the construction or operation of the systems (while under warranty or service agreement) attributable to the failure of the Contractor to implement approved IT security measures shall be borne by the contractor.

n. Configuration of the VMS and Access Control managed software to:

1) Allow complete interface between both platforms
2) Allow the Access Control System to access and view all video surveillance cameras.
3) Allow access and controlled network management system with Web and Internet access of the Video Surveillance system.

o. Programming camera names and recording parameters to optimize the camera for the environment for which it is operating in. Camera names shall be coordinated with the Owner prior to configuration. Naming all cameras within the system is the responsibility of the Contractor.

Q. Environmental Conditions: System(s) shall withstand the environmental conditions without mechanical or electrical failure, damage or degradation of its operating capacity Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

2.2 VIDEO MANAGEMENT SYSTEM

A. The Video Management System shall be Avigilon Enterprise.
B. Include all licenses for a fully functional system.

2.3 VIDEO SURVEILLANCE CAMERAS

A. Cameras shall be Avigilon.
B. Refer to camera schedule for make, model, and mount information.
C. Include all required mounting, housing, brackets, and power supplies for a fully functional system.

2.4 VIDEO MANAGMENENT SERVER

A. The Video Management Server shall be Avigilon Enterprise: #NVR5 series or better.

2.5 UNINTERRUPTIBLE POWER SUPPLY (UPS):

A. The Contractor shall supply individual UPS' each Telecommunication Room or Equipment Room where Active Electronics supplying data and signal to the Video Surveillance System is located. The UPS will be used to support Ethernet switch, servers, video recorders, and any other rack mount security equipment.
B. The Contractor shall supply individual UPS at security guard post. UPS will be used to support security workstation, monitors, printer, intercom master station, and any other security equipment in that location.
C. The UPS shall be as manufactured by APC or approved equal
D. The supplied UPS shall support the equipment at each location plus an additional 500 Watts at 120VAC for a minimum of fifteen (15) minutes under full load
E. The Contractor shall supply the appropriately sized UPS as dictated by the accepted submitted equipment as approved by the Engineer.
F. The UPS located in ER / TR locations shall be rack mountable and shall include all mounting hardware.
G. The UPS shall have the capability of sending SMTP email messages
H. The UPS shall be supplied with software to connect to the security system Ethernet network to allow for monitoring and alarm condition of the UPS including but not limited to the following;

    1. UPS on battery
    2. UPS load capacity exceeded
    3. UPS off line
    4. UPS overheat
    5. UPS experienced surge

2.6 SURGE PROTECTION:

A. Install Lightning / Surge protection for all exterior rated cameras. Ground all protectors to manufacturer recommendations and Code requirements.
B. The intent of the Lightning / Surge protector is to protect the connected electronics (switches, routers, servers) in the event a camera is struck by lightning.
C. Surge protectors shall be installed between camera and patch panel.
D. Acceptable manufacturers:

1. Ditek
2. Approved Equivalent

2.7 CLIENT WORKSTATIONS:

A. Client Viewing PC:

1. Seneca
2. Avigilon
3. Dell

B. Wireless Mouse and Keyboard:

1. IOGEAR #GKM552R
2. Approved Equivalent

C. 55” Display and Mount:

1. SAMSUNG #QM55 or approved equal
2. The digital display shall meet the following requirements:

a. 55” diagonal
b. 3840 x 2160 minimal resolution
c. 500 nit minimal brightness
d. Approved for 24/7 operation
e. Includes a standard manufacturer 3-year warranty

3. CHIEF #MTM1U or approved equal
4. Include Chief #FHB5147 Universal Flat Panel Mount Hardware Kit

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.
B. Verify that ratings and configurations of system components are consisted with the indicated requirements.
C. Verify that mounting surfaces are ready to receive the system components.
D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.
E. Verify that conditions are satisfactory prior to starting work.
F. Device Locations

1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.
H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install Video Surveillance system in accordance with NECA 1 (general workmanship).
B. Install products in accordance with manufacturer's instructions.
C. Install cameras level and plumb.
D. Install cameras with 84-inch minimum clear space below cameras and their mountings. Change type of mounting to achieve required clearance.
E. Set pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms and adjust.
F. Install power supplies and other auxiliary components within the Telecommunication Room unless otherwise indicated.
G. Install tamper switches on components indicated to receive tamper switches, arranged to detect unauthorized entry into system-component enclosures and mounted in self-protected, inconspicuous positions.
H. Identify system components, wiring, cabling, and terminals according to industry standards.
I. Unless otherwise indicated, use wiring in conduit.

1. Use suitable listed cables in we locations, including underground raceways.
2. Use suitable listed cables for vertical wire applications.
3. All cabling shall be plenum rated.
4. Install wiring in conduit for the following:

    a. Where required for rough-in.
    b. Where required by the AHJ.
    c. Where exposed to damage.
    d. Where installed outside the building.
    e. For exposed connections from outlet boxes to devices.

5. Conduit: comply with Division 26.
6. Conceal cables unless specifically indicated to be exposed.
7. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
8. Cables in the following areas may be exposed:

    a. Equipment Closets

9. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
10. Do not exceed manufacturer's recommended maximum cable length between components.

J. Provide grounding and bonding in accordance with Division 26.
K. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.
L. Install power supplies and other auxiliary components at control stations unless otherwise indicated.
M. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.
N. Security System Integration

1. The Contractor shall be responsible for providing hardware and software interfaces to achieve the specified system performance described herein and, by reference, realize absolute and seamless compatibility with the related component systems.
2. The Contractor shall ensure system additions and modifications provided under this scope of work have no negative effect on the individual components and systems, and

their core functionality, and no permanent effect beyond that specified or implied by the scope of work.

3. Purpose

    a. Integration is the process of designing, deploying, and configuring independently operating systems with the ability to request, receive, extract, process, and act upon information from other systems.
    b. Successful system integration must address three fundamental issues:

        1) Functionality: What information is needed, how it is to be requested and processed, and what functions or activities need to occur upon receipt of the information.
        2) Connectivity: How systems will be connected to support the communication of information and commands. (Special interfaces, wiring, networks, databases.)
        3) Communication: How information will be communicated between systems. (Instruction sets, language, protocols, formats, priority.)

4. Environment

    a. Integration components shall generally comprise special elements of independent subsystems, and shall be located within, or in close proximity to, the processing components of each independent subsystem. Where subsystems require special hardware or communications interfaces to support integration, the special hardware should be located near the independent subsystem processing components or network appliance, based on the manufacturers' recommendation. See the drawings for details on mounting locations.

5. Infrastructure and Connectivity:

    a. Devices/Appliances: Appliances and devices shall be connected to their respective systems via the applicable communications network.
    b. System LAN/WAN Connectivity: System Servers and microprocessor-based Control Panels, shall reside on the Local Area Network (LAN) or Wide Area Network (WAN) tier designated for integrated components.
    c. Enterprise: LAN networks will be connected to the Wide Area Network, to establish connectivity between remote sites and both the Primary and Alternate Security Operations Center (SOC – room SB05-1).

6. Attributes

    a. The attributes of the integrated environment are primarily defined by the subsystems that are to be integrated. Verify existing system components to be expanded by this project.
    b. Integrated systems comprise the processors, software, electrical control panels, data gathering panels, special data interfaces, and converters required to allow systems to communicate with each other, process information, and allow users to program and perform operations.

7. Functions

    a. The system shall provide the following automated processing rules, at a minimum:
    b. The object of "Access Control system integration" is to automatically configure the system to display, record, and report appropriate system activity to various elements of the system. Automatic configuration can free operators from difficult

control tasks, give the operator more time to respond to events, reduce operator error, and ensure critical system tasks occur consistently.

c. Electronic Access Control system elements shall be electronically integrated in such a way as to enable detection, database records and/or event-initiated instructions to be communicated between system components, to initiate recording, display, communication, and control activities.

d. Event-Initiated Interface, General:

1) The system shall support the capability to send and receive alarm and control messages between the Access Control System and video systems via a LAN communications link, using API, XML, or other industry-standard communication languages and formats, and shall act upon those messages received.
2) The system shall support the capability to send and receive alarm and control messages and alarm signal between the Access Control system and Intrusion Detection System for lockdown / duress / and panic button initiation.
3) Where integration may require the implementation of data interfaces, Contractor shall propose such integration to the Owner for approval, before proceeding with the work.
4) Software routines required to accomplish the required data-interface with external equipment and controls will be fully developed, installed, tested and supported by the Contractor.
5) The manufacturer of each applicable system will also support the data interface and will be engaged by the Contractor to provide on-site technical assistance where required to prepare, repair, configure, and test the system to operational condition.
6) Communication of event information between systems shall take place automatically and immediately when the event is sensed by the System.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Camera Field Verification:

1. All camera locations MUST to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for installation in areas not reviewed or approved by the Owner.
2. Camera images will be reviewed with the Owner and the Security Consultant. The contractor shall plan for three adjustments of the camera’s field of view as follows:

a. Initial setup and testing
b. Owner and / or Security Consultant adjustments #1
c. Owner and / or Security Consultant adjustments #2

D. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

E. Tests and Inspections:

1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels, including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:

    a. Prepare equipment list described in "Submittals" Article.
    b. Verify operation of auto-iris lenses.
    c. Set back-focus of fixed focal length lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Adjust until image is in focus with and without the filter.
    d. Set back-focus of zoom lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Additionally, set zoom to full wide angle and aim camera at an object 50 to 75 feet away. Adjust until image is in focus from full wide angle to full telephoto, with the filter in place.
    e. Set and name all preset positions; consult Owner's personnel.
    f. Set sensitivity of motion detection.
    g. Connect and verify responses to alarms.
    h. Verify operation of control-station equipment.

3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.
4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

F. Video Surveillance System shall be considered defective if it does not pass tests and inspections.
G. Prepare test and inspection reports.
H. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to this Project location during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

1. Check cable connections.
2. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
3. Adjust all preset positions; consult Owner's personnel.
4. Recommend changes to cameras, lenses, and associated equipment to improve Owner's use of video surveillance system.
5. Provide a written report of adjustments and recommendations

3.4 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.
B. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens before installation and prior to final acceptance.
C. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.

3.5 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.
B. Demonstration: Demonstrate proper operations of system to Owner and correct deficiencies or make adjustments as directed.
C. Training:

1. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE's designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.
2. General Training Requirements:

a. The security contractor shall submit proposal to conduct training courses for the security personnel in the operation and maintenance of the security systems within this security project.
b. The security contractor shall include training manuals and aids in the quantity as requested by the Owner. The training manuals shall include an agenda, defined objectives for each lesson, and a detailed description of the subject matter for each lesson. All personnel providing the instructions shall be certified by the equipment manufacturer for all applicable hardware and software.
c. Approval of the planned training content and training schedule shall be obtained by the Owner at least 45 days before the training is scheduled.
d. Training shall be provided by qualified, factory trained and certified engineers familiar with each system and its operations and shall be provided at the site for a period of no less than the hours stipulated below.

3. Training Topics:

a. System Administration Training

1) This training shall focus on determining and implementing system operational parameters.
2) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. 8 Hours of Administration training; (2) 4-hour classes.
3) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of training; (2) 3-hour classes.
4) This Administrations training shall include:

(a) Overall architecture and configuration of each system.
(b) Use of all system functions.
(c) ID badging design and production.
(d) Card-holder setup and configuration.
(e) Card-holder access level assignment.
(f) Access Door programming.
(g) Alarm setup and implementation.
(h) Data storage and retrieval through reports.
(i) Creation of reports.
(j) System database backup procedures.
(k) Hardware specifications.
(l) Fault diagnosis and corrections.

b. System User Monitoring Training

1) This training shall be for each designated personnel at this school.
2) This training shall focus on day-to-day system operations. Each user shall be capable to start the systems, operate them, recover the systems after a failure, and describe the specific hardware architecture and operation of the systems.
3) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. All System User Training shall be performed at each school within this specification. 8 Hours of User training; (2) 4-hour classes.
4) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of User training; (2) 3-hour classes.
5) Training shall include:

   (a) Use of overall system monitoring functions as determined by the security administration staff.
   (b) Monitoring alarm events.
   (c) Monitoring personnel access into the facility.
   (d) Assessing, responding to, and clearing alarms and messages.
   (e) Monitoring access door status.
   (f) Running routine reports.
   (g) General hardware architecture.
   (h) Functional operation of each system and interaction between these systems.
   (i) All Operator commands.
   (j) Database entry.
   (k) Report generation.
   (l) Alarm assessment.
   (m) Simple diagnostics.
   (n) System Troubleshooting and Maintenance Training

6) Training shall be provided with the internal features and configuration of the security systems so the user can trouble shoot and repair most configuration and physical device problems.
7) The training class shall be conducted so that it is completed approximately 14 days prior to acceptance of the system and final reliability testing. The users shall be included as part of this reliability testing. 8 Hours of training; (2) 4-hour classes.
8) This training shall include:

   (a) System networking communications and diagnostics.
   (b) Device configuration and programming.
   (c) Controller setup.
   (d) Wiring and cabling overview.
   (e) System Diagnostics.
   (f) Software troubleshooting.
   (g) Physical layout of each piece of hardware.
   (h) Preventive maintenance procedures and schedules.
   (i) Calibration procedures.

c. IT Training

1) Training shall be provided information of the security systems to the IT staff. This shall include information as to how each system functions within the LAN/WAN network infrastructures. 4 Hours of training.
2) Topics shall include:

(a) Network topologies.
(b) Maintenance of data security.

4. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.
5. Should the training be deemed as inadequate by the Owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.
6. The Owner reserves the right to request the Contractor to videotape training sessions and turn over video records (DVD format) to Owner as part of the “Owner Project Manuals” and Deliverables.

3.6 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.7 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.
B. Adjustments:

1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

a. Check cable connections.
b. Check proper operation of video surveillance devices.
c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.
D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.
E. Provide trouble call-back service upon notification by Owner:

1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION 282300

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 284600 - FIRE DETECTION AND ALARM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fire alarm system and associated components, including control units, related equipment, initiating devices, and notification appliances.

1.2 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 087100 - Door Hardware:

C. Section 211300 - Fire-Suppression Sprinkler Systems: For interface with fire alarm system.

D. Section 213000 - Fire Pumps: For interface with fire alarm system.

E. Section 233300 - Air Duct Accessories: Smoke/fire dampers for interface with fire alarm system.

F. Section 260519 - Low-Voltage Electrical Power Conductors and Cables: For non-power-limited cables.

G. Section 260526 - Grounding and Bonding for Electrical Systems.

H. Section 260533.16 - Boxes for Electrical Systems.

I. Section 275116 - Public Address Systems.

J. Section 284614 - Single and Multiple Station Alarms.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authorities having jurisdiction.

B. BAS: Building automation system.

C. DMNS: Distributed mass notification system.

D. ECS: Emergency communications system.

E. EoL: End-of-line.

F. EVACS: Emergency voice/audio communication systems.

G. FACU: Fire alarm control unit.

H. HVAC: Heating, ventilation, and air conditioning.

I. IDC: Initiating device circuit.

J. LAN: Local area network.

K. MNS: Mass notification system.

L. NAC: Notification appliance circuit.

M. NPLFA: Non-power-limited fire alarm.

N. PLFA: Power-limited fire alarm.

O. SLC: Signaling line circuit.

P. SOO: Sequence of operation.

1.4 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.

B. ADA Standards - 2010 ADA Standards for Accessible Design.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities.

D. IEEE C62.41.2 - IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and less) AC Power Circuits.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction.

F. NECA 90 - Standard for Commissioning Building Electrical Systems.

G. NECA 305 - Standard for Fire Alarm System Job Practices.

H. NFPA 3 - Standard for Commissioning of Fire Protection and Life Safety Systems.

I. NFPA 70 - National Electrical Code.

J. NFPA 72 - National Fire Alarm and Signaling Code.

K. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

L. NFPA 1225 - Standard for Emergency Services Communications.

M. UL 38 - Standard for Manual Signaling Boxes for Fire Alarm Systems.

N. UL 268 - Standard for Smoke Detectors for Fire Alarm Systems.

O. UL 268A - Standard for Smoke Detectors for Duct Application.

P. UL 464 - Standard for Audible Signaling Devices for Fire Alarm and Signaling Systems, Including Accessories.

Q. UL 521 - Standard for Heat Detectors for Fire Protective Signaling Systems.

R. UL 864 - Control Units and Accessories for Fire Alarm Systems.

S. UL 1449 - Standard for Surge Protective Devices.

T. UL 1480 - Standard for Speakers for Fire Alarm and Signaling Systems, Including Accessories.

U. UL 1638 - Standard for Visible Signaling Devices for Fire Alarm and Signaling Systems, Including Accessories.

V. UL 1711 - Amplifiers for Fire Protective Signaling Systems.

W. UL 1971 - Standard for Signaling Devices for the Hearing Impaired.

X. UL 2075 - Standard for Gas and Vapor Detectors and Sensors.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate arrangement of equipment with dimensions and clearance requirements of actual equipment.

2. Coordinate placement of devices and notification appliances with potential conflicts or view obstructions.

3. Coordinate work to provide power for equipment at required locations (e.g., smoke dampers, type of actuators, line or local control transformer, zoning, grouping and circuit activations).

4. Coordinate fire suppression systemdevice requirements, monitoring, control, and associated interconnections.

5. Coordinate requirements for branch circuit protection, identification, and shunt trip if applicable.

6. Coordinate kitchen equipment requirements for fire alarm system interconnections based on selected equipment.

7. Coordinate reflected ceiling plans to avoid conflicting placements; maintain minimum diffuser and detector clearances as indicated.

8. Coordinate submittals to confirm equipment and associated components are capable of indicated settings, and manufacturer documentation identifies required compatible product listings.

9. Notify Engineer of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

10. Door Hardware: See Section 087100 and coordinate, including access control panel locations.

11. Non-Power-Limited Cables: See Section 260519.

12. See Section 019113 - General Commissioning Requirements and coordinate for supporting requirements, including support of services not limited to installation checklists, acceptance testing reports, functional testing, and integrated system testing.

B. Preinstallation Meetings:

1. Conduct meeting with facility representative to review devices, notification appliances, and equipment locations.

2. Conduct meeting with facility representative and other related equipment manufacturers to discuss fire alarm system interface requirements.

3. Conduct meeting to review anticipated installation of code-required smoke control requirements, product solutions, and SOO.

4. Convene one week before starting work for review of documented SOO for system applications.

C. Sequencing:

1. Verify exact termination locations required for boxes, enclosures, and equipment.

2. Do not install devices or notification appliances until final surface finishes, painting, and cleaning are complete, unless otherwise required by AHJ.

3. Do not begin installation of conductors and cables until installation of conduit and pathways between termination points is complete.

4. Sequence work to protect cabling (e.g., overspray painting, physical stress, and insulation damage or covering markings).

5. Verify naming convention for equipment identification, including room names and numbers, prior to creation of final drawings, reports, and labels.

D. Scheduling:

1. Arrange access to facility for data collection with facility representative.

2. Where work involves interruption of existing electrical or fire alarm system service, arrange interruption with Owner.

a. Arrange test start and end with responsible reporting service. Confirm system normal operating mode and record as-found and as-left settings.

b. Arrange work to disable individual devices or circuits for minimal disruption if possible.

c. Arrange in accordance with NFPA 72 fire alarm system impairment requirements.

d. Where required by AHJ, arrange systems or partial system out of service interruption in accordance with requirements of building, life safety, and fire codes (e.g., approved fire watch plus required notifications, tags at each fire department connection and control valve, and AHJ notification when excess hours).

1.6 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Evidence of designer qualifications.

C. Comply with NFPA 72 chapter "Documentation," including noting names of installers, owners, and system classification information.

D. Design Documents: Submit all information required for plan review and permitting by AHJ, including floor plans, riser diagrams, and description of operation.

1. Copy (if any) of list of data required by AHJ.

2. NFPA 72 "Record of Completion", filled out to extent known at time.

3. Clear and concise description of operation, with input/output matrix similar to that shown in NFPA 72 Appendix A, and complete listing of software required.

4. Manufacturer's detailed product data sheet for each component, including wiring diagrams, and circuit length limitations. Catalog pages and product descriptions include ratings, dimensions, finishes, service conditions, and included features.

5. Certification by manufacturer of FACU that system design complies with Contract Documents.

6. Certification by Contractor that system design complies with Contract Documents.

E. Shop Drawings: Submit installation documentation required for plan review and permitting by AHJ, including floor plans showing locations of fire alarm system components, enlarged drawn to identified scale plan view, and riser diagrams.

1. System zone boundaries and interfaces to fire safety systems.

2. Show locations of components, circuits, and raceways; mark components with identifiers used in control unit programming.

3. Include elevations and details of proposed equipment arrangements.

4. Include system interconnection schematic riser diagram showing proposed and approved cable size and type; coordinated with floor plans and describing circuit class, survivability, and application specific information required by NFPA 72.

5. Include typical wiring diagrams for devices, notification appliances, remote indicators, annunciators, remote test stations, and EoL and power supervisory devices.

6. Include requirements and control diagrams for interfacing with other systems.

7. Circuit layouts; number, size, and type of raceways and conductors; conduit fill calculations; standby and spare capacity calculations; notification appliance circuit loop resistance and voltage drop calculations, including spare capacity.

8. List of devices and notification appliances on each SLC, with spare capacity indicated.

9. Manufacturer's detailed data sheet for each component, including wiring diagrams, installation instructions, and circuit length limitations.

10. Description of power supplies; if secondary power is by battery include calculations demonstrating adequate battery power.

11. Detailed drawing of graphic annunciators, displays, and interfaces.

12. Certification by either FACU manufacturer or manufacturer of related equipment.

13. Certification by FACU manufacturer that system design complies with Contract Documents.

14. Certification by Contractor that system design complies with Contract Documents.

15. Mark existing components indicating to be removed.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Evidence of installer qualifications.

H. Evidence of maintenance contractor qualifications, if different from installer.

I. Inspection and Test Reports:

1. Submit inspection and test plan prior to closeout demonstration.

2. Submit documentation of satisfactory inspections and tests.

3. Submit NFPA 72 "Inspection and Test," filled out.

J. Operating and Maintenance Data: See Section 01 7800 for additional requirements; revise and resubmit until acceptable; have one set available during closeout demonstration:

1. Complete set of specified design documents, as approved by AHJ.

2. Additional printed set of project record documents and closeout documents, bound or filed in same manuals.

3. Contact information for firm that will be providing contract maintenance and trouble call-back service.

4. List of recommended spare parts, tools, and instruments for testing.

5. Replacement parts list with current prices, and source of supply.

6. Detailed troubleshooting guide and large scale input/output matrix.

7. Preventive maintenance, inspection, and testing schedule complying with NFPA 72; provide printed copy and computer format acceptable to Owner.

8. Detailed but easy to read explanation of procedures require recording of system trouble events by qualified personnel, such as when routine testing is being conducted for fire drills and when entering into contracts for building renovations.

K. Project Record Documents: See Section 01 7800 for additional requirements, have one set available during closeout demonstration:

1. Complete set of floor plans showing actual installed locations of components, conduit, and zones.

2. "As installed" wiring and schematic diagrams, with final terminal identifications.

3. "As programmed" operating sequences, including control events by device, and updated input/output chart.

a. ECS: Voice messages by event.

L. Closeout Documents:

1. Certification by manufacturer that system has been installed in compliance with manufacturer's installation requirements, is complete, and is in satisfactory operating condition.

2. NFPA 72 "Record of Completion," filled out completely and signed by installer and authorized representative of AHJ.

3. Certificate of Occupancy.

1.7 QUALITY ASSURANCE

A. Designer Qualifications: NICET Level III (three) or Level IV (four) certified fire alarm technician or registered fire protection engineer, employed by FACU manufacturer, Contractor, or installer, with experience designing fire alarm systems in jurisdictional area of AHJ.

B. Installer Qualifications: Firm with minimum three years documented experience installing fire alarm systems of specified type and providing contract maintenance service as regular part of their business.

1. Authorized representative of FACU manufacturer; submit manufacturer's certification that installer is authorized; include name and title of manufacturer's representative making certification.

2. Installer Personnel: At least two years of experience installing fire alarm systems.

3. Supervisor: Level III (three) or Level IV (four) certified fire alarm technician; furnish name and address.

4. Certified in the State in which the Project is located as fire alarm installer.

C. Manufacturer Qualifications: Company specialized in manufacturing products specified in this section with at least three years of documented experience.

D. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.

1.8 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NECA 305.

C. Handle carefully to avoid damage to internal components, enclosure, and finish.

D. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.9 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Do not exceed maximum ambient temperature requirements for batteries at any time, which reduces battery service life. Replace batteries exposed to temperatures in excess of manufacturer's requirements.

C. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify Engineer and obtain direction before proceeding with work.

D. Existing Conditions:

1. Existing Fire Alarm System: Remove existing components indicated and incorporate remaining components into new system. Comply with NFPA 70.

    a. Maintain existing under warranty as if new; do not take existing portions of system out of service until new portions are fully operational, tested, and connected.

2. On-Premises Supervising Station: Include modifications necessary to existing supervising station to accommodate new fire alarm work.

3. Modifications to Existing System:

    a. Remove inactive or abandoned cables and components from existing fire alarm system.

    b. Remove unused existing components and materials from site and dispose according to local and federal requirements.

1.10 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Fire Alarm Control Units and Accessory Equipment: Provide minimum 3-year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

C. Fire Alarm Manual Pull Stations: Provide minimum 1-year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

D. Fire Alarm System Detectors: Provide minimum 1-year year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

E. Fire Alarm System Notification Appliances: Provide minimum 1-year year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.1 FIRE ALARM SYSTEM

A. General Requirements:

1. Provide modifications and extensions to existing fire alarm system complying with NFPA 70, NFPA 72, NFPA 90A, and consisting of required equipment, conduit, cabinets, outlet boxes, wiring, connectors, hardware, supports, accessories, components, software, and system programming as necessary for complete operating system that provides functional intent indicated.

2. Comply with the following; where requirements conflict, order of precedence of requirements is as listed:

a. 36 CFR 1191 and ADA Standards.

b. ICC A117.1

c. Requirements of State Fire Marshal.

d. Requirements of AHJ.

e. Applicable local codes.

f. Contract Documents.

g. NFPA 72; "should" is mandatory; where conflicts between requirements require deviation, identify deviations clearly on design documents.

3. Fire Alarm System Products:

a. Listed, classified, and labeled as suitable for purpose intended.

b. Installation Environments: Provide products suitable for their respective indoor and outdoor applications.

4. Fire Alarm System Design Information:

a. Building Code: Comply with applicable building code.

1) Principle Occupancy: As indicated on Architect code summary drawings.

2) Principle Use: As indicated on Architect code summary drawings.

3) Occupant Evacuation Method: Total building.

4) Equipment Room Rating: None required.

5) Fire Suppression System: Fully sprinkled.

(a) Types:

(1) Wet-Pipe Sprinklers.

b. NFPA 72 Fire Alarm System Classification: Protected premises.

c. Smoke and Heat Detector Coverage: Partial or selective coverage in accordance with NFPA 72.

d. Notification Appliance Zones:

1) See fire alarm system floor plans on drawings.

e. Emergency Communications Systems (ECSs):

1) See respective Division 27 and 28 sections for additional requirements.

2) Design in accordance with intelligibility requirements listed in NFPA 72.

3) One-Way ECS:

(a) In-building fire EVACS.

4) Provide fire emergency command center for ECS in accordance with requirements of AHJ, building code, fire code, life safety code, and NFPA 72.

5. Provide fire alarm circuits in accordance with NFPA 70.

a. Comply with methods of interconnecting FACUs in accordance with NFPA 72 and NFPA 70.

b. Power Sources:

1) Comply with requirements for power supplies of emergency systems in accordance with NFPA 70.

2) Primary: Dedicated branch circuits from facility power distribution system.

3) Secondary: Storage batteries with capacity to operate system for period specified by NFPA 72.

c. Wiring and Wiring Methods:

1) General Requirements:

(a) Comply with requirements for wiring and wiring methods in accordance with NFPA 70.

(b) Conductors and Cables Installed Exposed in Spaces Used for Environmental Air (only where specifically permitted): Plenum-rated, listed and labeled as suitable for use in return air plenums.

(c) Special Occupancies: Comply with NFPA 70.

(d) Comply with NFPA 70 for wire and cable plenum, riser, general-purpose, limited-use, undercarpet, and underground applications.

2) Fire Alarm Circuits:

(a) Comply with NFPA 70 for conditions and types required for multiconductor cable systems.

(b) Non-Power-Limited Fire Alarm (NPLFA) Circuits:

(1) Provide dedicated NPLFA non-GFCI branch circuits for fire alarm equipment and marked by red identification in accordance with NFPA 70.

(c) Power-Limited Fire Alarm (PLFA) Circuits:

(1) Provide identification for PLFA circuits in accordance with NFPA 70.

3) Fire-Rated Cables and Cable Systems:

(a) Performance alternative approved by AHJ.

(b) Provide cable fastening and listing requirements in accordance with NFPA 70. Provide indication of application, use cases, and product make and model for which listing applies.

(c) Provide additional classification suffix marking on cable system; observable by AHJ.

(d) ECS: Provide two-hour fire-rated protection for control equipment and circuits in accordance with NFPA 72.

(e) Fire-Rated Cable in Accordance with NFPA 72:

(1) Two-hour fire-rated circuit integrity (CI) or fire-resistive cable.

(2) One-hour fire-rated circuit integrity (CI) or fire-resistive cable.

6. Provide pathway class designations and pathway survivability, as defined in NFPA 72.

a. Provide monitoring of conductors and other signaling channels for integrity and circuit performance.

b. Pathway Class Designations:

1) Unless otherwise indicated or required, pathways to meet the following requirements:

(a) SLCs: Class B (star, tee-tap, multi-tap, with no return).

(b) IDCs: Class B (daisy-chain with EoL resistor device installed at end of circuit).

(c) NACs: Class B (daisy-chain with EoL resistor device installed at end of circuit).

(d) Network Communications: Class B.

(e) Other Wiring:

(1) Other life safety control features not covered above (e.g., door holder circuits, elevator recall circuits, fire smoke dampers, and air handling system interfaces), wired as Class D (failsafe, intended operation is performed in event of pathway failure).

(2) Where Class D wiring is not possible due to limitation of equipment, wiring limited to 3-feet between addressable control module and equipment and be installed in metallic conduit.

c. Pathway Survivability:

1) Unless otherwise indicated or required, pathways to meet requirements for Pathway Survivability Level 1 (nonrated cable installed in metal raceway, building protected by automatic sprinkler system).

(a) Exceptions:

(1) For ECS employing relocation or partial evacuation, pathways for notification and communication circuits and other circuits necessary to ensure continued operation of emergency communication system to meet requirements for Pathway Survivability Level 3 (two-hour rated cable with performance approved by AHJ, building protected by automatic sprinkler system).

7. Spare System Capacity:

a. SLCs: Minimum 25 percent spare capacity.

b. NACs: Minimum 25 percent spare capacity.

c. Speaker Circuits: Minimum 25 percent spare capacity.

8. Secondary Power Source - Battery Storage Capacity:

a. Provide standby (nonalarm) operation sufficient for 24 hours.

b. Provide additional alarm operation for 15 minutes.

c. Calculate combined of standby load plus alarm load for overall battery storage capacity requirements, per power supply.

d. Provide 25 percent additional overall battery capacity correction factor.

B. Fire Alarm System Interfaces and Control Functions:

1. UL 864 listed unless otherwise indicated.

2. Descriptions below are intended to provide means for interface. See project SOOs, narrative, and input/output matrix for execution requirements.

3. Provide initiating devices, interfaces, and control functions for emergency control function interfaces in accordance with NFPA 72.

4. Provide monitoring of interconnected systems. Coordinate notification appliance alternate markings as indicated on drawings.

5. Fire Suppression Systems:

a. Provide minimum of four monitoring point inputs per system unless otherwise indicated.

b. Kitchen Hood Suppression Systems: Provide minimum of one monitoring point input per system.

c. Wet Pipe Fire Sprinkler Systems:

1) Waterflow Switches: Provide minimum of one monitoring point input per switch.

2) Control Valve Supervisory (Tamper) Switches: Provide minimum of one monitoring point input per switch.

3) Pressure Supervisory (High/Low Pressure) Switches: Provide minimum of two monitoring point inputs per switch (separate points for high/low pressure signals).

6. Fire and Smoke Doors/Shutters/Curtains:

a. Electromagnetic Door Holder Release:

1) Provide output signal for release of electromagnetic door holders via addressable relay module and power isolation relay.

2) Door holders powered via 24 VDC unless otherwise indicated.

3) Door release activated as determined by AHJ.

(a) Release upon activation of smoke detectors in smoke zone on either side of door, upon alarm from manual pull station on same floor, and upon sprinkler activation on same floor.

7. Electrically Locked Doors:

a. Comply with NFPA 72, building code, and life safety code requirements for electrically locked doors.

b. Door Release:

1) Provide output signal for release of electrically locked doors via addressable relay module and power isolation relay.

2) Provide connection to UL 864 listed control system interface or interface with door control power where interruption of control power releases doors.

3) Activate door release as indicated on drawings and in accordance with NFPA 72.

(a) Egress Doors: Unlock upon activation of any alarm initiating device or suppression system in smoke zone that doors serve as egress from.

c. Lock Power Supplies: Provide independent power supplies.

8. Lighting/Dimming Control Systems:

a. System Override:

1) Provide output signal to override lighting/dimming controls via addressable relay module and power isolation relay.

2) Provide connection to UL 864 listed control system interface or interface with system control power where interruption of control power overrides system.

9. Sound and Audio/Visual Media Control Systems:

a. System Override:

1) Provide output signal to override sound and audio/visual media controls via addressable relay module and power isolation relays.

2) Provide connection to UL 864 listed system interface or interface with system control power where interruption of control power overrides system.

10. Emergency Communication Systems (ECS):

a. Provide minimum of six monitoring point inputs per system, including associated enhancement systems.

11. Other Interconnected Systems: For systems listed below, provide minimum of two monitoring point inputs each.

a. Gas Detection Systems: Including providing notification appliances as indicated on plans for CO - Carbon Monoxide.

b. Security system; see Division 28.

12. HVAC Systems:

a. Air Handling Units (AHUs) and Roof Top Units (RTUs):

1) Provide duct smoke detector on supply side of air stream for units over 2,000 cfm.

2) Provide duct smoke detector on return side of air stream for units over 15,000 cfm.

3) Provide remote test station for each duct smoke detector unless explicitly indicated as not required.

4) Provide output signal to shut down units with at least one duct smoke detector via addressable relay module.

5) Where fire/smoke dampers are located downstream of unit, provide monitoring point input to determine that unit is not operational and subsequently provide output signal to close such dampers via addressable relay module and power isolation relay.

b. Energy Recovery Units (ERUs):

1) Provide duct smoke detector on supply side of air stream.

2) Provide duct smoke detector on return side of air stream.

3) Provide remote test station for each duct smoke detector unless explicitly indicated as not required.

4) Provide output signal to shut down units with at least one duct smoke detector via addressable relay module.

5) Where fire/smoke dampers are located downstream of unit, provide monitoring point input to determine that unit is not operational and subsequently provide output signal to close such dampers via addressable relay module and power isolation relay.

c. Remote Test Stations: Provide remote test station for each duct smoke detector unless explicitly indicated as not required. Unless otherwise indicated, use remote test stations only in clean, dry, indoor, nonhazardous locations.

13. Fire/Smoke Dampers:

a. Provide output signal to close fire/smoke damper via addressable relay module and power isolation relay.

b. Fire/smoke damper activated as indicated on drawings.

2.2 FIRE ALARM CONTROL UNITS AND RELATED EQUIPMENT

A. Manufacturers:

1. Honeywell International, Inc; Honeywell Notifier: www.honeywell.com/#sle.

B. Fire Alarm Control Units and Related Equipment: Listed and labeled as complying with UL 864.

C. Provide cabinets and enclosures as indicated or as required to house system components.

D. Fire Alarm Control Unit (FACU): Addressable.

1. SLCs and IDCs: Configurable for Class B or Class A with additional modules.

2. NACs: Integral and programmable with synchronization modules or cards as required.

3. Power Supply: 120 VAC, 60 Hz, supplying necessary power for FACU.

4. User-Interface: Touchscreen display for system interfacing and service mode settings, include password and user credentials; configurable for custom actions and incorporates historical event log.

5. Support self-testing detector capability.

6. Remote Annunciator Support: Up to 10.

7. Provide NAC expansion as required.

8. ECS: Separate system, integrated with FACU.

9. Products:

a. Honeywell International, Inc; Honeywell Notifier; ONYX Series NFS-320 Fire Alarm Panel: www.honeywell.com/#sle.

E. Basis of Design - Addressable Fire Alarm Control Unit (FACU): Honeywell International, Inc; Honeywell Notifier; ONYX Series; voice (but no networking) capability; www.honeywell.com/#sle.

1. Notifier Model NFS2-3030:

a. System Capacity: 3,180 device addresses (1,590 detectors and 1,590 modules) on 10 SLCs; one required NAC expansion card, minimum four NACs; one EIA-485 port for up to 32 remote annunciators and LCD displays; over 2,000 software zones.

b. Features: Strobe synchronization; dedicated alarm, supervisory, and trouble relays; 4,000 event history buffer; Boolean logic equations; releasing up to ten independent hazards; UL 864-listed for post-fire smoke removal and active smoke control.

2. Voice Integration: UL 864-listed control panel for emergency voice evacuation system (EVACS); 70 Vrms; twisted pair copper wire, single-mode fiber optic, and multimode fiber optic media.

a. For FACU NFS2-620 and NFS2-3030: Notifier Model DVC-EM; inclusive of system control equipment for audio transponder; field programmable components and digital distributed audio; digital distributed audio; include backup amplifier for full redundancy at each primary amplifier.

3. Remote Annunciators and Displays: Provide 80-character LCD annunciator, 160-character LCD annunciator, 640-character LCD display, and 1024 X 600 color touchscreen display.

F. Notification Appliance Circuit Expansion:

1. Where notification appliance circuit requirements exceed capacity of FACU, provide accessories and cabinets as required for expansion.

G. Emergency Communications System (ECS):

1. Comply with NFPA 1225.

2. Amplifiers listed and labeled as complying with UL 1711.

3. FACU Listed for ECS:

a. Provide digital ECS integrated with FACU and capable of automatic and manual paging, messaging, evacuation, and alerting on selective and all-call basis.

b. Provide all-call and total evacuation necessary switch points of command, manual controls of evacuation and paging, per zone, prerecorded messaging for nonemergency voice notifications, door unlock provisions, and commands for speaker bypass, unless otherwise approved by Engineer and AHJ.

c. Provide minimum of six switch points of command for speaker bypass, visual bypass, elevator recall bypass, door control bypass, HVAC bypass, and auxiliary bypass.

d. Local and Remote Transponders:

1) Audio hardware, including multiple primary and backup amplifiers, speaker circuit interfaces, power supplies, supervision hardware, cabinets, and battery backup systems may be configured to support multiple notification zones and packaged as audio transponders.

2) Transponders considered system control equipment and located, installed, and interfaced accordingly.

H. Addressable Interface Modules:

1. General Requirements:

a. Provide addressable modules suitable for connection to FACU SLCs.

b. Unless otherwise indicated, use addressable modules only in clean, dry, indoor, nonhazardous locations.

2. Addressable Monitor Modules: Unless devices are explicitly permitted connected together on one zone; provide separate addressable monitor module for each conventional dry-contact input device in order to be individually identifiable by addressable FACU.

3. Addressable Control Modules: Provide as indicated or as required for selective control of notification appliances.

4. Addressable Analog Input Modules: Provide as indicated or as required for monitoring and transmitting status signals from devices to FACU.

5. Addressable Relay Modules:

   a. Provide as indicated or as required to perform necessary functions via dry-contact interface.

   b. Where load exceeds module contact rating, provide accessory power isolation relays suitable for load as required.

I. Alarm Communication:

1. Protected Premises Alarm and Signaling Systems:

   a. Provide accessories as required for interface as indicated and as required by AHJ.

   b. Provide accessories in accordance with building code, fire code, and life safety code requirements for occupancy classifications and use cases.

   c. Include software and firmware control, required features, special requirements for low-power radio (wireless) systems, and fire alarm system interconnections required by NFPA 72.

2. Supervising Station Alarm Systems:

   a. Provide accessories as required for interface with supervising station as indicated and as required by AHJ.

   b. Communication Method: Single path, internet protocol (IP).

   c. Supervise communication paths at interval required by NFPA 72.

J. Remote Annunciators:

1. LCD Remote Annunciators:

   a. Provide backlit LCD display that mimics FACU display.

   b. Provide dedicated status indications for power and alarm, supervisory, and trouble conditions.

   c. Enable system control functions including acknowledge, silence, and reset.

   d. Provide local audible alarm.

   e. Mounting: Wall-mounted; provide flush-mounted or surface-mounted annunciator as indicated.

2.3 FIRE ALARM SYSTEM INITIATING DEVICES

A. Manufacturers:

1. Honeywell International, Inc; Honeywell Notifier: www.honeywell.com/#sle.

2. Source Limitations: Furnish initiating devices produced by same manufacturer as FACUs where possible.

B. General Requirements:

1. Addressable Systems:

a. Addressable Devices: Individually identifiable by addressable FACU; suitable for connection to FACU SLCs.

b. Conventional/Nonaddressable Devices: Provide addressable interface modules as indicated or as required for connection to addressable FACU. Unless devices are explicitly permitted to be connected together as one zone, provide separate addressable monitoring point for each device in order to be individually identifiable by addressable FACU.

2. Provide devices and associated accessories suitable for intended application and location to be installed. Unless otherwise indicated, use addressable devices and addressable interface modules only in clean, dry, indoor, nonhazardous locations.

3. Surface-Mounted Devices: Provide manufacturer's accessory surface mount backboxes or suitable outlet/device box.

4. Devices for Outdoor and Damp/Wet Locations: Weatherproof, suitable for outdoor use; provide manufacturer's accessory backboxes or enclosures in accordance with product listing.

5. Devices for Hazardous/Classified Locations: Listed and labeled as suitable for classification of installed location.

6. Protective Covers for Fire Alarm Devices: See "Accessories" below.

C. Manual Fire Alarm Boxes/Pull Stations:

1. Description: Noncoded manual signaling boxes listed and labeled as complying with UL 38.

2. Alarm Initiation: Configured for general alarm initiation unless otherwise indicated; presignal stations (where indicated) require use of key to initiate general alarm.

3. Operation: Dual-action unless otherwise indicated or required.

a. Dual-Action Operation: First requires pushing, pulling, or lifting, then pulling of lever.

4. Color: Red, in accordance with NFPA 72.

5. Station Reset: Requires use of key or tool.

D. Spot-Type Detectors:

1. Utilize plug-in mounting to separate base with tamper-resistant feature; provide bases as indicated or as required.

2. Addressable Detectors:

   a. Provide LED indication of normal operation and regular communication with FACU and alarm condition.

3. Smoke Detectors:

   a. Listed and labeled as complying with UL 268.

   b. Provide sensor type (e.g., photoelectric, ionization) as indicated.

4. Thermal/Heat Detectors:

   a. Listed and labeled as complying with UL 521.

   b. Provide sensor type (e.g., fixed temperature, rate-of-rise) and rating as indicated.

5. Carbon Monoxide Detectors:

   a. Listed and labeled as complying with UL 2075.

   b. Provide end-of-life notification.

6. Combination and Multi-Criteria Detectors: Comply with respective requirements for each detection method.

E. Duct Smoke Detectors:

1. Listed and labeled as complying with UL 268A.

2. Ratings: Compatible with air velocity, temperature, and humidity requirements for installed duct.

3. Housing: Select as required for application.

4. Sampling Tubes: Select as required for installation in duct to be monitored.

F. Accessories:

1. Remote Test Stations: Allows for detector key switch test and reset; provides visual and audible indication of alarm condition.

2.4 FIRE ALARM SYSTEM NOTIFICATION APPLIANCES

A. General Requirements:

1. Provide signaling notification appliances listed for fire-protective service and intended operating mode, public or private; suitable for connection to FACU notification appliance circuits.

2. Provide notification appliances and associated accessories suitable for intended application and location to be installed. Use notification appliances only according to listed mounting (e.g. ceiling, wall).

3. Surface-Mounted Notification Appliances: Provide manufacturer's accessory surface mount backboxes or suitable outlet/device box.

4. Concealed Notification Appliances:

    a. Upon activation from fire alarm system, expose device for operation; return to concealed position upon system deactivation; motor-driven.

    b. Provide door position monitoring system for remote indication of concealed and exposed positions.

5. Exterior Notification:

    a. In addition to required occupant notification, provide notification appliances on exterior of building.

    b. Outdoor and Damp/Wet Locations: Weatherproof, suitable for outdoor use; provide manufacturer's accessory backboxes or enclosures in accordance with product listing.

    c. Visible Notification: Provide strobe beacon with red lens; interface to dedicated NAC or addressable control module, 24 VDC, supervised.

    d. Sprinkler System Waterflow Visible Notification: Provide strobe beacon with clear lens; interface to dedicated NAC or addressable control module, 24 VDC, supervised; same circuit as sprinkler system waterflow audible notification where provided.

    e. Sprinkler System Waterflow Audible Notification: Provide bell; interface to dedicated NAC or addressable control module, 24 VDC, supervised; same circuit as sprinkler system waterflow visible notification where provided.

6. Notification Appliance Derating: Include device derating adjustments in accordance with listing where applicable, including the following.

    a. Where accessory protective guards or enclosures are utilized.

    b. Where required by field conditions (e.g., ambient temperature and sound).

7. Notification Appliance Color:

    a. Wall-Mounted: White.

    b. Ceiling-Mounted: White.

    c. See drawings for mounting configuration indicated by symbols on floor plans, system interconnection diagrams, and details.

B. Visible Notification Appliances:

1. Public Mode Operation: Listed and labeled as complying with UL 1971.
2. Private Mode Operation: Listed and labeled as complying with UL 1638.
3. Strobes: Clear or nominal white lens with flash rate of 1 Hz unless otherwise indicated or required; xenon or LED light source with maximum pulse duration of 0.02 seconds; candela rating as indicated.

C. Audible Notification Appliances:

1. Listed and labeled as complying with UL 464.
2. Rated Sound Pressure Level: As required to achieve design sound pressure levels, but not less than 75 dBA at 10 feet for public mode operation or 45 dBA at 10 feet for private mode operation in accordance with UL 464.
3. Horns: Selectable tone, including at minimum NFPA 72 temporal 3 pattern and continuous; minimum of two selectable volume levels.

D. Speakers for ECS:

1. Listed and labeled as complying with UL 1480.
2. Rated Sound Pressure Level: As required to achieve design sound pressure levels, but not less than 75 dBA at 10 feet in accordance with UL 1480.
3. Frequency Range: 400 to 4,000 Hz minimum in accordance with UL 1480; listed for producing 520 Hz low frequency alarm signal for sleeping areas in accordance with NFPA 72.
4. Speaker Voltage: Field configurable, matched to audio distribution circuit voltage.
5. Provide minimum of four field-selectable power taps.

E. Combination Notification Appliances: Comply with respective requirements for each signaling method.

2.5 WIRE AND CABLE

A. General Requirements:

1. Comply with NFPA 70 listing and marking requirements for cables.
2. Substitution of fire alarm listed cables for communication wiring, in accordance with NFPA 70, is not permitted.
3. Provide cables as indicated or as required for connections between system components.

B. Power-Limited Fire Alarm Cables (PLFA):

1. Comply with applications of listed cables in accordance with Chapter 7 of NFPA 70.

C. Non-Power-Limited Fire Alarm Cables (NPLFA):

1. Comply with NPLFA circuit conductor properties in accordance with NFPA 72.

2. Comply with listing requirements in Chapter 7 of NFPA 70.

2.6 ACCESSORIES

A. Provide components as indicated or as required for connection of fire alarm system to devices and other systems indicated.

B. Provide EoL resistors as required for wiring supervision.

C. Protective Covers for Fire Alarm Devices:

1. Listed to same standard as device being protected.

2. Outdoor Covers: Weather resistant, suitable for outdoor use; use only with outdoor-rated devices.

3. Provide guards to protect devices where subject to mechanical damage; listed for use with detector.

a. Protective Covers for Manual Pull Stations:

1) Provide protective covers with hinged access for manual pull stations.

2) Listed and labeled as complying with UL 38.

3) Outdoor Covers: Weather resistant, suitable for outdoor use; use only with outdoor rated devices.

D. Surge Protection:

1. Line Voltage Surge Protection:

a. Provide for each line voltage circuit serving fire alarm system control units and related equipment (e.g., FACU, field booster panels, nodes, and transponders).

b. Listed and labeled as complying with UL 1449.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify field measurements.

B. Verify that system capacities listed in manufacturer instructions align with designed system.

C. Verify that mounting surfaces are ready to accept components and equipment, with suitable support frames and anchors installed where required.

D. Verify ratings, configurations, and characteristics of system components.

E. Verify rough-ins for field connections.

F. Verify that work likely to damage fire alarm system has been completed.

G. Verify that interior of building has been protected from weather.

H. Perform preinstallation tests and inspections per manufacturer's instructions and in accordance with NECA 305.

I. Verify that system bonding is in accordance with Section 260526.

J. Do not energize system until deficiencies have been corrected.

K. Verify that branch circuit wiring installation is completed, tested, and ready for connection to fire alarm system. Overcurrent protection ratings are consistent with circuit voltage and manufacturer's recommendations and nameplate data for equipment.

3.2 PREPARATION

A. Prior to installation, confirm environment of installation area is clean, and with ambient temperature, humidity, and ventilation requirements are per manufacturer’s written instructions.

1. Clean and vacuum in accordance with manufacturer's written instructions. Confirm equipment ventilation holes are absent of obstructions and free for air flow.

2. Clean pathways thoroughly to remove foreign materials before installing conductors and cables.

3. Clean dirt, debris, plaster, and other foreign materials from equipment enclosures, cabinets, and outlet boxes.

4. Clean surfaces to receive adhesive products according to manufacturer's instructions.

B. Follow tool requirements for installation, including torquing adjustments, as listed in manufacturer documentation.

C. Remove detector dust covers prior to system energization.

3.3 INSTALLATION

A. Install field-devices, components, FACU and related equipment, and accessories in accordance with the following:

1. Manufacturer's instructions, applicable codes, and Contract Documents.

2. NECA 1.

3. NECA 305.

4. NFPA 72.

5. NFPA 70; including requirements for mechanical execution of work.

B. Field Locations:

1. Obtain Owner's approval of locations of devices and notification appliances before installation.

2. Arrange equipment to provide minimum operational clearances and required maintenance access in accordance with manufacturer's instructions and NFPA 70.

3. Conceal wiring, conduit, outlet boxes, and supports where installed in finished areas; maintain code-required access.

C. Raceways and Supports:

1. Coordinate locations of outlet boxes as required for installation. Only install boxes and equipment at locations based on application standards indicated in NFPA 72.

2. Secure and support raceways at intervals complying with NFPA 70. Provide supports where vertical rise exceeds permissible limits.

3. Install firestopping to preserve fire resistance rating of partitions and other elements.

D. Wiring and Connections:

1. Maintain separation of Class 1, Class 2, Class 3 remote-control, signaling, fire alarm circuits, and power-limited circuits in accordance with cable insulation class and NFPA 70.

2. Maintain circuit pathway and class designations in accordance with NFPA 72 for configuration, separation, and survivability.

3. Comply with permitted and not permitted installations for wires, cables, cable routing assemblies, communications circuits, and fire alarm circuits in accordance with NFPA 70.

4. Secure and support conductors and cables in accordance with NFPA 70 using suitable supports and methods approved by AHJ. Provide independent support from building structure and suspended ceiling systems. Do not provide support from raceways, piping, ductwork, or other systems.

5. Provide grounding and bonding in accordance with Section 260526.

6. Comply with manufacturer's minimum cable sizes or ratings.

7. Do not exceed manufacturer's recommended maximum power, signal, or network cable lengths between components.

8. Provide network wiring in accordance with NFPA 70.

9. Neatly train and bundle conductors inside boxes, wireways, and cabinets.

10. Fire-Rated Cables and Cabling Systems: Comply with listing requirements to maintain installation, including aspects of attachment surfaces, specific products, and requirements associated with vertical and horizontal routing.

11. See manufacturer's instructions for batteries.

E. Fire Alarm System Components:

1. Install field-installed devices, components, relays, notification appliances, accessories, and when applicable EoL resistors.

    a. Install wiring to supervisory devices and associated EoL resistors as required for supervision of hardwired connections

2. Install Wall-Mounted Equipment: Assemble component hardware within (e.g., card bays, sub-bays, expansion bays, signal cards, other card frames, networking, signal transmission, application modules, tamper monitoring devices, interconnecting modules, and auxiliary power supplies), including space for required spare capacity, and configure settings.

3. Install Interconnect Wiring: Connect system cabinets, install processor and cards, cabling, connectors, terminations, and bonding.

F. Branch Power:

1. After installation confirmations, follow manufacturer instructions to connect branch circuit power cables to premises fire alarm system components; comply with NFPA 70.

2. Where accessories require auxiliary power, provide control power source and monitoring as indicated or as required to complete installation.

3. Install auxiliary power supplies, including indicated monitoring, and connections necessary for remote equipment.

G. System Identification:

1. Identify devices, notification appliances, components, cables, and equipment in accordance with approved submittals. See Section 260553.

2. Confirm fire alarm system programming meets requirements of SOO and sub-system SOOs.

3. Mark location of disconnecting means for NPFLA circuits.

4. Coordinate to provide red branch power circuit protective devices or identify them accordingly as required by NFPA 72 and NFPA 70.

5. Mark date of batteries installed on inside cover of panels and formal maintenance logs.

H. Troubleshooting and Installer Checks:

1. Field test connectivity periodically during installation process to avoid unexpected troubleshooting.

2. Check system operation for notification, FACU functions, circuit supervision, alarm initiating devices, supervisory initiating devices, dress panels/doors/covers, and programming before performing field tests.

I. Fire Alarm System Tests:

1. Perform required tests of NFPA 72. Record measured values during operational checks.

2. Confirm functional testing of fire alarm system is as indicated in Contract Documents.

3.4 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Provide services of manufacturer's authorized representation to observe installation and assist in inspection, testing, and adjusting. Include manufacturer's detailed testing procedures and field reports and with submittals.

C. Provide equipment, two-way radios for testing personnel use, tools, and supplies required to accomplish inspection and testing.

D. Notify Owner and Engineer at least two weeks prior to scheduled inspections and tests.

E. Inspect and test in accordance with manufacturer's instructions.

F. Inspect wiring and components for damage and defects.

G. Batteries and Power Supplies: Perform inspections and tests listed in manufacturer installation instructions.

H. Perform additional requirements related to testing and inspection during system startup.

I. Test for interface with other systems.

J. Test shunt trips to verify operation.

K. Correct defective work, adjust for operation, and retest until entire system complies with Contract Documents.

L. Submit detailed reports indicated inspection and testing results, corrective actions taken, and as-found and final adjusted settings.

M. Diagnostic Period: After successful completion of inspections and tests, operate system to normal mode for at least 14 days without system or equipment malfunctions.

3.5 SYSTEM STARTUP

A. Obtain Owner approval prior to performing system startup.

B. Manufacturer Services: Provide services of manufacturer's authorized representation to systems startup. Include manufacturer's detailed startup procedures with submittals.

C. Prepare and start equipment and systems in accordance with manufacturer's instructions and recommendations.

3.6 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust initiating device and notification appliance settings to achieve desired operation as indicated in submittals.

C. Measure power supply primary and secondary voltages, log values for records, and make appropriate adjustments.

D. Adjust alignment of equipment covers and doors. Provide keys and spare keys to Owner.

E. Reprint and reinstall damaged or misinstalled labels; maintain neat and square to installed location good workmanship - see NECA 1; maintain consistent placements for identification on products of similar type.

F. Adjust devices or notification appliances and associated bases to be flush and level.

G. Program system parameters according to requirements of Owner.

3.7 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.

B. See Section 017419 - Construction Waste Management and Disposal for field-generated construction waste requirements.

C. Check tightness of electrical connections. Replace damaged components and provide closure plates for vacant positions. Provide circuit directory updates for related power branch circuits.

D. Clean and repair existing materials and equipment that remain or are indicated for reuse.

E. Clean dirt, debris, plaster, and other foreign materials from outlet boxes and fire alarm system equipment and components.

F. Clean fire alarm system equipment and components according to manufacturer's instructions and NECA 305.

G. Clean surfaces and interiors of boxes and device cover plates in accordance with manufacturer's instructions to remove dirt, fingerprints, debris, plaster, and other foreign materials.

H. Repair scratched or marred exposed surfaces to match original factory finish.

I. Comply with federal (EPA), state, and local regulations for battery handling and disposal. Do not spill battery fluids down plumbing drains. Only use containers safe for transportation marked 'nonspillable.'

3.8 COMMISSIONING

A. See Section 019113 - General Commissioning Requirements for additional requirements.

B. Comply with NFPA 3 for commissioning of fire protection and life safety systems.

C. Comply with NECA 90 for commissioning building electrical systems.

D. Support Commissioning Agent in assembling test data and generating reports.

E. Participate in four hours of seasonal testing, as scheduled by Commissioning Agent, six months from Date of Substantial Completion.

3.9 INSPECTION AND TESTING FOR COMPLETION

A. Notify Owner 7 days prior to beginning completion inspections and tests.

B. Notify AHJ and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

C. Provide services of installer's supervisor or person with equivalent qualifications to supervise inspection and testing, correction, and adjustments.

D. Prepare for testing by ensuring that work is complete and correct; perform preliminary tests as required.

E. Provide tools, software, and supplies required to accomplish inspection, testing, and document results.

F. Perform inspection and testing in accordance with NFPA 72 and requirements of AHJ; document each inspection and test.

G. Correct defective work, adjust for operation, and retest until entire system complies with Contract Documents.

H. Diagnostic Period: After successful completion of inspections and tests, operate system in normal mode for at least 14 days without system or equipment malfunctions.

1. Record system operations and malfunctions.

2. If malfunction occurs, start diagnostic period over after correction of malfunction.

3. Owner will provide attendant operator personnel during diagnostic period; schedule training to allow Owner personnel to perform normal duties.

4. At end of successful diagnostic period, fill out and submit NFPA 72 "Inspection and Testing Form."

3.10 OWNER PERSONNEL INSTRUCTION

A. Provide the following instruction to designated Owner personnel:

1. Hands-On Instruction: On-site, using operational system.

2. Classroom Instruction: Owner furnished classroom, on-site or at other local facility.

B. Administrative: One-hour session(s) covering issues necessary for nontechnical administrative staff; classroom:

1. Initial Training: One session precloseout.

C. Basic Operation: One-hour sessions for attendant personnel, security officers, and engineering staff; combination of classroom and hands-on:

1. Initial Training: One session precloseout.

D. Use operation and maintenance documentation as primary instruction material; have paper copies available for attendees and supplement training material aids.

3.11 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals for additional submittals.

B. See Section 017900 - Demonstration and Training for additional requirements.

C. Closeout Demonstration: Demonstrate operation of all functions to Owner.

1. Be prepared to conduct any of required tests.

2. Have minimum one copy of operation and maintenance data, preliminary copy of project record drawings, input/output matrix, and operator instruction chart(s) available during demonstration.

3. Have authorized technical representative of FACU manufacturer present during demonstration.

4. Demonstration may be combined with inspection and testing required by AHJ; notify AHJ with enough time to schedule demonstration.

5. Repeat demonstration until successful.

D. Occupancy will not occur prior to Substantial Completion.

E. Substantial Completion of project cannot be achieved until inspection and testing is successful and the following:

1. Specified diagnostic period without malfunction has been completed.

2. Approved operating and maintenance data has been delivered.

3. All aspects of operation have been demonstrated to Owner.

4. Final acceptance of fire alarm system has been given by AHJ.

5. Occupancy permit has been granted.

6. Specified precloseout instruction is complete.

3.12 PROTECTION

A. Protect installed fire alarm system from subsequent construction operations.

3.13 MAINTENANCE

A. See Section 017000 - Execution and Closeout Requirements for additional requirements relating to maintenance service.

B. Perform routine inspection, testing, and preventive maintenance required by NFPA 72, including:

1. Maintenance of fire safety interface and supervisory devices connected to fire alarm system.

2. Repairs required, unless due to improper use, accidents, or negligence beyond control of maintenance contractor.

3. Record keeping required by NFPA 72 and AHJ.

C. Provide trouble call-back service upon notification by Owner:

1. Provide on-site response within two hours of notification.

2. Include allowance for call-back service during normal working hours at no extra cost to Owner.

3. Owner will pay for call-back service outside of normal working hours on hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

D. Provide complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with detailed schedule.

E. Maintain on-site log listing date and time of each inspection and call-back visit, condition of system, nature of trouble, correction performed, and parts replaced. Submit duplicate of each log entry to Owner's representative upon completion of site visit.

F. Comply with Owner's requirements for access to facility and security.

END OF SECTION 284600

This page intentionally left blank

SECTION 284614 - SINGLE AND MULTIPLE STATION ALARMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Single- and multiple-station alarms.

1.2 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 260526 - Grounding and Bonding for Electrical Systems.

C. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

D. Section 284600 - Fire Detection and Alarm: Fire alarm system.

1.3 REFERENCE STANDARDS

A. ICC (IFC) - International Fire Code.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction.

C. NFPA 70 - National Electrical Code.

D. NFPA 72 - National Fire Alarm and Signaling Code.

E. NFPA 101 - Life Safety Code.

F. UL 217 - Standard for Smoke Alarms.

G. UL 539 - Standard for Single and Multiple Station Heat Alarms.

H. UL 1971 - Standard for Signaling Devices for the Hearing Impaired.

I. UL 2034 - Standard for Single and Multiple Station Carbon Monoxide Alarms.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including ratings, configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.

1.5 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70.

2. NFPA 72.

3. NFPA 101.

4. ICC (IFC).

5. Requirements of authorities having jurisdiction.

6. Applicable local codes.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least minimum three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. See Section 017419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

C. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.7 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

1.8 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 10-year manufacturer warranty for alarm units. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 SINGLE- AND MULTIPLE-STATION ALARMS

A. General Requirements:

1. Power Supply: 120 VAC with battery backup, alkaline or sealed lithium with 10-year life. Battery-operated only alarms not permitted.

2. Utilize plug-in mounting with tamper-resistant features.

3. Provide alarm test and silence features.

4. Self restoring; automatic alarm reset upon clearing of alarm condition.

5. Multiple-Station Alarms:

a. Utilize wired communication between interconnected alarms.

b. Limit number of interconnected alarms in accordance with manufacturer's requirements and applicable codes.

B. Smoke Alarms:

1. Listed and labeled as complying with UL 217.

2. Smoke Sensor: Photoelectric type unless otherwise indicated.

C. Heat Alarms:

1. Listed and labeled as complying with UL 539.

2. Thermal Sensor: Fixed temperature, 135 degrees F unless otherwise indicated.

D. Carbon Monoxide Alarms:

1. Listed and labeled as complying with UL 2034.

2. Provide end-of-life notification.

E. Combination and Multicriteria Alarms: Comply with respective requirements for each detection method.

F. Provide integrated voice notification in addition to required audible emergency evacuation signal.

G. Strobes Integrated or Interconnected with Multiple-Station Alarms:

1. Listed and labeled as complying with UL 1971.

2. Provide clear or nominal white lens with flash rate of 1 Hz unless otherwise indicated or required; xenon or LED light source with maximum pulse duration of 0.02 seconds; candela rating as indicated.

3. Provide distinguishable visible notification for smoke/heat and carbon monoxide alarms.

2.2 ACCESSORIES

A. Relay Modules:

1. Provide as required to activate external auxiliary devices.

2. Listed as accessory for use with connected alarms.

3. Activate relay contacts when alarm sounds, and deactivate after alarm stops sounding.

4. Contacts: Form C, one normally open and one normally closed.

5. Voltage: 120 VAC.

PART 3 EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1 for general workmanship.

B. Install products in accordance with manufacturer's instructions.

C. Install new batteries in devices with field-installed battery backup.

D. Provide grounding and bonding; see Section 260526.

E. Install firestopping to preserve fire resistance rating of partitions and other elements; see Section 078400.

F. Identify system wiring, components, and overcurrent protective devices for branch circuits serving alarms; see Section 260553.

3.2 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements for additional requirements.

B. Comply with requirements of authorities having jurisdiction for scheduling and observation of inspections and tests.

C. Perform initial acceptance inspection and testing in accordance with NFPA 72 and requirements of authorities having jurisdiction; document each inspection and test.

D. Use integral test feature to confirm operation of each alarm and activation of interconnected alarms.

E. Test for operation of connected external auxiliary devices.

F. Test for interface with other systems.

G. Correct deficiencies and replace damaged or defective alarms and accessories.

3.3 PROTECTION

A. Protect installed alarms from subsequent construction operations.

END OF SECTION 284614

SECTION 311100 – CLEARING AND GRUBBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes

1. Cutting of trees and other vegetation.
2. Clearing of miscellaneous vegetation.
3. Removal of roots and related growth.
4. Disposal of all waste materials.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges and Incidental Construction, Form 819 and any supplements.

C. Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.

3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DEFINITIONS

A. Clearing: Clearing shall consist in the felling, cutting up, and satisfactory disposal of trees and other vegetation designated for removal in accordance with these specifications.

B. Drainage Course: Layer supporting basement grade used to minimize capillary flow of pore water.

C. Grubbing: Grubbing shall consist of the removal of roots 1 ½ inch and larger, organic matter and debris, and stumps having a diameter of three inches or larger, to a depth of at least 18 inches below the surface and or subgrade; whichever is lower, and the disposal thereof.

1.6 SAFETY REQUIREMENTS

A. Contractor shall conduct all clearing and grubbing activities in conformance with applicable regulations, including those relating to barriers, warning signs, excavation safety, sheeting, shoring, and stabilization.

B. Contractor shall provide and maintain barricades, warning signs, signs, lights, etc., required for the protection of personnel, materials and property. Temporary barricades, etc. shall conform all applicable codes and regulations, and shall be lighted at night with lanterns, flares and reflectorized paint as required for safety. Adapt barricades, signs, lights, etc. to evolving site conditions throughout the progress of the work.

C. Provide other safety devices as required, including adaptation of such safety devices to changing site conditions, to prevent unauthorized entry to construction areas. Provide warning signs and other temporary construction safety devices necessary for proper completion of the work in compliance with applicable safety regulations.

1.7 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained, experienced, and as required licensed, in the necessary crafts and who are completely familiar with the specified requirements

and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 PREPARATION

A. Secure the work area and take precautions for preventing injuries to persons or damage to property in or about the work. Protect structures, utilities, sidewalks, pavements and other facilities or sensitive areas from damage by clearing and grubbing operations.

B. Establish all required erosion and sedimentation controls prior to initiating work.

3.2 CLEARING AND GRUBBING

A. Clear, grub, remove, and dispose of all vegetation and debris within the limits of construction, as designated on the plans or as required by Engineer. Contractor shall remove only those trees and shrubs absolutely necessary to allow for the construction. The work shall also include the preservation and protection of all vegetation designated to remain.

B. A preconstruction meeting shall be held with Engineer, Owner, local authorities, property owner(s) and other appropriate personnel, if required, prior to any clearing.

C. The area within the limits of construction or as designated shall be cleared and grubbed of all trees, stumps, roots, brush, undergrowth, hedges, heavy growth of grasses or weeds, debris and rubbish of any nature which, in the opinion of Engineer, is unsuitable for foundation material. Nonperishable items that will be a minimum of five (5) feet below the finish elevation of the earthwork or slope of the embankment may be left in place.

D. Contractor shall provide barricades, fences, coverings, or other types of protection necessary to prevent damage to existing improvements, not indicated to be removed, and improvements on adjoining property. All improvements damaged by this work shall be restored to their original condition or to a condition acceptable to the owner or other parties or authorities having jurisdiction.

E. Protection of Trees and Vegetation: Contractor shall protect existing trees and other vegetation indicated on the Drawings to remain in place against cutting, breaking, or skinning of roots, skinning and bruising of bark, smothering of trees by stockpiling construction materials or excavated materials within drip line, excess foot or vehicular traffic, or parking of vehicles within drip line. Provide temporary fences or barricades as required to protect trees and vegetation to be left standing at no additional cost.

F. Trees and shrubs that are to remain within the construction limits will be indicated on the Drawings or conspicuously marked on the Project Site. Unless otherwise noted, trees within the construction limits shall become the property of the Contractor and shall be removed from the site.

G. Carefully and cleanly cut roots and branches of trees indicated to remain where the roots and branches obstruct construction of utilities or other subsurface improvements. Contractor shall provide protection for roots and branches over 1 ½ inches diameter that are cut during construction operations. Temporarily cover all exposed roots with wet burlap to prevent roots from drying out. Provide earth cover as soon as possible.

H. Damaged trees and vegetation designated to remain shall be repaired or replaced at Contractor's expense in a manner acceptable to Engineer if they are damaged by construction operations. Repair tree damage as directed by a qualified tree surgeon.

I. Trees and vegetation designated to remain shall be repaired or replaced at Contractor's expense in a manner acceptable to Engineer if they are damaged by construction operations. Repair tree damage as directed by a qualified arborist.

J. All brush, tree tops, stumps, and debris shall be hauled away and disposed of in accordance with all applicable laws and regulations. Contactor shall clean up debris resulting from clearing operations continuously with the progress of the work and remove promptly all salvageable material that becomes his property and is not to be reused in construction. Sale of material on the site is prohibited. Debris from the site shall be removed in such a manner as to prevent spillage. Keep pavement and area adjacent to site clean and free from mud, dirt, dust, and debris at all times.

K. The method of stripping, clearing and grubbing the site shall be at the discretion of the Contractor. However, all stumps, roots and other debris protruding through the ground surface or in excavated areas shall be completely removed to a minimum depth of 18 inches below surface and/or subgrade whichever is lower and disposed of off the site by the Contractor, at his expense.

L. Marginal Areas: In marginal areas, with Engineer's permission, remove trees where the following conditions exist.

1. Root Cutting: When clearing up to the "clearing limits," the Contractor shall also remove any tree which is deemed marginal such that when the roots are cut and the tree could be rendered unstable by the affects of high winds and in danger of toppling into either the right-of-way or onto private property.
2. Slender Bending Trees: Where young, tall, thin trees are left unsupported by the clearing operation, and are likely to bend over into the right-of-way, Contractor, during the clearing operation, shall selectively remove those trees which are located outside and adjacent to the clearing limits and any right-of-way or easement as well. During the course of construction and during the one-year warranty period, the Contractor shall remove such young trees that overhang into the right-of-way or cleared area.

M. Stripping of Topsoil: Remove the existing topsoil to a depth of 6 inches or to the depth encountered from all areas in which excavation will occur. The topsoil shall be stored in stockpiles, separate from the excavated material, if the topsoil is to be respread. Otherwise material shall be disposed of off-site at Contractor's expense.

3.3 DISPOSAL

A. Contactor shall consolidate and clean-up debris resulting from clearing and grubbing operations continuously with the progress of the work.

B. All brush, treetops, stumps, and debris resulting from clearing and grubbing operations shall be hauled away and disposed of in accordance with all applicable laws and regulations. Any

materials salvaged by Contractor from clearing and grubbing operations shall be promptly removed from the Project Site.

C. Contractor will be responsible for obtaining all applicable permits and paying all fees for the disposal of excess material.

D. Sale of material on the Project Site is prohibited.

E. Burning of material is prohibited.

END OF SECTION 311100

SECTION 312310 – EARTHWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Preparation and grading subgrades for slabs-on-grade, walks, pavements, and landscaping.
2. Excavating and backfilling for structures.
3. Excavation and backfilling for underground utilities and associated appurtenances.
4. Excavation, backfill and compaction for the demolition/removal of subsurface utilities and improvements.
5. Earth retention systems.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 GENERAL

A. Contractor is advised that lines and grades, as shown on the Drawings, are subject to change. Although it is intended to adhere to what is shown on Drawings, Engineer reserves the right to make changes in lines and grades of utilities or other subsurface construction when such changes may be necessary or advantageous.

B. In open trenching on public roadways, Contractor shall be governed by the conditions, restrictions and regulations made by the local or state authority as applicable. All such regulations shall be in addition to those set down in the Specifications.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.

3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 EXCAVATION CLASSIFICATIONS

A. Excavation - Excavation shall be unclassified and no consideration will be given to the nature of the materials. Excavation shall comprise and include the satisfactory removal and disposal of all materials encountered regardless of the nature of the materials and shall be understood to include but not limited to earth, fill, boulders, foundations, pavements, curbs, piping, cobbles, stones, footings, bricks, concrete, previously abandoned drainage structures and utility structures abandoned and not removed by the utility and debris.

B. Common Excavation - Excavation of all materials that can be excavated, moved, loaded, transported, and unloaded using heavy equipment or that can be excavated and dumped into place or loaded onto hauling equipment by excavation equipment (shovel, bucket, backhoe, dragline, or clam shell) or moved with dozer-type equipment, appropriate to the material type, character, and nature of the materials. The presence of isolated boulders or rock fragments larger than 1 cubic yard is not in itself sufficient cause to change the classification of the surrounding material. All Common Excavation shall be included in the Base Bid.

C. Rock Excavation - Rock Excavation as defined herein. The excavation and removal of isolated boulders or rock fragments larger than 1 cubic yard encountered in materials otherwise conforming to the definition of Common Excavation shall be classified as rock excavation. The presence of isolated boulders or rock fragments larger than 1 cubic yard is not in itself sufficient cause to change the classification of the surrounding material.

1.6 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 819 and any supplements.

C. Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction

D. American Concrete Institute (ACI)

1. ACI 229R-99 - Controlled Low-Strength Materials (CLSM).

E. American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO Method T 90 - Determining the Plastic Limit and Plasticity Index of Soils.
2. AASHTO T104 - Standard Method of Test for Soundess of Aggregate by Use of Sodium Sulfate or Magnesium Sulfate.
3. AASHTO Method T146 - Standard Method of Test for Wet Preparation of Disturbed Soil Samples for Test.

F. ASTM International (ASTM).

1. ASTM D422 - Standard Test Method for Particle-Size Analysis of Soils.
2. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
3. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3(2,700 kN-m/m3)).
4. ASTM D2487 - Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System).
5. ASTM D2922 - Standard Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
6. ASTM D3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).
7. ASTM D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

1.7 DEFINITIONS

A. Backfill: Soil material or flowable concrete used to fill an excavation.

B. Bedding Course: Layer placed over the excavated sub-grade in a trench before laying pipe.

C. Benching: A method of limiting cave-in potential by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near-vertical surfaces between levels.

D. Borrow: Satisfactory soil imported from off-site for use as fill or backfill.

E. Clearing: Clearing shall consist in the felling, cutting up, and satisfactory disposal of trees and other vegetation designated for removal in accordance with these specifications.

F. Drainage Course: Layer supporting basement grade used to minimize capillary flow of pore water.

G. Earth Retention Systems: Any structural system, such as sheeting and bracing or cofferdams, designed to retain in-situ soils in place and prevent the collapse of the sides of an excavation in order to protect employees and adjacent structures.

H. Excavation: Any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal.

1. Additional Excavation: Excavation beyond required dimensions or below subgrade elevations that is requested and/or directed by Engineer. Additional Excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
2. Bulk Excavation: Excavations more than 10 feet in width and pits more than 30 feet in either length or width.
3. Unauthorized Excavation: Excavation below the elevations specified on the plans, beyond the limits indicated on the plans, or where no dimensions are indicated, beyond depths, elevations, and dimensions reasonably necessary for construction of the work without the request and/or direction of the Engineer. Unauthorized excavation, as well as any remedial work directed by Engineer, or if applicable Geotechnical Engineer, shall be without additional compensation.

I. Fill: Soil materials used to raise existing grades.

J. Finished Grade: The proposed final elevations shown on the Drawings or called for in the Specifications.

K. Geotechnical Engineer: A qualified and licensed entity designated for the project as the authority on the assessment, design, and oversight of soil and/or rock conditions and construction affected by such conditions.

L. Geotechnical Testing Agency: An independent testing agency employed by Owner, or by Contractor is called-for, and qualified according to ASTM E 329 to conduct soil materials and rock-definition testing, as documented according to ASTM D 3740 and ASTM E 548.

M. Grubbing: Grubbing shall consist of the removal of roots 1 ½ inch and larger, organic matter and debris, and stumps having a diameter of three inches or larger, to a depth of at least 18 inches below the surface and or subgrade; whichever is lower, and the disposal thereof.

N. Protective System: A method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, or from the collapse of adjacent structures. Protective systems include earth retention systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection.

O. Regular Excavation: Removal and disposal of any and all material above subgrade elevation, except solid rock and undercut excavation, located within the limits of construction.

P. Rock: Solid ledges, bedded deposits, unstratified masses and conglomerations of material so firmly cemented as to possess the characteristics of solid rock which cannot be removed without systematic drilling or hoe ramming. All boulders containing a volume of more than one (1) cubic yard shall be considered rock.

Q. Rock Excavation: Removal and satisfactory disposal of Rock, which, in the opinion of Engineer, cannot be excavated except by drilling, wedging, jack hammering or hoe ramming or the excavation of boulders or rock fragments containing a volume of more than one (1) cubic yard. The presence of isolated boulders or rock fragments larger than 1 cubic yard is not in itself sufficient cause to change the classification of the surrounding material.

R. Licensed Professional Engineer: A person who is licensed as a professional engineer in the state where the work is to be performed. However, a professional engineer, registered in any state is

deemed to be a "registered professional engineer" within the meaning of this standard when approving designs for "manufactured protective systems" or "tabulated data" to be used in interstate commerce.

S. Satisfactory Materials: Earth material that meets the classification, use, and/or gradation requirements herein that does not contain limestone, shale, clay, ash, slag, friable material, organic or vegetative materials, topsoil, wood, trash, broken concrete, masonry rubble, trash, refuse, or frozen materials.

T. Shield System: A structure that is designed to withstand the forces imposed on it by a cave-in and thereby protects employees within the structure. Shields can be permanent structures or can be designed to be portable and moved along as work progresses. Additionally, shields can be either pre-manufactured or job-built in accordance with 29 CFR 1926.652(c)(3) or (c)(4). Shields used in trenches are usually referred to as "trench boxes" or "trench shields."

U. Sloping: A method of protecting employees from cave-ins by excavating to form sides of an excavation that are inclined away from the excavation so as to prevent cave-ins. The angle of incline required to prevent a cave-in varies with differences in such factors as the soil type, environmental conditions of exposure, and application of surcharge loads.

V. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

W. Sub-grade: Surface or elevation remaining after completing excavation, or top surface of a fill or backfill immediately below drainage fill.

X. Surplus Material: Excavated acceptable material that cannot be utilized elsewhere on the site as backfill or embankment fill, or as otherwise directed by the Engineer.

Y. Temporary Dewatering System: A system to lower and control water to maintain stable, undisturbed subgrades at the lowest excavation levels. Dewatering shall be provided for all pipelines, structures and for all other miscellaneous excavations.

Z. Testing Laboratory: A qualified entity engaged to perform specific laboratory tests.

AA. Testing Agency: A qualified entity engaged to collect samples, perform specific in-field tests, and/or inspections. The Testing Laboratory may provide the services of the Testing Agency.

BB. Trench: A narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet.

CC. Unacceptable Material: Soil material that contains organic silt, peat, vegetation, wood or roots, stones or rock fragments over six (6) inches in diameter or exceeding 40 percent by weight of the backfill material, porous biodegradable matter, loose or soft fill, construction debris, or refuse, or material which cannot be compacted to the specified or indicated density.

1.8 SUBMITTALS

A. Site Characterization of Off-Site Borrow Sources: The following information shall be submitted to Engineer for review at least two weeks prior to use of an off-site borrow source:

1. Location and name of the borrow source site.
2. Owner and contact information for the borrow source site.
3. Present and past usage of the source site and materials.
4. Any previously existing report(s) associated with an assessment of the source site as relates to the presence of oils, hazardous materials, or other organic and non-organic constituents which may be considered contaminants.
5. Location within the site from which the material will be obtained.

B. Chemical Testing Data: For each type/classification of earth material proposed and each source of earth material proposed: Submit a letter signed by an authorized representative of material supplier stating that such proposed material is free of oils, hazardous materials, or other organic and non-organic constituents which may be considered contaminants.

C. Material Testing Data: Provide results for all proposed bedding, fill, aggregates, and backfill. Submit complete laboratory reports.

1. Gradation analysis.
2. Soil classification and Moisture-Dry Density Curve.
3. Loss on Abrasion.
4. Soundness.

D. Samples: 50-pound sample of each type of off-site bedding, fill, aggregates, and backfill that are proposed for use at the Project Site in an air-tight container for the testing laboratory, a minimum of two weeks prior to delivery of such material to the site. Use of these proposed materials by Contractor prior to testing and approval or rejection shall be at Contractor's risk.

E. Product Data

1. Plastic warning tape.
2. Separation fabric, filter fabric, geogrids, or similar geotextiles.

F. Field Testing Results

1. Compaction test results keyed to date and specific location of testing. Provide Engineer with copies of testing reports within 24 hours of field test.

1.9 SAFETY

A. Contractor shall conduct all excavation activities in conformance with applicable regulations, including those relating to warning signs, excavation safety, sheeting, shoring, and stabilization.

B. Contractor shall provide and maintain barricades, signs, lights, etc., required for the protection of personnel, materials and property. Temporary barricades, etc. shall conform all applicable codes and regulations, and shall be lighted at night with lanterns, flares and reflectorized paint as required for safety. Adapt barricades, signs, lights, etc. to evolving site conditions throughout the progress of the work.

C. Provide other safety devices as required, including adaptation of such safety devices to changing site conditions, to prevent unauthorized entry to construction areas and open excavations. Provide warning signs and other temporary construction safety devices necessary for proper completion of the work in compliance with applicable safety regulations.

D. Contractor shall properly design and furnish all labor, materials, equipment, and tools necessary to construct permanent or temporary excavation support systems, including, but not necessarily limited to, sheet piling, trench shields, trench boxes, timber trench shoring, pneumatic/hydraulic shoring, steel sheeting or sheeting using other materials, sloping, and benching.

E. Any time an excavation is to remain open, at a minimum, provide full enclosure with safety barriers and fencing, warning signs, and additional safety control measures as appropriate for the condition.

1.10 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

B. Utility Mark-out

1. Prior to commencing work, comply with utility mark-out requirements of the Call-Before-You-Dig System (1-800-922-4455).
2. Verify the location of all subsurface utilities marked through the Call-Before-You-Dig System.
3. Not all subsurface facilities or structures will be identified through the Call-Before-You-Dig System. Confirm the location of other subsurface utilities and other subsurface facilities or structures prior to commencing work. Field-mark utilities as required.

C. Codes and Standards: Perform the work of this Section in accordance with all applicable codes, standards, and the requirements of authorities having jurisdiction.

D. Engineer reserves the right to perform all in-field testing specified in this Section and reserves the right to determine the suitability of all materials to be used for fills and reject any fill not meeting the specifications.

E. Field Density testing and subgrade observation shall be performed by the designated entity

F. Weather Limitations:

1. Material excavated when frozen or when air temperature is less than 32 degrees Fahrenheit (32 F) shall not be used as fill or backfill until material completely thaws.
2. Material excavated during inclement weather shall not be used as fill or backfill until after material drains and dries sufficiently for proper compaction.

1.11 TESTING

A. The Owner will retain a testing entity to perform sampling and testing of the work under this Section during construction. The testing entity’s presence does not constitute supervision or direction of Contractor’s work. Neither the presence of the testing entity nor any observations and testing performed by him, nor any notice or failure to give notice shall excuse Contractor from conformance with these Specifications or from defects discovered in his work. Contractor shall remain responsible for all pre-construction sapling and testing.

B. Borrow and Fill: Contractor shall provide testing as defined below.

1. Gradation analysis for each type of borrow and on-site fill materials by ASTM D422.
2. Soil classification (ASTM D2487) and Moisture-Dry Density Curve (Proctor Test-Modified) by ASTM D1557 for all proposed fill and backfill materials at the frequency specified below:

   a. For suitable soil materials removed during Trench Excavation, perform one test for every 1,000 cubic yards of similar soil type. Similarity of soil types will be as determined by the Engineer.
   b. For borrow materials, perform tests from each proposed source, at a rate of one test for every 1,000 cubic yards of soil type. Similarity of soil types will be as determined by the Engineer.

3. Loss on Abrasion: Where called-for, AASHTO Method T 96.
4. Soundness: Where called-for, AASHTO Method T 104.

C. Compaction Testing: Owner will conduct compaction testing (i.e. ASTM D2922 and ASTM D3017 or ASTM D1556) at the frequency indicated below.

1. Trench: 1 test per lift, every 1,000 square feet or 200 feet of trench.
2. Embankment: 1 test per lift, every 1,000 square feet.
3. Additional compaction testing may be required when there is evidence of a change in the quality of moisture control or the effectiveness of compaction.
4. If all compaction test results within the initial 25% of the total anticipated number of tests indicate compacted field densities equal to or greater than 95% of maximum dry density at optimum moisture content, Engineer may reduce frequency of compaction testing. In no case will the frequency be reduced to less than one test for every 500 cubic yards of material backfilled.
5. If testing indicates that compacted subgrade, backfill, or fill are below specified density, additional compaction and/or replacement of material shall be provided at no expense to Owner.

D. Chemical Testing: Prior to delivery of any earth material to the Project Site, Contractor shall conduct chemical testing to demonstrate that such material is free of oils, hazardous materials, or other organic and non-organic constituents which may be considered contaminants.

1.12 EXCAVATED MATERIAL

A. Placement

1. Excavated material shall be so placed as not to interfere with travel or movement on existing streets, driveways, sidewalks or other areas designated to remain undisturbed. Excavated material shall not be deposited on private property without the written consent of the property owner(s) and approval of Engineer.
2. No excavated material shall be stored on top of installed pipe or other construction. Contractor shall consider surcharge loads when stockpiling excavated material adjacent to trenches, and take any measure required to prevent cave-in, including but not limited to, trench support systems and/or stockpiling excavated material remote from trench.

B. Suitable excavated material may be used for Common Fill or Backfill on other parts of the Work, if specifically approved by Engineer.

C. Material excavated from private property shall belong to the property Owner, or his representative, and shall be disposed of by the Contractor, as required by said Owner or his representative. If the Contractor fails to promptly remove such surplus material, Engineer may have the same done and charge the cost thereof as money paid to the Contractor.

D. Contractor shall be responsible for the proper disposal of all unsuitable excavated materials. Engineer shall determine what is suitable or unsuitable material where questions arise. Generally, unsuitable material shall include, but not be limited to, pavement (bituminous and concrete), large boulders, pipe, conduit and metal.

E. Contractor shall submit to Engineer, for approval, the location(s) to be utilized during the Contract period for waste material disposal. This approval must occur before any export of waste material from the project site. Any change in the disposal site during construction shall be submitted for approval.

1.13 SHEETING, SHORING AND BRACING

A. Provide earth retention systems as required by federal, state and local regulations. Shoring and bracing of trenches and other excavations shall be in accordance with the latest OSHA Standards and Interpretations, and to all other applicable codes, rules and regulations of federal, state and local authorities.

1.14 DRAINAGE

A. At all times during construction, Contractor shall temporarily provide, place and maintain ample means and devices with which to remove promptly, and dispose of properly, all water entering trenches and other excavations, or water that may flow along or across the site of the Work, and keep said excavations dry until the structures, pipes, and appurtenances to be built therein have been completed to such extent that they will not be damaged. At the conclusion of the work, Contractor shall remove such temporary means and devices.

B. All groundwater which may be found in the trenches and foundation excavations, and any water which may get into them from any cause whatsoever, shall be pumped or bailed out, so that the trench shall be dry during pipe laying and backfilling and during the placement of concrete.

C. All water pumped or drained from the Work shall be managed in accordance with applicable discharge permits, without undue interference with other work or damage to pavements, other surfaces, or property.

1.15 COORDINATION

A. Prior to commencing earthwork operations, meet with representatives of governing authorities, Engineer, testing entity, and other pertinent entities.

1. Review earthwork procedures and responsibilities including Contractor's schedule of operations, scheduling observation and testing procedures and requirements.
2. Notify participants at least three (3) working days prior to convening conference. Record discussions and agreements and furnish copies to each participant.
3. Contractor shall at all times so conduct his work as to insure the least possible inconvenience to the general public and the residents in the vicinity of the work. Fire hydrants on or adjacent to the work shall be kept accessible to firefighting equipment at all

times. Temporary provisions shall be made by Contractor to ensure the proper functioning of all gutters, sewer inlets, drainage ditches, and irrigation ditches, which shall not be obstructed except as approved by Engineer.

B. Benchmark/Monument Protection: Protect and maintain benchmarks, monuments or other established reference points and property corners. If disturbed or destroyed, replace at no cost to Owner.

C. Provide five (5) days advance notice to Engineer and testing entity for any proposed earthwork operation requiring observation and/or testing.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. All materials used in the work of this Section shall be Satisfactory Material, and any material that does not meet this classification shall be considered an Unsatisfactory Material and shall not be used.

B. Unsatisfactory Soils: Soil materials not meeting the requirements for Satisfactory Soils.

1. Unsatisfactory soils also include satisfactory soils not maintained within two (2) percent of optimum moisture content at time of compaction.

2.2 COMMON FILL/ORDINARY BORROW

A. Earth materials classified by ASTM D 2487 as GW, GP, GM, GP-GM, GW-GM, GP-GC, SW, SP, and SM that are free of clay.

B. Common Fill material is subject to the approval of Engineer and may be either material removed from excavations or borrow from off site. It shall have physical properties such that it can be readily spread and after it has been placed and properly compacted, it will form a dense, stable fill.

C. Common Fill shall be graded as follows:

Gradation of Common Fill

Sieve	Percent Passing by Weight
6”	100
3.5 ”	50-100
3/4”	50-90
No. 4	25-55
No. 200	0-20

1. Less than twenty (20) percent of material by weight passing the No. 4 sieve shall pass the No. 200 sieve.
2. Common Fill shall not be used at locations where use of select fill is indicated.

2.3 COMMON FILL/ORDINARY BORROW

A. Satisfactory Material that is well-graded meeting ASTM D 2487 classification group GW, GP, GM, SW, SP, and SM. No particle shall exceed 6-inches in size and no greater than 10% by weight of the material shall pass the No. 100 sieve and no greater than 5% by weight of the material shall pass the No. 200 sieve.

B. Common Fill is subject to the approval of Engineer and may be either material removed from on-site excavations or borrow pits or imported from off-site, approved sources. It shall have physical properties such that it can be readily spread and after it has been placed and properly compacted, it will form a dense, stable fill.

Bank Run Gravel

C. Granular material, well graded from fine to coarse, obtained from approved natural deposits and unprocessed, except for the removal of unacceptable material and stones larger than the maximum size permitted.

D. Bank Run Gravel shall be graded as follows:

Gradation of Bank Run Gravel (ConnDOT Grading “C”)

Sieve	Percent Passing by Weight
1 ½”	100
¾”	45-80
¼	25-60
No. 10	15-45
No. 40	5-25
No. 100	0-10
No. 200	0-5

2.4 GRANULAR FILL

A. Broken or crushed stone, gravel, or a mixture thereof.

B. Broken or crushed stone

1. The product resulting from the artificial crushing of rocks, boulders or large cobblestones, substantially all faces of which have resulted from the crushing operation. Broken or crushed stone shall consist of sound, tough, durable stone, reasonably free from soft, thin, elongated, laminated, friable, micaceous or disintegrated pieces.

C. Bank or crushed gravel

1. Sound, tough, durable particles of crushed or uncrushed gravel, free from soft, thin, elongated or laminated pieces and vegetable or other deleterious substances. Crushed gravel shall be the manufactured product resulting from the deliberate mechanical crushing of gravel with at least 50% of the gravel retained on the No. 4 sieve having at least one fractured face.

D. Granular Fill shall be graded as follows:

Gradation of Granular Fill (ConnDOT M.02.01 Grading “A”)

Sieve	Percent Passing by Weight
3 ½”	100
1 ½”	55-100
1/4”	25-60
No. 10	15-45
No. 40	5-25
No. 100	0-10
No. 200	0-5

2.5 SCREENED GRAVEL AND CRUSHED STONE

A. Screened gravel, well graded in size from 3/8 inch to 3/4 inch. The gravel shall consist of clean, hard, and durable particles or fragments. Crushed rock of suitable size and grading may be used instead of screened gravel.

B. Screened Gravel shall be graded as follows:

Gradation of Screened Gravel (ConnDOT Gradation No. 6)

Sieve	Percent Passing by Weight
1”	100
3/4”	90-100
1/2”	20-55
3/8”	0-15
No. 4	0-5

2.6 PROCESSED AGGREGATE BASE

A. Coarse aggregates and fine aggregates shall be combined and mixed by approved methods so that the resulting material shall conform to the following gradation:

Gradation of Processed Aggregate Base

Sieve	Percent Passing by Weight
2 1/2”	100
2”	95-100
3/4”	50-75
1/4”	25-45
No. 40	5-20
No. 100	2-12

B. Coarse Aggregate: Either gravel, broken stone or a combination thereof. When tested by means of the Los Angeles Machine, using AASHTO Method T 96, the coarse aggregate shall not have a loss of more than 50%.

1. If gravel is used for the coarse aggregate, it shall consist of sound, tough, durable particles of crushed or uncrushed gravel or a mixture thereof, free from soft, thin, elongated or laminated pieces, lumps of clay, loam and vegetable or other deleterious substances.
2. If broken stone is used for the coarse aggregate, it shall consist of sound, tough, durable fragments of rock of uniform quality throughout. It shall be free from soft disintegrated pieces, mud, dirt, organic or other injurious material.
3. Soundness for Gravel and Broken Stone: When tested by magnesium sulfate solution for soundness using AASHTO Method T 104, the coarse aggregate shall show a loss of not more than 15% at the end of 5 cycles.

C. Fine Aggregate: Natural sand, stone sand, screenings or any combination thereof. The fine aggregate shall be limited to material 95% of which passes a No. 4 (4.75-mm) sieve having square openings and not more than 8% of which passes a No. 200 (75-µm) sieve. The material shall be free from clay, loam and deleterious materials.

1. Plasticity: When natural sand is used, the fine aggregate shall conform to the following:

    a. When the fraction of the dry sample passing the No. 100 mesh sieve is 4% or less by weight (mass), no plastic limit test will be made.
    b. When the fraction of the dry sample passing the No. 100 mesh sieve is greater than 4% and not greater than 8% by weight (mass), that fraction shall not have sufficient plasticity to permit the performing of the plastic limit test using AASHTO Method T 90.
    c. When the fraction of the dry sample passing the No. 100 mesh sieve is greater than 8% by weight (mass), the sample will be washed; and the additional material passing the No. 100 mesh sieve shall be determined by AASHTO Method T 146, except that the No. 100 mesh sieve will be substituted for the No. 40 mesh sieve where the latter is specified in AASHTO Method T 146. The combined materials that passed the No. 100 mesh sieve shall not have sufficient plasticity to permit the performing of the plastic limit test using AASHTO Method T 90.

2. Plasticity: When screenings or any combination of screenings and natural sand or any combination of stone sand and natural sand are used, the following requirements shall apply:

    a. When the fraction of the dry sample passing the No. 100 mesh sieve is 6% or less by weight (mass), no plastic limit test will be made.
    b. When the fraction of the dry sample passing the No. 100 mesh sieve is greater than 6% and not greater than 10% by mass, that fraction shall not have sufficient plasticity to permit the performing of the plastic limit test, using AASHTO Method T 90.

c. When the fraction of the dry sample passing the No. 100 mesh sieve is greater than 10% by weight (mass), the sample shall be washed; and additional material passing the No. 100 mesh sieve shall be determined by AASHTO Method T 146, except that the No. 100 mesh sieve shall be substituted for the No. 40 mesh sieve where the latter is specified in AASHTO Method T 146. The combined materials that have passed the No. 100 mesh sieve shall not have sufficient plasticity to permit the performing of the plastic limit test using AASHTO Method T 90.

2.7 BEDDING

A. Slabs on grade

1. Granular Fill unless otherwise indicated.

B. Utilities

1. Unless otherwise indicated, bedding shall consist of screened gravel, maximum size 3/4 inches and minimum size 3/8 inches.
2. When clay, wet, soft or silty soil conditions prevail, 3/4-inch crushed stone shall be used for bedding of pipe.

2.8 SAND

A. Sand shall consist of clean, hard, durable, uncoated particles of quartz or other rock. It shall not contain more than 3% of material finer than a #200 sieve.

B. Organic Impurities: Fine aggregate subjected to the colorimetric test shall not produce a color darker than Gardner Color Standard No. 11, using AASHTO T 21. If the fine aggregate fails to meet this requirement, the provisions of AASHTO M 6, Section 5.2, will govern.

C. Sand shall be uniformly graded as follows:

Gradation of Sand

Sieve	Percent Passing by Weight
3/8”	100
No. 4	95-100
No. 8	80-100
No. 16	50-85
No. 30	25-60
No. 50	10-30
No. 100	2-10

D. The above gradation represents the extreme limits which shall determine suitability for use from all sources of supply. The gradation from any one source shall be reasonably uniform and not subject to the extreme percentages of gradation specified above. For the purpose of determining the degree of uniformity, a fineness modulus determination will be made upon representative samples from any source. Fine aggregate from any one source having a variation in fineness modulus greater than 0.20 either way from the fineness modulus of the representative sample will be rejected.

2.9 FLOWABLE CONCRETE FILL/BACKFILL (FLOWFILL)

A. Cementitious material, ACI 229R, comprised of cement, aggregates, fly ash, water, and admixtures, capable of being poured or pumped, self-leveling, self-curing to specified strengths.

B. Excavatable flowfill: Concrete strength shall be liquid enough to flow, be self-leveling and excavatable by hand methods. Unless otherwise specified, excavatable flowfill shall have a minimum 28 day compressive strength of 30 psi, and shall not exceed 100 psi.

C. Non-excavatable flowable: Concrete strength shall be liquid enough to flow and be self-leveling and excavatable by machine equipment. Unless otherwise specified, non-excavatable flowfill shall have a minimum 28-day compressive strength of 125 psi, and shall not exceed 200 psi.

2.10 DETECTABLE WARNING TAPE

A. Acid and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, minimum 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:

1. Red: Electric power lines, electric power conduits and other electric power facilities.
2. Blue: Water.
3. Orange: Communication lines or cables, including but not limited to telephone, fire signals, cable television, and electronic controls.
4. Green: Storm drainage and sanitary sewer systems, including force mains and other non-hazardous materials.

PART 3 - EXECUTION

3.1 PREPARATION

A. Notify “Call-Before-You-Dig” to request a utility mark-out for the Project Site prior to any earth disturbance. Provide written confirmation to Engineer that such mark-out has been completed.

B. Verify site conditions before proceeding with demolition work. Field check the accuracy of the Drawings and inspect structures, utilities, and other site features prior to start of work and notify Engineer in writing, of any discrepancies or hazardous conditions.

C. Take precautions for preventing injuries to persons or damage to property in or about the work. Protect structures, utilities, sidewalks, pavements and other improvements from damage caused by settlement, lateral movement, undermining, washout and other hazards created by earthwork operations.

D. Protect sub-grades and foundation soils against freezing temperatures or frost. Provide protective insulating materials as necessary.

E. Provide erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

F. When excavations are to be made in paved surfaces, the pavement shall be removed so as to provide a clean uniform edge with a minimum disturbance of remaining pavement. Saw cutting the pavement to provide a clean, uniform edge shall unless otherwise indicated.

G. If pavement is removed in large pieces, it shall not be mixed with other excavated material, but shall be disposed of away from the site of the Work before the remainder of the excavation is made.

3.2 CLEARING AND GRUBBING

A. Clear, grub, remove, and dispose of all vegetation and debris within the limits of construction, as designated on the plans or as required by Engineer. Contractor shall remove only those trees and shrubs absolutely necessary to allow for the construction. The work shall also include the preservation from injury of defacement of all vegetation or object designated to remain.

B. Refer to Section 31 1100 – Clearing and Grubbing.

3.3 PROTECTION OF EXISTING FEATURES

A. General

1. Protect all existing improvements from damage unless those improvements are specifically designated for permeant removal, relocation, or temporary removal and replacement.
2. As excavation approaches underground structures, digging by machinery shall be discontinued and the excavation shall be done by means of hand tools.
3. Pavements: On paved surfaces to remain, do not use or operate tractors, bulldozers, or other power operated equipment, the treads or wheels of which are so shaped as to cut or otherwise damage such surfaces. All surfaces, which have been damaged by Contractor's operations, shall be restored to a condition at least equal to that in which they were found immediately prior to the beginning of operations. Suitable materials and methods shall be used for such restoration.

B. Utilities

1. Existing utilities remaining in service, including those remaining in service until after relocation, and relocated utilities shall be protected from damage. Before excavating near any existing utilities, notify the utility owner, coordinate protective work and comply with the utility owners' requirements. Coordinate with respective utility owners/operators as required.
2. Safeguard and protect from damage or movement any existing services, utilities, and utility structures uncovered or encountered which are to remain in service.
3. All utility services shall be supported by suitable means so that the services shall not fail when tamping and settling occurs.
4. Where known utilities are encountered, notify Engineer and document location and type of utility before proceeding with work in such area.
5. When uncharted or incorrectly charted piping or utilities are encountered during excavation, stop work and notify Engineer immediately. Cooperate with the utility owners in maintaining their utilities in operation prior to resuming work.

C. Retaining Structures: Provide bracing, shoring, sheeting, sheet piling, underpinning or other retaining structures necessary to guard against any movement or settlement of existing or new construction, utility systems, paving, or other improvements. Assume responsibility for the

strength and adequacy of retaining structures, and for the safety and support of construction, utilities or paving, and for any movement, settlement or damage thereto. Retain the services of a licensed engineer as required to design bracing, shoring, sheeting, sheet piling, underpinning or other retaining structures.

D. Replacement and Relocation

1. In case of damage, Contractor shall notify the appropriate party so that proper steps may be taken to repair any and all damage done. When the Owner does not wish to make the repairs themselves, all damage shall be repaired by Contractor, or, if not promptly done by him, Engineer may have the repairs made at the expense of Contractor.
2. If certain existing structures are encountered that in the opinion of Engineer require temporary or permanent relocation or removal, Engineer may order in writing that Contractor undertake all or part of such work or to assist the Owner in performing such work. For such occurrences, Contractor shall be compensated as applicable, as extra work.
3. In removing existing structures, Contractor shall use care to avoid damage to the material, and Engineer shall include for payment only those new materials, which, in his judgment, are necessary to replace those unavoidably damaged.
4. The structures to which the provisions of the preceding two paragraphs shall apply include structures which (1) are not indicated on the Drawings or otherwise provided for, (2) encroach upon or are encountered near and substantially parallel to the edge of the excavation, and (3) in the opinion of Engineer will impede progress to such an extent that satisfactory construction cannot proceed until they have been changed in location, removed (to be later restored), or replaced. (See Item 3.19, "Sub Surface Obstructions" also).

3.4 DEWATERING

A. Comply with all applicable permit requirements.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrade and from flooding Project site and surrounding area.

C. Protect sub-grades from softening, undermining, washout and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.
2. Install de-watering system to keep subgrades dry and convey ground water away from excavations.

3.5 EXCAVATION

A. Dust Control: During the progress of the Work, Contractor shall conduct his operations and maintain the area of his activities in order to minimize the creation and dispersion of dust. Refer to Section 01 5714- Temporary Dust Control.

B. Excavate to the exact elevations shown on the plans, or as directed by Engineer. Where no dimensions are indicated, make excavations in such manner, and to such depths, elevations, and dimensions, that will give suitable room for construction of the work indicated on the Drawings. As applicable for utility installations, comply with trench limits shown on the Drawings.

C. Furnish and place all sheeting, bracing, and supports, and render the bottom of the excavation firm and dry, and in all respects, acceptable for construction of the work.

D. If Contractor excavates below the elevations specified on the plans, beyond the limits indicated on the plans, or where no dimensions are indicated, beyond depths, elevations, and dimensions reasonably necessary for construction of the work, Contractor shall bring the excavation back to the proper elevation and/or dimension by backfilling with Suitable Material that is approved by Engineer in accordance with the backfilling provisions specified herein. Engineer, or if applicable Geotechnical Engineer, shall have sole authority in determining the specific composition of such Suitable Material.

1. Any increase in cost resulting from Unauthorized Excavation, including but not necessarily limited to backfilling, haul-off, increasing the size of footings or foundations, testing, schedule impact, or administrative impact shall be at Contractor's sole expense.

E. If utilities are to be laid in new embankments, or other new fill areas which are more than 12 inches deep below the invert of the pipe, the fill material shall be placed and properly compacted to final grade or to a height of at least 3 feet above the top elevation of the pipe, whichever is the lesser, before laying pipe. Particular care shall be taken to ensure maximum consolidation of material under the pipe location. The pipe trench shall then be excavated as though in undisturbed material.

3.6 TRENCH EXCAVATION

A. In general, trenches shall be excavated to such depth as will provide a cover depth as indicated on the Drawings from finished grade to the top of the pipe barrel. Deeper trenches shall be provided where necessary on account of the conformation of the ground and to permit the alignment of the pipe without undue deflection of joints.

B. Trenches shall be excavated by hand or machinery to the width and depth indicated on the Drawings and specified herein. Depth shall account for thickness of the pipe and thickness of bedding. All loose materials shall be removed from the bottom of the trench so that the bottom of the trench will be in an undisturbed condition.

C. If in the opinion of Engineer, the material at or below the depth to which excavation for structures and pipes would normally be carried is unsuitable for foundation, it shall be removed to such widths and depths as directed and replaced with suitable material.

D. Trench widths shall be 3 feet greater than the nominal inside diameter of pipe for such diameters of 36 inches or less. For diameters greater than 36 inches, the width shall be 4 feet greater than nominal inside diameter. Trench excavation for manholes, catch basins, drop inlets, etc. shall be two (2) feet outside the neat lines of the foundations. These limits may be adjusted for field conditions at the direction of Engineer.

E. Bedding for pipe and utility structures will be as detailed on the Drawings.

3.7 APPROVAL OF SUBGRADE

A. Notify Engineer, and Geotechnical Engineer if applicable, when excavations have reached required subgrade elevation.

B. If Engineer and, if applicable, Geotechnical Engineer determines that Unacceptable Material is present, continue excavation of such Unacceptable Material and replace with approved Satisfactory Materials as directed. The replacement of Unacceptable Material with Satisfactory Materials will be paid for as a change in the work according to applicable provisions of the contract.

C. Protect subgrade from disturbance at all times. Reconstruct sub-grades damaged by freezing temperatures, frost, rain, accumulated water or construction activities, as directed by Engineer. Excavation and replacement with structural fill of any disturbed or softened materials resulting from inadequate preparation, inadequate dewatering, or inadequate protection, shall be at Contractor's sole expense.

3.8 FILL AND BACKFILL

A. Fill: Contractor shall remove loam and topsoil, loose vegetable matter, stumps, large roots, etc., from areas upon which embankments will be built or material will be placed as fill to adjust subgrade prior to final grading. The subgrade shall be prepared by forking, furrowing, or plowing such that the first layer of the new material placed thereon, will be well bonded to it.

B. Backfill: Common Fill material may be used as backfill when indicated on the Drawings or when authorized by Engineer (or as applicable Geotechnical Engineer) if Contractor can achieve required minimum dry density after compaction. Backfilling shall be done as promptly as is consistent with non-injury to pipe or structures, but no backfilling shall be done before Engineer (or as applicable Geotechnical Engineer) gives permission.

C. Frozen material shall not be placed in any fill or backfill, nor shall any fill or backfill be placed upon frozen material. Previously frozen material shall be removed, or shall be otherwise treated as required, before new fill or backfill is placed.

D. After the subgrade has been prepared, fill material shall be placed thereon and built up in successive layers not exceeding twelve (12) inches before compaction until it has reached the required elevation.

1. When gravel fill or other material is used for foundation of structures, it shall be spread in layers of uniform thickness not exceeding six (6) inches before compaction.

E. Upon completion of filling and backfilling, all surplus material shall be removed and surfaces to remain which are affected in any way by the work restored to the condition in which they were before ground was broken. All surplus materials shall become the property of Contractor. If Contractor fails to promptly remove such surplus materials, Engineer may have the same done and charge all associated costs to Contractor, including deduction from payments due.

3.9 BACKFILLING UTILITIES

A. As soon as practical after utility has been placed into bedding and joints properly made, backfilling shall begin, and shall continue without delay.

B. Placement of bedding over pipe prior to placement of backfill shall be as indicated on the Drawings. Hand-place bedding at the sides of the pipe and to the limits indicated on the Drawings over the pipe. Bedding placed over pipe shall be in 6-inch layers, leveled along the length and width of the trench and thoroughly compacted with approved tampers.

C. Install warning tape as indicated o the Drawings unless otherwise specified by the utility owner/operator.

3.10 BACKFILLING AT STRUCTURES

A. No backfill shall be deposited against concrete until the concrete has obtained sufficient strength to withstand the earth pressure placed upon it and in no case less than seven days, nor before carrying out and satisfactorily completing the tests for watertight structures specified elsewhere.

B. Prior to placing backfill, subgrade shall be thoroughly compacted. Soft or loose material evident during compaction shall be removed and replaced with Granular Fill.

C. Fill placed around arches, rigid frames, box culverts and piers shall be deposited on both sides of the structure to approximately the same elevation at the same time. Each layer of backfill shall be spread to a thickness not exceeding 6 inches deep after compaction and shall be thoroughly compacted by the use of power rollers or other motorized vehicular equipment, by tamping with mechanical rammers or vibrators, or by pneumatic tampers. Any equipment not principally manufactured for compaction purposes or which is not in proper working order in all respects shall not be used within the area described above.

D. Bring backfill to sub-grade elevations. Slope backfill at exterior of building to drain water away from building.

3.11 COMPACTION

A. Each layer of fill or backfill material shall be compacted by the use of compaction equipment consisting of rollers, compactors or a combination thereof. Earth-moving and other equipment not specifically manufactured for compaction purposes will not be considered as compaction equipment. At such points as cannot be reached by mobile mechanical equipment, or where such equipment is not permitted, the materials shall be thoroughly compacted by the use of suitable power- driven tampers.

B. Previously placed or new materials shall be moistened by sprinkling, if required, to ensure proper bond and compaction. No compacting shall be done when the material is too wet, from either rain or application of water, to compact it properly. At such times the work shall be suspended until the previously placed and new materials have dried out sufficiently to permit proper compaction, or such other precautions shall be taken as may be necessary to obtain proper compaction.

C. Special attention shall be given to compaction in places close to walls where motorized vehicular compaction equipment cannot reach. Within 3 feet of the back face of walls and within a greater distance at angle points of walls, each layer of backfill shall be compacted by mechanical rammers, vibrators or pneumatic tampers.

D. Each layer of fill or backfill shall be compacted at optimum moisture content. No subsequent layer shall be placed until the specified compaction is obtained for the previous layer.

E. Compaction Density: Compaction density shall be expressed as a percentage of maximum dry density at optimum moisture content according to ASTM D 1557 Method C. Density indicated is minimum required.

1. Under structures, building slabs, and steps: 95 %

2. At building foundations: 95 %
3. Utilities, below pipe centerline: 95%
4. Utilities below unpaved surface, above pipe centerline: 92%
5. Utilities below paved surface, above pipe centerline: 95%
6. Embankments: 92%
7. Landscaped areas: 90 %.
8. Natural grass athletic fields and similar recreational fields: 93%

3.12 SUBSURFACE OBSTRUCTIONS

A. As a general rule, sub-surface obstructions encountered along the route of the pipeline shall be considered as follows:

1. Crossing Obstruction: All pipes, conduits, wires, etc. of whatever nature whose centerline lies at an angle of 20 degrees or greater to the centerline of the pipe being installed shall be considered as crossing obstructions and shall be protected, or repaired or replaced if damaged, or relocated, all at no additional cost to the Owner.
2. Interfering Obstructions: All pipes, conduits, wires, etc. of whatever nature whose centerline lies at an angle of less than 20 degrees, but more than 5 degrees to the centerline of the pipe being installed, shall be considered as interfering obstructions. Costs for supporting such obstructions in place during installation of the new pipe shall be paid for by the Owner. Costs for supporting interfering obstructions shall not be construed to include any costs for excavation. Repairing or replacing damaged interfering obstructions, or relocation shall be accomplished at no additional cost to the Owner.
3. Parallel Obstructions: All pipes, conduits, wires, etc. of whatever nature whose centerline lies at an angle of 5 degrees or less, or is truly parallel and less than 0.5 feet offset from outside the normal trench limits, as specified in Subarticle 3.5 B. of this Section, of the pipe being installed, shall be considered parallel obstructions. Costs for supporting such obstructions in place during installation of the new pipe, including excavation, may be paid for by the Owner, or Owner may elect to pay for the cost of replacing such obstructions. Should Owner first elect to pay the cost of supporting the obstruction and then elect to pay the cost of replacing the obstruction, approved costs for supporting the obstruction, including excavation, incurred prior to electing replacement costs shall also be paid. After Owner elects to pay replacement costs, only replacement costs will be paid for all additional work in the vicinity of the parallel obstruction.
4. Angle measurement between centerline of obstructing pipe, conduit, wire, etc. and centerline of the pipe being installed shall be taken from between the horizontal projection of the centerlines at ground surface. Parallel offset distance between centerline of obstructing pipe, conduit, wire, etc. and the outside of normal trench limits of the pipe being installed shall be taken from between the horizontal projection of the centerlines and outside trench limit at ground surface.

END OF SECTION 312310

SECTION 312319 – DEWATERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes:

1. Removal of surface water and ground water as necessary to perform the construction required by the contract.
2. Constructing, installing, building, and maintaining all necessary temporary water extraction and management facilities.
3. Furnishing, installing, and operating all necessary pumps, piping, and other equipment.
4. Complying with all applicable approvals, authorizations or permits associated with the management of dewatering wastewaters.
5. Removing all such temporary works and equipment after their intended function is no longer required.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. Connecticut Department of Energy and Environmental Protection (DEEP)

1. Connecticut Guidelines for Soil Erosion and Sediment Control, State of Connecticut Council on Soil and Water Conservation, 2023.
2. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Stormwater and Dewatering Wastewaters Associated with Construction Activities, (DEEP-WPED-GP-015), latest issue.

3. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Groundwater Remediation Wastewater to a Sanitary Sewer (DEP-WD-GP-007), latest issue.
4. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Groundwater Remediation Wastewater Directly to Surface Water (DEP-PED-GP-020), latest issue.
5. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Groundwater Remediation Wastewater Directly to Surface Water (DEP-PED-GP-020), latest issue.

D. Regulations of Connecticut State Agencies (RCSA)

1. RCSA Section 22a-372-1, 22a-377(b)-1, 22a-377(c)-1, 22a-377(c)-2, Water Diversion.
2. RCSA Section 22a-430-3 through 4, General Conditions Applicable to Water Discharge Permits and Procedures and Criteria for Issuing Water Discharge Permits.
3. RCSA Section 22a-430-8, Underground Injection Control.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DESCRIPTION OF THE WORK

A. Prevent surface water and subsurface or groundwater from flowing into excavations or earthwork areas which would cause flooding of the Project Ste and surrounding area, or softening or loosening of the soil at excavation or earthwork subgrade.

B. Provide adequate and satisfactory dewatering and drainage of excavations and furnish all materials and equipment and do all incidental work required in conjunction with the furnishing, installing, and maintaining of same to permit proper and timely completion of all work required.

C. Contractor may choose any satisfactory dewatering method he wishes subject to the approval of Engineer, provided such method performs the dewatering required and complies with applicable approvals, authorizations and permits.

D. Contractor shall assume all responsibility for the adequacy of the methods, materials, and equipment employed. Contractor shall take all precautions necessary to prevent loosening or softening of the subgrade. In this regard, Contractor shall at all times be prepared to alter his construction method or sequence.

E. The work shall be maintained dry until the structures (building slabs and footings, paved area, pipe, drainage structure, embankments, etc.) are completed.

F. All dewatering required by pumping and drainage shall be performed without damage to the excavation, pipe trench, pavements, pipes, electrical conduits, other utilities and any other work or property. Existing or new sanitary sewers shall not be used to dispose of drainage.

1.6 SUBMITTALS

A. Dewatering Plan: Prior to installation of the dewatering system, submit design data showing the following, for review by Engineer:

1. Locations and associated construction where dewatering is required.
2. Specific methods and devices proposed for dewatering.
3. Details on protection at the inlet and outlet of pumps, method for floating the pump intake, or other methods to minimize and retain the sediment.
4. Proposed location of dewatering discharge and details of infiltration basins or other discharge location. Per the General Permit, where feasible and appropriate, dewatering wastewaters will be infiltrated into the ground.
5. Details on any containment berm construction when dewatering earth materials.
6. Identification of a contingency plan for emergency operations should the dewatering operation prove inadequate to meet the dewatering need or is found to be causing unacceptable turbidity problems (e.g., alternative discharge locations or use of a portable sediment tank). If turbidity or siltation problems are not adequately controlled by the contingency plan, then the operation will be ceased and a revised dewatering plan submitted for approval prior to further implementation.

1.7 REGULATORY COMPLIANCE

A. Comply at all times with the following as applicable to the Project:

1. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Stormwater and Dewatering Wastewaters Associated with Construction Activities, (DEP-PED-GP-015), latest revision. Conditions of such permit, other conditions of approval or authorizations, and any Stormwater Pollution Prevention Plans shall become part of the Contract Documents.
2. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Groundwater Remediation Wastewater to a Sanitary Sewer (DEP-PERD-GP-007), latest revision. The conditions of such permit, other conditions of approval or

authorizations, and any supplemental plans shall become part of the Contract Documents.

3. Connecticut Department of Energy and Environmental Protection General Permit for the Discharge of Groundwater Remediation Wastewater Directly to Surface Water (DEP-PED-GP-020), latest revision. The conditions of such permit, other conditions of approval or authorizations, and any supplemental plans shall become part of the Contract Documents.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 JOB CONDITIONS

A. Surface Drainage: Intercept and divert precipitation, and surface water, away from excavations through the use of temporary diversion swales, temporary sediment traps, pipes, sumps or other approved means.

B. Drainage of Excavated Areas: Provide and maintain ditches of adequate size to collect surface and seepage water, which may enter the excavations. Divert the water into sumps and storm drains or pump into drainage channels or storm drains. When water is to be diverted into a storm drain, provide dewatering settling basins, or other accepted apparatus, such as fractionation tanks, as required to reduce the amount of fine particles, which may be carried into the drain. If a storm drain becomes blocked due to dewatering operation, it shall be cleaned by the Contractor at his own expense.

3.2 DEWATERING

A. Where feasible and appropriate, dewatering wastewaters will be infiltrated into the ground. Dewatering wastewaters discharged to surface waters will be discharged in a manner that minimizes the discoloration of the receiving waters. The following measures will be employed to ensure that dewatering wastewaters will not cause scouring or erosion or contain suspended solids in amounts that could reasonably be expected to cause pollution:

B. Divert surface waters away from areas needing dewatering.

C. Consider if well points and sumps can be used to lower the groundwater table reducing the need for settling facilities.

D. For sites that don’t require continuous pumping, pump work areas before construction activities begin each work day.

E. Provide filtration near the suction intake.

F. Locate pumps, intake sumps, and other intake structures in areas which will not require constant moving, when possible.

G. Locate pump discharge facilities (portable, permanent, or bio-filtering structures) such that a minimum disturbance of existing wetlands and watercourses is incurred.

H. Provide protection at outlets from pumping operations to dissipate pumping surges and prevent erosion at the point of discharge.

I. Maintain the water level at such lowered elevations that no danger to structures can occur because of the buildup of excessive hydrostatic pressure on the subgrade, or bottom of trench, unless otherwise permitted by Engineer.

J. Do not allow water to accumulate in excavations. At all times during construction, provide ample means and devices with which to remove promptly and dispose properly of all water entering roadway, trench, and structure excavations and keep them dry until the structures to be built thereon are completed.

K. No pipe/culvert/structure shall be laid in water. No masonry shall be laid in water, and no water shall be allowed to rise over masonry (either concrete or brick) in 24 hours after being placed. Nor shall moving water be allowed to rise over masonry for four days. In no event shall water be allowed to rise so as to set up unequal pressures in the structures until the concrete or mortar has set at least 24 hours. The Contractor shall constantly guard against the possibility of flotation of pipe or structures after installation. He shall place adequate backfill promptly in accordance with Section 31 2310 - Earthwork to prevent this occurrence, and his method of handling drainage and carrying on these operations shall always be adequate to prevent flotation.

END OF SECTION 312319

SECTION 312543 – GEOTEXTILES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Furnishing and installation geotextile materials for the separation of earth materials.
2. Furnishing and installation geotextile materials for the stabilization of earth materials.

A. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

B. Contractor is responsible for all health and safety.

1.3 REFERENCES

C. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 819 and any supplements.

B. ASTM International (ASTM).

1. ASTM D4355 – Standard Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus.
2. ASTM D4491 – Standard Test Methods for Water Permeability of Geotextiles by Permittivity.
3. ASTM D4533 – Standard Test Method for Trapezoid Tearing Strength of Geotextiles.
4. ASTM D4632 – Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.
5. ASTM D4751 – Standard Test Method for Determining Apparent Opening Size of a Geotextile.
6. ASTM D4873 – Guide for Identification, Storage, and Handling of Geotextiles.
7. ASTM D6241 – Standard Test Method for Static Puncture Strength of Geotextiles and Geotextile-Related Products Using a 50-mm Probe.
8. ASTM D6706 – Standard Test Method for Measuring Geosynthetic Pullout Resistance in Soil.

C. Code of Federal Regulations (CFR)

1. 29 CFR Part 1926 Subpart P – OSHA Excavation Regulations 1926.560 through 1926.562 including Appendices A through F.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section.

1.6 SUBMITTALS

A. Submit to Engineer for approval material specifications, manufacturer’s product data, manufacturer’s installation guidelines, and shop drawings for all materials furnished under this Section.

B. Connection details for geotextile.

C. Proposed mechanical connection devices.

1.7 DELIVERY, STORAGE AND HANDLING

A. Geotextile labeling, shipment, and storage shall follow ASTM D4873. Product labels shall be clearly labeled and/or marked to specifically identify each product and clearly show the manufacturer’s name, style name, and roll number.

B. Each geotextile roll shall be wrapped with a material that will protect the geotextile from damage due to shipment, water, sunlight, and contaminants. Protect rolls from crushing or abrasion during shipping and hauling.

C. Geotextile shall be stored on a prepared surface (not wooden pallets) and should not be stacked more than two rolls high. Storage shall be such that the geotextile is protected from puncture, dirt, grease, water, moisture, mud, mechanical abrasions, excessive heat or cold, or other damaging circumstances. Temporary storage at the Project Site shall be away from standing water such that crushing or flattening of roll goods does not occur.

PART 2 - PRODUCTS

2.1 SEPARATION GEOTEXTILE

A. Separation Geotextile shall be utilized to separate layers of earth materials in utility trenches, drains, layered systems and similar installations in a non-structural configuration.

1. Composition: Woven geotextile made of 100% polypropylene slit film yarns.
2. Physical properties:

Mechanical and Physical Properties of Separation Geotextile

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Grab Tensile Strength, Ultimate	ASTM D4632	Pounds	120
Grab Tensile Strength, Elongation at Ultimate	ASTM D4632	Percent (%)	50
Trapezoid Tear Strength	ASTM D4533	Pounds	50
CBR Puncture Strength	ASTM D6241	Pounds	310
Apparent Opening Size (AOS)	ASTM D4751	(U.S. Sieve)	70
Permittivity	ASTM D4491	sec^{-1}	1.7
Flow Rate	ASTM D4491	$gal/min/ft^2$	135
UV Resistance (at 500 hours)	ASTM D4355	% strength retained	70

2.2 LIGHT-DUTY STABILIZATION GEOTEXTILE

A. Light-Duty Stabilization Geotextile shall be utilized under temporary sidewalks and unit pavers when called-for.

1. Composition: Woven geotextile made of 100% polypropylene slit film yarns.
2. Physical properties:

Mechanical and Physical Properties of Light-Duty Stabilization Geotextile

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Tensile Strength @2% Strain (MD/CD)	ASTM D4595	Pounds/foot	600/600
Tensile Strength @5% Strain (MD/CD)	ASTM D4595	Pounds/foot	1620/1620
Flow Rate	ASTM D4491	Gal/min/ ft^2	70
Permittivity	ASTM D4491	sec^{-1}	90
Apparent Opening Size (AOS)	ASTM D4751	(U.S. Sieve)	40
Interaction Coefficient	ASTM D6706	-	0.89
UV Resistance (at 500 hours)	ASTM D4355	% strength retained	90

MD – Machine Direction
CD – Transverse (Crosswise) Direction

2.3 STABILIZATION GEOTEXTILE

A. Stabilization Geotextile shall be utilized for stabilization of subgrades where unsuitable subsurface soil conditions are present. Stabilization geotextile shall only be utilized with the approval of Engineer.

1. Composition: Woven geotextile made of 100% polypropylene slit film yarns.
2. Physical properties:

Mechanical and Physical Properties of Stabilization Geotextile

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Grab Tensile Strength, Ultimate (MD/CD)	ASTM D4595	Pounds/foot	7200/5760
Tensile Strength at 2% Strain	ASTM D4595	Pounds/foot	1370/1560
Tensile Strength at 5% Strain	ASTM D4595	Pounds/foot	3600/3600
Tensile Strength at 10% Strain	ASTM D4595	Pounds/foot	6600/5760
Flow Rate	ASTM D4491	Gal/min/ ft^2	15
Permittivity	ASTM D4491	sec^{-1}	0.23
Apparent Opening Size (AOS)	ASTM D4751	(U.S. Sieve)	20
UV Resistance (at 500 hours)	ASTM D4355	% strength retained	80

MD – Machine Direction
CD – Transverse (Crosswise) Direction

PART 3 - EXECUTION

3.1 GENERAL

A. Install geotextile as shown on the Drawings or as called-for in the Specifications. Follow manufacture's guidelines.

B. Ensure that geotextile is protected during installation from clogging, tears, and other damage.

3.2 PIPE OR DRAINAGE SYSTEMS

A. Provide smooth side and bottom trench surfaces so the fabric does not bridge depressions in the soil and is not damaged by rock projections.

B. Use fabric of a width to permit a minimum trench-width overlap across the backfill at the trench top.

C. Lay the fabric flat in the prepared trench without stretching. Lay the top of the fabric back on the sides to allow for the placement of the aggregate backfill and pipe.

D. Overlap ends of rolls an amount equal to the trench width prior to fabric placement. Where pockets or cavities occur in the trench bottom or sides, fill them with acceptable granular material to prevent distortion or damage to the fabric.

E. Backfill aggregate and install pipe in a manner to prevent damage to the fabric. Compact aggregate backfill and overlap the fabric across the trench top. Do not allow the fabric to be exposed for more than 2 weeks without covering with backfill.

3.3 LAYER SEPARATION AND/OR STABILIZATION

A. Place fabric on a normally prepared subgrade area attending the full width of the sub-base layer being protected.

B. Place fabric in a loose and unstretched condition to minimize shifting, puncture, and/or tearing. Overlap fabric roll-ends and edges a minimum of 12 inches with adjacent material.

C. Place subbase material within 2 weeks after placement of fabric to minimize exposure. Place sub-base material in a manner to minimize slippage of the fabric. If excessive slippage occurs, use steel securing pins per manufacturer's guidelines.

END OF SECTION 312543

SECTION 314143 – SHEETING AND STAYBRACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes

1. Shoring and bracing necessary to protect existing buildings, existing culvert, streets, walkways, utilities, and other improvements and excavation against loss or ground caving embankments.
2. Maintenance of shoring and bracing.
3. Removal of shoring and bracing, as required.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges and Incidental Construction, Form 819, and any supplements.

C. Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DESCRIPTION OF THE WORK

A. Contractor shall install sheeting or staybracing as necessary in order to comply with the Applicable Safety Code; to accommodate traffic; to permit access to existing utilities; to provide an opening of proper depth and width in which to install the proposed pipes and other underground structures; and to protect his workmen, employees of the Owner and (Insert Name), State and the public, from death or injury from bank failure, earth collapse or earth movement of any nature whatsoever. In general, all trenches and excavations over 5 feet in depth, any other unstable excavations or excavations in unstable material, shall be protected against the hazard of collapse.

1.6 SHEETING/STAYBRACING DESIGN

A. Contractor shall be entirely and solely responsible for the adequacy and sufficiency of all supports and for all sheeting, bracing, shoring, underpinning, cofferdamming, etc. The Contractor shall assume the entire and sole responsibility for damages on account of injury to persons or damage to adjacent pavements and public and private property (including but not limited to, the Work under construction, existing buildings, facilities, etc.) which injury or damage results directly from said Contractor's failure to install, or to leave in place, adequate and sufficient supports, sheeting, bracing, underpinning, cofferdamming, etc.

B. Contractor shall submit, in triplicate, a detailed written description of the equipment and sheeting methods he proposes to use to Engineer prior to the installation of any sheeting and/or shoring. These plans should include, but not be limited to, the type of sheeting or shoring, sizes and dimensions, bracing, spacing, methods of installation and removal, etc.

C. All sheeting shall be designed and sealed by a Professional Engineer licensed to practice in the State where the Work is being performed. He shall be known as the Contractor's Engineer. Sheeting computations and sketches shall be submitted for Engineer's review.

1.7 SHEETING LEFT-IN-PLACE

A. Sheeting, shoring or other timbering may be left-in-place at the option of the Contractor when needed to protect other existing facilities or the Work built or to be built under this Contract. However, steel sheeting left-in-place will be paid for only where specifically shown as "Steel Sheeting Left-in-Place" on the Contract Drawings or where ordered by Engineer.

B. It is expressly understood and agreed that removing or leaving-in-place any sheeting or shoring, etc., as noted above, shall not relieve the Contractor from any responsibility for any loss damage whatever due to omission of, or failure of, the sheeting, etc., failure to leave it in place, or the settling of the backfill, or any movement of the ground or any structure or object adjacent to any trench or excavation made by Contractor. Engineer will not order sheeting left-in-place at the expense of the Owner in order to accommodate the convenience of the Contractor or to save him the cost of its removal.

1.8 OPTIONAL METHOD OF TRENCHING

A. Contractor may, with the approval of Engineer, lay back slopes in accordance with the provisions of the Applicable Safety Code in order to avoid the necessity of sheeting or limiting the quantity thereof. However, in the case of trenches, the toe of this slope will not be lower than one foot above the top of the pipe to be installed. A level bench of at least two (2) feet in width shall be maintained between the toe of the sloped section and vertical trench excavation for pipes with an outside diameter of six (6) feet or less; for pipes with an outside diameter over six (6) feet, a minimum four (4) foot bench shall be provided. Where sloping is used as a substitute for sheeting or staybracing, or used in combination therewith, it shall be sloped a minimum of one horizontal to one vertical except where instability of the material requires a slope flatter than one to one. If the Contractor elects and is allowed to lay back the slopes, there will be no additional payment made for the extra excavation outside of the normal trench or structure excavation payment limits.

1.9 RESPONSIBILITY OF ENGINEER

A. There shall be no obligation on the part of Engineer to issue orders for sheeting, staybracing or sheeting left-in-place and/or to pass upon sufficiency and adequacy of sheeting; nor shall the failure on the part of Engineer to give such orders relieve the Contractor from liability for damages occasioned by negligence, or otherwise growing out of the Contractor's failure to either install sufficient and adequate sheeting and/or staybracing or to leave in place in the excavation sufficient and adequate support to prevent the caving in or moving of the ground adjacent to the sides of the excavation during and after the backfilling operation.

PART 2 - PRODUCTS

2.1 WOOD STAYBRACING

A. Wood Staybracing

2.2 STEEL SHEETING

A. Steel sheeting: continuous and interlocking sheets, ASTM A-328.

2.3 TRENCH BOXES

A. Trench boxes shall not be used unless requested by the Contractor and authorized by Engineer. If authorized, they shall be used only when the protection of workmen is involved, not

for support of existing adjacent utilities, structures, embankments, etc. A trench protected by the use of a trench box shall not be considered a sheeted trench.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Unless expressly authorized by Engineer, sheeting shall be driven ahead of the excavation to avoid loss of material from behind the sheeting. If it is necessary to excavate below the sheeting to facilitate driving, care shall be taken to avoid trimming behind the face along which the sheeting will be driven. Care shall be taken to prevent voids outside of the sheeting.

B. All sheeting and staybracing shall be securely installed and properly braced in accordance with the Applicable Safety Code. Engineer may direct the Contractor at any time in writing to have sheeting, bracing, etc. in place to be embedded in backfill or concrete for the purpose of preventing subsequent injury to structures and property.

C. The depth of pilot cuts for trenches/structures shall not exceed five (5) feet in depth at any time. Engineer may reduce the depth of the pilot cut should the soil and subsurface conditions warrant such action. Sheeting must be driven by drop hammer or other methods approved in writing by Engineer below the area of the pilot cut. Driving of sheeting above the pilot cut is subject to the directions of Engineer. Engineer may direct the Contractor to use other types of equipment, and to revise the procedure during the excavation of the pilot cut and the driving of the sheeting should it be found necessary to do so.

D. Vibratory driving hammers shall not be used unless specifically authorized by Engineer.

E. Where sheeting is specified to be left-in-place, it shall be wood sheeting unless otherwise specifically noted on the Contract Drawings. Where wooden sheeting cannot be driven due to the nature of the material, then steel sheeting may be driven and removed in lieu of the wooden sheeting providing the following procedures are followed:

1. Simultaneously with the withdrawal of sheeting and as each layer is compacted in accordance with Section 312310 - Earthwork; or
2. The trench/area will be backfilled to the surface. If the sheeting is to be withdrawn, backfilling will proceed up to each set of rangers and braces; the rangers and braces will be removed; the backfilling will proceed up to the next set of rangers and braces, etc. up to the top of the excavation. The backfill material shall be compacted to 98% of the maximum dry density as determined by AASHTO T 99, Method C. Alternate sections of sheeting from the left side and right side of the trench/area shall be removed and the cavity remaining there from shall be jetted thoroughly by high-pressure water, starting at the toe of the sheeting and being drawn to the surface. Sand shall be inserted with the jetting process.
3. Where the bottom of the excavation is not free draining material (some areas of organic material or miscellaneous fill) or where granular backfill is not available or ordered by Engineer, the jetting shall be very carefully done with a minimum amount of water being expended. In such locations, the Contractor may request the approval of Engineer for other compaction methods in the sheeting cavity.
4. Contractor shall remove the sheeting and/or staybracing from the excavation, except where it is specifically indicated on the Contract Drawings "To be Left- in-Place", or the Contractor may elect to leave in place the sheeting and/or staybracing for his own convenience, or to serve his own interest to protect existing facilities, the Work built or to

be built under this Contract, or for the safety of the public, etc., at no cost to the Owner. No sheeting or bracing which is within three feet of the existing or proposed finished grade may be left-in-place without the prior permission of Engineer. This may require the Contractor cut off sheeting at this elevation and at no additional cost to the Owner.

5. Where sheeting, regardless of the type of sheeting used, is left in place, as specified or ordered or at the Contractor's convenience/option, unless otherwise specifically permitted in writing by Engineer, all elements such as rangers, braces, wales, etc. shall be left in place except as specified hereinbefore; and, except such temporary braces required to be removed to make way for the structure/utility. Where it is necessary to remove such temporary braces, the sheeting shall be rebraced, but in no case shall the sheeting be braced against the sides of the structure/utility to be constructed unless approved in writing by the owner of the structure/utility. Where lagging and "soldier" beams are used, the "soldier" beams and all the braces shall also be left in place.
6. Where wood sheeting has been driven below the excavation bottom to provide for a "toe-in", no wood sheeting below the top of pipe or structure shall be removed, but it shall be cut off at this elevation and the remaining sheeting above this line removed as described herein. There will be no payment made for this work, nor for the wood sheeting left-in-place.
7. Sheeting shall be cut away and removed from in front of capped outlets or other braces or inlets set in the pipe for future connections.
8. All sheeting, shoring and bracing removed shall be carefully removed from the excavation in such a manner as not to endanger the completed work or any adjacent pavements, buildings, structures, utilities, property, etc. The sheeting shall be withdrawn to such an extent that it is just above the backfill material being compacted and all voids left or caused by the withdrawal of such sheeting, shall be immediately refilled with approved material and compacted at no additional cost to the Owner.
9. Where the excavation is to be left open during non-working hours, the sheeting shall extend 42 inches above existing grade to protect pedestrian and vehicular traffic from the open excavation.

END OF SECTION 314143

SECTION 321216 – BITUMINOUS CONCRETE PAVEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:
   1. Bituminous concrete paving for streets, driveways, playgrounds, and parking areas.
   2. Installation of bituminous concrete overlays over existing pavement, including surface preparation, truing and leveling pavement, tack coating and all other associated items and operations necessary and required to complete the installation.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

11. AASHTO T 104 Standard Method of Test for Soundness of Aggregate by Use of Sodium Sulfate or Magnesium Sulfate.
12. AASHTO T-209 - Maximum Specific Gravity and Density of Bituminous Paving Mixtures.
13. AASHTO T-245 - Standard Method of Test for Resistance to Plastic Flow of Bituminous Mixtures Using Marshall Apparatus.

E. American Society for Testing and Materials (ASTM)

1. ASTM D1188 - Standard Test Method for Bulk Specific Gravity and Density of Compacted Bituminous Mixtures Using Coated Samples.
2. ASTM D2726 - Standard Test Method for Bulk Specific Gravity and Density of Non-Absorptive Compacted Bituminous Mixtures.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SPECIFICATIONS

A. All work performed under this Section shall conform to the Standard Specifications for Roads, Bridges and Incidental Construction, Form 819 Supplemental Section 4.06 – Bituminous Concrete (Revised 3/17/14). This Specification is hereby incorporated into this Section by reference.

1.6 TESTING

A. Owner will retain a testing entity to perform observation and testing of the work under this Section. The testing entity's presence does not constitute supervision or direction of Contractor's work. Neither the presence of the testing entity nor any observations and testing performed by him, nor any notice or failure to give notice shall excuse Contractor from conformance with these Specifications or from defects discovered in his work.

B. Each week, Contractor shall advise the Owner's Representative of anticipated testing requirements during the following week, based on anticipated construction activities. The Contractor shall also notify the Owner's Representative and testing laboratory 24 hours before the expected time of testing.

PART 2 - PRODUCTS

2.1 GENERAL

A. All work performed under this Section shall conform to the Standard Specifications for Roads, Bridges and Incidental Construction, Form 819 Supplemental Section M.04 – Bituminous Concrete (Revised 1/28/15). This Specification is attached hereto and is herby incorporated into this Section.

PART 3 - EXECUTION

3.1 GENERAL

A. Contractor shall install all pavements as specified in the location and to the grades as shown on the Drawings and/or approved by Engineer. Materials, methods of construction, and type and thickness of pavement courses shall be as shown on the Details of the Drawings and as specified herein.

B. Owner and its representatives shall have access to all parts of the Work under construction at all times.

3.2 SPECIFICATIONS

A. Execute the work of this Section in accordance with the Standard Specifications for Roads, Bridges and Incidental Construction, Form 819 Supplemental Section 4.06 – Bituminous Concrete. This Specification is attached hereto and is hereby incorporated into this Section.

END OF SECTION 321216

SECTION 321316 - DECORATIVE CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled "Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Stamped concrete paving with integral color and stained individual stones.
2. Stamped concrete frost pads with integral color and stained individual stones.

B. Related Sections:

1. Division 03 Section "Cast-in-Place Concrete" for non-stamped concrete sidewalk pavement and general building applications of concrete.
2. Division 32 Section "Cement Concrete Paving" for cast-in-place concrete paving with other finishes, curbs and gutters, stamped detectable warnings, pavement markings, and wheel stops.
3. Division 32 Section "Pavement Joint Sealants" for joint sealants in expansion and contraction joints within decorative concrete paving and in joints between decorative concrete paving and asphalt paving or adjacent construction.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and PR consumer recycled content. Include statement indicating cost for each product having recycled content.

4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color, pattern, or texture selection.

C. Samples for Verification: For each type of exposed color, pattern, or texture indicated.

D. Other Action Submittals:

1. Design Mixtures: For each decorative concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

E. Qualification Data: For qualified Installer, ready-mix concrete manufacturer and testing agency.

F. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Fiber reinforcement.
4. Admixtures.
5. Curing compounds.
6. Applied finish materials.
7. Joint fillers.

G. Material Test Reports: For each of the following:

1. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

H. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer of decorative concrete paving systems.

B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

C. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field-Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

D. Source Limitations: Obtain decorative concrete paving products and each type or class of cementitious material of the same brand from same manufacturer's plant and obtain each aggregate from single source.

E. Concrete Testing Service: Engage a qualified testing agency to perform material evaluation tests and to design concrete mixtures.

F. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.

G. Sample Mockup: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of decorative concrete paving to demonstrate typical joints; surface color, pattern, and texture; curing; and standard of workmanship.
2. Build mockups of decorative concrete paving as directed by Landscape Architect to be not less than 96 inches (2400 mm) by 96 inches (2400 mm).

H. First-pour Mockup: Following approval of sample mockup, build first-pour mockup to verify on a large scale the aesthetic effects and quality standards made during the sample mockup approval process.

1. Build mockups of full-thickness sections of decorative concrete paving to confirm typical joints; surface color, pattern, and texture; curing; and standard of workmanship.
2. Build mockups of decorative concrete paving at the project site not less than the size of the smallest pour.

I. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to decorative concrete paving, including but not limited to, the following:

a. Concrete mixture design.
b. Quality control of concrete materials and decorative concrete paving construction practices.

2. Require representatives of each entity directly concerned with decorative concrete paving to attend, including the following:

    a. Contractor's superintendent.
    b. Independent testing agency responsible for concrete design mixtures.
    c. Ready-mix concrete manufacturer.
    d. Decorative concrete paving Installer.
    e. Manufacturer's representative of decorative concrete paving system.

1.7 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves of a radius of 100 feet (30.5 m) or less. Do not use notched and bent forms.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.2 STEEL REINFORCEMENT

A. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, fabricated from as-drawn steel wire into flat sheets.

B. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420); deformed.

2.3 REINFORCEMENT ACCESSORIES

A. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
2. For zinc-coated reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.4 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C 150, gray Portland cement Type I, II or IV.

B. Normal-Weight Aggregates: ASTM C 33, Class 4S, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Aggregate Size: 3/4-inch (19 mm) nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Water: Potable and complying with ASTM C 94/C 94M.

D. Air-Entraining Admixture: ASTM C 260.

E. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.

F. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber: Monofilament or fibrillated polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C 1116/C 1116M, Type III, 1/2 to 1-1/2 inches (13 to 38 mm) long.

2.6 SURFACE COLORING MATERIALS

A. Pigmented Mineral Dry-Shake Hardener: Factory-packaged, dry combination of Portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

B. Liquid Release Agent: Manufacturer’s standard, clear, evaporating formulation that facilitates release of stamp mats and texture rollers.

2.7 STAMPING DEVICES

A. Stamp Mats: Semirigid polyurethane mats with projecting textured and ridged underside capable of imprinting texture and joint patterns on plastic concrete.

B. Texture Rollers: Manually controlled, abrasion-resistant polyurethane rollers capable of imprinting texture on plastic concrete.

2.8 STAIN/HIGHLIGHTING MATERIALS

A. Stain: Water-based, acrylic latex, penetrating stain with colorfast pigments or other product as recommended by manufacturer for use as staining solution to achieve desired effect.

2.9 CURING AND SEALING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

B. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type I, Class B, manufactured for colored concrete.

1. For integrally colored concrete, curing compound shall be pigmented type approved by coloring admixture manufacturer.
2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.

C. Clear Acrylic Sealer: Manufacturer's standard, waterborne, nonyellowing and UV-resistant, membrane-forming, medium-gloss, acrylic copolymer emulsion solution, manufactured for colored concrete, containing not less than 15 percent solids by volume.

1. Finish: Matt.

D. Slip-Resistance-Enhancing Additive: Manufacturer's standard finely graded aggregate or polymer additive, designed to be added to clear acrylic sealer to enhance slip resistance of sealed paving surface.

2.10 GROUT MATERIALS

A. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

B. Sand: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 (1.18-mm) sieve and no more than 10 percent passing No. 200 (0.075-mm) sieve.

2.11 RELATED MATERIALS

A. Polyethylene Expansion Joint Filler: Flexible, lightweight, non-staining, polyethylene, close-celled expansion joint filler that shall be a chemical-resistant, ultraviolet stable, non-absorbent, low density, compressible foam.

1. Products: Subject to compliance with requirements, provide the following:

a. Meadows, W. R., Inc.; DECK-O-FOAM Expansion Joint Filler.
b. A.H. Harris & Sons, Inc.

2. Requirements:

a. Density, ASTM D1751: 2.0 lbs/cu.ft. (32.04 kg/cu. m)
b. Compression, ASTM D3575
c. 10% Deflection: 10 psi (69 KPa) maximum.

d. 80% Deflection: 125 psi (862.49 KPa) max.
e. Tensile Strength, ASTM D3575: 55 psi (379.50 KPa)
f. Water Absorption, ASTM D3575: 0.5% vol. maximum.
g. Temperature Stability: -40ºC to 71ºC (-40ºF to 160ºF).

B. Polyethylene Film: ASTM D 4397, 1 mil (0.025 mm) thick, clear.

2.12 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.

B. Proportion mixtures to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 4000 psi (27.6 MPa).
2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45.
3. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content: 6 percent plus or minus 1.5 percent for 3/4-inch (19-mm) nominal maximum aggregate size.

D. Limit water-soluble, chloride-ion content in hardened concrete to 0.30 percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing admixture in concrete as required for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

F. Cementitious Materials: Limit percentage by weight of cementitious materials other than Portland cement according to ACI 301 (ACI 301M) requirements for concrete exposed to deicing chemicals.

G. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.0 lb/cu. yd. (0.60 kg/cu. m).

H. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.13 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below stamped concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph (5 km/h).
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch (13 mm) according to requirements in Division 31 Section "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch (50-mm) overlap to adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and control joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

1. Locate expansion joints where indicated on the Drawings.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Control Joints: Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of adjacent decorative concrete paving:

1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

a. Tolerance: Ensure that sawed joints are within 3 inches (75 mm) in both directions from center of dowels.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch (6-mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate edging tool marks on concrete surfaces.

F. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

G. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

H. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

I. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.

J. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

K. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

L. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement dowels and joint devices.

M. Screed paving surface with a straightedge and strike off.

N. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

O. Cold-Weather Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

P. Hot-Weather Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.

3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.6 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

3.7 INTEGRALLY COLORED CONCRETE FINISH

A. Integrally Colored Concrete Finish: After final floating, apply the following finish:

1. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch (1.6 to 3 mm) deep with a stiff-bristled broom, perpendicular to line of traffic.

3.8 STAMPING

A. Mat Stamping: After floating and while concrete is plastic, apply mat-stamped finish.

1. Liquid Release Agent: Apply liquid release agent to the concrete surface and the stamp mat. Uniformly mist surface of concrete at a rate of 5 gal/1000 sq. ft. (0.2 L/sq. m).
2. After application of release agent, accurately align and place stamp mats in sequence.
3. Uniformly load mats and press into concrete to produce required imprint pattern and depth of imprint on concrete surface. Gently remove stamp mats. Hand stamp edges and surfaces unable to be imprinted by stamp mats.
4. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

B. Roller Stamping: After floating and while concrete is plastic, apply roller-stamped finish.

1. Cover surface with polyethylene film, stretch taut to remove wrinkles, lap sides and ends 3 inches (75 mm), and secure to edge forms. Lightly broom surface to remove air bubbles.
2. Accurately align roller and perform rolling operation to produce required imprint pattern and depth of imprint on concrete surface. Hand stamp surfaces inaccessible to roller.
3. Carefully remove polyethylene film immediately after roller stamping.

3.9 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Compound: Apply curing compound immediately after final finishing. Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas that have been subjected to heavy rainfall within three hours after application. Maintain continuity of coating and repair damage during curing period.

1. Cure integrally colored concrete with a pigmented curing compound.
2. Cure concrete finished with pigmented mineral dry-shake hardener with a pigmented curing compound.

3.10 STAINING/HIGHLIGHTING

A. Newly placed concrete paving shall be at least 28 days old or as suggested by manufacturer before staining/highlighting.

B. Prepare surfaces according to manufacturer's written instructions and as follows:

1. Clean concrete thoroughly by scraping, applying solvents or stripping agents, sweeping and pressure washing, or scrubbing with a rotary floor machine and detergents recommended by stain manufacturer. Rinse until water is clear and allow surface to dry.
2. Neutralize concrete surfaces and rinse until water is clear. Test surface for residue with clean white cloth. Test surface according to ASTM F 710 to ensure pH is between 7 and 8.

C. Allow paving surface to dry before applying stain. Verify readiness of paving to receive stain according to ASTM D 4263 by tightly taping 18-by-18-inch (450-by-450-mm), 4-mil- (0.1-mm-) thick polyethylene sheet to a representative area of paving surface. Apply stain only if no evidence of moisture has accumulated under sheet after 16 hours.

D. Stain: Apply stain to paving surfaces according to manufacturer's written instructions and as follows:

1. Mask off individual stones prior to application of stain to ensure no color spill onto adjacent stones. Apply each coat of stain to entire surface of individual stones in sufficient quantity to obtain color consistent with approved mockup.
2. Apply first coat of stain to dry, clean surfaces by airless sprayer or by high-volume, low-pressure sprayer.
3. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
4. Rinse until water is clear. Control, collect, and legally dispose of runoff.

3.11 SEALER

A. Clear, Solvent-Borne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type I, Class A, manufactured for use with colored concrete.

B. Clear Acrylic Sealer: Apply uniformly in two coats in continuous operations according to manufacturer's written instructions. Allow first coat to dry before applying second coat, at 90 degrees to the direction of the first coat using same application methods and rates.

1. Begin sealing dry surface no sooner than 28 days after concrete placement.
2. Thoroughly mix slip-resistance-enhancing additive into sealer before applying sealer according to manufacturer's written instructions. Stir sealer occasionally during application to maintain even distribution of additive.

3.12 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch (19 mm).
2. Thickness: Plus 3/8 inch (10 mm), minus 1/2 inch (12 mm).
3. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/2 inch (13 mm).
4. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
5. Vertical Alignment of Dowels: 1/4 inch (6 mm).
6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
7. Joint Spacing: 3 inches (75 mm).
8. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
9. Joint Width: Plus 1/8 inch (3 mm), no minus.

3.13 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 5000 sq. ft. (465 sq. m) or fraction thereof of each concrete mixture placed each day.

a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.

6. Compressive-Strength Tests: ASTM C 39/C 39M; test one specimen at seven days and two specimens at 28 days.

    a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).

D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Decorative concrete paving will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.14 REPAIRS AND PROTECTION

A. Remove and replace decorative concrete paving that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Detailing: Grind concrete "squeeze" left from tool placement. Color ground areas with slurry of color hardener mixed with water and bonding agent. Remove excess release agent with high-velocity blower.

C. Protect decorative concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain decorative concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 321316

SECTION 321500 – AGGREGATE SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Stone Mulch Surfacing.

1.3 RELATED REQUIREMENTS

A. Section 31 2310 – Earthwork: Preparation of site paving, compacted subbase for paving, and base courses.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification:

1. For each stone type indicated. Include at least two samples in each set for each type of stone, exhibiting extremes of the full range of color and other visual characteristics expected in completed Work. Samples will establish the standard by which stone provided will be judged.
2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).
3. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of aggregate through one source from a single manufacturer.

B. Pre-installation conference: Conduct conference at project site to comply with requirements in Section 01 3000 - Administrative Requirements.

PART 2 - PRODUCTS

2.1 STONE SOURCE

A. Varieties and Sources: Obtain materials of each type from same source for the entire project. Approval of stone supplier is required prior to purchase. Subject to compliance with requirements, provide stone of one of the following varieties from the following source or equivalent:

2.2 STONE MULCH SURFACING

A. Riverwashed Stone Mulch: Screened, off-site uncrushed rounded stone free of iron, fines, dust (less than 2 percent passing the No. 200 sieve), organic materials, snow, ice, and other unsuitable materials as approved by Landscape Architect.

B. Size: 2-to-3-inch (50 to 76 mm) diameter. Mulch shall be washed free of all fines.

C. Color: Readily available natural gravel color range as approved by Landscape Architect.

D. Crushed Stone Mulch: Screened, off-site crushed stone free of iron, fines, dust (less than 2 percent passing the No. 200 sieve), organic materials, snow, ice, and other unsuitable materials as approved by Landscape Architect.

E. Size: 3/4-inch (19 mm) diameter. Mulch shall be washed free of all fines.

F. Color: Readily available natural gravel color range as approved by Landscape Architect.

G. Stone Mulch Edge Restraints: Standard commercial-aluminum angle edging, rolled edge, fabricated in sections of standard lengths.

1. Basis-of-Design Product: Subject to compliance with requirements, provide “Perma-Strip” angled aluminum landscape edging as manufactured by Permaloc Corporation or comparable product by a licensee of one of the following:

    a. Brickstop Corporation.
    b. Curv-Rite, Inc.
    c. Sure-loc Edging Corporation.

2. Edging Size: 3/16 inch (3.2 mm) thick by 6 inches (102 mm) tall by 1-1/2 inches wide.
3. Stakes: 18 inches (300 mm) long, 3 minimum per 8-foot section.
4. Accessories: Standard tapered ends, corners, and splicers.
5. Finish: Electrostatically-applied baked on paint.
6. Color: Black.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 STONE MULCH INSTALLATIONS

A. Steel Edging: Install steel edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately 30 inches (760 mm) apart, driven below top elevation of edging.

B. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.

1. Mulch backfilled and compacted surfaces areas to receive stone mulch. Apply 4-inch (100-mm) average thickness of mineral mulch over whole surface, and finish level with adjacent finish grades.

3.3 CLEANUP AND PROTECTION

A. During installation, keep adjacent paving and construction clean and work area in an orderly condition.

B. After completing installation of stone materials, inspect components. Remove spots, dirt, and debris. Repair damaged finishes to match original finish or replace component.

3.4 DISPOSAL

A. Remove surplus stone materials and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

END OF SECTION 321500

SECTION 321623 – CURBING

PART 1 - SUMMARY

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES**:**

A. Precast concrete curb.

B. Cast-in-place concrete curb.

C. Work shall also include all associated items and operations necessary and required to complete the installations, including, but not limited to, surface preparation, finishing and cleanup.

D. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

E. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. United States Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. State of Connecticut Department of Transportation (ConnDOT)

1. Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 819, 2016 and any supplements.

D. ASTM International (ASTM).

1. ASTM C33 – Standard Specification for Concrete Aggregates.
2. ASTM C94 – Standard Specification for Ready-Mixed Concrete.
3. ASTM C150 – Standard Specification for Portland Cement.
4. ASTM D235 – Standard Specification for Mineral Spirits (Petroleum Spirits).
5. ASTM C207 – Standard Specification for Hydrated Lime for Masonry Purposes
6. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.
7. ASTM C309 – Standard Specification for Liquid Membrane - Forming Compounds for Curbing Concrete.

8. ASTM C494 – Standard Specification for Chemical Admixtures for Concrete.
9. ASTM C989 – Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
10. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
11. ASTM D1752 – Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction

E. American Concrete Institute (ACI)

1. ACI 304 – Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete.

F. American Association of State High and Transportation Officials (AASHTO)

1. AASHTO M 6 – Standard Specification for Fine Aggregate for Portland Cement Concrete.
2. AASHTO M 85 – Standard Specification for Portland Cement (Chemical and Physical).
3. AASHTO M 133 – Standard Specification for Preservatives and Pressure Treatment Processes for Timber.
4. AASHTO M 213 – Standard Specification for Preformed Expansion Joint Filler for Concrete (Bituminous Type).
5. AASHTO M 233 – Standard Specification for Boiled Linseed Oil Mixture for Treatment of Portland Cement Concrete.
6. AASHTO M 240 – Standard Specification for Blended Hydraulic Cement.
7. AASHTO T11 – Standard Method of Test for Materials Finer Than 75-um (No. 200) Sieve in Mineral Aggregates by Washing.
8. AASHTO T21 – Standard Method of Test for Organic Impurities in Fine Aggregate for Concrete.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of

Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Submit Shop Drawings, manufacturer's literature, material certificates or other data indicating compliance with these Specifications.

B. Precast Curbing: Submit for approval, data indicating size, shape and dimensions, finish and setting method.

C. Stone Curbing: Submit for approval, the name of the quarry and the type of curb which the Contractor proposes to use. Samples of curbing shall be submitted for approval only when requested by the Engineer. Such submission shall be made sufficiently in advance of ordering so that the Engineer may have an opportunity to judge the granite, both as to quality and appearance.

D. Precast Curbing: Submit representative test specimens of the cured concrete used in precast units showing a compressive strength of 4,000 pounds prior to shipping any units.

E. Submit testing data for concrete as required by Section 03 3200 – Site Cast-in-Place Concrete.

1.6 DELIVERY, STORAGE AND HANDLING

A. Granite and precast concrete curb units shall be delivered to the job adequately protected from damage during transit.

B. Curbing shall be protected against staining, chipping, and other damage. Cracked, badly chipped, or stained units will be rejected and shall not be employed in the Work.

PART 2 - PRODUCTS

2.1 PRECAST CONCRETE CURB

A. Concrete for precast concrete curbing shall have a minimum compressive strength of 4,000 psi at 28 days, and shall contain 5 to 7 percent entrained air.

B. Precast concrete curb shall be treated with a protective coating of Linseed Anti-Spalling Compound. Boiled linseed oil mixture shall conform to AASHTO M 233 and shall be composed of 50 percent (50 %) double boiled linseed oil and 50 percent (50%) petroleum spirits, ASTM D235, by volume.

C. Finish and Color: Precast curb units shall be rub-finished in the following manner:

1. After the concrete has properly hardened, the exposed surfaces shall be rubbed with a No. 16 carborundum stone or an abrasive of approved equal in a manner to fully remove cement enamel finish and expose a durable sand grain finish satisfactory to Engineer. No cement shall be used in the rubbing process.
2. The finish of these units shall be uniform and shall conform to those of adjacent work in their final position.

D. Precast concrete curb sections shall be furnished with sockets in each end to receive dowels to maintain the horizontal and vertical alignment of the curb. The dowel socket shall be $1\frac{1}{16}$ inch by 2½ inches.

E. Dowels: Steel, ⅝ inch by 4 inch with minimum yield strength of 36,000 psi. Dowels shall be supplied by the curb manufacturer.

2.2 CAST-IN-PLACE CONCRETE CURB

A. Concrete and reinforcement for cast-in-place concrete curbs shall be as specified in Section 03 3200 – Site-Cast-in-Place Concrete.

2.3 CEMENT MORTAR

A. Mortar shall be composed of one part Portland Cement, ASTM C150, and two parts, by volume, of surface dry fine aggregate. Hydrated lime, ASTM C207, in an amount not to exceed 4 pounds of lime to each bag of Portland Cement, may be added at the option of Engineer. Cement and hydrated lime shall conform to the following requirements:

1. Portland cement: Types I, II or IS.
    a. Cement having a temperature exceeding 160°F (71°C) at the time of delivery to the mixer shall not be used in the concrete.
    b. Types I, II, and III Portland cement shall conform to the requirements of AASHTO M 85.
    c. Type IS, Portland blast-furnace slag cement and Type IP, portland-pozzolan cement shall conform to the requirements of AASHTO M 240. The use of other approved cementitious material as a partial replacement for Type IS or Type IP cement will not be permitted.
    d. Type I and Type III Portland cement shall be used only when required or expressly permitted by Contract or Engineer.
2. Hydrated lime: ASTM C6.
3. Fine aggregate: Fine aggregate shall be sand consisting of clean, hard, durable, uncoated particles of quartz or other rock, free from lumps of clay, soft or flaky material, loam, organic or other injurious material. In no case shall sand containing lumps of frozen material be used.
    a. Fine aggregate shall contain not more than 3% of material finer than a No. 200 (75 µm) sieve, using AASHTO T 11.
    b. Organic Impurities: Fine aggregate subjected to the colorimetric test shall not produce a color darker than Gardner Color Standard No. 11, using AASHTO T 21. If the fine aggregate fails to meet this requirement, the provisions of AASHTO M 6, Section 5.2, will govern.
    c. Gradation: For laying stone or precast units, fine aggregate shall be uniformly graded from coarse to fine and shall meet the following gradation requirements:

Aggregate Gradation (Cement Mortar for Laying Stone or Precast Units)

Sieve	Percent Passing
⅜″	100
No. 4	95–100
No. 8	80–100
No. 16	50–85
No. 30	25–60
No. 50	10–30
No. 100	2–10

d. Gradation: For pointing stone or precast units, fine aggregate shall be uniformly graded from coarse to fine and shall meet the following gradation requirements:

Aggregate Gradation (Cement Mortar for Pointing Stone or Precast Units)

Sieve	Percent Passing
No. 8	100
No. 50	10–40
No. 100	0–10

e. Water: Potable quality.

2.4 JOINT FILLER

A. Preformed expansion joint filler or wood joint filler as indicated on the plans.

B. Preformed expansion joint filler shall be the bituminous cellular type and shall conform to the requirements of AASHTO M213.

C. Boards for wood joint filler shall be planed on two sides and shall be either redwood, cypress or white pine. Redwood and cypress boards shall be of sound heartwood. White pine boards shall be of sound sapwood.

1. Occasional small, sound knots and medium surface checks will be permitted provided the board is free of any defects that will impair its usefulness for the purpose intended. The joint filler may be composed of more than one length of board in the length of the joint, but no board of a length less than 6 feet may be used; and the separate boards shall be held securely to form a straight joint. Boards composed of pieces that are jointed and glued shall be considered as one board.
2. Dimensions shall be as specified or shown on the plans; and tolerances of plus $1/16$-inch thickness, plus ⅛-inch depth and plus ¼-inch length will be permitted.
3. All wood joint filler boards shall be given a preservative treatment by brushing with a creosote oil conforming to AASHTO M133. After treatment, the boards shall be stacked in piles, each layer separated from the next by spacers at least ¼ inch thick; and the boards shall not be used until 24 hours after treatment.

2.5 TRANSITION SECTIONS

A. Horizontal transition sections shall be provided at all locations where curb sections change (i.e., vertical to sloped). Vertical transition sections shall also be provided for precast curb sections at

handicapped ramps to create a smooth transition with a doweled joint. Vertical transition sections for stone curb shall be made as shown on the Drawings.

PART 3 - EXECUTION

3.1 GENERAL

A. Trenching, excavation, backfilling, and compaction shall be completed in accordance with Section 31 2310 – Earthwork, except as modified within this Section.

B. Cement Mortar Bedding, if required, shall be placed as indicated in details in accordance with Section 03 3200 – Site Cast-In-Place Concrete.

3.2 PRECAST CONCRETE CURB

A. Precast units delivered to the site shall be inspected for damage, unloaded and placed along excavated trench or other designated location with the minimum amount of handling.

1. Materials shall be handled in such a manner as to insure delivery to trench in a sound and undamaged condition.
2. All individual pieces of curbed curbing shall be marked to correspond to the radius and location where curbing is to be set.

B. Excavation shall be made in accordance with details on the plans and shall extend 6 inches below and behind finished curb sections.

1. Screened gravel base shall be compacted to a firm, even surface.

C. Installation of precast concrete curb shall be completed within the prepared trench such that each section is doweled to the next continuously and conforming to the line, grade, and cross-section shown on the plans, unless otherwise directed by Engineer. Installation shall be completed in such a manner as to prevent damage to the precast units.

D. After the curb is set, trench shall be backfilled immediately with approved material. The first layer to be 4 inches in depth, thoroughly rammed, the other layers to be not more than 6 inches in depth and thoroughly rammed until the trench is filled. Care is to be taken not to affect the line or grade of the curb during this procedure.

E. All curb joints shall be filled with caulking compound (color-cement mortar grey). One joint every 50 feet shall be left clean of caulk to allow for expansion.

3.3 CAST-IN-PLACE CONCRETE CURB

A. General Requirements: Concrete curb shall be constructed of concrete and shall be cast-in-place on the prepared subbase in accordance with the dimensions and details line and grade shown on the Drawings. Curbing shall be constructed using conventional forms and in segments separated by construction joints and expansion joints as specified herein. This item shall consist of concrete curbing constructed or as ordered and in conformity with these specifications.

B. Forms: Forms shall be metal or acceptable planed and matched lumber, straight and free from warp or other irregularities that will adversely affect the installation. Forms shall conform to the curb cross-section shown on the Drawings and shall be carefully set to line and grade and thoroughly braced and secured in place so that there will be no displacement during placement of the concrete. All forms shall be thoroughly cleaned prior to reuse.

C. Placing of Concrete: Prior to placement of the concrete, the subgrade shall be moistened and the contact surfaces of the forms shall be given a light coating of oil that will not discolor the concrete. Concrete shall then be placed in the form as near to its final position as practicable, struck off with a template, spaded to prevent “rock-pockets” or “honey combing” adjacent to the forms and finished to a smooth even surface. The concrete may be compacted by mechanical vibrators if approved by Engineer. Placing by slip form methods shall be approved by Engineer.

D. Expansion Joints: Vertical expansion joints shall be located approximately every seventy-five (75) feet and shall be so arranged that they shall match expansion joints in any adjacent concrete pavements and sidewalks. Unless directed otherwise, expansion joints shall also be installed at the PC and PT of all radius curb. Expansion joints shall be constructed vertical, plumb, and at right angles to the face of the curb.

1. Prior to concreting, all exposed surfaces of the wood filler shall be given a light brush coating of form oil.
2. They shall be one-half (½) inch in width and formed with premolded bituminous joint filler cut to conform to the cross-section of the curb/curb gutter.

E. Construction Joints: Vertical construction joints shall be located approximately every fifteen (15) feet being equally spaced between expansion joints. The length of these curb/curb gutter segments may be varied slightly for closures but in no case shall they be less than eight (8) feet. Construction joints shall be vertical, plumb and at right angles to the face of the curb and shall be formed by approved method that will provide complete separation of the curb segments during the placing of the concrete. If curb is formed by slip form methods, the joints shall be sawed as soon as practicable after the concrete has set to preclude raveling during the sawing and before any shrinkage cracking occurs in the concrete.

F. Finishing: Forms shall be left in place for twenty-four (24) hours or until the concrete has sufficiently hardened as determined by Engineer so that they can be removed without injury to the curb. Upon removal of the forms, the exposed faces of the curb/curb gutter shall be immediately rubbed to a uniform surface. Rubbing shall be performed by experienced and competent concrete finishers. No plastering will be permitted.

END OF SECTION 321623

SECTION 321723 – PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Temporary or permanent painted pavement markings, including but not limited to center lines, lane lines and shoulder lines, stop bars, crosswalks, parking stalls, lane arrows, legends, markings within gore areas, and painting of paved islands or medians.
2. Maintaining access for vehicular and pedestrian traffic as required for other construction activities. Utilize flagmen, barricades, warning signs, and warning lights as required.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 SUBMITTALS

A. Submit material specifications and shop drawings for all materials furnished under this Section.

B. Submit material certificates signed by the material producer and Contractor, certifying that materials comply with these Specifications.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include

statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

B. Contractor shall furnish one technical expert, who shall be fully knowledgeable about all equipment operations and application techniques, to oversee the work of this Section.

PART 2 - PRODUCTS

2.1 WATERBORNE PAVEMENT MARKING PAINT

A. General

1. White and yellow fast-drying waterborne pavement marking paint, low VOC, ready-mixed, one component, 100 percent acrylic, Federal Specification TT-P-1952D.
2. Paint shall be capable of being applied with paint striping equipment at ambient temperatures.
3. Weight per gallon shall not be less than 12.5 pounds/gallon when tested in accordance with ASTM D 1475.
4. Colors: ASTM D211 and per Federal Standard No. 595.

B. Manufacturer:

1. Paint shall be formulated and manufactured from first-grade raw materials and shall be free from defects and imperfections that might adversely affect the serviceability of the finished product. The materials shall not exhibit settling or jellying after storage in the sealed containers as received that will affect the performance of the products. The paint shall provide the proper anchorage, refraction and reflection for the finished glass spheres when applied as specified.

C. Composition

1. Composition of the paint shall be at the discretion of the manufacturer, provided that the finished product meets the requirements of any applicable Federal, State or Local regulations for products of this type and the requirements as follows:

    a. Paint shall not contain more than 0.06% lead.
    b. Total nonvolatile shall not be less than 70% by weight (mass).
    c. Pigment shall be 45-55% by weight (mass).
    d. Resin solids shall be composed of 100% acrylic emulsion polymer.
    e. Volatile organic compounds shall not exceed 150 grams/liter, excluding water.
    f. Closed-cup flash point shall not be less than 100°F (38°C), and weight per gallon shall not be less than 12.5 pounds/gallon when tested in accordance with ASTM D 1475.

D. Viscosity

1. Consistency of the paint shall not be less than 80, nor more than 90 Kreb units when tested in accordance with ASTM D562. The paint shall have good spraying characteristics when the material is heated to application temperature of 130°F to 145°F.

E. Flexibility

1. Paint shall not show cracking or flaking when subjected to the TT-P-1952D flexibility test in which the panels used shall be tin plates that are 3 inches x 5 inches in area and 35 - 31 U.S. Gauge in thickness. The tin panels shall be lightly buffed with steel wool and thoroughly cleaned with solvent before being used for tests.

F. Dry Opacity

1. Both white and yellow paints shall have a minimum contrast ratio of 0.96. Contract ratio shall be determined by applying a wet film thickness of 0.005 inches (127 microns) to a standard hiding power chart. After drying, the black and white reflectance values shall be determined using a suitable reflectometer and the contrast ratio determined.

G. Bleeding

1. Paints shall have a minimum bleeding ratio of 0.97 when tested in accordance with FS TT-P-1952D.

H. Abrasion Resistance

1. No less than 210 liters of sand shall be required to remove paint film when tested in accordance with TT-P-1952D.

I. Colors

1. Yellow: FS 595, No. 13538, latest issue.
2. White: No darker or yellower than FS 595, No. 17778, latest issue, when the material is placed in a type EH weatherometer for a period of 500 hours and weathered according to ASTM G153.
3. Car/Van Pool and Electric Vehicle Parking Space Marking Color: Red FS595, No. 12199 or approved equal.
4. Fuel Efficient Vehicle Parking Space Marking Color: Green FS 595, No. 14187 or approved equal.

5. Hopscotch and Four Square colors: As selected from FS 595 colors by Landscape Architect.
6. Color determination shall be made without beads, after a minimum of 24 hours. If not a visual match, the diffuse day color of the paint shall conform to the CIE Chromaticity coordinate limits as follows:

Paint CIE Chromaticity Coordinate Limits

	x	Y	x	y	x	y	x	y	Brightness
White	0.305	0.295	0.360	0.360	0.388	0.377	0.280	0.310	84.0 Min
Yellow	0.485	0.455	0.506	0.452	0.484	0.428	0.477	0.438	50.0 Min

7. Paint shall not discolor in sunlight and shall maintain colorfastness throughout its life, approximately two years.

J. Glass Bead Adhesion

1. Paint with glass beads conforming to M.07.30, applied at the rate of 6.0 pounds/gallon of paint, shall require not less than 150 liters of sand to remove paint film and glass beads.

K. Scrub Resistance

1. Paint shall pass 300 cycles minimum when tested in accordance with ASTM D2486.

L. Drying time

1. Reflectorized line shall dry to no pick up in 15 minutes or less as tested by ASTM D711 when applied at the ratio provided for specified glass spheres to paint (the paint at 15+ 1 mil (381 millimeters + 25 millimeters) wet film thickness equivalent to 100-115 square foot/gallon and the glass spheres at the equivalent rate of 6.0 pounds/gallon.

2.2 HOT-APPLIED WATERBORNE PAVEMENT MARKING PAINT

A. General

1. White and yellow fast-drying waterborne pavement marking paint, low VOC, ready-mixed, one component, 100 percent acrylic, Federal Specification TT-P-1952D.
2. Paint shall be capable of being applied with paint striping equipment at an application temperature of 130°F to 145°F.
3. Color: ASTM D211 and per Federal Standard No. 595.
4. Glass Beads: AASHTO M 247, Type 1.

B. Manufacture

1. Paint shall be formulated and manufactured from first-grade raw materials and shall be free from defects and imperfections that might adversely affect the serviceability of the finished product. The materials shall not exhibit settling or jellying after storage in the sealed containers as received that will affect the performance of the products. The paint shall

provide the proper anchorage, refraction and reflection for the finished glass spheres when applied as specified.

C. Composition

1. Composition of the paint shall be at the discretion of the manufacturer, provided that the finished product meets the requirements of any applicable Federal, State or Local regulations for products of this type and the requirements as follows:

a. Paint shall not contain more than 0.06% lead.
b. Total nonvolatile shall not be less than 76% by weight (mass).
c. Pigment shall be 58-63% by weight (mass).
d. Resin solids shall be composed of 100% acrylic emulsion polymer.
e. Volatile organic compounds shall not exceed 150 grams/liter, excluding water.
f. Closed-cup flash point shall not be less than 100°F, and weight per gallon shall not be less than 12.5 pounds/gallon when tested in accordance with ASTM D 1475.

D. Viscosity

1. Consistency of the paint shall not be less than 80, nor more than 90 Kreb units when tested in accordance with ASTM D562. The paint shall have good spraying characteristics when the material is heated to application temperature of 130°F to 145°F.

E. Flexibility

1. Paint shall not show cracking or flaking when subjected to the TT-P-1952D flexibility test in which the panels used shall be tin plates that are 3 inches x 5 inches (76 millimeters x 127 millimeters) in area and 35 - 31 U.S. Gauge in thickness. The tin panels shall be lightly buffed with steel wool and thoroughly cleaned with solvent before being used for tests.

F. Dry Opacity

1. Both white and yellow paints shall have a minimum contrast ratio of 0.96. Contract ratio shall be determined by applying a wet film thickness of 0.005 inches (127 microns) to a standard hiding power chart. After drying, the black and white reflectance values shall be determined using a suitable reflectometer and the contrast ratio determined.

G. Bleeding

1. Paints shall have a minimum bleeding ratio of 0.97 when tested in accordance with FS TT-P- 1952D.

H. Abrasion Resistance

1. No less than 210 liters of sand shall be required to remove paint film when tested in accordance with TT-P-1952D.

I. Color

1. Yellow: FS 595, No. 13538, latest issue.
2. White: No darker or yellower than FS 595, No. 17778, latest issue, when the material is placed in a type EH weatherometer for a period of 500 hours and weathered according to ASTM G153.

3. If not a visual match, the diffuse day color of the paint shall conform to the CIE Chromaticity coordinate limits as follows:

Paint CIE Chromaticity Coordinate Limits

	x	Y	x	y	x	y	x	y	Brightness
White	0.305	0.295	0.360	0.360	0.388	0.377	0.280	0.310	84.0 Min
Yellow	0.485	0.455	0.506	0.452	0.484	0.428	0.477	0.438	50.0 Min

4. Paint shall not discolor in sunlight and shall maintain colorfastness throughout its life, approximately two years. Color determination shall be made without beads, after a minimum of 24 hours.

J. Glass Bead Adhesion

1. Paint with glass beads shall require not less than 150 liters of sand to remove paint film and glass beads.

K. Scrub Resistance

1. Paint shall pass 300 cycles minimum when tested in accordance with ASTM D2486.

L. Drying time

1. Reflectorized line shall dry to no pick up in 120 seconds or less when applied at the ratio provided for specified glass spheres to paint (the paint at 15+ 1 mil (381 millimeters + 25 millimeters) wet film thickness equivalent to 100-115 square foot/gallon (2.45-2.82 square meters/liter) and the glass spheres at the equivalent rate of 6.0 pounds/gallon (0.72 kilograms/liter). The paint shall be applied with equipment so as to have the paint at a temperature of 130°F to 145°F (54°C to 63°C) at the spray gun.

2.3 EPOXY RESIN PAVEMENT MARKINGS

A. Epoxy Resin Material: The material shall be composed of epoxy resins and pigments only.

B. Composition:

1. White (percent by weight): 20% +/- 2% Titanium Dioxide, ASTM D476 Type 3 and 80% +/- 2% Epoxy Resins.
2. Yellow (percent by weight): 25% +/- 2% Chrome Yellow, ASTM D211 Type 3 and 75% +/- 2% Epoxy Resins.
3. Epoxy Resins: ASTM D1763.

C. Color

1. Yellow: FS 595, No. 13538, latest issue.

2. White: No darker or yellower than FS 595, No. 17778, latest issue, when the material is placed in a type EH weatherometer for a period of 500 hours and weathered according to ASTM G153.

D. Adhesion Capabilities

1. When the adhesion of the material to portland cement concrete (test concrete shall have a minimum of 300 psi tensile strength) is tested according to ACI 503R testing procedure, the failure of the system must take place in the concrete. The concrete shall be 90 °F when the material is applied, after which the material shall be allowed to cure for 72 hours at 73 +/- 3.5 °F.

E. Abrasion Resistance

1. When the abrasion resistance of the material is tested according to ASTM C 501 with a CS-17 wheel under a load of 1000 grams for 1000 cycles, the wear index shall be no greater than 82. (The wear index is the weight (mass) in milligrams that is abraded from the sample under the test conditions).

F. Hardness

1. The Type D durometer hardness of the material shall be not less than 75 nor more than 90 when tested according to ASTM D2240 after the material has cured for 72 hours at 73 +/- 3.5 °F.

G. Tensile Strength

1. Tensile strength of the material, when tested according to ASTM D 638, shall not be less than 6,000 psi after 72 hours cure at 73 +/- 3.5 °F.

H. Compressive Strength

1. Compressive strength of the material, when tested according to ASTM D 695, shall not be less than 12,000 psi after 72 hours cure at 73 +/- 3.5 °F.

I. Shelf Life

1. Individual components shall not require mixing prior to use when stored for a period of 12 months.

2.4 GLASS BEADS

A. Beads shall be transparent, clean, colorless glass, smooth and spherically shaped, free of milkiness, pits, or excessive air bubbles.

B. Quality Assurance Control

1. Beads shall be segregated into maximum lots of 2,500 pounds (1125 kilograms) and lot numbers shall be stamped onto each lot. Each lot shall be tested for gradation, rounds and embedment coating.

C. Gradation - The glass spheres shall meet the following gradation requirements:

Glass sphere gradation (ConnDOT Grading “A”)

Sieve Size	% Passing
20 (850 um)	100
30 (600 um)	80-95
50 (300 um)	9-42
80 (180 um)	0-10

Glass sphere gradation (ConnDOT Grading “B”)

Sieve Size	% Retained
10 (2.0 mm)	0
12 (1.7 mm)	0-5
14 (1.4 mm)	5-20
16 (1.18 mm)	40-80
18 (1.0 mm)	10-40
20 (850 um)	0-5
Pan	0-2

1. Roundness: Glass beads shall have a minimum of 80% rounds per screen for two highest sieve quantities and no more than 3% angular particles per screen for Grading “B”. The remaining sieve fractions shall typically be no less than 75% rounds.

D. Refractive Index: Glass beads shall have a refractive index of 1.50 to 1.52.

PART 3 - EXECUTION

3.1 GENERAL

A. Pavement markings shall be applied in accordance with the details shown on the plans and the control points established by the Contractor and approved by the Engineer.

B. No paint shall be applied to new bituminous pavement until the top course has cured at least one week minimum.

C. Pavement areas to be painted shall be dry and sufficiently cleaned of sand and road debris so as to provide an acceptable bond between the paint and the pavement.

D. All painting shall be performed in a neat and workmanlike manner. The lines shall be sharp and clear with no feathered edging or fogging and precautions shall be taken to prevent tracking by tires of the striping equipment. Paint shall be applied as shown on the Drawings with no unsightly deviations.

E. Contractor shall protect the buildings, walks, pavement, curbing, trees, shrubs, mulch, etc. from over-spray of paint and damage by his operations.

F. Operations shall be conducted only when the road surface temperature is at least 40°F or as allowed by Engineer. They shall be discontinued during periods of rain, and shall not continue until Engineer determines that the pavement surface is dry enough to achieve adhesion.

G. After application, paint shall be protected from crossing vehicles using traffic cones or other acceptable method for a time at least equivalent to the drying or curing time of the paint.

H. The material shall be applied to the pavement by equipment used specifically for the application of pavement markings and shall be of a standard commercial manufacturer.

I. Contractor shall provide survey control for layout of pavement markings by utilizing his own surveyor or hiring a registered land surveyor. The cost of this survey control shall be included in other items of work.

3.2 WATERBORNE PAVEMENT MARKINGS

A. Painted legend, arrows, and markings includes paint installed with a hand striping machine such as: stop bars, crosswalks, parking stalls, lane arrows, legends, markings within gore areas, and painting of paved islands or medians.

B. Painted pavement markings and hot applied painted pavement markings include paint installed with a truck-mounted painting machine such as center lines, lane lines and shoulder lines.

C. Waterborne Paint, Ambient Temperature

1. Apply paint at a rate of 100 to 115 square feet per gallon, with glass beads applied at a rate of 6 pounds per gallon of paint for painted pavement markings and painted legend, arrows, and markings

D. Waterborne Paint, Hot-Applied

1. Hot-applied paint shall be applied at a temperature of 130°F to 145°F at the spray gun.
2. Apply paint at a rate of 8 pounds per gallon of paint for hot-applied painted pavement markings.

3.3 EPOXY RESIN PAINTED PAVEMENT MARKINGS

A. Epoxy resin pavement markings includes epoxy resin installed with a truck-mounted machine such as center lines, lane lines, and shoulder lines.

B. Epoxy resin pavement markings, symbols and legends include stop bars, crosswalks, parking stalls, lane arrows, legends, and markings within areas such as paved islands, gore areas and paved medians.

C. Equipment

1. Equipment furnished shall include an applicator truck of adequate size and power, together with the following:

    a. Remote application equipment designed to apply an epoxy resin material in a continuous pattern.
    b. Portable glass bead applicators, one for each size bead, designed to provide uniform and complete coverage of the epoxy binder by a controlled free-fall method. Pressurized glass bead application shall not be used. Before epoxy color is changed, equipment shall be cleaned out sufficiently to ensure that the color of material applied will be correct.

2. When working on a highway with more than one lane in either direction, the applicator truck (striper) shall have a permanently mounted direction variable illuminated arrow board, fully operational and visible to approaching traffic. There will be no additional payment for the arrow board. Its cost shall be included in the bid price for this item.
3. For markings applied on pavements over one year old, equipment furnished shall also include a power washing machine capable of cleaning the pavement with a pressure of 2,400 to 2,800 psi with water heated to 180°F - 195°F. No chemicals shall be added to the water used in the process. The power washer shall be equipped with a turbo blast tip with an oscillating head and shall be capable of supplying a minimum of 5 gallons/minute gun.
4. All guns on the spray carriages shall be in full view of the operator(s) during operation.

D. Procedures

1. The road surface shall be cleaned at the direction of the Engineer just prior to application. Pavement cleaning shall consist of power washing using clean water heated to 180°F – 195 °F at a pressure of 2,240 - 2,800 psi. The areas to be power washed shall include all areas where epoxy marking symbols and legends (including stop bars and crosswalks) are to be applied and at least 1 inch beyond the area to be marked. The surface shall be cleaned to the satisfaction of the Engineer.

    a. For other pavement areas, cleaning shall consist of brushing with rotary broom (non-metallic), and any additional work as recommended by the material manufacturer and acceptable to the Engineer.
    b. New portland cement concrete surfaces shall be cleaned by abrasive blasting to remove any surface treatments and/or laitance.
    c. New bituminous concrete surfaces are not to be power washed.

2. All surfaces that are power washed shall be allowed to dry sufficiently prior to the application of the epoxy markings. The areas to be marked shall be broom cleaned immediately prior to the application of the epoxy markings. Glass beads shall be applied immediately after application of the epoxy resin marking to provide an immediate notrack system.
3. Contractor will place necessary “spotting” at appropriate points to provide horizontal control for striping and to determine necessary starting and cutoff points. Broken line intervals will not be marked. Longitudinal joints, pavement edges and existing markings shall serve as horizontal control when so directed.
4. A tolerance of 0.25 inch under or 0.25 inch over the specified width shall be allowed for striping provided the variation is gradual and does not detract from the general appearance. Alignment deviations from the control guide shall not exceed 2 inches provided the variation is gradual and does not detract from the general appearance. Material shall not be applied over a longitudinal joint. Establishment of application tolerances shall not relieve Contractor of the responsibility to comply as closely as practicable with the planned dimensions.
5. Glass beads conforming to the requirements of Grading “B” (larger beads) as specified herein shall be applied at a rate of 12 pounds per gallon of epoxy pavement marking material, immediately followed by a second drop of glass beads conforming to the requirements of Grading “A” (smaller beads) as specified herein applied at a rate of 13 pounds per gallon of epoxy pavement marking material.
6. Time to No-Track: The material shall be in “no-tracking” condition within 15 minutes, or as allowed by Engineer. The no-tracking time shall be determined by passing over the line with a passenger car or pickup truck in the simulated passing maneuver. A marking showing no visual deposition of the material to the pavement surface when viewed from a distance of 50 feet (15 meters) shall be considered as showing “no-tracking” and conforming to this requirement for time to no-track.
7. When stencils are used during the application of epoxy markings, care must be used when removing the stencils so that the epoxy resin does not drip on the road, sidewalk, grass, etc., and so that the applied markings have edges which are clean, straight and neat.
8. Epoxy resin pavement markings may be applied over existing painted markings provided they are sufficiently worn to allow adequate adhesion. If required by the Engineer, existing plastic, thermoplastic, epoxy or freshly painted markings shall be removed prior to the application of epoxy markings.

E. Crosswalks

1. Only glass beads conforming to the requirements of Grading “A” (smaller beads) as specified herein shall be applied at a rate of 25 pounds per gallon of epoxy pavement marking material.

F. Performance

1. In order to be accepted, the applied markings must meet the following minimum retroreflectivity reading as measured using an LTL 2000 Retrometer with 30-meter geometry 1 to 2 weeks after installation:

    a. White Epoxy 250 millicandelas per square foot per foot candle (millicandelas per square meter per lux).
    b. Yellow Epoxy 175 millicandelas per square foot per foot candle (millicandelas per square meter per lux).

END OF SECTION 321723

SECTION 32 1726 - TACTILE WARNING SURFACING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Cast iron tactile and detectable warning tiles for pedestrian walking surfaces.

1.3 RELATED REQUIREMENTS

A. Section 32 1313 - Concrete Paving: Concrete sidewalks.

1.4 REFERENCE STANDARDS

A. 49 CFR 37 - Transportation Services for Individuals with Disabilities (ADA) current edition.

B. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

C. ASTM A48/A48M - Standard Specification for Gray Iron Castings 2003 (Reapproved 2021).

D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar 2015.

E. ATBCB PROWAG - Proposed Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way 2011.

1.5 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from

Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Warranty: Submit manufacturer warranty; complete forms in Owner's name and register with manufacturer.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than five years documented experience.

B. Installer Qualifications: Company certified in writing by product manufacturer as having successfully completed work substantially similar to the work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver to project site in manufacturer's protective wrapping and in manufacturer's unopened packaging.

B. Store covered and elevated above grade and in manufacturer's unopened packaging until ready for installation. Maintain at ambient temperature between 40- and 90-degrees F (4 and 32 degrees C).

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Cast Iron Tiles: Provide manufacturer's standard ten-year warranty against manufacturing defects, breakage, or deformation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Cast Iron Detectable Warning Plates:

1. Neenah Foundry, a division of Neenah Enterprises, Inc; [_____]: www.nfco.com/#sle.
2. East Jordan Iron Works Inc.

2.2 TACTILE AND DETECTABLE WARNING DEVICES

A. Cast Iron Detectable Warning Plates:
   1. Material: Cast gray iron; ASTM A48/A48M, Class 30 A (minimum).
   2. Installation Method: Cast in place.
   3. Square Dimensions: 24 inches square (610 mm square) and 24 inches by 24 inches (610 mm by 610 mm).
   4. Pattern: Truncated cones in compliance with ADA Standards.
   5. Joint: Manufacturer standard, bolted connection.
   6. Finish: Unfinished.

2.3 ACCESSORIES

A. Fasteners: ASTM A666, Type 304 stainless steel
   1. Size: 1/4-inch (6.35 mm) diameter and 1-1/2 inches (38 mm) long.

PART 3 EXECUTION

3.1 EXAMINATION

A. When installation location is near site boundary or property line, verify required location using property survey.

B. Verify that work area is ready to receive work:
   1. If existing conditions are not as required to properly complete the work of this section, notify Architect.
   2. Do not proceed with installation until deficiencies in existing conditions have been corrected.

C. Verify that dimensions, tolerances, and attachment methods for work in this section are properly coordinated with other work on site.

3.2 INSTALLATION, GENERAL

A. Install in accordance with manufacturer's written instructions.
   1. Do not install damaged, warped, bowed, dented, abraded, or otherwise defective units.
   2. Do not install when ambient or substrate temperature has been below 40 degrees F (4 degrees C) during the preceding 8 daylight hours.

B. Field Adjustment:
   1. Locate relative to curb line in compliance with ATBCB PROWAG, Sections 304 and 305.
   2. Orient so dome pattern is aligned with the direction of ramp.
   3. Align truncated dome pattern between adjacent units.

C. Install units fully seated to substrate, square to straight edges and flat to required slope.

3.3 INSTALLATION - CAST IN PLACE, CAST IRON PLATES

A. Concrete Paving: See Section 32 1313.

B. When installing multiple adjacent units, connect plates before placing.

C. Install by method described in manufacturer's written instructions.

D. Place units into wet concrete.

E. Press assembly into concrete to achieve final elevation.

F. Finish concrete adjacent to plate. Remove wet concrete spilled onto plate surface.

3.4 PROTECTION

A. Protect installed units from traffic, subsequent construction operations or other imposed loads until concrete is fully cured.

B. Touch-up, repair or replace damaged products prior to Date of Substantial Completion.

END OF SECTION

SECTION 321816.13 – PLAYGROUND PROTECTIVE SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Poured in Place Rubber protective surfacing for playground areas.

B. Subbase under resilient surfacing.

1.3 RELATED REQUIREMENTS

A. Section 11 6813 - Playground Equipment.

B. Section 31 2310 - Earthwork: Subbases for surfacing.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 REFERENCE STANDARDS

A. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)) 2012 (Reapproved 2021).

B. ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine 2017.

C. ASTM F1292 - Standard Specification for Impact Attenuation of Surfacing Materials Within the Use Zone of Playground Equipment 2018.

D. ASTM F1487 - Standard Consumer Safety Performance Specification for Playground Equipment for Public Use 2021.

E. ASTM F1951 - Standard Specification for Determination of Accessibility of Surface Systems under and around playground equipment; 2014.

F. CPSC Pub. No. 325 - Public Playground Safety Handbook 2010.

G. Americans for with Disabilities Act (ADA).

1.6 DEFINITIONS

A. Use Zone: The area beneath and immediately adjacent to a play structure or equipment (play event) that is designated for unrestricted circulation around equipment, and on whose surface it is predicted that a user would land when falling from or exiting the equipment.

B. Critical Fall Height: The maximum fall height at which the protective surfacing meets the requirements of ASTM F1292.

C. Fall Height: The vertical distance between the finished elevation of the designated play surface and the finished elevation of the protective surfacing beneath it as defined by ASTM F1487.

D. Protective Surfacing: Resilient ground surfacing. The characteristics of the protective surfacing are based on the fall height of the playground equipment. Changes in either the surfacing or the fall height, particularly reducing the resilience of the protective surfacing or increasing the fall height, will reduce safety-related performance.

E. Subbase: A layer under the resilient layer of the protective surfacing but over the subgrade; may be rigid, as in concrete or bituminous, or aggregate.

F. Subgrade: The surface of the ground on which the protective surfacing is installed.

1.7 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of this work; require attendance by affected installers.

1. Conduct meeting to verify product requirements, substrate conditions, utility connections as required, and manufacturer's installation instructions.

1.8 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements - Administrative Requirements, for submittal procedures.

B. Product Data: For all manufactured surfacing products, provide manufacturer's product data showing materials of construction, compliance with specified standards, installation procedures, and safety limitations.

1. Include IPEMA certifications for all surfaces.

C. Shop Drawings: Detailed scale drawings showing locations of existing playground equipment and exposed footings, bases, and anchorage points.

1. Clearly identify footing and base elevations in relation to a fixed survey point on site and to subgrade elevation and depth of protective surfacing, surveyed by land surveyor licensed in the State in which the Project is located.
2. Show locations of underground utilities, storm-drainage system, and irrigation system.
3. Show locations of related construction such as walkways and roadways, fences, site furnishings, and plantings.
4. Show measured fall height for each playground equipment item, determined in accordance with ASTM F1487.
5. Show Use Zone perimeters, determined in accordance with ASTM F1487.

D. Samples: For each product for which color must be selected provide color chart showing full range of colors.

E. Maintenance Data:

1. For manufactured surfacing products, provide manufacturer's recommended maintenance instructions and list of repair products, with address and phone number of source of supply.

F. Manufacturer's Field Report.

1.9 QUALITY ASSURANCE

A. Maintain one copy of the latest edition of ASTM F1487 and CPSC Pub. No. 325 at project site.

B. Manufacturer Qualifications: Company regularly engaged in manufacturing products specified in this section, with not less than three years of documented experience.

1. Surfacing installed in minimum 10 sites and been in successful service minimum 5 years.
2. Provide certificate of Insurance AA rated for minimum 1,000,000 dollars covering both product and general liability.
3. Manufacturer's Representative: Provide name, company name and address, and qualifications.

C. Installer Qualifications: Company certified by manufacturer for training and experience installing the protective surfacing; provide installer's company name and address, and training and experience certificate.

1.10 PRE-INSTALLATION MEETING

A. Coordinate with Section 11 68 00 – Playfield Equipment and Structures.

B. Convene a meeting one week before starting earthwork for playground to discuss coordination between various installers.

1. Require attendance by personnel responsible for grading and installers of playground equipment, protective surfacing, footings, and adjacent work.
2. Include representatives of Contractor.
3. Notify Architect at least 2 weeks prior to meeting.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store protective surfacing to project site in accordance with manufacturer's recommendations.

B. Store materials in a dry, covered area, elevated above grade.

1.12 STANDARD WARRANTY

A. See Section 01 7800 - Closeout Submittals - Closeout Submittals, for additional warranty requirements.

B. Provide minimum 5 year warranty for poured in place playground surfacing.

PART 2 - PRODUCTS

2.1 PERFORMANCE CRITERIA

A. Because the safety of the playground depends on strict compliance with the performance criteria, this information is provided for Contractor's information.

1. The protective surfacing constitutes a resilient layer installed over a non-resilient layer, which is installed over the subgrade, with the top of playground equipment footings and anchorage devices covered by full depth of the resilient portion of the protective surfacing.
2. The total depth available for protective surfacing, from surface of subgrade, is indicated on drawings.
3. The top elevation of the protective surfacing is intended to be flush with adjacent grades.
4. Use Zone: The protective surfacing shall be designed to provide acceptable impact attenuation as defined in ASTM F1292 for Critical Height as indicated on the Drawings.
5. High Play Activity Area: The protective surfacing has been designed to provide impact acceptable attenuation as defined in ASTM F1292 for Critical Fall Height as indicated on the Drawings.
6. Accessibility: Surface material must provide accessible routes for maneuvering in and around play events and comply with ASTM F1951.
7. All playground components' use and layout shall conform to recommendations of U.S. Consumer Product Safety Commission "Public Playground Safety Handbook" (CGS Section 21a-12a) and ASTM International standards.

B. If deviation from specified depth is required, it is the Contractor's responsibility to make all changes required to maintain specified top elevation and required impact attenuation at no extra cost to Owner; obtain approval prior to proceeding; follow approval request procedure as specified for substitutions.

2.2 MATERIALS

A. Poured-In-Place Membrane Surfacing: Weather-resistant wear layer over impact attenuating substrate over aggregate subbase.

1. Wear Layer: Ethylene propylene diene monomer (EPDM) particles adhered with an ultraviolet-stabilized polyurethane binder to produce an even, uniformly colored surface.
2. Wear Layer Thickness: 3/8 inch (10 mm), minimum.
3. Coefficient of Friction, when wet: 0.8, minimum, when tested in accordance with ASTM D2047.
4. Wear Layer Color(s): As indicated on drawings.
5. Impact Attenuating Substrate: 100 percent recycled shredded styrene butadiene rubber (SBR) shreds or granules with 100 percent solids polyurethane binder to form a resilient material; do not use foam rubber.
6. Resilient Depth: As required to achieve acceptable impact attenuation as defined in ASTM F1292 for Critical Fall Height, but not more than depth indicated; maintain top elevation flush with adjacent grades.
7. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
8. Manufacturers:

a. GameTime, Inc: www.gametime.com/#sle.
b. No Fault Sport Group; No Fault Safety Surface for Playgrounds: www.nofault.com/#sle.
c. Play Safe Surfacing, Inc: www.playsafesurfacing.com/#sle.
d. Hanover Specialties Inc: www.vitriturf.com/#sle.

B. Geotextile: Nonwoven polypropylene sheet.

C. Aggregate Subbase: See Section 32 2310.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Playground equipment installer will perform playground layout prior to installation of footings; verify correctness of layout before starting this work.

B. Verify that playground equipment and site furnishings and irrigation system located within playground area are complete.

C. Verify location of underground utilities and facilities in the playground area. Damage to underground utilities and facilities will be repaired at Contractor's expense.

D. Verify that subgrades are at proper elevations and that smooth grading is complete.

E. Verify that proper depth of surfacing is marked on base supports of playground equipment.

3.2 PREPARATION

A. Correct subgrade irregularities to ensure that required depth of protective surfacing can be installed, and subgrade elevation is in accordance with manufacturer's requirements.

B. Inside Use Zones remove all obstructions that would extend into the resilient protective surfacing.

C. Remove rocks, debris, and other similar items.

3.3 SUBBASE

A. Install aggregate subbase as indicated on drawings and in Section 32 1123. Compact aggregate to maximum 95 percent, in accordance with ASTM D1557.

B. Install with top surface of subbase no higher than grades and levels indicated and not more than 1/4 inch (6 mm) lower than grades and levels indicated.

C. Install in true, even plane, sloped to provide positive drainage.

D. Flatness Tolerance: 1/4 inch in 10 feet (6 mm in 3 m), maximum.

3.4 RESILIENT SURFACING LAYER

A. Install in accordance with CPSC Pub. No. 325, ASTM F1487, manufacturer's instructions, and requirements of authorities having jurisdiction (AHJ).

B. Install proper thickness throughout Use Zone(s).

C. Clean and dry surface of subbase.

D. Cover aggregate subbase with geotextile:

1. Verify that aggregate is free of ruts or protruding objects.
2. Lap minimum 4 inches (100 mm) width at seams. Adhere seams in accordance with manufacturer's recommendations.
3. Install smooth, and free of tensile stresses, folds, or wrinkles.
4. Protect from clogging, tears, or other damage during surfacing installation.
5. Repair or replace damaged geotextile in accordance with manufacturer's recommendations.

E. Poured In Place Surfacing:

1. Mix components mechanically on-site in accordance with manufacturer's directions; do not mix by hand.
2. Install seamlessly; ensure complete bond to subbase.
3. Cover footings and foundations and adhere tightly around penetrating elements.
4. Maintain full thickness of resilient layers within Use Zone; cover or abut containment curbs as indicated on drawings; completely cover tapered transition edges.
5. Hand trowel exposed surface to smooth, even finish.
6. Impact Attenuation Layer: Install entire layer in one continuous pour on the same day.

7. Wear Surface: Bond wear surface to substrate with adhesive. Apply adhesive in small quantities so that wear surface can be applied before adhesive dries.

    a. Install surfacing seamlessly. When wear surface is composed of different color patterns, pour surface continuously and seamlessly.
    b. When seams are required due to color change or field conditions, place adjacent wear surface as soon as possible, before initial pour has cured. Coat edge of initial pour with adhesive and apply wear surface mixture immediately.
    c. Add a minimum of 1/16 inch (2 mm) depth to specified surfacing depth to ensure required impact attenuation performance is met.
    d. Install wear surface to cover foundations and adhere tightly around elements penetrating the surface.

3.5 FIELD QUALITY CONTROL

A. Obtain the services of the equipment manufacturer's field representative to review the finished installation for compliance with specified requirements and with design criteria to the extent known to the Contractor; submit report of field review.

B. Owner or Owner's representative will inspect playground surfacing after installation to verify that surfacing is of proper type and depth and that playground meets specified design safety and accessibility requirements.

C. Repair or replace rejected work until compliance is achieved.

3.6 CLEANING AND PROTECTION

A. Restore adjacent existing areas that have been damaged from the construction.

B. Clean playground equipment of construction materials, dirt, stains, filings, and blemishes due to shipment or installation. Clean in accordance with manufacturer's instructions, using cleaning agents as recommended by manufacturer.

C. Clean playground area of excess construction materials, debris, and waste.

D. Remove excess and waste material and dispose of off-site in accordance with requirements of authorities having jurisdiction.

E. Protect installed products until Date of Substantial Completion.

F. Replace damaged products before Date of Substantial Completion.

END OF SECTION 321816.13

SECTION 323113 – CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Furnishing and installing woven wire fencing systems of the type and height specified and supported by metal posts erected where indicated on the Drawings and as specified herein, including fence and gates.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. ASTM International (ASTM).

1. ASTM A90 – Standard Test Method for Weight (Mass) of Coating on Iron or Steel Articles with Zinc or Zinc Alloy.
2. ASTM A123 – Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A153 – Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware.
4. ASTM A307 – Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60,000 PSI Tensile Strength.
5. ASTM A392 – Standard Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
6. ASTM A428 – Standard Test Method for Weight (Mass) of Coating on Aluminum-Coated Iron or Steel Articles.
7. ASTM A491 – Standard Specification for Aluminum Coated Steel Chain Link Fence Fabric.
8. ASTM A780 – Standard Specification for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

9. ASTM A819 – Standard Specification for Metallic-Coated Steel Wire for Chain Link Fence Fabric and Marcelled Tension Wire.
10. ASTM A824 – Standard Specification Metallic-Coated Steel Marcelled Tension Wire for Use with Chain Link Fence.
11. ASTM B211 – Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod and Wire.
12. ASTM C94 – Standard Specification for Ready-Mixed Concrete.
13. ASTM F552 – Standard Terminology Relating to Chain Link Fencing.
14. ASTM F567 – Standard Practice for Installation of Chain Link Fence.
15. ASTM F626 – Standard Specification for Fence Fittings.
16. ASTM F668 – Specification for Polymer Coated Chain Link Fence Fabric.
17. ASTM F900 – Standard Specification for Industrial and Commercial Swing Gates.
18. ASTM F934 – Specification for Standard Colors for Polymer-Coated Chain Link.
19. ASTM F1043 – Strength and Protective Coatings on Metal Industrial Chain Link Fence Framework.
20. ASTM F1083 – Standard Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures.
21. ASTM F1183 – Standard Specification for Aluminum Alloy Chain Link Fence Fabric.
22. ASTM F1664 – Standard Specification for Poly(Vinyl Chloride) (PVC) and Other Conforming Organic Polymer-Coated Steel Tension Wire Used with Chain-Link Fence.

D. Chain Link Fence Manufacturer's Institute

1. Chain Link Fence Manufacturer's Institute Product Manual, latest revision.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SYSTEM DESCRIPTION

A. Temporary Construction Fence:

1. Fence Height: 8 feet.
2. Mesh Size: 2 inches.
3. Mesh Gauge: 12
4. Gates: Height of gates shall match that of fence. Width of gates shall be as shown on the Drawings.
5. Anchored post or driven posts where indicated. No top or bottom rails required.
6. Panelized/modular units where indicated. Two stabilizers per panel.

B. Chain Link Fence:

1. Fence Height: Varies, refer to the Drawings.
2. Mesh Size: 2 inches.
3. Mesh Gauge: 9, measured prior to application of any coating.
4. Gates: Height of gates shall match that of fence. Type and size of gates shall be as shown on the Drawings.
5. Top and bottom rails between posts unless otherwise indicated.

1.6 SUBMITTALS

A. Shop drawings showing the plan layout, spacing of components, post foundation dimensions, hardware anchorage, gates and a schedule of components.

B. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for chain-link fences and gates.

1. Fence and gate posts, rails, and fittings.
2. Chain-link fabric, fabric coatings, reinforcements, and attachments.
3. Accessories: Privacy slats.
4. Gates, locking mechanisms and hardware.
5. Gate operators, including operating instructions.
6. Motors (if applicable): Show nameplate data, ratings, characteristics, and mounting arrangements.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work. Show accessories, hardware, gate operation, and operational clearances.

1. Gate Operator (if applicable): Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
2. Wiring Diagrams (if applicable): For power, signal, and control wiring.

D. Samples for Initial Selection: For components with factory-applied color finishes.

E. Samples for Verification: Prepared on Samples of size indicated below:

1. Polymer-Coated Components: In 6-inch lengths for components and on full-sized units for accessories.

F. Delegated-Design Submittal: For chain-link fences and gate framework indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified factory-authorized service representative.

B. Product Certificates: For each type of chain-link fence system and gate, from manufacturer.

C. Product Test Reports: For framing strength, ASTM F1043.

D. Field quality-control reports.

E. Warranty: Sample of special warranty.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For the following to include in emergency, operation, and maintenance manuals:

1. Polymer finishes.
2. Gate hardware.
3. Gate operator.

1.9 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

B. Supply material in accordance with Chain Link Fence Manufacturer's Institute Product Manual and this Specification.

C. Perform installation in accordance with ASTM F567.

D. Maintain all facilities installed under this Section in proper and safe condition throughout the progress of the work.

1.10 PROJECT CONDITIONS

A. Field Measurements: Verify layout information for chain-link fences and gates shown on Drawings in relation to existing improvements and/or proposed construction. Verify dimensions by field measurements. Notify Engineer of any dimensional discrepancies prior to proceeding with the work. Coordinate with Engineer regarding any adjustment or modification.

1.11 DELIVERY, STORAGE AND HANDLING

A. Deliver fence fabric and accessories in packed cartons or firmly tied rolls.

B. Packages shall be labeled with the manufacturer's name.

C. Store fence fabric and accessories in a secure and dry place.

1.12 WARRANTY

B. Special Warranty: Manufacturer's standard form in which Installer agrees to repair or replace components of chain-link fences and gates that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Faulty operation of gate operators and controls.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
c. Deterioration of coatings beyond normal weathering.

B. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL

A. All posts and rails shall be straight, true to section and of sufficient length for proper installation.

B. Unless otherwise specified, hardware and accessories shall conform to the requirements of ASTM F626 and ASTM A123 or ASTM A153 as applicable for zinc-coating.

2.2 POSTS AND RAILS

A. Extruded steel tube, ASTM F1083 or rolled/welded tube, ASTM F1043, minimal yield strength 50,000 pounds per square inch (psi), hot dipped galvanized.

1. Extruded steel tube: Average zinc coating of 2.0 ounces per square foot (oz/ft^2) interior/exterior, ASTM F1083.
2. Rolled/welded tube: External zinc coating 1.0 oz/ft^2 with a clear polymeric overcoat, Type D interior 90% zinc-rich coating having a minimum thickness of 0.30 mils.

B. Post size per Table 1.

Table 1 – Post and Rail Sizes

Item	Fence Height	Outside Diameter, Inches	F1083 Schedule 40 weight lb/ft	F1043-IC WT-40 weight lb/ft
Line Posts	up to 8 ft.	2.375	3.65	3.12
	8 to 12 ft.	2.875	5.79	4.64
Terminal Posts	up to 8 ft.	2.875	5.79	4.64
	8 to 12 ft.	4.000	9.11	6.56
Rails		1.660	2.27	1.84

C. Truss rod shall be ⅜-inch zinc-coated steel with adjustable turnbuckles or truss tightener.

2.3 CHAIN-LINK FENCE FABRIC

A. General: Provide fabric in one-piece heights measured between top and bottom of outer edge of selvage knuckle or twist. Comply with CLFMI Product Manual and with requirements indicated below:

1. Fabric Height: As indicated on Drawings.
2. Mesh Size: 2 inches.
3. Selvage: Knuckled at both selvages (KK).
4. Wire Fabric

a. Zinc-Coated Steel Fabric, 9-gauge, ASTM A819, hot-dip galvanized, ASTM A392 Class 2 – 2.0 oz/ft², coated after weaving (GAW).

1) Coat selvage ends of fabric that is metallic coated before the weaving process with manufacturer's standard clear protective coating.

b. Polymer-Coated Steel Fabric: ASTM F668, 9-gauge core wire, 0.3 oz/ft^2 zinc-coated with Class 2b (thermally fused and bonded) PVC coating.

1) Color: Black, ASTM F934.

2.4 TENSION WIRE

C. Match coating type to that of the chain link fabric.

1. Metallic-coated steel wire: Marcelled (spiraled or crimped), 7 gage, (0.177 inches) diameter, ASTM A824, zinc-coated, ASTM A818 Class 5 – 2.0 oz/ft².
2. Polymer-coated steel wire: Marcelled (spiraled or crimped) 7 gage, (0.177 inches) diameter (before coating), ASTM F1664.

a. Color: Black, ASTM F934.

2.5 HARDWARE AND FITTINGS

A. Tension and Brace Bands: Galvanized pressed steel complying with ASTM F626, minimum steel thickness of 12 gauge (0.105 in.), minimum width of ¾ in. and minimum zinc coating of 1.20 oz/ft². Secure bands with $\frac{5}{16}$ in. hot-dip galvanized steel carriage bolts.

B. Terminal Post Caps, Line Post Loop Caps, Rail and Brace Ends, Boulevard Clamps, and Rail Sleeves: In compliance to ASTM F626, pressed steel galvanized after fabrication having a minimum zinc coating of 1.20 oz/ft².

1. Rail sleeves shall not be less than 6 inches long.

C. Truss Rod Assembly: In compliance with ASTM F626, ⅜ in. diameter steel truss rod with a pressed steel tightener, minimum zinc coating of 1.2 oz/ft², assembly capable of withstanding a tension of 2,000 lbs.

D. Tension Bars: In compliance with ASTM F626. Galvanized steel one-piece length 2 in. less than the fabric height, minimum cross section of $^{3}/_{16}$ in. by ¾ in. and minimum zinc coating of 1.2 oz./ft².

E. Miscellaneous hardware, including but not limited to nuts, bolts, washers, clips, bands, rail ends, brackets, and straps shall be provided as required, hot-dip galvanized steel, ASTM F626.

F. Brace bands shall be formed from flat or beveled steel and shall have a minimum thickness after galvanizing of 0.108 inches and a minimum width of ¾ inch.

G. Polymer-Coated Fittings: ASTM F626, PVC or polyolefin coating, minimum thickness 0.006 in., fused and adhered to the zinc-coated fittings. Color to match fence system.

2.6 TIE WIRE AND HOG RINGS

A. Tie Wire and Hog Rings: Galvanized minimum zinc coating 1.20 oz/ft², 9-gauge (0.148 in) steel wire, ASTM F626.

B. Polymer coated materials shall match the coating, class and color to that of the chain link fabric.

2.7 FASTENERS

A. All fasteners shall be hot-dip galvanized, ASTM F2329.

B. Bolts: Steel, ASTM A307, Grade A min, Hex.

C. Nuts: Steel, ASTM A563, Grade A min, Hex.

D. Washers: Steel, round, ASTM F844.

E. Polymer Coated Color Fittings: In compliance with ASTM F626, PVC or polyolefin coating minimum thickness 0.006 in. fused and adhered to the zinc-coated fittings. Color to match fence system.

2.8 MODULAR OR PANELIZED CHAIN LINK FENCE (TEMPORARY FENCE ONLY)

A. Free-standing fence panels, minimum ten (10) foot panels of the height specified.

B. Fabric as specified.

C. Welded tubular steel frame.

D. Stands: Four-sided welded tubular steel frame with center bar and tubular sleeves.

2.9 SWING GATES

A. Gate Construction: ASTM F900. Corners welded or assembled with special malleable or pressed-steel fittings and rivets or bolts to provide rigid connections.

B. Pipe and Tubing: Zinc-Coated Steel: Comply with ASTM F1043 and ASTM F1083; protective coating and finish to match fence framing.

C. Posts (Hing Posts): Round tubular steel.

1. Up to 4-foot fencing: 2⅞-inch OD Pipe.
2. Over 4-foot to 6-foot fencing: 4-inch OD Pipe.
3. Over 6-foot to 12-foot fencing: 6.625-inch OD Pipe.

D. Frames and Bracing: Round tubular steel.

1. Framing:

a. 2.375 inch OD Pipe
b. Gate Leaves: Configured with intermediate members and diagonal truss rods or tubular members as necessary to provide rigid construction, free from sag or twist. When width of gate leaf exceeds 10 feet, install mid-distance vertical tubing of the same size and weight as frame members. When either horizontal or vertical bracing is not required, provide truss rods as cross-bracing to prevent sag or twist.
c. Horizontal bid bracing shall be used on all gates.

E. Wire Fencing Fabric: Fabric shall match that of fence, attached securely to frame at intervals not exceeding 15 inches.

F. Hardware:

1. Latches, hinges, stops, keepers and other hardware items shall be furnished as required for proper operation. These elements may not be shown on the Drawings, but shall be supplied and installed as required for a complete gate system.
2. Hinges: 360-degree inward and outward swing. Set screw shall be installed drilled into the steel post to lock each hinge to the gate post and prevent rotation. No-lift-off type. Box type hinges are not acceptable.
3. Latches: permitting operation from both sides of gate with provision for padlocking accessible from both sides of gate.
4. Double gates and single gates with leaf width 4 feet and greater shall be equipped with a minimum ½″ drop bar and gate hold-backs.
5. Latches, hinges, stops, keepers and other hardware items shall be furnished as required for proper operation.

2.10 PRIVACY SLATS (IF APPLICABLE)

A. Material: PVC, UV-light stabilized, flame resistant, four ply, not less than 0.023 inch (0.58 mm) thick; sized to fit mesh specified for direction indicated.

B. Material: Redwood, $\frac{5}{16}$ inch (7.9 mm) thick, sized to fit mesh specified for direction indicated.

C. Color: As selected by Owner.

2.11 CONCRETE

A. Concrete shall conform to ASTM C94; or pre-packaged concrete mix, ASTM C387. Minimum 28-day compressive strength of 3,000 psi. No air entrainment.

2.12 GROUT AND ANCHORING CEMENT

A. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout, recommended in writing by manufacturer, for exterior applications.

B. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended in writing by manufacturer, for exterior applications.

PART 3 - EXECUTION

3.1 GENERAL

A. Install fence with properly trained crew as shown on the drawings in accordance with ASTM F567.

B. Install all nuts for tension bands and hardware bolts on the side of the fence opposite the fabric.

C. The temporary chain link fence shall be removed at the conclusion of the work.

3.2 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for a verified survey of property lines and legal boundaries, site clearing, earthwork, pavement work, and other conditions affecting performance of the Work.

1. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.4 INSTALLATION, GENERAL

D. Install chain-link fencing to comply with ASTM F567 and more stringent requirements indicated.

1. Install fencing on established boundary lines inside property line.

3.5 CHAIN-LINK FENCE INSTALLATION

A. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacings indicated, in firm, undisturbed soil.

B. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.

1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
2. Concrete post footings shall have a plan diameter 12 inches greater than the post diameter. Holes shall be clean and free of loose soil and debris. Concrete shall be placed continuously in one operation and tamped or vibrated for consolidation. Tops of the concrete footings shall be crowned to shed water.
3. Gate post/footings shall be installed a minimum of 42 inches below grade.
4. All corner, end posts, and gate posts shall be braced.

    a. Brace each gate and corner post to adjacent line post with horizontal center brace rail and diagonal truss rods. Install brace rail one bay from end and gate posts.
    b. Corner and terminal posts are to be braced horizontally and diagonally. The braces are to extend over one adjacent panel. Changes in line of 30 degrees or more shall be considered as corners.
    c. Braces and truss rods shall be securely fastened to posts with appropriate hardware.
    d. Pull posts with two braces shall be provided for all heights where changes in horizontal or vertical alignment of ten (10) degrees or more occur.

5. Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.

    a. Concealed Concrete: Top 3 inches below grade as indicated on Drawings to allow covering with surface material.
    b. Posts Set into Concrete in Sleeves: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with non-shrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer’s written instructions, and finished sloped to drain water away from post.
    c. Posts Set into Voids in Concrete: Form or core drill holes not less than 5 inches deep and ¾ inch larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with non-shrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer’s written instructions, and finished sloped to drain water away from post.

C. Terminal Posts: Locate terminal end, corner, and gate posts per ASTM F567 and terminal pull posts at changes in horizontal or vertical alignment of 15 degrees or more.

D. Line Posts: Space line posts uniformly as indicated on the Drawings. Unless indicated otherwise, spacing shall be 8 feet on-center.

E. Post Bracing and Intermediate Rails: Install according to ASTM F567, maintaining plumb position and alignment of fencing. Diagonally brace terminal posts to adjacent line posts with truss rods and turnbuckles. Install braces at end and gate posts and at both sides of corner and pull posts.

1. horizontal braces at midheight of fabric 72 inches or higher, on fences with top rail and at two-third fabric height on fences without top rail. Install so posts are plumb when diagonal rod is under proper tension.

F. Tension Wire: Install according to ASTM F567, maintaining plumb position and alignment of fencing. Pull wire taut, without sags. Fasten fabric to tension wire with 0.120-inch-diameter hog rings of same material and finish as fabric wire, spaced a maximum of 24 inches on-center. Install tension wire in locations indicated before stretching fabric. Provide horizontal tension wire at the following locations:

1. Extended along top and bottom of fence fabric. Install top tension wire through post cap loops. Install bottom tension wire within 6 inches (152 mm) of bottom of fabric and tie to each post with not less than same diameter and type of wire.

G. Top Rail: Install according to ASTM F567, maintaining plumb position and alignment of fencing. Run rail continuously through line post caps, bending to radius for curved runs and terminating into rail end attached to posts or post caps fabricated to receive rail at terminal posts. Provide expansion couplings as recommended in writing by fencing manufacturer.

H. Intermediate and Bottom Rails: Install and secure to posts with fittings.

I. Chain-Link Fabric: Apply fabric to outside of enclosing framework. Leave 1 inch between finish grade or surface and bottom selvage unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires. Anchor to framework so fabric remains under tension after pulling force is released.

J. Tension or Stretcher Bars: Thread through fabric and secure to end, corner, pull, and gate posts with tension bands spaced not more than 15 inches on-center.

K. Tie Wires: Use wire of proper length to firmly secure fabric to line posts and rails. Attach wire at one end to chain-link fabric, wrap wire around post a minimum of 180 degrees, and attach other end to chain-link fabric per ASTM F626. Bend ends of wire to minimize hazard to individuals and clothing.

1. Maximum Spacing: Tie fabric to line posts at 12 inches on-center and to braces at 24 inches on-center.

L. Fasteners: Install nuts for tension bands and carriage bolts on the side of the fence opposite the fabric side.

M. Privacy Slats: Install slats in direction indicated, securely locked in place.

1. Diagonally, for privacy factor of 80 to 85.

N. Fabric:

1. Do not install fabric until concrete post footings have cured seven (7) days. Provide fabric of the height specified. Install fabric on the public side of the fence, with bottom no greater than 2 inches above the ground surface. Fabric shall be pulled taut to prevent sagging and provide a uniform smooth appearance. Fasten fabric to line posts at intervals not exceeding 15 inches with ties as specified.
2. Install tension wire in one continuous length between pull posts, weaved through fence fabric at top. Tension wire shall be applied to provide a wire without visible sag between posts. Fasten fabric to tension wire at intervals not exceeding 24 inches with ties or hog rings as specified.
3. Where it is not practicable to conform the fence to general contour of the ground, as at ditches, channels, etc., the opening beneath the fence shall be enclosed with chain link fabric and sufficiently braced to preclude access, but not to restrict the flow of water.

3.6 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach fabric as for fencing. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

B. Provide swing gates at the locations and dimensions shown on the Drawings. Do not install gates until concrete post footings have cured seven (7) days.

C. Gates shall be installed plumb, level, and secure, with full opening without interference. Hardware shall be installed and adjusted for smooth operation and lubricated where necessary.

D. Provide concrete center drop to footing depth and suitable drop rod sleeve at center of double gate openings.

3.7 GATE OPERATOR INSTALLATION (IF APPLICABLE)

A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.

B. Excavation for Support Posts Pedestals Equipment Bases/Pads: Hand-excavate holes for bases/pads, in firm, undisturbed soil to dimensions and depths and at locations as required by gate-operator component manufacturer's written instructions and as indicated.

3.8 GROUNDING AND BONDING

E. Fence Grounding: Install at maximum intervals of 1,500 feet except as follows:

F. Fences within 100 feet of buildings, structures, walkways, and roadways: Ground at maximum intervals of 750 feet.

1. Gates and Other Fence Openings: Ground fence on each side of opening.
2. Bond metal gates to gate posts.
3. Coordinate subparagraph below with Drawings in projects where intentional discontinuities are provided in metal fencing conductivity to localize lightning effects to the vicinity of strikes. See Evaluations.
4. Bond across openings, with and without gates, except openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches below finished grade.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet on each side of crossing.

C. Plans and details on Electrical Drawings and requirements in Division 26 Sections may revise or illustrate application of requirement below or may require grounding that exceeds minimum requirements in IEEE C2. Fences enclosing electrical substations are often bonded to a station grounding mat.

D. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.

E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at the grounding location, including the following:

1. Make grounding connections to each barbed wire strand with wire-to-wire connectors designed for this purpose.
2. Make grounding connections to each barbed tape coil with connectors designed for this purpose.

F. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.

G. Connections: Make connections to minimize possibility of galvanic action or electrolysis. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
2. Make connections with clean, bare metal at points of contact.
3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

H. Bonding to Lightning Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning protection down conductor or lightning protection grounding conductor complying with NFPA 780.

3.9 FIELD QUALITY CONTROL

A. Grounding-Resistance Testing: Engage a qualified testing agency to perform tests and inspections.

1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance no fewer than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
3. Report: Prepare test reports certified by a testing agency of grounding resistance at each test location. Include observations of weather and other phenomena that may affect test results.

3.10 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire

operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

3.11 DEMONSTRATION

G. Engage a factory-authorized service representative to train Owner's personnel to adjust, operate, and maintain chain-link fences and gates.

END OF SECTION 323113

SECTION 323300 – BOLLARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Steel pipe bollard with plastic sleeve.
2. Accessible Parking Signage bollard.
3. Eclipse Concrete Bollard

B. The Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. The Contractor is responsible for all health and safety.

1.3 RELATED SECTIONS

A. Section 05 0513 - Shop-Applied Coatings for Metal: For hot-dip galvanized with primed finish.

B. Section 09 9113 - Exterior Painting: For field painted finish.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include

documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. ASTM International (ASTM).

1. ASTM A366—Standard Specification for Steel, Carbon, Cold-Rolled Sheet, Commercial Quality.
2. ASTM A500—Standard Specification for Cold-Formed Welded and Seamless Carbon Tubing in Rounds and Shapes.
3. ASTM D1640—Standard Test Methods for Drying, Curing, or Film Formation of Organic Coatings at Room Temperature.
4. ASTM D5893—Standard Specification for Cold Applied, Single Component, Chemically Curing Silicone Joint Sealant for Portland Cement Concrete Pavements.

C. State of Connecticut

1. State Building Code, including all Amendments, Supplements, and Errata.

D. United States Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction.

E. United States General Services Administration, Federal Standards.

1. Federal Standard No. 595—Colors Used in Government Procurement.

1.6 PERFORMANCE REQUIREMENTS

A. Bollards are to be installed as a single unit with specified dimensions and is secured in the ground.

1.7 SUBMITTALS

A. Submit Shop Drawings, manufacturer’s literature, material certificates or other data indicating compliance with these Specifications.

B. Submit testing data for concrete as required by Section 03 3200—Site Cast-in-Place Concrete.

1.8 DELIVERY, STORAGE AND HANDLING

A. Supply: Bollard units of all types must be supplied by a single manufacturer having the resources to provide consistent quality in appearance and physical properties.

B. Materials shall be wrapped for shipment and storage, delivered to the jobsite in manufacturer's original packaging.

C. Store units to avoid damage from moisture, abrasion, and other construction activities.

PART 2 - PRODUCTS

2.1 STEEL PIPE BOLLARDS WITH PLASTIC SLEEVE

A. Concrete filled steel pipe with plain shaft.

1. Shape: Round.
2. Pipe Diameter: As indicated on Drawings.
3. Height above Grade: As indicated on Drawings.

4. Materials:

a. Steel Pipe: ASTM A53/A53M, standard weight.
b. Factory Finish: Hot-dipped galvanized.

5. Mounting: In-ground.

6. Accessories: Plastic Cover.

a. Material: LDPE plastic injected with UV resistor fade resistant additive.
b. Wall Thickness: 1/4 inch.
c. Size: 7-inch inside diameter designed to fit over 6-inch diameter pipe.
d. Height: Cut to length as required by manufacturer.
e. Top: Domed.
f. Color: Black.
g. Manufacturer: Ideal Shield, 2525 Clark Street, Detroit, MI 48209 (866) 825-8659 or approved equal.

2.2 ACCESSIBLE PARKING SIGNAGE BOLLARD

A. Hollow steel pipe with plain shaft.

B. Shape: Square.

C. Width: As indicated on Drawings.

D. Height Above Grade: As indicated on Drawings.

E. Cap: Angled steel plate.

F. Materials:

1. Steel Tube: ASTM A513/A513M, standard weight.
2. Factory Finish: hot-dip galvanized with primed finish 05 0513 - Shop-Applied Coatings for Metal.
3. Final Finish: Field painted conforming to Section 09 9113 - Exterior Painting.
4. Color: As indicated on metal finish schedule.
5. Mounting: In-ground.

2.3 ECLIPSE CONCRETE BOLLARD

A. Pre-cast concrete bollard
1. Shape: Round
2. Diameter: 10”
3. Height above grade: 39 7/8”
4. Color: Acid Wash A20 White
5. Mounting: In-ground Embedment
6. Manufacturer: Wausau Tile, P.O. BOX 1520 Wausau, WI 54402-1520

2.4 CONCRETE

A. Concrete shall be as specified in Section 03 3200—Site-Cast-in-Place Concrete.

2.5 JOINT FILLER

A. One-part, cold-applied silicone that cures to a durable, flexible, low modulus silicone rubber joint seal, ASTM D5893.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install bollards at the locations indicated on the Drawings.

B. Install bollards level and true to the specific depths and exposures as indicated on the Drawings.

C. Provide temporary bracing as required to maintain desired installation until concrete has cured.

D. Protect newly-installed bollards from damage or movement.

E. Verify mounting location before proceeding. For bollards, verify spacing.

F. Examine conditions at the installation area for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting installation.

G. Proceed with installation only after unsatisfactory conditions have been corrected.

H. Use manufacturer’s templates or similar guides prior to drilling for anchorage. Control dust and protect adjacent areas.

I. Comply with manufacturer's written installation instructions for installation, unless more stringent requirements are indicated. Complete field assembly where required.

END OF SECTION 323300

SECTION 329119.13 – TOPSOIL PLACEMENT AND GRADING

PART 1 - PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Testing of topsoil for use in creating amended topsoil and as an ingredient in planting soils of other sections.

B. Placing and finished grading of amended topsoil.

1.3 RELATED REQUIREMENTS

A. Section 31 1100 – Clearing and Grubbing: Clearing and protection of vegetation.

B. Section 32 9300 - Plants: Placing planting soil for plantings.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of

Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 UNIT PRICES

A. Work of this Section is affected by unit prices specified in Section 01 2200 - Unit Prices.

1.6 DEFINITIONS

A. AAPFCO: Association of American Plant Food Control Officials.

B. Amended Topsoil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

C. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.

D. CEC: Cation exchange capacity.

E. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.

F. Duff Layer: A surface layer of soil, typical of forested areas, which is composed of mostly decayed leaves, twigs, and detritus.

G. Imported Soil: Soil that is transported to Project site for use.

H. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.

I. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.

J. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.

K. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."

L. Planting Soil: Amended topsoil that has been modified as specified with soil amendments and fertilizers to produce a soil mixture for use in planting beds.

M. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.

N. SSSA: Soil Science Society of America.

O. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

P. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

Q. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.

R. USCC: U.S. Composting Council.

1.7 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at project site.

1.8 SUBMITTALS

A. Product Data: For each type of product.

1. Include recommendations for application and use.
2. Include test data substantiating that products comply with requirements.
3. Include sieve analyses for aggregate materials.
4. Material Certificates: For each type of imported soil before delivery to the site, according to the following:

    a. Manufacturer's qualified testing agency's certified analysis of standard products.
    b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
    c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.

B. Samples: For each bulk-supplied material, 1 quart (1 liter) volume of each in sealed containers labeled with content, source, and date obtained. Each sample shall be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

C. Qualification Data: For each testing agency.

D. Preconstruction Test Reports: For preconstruction soil analyses specified in "Preconstruction Testing" article.

E. Field quality-control reports.

1.9 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1. Laboratories: Subject to compliance with requirements, provide testing by one of the following:

a. UConn Soil Nutrient Analysis Laboratory, 6 Sherman Place U-5102, University of Connecticut, Storrs, CT 06269-5102 (860) 486-4274 email: soiltest@uconn.edu.

1.10 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction soil analyses on existing, on-site soil.

1. Notify Architect seven days in advance of the dates and times when laboratory samples will be taken.

B. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.

1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.11 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.

B. Sample Collection and Labeling: Have samples taken and labeled by Owner or Contractor in presence of Architect under the direction of the testing agency.

1. Number and Location of Samples: Minimum of three representative soil samples from varied locations for each soil to be used or amended for landscaping purposes.
2. Procedures and Depth of Samples: According to USDA-NRCS's "Field Book for Describing and Soils".
3. Division of Samples: Split each sample into two, equal parts. Send half to the testing agency and half to Owner for its records.
4. Labeling: Label each sample with the date, location keyed to a site plan or other location system, visible soil condition, and sampling depth.

1.12 TESTING REQUIREMENTS

C. General: Perform tests on soil samples according to requirements in this article.
1. Physical Testing:
1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
b. Hydrometer Method: Report percentages of sand, silt, and clay.

2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."

3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D698 (Standard Proctor).

B. Chemical Testing:

1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."
2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."

C. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAPT NCR-13, including the following:

1. Percentage of organic matter.
2. CEC, calcium percent of CEC, and magnesium percent of CEC.
3. Soil reaction (acidity/alkalinity pH value).
4. Buffered acidity or alkalinity.
5. Nitrogen ppm.
6. Phosphorous ppm.
7. Potassium ppm.
8. Manganese ppm.
9. Manganese-availability ppm.
10. Zinc ppm.
11. Zinc availability ppm.
12. Copper ppm.
13. Sodium ppm [and sodium absorption ratio].
14. Soluble-salts ppm.
15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
16. Other deleterious materials, including their characteristics and content of each.

D. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."

E. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory amended topsoil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.

1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1000 sq. ft. (100 sq. m) for 6-inch (150-mm) depth of soil.
2. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1000 sq. ft. (100 sq. m) for 6-inch (150-mm) depth of soil.

F. Delivery, Storage, and Handling

G. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.

H. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways, and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Do not move or handle materials when they are wet or frozen.
4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 TOPSOILS SPECIFIED BY COMPOSITION

A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.

B. The Soil shall not contain refuse, roots larger than ¼-inch diameter, heavy, sticky, or stiff clay, stones larger than ½-inches in diameter, noxious seeds, sticks, brush, litter, concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, or any substances deleterious to plant growth. The percentage of the above objects shall be controlled by source selection not by screening the soil. The Soil shall be suitable for the germination of seeds and the support of vegetative growth in line with the requirements of the project. The Soil shall not contain weed seeds in quantities that cause noticeable weed infestations in the final planting beds.

C. Amended Topsoil: Required Properties of topsoil after amendments have been added:

1. Friable and with sufficient structure to give good tilth and aeration.
2. Soil reaction of pH: 6 to 7.
3. Organic Matter Content: Minimum of 6 percent following addition of compost.
4. No stones greater than 0.5 inches (13 mm).
5. Infiltration Rate: Greater than 4 inches per hour.
6. Combined silt and clay shall not exceed 40 percent.
7. Soluble salts shall be no more than 2 mmho/cm.
8. Soil shall not be compactable to more than 200 psi.
9. Soils shall conform to the following gradations:

Percentage of Main Fraction		
Description	Size (mm)	Percent
Sand	0.05 to 2.0	59 to 70
Silt	0.002 to 0.05	15 to 25
Clay	Less than 0.002	5 to 15
Percentage of Sand Fraction		

Percentage of Main Fraction		
Description	Size (mm)	Percent
Description	Size (mm)	Percent
Very Coarse	1.0 to 2.0	12 to 14
Coarse	0.5 to 1.0	18 to 21
Medium	0.25 to 0.5	18 to 21
Fine	0.10 to 0.25	8 to 9
Very Fine	0.05 to 0.10	3 to 4

D. On-Site Topsoil: Existing, on-site surface soil, with the duff layer, if any, retained; and stockpiled on-site; modified to produce viable amended topsoil.

1. Blend existing, on-site surface soil with soil amendments and fertilizers according to the soil analysis to produce amended topsoil:

a. Inorganic soil amendments as recommended by testing laboratory.
b. Organic soil amendments as recommended by testing laboratory.
c. Fertilizer as recommended by testing laboratory.

E. Imported Topsoil: Imported, naturally formed soil from off-site sources and consisting of sandy loam soil according to USDA textures; and modified to produce viable amended topsoil.

1. Sources: Take imported, unamended soil from sources that are naturally well-drained sites where topsoil occurs at least 4 inches (100 mm) deep, not from agricultural land, bogs, or marshes; and that do not contain undesirable organisms; disease-causing plant pathogens; or obnoxious weeds and invasive plants including, but not limited to, quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, ground ivy, perennial sorrel, and bromegrass.

2. Blend imported topsoil with soil amendments and fertilizers according to the soil analysis to produce amended topsoil:

a. Inorganic soil amendments as recommended by testing laboratory.
b. Organic soil amendments as recommended by testing laboratory.
c. Fertilizer as recommended by testing laboratory.

2.2 INORGANIC SOIL AMENDMENTS

A. The following inorganic soil amendments shall be added to topsoil when recommended by soil analysis and as indicated on drawings to produce amended topsoil.

B. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:

1. Class: T, with a minimum of 99 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 75 percent passing through a No. 60 (0.25-mm) sieve.
2. Class: O, with a minimum of 95 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through a No. 60 (0.25-mm) sieve.
3. Form: Provide lime in form of ground dolomitic limestone.

C. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through a No. 40 (0.425-mm) sieve.

D. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.

E. Perlite: Horticultural perlite, soil amendment grade.

F. Agricultural or Recycled Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 (0.30-mm) sieve.

G. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C33/C33M.

2.3 ORGANIC SOIL AMENDMENTS

A. The following organic soil amendments shall be added to topsoil when recommended by soil analysis and as indicated on drawings to produce amended topsoil.

B. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:

C. Sphagnum Peat: Partially decomposed sphagnum peat moss, finely divided or of granular texture with 100 percent passing through a 1/2-inch (13-mm) sieve, a pH of 3.4 to 4.8, and a soluble-salt content measured by electrical conductivity of maximum 5 dS/m.

D. Muck Peat: Partially decomposed moss peat, native peat, or reed-sedge peat, finely divided or of granular texture with 100 percent passing through a 1/2-inch (13-mm) sieve, a pH of 6 to 7.5, a soluble-salt content measured by electrical conductivity of maximum 5 dS/m, having a water-absorbing capacity of 1100 to 2000 percent, and containing no sand.

E. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.4 FERTILIZERS

A. The following fertilizers shall be added to topsoil when recommended by soil analysis and as indicated on drawings to produce amended topsoil.

B. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.

C. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: 1 lb./1000 sq. ft. (0.5 kg/100 sq. m of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

D. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

E. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

PART 3 - PART 3 EXECUTION

3.1 GENERAL

A. Place amended topsoil and fertilizers according to requirements in other specification sections.

B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches (150 mm) and stockpile until amended.

B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.

C. Unsuitable Materials: Clean soil to contain a maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.

D. Screening: Pass unamended soil through a 2-inch (50-mm) sieve to remove large materials.

3.3 PLACING AND MIXING UNAMENDED TOPSOIL OVER EXPOSED SUBGRADE

A. General: Apply and mix unamended soil with amendments on-site to produce required amended topsoil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches (100 mm). Remove stones larger than 1-1/2 inches (38 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply, add soil amendments, and mix approximately half the thickness of unamended topsoil over prepared, loosened subgrade according to "Mixing" paragraph below. Mix thoroughly into top 2 inches (50 mm) of subgrade. Spread remainder of planting soil.

C. Mixing: Spread unamended topsoil to total depth of 6 inches (150 mm), but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if topsoil or subgrade is frozen, muddy, or excessively wet.

1. Amendments: Apply soil amendments, except compost, and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended topsoil to produce amended topsoil.

a. Mix lime with dry soil before mixing fertilizer.
b. Mix fertilizer with planting soil no more than seven days before planting.

2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches (200 mm) in loose depth for material compacted by compaction equipment, and not more than 4 inches (100 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each blended lift of amended topsoil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D698 and tested in-place except where a different compaction value is indicated on Drawings.

E. Finish Grading: Grade amended topsoil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections:

1. Compaction: Test planting-soil compaction after placing each lift and at completion using a densitometer or soil-compaction meter calibrated to a reference test value based on laboratory testing according to ASTM D698. Space tests at no less than one for each 1000 sq. ft. (100 sq. m) of in-place soil or part thereof.

C. Soil will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Label each sample and test report with the date, location keyed to a site plan or other location system, visible conditions when and where sample was taken, and sampling depth.

3.5 PROTECTION

A. Protection Zone: Identify protection zones according to Section 01 5639 - Temporary Tree and Plant Protection

B. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Vehicle traffic.

4. Foot traffic.
5. Erection of sheds or structures.
6. Impoundment of water.
7. Excavation or other digging unless otherwise indicated.

C. If amended topsoil or subgrade is over compacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by Architect and replace contaminated planting soil with new planting soil.

3.6 CLEANING

A. Protect areas adjacent to amended topsoil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.

B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.
2. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION 329119.13

SECTION 329219 – SEEDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Hydroseeding, mulching and fertilizer.

B. Maintenance.

1.3 RELATED REQUIREMENTS

A. Section 32 9119.13 - Topsoil Placement and Grading: Topsoil testing, planting soil placement and finish grading.

B. Section 32 9223 – Sodding: Providing and installing sod within turf surfaced roadways.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of

Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DEFINITIONS

A. Weeds: Include Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Brome Grass.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Maintenance Data: Include maintenance instructions, cutting method and maximum grass height; types, application frequency, and recommended coverage of fertilizer.

C. Maintenance Contract.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver grass seed mixture in sealed containers. Seed in damaged packaging is not acceptable. Deliver seed mixture in containers showing percentage of seed mix, year of production, net weight, date of packaging, and location of packaging.

B. Deliver fertilizer in waterproof bags showing weight, chemical analysis, and name of manufacturer.

PART 2 - PART 2 PRODUCTS

2.1 SEED MIXTURE

A. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA's "Rules for Testing Seeds" for purity and germination tolerances.

B. Seed Species: Seed of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:

1. Grass seed mixture shall be as indicated on the Drawings.

2.2 SOIL MATERIALS

A. Amended Topsoil: As specified in Section 32 9119.13 - Topsoil Placement and Grading.

2.3 ACCESSORIES

A. Mulching Material: Oat or wheat straw, free from weeds, foreign matter detrimental to plant life, and dry. Hay or chopped cornstalks are not acceptable.

B. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic and free of plant-growth or germination inhibitors; with a maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.

C. Water: Clean, fresh, and free of substances or matter that could inhibit vigorous growth of grass.

2.4 EROSION-CONTROL MATERIALS

A. Erosion-Control Blankets: Biodegradable wood excelsior, straw, or coconut-fiber mat enclosed in a photodegradable plastic mesh. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

B. Erosion-Control Fiber Mesh: Biodegradable burlap or spun-coir mesh, a minimum of 0.92 lb./sq. yd. (0.5 kg/sq. m), with 50 to 65 percent open area. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

2.5 PESTICIDES

A. General: Pesticide, registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

2.6 TESTS

A. Provide analysis of topsoil fill under provisions of Section 01 4000 and according to Section 32 9119.13 - Topsoil Placement and Grading.

2.7 FIELD CONDITIONS

A. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: March 15th to June 15th.
2. Fall Planting: August 15th to October 15th.

B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that prepared soil base is ready to receive the work of this Section.

3.2 PREPARATION

A. Prepare subgrade in accordance with Section 31 2200.

B. Place amended topsoil in accordance with Section 32 9119.13 - Topsoil Placement and Grading.

C. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

1. Protect adjacent and adjoining areas from hydroseeding and hydromulching overspray.
2. Protect grade stakes set by others until directed to remove them.

D. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

E. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

F. Before planting, obtain Landscape Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.3 FERTILIZING

A. Apply fertilizer in accordance with manufacturer's instructions and per recommendations per Section 32 9119.13 - Topsoil Placement and Grading.

B. Apply after smooth raking of topsoil and prior to roller compaction.

C. Do not apply fertilizer at same time or with same machine as will be used to apply seed.

D. Mix thoroughly into upper 2 inches (50 mm) of topsoil.

E. Lightly water to aid the dissipation of fertilizer.

3.4 HYDROSEEDING

A. Apply seeded slurry with a hydraulic seeder at a rate of 3 to 4 lbs. per 1000 sq ft (1.4 to 1.8 Kg per 1000 sq m) evenly in two intersecting directions unless indicated to apply at a heavier rate on the Drawings.

B. Do not hydroseed area in excess of that which can be mulched on same day.

C. Immediately following seeding, apply mulch to a thickness of 1/8 inches (3 mm). Maintain clear of shrubs and trees.

D. Apply water with a fine spray immediately after each area has been mulched. Saturate to 4 inches (100 mm) of soil.

E. Following germination, immediately re-seed areas without germinated seeds that are larger than 4 by 4 inches (100 by 100 mm).

3.5 TURF RENOVATION

A. Renovate turf damaged by Contractor's operations, such as storage of materials or equipment and movement of vehicles.

1. Reestablish turf where settlement or washouts occur or where minor regrading is required.
2. Install new planting soil as required.

B. Remove sod and vegetation from diseased or unsatisfactory turf areas; do not bury in soil.

C. Remove topsoil containing foreign materials, such as oil drippings, fuel spills, stones, gravel, and other construction materials resulting from Contractor's operations, and replace with new planting soil.

D. Mow, dethatch, core aerate, and rake existing turf.

E. Remove weeds before seeding. Where weeds are extensive, apply selective herbicides as required. Do not use pre-emergence herbicides.

F. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.

G. Till stripped, bare, and compacted areas thoroughly to a soil depth of 6 inches (150 mm).

H. Apply soil amendments and initial fertilizer required for establishing new turf and mix thoroughly into top 4 inches (100 mm) of existing soil. Install new planting soil to fill low spots and meet finish grades.

1. Soil Amendment(s): according to requirements of Section 32 9119.13 - Topsoil Placement and Grading. Apply as recommended by topsoil analysis.
2. Initial Fertilizer: Commercial fertilizer or Slow-release fertilizer applied according to manufacturer's recommendations.

I. Apply seed and protect with straw mulch as required for new turf.

J. Water newly planted areas and keep moist until new turf is established.

3.6 PROTECTION

A. Identify seeded areas with stakes and string around area periphery. Set string height to 24 inches (600 mm).

B. Moisten prepared area before planting if surface is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil

C. Cover seeded slopes where grade is 4 inches per foot (100 mm per m) or greater with erosion fabric. Roll fabric onto slopes without stretching or pulling.

D. Lay fabric smoothly on surface, bury top end of each section in 6 inch (150 mm) deep excavated topsoil trench. Provide 12 inch (300 mm) overlap of adjacent rolls. Backfill trench and rake smooth, level with adjacent soil.

1. For erosion-control mats, install planting soil in two lifts, with second lift equal to thickness of erosion-control mats. Install erosion-control mat and fasten as recommended by material manufacturer.
2. For erosion-control blanket or mesh, install from top of slope, working downward, and as recommended by material manufacturer for site conditions. Fasten as recommended by material manufacturer.

C. Secure outside edges and overlaps at 36-inch (900 mm) intervals with stakes.

D. Lightly dress slopes with topsoil to ensure close contact between fabric and soil.

E. At sides of ditches, lay fabric laps in direction of water flow. Lap ends and edges minimum 6 inches (150 mm).

3.7 MAINTENANCE

A. Provide maintenance at no extra cost to Owner; Owner will pay for water.

B. See Section 01 7000 - Execution Requirements, for additional requirements relating to maintenance service.

C. Provide a separate maintenance contract for specified maintenance service.

D. Provide maintenance of seeded areas for a minimum of three months from Date of Substantial Completion or until grass is well established and exhibits a vigorous growing condition. Continue maintenance until turf is satisfactory.

E. Turf installations shall meet the following criteria as determined by Landscape Architect

1. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. (0.92 sq. m) and bare spots not exceeding 5 by 5 inches (125 by 125 mm).

F. Mow grass at regular intervals to maintain at a maximum height of 2-1/2 inches (65 mm). Do not cut more than 1/3 of grass blade at any one mowing.

G. Neatly trim edges and hand clip where necessary.

H. Immediately remove clippings after mowing and trimming.

I. Water to prevent grass and soil from drying out.

J. Roll surface to remove minor depressions or irregularities.

K. Control growth of weeds. Apply herbicides in accordance with manufacturer's instructions. Remedy damage resulting from improper use of herbicides.

1. Apply pesticides and other chemical products and biological control agents in accordance with requirements of authorities having jurisdiction. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.
2. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

L. Immediately reseed areas that show bare spots.

M. Protect seeded areas with warning signs during maintenance period.

3.8 RESTORATION OF SETTLED GRADES

A. At the end, twelve months after the date of substantial completion of the soil installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the drawings.

1. Lawn areas: Remove the sod using mechanical sod cutter from the settled area and add the specified top soil or planting mix. Re sod the area using the sod cut from the lawn. In the event that the sod cannot be reused, install new sod that matches the seed mix on the lawn.
2. Planting Areas: Where the settlement is 3-inches or less, remove the mulch, top dress the area with the specified topsoil or planting mix and re mulch.
3. Planting Areas: Where the settlement is greater than 3-inches remove the mulch and plants, add the specified topsoil or planting mix and re mulch.

3.9 CLEANUP

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout maintenance period and remove after plantings are established.

C. Remove nondegradable erosion-control measures after grass establishment period.

END OF SECTION 329219

SECTION 329223 – SODDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SECTION INCLUDES

A. Fertilizing.

B. Sod installation.

C. Maintenance.

1.3 RELATED REQUIREMENTS

A. Section 32 1125 – Turf Surfaced Roadways: Materials and installation of turf surfaced roadways.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 DEFINITIONS

A. Weeds: Includes Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Brome Grass.

1.6 REFERENCE STANDARDS

A. TPI (SPEC) - Guideline Specifications to Turfgrass Sodding 2006.

1.7 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Certificate: Certify grass species and location of sod source.

C. Certificate: Certify fertilizer and herbicide mixture approval by authority having jurisdiction.

D. Maintenance Data: Include maintenance instructions, cutting method and maximum grass height; types, application frequency, and recommended coverage of fertilizer; and herbicides.

E. Maintenance Contract.

1.8 QUALITY ASSURANCE

A. Sod Producer: Company specializing in sod production and harvesting with minimum five years' experience and certified by the State of Connecticut.

B. Installer Qualifications: Company approved by the sod producer.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver sod on pallets. Protect exposed roots from dehydration.

B. Do not deliver more sod than can be laid within 24 hours.

1.10 MAINTENANCE

A. Provide a separate maintenance contract for specified maintenance service.

PART 2 - PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Comply with regulatory agencies for fertilizer and herbicide composition.

B. Provide certificate of compliance from authority having jurisdiction indicating approval of fertilizer and herbicide mixture.

2.2 MATERIALS

A. Sod: TPI (SPEC), Certified Turfgrass Sod quality; cultivated grass sod; type indicated in plant schedule on Drawings; with strong fibrous root system, free of stones, burned or bare spots; containing no more than 5 weeds per 1000 sq ft (100 sq m). Minimum age of 18 months, with root development that will support its own weight without tearing, when suspended vertically by holding the upper two corners.

B. Turfgrass Species: Sod of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:

1. Mix of three to six new varieties of turf-type fescues which require reduced frequency of watering, fertilization, and mowing as recommended by the sod producer.

2.3 FERTILIZERS

A. Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent from natural organic sources of urea formaldehyde, phosphorous, and potassium with nitrogen, phosphorous and potassium in amounts recommended in the soil analysis per Section 32 9119.13 - Topsoil Placement and Grading.

B. Fertilizer: Slow-release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorous and potassium in amounts recommended the soil analysis per Section 32 9119.13 - Topsoil Placement and Grading.

C. Water: Clean, fresh, and free of substances or matter that could inhibit vigorous growth of grass.

2.4 HERBICIDES

A. Herbicides: Herbicide, registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

1. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
2. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.5 ACCESSORIES

A. Wood Pegs: Softwood, sufficient size, and length to ensure anchorage of sod on slope.

2.6 FIELD CONDITIONS

A. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

B. CONNECTICUT:

1. Spring Planting: March 15th to June 15th.
2. Fall Planting: August 15th to October 15th.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that prepared soil base is ready to receive the work of this section.

3.2 PREPARATION

A. Prepare subgrade in accordance with Section 31 2200.

3.3 FERTILIZING

A. Apply fertilizer in accordance with manufacturer's instructions.

B. Apply after smooth raking of topsoil and prior to installation of sod.

C. Apply fertilizer no more than 48 hours before laying sod.

D. Mix thoroughly into upper 2 inches (50 mm) of topsoil.

E. Lightly water to aid the dissipation of fertilizer.

3.4 LAYING SOD

A. Moisten prepared surface immediately prior to laying sod.

B. Lay sod immediately after delivery to site to prevent deterioration.

C. Lay sod smooth and tight with no open joints visible, and no overlapping; stagger end joints 12 inches (300 mm) minimum. Do not stretch or overlap sod pieces.

D. Where new sod adjoins existing grass areas, align top surfaces.

E. Where sod is placed adjacent to hard surfaces, such as curbs, pavements, etc., place top elevation of sod 1/2 inch (13 mm) below top of hard surface.

F. On slopes 6 inches per foot (500 mm per m) and steeper, lay sod perpendicular to slope and secure every row with wooden pegs at maximum 2 feet (600 mm) on center. Drive pegs flush with soil portion of sod.

G. Water sodded areas immediately after installation. Saturate sod to 4 inches (100 mm) of soil.

H. After sod and soil have dried, roll sodded areas to ensure good bond between sod and soil and to remove minor depressions and irregularities. Roll sodded areas with roller not exceeding 2000 lbs. (Roll sodded areas with roller not exceeding 900 kg.)

3.5 MAINTENANCE

A. Provide maintenance at no extra cost to Owner; Owner will not pay for water.

B. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

C. Provide a separate maintenance contract for specified maintenance service.

D. Maintain sodded areas immediately after placement until grass is well established and exhibits a vigorous growing condition.

E. Mow grass at regular intervals to maintain at a maximum height of 2-1/2 inches (65 mm). Do not cut more than 1/3 of grass blade at any one mowing.

F. Neatly trim edges and hand clip where necessary.

G. Immediately remove clippings after mowing and trimming.

H. Water to prevent grass and soil from drying out.

I. Roll surface to remove irregularities.

J. Control growth of weeds. Apply herbicides in accordance with manufacturer's instructions. Remedy damage resulting from improper use of herbicides.

K. Immediately replace sod to areas that show deterioration or bare spots.

L. Protect sodded areas with warning signs during maintenance period.

3.6 SATISFACTORY TURF

A. Turf installations shall be, at the end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities as determined by Landscape Architect.

B. Use specified materials to reestablish turfgrass that does not comply with requirements and continue maintenance until turf is satisfactory.

3.7 CLEAN UP

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove nondegradable erosion-control measures after grass establishment period.

END OF SECTION 329223

SECTION 329300 – PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plants.
2. Planting Soil.

B. Related Sections:

1. Division 01 Section "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.
2. Division 31 Section "Clearing and Grubbing" for topsoil stripping and stockpiling, and site clearing.
3. Division 31 Section "Earthwork" for excavation, filling, and rough grading and for subsurface aggregate drainage and drainage backfill materials.
4. Division 32 Section “Topsoil and Grading” for planting medium.
5. Division 32 Section "Turf and Grasses" for turf (lawn), hydroseeding and sod.

1.3 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with ball size not less than sizes indicated; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.

C. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.

D. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

E. Finish Grade: Elevation of finished surface of planting soil.

F. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

G. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

H. Pests: Living organisms that occur where they are not desired, or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

I. Planting Area: Areas to be planted.

J. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

K. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

L. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

M. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

O. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [Project site] <Insert location>.

1.7 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
2. Plant Photographs: Include color photographs in [digital] [3- by 5-inch (76- by 127-mm) print] format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than [20] <Insert number> plants are required, include a minimum of [three] <Insert number> photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. Samples for Verification: For each of the following:

1. Organic and Compost Mulch: 1-quart (1-L) volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).

1.8 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

D. Sample Warranty: For special warranty.

1.9 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.10 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: Five years' experience in landscape installation in addition to requirements in Division 01 Section "Quality Requirements."
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Pesticide Applicator: State licensed, commercial.

B. Soil-Testing Laboratory Qualifications: An independent or university laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

C. Soil Analysis: For each unamended soil type, furnish soil analysis and a written report by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of the soil.

1. Testing methods and written recommendations shall comply with USDA's Handbook No. 60.
2. The soil-testing laboratory shall oversee soil sampling; with depth, location, and number of samples to be taken per instructions from Architect. A minimum of three one gallon representative samples shall be taken from varied locations for each soil to be used or amended for planting purposes.
3. Report suitability of tested soil for plant growth.

a. Based upon the test results, state recommendations for soil treatments and soil amendments to be incorporated. State recommendations in weight per 1000 sq. ft. (92.9 sq. m) or volume per cu. yd. (0.76 cu. m) for nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory planting soil suitable for healthy, viable plants.
b. Report presence of problem salts, minerals, or heavy metals, including aluminum, arsenic, barium, cadmium, chromium, cobalt, lead, lithium, and vanadium. If such problem materials are present, provide additional recommendations for corrective action.

D. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

E. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches (150 mm) above the root flare for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

F. Plant Material Observation: Landscape Architect shall be given the opportunity to observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Provide transportation and accompany Landscape Architect to this location. Landscape Architect retains right to observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

G. Preinstallation Conference: Conduct conference at Project site.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.

C. Deliver bare-root stock plants freshly dug. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting.

D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

E. Handle planting stock by root ball.

F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

H. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
2. Do not remove container-grown stock from containers before time of planting.
3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly-wet condition.

1.12 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting of Deciduous Plants: March 1st to May 15th
2. Spring Planting of Evergreen Plants: March 1st to June 1st.
3. Fall Planting of both Deciduous and Evergreen Plants: October 1st until soil becomes frozen.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

D. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.13 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner, or incidents that are beyond Contractor's control.
b. Structural failures including plantings falling or blowing over.
c. Faulty performance of edgings.
d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Periods from Date of Substantial Completion:

a. Trees, Shrubs, Vines, and Ornamental Grasses: 12 months.
b. Ground Covers, Biennials, Perennials, and Other Plants: 12 months.

3. Include the following remedial actions as a minimum:

a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
c. A limit of one replacement of each plant will be required except for losses or replacements due to failure to comply with requirements.
d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant Schedule or Plant Legend shown on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch (19 mm) in diameter; or with stem girdling roots will be rejected.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which shall begin at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

D. Labeling: Label at least one plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant as shown on Drawings.

2.2 SOIL MATERIALS

A. Amended Topsoil: As specified in Section 32 9119.13 – Topsoil Placement and Grading.

2.3 PLANTING SOILS

~~A.~~ Planting Soil: Blend amended topsoil with the following soil amendments and fertilizers in the following quantities to produce planting soil:
1. Compost: 1:3 ratio by volume of loose compost to amended topsoil.
2. Fertilizer tablets: Quantity per tree or shrub pit as recommended by tablet manufacturer.

2.4 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of the following:

1. Type: 100 percent shredded bark.
2. Size Range: 3 inches (76 mm) maximum, 1/2-inch (13 mm) minimum.
3. Color: Natural.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through a 1-inch (25-mm) sieve; soluble-salt content of 2 to 5 dS/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

2.5 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. (101g/sq. m) minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally-encountered chemicals, alkalis, and acids.

2.6 PESTICIDES

A. General: Pesticide registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

2.7 MISCELLANEOUS PRODUCTS

A. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

B. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb (0.45 kg) of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb (0.45 kg) of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

C. Filter Fabric: Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

D. Planting Tablets: Tightly compressed chip type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: 5-gram tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants for compliance with requirements and conditions affecting installation and performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.1 CARE OF PLANTS PRIOR TO PLANTING

A. When plants are taken from storage to the planting site, roots of plants shall be immersed in water immediately upon opening the bundle and kept in water until planted. The Contractor shall have sufficient tanks and pails to keep roots of plants from opened bundles in water until planted. Rootball and container plants shall be immersed for a minimum of 10 minutes prior to planting. Do not remove containers or wire baskets until plant is at planting pit.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Landscape Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

3.3 PLANTING AREA ESTABLISHMENT

A. Loosen subgrade of planting areas to a minimum depth of 12 inches (300 mm). Remove stones larger than 1 inch (25 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply approved fertilizer tablets directly to subgrade before loosening.
2. Thoroughly blend planting soil off-site before spreading.

    a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
    b. Mix lime with dry soil before mixing fertilizer.

3. Spread planting soil to a minimum depth of 18 inches (450 mm) as indicated on the Drawings, but not less than required to meet finish grades after natural settlement. Do not spread if planting soil or subgrade is frozen, muddy, or excessively wet.

a. Spread approximately one-half the thickness of planting soil over loosened subgrade. Mix thoroughly into top 4 inches (100 mm) of subgrade. Spread remainder of planting soil.

B. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at rate recommended by the manufacturer.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are not acceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.

1. Excavate approximately three times as wide as ball diameter for balled and burlapped or container-grown stock.
2. Excavate at least 12 inches (300 mm) wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
3. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
4. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
5. Maintain required angles of repose of adjacent materials as shown on the Drawings. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
6. Maintain supervision of excavations during working hours.
7. Keep excavations covered or otherwise protected when unattended by Installer's personnel.

B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- (150-mm-) diameter holes, 24 inches (600 mm) apart, into free-draining strata or to a depth of 10 feet (3 m), whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Only plants which have had their roots immersed in water for at least 10 minutes immediately prior to planting shall be installed. The Contractor shall have sufficient tanks and pails for immersing rootball and container plants prior to planting. Containers and wire baskets are to be removed only after plant has been immersed at the planting pit.

B. Before planting, fill excavations with water and allow to percolate away before positioning trees and shrubs.

C. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

D. Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

E. Set balled and burlapped stock plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Use planting soil for backfill.
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended in soil reports from soil-testing laboratory. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

F. Set container-grown stock plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Use planting soil for backfill.
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended in soil reports from soil-testing laboratory. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

G. When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 TREE, SHRUB, AND VINE PRUNING

A. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

B. Do not apply pruning paint to wounds.

3.7 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated in even rows with triangular spacing.

B. Use planting soil for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that will minimally disturb the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.8 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

A. Application: Apply compost 3 inches (76 mm) of compost to surface of in-place planting soil in planting beds prior to installation of weed control fabric and mulch. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet. Rake compost into top 3 inches (76 mm) of planting soil.

3.9 PLANTING AREA MULCHING

A. Prior to installing weed-control barriers, incorporate a 3 to 4 inches depth of composted mulch into the top 6 inches of the planting bed.

B. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.

C. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees and Tree-like Shrubs in Turf Areas: Apply organic mulch ring of 3-inch (75-mm) average thickness, with radius around trunks or stems as indicated on the Drawings. Do not place mulch within 3 inches (75 mm) of trunks or stems.

2. Organic Mulch in Planting Areas: Apply 3-inch (75-mm) average thickness of organic mulch extending 12 inches (300 mm) beyond edge of individual planting pit or trench and over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches (75 mm) of trunks or stems.

3.10 BED EDGING

A. Shovel-Cut Edging: Separate mulched areas from turf areas with a 45-degree, 4- to 6-inch-(100- to 150-mm-) deep, shovel-cut edge as shown on Drawings.

3.11 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.

B. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated past management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.12 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Non-Selective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written recommendations. Do not apply to seeded areas.

C. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

3.13 REPAIR AND REPLACEMENT

A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Landscape Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Landscape Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of 6 inches (150 mm) or smaller in caliper size.
2. Species of Replacement Trees: Same species being replaced.

3.14 RESTORATION OF SETTLED GRADES

A. At the end, twelve months after the date of substantial completion of the soil installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the Drawings.

1. Lawn areas: Remove the sod using mechanical sod cutter from the settled area and add the specified top soil or planting mix. Re sod the area using the sod cut from the lawn. In the event that the sod cannot be reused, install new sod that matches the seed mix on the lawn.
2. Planting Areas: Where the settlement is 3-inches or less, remove the mulch, top dress the area with the specified topsoil or planting mix and re mulch.
3. Planting Areas: Where the settlement is greater than 3-inches remove the mulch and plants, add the specified topsoil or planting mix and re mulch.

3.15 CLEANUP AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

C. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

3.16 DISPOSAL

A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

3.17 MAINTENANCE SERVICE

A. Maintenance Service for Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than maintenance period below.

1. Maintenance Period: 12 months from date of Substantial Completion.

B. Maintenance Service for Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than maintenance period below.

1. Maintenance Period: 12 months from date of Substantial Completion.

END OF SECTION 329300

SECTION 329705 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Backed Bench with Arms.
2. Trash Receptacles.

B. Related Requirements:

1. Division 03 Section "Cast-in-Place Concrete" for installing site furnishings cast in concrete footings.
2. Division 05 Section “Unit Masonry” for installation of anchorage hardware for seatwall mounted bench.
3. Division 31 Section "Earth Moving" for excavation for installing concrete footings.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For site furnishings to include in maintenance manuals.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include

statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5

PART 2 - PRODUCTS

2.1 BACKED BENCH WITH ARMS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Model “Gretchen” Backed Bench as manufactured by Landscape Forms, 431 Lawndale Avenue, Kalamazoo MI 49048 (800) 430-6209 or equal product by the following:

1. Forms + Surfaces
2. Maglin Site Furniture
3. Thomas Steele

B. Frame Material: 713 tenz-alloy Cast Aluminum.

C. Seat Material: Ipe, Solid stock, select South American hardwood.

1. Seat Height: 17 inches.
2. Length: 72 and 96 inches - where indicated on Drawings.
3. Seat Surface Shape: Straight.
4. Arms: Loop.
5. Back: Wood and metal.
6. Mounting: Surface mounted with concrete anchor bolts.

D. Metal Finish: Polyester powder-coated.
1. Color: Matte Black, and as approved by Landscape Architect.

E. Wood Finish: None.

2.2 TRASH RECEPTACLES

A. Basis-of-Design Product: Subject to compliance with requirements, provide “Collect” Litter and Recycling Receptacle as manufactured by Landscape Forms, 431 Lawndale Avenue, Kalamazoo, MI 49048 (800) 430-6209 or the comparable product by the following:

1. Forms + Surface.
2. Maglin Site Furniture.
3. Thomas Steele.

B. Description:

1. Receptacle Shape and Form: Round.
2. Style: Side Opening 25-gallon capacity.
3. Size: 23-inch diameter by 35-inches tall.
4. Inner Container: Black polyethylene or rigid plastic container with drain holes lift-out handles; designed to be removable and reusable.
5. Service Access: Swing-out door; inner container and disposable liner lift out for emptying; side-access latch.
6. Mount: Surface mount.

C. Lid Material: 14 gauge-spun metal, attached to the unit with a pop-up mechanism.

D. Wood Body Material: Ipe: solid stock, select South American hardwood.

1. Constructed of 1-1/4” x 1-1/2” solid stock boards.
2. Boards have eased edges and ends and all sides are finished prior to assembly.

E. Base Material:1-1/2” steel flat bar, hot rolled ASTM A36.

F. Metal Finish: Polyester powder-coated.
1. Color: Matte Black, and as approved by Landscape Architect.

2.3 FABRICATION

A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.

B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.

C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

D. Preservative-Treated Wood Components: Complete fabrication of treated items before treatment if possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces.

E. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.

F. Factory Assembly: Assemble components in the factory to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.4 GENERAL FINISH REQUIREMENTS

A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.5 ALUNINUM FINISHES

A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.

B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.

C. Install site furnishings level, plumb, true, and securely anchored at locations indicated on Drawings.

D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.

E. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and 3/4 inch (19 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with non-shrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

3.3 CLEANING AND PROTECTION

A. After installation, clean soiled site furnishing surfaces according to manufacturer's written instructions. Protect from damage until acceptance by Owner.

END OF SECTION 329705

SECTION 331900 – WATER SUPPLY SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:

1. Water distribution and fire protection piping.
2. Pipe fittings, valves, and valve boxes.
3. Hydrants.
4. Anchors and thrust blocks.
5. Miscellaneous water system appurtenances.
6. Connections to existing water systems.
7. Disinfection and testing of new systems and appurtenances.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 COORDINATION WITH JURISDICTIONAL AUTHORITY

A. Contractor shall notify and coordinate the work of this Section with the local authority having jurisdiction over water supply, whether public or private system owner/operator.

B. Obtaining permits or approvals which may be required to perform the work of this section, including all costs, fees and taxes required or levied.

C. Contractor shall obtain all required approvals for connection to, or extension of, any portion of the domestic or fire protection water systems.

D. The closing of valves necessary for making connections with the existing water systems will be done by Contractor with the assistance of Engineer. Sufficient notice shall be given the jurisdictional authority for a planned connection. No allowance will be made for any delay in the closing of valves. A 48-hour notice shall be given to adjacent buildings/residences affected by the shutdown, and shall be done by Contractor to the satisfaction of jurisdictional authority and Engineer. Jurisdictional authority or Engineer may require the work be completed outside of normal working hours during low use time periods.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. State of Connecticut.

1. Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 819 and any supplements.

D. ASTM International (ASTM)

1. ASTM B88—Standard Specification for Seamless Copper Water Tube.
2. ASTM F477—Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
3. ASTM D3139—Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
4. ASTM A536—Ductile Iron Castings.

5. ASTM D1557—Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)).

E. American National Standards Institute (ANSI)

1. ANSI A21.50—Thickness Design of Ductile-Iron Pipe
2. ANSI A21.51—Ductile-Iron Pipe, Centrifugally Cast, for Water
3. ANSI A21.4—Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water
4. ANSI A21.10—Ductile-Iron and Gray-Iron Fittings, 3 in through 48 in (75 mm through 1200 mm), for Water and Other Liquids

5. ANSI 61—Drinking Water System Components—Health Effects

F. American Water Works Association (AWWA)

1. AWWA C104—Standard for Cement-Mortar Lining for Ductile-Iron Pipe and Fittings.
2. AWWA C110—Standard for Ductile-Iron and Gray-Iron Fittings.
3. AWWA C111—Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
4. AWWA C150—Standard for Thickness Design of Ductile-Iron Pipe.
5. AWWA C151—Standard for Ductile-Iron Pipe, Centrifugally Cast.
6. AWWA C207—Standards for Steel Pipe Flanges for Waterworks Service—Sizes 4 In. through 144 In. (100 mm Through 3,600 mm).
7. AWWA C502—Standard for Dry-Barrel Fire Hydrants.
8. AWWA C504—Standard for Rubber-Seated Butterfly Valves.
9. AWWA C509—Standard for Resilient-Seated Gate Valves for Water Supply Service.
10. AWWA C550—Standard for Protective Epoxy Interior Coatings for Valves and Hydrants.
11. AWWA C651—Disinfecting Water Mains.
12. AWWA C900—Standard for Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 4 In.–12 In. (100 mm–300 mm), for Water Transmission and Distribution.
13. AWWA C800—Standard for Underground Service Line Valves and Fittings.

G. State of Connecticut

1. State Building Code, including all Amendments, Supplements, and Errata.

H. Local Jurisdictional Authority

1. Comply with standards of the Local Jurisdictional Authority. Should this Specification differ from those standards, the standards of the Local Jurisdictional Authority will govern.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section.

B. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

C. Maintain all temporary facilities and controls in proper and safe condition throughout the progress of the work.

1.7 COORDINATION WITH JURISDICTIONAL AUTHORITY

A. Contractor shall notify and coordinate the work of this Section with the local authority having jurisdiction over water supply, whether public or private system owner/operator.

B. Contractor shall obtain all required approvals for connection to, or extension of, any portion of the domestic or fire protection water systems.

C. Service Interruption: Provide Jurisdictional Authority five (5) days advanced notice for any planned interruption associated with the work. Comply with customer notification requirements of the Jurisdictional Authority.

D. Jurisdictional Authority may require the work be completed outside of normal working hours during low use time periods.

1.8 SAFETY

A. Contractor shall conduct all excavation activities in conformance with applicable regulations, including those relating to warning signs, excavation safety, sheeting, shoring, and stabilization.

B. Contractor shall provide and maintain barricades, signs, lights, etc., required for the protection of personnel, materials and property. Temporary barricades, etc. shall conform all applicable codes and regulations, and shall be lighted at night with lanterns, flares and reflectorized paint as required for safety. Adapt barricades, signs, lights, etc. to evolving site conditions throughout the progress of the work.

C. Provide other safety devices as required, including adaptation of such safety devices to changing site conditions, to prevent unauthorized entry to construction areas and open excavations. Provide warning signs and other temporary construction safety devices necessary for proper completion of the work in compliance with applicable safety regulations.

D. Contractor shall properly design and furnish all labor, materials, equipment, and tools necessary to completely construct the excavation support system, permanent or temporary, including sheet piling, trench shields, trench boxes, timber trench shoring, pneumatic/hydraulic shoring, steel sheeting or sheeting using other materials, sloping and benching. All of the proper materials and all equipment necessary to protect employees in excavations against cave-ins shall be furnished and installed.

E. Any time an excavation is to remain open, at a minimum, provide full enclosure with safety barriers and fencing, warning signs, and additional safety control measures as appropriate.

1.9 SUBMITTALS

A. Copies of all permits and/or approvals from Jurisdictional Authority.

B. Shop Drawings:

1. Submit shop drawings, descriptive literature, or both, showing pipe materials and appurtenances to be furnished. Shop Drawings shall be submitted to Engineer for approval prior to ordering materials.
2. Shop drawings showing the configuration, dimensions, layout, and spacing of major and minor components such as pipe, joints, restraints, valves, and other proposed details of assembly. Show in large-scale details any unique assembly, and/or installation requirements.

C. Copies of manufacturer-provided installation instructions, operation instructions, and maintenance material for all equipment furnished under this Section.

D. Manufacturer's warranties and associated warranty registration data in Owner's name. Submit two (2) copies of each warranty to Engineer in the manufacture's/supplier's standard form or if there is no standard form available, in a form specified by Engineer.

E. As-Built Drawings.

1.10 DELIVERY, STORAGE AND HANDLING

A. Storage of pipe, fittings, valves, hydrants and other water line appurtenances on the site shall be in accordance with the manufacturer's recommendations, subject to the approval of Engineer.

B. Care shall be taken in loading, transporting and unloading to prevent injury to the pipe, fittings, valves, hydrants, and other water line appurtenances. Pipe or fittings shall not be dropped. All pipe or fittings shall be examined before laying and no piece shall be installed which is found to be defective. Any damage to pipe and fitting coatings shall be repaired as directed by Engineer.

C. Pipe, fittings, valves, hydrants and other water system appurtenances which are defective from any cause, including damage caused by handling, and determined by Engineer as non-repairable, shall be unacceptable for installation and shall be replaced at no cost to the Owner.

D. Pipe, and all water system appurtenances that are damaged or disturbed through any cause prior to acceptance of the work shall be repaired, realigned or replaced as required by Engineer at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 GENERAL

A. The drawings are diagrammatic only and are intended to indicate the extent, but not all details, of the system, which shall be constructed. All materials and fittings are not shown; but Contractor shall furnish and install all materials and fittings required for the complete system.

2.2 DUCTILE IRON PIPE

A. Centrifugally-cast ductile iron pipe, AWWA C151/A21.51, thickness Class 52, AWWA C150/A21.50. Pipe shall be furnished in 18-foot or 20-foot nominal lengths, unless otherwise required by Jurisdictional Authority standards.

B. Pipes shall be cement-mortar lined in accordance with ANSI A21.4-03/AWWA C104, except that the cement lining shall be double thickness.

C. The exterior of all pipe shall be factory coated, with a double coat of asphaltic material conforming to ANSI A21.51-02/AWWA C151. The interior of all pipe shall have a seal coat of bituminous material applied over the cement lining in accordance with ANSI A21.4-03/AWWA C104.

2.3 DUCTILE IRON PIPE FITTINGS

A. Ductile iron pipe fittings shall have a pressure rating of 350 psi and shall conform to AWWA C110/ANSI A21.10-03. All fitting shall be compatible with pipe.

B. The type of fittings for pipe and valve connections shall be determined by Contractor in accordance with the requirements shown on the Drawings prior to ordering the fittings.

C. Fittings shall be cement-mortar lined and coated as specified for pipe.

2.4 DUCTILE IRON PIPE COUPLINGS

A. Couplings and accessories shall be pressure rated at least equal to that of the pipe. Couplings shall be Dresser Style 153, Smith Blair 441 style, Rapidfit by Cascade Waterworks, or approved equal. Couplings shall be provided with corrosion resistant nuts and bolts. The interior of the coupling shall be epoxy-coated. Epoxy coating shall conform to AWWA C550-01.

B. Transition couplings for joining pipe of different diameters shall be provided with corrosion resistant nuts and bolts.

C. After assembly, all exterior surfaces including the bolts and nuts shall be completely coated with two coats of a heavy-duty protective asphaltic coating.

2.5 JOINTS FOR DUCTILE IRON PIPE

A. Joints shall be mechanical joints, ANSI A21.11-00/AWWA C111-80. Mechanical joints shall be provided with required gaskets, lubricants and accessories conforming to ANSI A21.11-00/AWWA C111-80.

B. Restrainers shall be MEGALUG by EBBA Iron, MJ Field Lok Gasket by U.S. Pipe & Foundry, Allgrip 3600 by Star Pipe Products, or approved equal.

2.6 GATE VALVES

A. Gate valves shall be resilient seated conforming to the requirements of AWWA C509-01 and

the requirements of the local water authority.

B. Gate valves shall be cast iron body, bronze mounted, double disk, non-rising stem, O-ring type stuffing box.

C. Gate valves shall open to the left (counter clockwise) and shall be mechanical joint type.

D. Bolts, studs and nuts shall be made from a corrosion-resistant material such as low-zinc bronze, nickel copper alloy, or stainless steel.

E. The operating nut shall be 2 inches square at the base, tapering to $1\frac{15}{16}$ inches square at the top.

2.7 BUTTERFLY VALVES

A. Butterfly valves are generally used on pipe 16 inches and greater in diameter, and shall be installed in accordance with the standard practices of the Jurisdictional Authority.

B. Butterfly valves shall be pressure Class 150B mechanical joint end with ductile iron body conforming to ASTM A536-84, Grade 65-45-R and stainless steel body seat, all in accordance with ANSI F1433-97/AWWA C504-00 Rubber-Seated Butterfly Valves.

2.8 VALVE BOXES

A. Each gate valve shall be provided with a valve box and cover.

B. Valve boxes shall be of the adjustable, telescoping, heavy-pattern type designed and constructed to prevent the direct transmission of traffic loads to the pipe or valve.

C. Valve boxes shall be cast iron, asphalt coated with cast iron covers. The smallest inside diameter of the shaft shall not be less than 5¼ inches. The lower section of the box shall be designed to enclose the operating nut and stuffing box of the valve. Provisions shall be made for adjustment through at least 6-inches vertically while retaining a lap of at least 4 inches between sections.

D. Covers shall be close fitting and substantially dirt-tight. The top of the cover shall be flush with the top of the box rim. Unless otherwise required by the Jurisdictional Authority, the word “WATER” shall be cast in the top surface of the cover.

2.9 HYDRANTS

A. Hydrants: A.P. Smith or equal, conforming to AWWA C502.

1. Hydrants shall be designed to break free upon vehicle impact without water loss.
2. Diameter of the main valve opening shall be no less than 5-1/4”.

3. Inlet connection shall be no less than 6” diameter.
4. Direction and operation for opening hydrant shall be counterclockwise.
5. The maximum permissible head loss shall not exceed 7 PSI discharging 1,500 GPM.
6. Hydrants shall have following connections:

a. Two (2) 2-1/2” NST.
b. One (1) 4-1/2” South Central CT Regional Water Authority thread.
c. Caps are to be provided for the above connections.

B. Coatings: Two coats of primer; final finish color as required by the Jurisdictional Authority.

2.10 TAPPING SLEEVE AND VALVE

A. Tapping sleeves: AWWA C223, bolted-sleeve type with mechanical joint connection to the existing water pipe and flanged end outlets for connecting the tapping valves. Tapping sleeves shall be suitable for a working water pressure of 200 psi and outlet flanges shall conform to the 125-pound American Standard with Cor-Ten or cadmium plated cast iron nuts and bolts.

2.11 THRUST BLOCKS

A. Thrust blocks shall be installed in accordance with the details shown on the Drawings and/or as required by the Jurisdictional Authority.

B. Concrete: Minimum 28-day compressive strength of 3,000 psi.

C. In certain areas, thrust blocks cannot be used because of the density of other utilities and inability to construct thrust blocks bearing against “undisturbed soil”. In such case, restrained joints shall be used at that location.

2.12 CORPORATION STOPS AND CURB STOPS

A. Corporation stops: ball type corporation valves threaded to a receive compression-type fitting as manufactured by Mueller Co., Ford Meter Box Co., Grand Junction Pipe & Supply, or approved equal.

B. Curb stops: ball valve threaded to receive compression-type fittings by Mueller Co., Ford Meter Box Co., Grand Junction Pipe & Supply, or approved equal.

C. Stops shall be sized to receive the service tubing without the use of enlargement/reduction fittings.

2.13 SERVICE BOXES

A. Service boxes shall be cast iron improved extension type with arch pattern base. Covers shall be held in place with bronze bolts and the word “WATER” shall be cast into the top surface of the cover. Service box shafts shall have a minimum inside diameter of 2½ inches. Service boxes
shall be as manufactured by Mueller Co., Ford Meter Box Co., Grand Junction Pipe & Supply, or approved equivalent.

2.14 WATER SERVICE

A. Services, two inches or smaller: Copper water tubing, Type K, ASTM B88 and ANSI Standard 61 for underground water service.

1. Joints: Three part compression couplings or an approved equal.

B. Water Service Fittings: Fittings, couplings, adapters, check valves and service saddles shall be in conformance with AWWA C800.

C. Services, 3 inches and greater: Ductile iron pipe or as otherwise required by the Jurisdictional Authority.

2.15 METER PITS/VAULTS

A. As required by Jurisdictional Authority.

2.16 BACKFLOW PREVENTERS

A. As required by Jurisdictional Authority.

2.17 PRESSURE REDUCING VALVES

A. As required by Jurisdictional Authority.

2.18 METERS

A. As required by Jurisdictional Authority.

2.19 BEDDING

A. Unless otherwise indicated, bedding shall consist of screened gravel, maximum size ¾ inches and minimum size ⅜ inches.

B. When clay, wet, soft or silty soil conditions prevail, ¾-inch crushed stone shall be used for bedding.

2.20 PIPE AND APPURTENANCE ENCASEMENT

A. Encasement shall be polyethylene in accordance with AWWA ANSI-AWWA C105/A21.5-99(10). Polyethylene encasement shall be v-bio enhanced polyethylene encasement style only and consist of three co-extruded layers of linear low-density polyethylene (LLDPE) film that are fused into one.

PART 3 - EXECUTION

3.1 GENERAL

A. Verify site conditions before proceeding with demolition work. Field check the accuracy of the Drawings and inspect structures, utilities, and other site features prior to start of work and

notify Engineer in writing, of any hazardous conditions and/or discrepancies.

B. All water pipes, fittings, valves, hydrants and other appurtenances shall be installed at the locations as shown on the Drawings and/or directed by Engineer.

C. The proposed location and vertical alignment may be altered to avoid conflicts with existing and proposed utilities, as approved by Engineer.

3.2 LAYING DUCTILE IRON PIPE AND FITTINGS

A. Ductile iron pipe and fittings shall be installed in accordance with the requirements of AWWA C600.

B. Each length of pipe shall be laid with firm, full and even bearing throughout its entire length, in a trench prepared and maintained in accordance with Section 31 2310—Earthwork.

C. All pipe shall be clean before laying. When installation is stopped for any reason, the open ends of the pipe shall be closed by watertight plugs or other approved means. If water is in the trench when work is resumed, the plug shall not be removed until the trench has been dewatered and all danger of water entering the pipe has been eliminated.

D. Fittings, in addition to those shown on the Drawings, shall be provided if required to avoid utility conflicts.

E. When cutting of pipe is required, the cutting shall be done by machine, leaving a smooth cut at right angles to the axis of the pipe. Cut ends of pipe to be used with a push-on bell shall be beveled to conform to the manufactured spigot end. Cement lining shall be undamaged.

F. Maximum allowable deflection for pipe laid without fittings shall not exceed the allowable amount established by the pipe manufacturer and shall not exceed those shown in AWWA C600.

G. The pipe shall be laid with a minimum cover of 4½ feet (4.5 ft) below finished grade, unless otherwise required by the Municipality or directed by Engineer.

3.3 JOINTING DUCTILE IRON PIPE, PUSH-ON TYPE

A. Push-on joints shall be made in strict accordance with the manufacturer’s instructions. A rubber gasket shall be inserted in the groove of the bell end of the pipe and the joint surface cleaned and lubricated using the pipe manufacturer’s suggested methods and materials. The plain end of the pipe to be laid shall be inserted in alignment with the bell of the pipe to which it is to be jointed and pushed home with a jack or by other means. After joining the pipe, a metal feeler gauge shall be used to make certain that the rubber gasket is correctly located and has not been twisted or otherwise displaced.

3.4 JOINTING MECHANICAL JOINT PIPE AND FITTINGS

A. Mechanical joints shall be made in strict accordance with the manufacturer’s instructions. Mechanical joints shall be made by first cleaning the surfaces against which the gaskets will come in contact with a wire brush. The gasket, bell and spigot shall be lubricated by washing with soapy water just prior to assembling the joint. After the nuts have been made up finger tight, the bottom nut, then top and then diametrically opposite nuts shall be progressively

tightened. Bolts shall be tightened to the torques listed:

Bolt Size (Inches)	Range of Torque (Foot-Pounds)
⅝	45–60
¾	75–90
1	85–100

B. After installation, a heavy bitumastic coating shall be applied to all bolts and nuts.

C. Restraining device shall be ductile iron and shall have dimensions such that it can be used with the standardized mechanical joint bell and tee-head bolts conforming to ANSI A21.11 and ANSI A21.53-00/AWWA C153 latest revision.

3.5 CONCRETE THRUST BLOCKS

A. Where pipes change horizontal and vertical direction, at hydrants, tees and other fittings, and wherever abnormal thrust forces may be developed, the Contractor shall construct thrust and anchor blocks as detailed on the Drawings. They shall be concrete, of minimum dimensions as detailed on the drawings or of adequate additional size to suit actual conditions to withstand pressures anticipated, and shall be founded in undisturbed soil.

B. Concrete for thrust blocks shall have a minimum 28-day compressive strength of 3,000 psi.

C. Fittings, which do not use thrust blocks resting against natural occurring material with passive resistance pressure of 1,500 psf, shall be installed with a restrained joint system as specified in Article 3.7.

3.6 RESTRAINED JOINTS

A. Restrained joints shall be installed at bends, reducers, tees, valves, dead ends, and hydrants. The minimum length of pipe to be restrained on either side of the joint shall be as shown on the table below. The fittings of the new piping shall be for restrained joints, as marked on the Drawings.

Number of Joints to Restrain on Either Side of Fitting

Fitting Type	Number of Joints to Restrain on either Side of Fitting (Based on 18-foot pipe length)
90 Degree bend	3
45 Degree bend	2
22 ½ degree bend	2
Tee, Branch	3
Tee, Run	2

B. No restraining is required in the direction of the existing pipe if only a short length of it is exposed in the trench for making a connection.

C. Restrained joint assemblies for push-on pipe and fittings shall be made in strict accordance with the manufacturer's recommended installation procedures.

D. Restrained joint assemblies for mechanical joint pipe shall be EBAA Iron MEGALUG, Cascade Waterworks Rapidfit, U.S Pipe Co. MJ Field Lok, or approved equivalent.

3.7 WATER / SANITARY SEWER SEPARATION

A. When a sewer pipe crosses above or below a water pipe, Contractor shall comply with these following procedures:

1. Relation to Water Mains

a. Horizontal Separation: Whenever possible, sewers shall be laid below, and at a minimum at least 10 feet, horizontally, from any existing or proposed water main. Should local conditions prevent a lateral separation of 10 feet, a sewer may be laid closer than 10 feet, but no closer than 2 feet, to a water main if:

1) It is laid in a separate trench, or
2) It is laid in the same trench with the water main located at one side on a bench of undistributed earth, and
3) In either case, the elevation of the top (crown) of the sewer is at least 18 inches below the bottom (invert) of the water main.

b. Vertical Separation: Whenever sewers must cross under water mains, the sewer shall be laid at such an elevation that the top of the sewer is at least 18 inches below the bottom of the water main. When the elevation of the sewer cannot be varied to meet the above requirements, the water main shall be relocated to provide this separation or reconstructed with mechanical-joint pipe for a distance of 10 feet on each side of the sewer. One full length of water main should be centered over the sewer so that both joints will be as far from the sewer as possible.

c. When it is impossible to obtain horizontal and/or vertical separation as stipulated above, both the water main and sewer shall be constructed of mechanical-joint cement lined ductile iron pipe, or other equivalent based on watertightness and

structural soundness. Both pipes shall be pressure tested by an approved method to assure watertightness, or both pipes shall be encased in concrete.

3.8 GATE VALVES AND BOXES

A. Valves shall be set in firmly compacted and shaped soil. Where the soil in the trench subgrade is found to be soft, loose, freshly filled earth, unstable or unsuitable as a base, the unsuitable material shall be excavated to such additional depth and width as required. The excavated area shall be backfilled with gravel or crushed stone, compacted and shaped.

B. Valve boxes shall be set centered and plumb over the operating nuts of all valves. The top of each valve box shall be set to finished grade with at least 10 inches of overlap remaining between the upper sections for vertical adjustment. Minimum overlap for lower, extension pieces shall be 4 inches.

C. Boxes shall be adequately supported during backfilling to maintain vertical alignment.

3.9 TAPPING SLEEVES AND GATE VALVES

A. Installation shall be made under pressure and the flow of water through the existing pipe shall be maintained at all times. The diameter of the tap shall be a minimum of ¼ inch less than the inside diameter of the branch line.

B. The entire operation shall be conducted by workmen thoroughly experienced in the installation of tapping sleeves and valves, and under supervision of qualified personnel furnished by the manufacturer. The tapping machine shall be furnished by the Contractor.

C. Contractor shall determine the location of the existing pipe to be tapped to confirm that interference will not be encountered from existing utilities or a joint or a fitting. No tap shall be made closer than 3 feet from a pipe joint.

D. Pipe upon which tapping sleeve is to be installed shall be thoroughly cleaned of all foreign matter with scraping tools and wire brushes to a minimum of six inches beyond each side of the sleeve. The cleaned area shall be washed with a hypochlorite solution. The interior of tapping valve shall also be washed with hypochlorite solution.

E. Tapping sleeves and valves with boxes shall be set vertically and squarely centered on the pipe to be tapped. Adequate support shall be provided under the sleeve and valve during the tapping

operation. Thrust blocks shall be provided behind all tapping sleeves. the supporting earth around and under the valve and sleeve shall be compacted. After completing the tap, the valve shall be flushed to ensure that the valve set is clean.

F. Before backfilling, all exposed portions of any bolts used to hold the two halves of the sleeve together shall be heavily coated with two coats of bituminous paint.

3.10 HYDRANTS

A. Hydrants shall be installed at the locations and in conformance with the details shown on the drawings.

B. Hydrants shall be located no more than five (5) feet, nor less than three (3) feet, from the curb line or edge of the paved surface of the driveway.

C. All hydrants shall be located so they are readily accessible for the attachment of hoses, and to facilitate connection to mobile fire apparatus. No obstructions such as walls, fences, hedges, bushes, screen plantings, embankments or barriers shall be within five (5) feet of any fire hydrant or fire department connection.

D. All hydrants shall be positioned so that the 4-1/2” outlet is vacin in the direction of, or perpendicular to, the paved surface of the driveway.

E. All hydrants shall be installed so that the distance from the center line of the 4-1/2”outlet to final grade is no more than 36” and no less than 30”.

F. Each hydrant shall be set vertically and be properly braced. Hydrants shall be installed with thrust blocks or restrained joints as specified in Articles 3.6 and 3.7. Care shall be taken to ensure that thrust block concrete does not plug the drain ports.

3.11 WATER SERVICES

A. Service Pipe: Care shall be exercised in placing and laying of services to prevent kinks or sharp bends and contact with sharp stones or ledge which would damage to the pipe. At least 6 inches of sand shall be placed adjacent to, under, and above the pipe, and no stone larger than 2 inches shall be placed over the pipe until the depth of backfill above the pipe is in excess of 1 foot.

B. Corporation Stop: Taps to the pipe shall be threaded and shall be made at the horizontal diameter of the main. The tap shall be made by means of a tapping machine manufactured for this purpose and supplied by the Contractor. The tap and drill shall be kept sharp and shall have threads matching those of the stop. Corporation stop threads shall be coated with sealing compound and the stop screwed firmly into the water with the key upward and the inlet end projecting at least ⅛- inch beyond the inside face of the pipe. The corporation stop shall be left in the on (open) position after installation of the service pipe.

C. Curb Stop and Curb Boxes shall be of a size equal to the size of the service pipe and shall be installed in the locations shown on the drawings, or as ordered by Engineer. The boxes shall be set in a vertical position and flush with the proposed finish grade.

D. Ductile Iron Service Pipe: ductile iron service pipe connections to the water main shall be made with tee fittings or tapping sleeves.

3.12 POLYETHYLENE ENCASEMENT

A. Installation of polyethylene encasement shall be in accordance with the recommended procedures contained in ANSI A21.5-99/AWWA C105 and when directed by Engineer Water Department or Engineer.

B. Care shall be taken during backfilling to prevent damage to polyethylene wrap. backfilling shall be in accordance with AWWA C600-99.

3.13 PRESSURE TESTING

A. Hydrostatic and leakage test shall be conducted in accordance with AWWA Standard C600-99 and C900-97, and as directed by Engineer. Testing shall be conducted by a certified Independent Water Testing Company.

B. Conduct pipe tests after concrete thrust blocks have cured to the required 3000-psi strength. Fill pipe 24 hours prior to testing, and apply test pressure to stabilize system. Use only potable water.

C. Prior to pressure testing, the entire pipe section shall be flushed to remove any rocks or debris, which may have inadvertently entered the pipe during construction.

D. Once the pipe section has been filled at normal pressure and all entrapped air removed, the Contractor shall raise the pressure to 150 psi or two times the operating pressure (whichever is greater) by a special pressure pump, taking water from a small tank of proper dimensions for satisfactorily measuring the rate of pumping into the pipe. This pressure shall be maintained for a minimum of 2 hours, during which time the line shall be checked for leaks. Measured rate of water leakage shall not exceed the allowable leakage listed below.

Maximum Allowable Leakage

Test Pressure (psi)	Nominal Pipe Diameter (inches)	Allowable Leakage (gallons per hour per 1,000 feet of pipeline)
PART 1 150	PART 2 4	PART 3 0.36
PART 4 150	PART 5 6	PART 6 0.55
PART 7 150	PART 8 8	PART 9 0.74
PART 10 150	PART 11 10	PART 12 0.92
PART 13 150	PART 14 12	PART 15 1.10
PART 16 150	PART 17 16	PART 18 1.47

E. Interior piping in vaults, buildings, etc. shall have zero leakage.

F. Should leakage exceed this rate, the Contractor shall immediately locate the leak or leaks and repair them. Pipe will be accepted only when leakage is zero, or less than the allowable amount.

Approval does not absolve the Contractor from responsibility if leaks develop later within the period of warranty.

3.14 DISINFECTION

A. Before being placed in service, all new water pipe shall be chlorinated in accordance with AWWA C651-99 Standard for Disinfecting Water Mains or Engineer requirements/regulations, whichever is the more stringent.

B. The location of the chlorination and sampling points will be determined by the jurisdictional authority in the field. Taps for chlorination and sampling shall be installed by Contractor. Contractor shall uncover and backfill the taps as required.

C. The pipe section being disinfected shall be flushed to remove discolored water and sediment

from the pipe. a 25-mg/l chlorine solution in approved dosages shall be inserted through a tap at one end while water is being withdrawn at the other end of the pipe section. The chlorine concentration in the water in the pipe shall be maintained at a minimum 25-mg/l available chlorine during filling. To assure that this concentration is maintained, the chlorine residual shall be measured at regular intervals in accordance with procedures described in Standard Methods and AWWA M12, Simplified Procedure for Water Examination [Section K].

D. During the application of the chlorine, valves shall be manipulated to prevent the treatment dosage from flowing back into the pipe supplying the water. Chlorine application shall not cease until the entire pipe section is filled with chlorine solution. The chlorinated water shall be retained in the pipe for at least a twenty-four hour period. the treated water shall contain chlorine residual throughout the length of the pipe section as indicated in AWWA C651-99.

E. Following the chlorination period, all treated water shall be flushed from the pipe section and replaced with water from the distribution system. Prior to disposal of treated water the Contractor shall check with local authorities to determine if the discharge will cause damage to the receiving body or sewer and, if required, the Contractor shall neutralize the chlorinated water in accordance with AWWA recommendations. Bacteriological sampling and analysis of the replacement water may then be made by the Contractor in full accordance with AWWA C651-99. A minimum of three samples shall be taken by the Contractor at locations directed by Engineer along the length of water pipe being chlorinated and sent to a State approved private laboratory for analyses. The Contractor shall rechlorinate if the samples show presence of coliform, and the pipe section shall not be placed in service until all of the repeat samples show no presence of coliform.

F. Furnish two copies of a Certificate of Disinfection Report to Engineer and one copy to Engineer.

G. Contractor shall pay all costs for all testing, flushing, chlorinating, laboratory analyses, sampling, water supply and municipal charges.

3.15 AS-BUILT DRAWINGS

A. Contractor shall be solely responsible for complying with the requirements of local permitting authorities for preparation and submittal of as-built drawings. The requirements for the preparation of as-built drawings as defined herein shall be considered the minimum requirements

of Engineer, but shall in no way relieve Contractor from satisfying the requirements of local permitting authorities.

B. As work progresses, record the following on two (2) sets of Drawings:

C. All changes and deviations from the design in location, grade, size, material, or other feature as appropriate.

D. Any uncharted locations of utilities or other subsurface feature encountered during installation, including the characteristics of such uncharted utility or subsurface feature such as utility type, size, depth, material of construction, etc.

E. Recording of changes shall be clearly and neatly marked in red pen or pencil. All changes shall be noted on the appropriate Drawing sheets.

F. Make measurements from fixed, permanent points on the Project Site to accurately locate

the work completed. Such measurements shall consist of at least three (3) ties showing the distance of each item relative to each of the fixed, permanent points.

G. As-Built Drawings shall be complete and shall indicate the true measurement and location, horizontal and vertical, of all new construction. As-Built drawings shall also contain any additional information required by Engineer.

3.16 CLEAN UP

A. Contractor shall remove all debris, residuals, and materials at the conclusion of the work.

END OF SECTION 331900

SECTION 333100 – SANITARY SEWERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes:

1. Installation of sanitary sewage pipe and fittings.

2. Installation of sanitary specials, connection chimneys, laterals, outlets, and joint materials.

3. Installation of sanitary sewer manholes.

B. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

D. Contractor is solely responsible for obtaining permits or approvals which may be required to perform the work of this section, including all costs, fees and taxes required or levied. Notify and obtain such permits or approvals from all agencies having jurisdiction prior to starting work.

1.3 COORDINATION WITH JURISDICTIONAL AUTHORITY

A. Contractor shall notify and coordinate the work of this Section with the local authority having jurisdiction over water supply, whether public or private system owner/operator.

B. Obtaining permits or approvals which may be required to perform the work of this section, including all costs, fees and taxes required or levied.

C. Contractor shall obtain all required approvals for connection to, or extension of, any portion of the domestic or fire protection water systems.

D. The closing of valves necessary for making connections with the existing water systems will be done by Contractor with the assistance of Engineer. Sufficient notice shall be given the jurisdictional authority for a planned connection. No allowance will be made for any delay in the closing of valves. A 48-hour notice shall be given to adjacent buildings/residences affected by the shutdown, and shall be done by Contractor to the satisfaction of jurisdictional authority and Engineer. Jurisdictional authority or Engineer may require the work be completed outside of normal working hours during low use time periods.

1.4 REFERENCE STANDARDS

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. ASTM International (ASTM).

1. ASTM A47/A47M—Standard Specification for Steel Sheet, Aluminum-Coated, by the Hot-Dip Process.
2. ASTM A48—Standard Specification for Gray Iron Castings.
3. ASTM A123/A123M—Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
4. ASTM A307—Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
5. ASTM A536—Standard Specification for Ductile Iron Castings.
6. ASTM A563—Standard Specification for Carbon and Alloy Steel Nuts.
7. ASTM A615—Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
8. ASTM A74—Standard Specification for Cast Iron Soil Pipe and Fittings.
9. ASTM A746—Standard Specification for Ductile Iron Gravity Sewer Pipe.
10. ASTM C12—Standard Practice for Installing Vitrified Clay Pipe Lines.
11. ASTM C14—Standard Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
12. ASTM C55—Standard Specification for Concrete Building Brick.
13. ASTM C76—Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
14. ASTM C94—Standard Specification for Ready-Mixed Concrete.
15. ASTM C139—Standard Specification for Concrete Masonry Units for Construction of Catch Basins and Manholes.
16. ASTM C150—Standard Specification for Portland Cement.
17. ASTM C207—Standard Specification for Hydrated Lime for Masonry Purposes.
18. ASTM C270—Standard Specification for Mortar for Unit Masonry.
19. ASTM C387—Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
20. ASTM C425—Standard Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
21. ASTM C443—Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
22. ASTM C443—Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
23. ASTM C478—Standard Specification for Precast Reinforced Concrete Manhole Sections.
24. ASTM C507—Standard Specification for Reinforced Concrete Elliptical Culvert, Storm Drain, and Sewer Pipe.
25. ASTM C564—Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
26. ASTM C700—Standard Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength, and Perforated.
27. ASTM C1628—Standard Specification for Joints for Concrete Gravity Flow Sewer Pipe, Using Rubber Gaskets.
28. ASTM C828—Low-Pressure Air Test of Vitrified Clay Pipe Lines.

29. ASTM C877—Standard Specification for External Sealing Bands for Concrete Pipe, Manholes, and Precast Box Sections.
30. ASTM C478—Standard Specification for Precast Reinforced Concrete Manhole Sections.
31. ASTM C923—Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals.
32. ASTM C924—Testing Concrete Pipe Sewer Lines by Low-Pressure Air Test Method.
33. ASTM C969—Standard Practice for Infiltration and Exfiltration Acceptance Testing of Installed Precast Concrete Pipe Sewer Lines.
34. ASTM C972—Compression-Recovery of Tape Sealant.
35. ASTM C990—Standard Specification for Joints for Concrete Pipe, Manholes and Precast Box Sections Using Preformed Flexible Joint Sealants.
36. ASTM D412—Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers—Tension.
37. ASTM D624—Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.
38. ASTM D1784—Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
39. ASTM D1785—Standard Specification for Poly (Vinyl Chloride) (PVC), Plastic Pipe, Schedules 40, 80, and 120.
40. ASTM D2235—Standard Specification for Solvent Cement for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe and Fittings.
41. ASTM D2241—Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).
42. ASTM D2321—Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
43. ASTM D2412—Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.
44. ASTM D2464—Standard Specification for Threaded Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
45. ASTM D2466—Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
46. ASTM D2467—Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
47. ASTM D2680—Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) and Poly (Vinyl Chloride) (PVC) Composite Sewer Piping.
48. AASTM D2751—Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Sewer Pipe and Fittings.
49. ASTM D2996—Filament-Wound “Fiberglass” (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
50. ASTM D2997—Centrifugally Cast “Fiberglass” (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
51. ASTM D3034—Standard Specification for Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
52. ASTM D3139—Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
53. ASTM D3212—Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
54. ASTM D3262—“Fiberglass” (Glass-Fiber-Reinforced Thermosetting-Resin) Sewer Pipe.
55. ASTM D3350—Polyethylene Plastics Pipe and Fittings Materials.
56. ASTM D3753—Glass-Fiber-Reinforced Polyester Manholes and Wetwells.
57. ASTM D3840—“Fiberglass” (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe Fittings for Nonpressure Applications.
58. ASTM D4101—Standard Specification for Polypropylene Injection and Extrusion Materials.
59. ASTM D4161—“Fiberglass” (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe Joints Using Flexible Elastomeric Seals.

60. ASTM D4396—Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds for Plastic Pipe and Fittings Used in Nonpressure Applications.
61. ASTM F402—Safe Handling of Solvent Cements, Primers, and Cleaners Used for Joining Thermoplastic Pipe and Fittings.
62. ASTM F405—Corrugated Polyethylene (PE) Tubing and Fittings.
63. ASTM F477—Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
64. ASTM F679—Standard Specification for Poly (Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.
65. ASTM F714—Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Outside Diameter.
66. ASTM F758—Smooth-Wall Poly (Vinyl Chloride) (PVC) Plastic Underdrain Systems for Highway, Airport, and Similar Drainage.
67. ASTM F794—Standard Specification for Poly (Vinyl Chloride) (PVC) Profile Gravity Sewer Pipe and Fittings Based on Controlled Inside Diameter.
68. ASTM F894—Standard Specification for Polyethylene (PE) Large Diameter Profile Wall Sewer and Drain Pipe.
69. ASTM F949—Standard Specification for Poly(Vinyl Chloride) (PVC) Corrugated Sewer Pipe With a Smooth Interior and Fittings.
70. ASTM F1336—Standard Specification for Poly (Vinyl Chloride) (PVC) Gasketed Sewer Fittings.
71. ASTM F1803—Standard Specification for Poly (Vinyl Chloride)(PVC) Closed Profile Gravity Pipe and Fittings Based on Controlled Inside Diameter.

D. American Water Works Association (AWWA).

1. “PVC Pipe—Design and Installation,” M23 (latest edition. and applicable supplements thereto).
2. “Concrete Pressure Pipe,” M9 (latest edition and applicable supplements thereto).
3. ANSI/AWWA C104/A21.4—Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
4. ANSI/AWWA C105/A21.5—Polyethylene Encasement for Ductile-Iron Pipe Systems.
5. ANSI/AWWA C110/A21.10—Ductile-Iron and Gray-Iron Fittings for Water.
6. ANSI/AWWA C111/A21.11—Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
7. ANSI/AWWA C150/A21.50—Thickness Design of Ductile-Iron Pipe.
8. ANSI/AWWA C151/A21.51—Ductile-Iron Pipe, Centrifugally Cast, for Water or Other Liquids.
9. ANSI/AWWA C153/A21.53—Ductile-Iron Compact Fittings for Water Service.
10. ANSI/AWWA C600—Installation of Ductile-Iron Water Mains and Their Appurtenances.

E. American Concrete Pipe Association (ACPA).

1. ACPA 01-103—Concrete Pipe and Box Culvert Installation (latest revision and applicable supplements thereto).

F. UNI-BELL PVC PIPE ASSOCIATION (UBPPA).

1. UBPPA UNI-B-6 (1998) Recommended Practice for Low-Pressure Air Testing of Installed Sewer Pipe.

G. American Association of State High and Transportation Officials (AASHTO).

1. Standard Specifications for HS-20, Highway Loading (AASHTO H-20).

1.5 SUBMITTALS

A. Submit to Engineer for his approval manufacturer's name with details of the pipe, fittings, and joint offered before ordering. Engineer reserves the right to have the manufacturer submit to them a printed certified set of material specifications certifying to the manufacturer's conformity with this Section.

B. Product data for all materials provided under this Section.

C. Prior to ordering material, submit shop drawings and descriptive literature showing dimensions, joint and other details of all materials to be furnished under this Section. Such shop drawings shall include, but not necessarily be limited to, joint and other details for precast manholes, manhole frames and covers, and flexible joint sealant for manholes.

D. Samples of each size and type of pipe to be utilized. No pipe shall be ordered or delivered until Engineer has approved the pipe material.

E. As-Built Drawings

1. Submit two (2) copies of As-Built Drawings upon completion and acceptance of work.
2. As-Built Drawings shall be complete and shall indicate the true measurement and location, horizontal and vertical, of all new construction. As-Built drawings shall include a minimum of three (3) ties showing the distance to each catch basin and manhole, and the location of service connections measured from fixed permanent objects. As-Built drawings shall also contain any additional information required by Engineer.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

B. Codes and Standards: Perform earthwork complying with requirements of authorities having jurisdiction.

C. Sample pipe for testing, when requested by Engineer, shall be furnished by Contractor in sufficient numbers. The Contractor and/or the pipe manufacturer shall make the facilities and services for making the load tests available.

D. All costs for field tests shall be included in Contractor's cost of the work.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage

1. Manufacturer shall package the pipe in a manner designed to deliver the pipe to the Project Site neatly, intact, and without physical damage. Transportation carrier shall use an appropriate method to ensure the pipe is properly supported, stacked, and restrained during transport. Inspect materials delivered to site for damage; store with minimum of handling.

2. Unloading of the pipe should be controlled so as not to collide with the other pipe sections or fittings, and care should be taken to avoid chipping or spalling, especially to the spigots and bells. For manhole sections, cone sections, bases, fittings and other precast appurtenances, utilize lifting holes or lifting eyes provided.
3. In cold weather conditions, use caution to prevent impact damage. Handling methods considered acceptable for warm weather may be unacceptable during cold weather.
4. Storage:

    a. Store materials on site in enclosures or under protective coverings. Do not store materials directly on the ground. Keep inside of pipes and fittings free of dirt and debris.
    b. Pipe shall be stored on clean, level ground to prevent undue scratching or gouging.
    c. Store solvents, solvent compounds, lubricants, elastomeric gaskets, and any similar materials under cover out of direct sunlight. Provide additional storage measures in accordance with the manufacturer's recommendations. Discard materials if storage period exceeds the recommended shelf life. Solvents in use shall be discarded when the recommended pot life is exceeded.
    d. Metal Items: Check upon arrival; identify and segregate as to types, functions, and sizes. Store off the ground in a manner affording easy accessibility and not causing excessive rusting or coating with grease or other objectionable materials.
    e. Cement, Aggregate, and Reinforcement: As specified in Section 033200—Site Cast-in-Place Concrete.
    f. Store manhole units in an upright position.

PART 2 - PRODUCTS

2.1 GENERAL

A. Products furnished under this Section which are damaged or found defective in any way prior to being set in place and final acceptance, may be rejected. Engineer may reject an entire lot of pipe should the sample pipe from such lot fail to meet requirements.

2.2 POLYVINYL CHLORIDE (PVC) GRAVITY PIPE

A. Pipe, 4-inch to 15-inch diameter: ASTM D3034, SDR-35. Integral bell gasket joints with factory-installed retained integral gaskets. Minimum pipe stiffness of 46 psi, ASTM D3412.

B. Pipe, 18-inch to 36-inch diameter: ASTM F679. Integral bell gasket joints with factory-installed retained integral gaskets. Minimum pipe stiffness of 46 psi, ASTM D3412.

C. PVC Cell classification: 12454 or 12364, ASTM D1784.

D. Markings

1. Manufacturer's name or trademark.
2. The standard to which it conforms/ASTM Designation.
3. Pipe size.
4. Material designation code/PVC cell classification.
5. SDR number or schedule number.

E. Joints

1. Joints: ASTM D3212, gasketed, bell-and-spigot, push-on type.
2. Gaskets: ASTM F477. Gaskets shall be part of a complete pipe section, factory-installed or field-installed per pipe manufacturer's requirements. Lubricant shall be as recommended by the pipe manufacturer.

F. Fittings: SDR-35, ASTM D3034 and ASTM F1336, specifications to match pipe.

G. Waterstops: Elastomeric PVC, sized for outside diameter of pipe.

H. No single piece of pipe shall be laid on any project covered by these specifications unless it is found to be generally straight. Such pipe shall have a maximum ordinate as measured from the concave side of the pipe not to exceed 1/16 inch per foot of length. If the deviation from straightness exceeds this requirement, then the particular piece of pipe shall be rejected.

2.3 PVC FORCE MAIN PIPE

A. Polyvinyl Chloride (PVC) Sanitary Sewer Force Main pipe shall be manufactured from a Type I, Grade I Polyvinyl Chloride (PVC) compound with a Cell Classification of 12454-A or 12454-B per ASTM D1784.

B. All pipes shall be suitable for use as a pressure conduit for sanitary sewage.

C. Pipe shall be either SDR-14 (200 psi) meeting the requirements of AWWA C900 or Schedule 80 meeting the requirements of ASTM D1785.

D. Fittings shall be gasketed joint meeting the requirements of ASTM D3139, and the joint gasket shall conform to ASTM F477.

E. Force main pipe shall be a minimum of 3-inch diameter.

2.4 JOINT LUBRICANT

A. As specified by pipe manufacturer, ANSI/AWWA C111/A21.11.

2.5 CONCRETE MANHOLE

A. Reinforced precast concrete base, riser, and top: ASTM C478. Sections shall consist of smooth circular sections in standard nominal inside diameters, type and dimensions as indicated on the Drawings. All components shall be free from cracks, damaged joints, exposed reinforcing, aggregate pockets, spalls, and dimensional distortions or other irregularities.

1. Diameter: 48 inches unless otherwise indicated.
2. Concrete: 4,000 psi minimum.
3. Top Section: Concentric-cone type, unless eccentric-cone or flat-slab-top type is indicated. Cones shall have the same wall thickness and reinforcement as riser sections. If required or called-for, flat slab shall be a minimum of 8 inches thick designed to carry AASHTO H-20 loading with one foot cover and conform to ASTM C478.
4. Bottom: Bottoms shall be integrally cast unless specialty bases ("Dog-House") at points of connection to existing sewer mains are indicated on the Drawings or otherwise proposed for use. Unless indicated on the Drawings, any special bases or riser used must be detailed in shop drawings and submitted for approval.

5. External damp-proofing: Asphalt, ASTM D449, Type A.
6. Openings or “knockouts” in precast units shall be located as shown on the Drawings and to accommodate the inflow and outflow pipe orientation required. Openings shall sized sufficiently to permit passage of the largest outside dimension of pipe or fittings. Prior to ordering precast manhole bases, all angles between incoming pipes are to be field checked to incorporate possible line changes required in the field layout.

B. Gaskets for joints between manhole sections: Butyl rubber, ASTM C443.

C. Grade Rings: ASTM C478, precast reinforced concrete, 1-inch to 4-inch thickness, diameter to match manhole and frame.

D. Frame and Cover: Ductile Cast Iron, ASTM A536, Grade 60-40-18.

E. Frame and Cover: Grey Cast Iron, ASTM A48, Class 35B.

1. Cover: 26 inch diameter, non-vented with non-penetrating pickholes. Unless otherwise detailed or indicated, covers shall be cast with 1½ inch wide, raised letters, indicating “SANITARY SEWER”.

2. Frame and cover shall be supplied as a pair from the same manufacturer. Castings shall be of tough, even-grained iron, free from scale, lumps, blisters, sand-holes and other injurious defects, and of the size and type shown on the drawings. Frames and covers shall have machined bearing surfaces to seat firmly and prevent rocking and rattling under traffic loads. Before leaving the foundry, castings shall be thoroughly cleaned, subjected to hammer tests for soundness and given two coats of coal tar pitch varnish.

F. Resilient connectors for joints between manhole and pipes entering manhole: Continuous boot of ⅜ inch minimum thickness neoprene, ASTM C923 or ASTM C990. Boots shall be either cast into the manhole wall or installed into a cored opening using internal compression rings. Installed boot shall result in a water-tight connection meeting the performance requirements of ASTM C443.

G. Steps: ASTM C478 and OSHA 29 CFR 1910.27, drop front or equivalent. Steps shall be nine inches in depth and at least twelve inches in width with an abrasive step surface.

1. Cast Aluminum Alloy: Aluminum alloy, 6061-T6, tensile 38,000 psi, yield 35,000 psi. Drop front design with upturned embedded ends. All parts of aluminum steps to be embedded in concrete or masonry shall be coated with bituminous paint or zinc chromate primer.
2. Composite Plastic-Steel: One-half (½) inch deformed steel reinforcing rod, ASTM A615, Grade 60, encapsulated in a co-polymer polypropylene plastic, ASTM D2146, Type II, Grade 16906.
3. Steps shall be placed in vertical alignment as indicated on the Drawings. Steps shall be uniformly spaced not more than sixteen inches (16″) on center, including the spacing between the top step and the manhole cover. Steps shall be embedded in the wall a minimum distance of 4 inches in either cast or drilled holes. Steps shall not be driven or vibrated into fresh concrete and shall withstand a pullout resistance of 2,000 lbs when tested in accordance with ASTM C497. Each step shall project a minimum of 5 inches from the wall measured from the point of embedment.

2.6 DROP MANHOLE

A. Provide Concrete Manhole as specified herein.

B. Drop inlet shall be constructed with ductile iron gravity sewer pipe laid in undisturbed soil in conformance with ASTM A746-82. Adapt to PVC with Fernco coupling or approved equivalent.

C. Vertical drop pipe shall be 8″, 10″, or 12″ maximum SDR 35 PVC with 90-degree short bend radius shall conform to ASTM D3034.

D. Vertical drop pipe shall be anchored a minimum of every 4 feet with ⅛″ x 1½″ type 304 stainless steel pipe straps set as ordered with lag bolts and shields.

2.7 MORTAR

A. Mortar: ASTM C270/ASTM C387.

1. Portland Cement: ASTM C150, Type I.
2. Sand: ASTM C144.
3. Hydrated Lime: ASTM C207.
4. Water: Potable.
5. Mix proportions for manhole rims and covers: 1 part portland cement, 2 parts sand, and 1/4 part hydrated lime by dry volume. Hydrated lime shall not exceed 10 percent by weight of the total dry mix. Quantity of water in mixture shall be sufficient to produce a stiff, workable mortar, but in no case shall exceed 5 1/2 gallons of water per sack of cement.
6. Mix Proportions for invert construction: 1 part portland cement and 2 parts sand by volume. Quantity of water in mixture shall be sufficient to produce a stiff, workable mortar, but in no case shall exceed 5 1/2 gallons of water per sack of cement.

2.8 GREASE TRAP

A. Precast concrete or fiberglass of the configuration and dimensions shown on the Drawings.

B. Units shall be as manufactured by United Concrete Products, Inc. (Yalesville, CT); Rotondo Precast (Rehoboth, MA); Sparkling Clear Industries (Houston, TX), or approved equal.

C. Concrete units
1. All components shall be free from cracks, damaged joints, exposed reinforcing, aggregate pockets, spalls, and dimensional distortions or other irregularities.
2. H-20 loading with one foot of cover, manhole riser with frame and cones, plus the weight of the soil above.
3. Anchorage system for high groundwater/buoyancy.
4. Joints: Butyl rubber gasket joints, ASTM C990.

D. Unit manufacturer shall provide cleanout, sample and ventilation ports and a grease level monitoring and alarm system.

2.9 BEDDING

A. Pipes: Unless otherwise indicated or directed by Engineer, screened gravel, maximum size ¾ inches and minimum size 3/8 inches consisting of clean, hard, and durable fragments. No limestone shall be permitted.

B. Manholes: Screened Gravel or Crushed Stone, well graded in size from 3/4 inch to 3/8 inch consisting of clean, hard, and durable fragments. No limestone shall be permitted.

PART 3 - EXECUTION

3.1 GENERAL

A. Depending upon pipe type, comply with ASTM C1479, ASTM D2321, and pipe manufacturer's requirements for installation.

B. Inspect each pipe, fitting or other material before and after installation; replace those found defective and remove from Project Site.

C. Handle pipe, fittings, and other accessories in such manner as to ensure delivery to the trench in sound undamaged condition. Take special care not to damage linings of pipe and fittings; if lining is damaged, make satisfactory repairs. Carry or hoist, do not drag, pipe to trench. Provide proper facilities for lowering sections of pipe, manholes or other appurtenances into trenches and excavations without damage.

D. Wyes, tees and bends and adapters may not be explicitly indicated on the drawings but shall be installed as required to route pipe as indicated. Plans for such fittings showing cross sectional views with dimensions shall be provided by Contractor to Engineer for approval prior to use.

E. Dry conditions shall be maintained at all times and under no circumstances shall pipe be laid or appurtenances installed in water.

3.2 EARTHWORK

A. Excavation, the type of materials to be used in bedding and backfilling, and the method of placement shall conform to the requirements of Section 31 2310—Earthwork and the details shown on the Drawings.

B. Excavation for cover:

1. Under Roads and similar areas: Unless shown on the Drawings or otherwise specified, three (3) feet six (6) inches.
2. Landscape and grass areas: Unless shown on the Drawings or otherwise specified, four (4) feet.

C. Trenches should be excavated to the dimensions and grade specified on the Drawings or as ordered by engineer. The width of the trenches should be kept to the minimum required for installation of pipe sections.

1. Maximum trench width in soil: 1.25 times outside pipe diameter, in inches, plus one (1) foot measured at the springline of the pipe.
2. Maximum trench width in rock: Four (4) feet plus outside pipe diameter measured at the springline of the pipe.

D. The bottom of trenches shall be sufficiently graded to ensure uniform bearing for the full length of all pipes.

E. Backfill, with approved materials, and properly compact the following:

1. Over excavated areas
2. Soft, unstable, or unsuitable material.

F. Trenches shall be maintained in a safe condition at all times. Contractor shall furnish and employ such stay braces, sheeting, shoring, pumps, etc., as may be necessary for the proper completion of work, the protection of property and the safety of the public, employees of Contractor, Local Public Agencies, the Engineer, or the State; all in accordance with the current regulations of the Applicable Safety Code and pertinent local ordinances and regulations.

G. Contractor shall be entirely and solely responsible for the adequacy and sufficiency of all supports and of all sheeting, bracing shoring, underpinning, cofferdamming, etc. The Contractor shall assume the entire and sole liability for damages on account of injury to persons or damage to adjacent pavements and public and private property (including but not limited to, the Work under construction, existing buildings, facilities, etc.) which injury or damage results directly from Contractor's failure to install or to leave in place adequate and sufficient supports, sheeting, bracing, underpinning, cofferdamming, etc.

H. When blasting is required for the rock excavation, adequate provisions for safety shall be provided and such work shall be performed in compliance with applicable local requirements.

I. Backfill: Trenches shall be backfilled only after pipe has been inspected and approved and locations of pipes and appurtenances have been recorded.

3.3 COORDINATION WITH OTHER UTILITIES

A. Verify clearances for other utilities as required prior to proceeding with the work.

B. Crossing Water and Sewer Lines

1. Crossings shall be as close to perpendicular as possible.
2. Separation: Minimum 18-inch vertical separation.
3. Sewer line crossing below water line

    a. Unless approved by Engineer, sewer lines shall cross beneath water lines.
    b. Ensure adequate support for water line to avoid deflection or damage.
    c. Lay sewer pipe so that no joint in the sewer line will be closer than three (3) feet, horizontal distance, to the water line.
    d. Provide screened gravel or crushed stone at the crossing as indicated on the Drawings.
    e. Pressure Sewer Lines

        1) Separation: minimum two (2) feet separation.
        2) All portions of the pressure line within 10-feet of the water line shall be concrete-encased or enclosed in a continuous sleeve.

4. Sewer line above water line

    a. Pressure lines shall not be installed above water lines.
    b. Provide adequate support for the sewer pipe to maintain line and grade and prevent loading of the water line.
    c. Lay sewer pipe so that no joint in the sewer line will be closer than three (3) feet, horizontal distance, to the water line.
    d. For a distance of 10-feet on each side of the crossing, provide either gasketed PVC pressure pipe or a minimum of six (6) inches of concrete encasement.

5. Unusual conditions: When conditions prevent the minimum vertical separation indicated above for any type of crossing, obtain Engineer's approval prior to proceeding.

a. Comply with the following minimum requirements:

1) Provide sewer pipe meeting AWWA standards for potable water conveyance for a distance of 10-feet on each side of the crossing. Pressure test this segment in-place per AWWA standards without leakage prior to backfilling; or
2) Encase the lower pipe in a minimum of six (6) inches of concrete for a distance of 10-feet on each side of the crossing.

C. Parallel Water and Sewer Lines

1. Normal conditions: Sanitary piping or manholes shall be laid at least ten 10-feet horizontally from a water line whenever possible. The distance shall be measured edge-to-edge.
2. Unusual conditions: When conditions prevent a horizontal separation of ten 10-feet, the sanitary piping or manhole may be laid closer to a water line provided that:

a. The top (crown) of the sanitary piping shall be at least 18 inches below the bottom (invert) of the water main.
b. Where this separation cannot be obtained, provide sanitary pipe meeting AWWA standards for potable water conveyance pressure tested in place without leakage prior to backfilling.
c. Sewer manholes shall be of watertight construction and tested in place.

3. Sanitary sewer manholes: No water piping shall pass through or come in contact with any part of a sanitary sewer manhole.

3.4 PIPE INSTALLATION

A. All pipe shall be installed per the recommendations of the pipe manufacturer, unless otherwise specified.

B. Clean and dry surfaces receiving lubricants, cements, or adhesives. Affix gaskets to pipe not more than 24 hours prior to the installation of the pipe. Protect gaskets from sun, blowing dust, and other deleterious agents at all times. Before installation of the pipe, inspect gaskets and remove and replace loose or improperly affixed gaskets. Align each pipe section with the previously installed pipe section, and pull the joint together.

C. Commencing at the lowest point in the system, the pipe and fittings shall be carefully laid true to line and grade with the bell or groove-end upgrade.

D. A stopper shall be kept in the pipe mouth when the pipe laying is not in progress.

E. The ends of pipe, which enter masonry, shall be neatly cut to fit the inner face of the masonry.

1. The upper surface of the screened gravel shall be shaped as necessary to provide proper grade for the pipe to be laid thereon, bell holes shall be made in the screened gravel so the pipe shall be supported on its barrel portion only, and the pipe laid thereon to line and grade in the manner described in these Specifications.

F. When the pipe is properly positioned, screened gravel, unless otherwise required by the drawings or Engineer, shall be pulled or scraped up against the pipe and rammed into place along the barrel of the pipe only, to firmly hold the pipe in position. Care shall be taken during these operations to assure that the pipe is not disturbed.

G. Screened Gravel Haunching and Sand Stop:

1. All pipe and laterals connected thereto, shall be haunched with bedding from the foundation to a point at least to the top of the pipe and to this same elevation out to the trench wall. Care shall be taken when placing bedding in haunching, to assure that the pipe is not disturbed.
2. Contractor shall use any means necessary to assure firm compaction of haunching and adequate side support for the pipe.
3. Contractor shall provide and install a filter fabric sand stop per Section 02290 for the full trench width for all sanitary sewer mains and laterals. Filter fabric shall be placed on top of the screened gravel prior to placement of 12″ gravel/sand cushion. All costs for furnishing and placing of the filter fabric shall be included in the price bid per foot of pipe of all sizes.

H. Backfill trenches from the top of the screened gravel haunching and sand stop to 12″ above the top of pipe with firmly compacted sand or fine gravel or other suitable material exercising care so as not to damage or disturb the pipe.

I. Backfill from 12″ above the top of pipe to top of trench with bank run gravel, sand, or other approved material in roadway areas, otherwise suitable existing material may be used if approved by Engineer.

J. Fill on both sides of pipe and up to a depth of 12 inches over top of pipe shall be placed carefully by hand in layers, 6 inches thick, and each layer will be tamped and compacted before the next layer is placed. Care must be taken that the fill is compact and tight under the lower half of the pipe. Remaining backfill shall be placed in layers of not more than 12 inches in depth after compaction and shall be thoroughly compacted by means of mechanical rammers or vibrators or by pneumatic tampers. Hand tampers shall be used only around the pipe as approved by Engineer. All voids along sides of trench, behind sheeting, under bracing or other objects, shall be completely and carefully filled, using such fine materials, hand labor and tools as may be necessary. All backfill materials shall be compacted to a minimum of 95% of the maximum dry density as determined by AASHTO T-180 Method D or as directed by Engineer.

K. At Engineer’s discretion, the Contractor may compact the backfill from 12 inches over the pipe to finish grade by means of a Ho-Pac. Engineer shall also have the right to approve or disapprove the compaction equipment to be used and also the height of backfill to be compacted in one lift.

L. Backfill, screened gravel foundation and haunching shall be provided and installed as shown on the typical trench cross-section shown on the Drawings.

3.5 SPECIAL REQUIREMENTS

A. The following subarticles supplement execution requirements set forth in Article 3.4.

B. Installation of PVC Plastic Piping

1. Install pipe and fittings in accordance with Article 3.4 and ASTM D2321 for laying and joining pipe and fittings. Make joints with the gaskets specified for joints with this piping and assemble in accordance with the requirements of ASTM D2321 for assembly of joints. Make joints to other pipe materials in accordance with the recommendations of the plastic pipe manufacturer.

C. Installation of PVC Plastic Pressure Pipe and Fittings

1. Install pipe and fittings in accordance with Article 3.4 and AWWA C605 for laying of pipe, joining PVC pipe to fittings and accessories, and setting of hydrants, valves, and fittings; and with the recommendations for pipe joint assembly and appurtenance installation in AWWA M23.

    a. Pipe Less Than 4-Inch Diameter:

        1) Threaded joints shall be made by wrapping the male threads with joint tape or by applying an approved thread lubricant, then threading the joining members together. The joints shall be tightened with strap wrenches which will not damage the pipe and fittings. The joint shall be tightened no more than 2 threads past hand-tight.
        2) Push-On Joints: The ends of pipe for push-on joints shall be beveled to facilitate assembly. Pipe shall be marked to indicate when the pipe is fully seated. The gasket shall be lubricated to prevent displacement. Care shall be exercised to ensure that the gasket remains in proper position in the bell or coupling while making the joint.
        3) Solvent-weld joints shall comply with the manufacturer's instructions.

    b. Pipe greater than 4-Inch Diameter: Make push-on joints with the elastomeric gaskets specified for this type joint, using either elastomeric-gasket bell-end pipe or elastomeric-gasket couplings. For pipe-to-pipe push-on joint connections, use only pipe with push-on joint ends having factory-made bevel; for push-on joint connections to fittings, cut spigot end of pipe off square and re-bevel pipe end to a bevel approximately the same as that on ductile-iron pipe used for the same type of joint. Use an approved lubricant recommended by the pipe manufacturer for push-on joints. Assemble push-on joints for pipe-to-pipe joint connections in accordance with the requirements of AWWA C605 for laying the pipe and the recommendations in AWWA M23 for pipe joint assembly. Assemble push-on joints for connection to fittings in accordance with the requirements of AWWA C605 for joining PVC pipe to fittings and accessories and with the applicable requirements of AWWA C600 for joint assembly. Make compression-type joints/mechanical-joints with the gaskets, glands, bolts, nuts, and internal stiffeners specified for this type joint and assemble in accordance with the requirements of AWWA C605 for joining PVC pipe to fittings and accessories, with the applicable requirements of AWWA C600 for joint assembly, and with the recommendations of Appendix A to AWWA C111/A21.11. Cut off spigot end of pipe for compression-type joint/mechanical-joint connections and do not re-bevel.

2. Pipe anchorage: Provide concrete thrust blocks for pipe anchorage. Size and position thrust blocks as indicated on the Drawings or as otherwise required.

3.6 MANHOLE INSTALLATION

A. Furnish complete manhole assemblies conforming to the Drawings and as specified herein.

B. Precast reinforced concrete manhole sections shall be set so as to be vertical and with section in true alignment. Joints of the base and precast section shall be formed and sealed with "O" ring type rubber gaskets. Joints shall be painted with mortar and exterior joints thoroughly tooled so as to be slightly concave with a hard polished surface free from drying cracks. Interior joints shall be tooled flush in a similar manner. Mortar shall be as specified herein for brick masonry.

C. All holes in sections, used for their handling, shall be thoroughly plugged with mortar. Finish smooth and flush with adjoining surfaces.

D. The manufacturer shall provide waterstops acceptable to Engineer, which shall be applied to the outside of the plastic pipe where the pipe is to be enclosed in any structure where concrete or mortar is used to prevent leakage along the outer wall of the barrel of the pipe.

E. Manhole frames shall be set with the tops conforming accurately to the grade of or finished ground surface or as indicated on the plans or directed. Adjust to grade with clay bricks and mortar, not to exceed five brick courses. Frames shall be set concentric with the top of the masonry and in a full bed of mortar so that the space between the top of the manhole masonry and the bottom flange of the frame shall be completely filled and made watertight. A thick ring or mortar extending to the outer edge of the masonry shall be placed all around the bottom flange and have a slight slope to shed water away from the frame.

F. Manhole covers shall be left in place in the frames on completion of other work at the manholes.

3.7 GREASE TRAP

A. Grease traps shall be installed in accordance with the manufacturer’s recommendations.

B. The unit shall be placed on a minimum of 12 inches of compacted gravel on compacted subgrade.

C. The joints of field-assembled sections shall be waterproof.

D. Manhole riser sections, frames and covers shall be installed as required and detailed.

3.8 FIELD PERFORMANCE TESTS

A. Joints shall sustain a maximum limit of 50 gallons per inch of diameter per foot per day per mile when field tested by actual infiltration conditions. All sanitary sewers which lie between 25 feet and 75 feet of a water supply well shall not exceed a leakage of 25 gallons per day per inch diameter of pipe per mile of sewer.

B. These requirements will be met for every section (between manholes) of pipe; it is not a cumulative average over several sections of pipe. The low pressure air test as described in these specifications will be required for all sanitary sewer installations.

3.9 LEAKAGE TESTS FOR SEWER MANHOLES

A. General: Leakage tests shall be made and observed by Engineer on each manhole. The test shall be an exfiltration test or vacuum test, made as described below.

B. Preparation for Test: After the manhole has been assembled in place, all lifting holes and those exterior joints within 6 feet of the ground surface shall be filled and pointed with an approved non-shrinking mortar. The test shall be made prior to placing the self and invert and before filling and pointing the horizontal joints below the 6-foot depth line. If the groundwater table has been allowed to rise above the bottom of the manhole, it shall be lowered for the duration of the test. All pipes and other openings into the manhole shall be suitably plugged and the plugs braced to prevent blow out.

C. Test Procedure: The manhole shall then be filled with water to the top of the cone section. If the excavation has not been backfilled and observations indicate no visible leakage, that is, no water visibly moving down the surface of the manhole, the manhole may be considered to be satisfactorily water-tight. If the test as described above is satisfactory, as determined by Engineer, or if the manhole excavation has been backfilled, the test shall be continued. A period of time may be permitted if the Contractor so wishes to allow for absorption. At the end of this period, the manhole shall be refilled to the top of the cone, if necessary, and the measuring time of at least 8 hours begun. At the end of the test period, the manhole shall be refilled to the top of the cone, measuring the volume of water added. This amount shall be extrapolated to a 24-hour rate and the leakage determined on the basis of depth. The leakage for each manhole shall not exceed 1 gallon per vertical foot for a 24-hour period. If the test fails this requirement, but the leakage does not exceed 3 gallons per vertical foot per day, repairs by approved methods may be made as directed by Engineer to bring the leakage within the allowable rate of 1 gallon per vertical foot per day. Leakage due to a defective section of joint, or exceeding the 3 gallon per vertical foot per day, shall be cause for the rejection of the manhole. It shall be the Contractor's responsibility to uncover the manhole as necessary and to disassemble, reconstruct or replace it as directed by Engineer. The manhole shall then be retested and, if satisfactory, interior joints shall be filled and pointed.

D. Backfilling: The test may be conducted either before or after backfilling around the manhole. However, if the Contractor elects to backfill prior to testing, for any reason, it shall be at their own risk and it shall be incumbent upon the Contractor to determine the reason for any failure of the test. No adjustment in the leakage allowance will be made for unknown causes such as leaking plugs, absorption, etc., i.e., it will be assumed that all loss of water during the test is a result of leaks through the concrete. Furthermore, the Contractor shall take any steps necessary to assure Engineer that the water table is below the bottom of the manhole throughout the test.

E. Infiltration Test: If the groundwater table is above the highest joint in the manhole, and if there is no leakage into the manhole as determined by Engineer, such a test can be used to evaluate the water-tightness of the manhole. However, if Engineer is not satisfied, the Contractor shall lower the water table and carry out the test as described herein before.

F. Vacuum Testing

1. The vacuum testing system shall be a unit as supplied by P.A. Glazier, Inc.—Worcester, MA 01613 (508) 755-3849, Cherne Industries, Inc.—Minneapolis, MN 55436 (800-843-7584); IEQ industries—Ada, MI 49307 (800-544-9053), or approved equivalent.
2. The testing shall be done immediately after assembly of the manhole and before backfilling. A 60 lb-in torque wrench shall be used to tighten the external clamps that secure the test cover to the top of the manhole. All lift holes shall be plugged with an approved non-shrink grout. No grout will be placed in the horizontal joints before testing. All pipes entering the manhole shall be plugged, taking care to securely brace the plugs from being drawn into the manhole.
3. A vacuum of 10 inches of mercury shall be drawn and the vacuum pump shut off. With the valves closed, the time shall be measured for the vacuum to drop to 9 inches. The manhole shall pass the test if the time is greater than 60 seconds for a 48″-diameter manhole, 75 seconds for a 60″ manhole, and 90 seconds for a 72″ manhole.
4. If the manhole fails the initial test, necessary repairs shall be made with a non-shrink grout while the vacuum is still being drawn or the test shall be stopped, repairs made and all steps of the test repeated. Re-testing shall proceed until a satisfactory test is obtained.

3.10 SEWER PIPE JOINT TESTING

A. The main sewer line and laterals shall be tested for leakage by the use of low-pressure air as approved by Engineer. The test length shall not exceed one length of pipe between two structures. Air test procedures may be dangerous and the Contractor shall take all necessary precautions to prevent blowouts.

B. Pneumatic Plugs

1. Pneumatic plugs shall have a sealing length equal to or greater than the diameter of the pipe to be tested.
2. Pneumatic plugs shall resist internal test pressures without requiring external bracing or blocking.
3. All air used shall pass through a single control panel.
4. Three individual hoses shall be used for the following connections:

    a. From control panel to pneumatic plugs for inflation;
    b. From control panel to sealed line for introducing the low pressure air;
    c. From sealed line to control panel for continually monitoring the air pressure rise in the sealed line.

C. The following testing procedures shall be explicitly followed:

1. All pneumatic plugs shall be seal tested before being used in the actual test installation. One length of pipe shall be laid on the ground and sealed at both ends with the pneumatic plugs to be checked. Air shall be introduced into the plugs to 25 psig. The sealed pipe shall be pressurized to 5 psig. The plugs shall hold against this pressure without bracing and without movement of the plugs out of the pipe.
2. After the pipe has been backfilled and cleaned, pneumatic plugs shall be placed in the line at each manhole and inflated to 25 psi. Low-pressure air shall be introduced into this sealed line until the internal air pressure reaches 4 psi greater than the average back pressure of any ground water that may be over the pipe. At least two minutes shall be allowed for the air pressure to stabilize.
3. After the stabilization period (3.5 psi minimum pressure in the pipe), the portion of pipe tested shall be acceptable if the time required in minutes for the pressure to decrease from 3.5 to 3.0 psi (greater than the average back pressure of any ground water that may be over the pipe) is not less than the time indicated in the following table:

Minimum Pressure Drop Time

Pipe Size (in.)	Time (sec)
4	0.190L
6	0.427L
8	0.760L
10	1.187L
12	1.709L
15	2.671L

D. Correction of Defective Work: If leakage exceeds the specified amount, the Contractor shall make the necessary repairs or replacements required to permanently reduce the leakage to within the specified limit, and the tests shall be repeated until the leakage requirement is met.

E. Compliance with Agency Requirements: In the event of conflict between the leakage test requirements specified herein with the leakage test requirements of agencies having jurisdiction over all or any portion of the sewer system installed under this Contract, the more restrictive requirements shall govern.

3.11 CLEANING AND REPAIR

A. The Contractor shall clean the entire sewer system of all debris and obstructions. This cleaning shall include, the removal of all formwork from structures, concrete and mortar droppings, construction debris and dirt. The system shall be thoroughly flushed clean and the Contractor shall furnish all necessary hose, pumps, pipe and other equipment that may be required for this purpose. No debris shall be flushed into existing sewers, storm drains and or streams.

B. All work of cleaning and repair shall be performed at no additional cost to Owner.

3.12 FINAL INSPECTION

A. Upon completion of the work, and before final acceptance by Engineer, the entire sewer system shall be subjected to a final inspection in the presence of Engineer. The work shall not be considered as complete until all requirements for line, grade, cleanliness, leakage tests and other requirements have been met.

3.13 AS-BUILT DRAWINGS

A. As work progresses, record on one set of plans all changes and deviations from the Contract Drawings in size, line, and grade. Make sufficient measurements to accurately locate the completed work. Record the locations of any uncharted locations of utilities encountered during installation of the sewer. Deliver the final As-Built drawings to Engineer.

B. Contractor shall be solely responsible for complying with the requirements of local permitting authorities for preparation and submittal of as-built drawings. The requirements for the

preparation of as-built drawings as defined herein shall be considered the minimum requirements of Engineer, but shall in no way relive Contractor from satisfying the requirements of local permitting authorities.

C. As work progresses, record the following on two (2) sets of Drawings:

1. All changes and deviations from the design in location, grade, size, material, or other feature as appropriate.
2. Any uncharted locations of utilities or other subsurface feature encountered during installation, including the characteristics of such uncharted utility or subsurface feature such as utility type, size, depth, material of construction, etc.

D. Recording of changes shall be clearly and neatly marked in red pen or pencil. All changes shall be noted on the appropriate Drawing sheets.

E. Make measurements from fixed, permanent points on the Project Site to accurately locate the work completed. Such measurements shall consist of at least three (3) ties showing the distance of each item relative to each of the fixed, permanent points.

F. As-Built Drawings shall be complete and shall indicate the true measurement and location, horizontal and vertical, of all new construction. As-Built drawings shall also contain any additional information required by Engineer.

END OF SECTION 333100

SECTION 334000 – STORM DRAINAGE SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section Includes:

1. Installation of new storm drain pipe, manholes and catch basins.
2. Connection of exterior building roof drains and perimeter drains.
3. Installation of under-drains.
4. Installation of stormwater treatment units.

B. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

D. Contractor is solely responsible for obtaining permits or approvals which may be required to perform the work of this section, including all costs, fees and taxes required or levied. Notify and obtain such permits or approvals from all agencies having jurisdiction prior to starting work.

1.3 REFERENCE STANDARDS

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR)

1. 29 CFR 1926, Safety and Health Regulations for Construction.

B. ASTM International (ASTM)

1. ASTM A36—Standard Specification for Carbon Structural Steel.
2. ASTM A48—Standard Specification for Gray Iron Castings.
3. ASTM A123—Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
4. ASTM A307—Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
5. ASTM A536—Standard Specification for Ductile Iron Castings.
6. ASTM A615—Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
7. ASTM C12—Standard Practice for Installing Vitrified Clay Pipe Lines.

8. ASTM C14—Standard Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
9. ASTM C55—Standard Specification for Concrete Building Brick.
10. ASTM C76—Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
11. ASTM C94—Standard Specification for Ready-Mixed Concrete.
12. ASTM C139—Standard Specification for Concrete Masonry Units for Construction of Catch Basins and Manholes.
13. ASTM C150—Standard Specification for Portland Cement.
14. ASTM C207—Standard Specification for Hydrated Lime for Masonry Purposes.
15. ASTM C270—Standard Specification for Mortar for Unit Masonry.
16. ASTM C387—Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
17. ASTM C425—Standard Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
18. ASTM C443—Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
19. ASTM C443—Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
20. ASTM C478—Standard Specification for Precast Reinforced Concrete Manhole Sections.
21. ASTM F493—Standard Specification for Solvent Cements for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe and Fittings.
22. ASTM C507—Standard Specification for Reinforced Concrete Elliptical Culvert, Storm Drain, and Sewer Pipe.
23. ASTM C564—Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
24. ASTM F656—Standard Specification for Primers for Use in Solvent Cement Joints of Poly(Vinyl Chloride) (PVC) Plastic Pipe and Fittings.
25. ASTM C700—Standard Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength, and Perforated.
26. ASTM C877—Standard Specification for External Sealing Bands for Concrete Pipe, Manholes, and Precast Box Sections.
27. ASTM C890—Standard Practice for Minimum Structural Design Loading for Monolithic or Sectional Precast Concrete Water and Wastewater Structures.
28. ASTM C913—Standard Specification for Precast Concrete Water and Wastewater Structures.
29. ASTM C923—Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals.
30. ASTM C990—Standard Specification for Joints for Concrete Pipe, Manholes and Precast Box Sections Using Preformed Flexible Joint Sealants.
31. ASTM C1479—Standard Practice for Installation of Precast Concrete Sewer, Storm Drain, and Culvert Pipe Using Standard Installations
32. ASTM C 1628—Standard Specification for Joints for Concrete Gravity Flow Sewer Pipe, Using Rubber Gaskets.
33. ASTM D1784—Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
34. ASTM D1785—Standard Specification for Poly(Vinyl Chloride) (PVC), Plastic Pipe, Schedules 40, 80, and 120.
35. ASTM D2235—Standard Specification for Solvent Cement for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe and Fittings.
36. ASTM D2241—Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).
37. ASTM D2321—Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
38. ASTM D2412—Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.

39. ASTM D2466—Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
40. ASTM D2467—Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
41. ASTM D2564—Standard Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Piping Systems.
42. ASTM D2855—Standard Practice for Making Solvent-Cemented Joints with Poly(Vinyl Chloride) (PVC) Pipe and Fittings.
43. ASTM D2665—Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.
44. ASTM D2729—Standard Specification for Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
45. ASTM D2855—Standard Practice for Making Solvent-Cemented Joints with Poly (Vinyl Chloride) (PVC) Pipe and Fittings.
46. ASTM D3212—Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
47. ASTM D3350—Standard Specification for Polyethylene Plastics Pipe and Fittings Materials.
48. ASTM D4396—Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds for Plastic Pipe and Fittings Used in Nonpressure Applications.
49. ASTM F402—Safe Handling of Solvent Cements, Primers, and Cleaners Used for Joining Thermoplastic Pipe and Fittings.
50. ASTM F405—Corrugated Polyethylene (PE) Tubing and Fittings.
51. ASTM F477—Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
52. ASTM F656—Standard Specification for Primers for Use in Solvent Cement Joints of Poly (Vinyl Chloride) (PVC) Plastic Pipe and Fittings.
53. ASTM F679—Standard Specification for Poly (Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.
54. ASTM F714—Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Outside Diameter.
55. ASTM F758—Smooth-Wall Poly (Vinyl Chloride) (PVC) Plastic Underdrain Systems for Highway, Airport, and Similar Drainage.
56. ASTM F894—Standard Specification for Polyethylene (PE) Large Diameter Profile Wall Sewer and Drain Pipe.
57. ASTM F1803—Standard Specification for Poly (Vinyl Chloride)(PVC) Closed Profile Gravity Pipe and Fittings Based on Controlled Inside Diameter.
58. ASTM F2306—Standard Specification for 12 to 60 inch [300 to 1500 mm] Annular Corrugated Profile-Wall Polyethylene (PE) Pipe and Fittings for Gravity-Flow Storm Sewer and Subsurface Drainage Applications.
59. ASTM F2648—Standard Specification for 2 to 60 inch [50 to 1500 mm] Annular Corrugated Profile Wall Polyethylene (PE) Pipe and Fittings for Land Drainage Applications.

C. American Concrete Pipe Association (ACPA).

1. ACPA 01-103—Concrete Pipe and Box Culvert Installation (latest revision and applicable supplements thereto).

D. American Association of State High and Transportation Officials (AASHTO).

1. AASHTO H20—Standard Specifications for HS-20, Highway Loading.
2. AASHTO M105—Standard Specification for Gray Iron Castings.
3. AASHTO M198—Joints for Circular Concrete Sewer and Culvert Pipe Using Flexible Watertight Gaskets.

4. AASHTO M252—Standard Specification for Corrugated Polyethylene Drainage Pipe.
5. AASHTO M294—Standard Specification for Corrugated Polyethylene Pipe, 300- to 1500-mm Diameter.

E. Corrugated Polyethylene Pipe Association (CPPA), division of the Plastics Pipe Institute (PPI).

1. Recommended Installation Practices for Corrugated Polyethylene Pipe and Fittings (latest revision and applicable supplements thereto).

F. State of Connecticut Department of Transportation (ConnDOT)
1. Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction, Form 819 and any supplements.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Shop Drawings:

1. Submit shop drawings, descriptive literature, or both, showing pipe materials and appurtenances to be furnished. Shop drawings shall be submitted to Engineer for approval prior to ordering materials.
2. Shop drawings showing the configuration, dimensions, layout, and spacing of major and minor components such as pipe, joints, couplings, restraints, and other proposed details of assembly. Show in large-scale details any unique assembly, pipe/pipe transitions, pipe/structure transitions, and/or installation requirements.

B. Copies of manufacturer-provided installation instructions, operation instructions, and maintenance material for all equipment furnished under this Section.

C. Manufacturer's warranties and associated warranty registration data in Owner's name. Submit two (2) copies of each warranty to Engineer in the manufacture/supplier standard form or if there is no standard form available, in a form specified by Engineer.

D. As-Built Drawings.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and methods required for proper performance of the work in this Section. Use equipment of adequate size, capacity and quantity to accomplish the work of this Section in a timely manner.

B. Codes and Standards: Perform earthwork complying with requirements of authorities having jurisdiction.

C. Sample pipe for testing, when requested by Engineer, shall be furnished by Contractor in sufficient numbers. The Contractor and/or the pipe manufacturer shall make the facilities and services for making the load tests available.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage

1. Manufacturer shall package the pipe and other drainage materials in a manner designed to deliver the pipe to the Project Site neatly, intact, and without physical damage. Transportation carrier shall use an appropriate method to ensure the pipe is properly supported, stacked, and restrained during transport. Inspect materials delivered to site for damage; store with minimum of handling.
2. Unloading of the pipe and other drainage materials should be controlled so as not to collide with the other pipe sections or fittings, and care should be taken to avoid chipping or spalling, especially to the spigots and bells. For manhole sections, cone sections, bases, fittings and other precast appurtenances, utilize lifting holes or lifting eyes provided.
3. In cold weather conditions, use caution to prevent impact damage. Handling methods considered acceptable for warm weather may be unacceptable during cold weather.
4. Storage:

    a. Store materials on site in enclosures or under protective coverings. Do not store materials directly on the ground. Keep inside of pipes and fittings free of dirt and debris.
    b. Pipe shall be stored on clean, level ground to prevent undue scratching or gouging.
    c. Store solvents, solvent compounds, lubricants, elastomeric gaskets, and any similar materials under cover out of direct sunlight. Provide additional storage measures in accordance with the manufacturer's recommendations. Discard materials if storage period exceeds the recommended shelf life. Solvents in use shall be discarded when the recommended pot life is exceeded.
    d. Metal Items: Check upon arrival; identify and segregate as to types, functions, and sizes. Store off the ground in a manner affording easy accessibility and not causing excessive rusting or coating with grease or other objectionable materials.

e. Cement, Aggregate, and Reinforcement: As specified in Section 033200—Site Cast-in-Place Concrete.
f. Store manhole units in an upright position.

PART 2 - MATERIALS

2.1 GENERAL

A. Products furnished under this Section which are damaged or found defective in any way prior to being set in place and final acceptance, may be rejected. Engineer may reject an entire lot of pipe should the sample pipe from such lot fail to meet requirements.

2.2 CONCRETE GRAVITY PIPE

A. Reinforced concrete pipe:
1. Pipe less than 12 inches in diameter: ASTM C14, Class 3.
2. Pipe greater than 12 inches in diameter: ASTM C76, Class 3.
3. Class 4 pipe shall be required when cover is less than 12 inches.

C. Fittings and specials: conform to the applicable requirements specified for the pipe.

D. Gaskets and pipe ends for rubber gasket joint: ASTM C443.

2.3 CORRUGATED POLYETHYLENE PIPE

A. Pipe: High density polyethylene, corrugated, smooth interior, ASTM D3350, Cell Classification 424420C.

1. Four (4) inch through 10 inch diameter pipe: AASHTO M252, Type S.
2. 12 inch through 60 inch diameter pipe: AASHTO M294, Type S or ASTM F2306.

B. Joints: Bell-and-spigot joint, AASHTO M252, AASHTO M294, or ASTM F2306. Bell shall be an integral part of the pipe and provide a minimum pull-apart strength of 400 pounds. Bell-and-spigot joint shall incorporate a gasket making it silt-tight. Gaskets shall be installed in the bell, or on the pipe by the pipe manufacturer.

1. Four-inch (4″) through 60-inch (60″) diameter pipe joint, watertight, ASTM D3212. Gaskets: polyisoprene, ASTM F477. Gaskets shall be installed by the pipe manufacturer and covered with a removable, protective wrap to ensure the gasket is free from debris. A joint lubricant available from the manufacturer shall be used on the gasket and bell during assembly.
2. 12-inch (12″) through 60-inch (60″) diameter pipe shall have a reinforced bell with a bell tolerance device. The bell tolerance device shall be installed by the manufacturer.
3. Coupling bands shall conform to the manufacturer’s specifications. Couplers shall cover not less than one corrugation on each section of pipe.

C. Fittings: AASHTO M252, AASHTO M294, or ASTM F2306. Bell and spigot connections shall utilize a spun-on or welded bell and valley or saddle gasket meeting the watertight joint performance requirements of AASHTO M252, AASHTO M294 or ASTM F2306.

D. Saddle Tee

1. Saddle tees shall be manufactured saddle tees designed to connect to the corrugated polyethylene pipe.
2. Fittings shall conform to AASHTO M 294. Fabricated fittings shall be welded on the interior and exterior of all junctions.
3. A soil-tight seal shall be obtained with the coupling at the saddle tee stub to the storm service pipe.

2.4 POLYVINYL CHLORIDE (PVC) GRAVITY PIPE

A. Polyvinyl Chloride Pipe formulated for drainage application:

1. Pipe 4-inch to 15-inch diameter: ASTM D3034, SDR-35. Elastomeric gasket joints, retained gaskets, part of a complete pipe section and supplied as such.
2. Pipe 18 inch to 36 inch diameter: ASTM F679. Elastomeric gasket joints, retained gaskets, part of a complete pipe section and supplied as such.

B. PVC Cell classification: 12454 or 12364, ASTM D1784.

C. Pipe shall have a minimum pipe stiffness that equals or exceeds 46 psi (lbs/in.^{2}).

D. Pipe shall be marked along the outside of the barrel with the following:

1. The manufacturer's name or trademark.
2. The standard to which it conforms/ASTM Designation.
3. Pipe size.
4. Material designation code/PVC cell classification.
5. SDR number or schedule number.

E. Standard length of pipe: maximum of 20 feet with the following exceptions.

1. Length of 6-inch pipe shall be a maximum of 13 feet unless otherwise approved by Engineer.
2. Pipe used in house connections and/or laterals shall not exceed 6.5 feet in length unless otherwise approved by Engineer.

F. PVC Plastic Gravity Joints and Jointing Material.

1. Joints: ASTM D3213, gasketed, bell-and-spigot, push-on type.
2. Gaskets: ASTM F477. Since each pipe manufacturer has a different design for push-on joints, gaskets shall be part of a complete pipe section and provided as such. Gaskets may be factory installed or field installed as recommended by the pipe manufacturer. Lubricant shall be as recommended by the pipe manufacturer.

G. Fittings: SDR-35, ASTM D3034 and ASTM F1336, specifications as pipe.

H. The manufacturer shall provide waterstops acceptable to Engineer, which shall be applied to the outside of the plastic pipe where the pipe is to be enclosed in any structure where concrete or mortar is used to prevent leakage along the outer wall of the barrel of the pipe.

I. No single piece of pipe shall be laid on any project covered by these specifications unless it is found to be generally straight. Such pipe shall have a maximum ordinate as measured from the concave side of the pipe not to exceed $1/16$ inch per foot of length. If the deviation from straightness exceeds this requirement, then the particular piece of pipe shall be rejected.

2.5 UNDERDRAIN

A. Pipe: Perforated Polyvinyl Chloride (PVC) Gravity Pipe or Corrugated Polyethylene Pipe as indicated on the Drawings.

1. Perforated Polyvinyl Chloride (PVC) Gravity Pipe: ASTM F758.

a. Perforations shall be uniformly spaced along the length and circumference of the pipe.
b. Joints: Solvent weld with primer (ASTM F656) and solvent cement (ASTM F493) per ASTM D2855 or integrally-formed bell and spigot gasketed connections with elastomeric seals (gaskets) meeting the requirements of ASTM F477.

2. Corrugated Polyethylene Pipe: AASHTO M252 Type SP (Double Wall).

a. Perforations: Class 2 slotted perforations per AASHTO M252. Perforations shall be uniformly spaced along the length and circumference of the pipe.
b. Joints: Joint: Silt-tight, ASTM D3212.

2.6 JOINT LUBRICANT

A. As specified by pipe manufacturer, ANSI/AWWA C111/A21.11.

2.7 CATCH BASINS

A. Reinforced precast concrete base, sump, transition, riser, corbel, and top: ASTM C913 for precast rectangular catch basins, ASTM C478 for precast circular catch basins. Type, construction, and dimensions as indicated on the Drawings.

1. Concrete: 4,000 psi minimum, 4%–7% entrained air.
2. Reinforcement: ASTM C890. Steel bars, ASTM A615. Welded-wire fabric, ASTM A185. Additional reinforcing at openings.
3. Precast sections shall consist of smooth sections in standard nominal inside diameters. All precast concrete sections shall be free from cracks, damaged joints, exposed reinforcing, aggregate pockets, spalls, and dimensional distortions or other irregularities. Lifting holes shall be filled with mortar, or other approved material.
4. Openings or “knockouts” in precast units shall be located as shown on the Drawings and to accommodate the inflow and outflow pipe orientation required. Openings shall be sized sufficiently to permit passage of the largest outside dimension of pipe or fittings. Prior to ordering precast manhole bases, all angles between incoming pipes are to be field checked to incorporate possible line changes required in the field layout.

B. Gaskets for joints between sections: Butyl rubber, ASTM C443.

C. Grade Rings: ASTM C478, precast reinforced concrete, 1-inch to 4-inch thickness, dimensions to match basin and top section.

D. Frame and Grate.

1. Cast iron: AASHTO M 105, Class 25 for frames and Class 30 for grates.
2. Cast steel: ASTM A27, Grade optional, thoroughly annealed.

3. Structural Steel: ASTM A36, or A283, Grade B or better, as to quality and details of fabrication, except that in the chemical composition of the steel, the 2/10 of 1% of copper may be omitted.
4. Grate type: ConnDOT “Type A” unless otherwise specified.
5. Covers and gratings shall bear uniformly on their supports.
6. Frame and grate shall be galvanized, ConnDOT Form 819 M.06.03. Cast Iron frames and grates shall not be galvanized.

2.8 YARD DRAIN/AREA DRAIN

A. Configured as indicated on the Drawings. Precast concrete.

B. Frame and Grate: Ductile iron as an integral part of the surface drainage inlet and furnished by the same manufacturer of the drain, frame and grate set manufactured for use on PVC pipe, or insert-type grate manufactured for use on PVC pipe.

1. Grates for drain basins shall be capable of supporting H-20 wheel loading for traffic areas or H-10 loading for pedestrian areas.
2. 12″ and 15″ square grates will be hinged to the frame using pins. Metal used in the manufacture of the castings shall conform to ASTM A536 grade 70-50-05 for ductile iron.
3. Grates shall be provided painted black.

2.9 CONCRETE MANHOLE

A. Precast concrete manhole risers, base sections, and tops: ASTM C478. Precast manhole sections shall consist of smooth circular sections in standard nominal inside diameters. All precast concrete manhole sections shall be free from cracks, damaged joints, exposed reinforcing, aggregate pockets, spalls, and dimensional distortions or other irregularities. Lifting holes, when provided, shall be filled with mortar, or other approved material.

1. Concrete: 4,000 psi minimum, 4%–7% entrained air.
2. Diameter: 48 inches unless otherwise indicated.
3. Base and first riser: Monolithic and built to the dimensions and requirements indicated on the Drawings.

    a. Bottoms shall be integrally cast unless specialty bases at points of connection to existing piping (“Dog-House”) is indicated on the Drawings or otherwise proposed for use. Unless indicated on the Drawings, any special bases or riser used must be detailed in shop drawings and submitted for approval.

4. Riser sections: As required to provide depths indicated.
5. Top Section: Concentric-cone type, unless eccentric-cone or flat-slab-top type is indicated. Cones shall have the same wall thickness and reinforcement as riser sections. If required or called-for, flat slab shall be a minimum of 8 inches thick designed to carry AASHTO H-20 loading with one foot cover and conform to ASTM C478.
6. External damp-proofing: Asphalt, ASTM D449, Type A.
7. Openings or “knockouts” in precast units shall be located as shown on the Drawings and to accommodate the inflow and outflow pipe orientation required. Openings shall be sized sufficiently to permit passage of the largest outside dimension of pipe or fittings. Prior to ordering precast manhole bases, all angles between incoming pipes are to be field checked to incorporate possible line changes required in the field layout.

B. Gaskets for joints between manhole sections: Butyl rubber, ASTM C443.

C. Grade Rings: ASTM C478, precast reinforced concrete, 1 inch to 4 inch thickness, diameter to match manhole and frame.

D. Mortar: Packaged, ASTM C387 or as Specified in Section 033200—Site Cast-in-Place Concrete.

E. Frame and Cover: Ductile Cast Iron, ASTM A536, Grade 60-40-18.

F. Frame and Cover: Grey Cast Iron, ASTM A48, Class 25B (Frame) and Class 30B (Covers), uncoated.

1. Cover: 26 inch diameter, non-vented with non-penetrating pickholes. Unless otherwise detailed or indicated, covers shall be cast with 1½ inch wide, raised letters, indicating “STORM SEWER” unless other lettering is called-for.
2. Frame and cover shall be supplied as a pair from the same manufacturer. Castings shall be of tough, even-grained iron, free from scale, lumps, blisters, sand-holes and other injurious defects, and of the size and type shown on the Drawings. Frames and covers shall have machined bearing surfaces to seat firmly and prevent rocking and rattling under traffic loads. Before leaving the foundry, castings shall be thoroughly cleaned, subjected to hammer tests for soundness and given two coats of coal tar pitch varnish.

G. Resilient connectors for joints between manhole and pipes entering manhole: Continuous boot of ⅜ inch minimum thickness neoprene, ASTM C923 or ASTM C990. Boots shall be either cast into the manhole wall or installed into a cored opening using internal compression rings. Installed boot shall result in a water-tight connection meeting the performance requirements of ASTM C443.

H. Manhole Steps: ASTM C478 and OSHA 29 CFR 1910.27, drop front or equivalent. Steps shall be nine inches in depth and at least twelve inches in width with an abrasive step surface.

1. [Cast Aluminum Alloy: Aluminum alloy, 6061-T6, tensile 38,000 psi, yield 35,000 psi. Drop front design with upturned embedded ends. All parts of aluminum steps to be embedded in concrete or masonry shall be coated with bituminous paint or zinc chromate primer.]
2. [Composite Plastic-Steel: One-half (½) inch deformed steel reinforcing rod, ASTM A615, Grade 60, encapsulated in a co-polymer polypropylene plastic, ASTM D2146, Type II, Grade 16906.]
3. Steps shall be placed in vertical alignment as indicated on the Drawings. Steps shall be uniformly spaced not more than sixteen inches (16″) on center, including the spacing between the top step and the manhole cover. Steps shall be embedded in the wall a minimum distance of 4 inches in either cast or drilled holes. Steps shall not be driven or vibrated into fresh concrete and shall withstand a pullout resistance of 2000 lbs when tested in accordance with ASTM C497. Each step shall project a minimum of 5 inches from the wall measured from the point of embedment.

2.10 DROP MANHOLE

A. Drop inlet shall be constructed with ductile iron gravity pipe laid in undisturbed soil in conformance with ASTM A746-82. Adapt to PVC with Fernco coupling or approved equivalent.

B. Vertical drop pipe shall be 8″, 10″, or 12″ maximum SDR 35 PVC with 90 degree short bend radius shall conform to ASTM D3034.

C. Vertical drop pipe shall be anchored a minimum of every 4 feet with ⅛″ x 1½″ type 304 stainless steel pipe straps set as ordered with lag bolts and shields.

2.11 MASONRY UNITS

A. Brick: ASTM C32 Grade MS or ASTM C62 Grade SW.

B. Concrete block: Solid block, ASTM C139.

2.12 MORTAR

A. Mortar: ASTM C387.

1. Portland Cement: ASTM C150, Type I.
2. Sand: ASTM C144.
3. Hydrated Lime: ASTM C207.
4. Water: Potable.
5. Mix proportions for manhole rims and covers: 1 part portland cement, 2 parts sand, and ¼ part hydrated lime by dry volume. Hydrated lime shall not exceed 10 percent by weight of the total dry mix. Quantity of water in mixture shall be sufficient to produce a stiff, workable mortar, but in no case shall exceed 5½ gallons of water per sack of cement.
6. Mix Proportions for invert construction: 1 part portland cement and 2 parts sand by volume. Quantity of water in mixture shall be sufficient to produce a stiff, workable mortar, but in no case shall exceed 5½ gallons of water per sack of cement.

2.13 STORMWATER TREATMENT UNIT

A. Stormwater Treatment Units shall be hydrodynamic separators made of precast concrete sections and shall have the capacity and dimensions indicated on the Drawings. Treatment units shall be HydroStorm, as manufactured by Hydroworks (888-290-7900); Vortechs®, as manufactured by CONTECH Stormwater Solutions, Scarborough, Maine (877-907-8676); Stormceptor® by CSR—Farmington, CT (860-677-1374); or approved equivalent.

B. Units shown on the Drawings have been sized to meet specific criteria as indicated. Contractor shall submit only those units that are sized and manufactured to meet such criteria as shown with the details and/or listed below:

1. WQU HDS 1 – HS-5

a. Conveyed flow = 8.74 c.f.s. (total flow to the treatment system)
b. Treated flow = 5.59 c.f.s. (total flow actually subjected to treatment)
c. Removal efficiency particle size = maximum of 100 microns
d. Evidence of Independent Third Party field testing
e. Evidence of full scale laboratory testing
f. Minimum removal of 80% Total Suspended Solids (TSS) for 1 inch of rainfall on the impervious surfaces within its drainage area

2. WQU HDS 5 – HS-3i

a. Conveyed flow = 0.87 c.f.s. (total flow to the treatment system)
b. Treated flow = 0.87 c.f.s. (total flow actually subjected to treatment)

c. Removal efficiency particle size = maximum of 100 microns
d. Evidence of Independent Third Party field testing
e. Evidence of full scale laboratory testing
f. Minimum removal of 80% Total Suspended Solids (TSS) for 1 inch of rainfall on the impervious surfaces within its drainage area.

3. WQU HDS 7 – HS-5

a. Conveyed flow = 9.4 c.f.s. (total flow to the treatment system)
b. Treated flow = 6.46 c.f.s. (total flow actually subjected to treatment)
c. Removal efficiency particle size = maximum of 100 microns
d. Evidence of Independent Third Party field testing
e. Evidence of full scale laboratory testing
f. Minimum removal of 80% Total Suspended Solids (TSS) for 1 inch of rainfall on the impervious surfaces within its drainage area.

4. WQU HDS 9 – HS-4i

a. Conveyed flow = 6.26 c.f.s. (total flow to the treatment system)
b. Treated flow = 6.26 c.f.s. (total flow actually subjected to treatment)
c. Removal efficiency particle size = maximum of 100 microns
d. Evidence of Independent Third Party field testing
e. Evidence of full scale laboratory testing
f. Minimum removal of 80% Total Suspended Solids (TSS) for 1 inch of rainfall on the impervious surfaces within its drainage area.

C. Precast Sections: Portland cement shall be Type II, ASTM C150, 4,000 psi minimum.

D. Loading requirements:

1. H-20 loading, manhole riser with frame and cones, plus the weight of soil above.
2. Weight of precast concrete structure.
3. Initial handling and erection loadings.

E. Construction joints shall be sealed with a butyl rubber based sealant.

F. Manhole riser sections, manhole steps, frames and covers shall be as detailed on the Drawings.

2.14 BEDDING

A. Bedding for concrete and PVC pipes: Bedding, Haunching and Initial Backfill shall consist of screened gravel, maximum size ¾ inches and minimum size ⅜ inches.

B. Bedding for HDPE pipes: Bedding, Haunching and Initial Backfill shall consist of ConnDOT No. 6, No. 67, or No. 8 aggregate, or other materials meeting the requirements of ASTM D2321 for Class IA, Class IB, Class II, or Class III unless otherwise specified by the pipe manufacturer.

C. Bedding for Catch Basins: Screened Gravel or Crushed Stone, well graded in size from ¾ inch to ⅜ inch consisting of clean, hard, and durable fragments. No limestone shall be permitted.

PART 3 - EXECUTION

3.1 PIPE INSTALLATION

A. As soon as the excavation is completed to the normal grade of the bottom of the trench, the Contractor shall immediately place the bedding material in the trench. Then the pipe shall be firmly bedded in the compacted bedding material to conform accurately to the lines and grade indicated on the Drawings.

B. Install pipe, fittings, and accessories in accordance with manufacturer's instructions.

1. Concrete pipe shall be installed per ASTM C1479, as may be modified by the pipe manufacturer's instructions.
2. HDPE pipe shall be installed per ASTM D2321, as may be modified by the pipe manufacturer's instructions.

C. Notch under pipe bells and joints, where applicable to provide for uniform bearing under entire length of pipe.

D. Excavation, backfilling and compaction shall be as specified in Section 312310—Earthwork of these Specifications.

E. Maintain optimum moisture content of bedding material to attain required compaction density.

3.2 MANHOLES AND CATCH BASINS

A. Manholes and Catch Basins shall be constructed at the locations and to the lines, grades and dimensions noted on the Drawings, or as required.

B. Precast concrete construction shall be done in a manner to insure watertight construction and all leaks in precast concrete shall be sealed. If required, precast concrete shall be repaired or replaced to obtain watertight construction.

C. Concrete barrels and cones shall be precast concrete sections.

1. Bases shall be either precast with a barrel integrally cast with the base, or poured concrete suitably shaped by means of accurate bell-rung forms to receive the barrel sections. Manhole invert channels in manholes shall be formed in concrete.
2. Precast manholes shall have an adjustment ring at the top of the cone to permit the frame and cover to meet the finished surface. This shall consist of courses of brick or reinforced grading rings not to exceed 11 inches.

D. Stubs shall be short pieces cut from the bell ends of the appropriate size and class of pipe. Concrete stubs shall be plugged with brick masonry unless otherwise directed.

E. Manhole inverts shall conform accurately to the size of the adjoining pipes.

1. Manhole inverts shall be constructed of concrete developing 3,500 psi with the concrete being placed to the spring line of the pipe form.
2. Smooth plastic pipe, matching the dimension of the outlet pipe, shall be used to form the invert.

3. Side inverts and main inverts, where the direction changes, shall be laid out in smooth curves of the longest possible radius, which is tangent, within the manhole, to the centerline of adjoining pipelines.
4. Invert shelves shall be graded to provide a 1-inch per 1-foot wash from the manhole walls.

F. Manhole sections shall contain manhole steps accurately positioned and embedded in the concrete when the section is cast. Precast-reinforced concrete manhole sections shall be set so as to be vertical and with sections and steps in true alignment.

G. All holes in sections used for their handling shall be thoroughly plugged with rubber plugs, made specifically for this purpose, or with mortar. The mortar shall be one part cement to 1½ parts sand, mixed slightly damp to the touch (just short of “balling”), hammered into the holes until it is dense and an excess of paste appears on the surface, and then finished smooth and flush with the adjoining surfaces.

H. The Contractor may, as an alternate to suitable nonshrink mortar joints, use premolded elastomeric-sealed joints for pipe into precast manhole bases.

1. All materials, accessories and construction methods used in making the joints shall be supplied or approved by the manufacturer of the premolded elastomeric-sealed joint.

I. Openings for pipe and materials to be embedded in the walls of the base for these joints shall be cast in the base at the required locations during the manufacturer of the base. Incorrectly cast and patched pipe openings will be rejected.

J. Manhole risers and tops shall be installed using approved “o-ring” type, neoprene gaskets for sealing joints. Units shall be installed level and plumb. Water shall not be permitted to rise over newly made joints nor until after inspection as to their acceptability. All jointing shall be done in a manner to insure water tightness.

K. Openings shall be provided in the risers to receive entering pipes. These openings may be made at the place of manufacture. The openings shall be sized to provide a uniform 1 inch maximum annular space between the outside of the pipe wall and the opening in the riser. After the pipe is in position, the annular space shall be solidly filled with nonshrink mortar. Care shall be taken to assure that the openings are located to permit setting of the entering pipe at its correct elevation as indicated.

L. Openings, which are cut in the risers in the field, shall be carefully made by coring so as not to damage the riser. Damaged risers will be rejected and shall be replaced at no additional expense to the Owner.

M. Where required by the Drawings, a slot and opening shall be cast in the catch basin wall suitable for mounting the cast iron hood and discharge pipe. The hood hinge may be furnished to the precast supplier by the Contractor for incorporation into the casting during manufacture.

3.3 BRICK MASONRY

A. Brick Masonry Construction shall be done in a manner to insure watertight construction and all leaks in brick masonry shall be sealed. All workmanship shall conform to the best standard practice and all brick masonry shall be laid by skilled workmen.

B. All beds on which masonry is to be laid shall be cleaned and wetted properly. Brick shall be wetted as required and shall be damp but free of any surface water when placed in the Work. Bed joints

shall be formed of a thick layer of mortar, which shall be smoothed or furrowed slightly. Head joints shall be formed by applying to the brick to be laid a full coast of mortar on the entire end, or on the entire side as the case requires, and then shoving the mortar covered end or side of the brick tightly against the bricks laid previously. The practice of buttering at the corners of the brick and then throwing the mortar or scrapings in the empty joints will not be permitted. Dry or butt joints will not be permitted. Joints shall be uniform in thickness and shall be approximately 1¼ inch thick.

C. Brickwork shall be constructed accurately to dimensions and brickwork at top of manholes shall be to the dimensions of the flanges of the cast-iron frames.

D. Joints on the inside face of walls shall be tooled slightly concave with an approved jointer when the mortar is thumbprint hard. The mortar shall be compressed with complete contact along the edges to seal the surface of the joints.

E. All castings to be embedded in the brickwork shall be accurately set and built-in as the Work progresses. Cast-iron frames and manhole covers shall be well bedded in mortar and accurately set to finished graded indicated or as directed.

F. Water shall not be allowed to flow against brickwork or to rise on the masonry for 60 hours after it has been laid, and any brick masonry damaged in this manner shall be replaced as directed at no additional expense to the Owner. Adequate precautions shall be taken in freezing weather to protect the masonry from damage by frost.

3.4 CONCRETE MASONRY UNITS

A. Concrete Masonry unit construction shall be soaked in water before laying. As circular concrete block walls are laid-up, the horizontal joints and keyways shall be flushed full with mortar. As rectangular blocks are laid-up, all horizontal and vertical joints shall be flushed full with mortar. Plastering of the outside of block structures will not be required. The joints in precast units shall be wetted and completely mortared immediately prior to setting a section. No structure shall be backfilled until all mortar has completely set.

3.5 MANHOLE STEPS

A. Placement of steps into the precast walls shall be by a proven method as recommended by the supplier of the precast manhole sections. Details of the steps and method of placement shall be submitted for approval.

B. Plastic steps shall be placed into the wet concrete wall during manufacture or if designed for press fit installation shall be driven into a wall opening according to the manufacturer’s specifications. Steps shall not be mortared into place after the concrete has set.

C. All manholes, catch basins, lawn inlets, etc., which are in excess of five feet in depth, shall be constructed with standard aluminum steps, spaced at 12-inch on center.

3.6 DROP INLETS

A. Drop inlets shall be constructed to the lines, grades, dimensions and design at the locations indicated on the Drawings or as required.

B. Construction shall conform to requirements outlined in Section 033013—Site Cast-in-Place Concrete.

C. Engineer may permit brick or concrete masonry construction. If this alternate is being employed, construction shall be done in accordance with paragraphs 3.04 or 3.05 in this Section.

3.7 CASTINGS

A. Cast-iron frames for grates and covers shall be well bedded in cement mortar and accurately set to the grades indicated or as directed. The frames shall be encased with a thick cement-mortar collar around the entire perimeter of the frames.

B. All voids between the bottom flange shall be completely filled to make a watertight fit. A ring of mortar, at least one inch thick and pitched to shed water away from the frame shall be placed over and around the outside of the bottom flange. The mortar shall extend to the outer edge of the masonry all around its circumference and shall be finished smooth. No visible leakage will be permitted.

C. Structures within the limits of bituminous concrete pavement shall be temporarily set at the elevation of the bottom of the binder course or as ordered. After the binder course has been compacted, these structures shall be set at their final grade. Backfill necessary around such structures after the binder course has been completed shall be made with Class A concrete unless otherwise ordered.

3.8 TRENCH DRAINS/SLOTTED DRAINS

A. Precast, pre-sloped trench drain metals, accessories, and installation methods shall be in accordance with the manufacturer’s recommendations and the details shown on the Drawings.

B. Slotted drains shall be installed in accordance with the manufacturer’s recommendations and the details shown on the Drawings.

C. Contractor shall furnish to Engineer the manufacturer’s written instructions for installation prior to such installation.

3.9 STORMWATER TREATMENT UNIT

A. Stormwater Treatment Units shall be installed in accordance with the manufacturer’s instructions.

B. Vaults shall be placed on a minimum foundation of 12 inches of gravel material. If groundwater is encountered, the foundation base shall be a minimum of 12 inches of crushed stone.

C. If precast sections are to be field assembled, adequate waterproofing shall be used at the joints.

D. Stormwater Treatment Units installed on interior floor drain discharges from parking garages shall have gasoline trapping capabilities in accordance with local and state regulations.

3.10 CLEANING

A. At the completion of the Work, clean all piping, structures and open drainage courses, through and to which water from this construction is directed, to the satisfaction of Engineer.

3.11 AS-BUILT DRAWINGS

A. Contractor shall be solely responsible for complying with the requirements of local permitting authorities for preparation and submittal of as-built drawings. The requirements for the preparation of as-built drawings as defined herein shall be considered the minimum requirements of Engineer, but shall in no way relive Contractor from satisfying the requirements of local permitting authorities.

B. As work progresses, record the following on two (2) sets of Drawings:

1. All changes and deviations from the design in location, grade, size, material, or other feature as appropriate.
2. Any uncharted locations of utilities or other subsurface feature encountered during installation, including the characteristics of such uncharted utility or subsurface feature such as utility type, size, depth, material of construction, etc.

C. Recording of changes shall be clearly and neatly marked in red pen or pencil. All changes shall be noted on the appropriate Drawing sheets.

D. Make measurements from fixed, permanent points on the Project Site to accurately locate the work completed. Such measurements shall consist of at least three (3) ties showing the distance of each item relative to each of the fixed, permanent points.

E. As-Built drawings shall be complete and shall indicate the true measurement and location, horizontal and vertical, of all new construction. As-Built drawings shall also contain any additional information required by Engineer.

END OF SECTION 334000

SECTION 347123 – MAINTENANCE AND PROTECTION OF TRAFFIC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section “Summary”, Paragraph 1.1A, entitled “Related Documents.”

1.2 SUMMARY

A. Section includes:
   1. Coordination with state or local police/public safety.
   2. Development and submittal of a Traffic Management Plan.
   3. Development and submittal of a Detour Plan.
   4. Contractor shall identify safety hazards and then furnish all necessary labor, materials, testing, submittals, tools, and equipment including, but not limited, to signs, barricades, traffic drums, cones, flashers, construction fencing, flaggers, warning devices, temporary pavement markings, delineators, etc., to control vehicular and pedestrian traffic through and adjacent to the project area. These measures and actions shall safely maintain the accessibility of public and construction traffic by preventing potential construction hazards.
   5. The work shall also include all costs associated with the erecting, maintaining, moving, adjusting, cleaning, relocating, and storing the aforementioned materials as is necessary to ensure safe movement of vehicular and pedestrian traffic throughout the project area.

B. Contractor shall coordinate work between all Contractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for all health and safety.

1.3 REFERENCES

A. Reference herein to any technical society, organization, group or regulation are made in accordance with the following abbreviations and, unless otherwise noted or specified, all work under this Section shall conform to the latest edition as applicable.

B. Code of Federal Regulations (CFR).

   1. 29 CFR 1926, Safety and Health Regulations for Construction.

C. State of Connecticut.

   1. Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction, Form 819 and any supplements.

D. American Association of State High and Transportation Officials (AASHTO).

   1. Roadside Design Guide, latest edition.

2. Manual for Signing and Pavement Marking of the National System of Interstate and Defense Highways, latest edition.
3. AASHTO M 268 - Standard Specification for Retroreflective Sheeting for Traffic Control.

E. United States Department of Transportation, Federal Highway Administration (FHWA).

1. Manual on Uniform Traffic Control Devices for Streets and Highways (MUTCD), latest edition.
2. Standard Highway Signs Including Pavement Markings and Standard Alphabets, latest edition.

1.4 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:

1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
2. Product Data for Credit 5d: For paints and coatings, including printed statement of VOC content.
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
6. Laboratory Test Reports for Credit b4: For composite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.5 SUBMITTALS

A. Traffic Management Plan (if necessary)

1. Contractor shall identify safety hazards and then prepare and submit a Traffic Management Plan to describe all necessary labor, materials, testing, submittals, tools, and equipment including, but not limited, to signs, barricades, traffic drums, cones, flashers, construction fencing, flaggers, warning devices, temporary pavement markings, delineators, etc., proposed for use in controlling vehicular and pedestrian traffic through and adjacent to the project area.

B. Detour Plan (if necessary)

1. Prepare and submit a Detour Plan to describe the temporary re-routing of traffic around the work zone(s) showing all proposed routing, signs, barricades, traffic drums, cones, flashers, construction fencing, flaggers, warning devices, temporary pavement markings, delineators, etc., proposed for use in conjunction with such detour.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

PART 2 - PRODUCTS

2.1 MATERIALS

A. All materials furnished under this Section including any warning devices, such as signs, barricades, flashers, cones, drums, vests, paddle signs, delineators, and other incidentals necessary to protect the work area and maintain vehicular and pedestrian traffic through and adjacent to the project area shall be in accordance with the Manual of Uniform Traffic Control Devices, as amended, or as approved by Engineer.

PART 3 - EXECUTION

3.1 GENERAL

A. Verify site conditions before proceeding with the work. Field check the accuracy of the Drawings and inspect structures, utilities, and other site features prior to start of work and notify Engineer in writing, of any hazardous conditions and/or discrepancies.

B. Contractor shall keep the roadway under construction open to vehicular and pedestrian traffic for the full length of the project. Traffic is to be maintained on one section of existing pavement, proposed pavement, or a combination thereof.

C. Alternating one way traffic may be utilized and limited to a maximum length of 500 feet during construction hours.

D. Lane width for alternating one-way traffic shall be kept to a minimum width of 10 feet, or as directed by the Engineer. A sufficient number of travel ways and pedestrian passways shall be provided to move that traffic ordinarily using the roadway. The travel lanes and pedestrian passways shall be drained and kept reasonably smooth, and in a suitable condition at all times in order to provide minimum interference to traffic consistent with the prosecution of the work. Suitable ingress and egress shall be provided at all times where required for all intersections, driveways, and for all abutting properties having legal access.

3.2 TRAFFIC CONTROL

A. Contractor shall furnish, light, and maintain such signs as may be directed, or may be necessary, for the safe regulation, and convenience of traffic. Said signs will be as specified on the Contract

Drawings or elsewhere herein, or if not specified, they shall be adequate for the regulation, safety and convenience of traffic and in conformance with the applicable requirements of the Manual on Uniform Traffic Control Devices, latest edition. Engineer reserves the right to reject any sign deemed unsuitable.

B. Contractor shall provide, erect, and maintain suitably lighted barricades, warning lights, etc. as needed, or as directed in order to keep people, animals, and vehicles from excavations, obstacles, etc. Contractor may be required to employ traffic control personnel and take other such reasonable means or precautions as Engineer or local traffic authority may direct, or as may be needed to prevent damage or injury to persons, vehicles, or other property, and to minimize the inconvenience and danger to the public by his construction operations.

C. Contractor shall arrange his operations to provide access to properties along the street, including temporary bridges to driveways, and provide access to fire hydrants, manholes, gate boxes, or other utilities. Whenever any trench obstructs traffic in, or to, any public street, private driveway, or property entrance, Contractor shall take such steps as required to maintain necessary traffic and access, including temporary bridging if required.

D. Contractor shall confine his occupancy of public or traveled ways to the smallest space compatible with the efficient and safe performance of the Work contemplated by the Contract.

E. Contractor shall observe and obey all local and state laws, ordinances, regulations and permits in relation to the obstruction of streets and highways, keeping passageways open and protecting traffic where there may be danger from blasting or other construction activities.

F. Suitable lighted barriers or barricades shall be furnished by Contractor, and erected and maintained at all times, including daylight and night time, around all open ditches, trenches, excavations, or other work potentially dangerous to traffic or pedestrians. Such barricades shall conform to the Manual on Uniform Traffic Control Devices, latest edition. Barricades shall be placed on all sides and throughout the entire length and breadth of all open ditches, trenches, excavations, or other work, which must be barred to the general public. Barricades shall be properly painted and lighted to retain a high degree of visibility to vehicular and pedestrian traffic.

G. Suitable lighted barricades shall be defined as barricades lit by flashers in accordance with this paragraph or other lighting methods required by the Uniform Traffic Control Devices, latest edition, Engineer, or the local traffic authority. Flashers shall be placed along the entire length of the barricades at an interval no greater than 8 feet, center to center. Flashers shall be power operated, lens directed, enclosed light units which shall provide intermittent light from 70 to 120 flashes per minute, with the period of light emittance occurring not less than 25 percent of each on off cycle, regardless of temperature. The emitted light shall be yellow in color and the area of light on at least one face of the unit shall be not less than 12 square inches. The discernible light shall be bright enough to be conspicuously visible during the hours of darkness at a minimum distance of 800 feet from the unit under normal atmospheric conditions. For units, which beam light in one or more directions, the foregoing specifications shall apply 10 degrees or more to the side and 5 degrees or more above and below the photometric axis.

H. Contractor shall furnish and securely fasten flashing units to signs, barricades, and other objects in such numbers and for such lengths of time as are required for the maintenance and protection of traffic, or as the Engineer and/or local traffic authority may order. The flasher shall be in operation during all hours between sunset and sunrise, and during periods of low visibility. Contractor shall maintain, relocate and operate barricades and flashers throughout the life of the Contract as required. No special payment will be made for barricades or flashers.

I. Should Contractor or his employees neglect to set out and maintain barricades or lights, as required in these Specifications, Engineer immediately, and without notice, may furnish, install and maintain barricades or lights. The cost thereof shall be borne by Contractor and may be deducted from any amount due, or to become due, to Contractor under this Contract.

J. Contractor will be held responsible for any damages that the Owner, Governmental units, or their heirs or assigns may have to pay as a consequence of Contractor's failure to protect the public from injury, and the same may be deducted from any payments that are due or may become due to Contractor under this Contract. Contractor shall allow for bridging for trenches at all street and driveway crossings in such manner as the Engineer and/or local traffic authority may direct in order that the traffic on intersecting streets may not be blocked, and in order that entrance may be made to properties along the line of work.

3.3 MAINTENANCE OF TRAVEL LANES

A. During non-construction hours, weekends and holidays, a minimum of two 12-foot wide travel lanes shall be open to traffic. Trenches shall be either temporarily paved or covered with skid resistant steel plates, unless otherwise directed by Engineer or the local traffic authority. The steel plates to be designed to withstand the normal traffic loads. Also during the above mentioned times, all public and private driveways shall be accessible to vehicular traffic.

B. During construction hours, Contractor will be allowed to close the streets to through traffic, provided alternate detour arrangements are made which are acceptable to the Police, Fire, Emergency Medical Services, Public Safety, and local traffic authority. Contractor shall notify the local Police, Fire, Emergency Medical Services, Public Safety, and local traffic authority ten (10) calendar days in advance of any/or all street closures, or partial closures.

3.4 SNOW REMOVAL

A. If Contractor's operations or occupancy of any public street or highway, or the uneven surfaces over any trenches being maintained by Contractor shall interfere with the removal or sanding of snow or ice by the public authorities or adjoining land owners, in an ordinary manner with regular highway equipment, Contractor shall be required to perform such services for the public authorities or adjoining owners without charge.

B. If the Contractor fails to perform snow removal services for the public authorities or adjoining owners, he shall reimburse the said authorities or adjoining owners for any additional cost to them for doing such work occasioned by conditions arising from Contractor's operations, occupancy, or trench surfaces, together with any damage to the equipment of said parties by those conditions, or claims of any parties for damage or injury or loss by reason of failure to remove snow or ice or to sand icy spots under these conditions.

3.5 STREET DETOURS

A. Where detours will be required, Contractor shall prepare and submit a proposed Detour Plan for all portions of the Work. Such Detour Plan will be subject to review and approval by Engineer, the local traffic authority, and other applicable town or state entities having jurisdiction. This submittal shall be made at least seven days prior to commencing construction. It shall be the sole responsibility of Contractor to keep the Local Regulatory Agencies (including, but not limited to, the Police and Fire Departments) forewarned at least 72 hours in advance of changes in traffic patterns due to reduction of pavement widths or closing of streets. Contractor shall supply, install,

maintain, replace as necessary, adjust, move, relocate, and store all signs, suitably lighted barricades, traffic cones, and traffic delineators, as necessary to carry out the traffic routing plan and maintain vehicular and pedestrian traffic. All of this work shall meet with the requirements of Engineer, local traffic authority, and other applicable town or state entities having jurisdiction.

3.6 TRAFFIC CONTROL PROCEDURES

A. The proper and adequate signing of the construction zone, and any approved detours, is considered of utmost importance. Prior to the start of construction, Contractor shall submit a Traffic Management Plan for review by Engineer, the local traffic authority, Owner, Police, and Fire Department.

B. Contractor shall provide one flagman for each work crew within signed areas for the control and direction of vehicular and pedestrian traffic on as needed, or as directed, basis and at no cost to Owner. This flagman shall be dedicated to traffic control only and shall not be utilized as part of the work crew.

C. Uniformed policemen will be provided at major intersections and at other locations where the applicable local traffic authority or local regulatory agencies may determine their need for the control and direction of vehicular traffic and pedestrians.

3.7 CLEAN UP

A. Contractor shall remove all debris, residuals, and materials at the conclusion of the work.

GENERAL NOTES

1. GENERAL CONTRACTOR TO NOTIFY ARCHITECT OF ANY INCONSISTENCIES IN THE DRAWINGS, EXISTING CONDITIONS OR THE PROPOSED CONSTRUCTION IMMEDIATELY.
2. GENERAL CONTRACTOR TO TAKE AND VERIFY ALL DIMENSIONS AND CONDITIONS ON THE JOB AND SHALL BE HELD RESPONSIBLE FOR THE SAME.
3. ALL NOTES AND DIMENSIONS DESIGNATED AS "TYP." OR "TYPICAL" APPLY TO ALL SIMILAR CONDITIONS THROUGHOUT THE PROJECT.
4. THESE PLANS ARE NOT TO BE SCALED FOR CONSTRUCTION PURPOSES. DIMENSION LINES AND NOTES SUPERSEDE ALL SCALED REFERENCES.
5. ALL DIMENSIONS ARE TO FACE OF MASONRY, FACE OF STUD OR CENTERLINE OF STRUCTURAL STEEL COLUMNS UNLESS OTHERWISE NOTED.
6. ROOFING CONTRACTOR TO VERIFY QUANTITY AND LOCATION OF ROOF PENETRATIONS, AND TO FLASH ACCORDING TO MANUFACTURER'S SPECIFICATIONS.
7. THE REQUIREMENTS FOR SEISMIC LOADS HAVE BEEN INCORPORATED INTO THE DESIGN OF THE STRUCTURAL, MECHANICAL, AND SUSPENDED CEILING SYSTEMS AS REQUIRED FOR THE NEW CONSTRUCTION.
8. SIGNAGE SHALL BE PLACED ON THE WALL ADJACENT TO THE LEVEL SIDE OF A ROOM DOOR AT A HEIGHT OF 5' A.F.F.
9. PROVIDE AN ALUMINUM DIVIDER STRIP AT ALL DOOR THRESHOLDS WHERE TWO DIFFERENT FINISHES MEET UNLESS OTHERWISE NOTED.

DEMOLITION NOTES

1. REMOVE ALL MATERIALS, ASSEMBLIES AND CONSTRUCTED ELEMENTS AS REQUIRED TO ACCOMMODATE THE NEW CONSTRUCTION.
2. PROTECT ALL EXISTING FINISHES AND SPACES NOT AFFECTED BY THE CONSTRUCTION OR DIRECTLY ADJACENT TO THE CONSTRUCTION. ALL EXISTING FINISHES AFFECTED BY THE DEMOLITION WORK ARE TO BE RETURNED TO A STATE OF FINISH EQUIVALENT TO THAT PRIOR TO COMMENCEMENT OF THE WORK.
3. PROVIDE DUST-PROOF PARTITIONS SEPARATING THE DEMOLITION AND WORK AREAS FROM AREAS UNAFFECTED BY THE CONSTRUCTION.
4. CLEAN ALL AREAS OF THE PROJECT PERIODICALLY TO MAINTAIN A SAFE AND CLEAR WORKING ENVIRONMENT. PROVIDE FINAL CLEANING OF THE ENTIRE PROJECT SITE AT THE COMPLETION OF THE PROJECT WORK.
5. PROVIDE TEMPORARY SHORING OR BRACING AS REQUIRED TO PROPERLY COMPLETE THE WORK. COORDINATE SHORING WITH ALL SUB-CONTRACTORS, AND NOTIFY THE ARCHITECT OF ANY PROBLEMS OR CONCERNS IMMEDIATELY.

CONSTRUCTION DOCUMENTS
JUNE 5, 2026

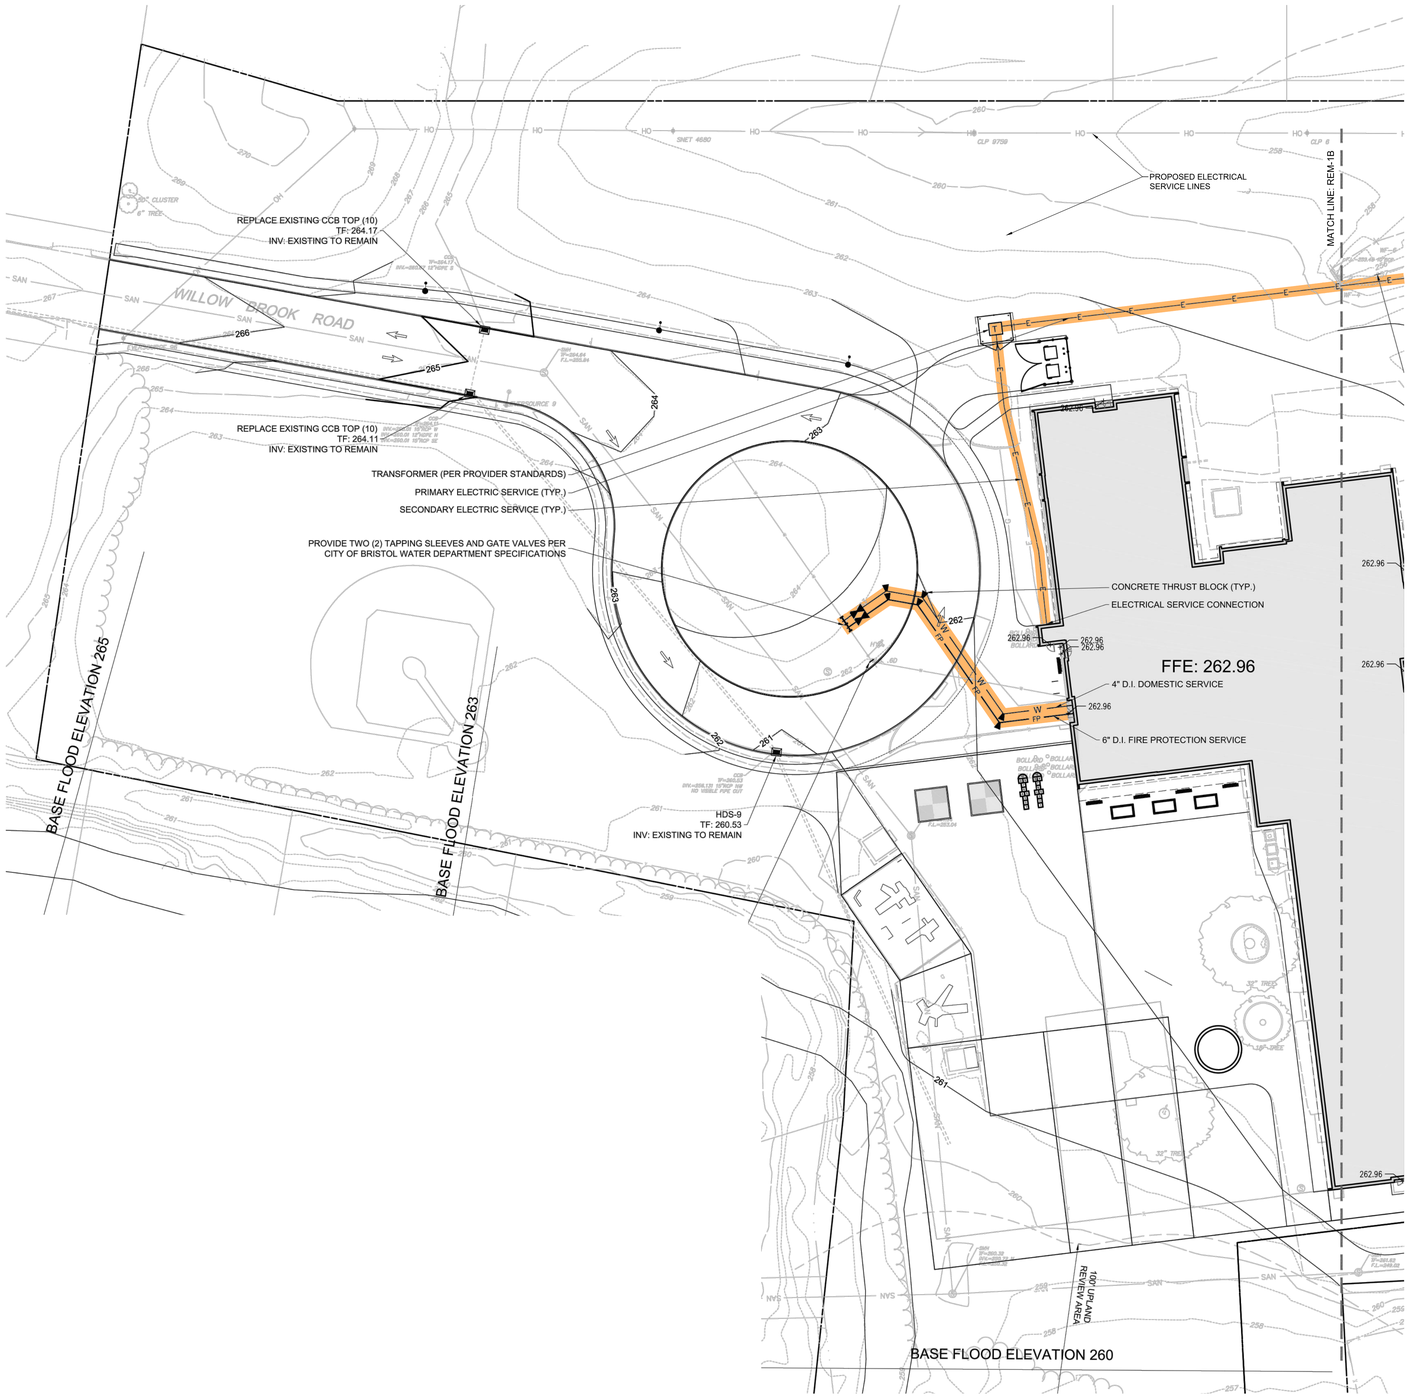
CODE INFORMATION

R1.0



1 REM-1A **SOIL MANAGEMENT SITE PLAN**
1" = 30'

SOURCE:
- SITE PLAN WAS CREATED FROM DRAWING NUMBER C3.0 TITLED "GRADING, DRAINAGE & UTILITY PLAN (WEST)" FOR EDGEWOOD PRE-K ACADEMY - CITY OF BRISTOL, QA+M OF FARMINGTON, CT DATED MARCH 20, 2026.
- DETAIL A WAS CREATED FROM DRAWING NUMBER FIGURE NO. 2 TITLED "CLOSURE SAMPLING LOCATIONS" FOR EDGEWOOD SCHOOL - CITY OF BRISTOL BY, HRP OF FARMINGTON, CT DATED 12/01/2025.

DRAINAGE AND UTILITIES LEGEND

- STORM DRAINAGE PIPE
- CATCH BASIN
- DRAINAGE MANHOLE
- AREA/YARD DRAIN
- TREATMENT UNIT
- ROOF LEADER
- SANITARY MANHOLE
- S — SANITARY SEWER
- VENT — VENT LINE
- CLEANOUT
- W — WATER LINE / FIRE LINE
- W — WATER LINE DOMESTIC
- WATER GATE VALVE
- WATER TAPPING SLEEVE
- WATER METER
- E — ELECTRIC / COMM. DUCT BANK
- G — GAS LINE
- GAS METER

GRADING LEGEND

- DIRECTION OF SURFACE DRAINAGE FLOW
- 123 — PROPOSED INTERMEDIATE CONTOUR
- 120 — PROPOSED INDEX CONTOUR
- 123.45 — TW 123.45 / BW 122.45 — PROPOSED SPOT ELEVATION
- 123.45 (MC) — MATCH EXISTING SPOT ELEVATION
- FLUSH CONDITION
- ACCESSIBLE ROUTE
- B-# — SOIL BORING LOCATION

SOIL CLASSIFICATION KEY:

- CONTAMINATED SOIL
- POLLUTED SOIL
- UNCONTAMINATED / CLEAN SOIL
- UNINVESTIGATED AREA

CONTAMINATED SOIL: SOIL EXHIBITING EXCEEDANCES OF PERTINENT CONTAMINANT CONCENTRATION LIMITS IN THE CONNECTICUT FORMER REMEDIATION STANDARD REGULATIONS (RSR'S) / RELEASE-BASED CLEAN-UP REGULATIONS (RBCR).

POLLUTED SOIL: SOIL EXHIBITING DETECTABLE CONCENTRATIONS OF CONTAMINANTS, INCLUDING METAL CONCENTRATIONS ABOVE TYPICAL BACKGROUND LEVELS, BUT AT CONCENTRATIONS BELOW PERTINENT FORMER RSR CRITERIA / RELEASE-BASED CLEAN-UP REGULATIONS (RBCR)

UNCONTAMINATED / CLEAN SOIL: SOIL EXHIBITING NO DETECTABLE CONCENTRATIONS OF CONTAMINANTS OR DETECTABLE CONCENTRATIONS OF CONTAMINANTS, INCLUDING METALS CONCENTRATIONS BELOW TYPICAL BACKGROUND RANGES.

UNINVESTIGATED AREA: SOILS WITHIN AREAS THAT HAVE NOT BEEN INVESTIGATED. THESE SOILS ARE CONSIDERED CONTAMINATED FOR BIDDING PURPOSES. CHARACTERISTIC SOIL TESTING CAN BE COMPLETED TO RECLASSIFY SOIL.

GENERAL NOTES:

1. THIS GENERAL SITE SOIL CHARACTERIZATION DRAWING IS INTENDED FOR USE BY THE CONTRACTOR IN ASSISTING WITH DEVELOPING THEIR BID RELATED TO ALL SITE WORK AS IT RELATES TO THE DISPOSITION OF SOIL GENERATED FROM THE PROPOSED WORK AREA. THIS DRAWING WAS BASED UPON EXISTING SOIL ANALYTICAL DATA COLLECTED FOR PRE-CONSTRUCTION SOIL TESTING IN 2026 AS PART OF DESIGN PROCESS.
2. EXCESS POLLUTED AND CONTAMINATED SOILS SHALL BE PROPERLY HANDLED AND DISPOSED OF BY THE CONTRACTOR IN ACCORDANCE WITH PROJECT SPECIFICATIONS SECTION 01 57 05 AND SECTION 02 61 23 AND OTHER PROJECT SPECIFICATIONS AS APPLICABLE.
3. STRIP AND EXCAVATE POLLUTED AND CONTAMINATED SOILS AT DESIGNATED LOCATIONS AS REQUIRED BY SITE WORK ACTIVITIES. EXCESS POLLUTED AND CONTAMINATED SOILS SHALL BE PROPERLY DISPOSED OF BY THE CONTRACTOR IN ACCORDANCE WITH PROJECT SPECIFICATIONS SECTION 01 57 05 AND SECTION 02 61 23 AND OTHER PROJECT SPECIFICATIONS, AS APPLICABLE.
4. SOILS GENERATED FROM UNTESTED AREAS SHALL BE CLASSIFIED AS CONTAMINATED SOILS.
5. UNCONTAMINATED / CLEAN SOILS SHALL NOT BE COMINGLED WITH POLLUTED OR CONTAMINATED SOILS. UNCONTAMINATED SOILS MAY BE REUSED ON SITE, WHERE APPROPRIATE PER PROJECT SPECIFICATIONS. POLLUTED SOILS SHALL NOT BE COMINGLED WITH CONTAMINATED SOILS. POLLUTED SOILS MAY BE CONSIDERED FOR RE-USE WHERE APPROPRIATE PER PROJECT SPECIFICATIONS.
6. IT IS NOT THE INTENT OF THIS PROJECT TO EXCAVATE AND MANAGE OR DISPOSE OF CONTAMINATED OR POLLUTED SOILS BEYOND THE LIMITS OF THE WORK DESCRIBED IN THE ARCHITECT'S PLANS AND SPECIFICATIONS.
7. SOILS THAT WILL BE IMPACTED INCIDENTAL TO ANY WORK ON THE SITE ARE COVERED UNDER THESE PLANS AND SPECIFICATIONS AND ARE SUBJECT TO ALL SPECIFIED REQUIREMENTS.
8. IF POLLUTED AND CONTAMINATED SOILS ARE ENCOUNTERED THEY SHALL BE HANDLED IN ACCORDANCE WITH SECTION 01 57 05 AND SECTION 02 61 23.
9. MATERIAL FROM THE PAVEMENT RECLAMATION ON-SITE MAY BE CONSIDERED FOR RESUSE AS BASE MATERIAL BENEATH THE NEW PAVEMENT LAYER IN ACCORDANCE WITH PROJECT SPECIFICATIONS.
10. DEWATERING IF NEEDED FOR UTILITY INSTALLATIONS WILL BE COMPLETED IN ACCORDANCE WITH PROJECT SPECIFICATIONS.
11. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED IN ACCORDANCE WITH PROJECT SPECIFICATIONS.
12. CALL-BEFORE-YOU-DIG (CBYD) / 811 IS REQUIRED TO BE CONTACTED PRIOR INTRUSIVE ACTIVITIES AT LEAST TWO BUSINESS DAYS BUT NOT MORE THAN 30 DAYS PRIOR TO INITIATION OF WORK.
13. EXECUTION AND HANDLING OF POLLUTED AND CONTAMINATED SOILS IS REQUIRED TO BE COMPLETED BY A GENERAL PERMIT TO ACT AS A CONTRACTOR TO CONTAIN OR REMOVE OR OTHERWISE MITIGATE THE EFFECTS OF CERTAIN RELEASES. (REGISTERED EXISTING RELEASE RESPONSE CONTRACTOR)
14. REFER TO MECHANICAL AND PLUMBING PLANS FOR BOILER ROOM AND CORRIDOR TRENCHING LOCATIONS NOT SOWN ON THIS DRAWING BUT INCLUDED IN THE CONTRACTORS BID FOR SOIL REMOVAL. SOIL REMOVED FROM WITHIN THE BOILER ROOM SHALL BE DISPOSED OF AS CONTAMINATED AND SOIL FROM THE INTERIOR TRENCHING SHALL BE DISPOSED OF AS POLLUTED.

ABATEMENT NOTES:

AC = ASBESTOS-CONTAINING
PCB = POLYCHLORINATED BIPHENYL
PPM = PARTS PER MILLION
1-001 = EAGLE ROOM DESIGNATION

REMOVE ALL AC FLOOR TILE AND ASSOCIATED BLACK MASTIC. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.

REMOVE ALL AC MUDDED PIPE FITTING INSULATION FROM ALL ELBOWS, TEES, AND HANGERS ON FIBERGLASS INSULATED LINES THROUGHOUT PIPE TUNNELS.

1. REMOVE AND DISPOSE OF ALL FRIABLE AC MUDDED PIPE FITTING INSULATION ON FIBERGLASS INSULATED LINES EXPOSED AND ABOVE GYPSUM CEILING BOARD AND SPLINED ACOUSTICAL CEILINGS.
2. REMOVE AND DISPOSE OF ALL FRIABLE AC MUDDED PIPE FITTING INSULATION ON FIBERGLASS INSULATED LINES WITHIN MASONRY WALLS.
3. REMOVE AND DISPOSE OF ALL FRIABLE AC AIR CELL PIPE INSULATION WITHIN MASONRY WALLS.
4. REMOVE AND DISPOSE OF ALL FRIABLE AC ROOF DRAIN PIPE FITTING INSULATION.
5. REMOVE ALL AC CAULK AT ALL DOOR FRAMES, PARTITION WINDOW FRAMES, COLUMNS AND MASONRY WALL JUNCTIONS (BEIGE AND GRAY). DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
6. REMOVE ALL AC WINDOW GLAZING COMPOUND AT METAL SASHES TO INTERIOR PARTITION WINDOWS, DOOR SIDELIGHT SASHES, TRANSOM WINDOWS, AND WITHIN METAL DOORS. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
7. REMOVE AND DISPOSE OF ENTIRE DOOR WITH AC FIRE DOOR CORE INSULATION.
8. REMOVE ALL AC DUCT FLANGE SEALANT. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
9. REMOVE ALL AC EXPANSION JOINT CAULK. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
10. REMOVE ENTIRE PIPE FLANGE GASKET. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
11. REMOVE ALL PIPE VALVE PACKINGS. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
12. REMOVE ALL AC TOP LAYER ROOF EDGE FLASHING CEMENT. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
13. REMOVE ALL AC TAR AT ROOF DRAIN PAN. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
14. REMOVE ALL AC CEMENT BOARD AT RAISED WALL. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
15. REMOVE ALL AC SILVER PAINT AT RAISED PENETRATIONS, SKYLIGHTS, EXPANSION JOINTS, AND ROOF WALL JUNCTIONS. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
16. REMOVE ALL AC CAULK AT TOP OF CEMENT BOARD. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
17. REMOVE ALL AC CAULK AT WOOD SOFFIT. DISPOSE OF AS ASBESTOS WASTE AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM.
18. REMOVE WOOD DOOR WITH AC WINDOW GLAZING COMPOUND AND FIRE DOOR CORE INSULATION. DISPOSE OF WINDOW GLAZING AS ASBESTOS AND PRESUMED PCB BULK PRODUCT WASTE >50 PPM. DISPOSE OF ENTIRE DOOR AS ASBESTOS WASTE.
19. REMOVE ALL RESIDUAL ORIGINAL CAULK AT DOOR FRAMES AND WINDOW PERIMETERS UNDER NEW DOOR / WINDOW SYSTEMS AND CAULKS. DISPOSE OF AS PRESUMED PCB BULK PRODUCT WASTE >50 PPM.

LEAD-BASED PAINT NOTE:

THIS PROJECT INCLUDES THE DISTURBANCE OF PAINTED SURFACES AND/OR COMPONENTS. LEAD AT VARYING LEVELS IS KNOWN TO BE PRESENT IN THE SURFACE COATINGS ON THE VARIOUS SURFACES AND COMPONENTS. ALL PAINT DISTURBING TASKS SHALL BE PERFORMED IN ACCORDANCE WITH THE USEPA RENOVATION, REPAIR, AND PAINTING RULE 40 CFR PART 745.80 SUBPART E. METAL BUILDING COMPONENTS MUST BE RECYCLED IN A FACILITY THAT ACCEPTS LEAD-BASED PAINT.

REMOVE ALL WOOD SOFFIT AND FASCIA BOARDS COATED WITH LEAD-BASED PAINT. DISPOSE OF ALL PAINTED WOOD AND ASSOCIATED PAINT CHIPS AS HAZARDOUS LEAD WASTE (D 008).

A. LIQUID ENCAPSULATE STEEL COLUMNS WITH CT DPH APPROVED ENCAPSULANT.

B. REMOVE CONCRETE MASONRY UNIT WALLS COATED WITH LEAD-BASED PAINT. DISPOSE OF AS HAZARDOUS SOLID WASTE.

C. REMOVE CERAMIC WALL TILE AND MASONRY BLOCK WITH LEAD GLAZING. DISPOSE OF AS NON-HAZARDOUS SOLID WASTE.

D. REMOVE AND RECYCLE METAL DOOR FRAME.

HIGH LEVELS OF LEAD (≥1.0 MG/CM^2) WERE IDENTIFIED ON THE FOLLOWING SURFACES THROUGHOUT THE BUILDING:

ORIGINAL BUILDING:
- CERAMIC WALL TILE
- METAL COLUMNS
- METAL PANELS IN WINDOW WALL
- CONCRETE MASONRY WALLS
- METAL DOOR STOP
- EXTERIOR WOOD SOFFITS
- EXTERIOR METAL COLUMNS

1963-1965 ADDITION:
- CERAMIC WALL TILE

UNIVERSAL WASTE KEY:

PCB / DEHP BALLASTS: (287 EA)
CHLOROFLUOROCARBONS: (20 EA)
CAPACITORS: (2 EA)
COMPACT FLUORESCENT BULBS (2 EA)
FLUORESCENT LIGHT TUBES: (5,644 LF)
LEAD ACID BATTERIES: (94 EA)
U-SHAPED FLUORESCENT BULBS: (42 EA)
USED ELECTRONICS: (3 CUBIC YARDS)

SURVEY NOTES

1. THIS SURVEY AND MAP HAS BEEN PREPARED IN ACCORDANCE WITH THE REGULATIONS OF CONNECTICUT STATE AGENCIES, SECTIONS 20-300B-1 THRU 20-300B-20 AND THE "MINIMUM STANDARDS OF ACCURACY, CONTENT & CERTIFICATION FOR SURVEYS AND MAPS, AS AMENDED OCTOBER 26, 2018.
   - 1.1. THE TYPE OF SURVEY IS A PROPERTY/BOUNDARY, TOPOGRAPHIC AND GENERAL LOCATION SURVEY.
   - 1.2. THE BOUNDARY DETERMINATION CATEGORY IS RESURVEY.
   - 1.3. THE ACCURACIES ARE AS FOLLOWS:

HORIZONTAL CONTROL	CLASS "A-2"
VERTICAL CONTROL	CLASS "V-2"
BOUNDARY	CLASS "A-2"
TOPOGRAPHY	CLASS "T-2"

2. THE COORDINATES AND ELEVATIONS DEPICTED ON THE PLAN REPRESENT THE NAD '83 AND THE NAVD '88 DATUMS. COORDINATES WERE ESTABLISHED ON THE SITE BASED UPON GPS OBSERVATIONS TAKEN ON APRIL 2023 USING TRIMBLE GNSS RTK R10 RECEIVERS AND SOLUTIONS PROVIDED THROUGH THE KEYNET NETWORK.
3. UNDERGROUND UTILITIES (IF DEPICTED) HAVE BEEN COMPILED, IN PART, BASED UPON INFORMATION FURNISHED BY OTHERS. THIS INFORMATION IS TO BE CONSIDERED APPROXIMATE AND ALFRED BENESCH & COMPANY DOES NOT TAKE RESPONSIBILITY FOR SUBSEQUENT ERRORS OR OMISSIONS WHICH MAY HAVE BEEN INCORPORATED INTO THIS PLAN AS A RESULT. ADDITIONALLY, OTHER SUCH FEATURES MAY EXIST ON THE SITE, THE EXISTENCES OF WHICH ARE UNKNOWN TO ALFRED BENESCH & COMPANY. THE SIZE, LOCATION AND EXISTENCE OF ALL SUCH FEATURES MUST BE FIELD DETERMINED AND VERIFIED BY THE APPROPRIATE AUTHORITIES PRIOR TO ANY CONSTRUCTION. CALL "CALL BEFORE YOU DIG" 1-800-922-4455.
4. THE SUBJECT PROPERTY'S CURRENT DEED CAN BE FOUND IN VOLUME 347 PAGE 184 AND VOLUME 343 PAGE 70
5. THE PROPERTY IS LOCATED IN THE "R-15" ZONE PER TOWN.
6. THE PROPERTY LIES WITHIN THE FLOOD ZONE AE BASE FLOOD ELEVATION 260 AND "OTHER AREAS ZONE 'X' – AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN." PER THE FEMA FLOOD INSURANCE RATE MAP HARTFORD COUNTY, CONNECTICUT (ALL JURISDICTIONS) PANEL 458 OF 675 MAP NUMBER: 09003C0458F EFFECTIVE DATE: SEPTEMBER 26, 2008
7. TOTAL PARCEL AREA IS 691,916 SQ. FT. = 15.884 AC.
8. WETLAND WERE FIELD VERIFIED ON 11/19/2025 BY MARTIN BROGIE CERTIFIED SOIL SCIENTIST.
9. THE PROPERTY IS LOCATED WITHIN A LEVEL A – AQUIFER PROTECTION AREA, ANY PROPOSED ACTIVITY REQUIRES A REVIEW BY BRISTOL AQUIFER PROTECTION AGENCY.

STATE OF CONNECTICUT — DAVID A. CARICCHIO — No. 70036 — LICENSED LAND SURVEYOR

TO THE BEST OF MY KNOWLEDGE AND BELIEF THIS MAP IS SUBSTANTIALLY CORRECT AS DEPICTED AND NOTED HEREON.

AQUIFER PROTECTION AREA GUIDANCE

Best Management Practices for Temporary Construction and Reconstruction Operations in Aquifer Protection Areas

Issues and Concerns
Potential groundwater quality concerns include stormwater, fuel, and other maintenance chemicals associated with vehicles, machinery, and equipment.

Guidance/Recommendations
For the protection of ground water quality at construction operations in aquifer protection areas, DEEP recommends the following:

Temporary Construction Measures

- Significant fuel, chemical or other hazardous materials storage and handling, including fueling of construction vehicles, should be located outside well field area and aquifer protection area.
- No repair or maintenance of construction vehicles or washing of construction vehicles is permitted within the aquifer protection area.
- Any necessary temporary storage should be aboveground, protected from rainfall, and on an impervious containment surface.
- An emergency spill and response plan should be developed, including coordination with the water supplier.
- The site access should be adequately secured at all times to prohibit any unauthorized disposal of waste materials.

Stormwater Pollution Prevention Measures:

- Ways to minimize pollutant load (sand, salt, etc.) should be examined.
- Deicing management areas should be established including low salt use areas, alternative chemical or sand methods.
- Wellhead protection signs shall be posted in clear visibility of the highway at the entrance and exit points of the aquifer protection area and at ½ mile intervals.

Drainage System Design Criteria:

- Select best management practices from the DEEP stormwater manual based on treatment effectiveness and low groundwater pollution potential.

CT Department of Energy and Environmental Protection 6/23/2016

- Sheetflow and swale collection is encouraged, where possible, outside of immediate well field area.
- Catch basins and curbs should be used in immediate wellhead area to divert and control runoff and spills away from wellhead.
- Dry wells or similar subsurface leaching structures should not be used for stormwater disposal from paved or other areas that have high potential to pollute groundwater; existing structures which have high potential to pollute groundwater should be removed or converted.
- Gross particle/oil separators (swirl concentrator type) may be used for pretreatment of consecutive catch basins. Deep catch basins (minimum 4' deep and tight construction, 2' sump) may also be used.
- Stormwater discharge points shall outlet to aboveground land surface or basin type structures. Significant or critical discharge points should have a basin designed with a forebay (tight soil or liner) capable of containing an 8,000-10,000 gallon spill volume and 3-6 feet above water table, 4 feet above bedrock.
- Potential strategic groundwater monitoring should be considered.

For questions or more information, please contact the Aquifer Protection Area Program at 860-424-3040 or visit our website at www.ct.gov/deep/aquiferprotection.

SITE PREPARATION NOTES:

1. CONTRACTOR SHALL NOTIFY "CALL BEFORE YOU DIG" (1-800-922-4455) AND VERIFY UTILITY MARK-OUT WITH THE OWNER PRIOR TO THE INITIATION OF ANY SITE DISTURBANCE.
2. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR VERIFICATION OF THE LOCATION AND NATURE OF ALL SUBSURFACE UTILITIES AT THE PROJECT WHICH MAY BE AFFECTED BY THE WORK. COORDINATE WITH RESPECTIVE UTILITY OWNERS AND PERFORM VERIFICATION OF TYPE, LOCATION, AND INVERTS AS REQUIRED.
3. PROTECT ALL IMPROVEMENTS NOT INCLUDED WITHIN THE LIMITS OF WORK. ANY IMPROVEMENT WHICH IS DAMAGED SHALL BE REPAIRED OR REPLACED IN-KIND TO THE OWNER'S SATISFACTION.
4. DURING DEMOLITION, PROTECT ALL ADJACENT CURBING, SIDEWALKS, RAMPS, ABOVE-GRADE AND BELOW-GRADE UTILITIES, DRAINAGE STRUCTURES, LIGHT BASES, AND OTHER IMPROVEMENTS POTENTIALLY AFFECTED BY THE WORK. CLEARLY DELINEATE THE LIMITS OF WORK AND MARK, BARRICADE, OR OTHERWISE IDENTIFY THOSE IMPROVEMENTS THAT ARE TO BE PROTECTED AND/OR AVOIDED. ANY IMPROVEMENT WHICH IS DAMAGED SHALL BE REPAIRED OR REPLACED IN-KIND TO THE OWNER'S SATISFACTION.
5. THE LOCATIONS OF EXISTING SITE FEATURES AS SHOWN HAVE BEEN OBTAINED FROM MAPS, SURVEYS, FIELD INSPECTIONS, AND OTHER AVAILABLE INFORMATION. THEY MUST BE CONSIDERED APPROXIMATE BOTH TO LOCATION, SIZE, AND AS-BUILT CONDITION AND ARE PROVIDED FOR INFORMATIONAL PURPOSES ONLY. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR DETERMINING ACTUAL FIELD CONDITIONS.
6. THE DIMENSIONS SHOWN ON THE PLANS, INCLUDING THE INTENDED DIMENSIONS OF THE WORK, MAY VARY FROM ACTUAL EXISTING CONDITIONS IN THE FIELD. THE CONTRACTOR SHALL TAKE APPROPRIATE MEASUREMENTS TO VERIFY ALL DIMENSIONS SHOWN ON THE DRAWINGS AS WELL AS OTHER DIMENSIONS HE MAY DEEM APPROPRIATE TO FACILITATE THE COMPLETION OF THE WORK. NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN EXISTING CONDITIONS AND THE CONTRACT DOCUMENTS BEFORE PROCEEDING WITH THAT PORTION OF THE WORK.
7. IMPLEMENTING WORKER SAFETY AND/OR HEALTH PROTOCOLS THAT ADDRESS COMPLIANCE WITH RULES, LAWS, AND REGULATIONS PERTAINING TO CONSTRUCTION SAFETY AND/OR THE POTENTIAL AND/OR ACTUAL RISK OF EXPOSURE TO SITE-SPECIFIC PHYSICAL OR CHEMICAL HAZARDS IS SOLELY THE RESPONSIBILITY OF THE CONTRACTOR.
8. PRIOR TO THE TERMINATION, ABANDONMENT, OR REMOVAL OF ANY UTILITY, VERIFY THAT APPLICABLE NOTIFICATIONS HAVE BEEN MADE TO THE UTILITY OWNER/OPERATOR AND THAT THE UTILITY HAS BEEN PROPERLY TERMINATED, CAPPED, OR PLUGGED AS REQUIRED.
9. PROVIDE PAVEMENT SAWCUT AT THE EDGE OF EACH PAVEMENT REMOVAL AREA TO ESTABLISH A CLEAN EDGE WHERE NEW WORK WILL MEET EXISTING PAVEMENT. SAWCUT SHALL BE A MINIMUM OF 12 INCHES FROM EDGE OF PAVEMENT REMOVAL.
10. UNLESS OTHERWISE INDICATED, ALL DISTURBED AREAS SHALL BE RESTORED WITH SIX (6) INCHES OF LOAM, SEEDED, FERTILIZED, AND MULCHED. PROVIDE ADDITIONAL EROSION CONTROLS AS REQUIRED.
11. ALL SIDEWALK CLOSURES AND MEASURES FOR TEMPORARY PEDESTRIAN ACCESS, SIDEWALKS, CROSSINGS, AND BIKE LANES SHALL MEET THE APPROVAL OF THE TOWN OF BRISTOL.

EROSION AND SEDIMENTATION CONTROL NARRATIVE:

PER STATE OF CONNECTICUT
ALL APPLICABLE PRACTICES RECOMMENDED BY THE 2023 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL AS AMENDED.

DESCRIPTION

THE PROPOSED PROJECT CONSISTS OF RENOVATING THE EXISTING SCHOOL, EDGEWOOD PRE-K ACADEMY. THE SITE IS TO BE FULLY REHABILITATED WITH MATERIALS MOSTLY BEING REPLACED IN KIND TO EXISTING CONDITIONS. THE BUILDING IS TO REMAIN WITH IMPROVEMENTS BEING MADE TO THE INTERIOR AND FASCIA.

DESIGN AND CRITERIA

NOTE: THE CONTRACTOR SHALL NAME ONE INDIVIDUAL AS HIS SEDIMENT AND EROSION CONTROL SUPERVISOR WHOSE PRIMARY RESPONSIBILITY WILL BE THE MAINTENANCE OF ALL ON-SITE EROSION CONTROL MEASURES. HE WILL KEEP A DAILY LOG OF HIS ACTIVITIES AND AN UPDATED SCHEDULE OF PROPOSED CONSTRUCTION ACTIVITIES. THE LOG WILL BE MADE AVAILABLE TO INSPECTORS.

A. GEOTEXTILE SILT FENCE (SF) - SHALL BE NON-WOVEN MATERIAL, MINIMUM 36" HIGH AND FASTENED TO WOOD STAKES. SILT FENCE SHALL BE INSTALLED WITH END RUNS TURNED UP GRADE AT 45 DEGREES FOR A DISTANCE OF 10 FEET (SEE DETAIL).

B. TEMPORARY SEEDING (TS)

1. CONTRACTOR SHALL SCARIFY THE SOIL TO A DEPTH OF 2" BEFORE APPLYING FERTILIZER, LIMESTONE AND SEED.
2. SEED MAY BE APPLIED BY HAND OR MECHANICALLY. SEED APPLICATION SHALL BE UNIFORM. SEED RATE SHALL BE IN ACCORDANCE WITH THE 2023 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL AS AMENDED (INCREASE SEEDING RATES BY 10% WHEN HYDROSEEDING, LIMESTONE, FERTILIZER AND SEED MAY BE APPLIED IN SLURRY.)
3. CONTRACTOR SHALL MULCH AREA (MS) IMMEDIATELY FOLLOWING SEEDING. (NOTE: IN THE EVENT SEEDING OPERATIONS ARE NOT FEASIBLE DUE TO SEASONAL RESTRICTIONS OR EXTENDED INCLEMENT WEATHER PATTERNS, THE CONTRACTOR SHALL INSTALL AN EROSION CONTROL BLANKET OVER EXPOSED SOILS.)

C. PERMANENT SEEDING (PS)

1. CONTRACTOR SHALL APPLY TOPSOIL AND FINE GRADE ALL AREAS BEFORE THE APPLICATION OF PERMANENT SEED. APPLY LIMESTONE AND FERTILIZER AS NEEDED, IN ACCORDANCE WITH SOIL TESTS.
2. REMOVE ALL SURFACE STONES ½ INCH AND LARGER. REMOVE ALL OTHER DEBRIS AND RAKE SEED BED.
3. APPLY SEED WITHIN 7 DAYS AFTER ESTABLISHING FINAL GRADES. SEE PLANTING PLAN.

D. STRAW BALE BARRIER (HB) - SHALL BE MADE OF STRAW WITH 40 POUNDS MINIMUM WEIGHT AND 120 POUNDS MAXIMUM WEIGHT, HELD TOGETHER BY TWINE OR WIRE. (SEE DETAIL.)

E. CONSTRUCTION ENTRANCE (CE) - SHALL BE AN ANGULAR STONE PAD, A MINIMUM OF 12' WIDE AND 50' LONG. (SEE DETAIL).

F. EROSION CONTROL BLANKET (ECB) - EROSION MAT SHALL BE PLACED ON ALL EXPOSED CUT/FILL SLOPES STEEPER THAN 3:1 (INCLUDING SWALES & DITCHES) TO PROTECT AGAINST RAINFALL AND HOLD MOISTURE CONTENT TO ENHANCE VEGETATION GROWTH IN SEEDED AREAS. MAT (OR BLANKETS) SHALL BE STRAW OR STRAW/COCONUT FIBER COMBINATION SEWN TOGETHER WITH LIGHTWEIGHT NETTING. USE NORTH AMERICAN GREEN. S150 - SLOPES UP TO 3:1, SC150-SLOPES FROM 3:1 UP TO 2:1 OR GREATER. TEMPORARY HAY MULCH TO BE APPLIED TO AREAS LESS THAN 3:1 SLOPE AND ALL AREAS TO BE LEFT BARREN OVER THE WINTER, MULCH RATE TO BE 70 POUNDS/1000 S.F.

APPLICATION/GENERAL PROCEDURES

SOIL EROSION AND SEDIMENT CONTROL MEASURES WILL BE INSTALLED PRIOR TO ANY SITE DISTURBANCE, AND DEVELOPMENT WILL PROCEED ACCORDING TO A SPECIFIC CONSTRUCTION SEQUENCE. THE OBJECTIVE IS TO MAXIMIZE THE REDUCTION OF SEDIMENT-LADEN RUNOFF THROUGH IMPLEMENTATION OF CONVENTIONAL SOIL SEDIMENTATION AND EROSION CONTROL PRACTICES CURRENTLY RECOMMENDED BY THE 2023 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL

A. EARTHWORK WILL BE SCHEDULED FOR PERIODS WHEN SOIL SATURATION IS LOW AND SOIL LOSS HAZARD IS AT A MINIMUM.
B. SUSPEND EARTHWORK FOR MAJOR STORM EVENTS AND IMPLEMENT ADDITIONAL SEDIMENTATION AND EROSION CONTROL MEASURES AS NECESSARY.
C. THERE SHALL BE NO CUTS OR FILL LEFT EXPOSED FOR LONGER THAN 30 DAYS. THE ESTABLISHED PROCEDURE OF TEMPORARILY SEEDING AND/OR COVER WITH EROSION PROTECTION (MAT OR STRAW) SHALL BE FOLLOWED TO INSURE MINIMAL SOIL LOSS.
D. THE DISCHARGE OF UNTREATED STORMWATER TO ANY ADJACENT ROADWAYS, DRAINAGE INLETS, OR PROPERTIES IS NOT ALLOWED.

EROSION AND SEDIMENT CONTROL NOTES:

1. THIS PLAN IS FOR EROSION AND SEDIMENTATION (E&S) CONTROL ONLY. SEE OTHER PLANS FOR THE SCOPE OF CONSTRUCTION WORK.
2. THE MEASURES SPECIFIED HEREON ARE THE MINIMUM REQUIREMENTS FOR E&S CONTROL AND ARE SHOWN IN GENERAL SIZE AND LOCATION ONLY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ENSURING THAT ALL E&S CONTROL MEASURES ARE CONFIGURED AND CONSTRUCTED IN A MANNER THAT WILL MINIMIZE EROSION OF SOILS AND PREVENT THE TRANSPORT OF SEDIMENTS AND OTHER POLLUTANTS TO ANY RESOURCE AREAS. ALL EROSION CONTROLS SHALL BE INSTALLED PRIOR TO ANY SITE WORK. CONTROLS SHOULD BE INSPECTED WEEKLY AND AFTER EACH RAINFALL. EXCAVATED MATERIAL SHOULD NOT BE DISPOSED OF IN THE WETLAND AREA. PROVIDE ADITIONAL E&S MEASURES AS REQUIRED TO CONTROL EROSION AND SILTATION THROUGHOUT THE DURATION OF THE CONSTRUCTION AS CONDITIONS DICTATE AND/OR AS DIRECTED BY THE OWNER OR THE ENGINEER.
3. MONITOR AND INSPECT ALL E&S MEASURES IN AN ONGOING MANNER THROUGHOUT THE WORK AND TAKE CORRECTIVE MEASURES, AS REQUIRED, TO MINIMIZE EROSION OF SOILS AND PREVENT THE TRANSPORT OF SEDIMENTS AND OTHER POLLUTANTS TO ANY RESOURCE AREAS.
4. ANY EROSION AND SEDIMENTATION MEASURE IMPLEMENTED BEYOND THAT SHOWN HEREON SHALL CONFORM TO APPLICABLE SECTIONS OF THE STATE OF CONNECTICUT'S 2023 "CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL."
5. ANY STOCKPILED MATERIAL SHALL BE SUBJECT TO EROSION CONTROL MEASURES THAT INCLUDE A MINIMUM OF SILT FENCE OR HAY BALE BARRIER. COVER STOCKPILES IF SIGNIFICANT RAINFALL IS PREDICTED.
6. PROVIDE TEMPORARY SEEDING WITH MULCH ON ALL EXPOSED SOIL AREAS WHERE WORK WILL BE SUSPENDED FOR LONGER THAN 30 DAYS. APPLY SEED AND MULCH WITHIN THE FIRST 7 DAYS OF SUSPENDING WORK. WHEN SEEDING IS NOT POSSIBLE DUE TO SEASONAL WEATHER CONDITIONS OR OTHER FACTORS, PROVIDE TEMPORARY STRUCTURAL SOIL PROTECTION SUCH AS MULCH, WOODCHIPS, EROSION CONTROL MATTING, OR COMPOST.
7. ALL TEMPORARY SLOPES IN EXCESS OF 3 (HORIZONTAL) TO 1 (VERTICAL) SHALL BE STABILIZED WITH EROSION CONTROL MATTING OR APPROVED EQUIVALENT.
8. NO RUNOFF SHALL BE ALLOWED TO ENTER ANY STORMWATER SYSTEM OR EXIT THE SITE PRIOR TO TREATMENT FOR SEDIMENT REMOVAL.
9. THE CONTRACTOR SHALL MAINTAIN A CLEAN CONSTRUCTION SITE AND SHALL NOT ALLOW THE ACCUMULATION OF RUBBISH OR CONSTRUCTION DEBRIS. ALL TRASH SHALL BE CLEANED ON A DAILY BASIS AND THE SITE SHALL BE LEFT IN A NEAT CONDITION AT THE END OF EACH WORK DAY.
10. TAKE ALL NECESSARY PRECAUTIONS TO AVOID THE SPILLAGE OF FUEL OR OTHER POLLUTANTS AND ADHERE TO ALL APPLICABLE POLICIES AND REGULATIONS RELATED TO SPILL PREVENTION, CONTROL, AND RESPONSE.
11. FOR DUST CONTROL, PERIODICALLY MOISTEN EXPOSED SOIL SURFACES WITH WATER AND MAINTAIN ADEQUATE MOISTURE LEVELS.
12. SWEEP ADJACENT ROADWAYS IF MUD OR SOIL IS TRACKED ON TO THEM, OR AS DIRECTED BY THE ENGINEER.
13. ALL SEDIMENTATION AND EROSION CONTROL MEASURES SHALL BE INSTALLED BY THE PERMITTEE AND INSPECTED BY THE TOWN ENGINEER AND/OR THE WETLANDS ENFORCEMENT OFFICER / DULY AUTHORIZED AGENT; ADDITIONAL OR SUPPLEMENTAL CONTROLS MAY BE REQUIRED. THE PERMITTEE SHALL MAINTAIN THE CONTROLS DURING AND AFTER CONSTRUCTION AND REMOVE THEM UPON SITE STABILIZATION OF THE AFFECTED AREA.
14. AN ANTI-TRACKING APRON SHALL BE INSTALLED AT THE SITE ACCESS DRIVE AT A LOCATION APPROVED BY THE TOWN ENGINEER, WITH 6 INCHED OF CRUSHED STONE (SIZED 1 ½" TO 3") UNDERLAIN WITH CONSTRUCTION FRAME SPREAD TO THE TRAVELED WIDTH AND 50 FEET IN LENGTH OR WITH APRON MATS. THE APRON SHALL BE MAINTAINED AT ALL TIMES.
15. THE PERMITTEE AND THEIR CONTRACTOR SHALL MEET WITH AGENCY STAFF, INCLUDING BUT NOT LIMITED TO THE WETLANDS ENFORCEMENT OFFICER / DULY AUTHORIZED AGENT AND TOWN ENGINEER, TO REVIEW THE CONDITIONS OF THIS APPROVAL AND THE CONSTRUCTION PROGRAM TO BE UTILIZED TO IMPLEMENT THE APPROVED REGULATED ACTIVITY.
16. THE WETLANDS ENFORCEMENT OFFICER / DULY AUTHORIZED AGENT SHALL BE NOTIFIED IN WRITING FORTY-EIGHT (48) HOURS PRIOR TO THE START OF CONSTRUCTION.
17. DURING THE DURATION OF THIS APPROVAL, THE CHAIRMAN OF THE AGENCY OR THE WETLANDS ENFORCEMENT OFFICER / DULY AUTHORIZED AGENT SHALL HAVE PERMISSION TO ENTER UPON THE SUBJECT PROPERTY AT REASONABLE TIMES FOR THE PURPOSE OF VIEWING AND INSPECTING THE CONDUCT OF THE APPROVED REGULATED ACTIVITY.
18. NO WORK OTHER THAN MAINTENANCE OF SEDIMENT AND EROSION CONTROL SHALL BE PERFORMED DURING SIGNIFICANT RAINFALL OF ONE (1) INCH OR MORE WITHIN A TWENTY-FOUR (24) HOUR PERIOD. ALL WORK SHALL BE PERFORMED BETWEEN 7:00 AM AND 4:00 PM, MONDAY THROUGH FRIDAY. NO WORK MAY BE CONDUCTED ON LEGAL HOLIDAYS OR WEEKENDS WITHOUT THE EXPRESSED APPROVAL OF THE AGENCY.
19. UPON COMPLETION OF THE REGULATED ACTIVITY APPROVED HEREIN, THE PERMITTEE SHALL NOTIFY THE WETLANDS ENFORCEMENT OFFICER / DULY AUTHORIZED AGENT FOR A FINAL INSPECTION AND CONFIRMATION OF SATISFACTORY COMPLETION AND COMPLIANCE WITH THE APPROVED SITE PLANS AND ALL STANDARD AND SPECIAL SUPPLEMENTAL CONDITIONS, REQUIREMENTS AND MODIFICATIONS OF THIS APPROVAL.
20. TOTAL SITE DISTURBANCE IS APPROXIMATELY 4.27 ACRES.

SUGGESTED CONSTRUCTION SEQUENCE:

1. CONDUCT A PRE-CONSTRUCTION MEETING WITH THE OWNER AND ENGINEER PRIOR TO ANY CONSTRUCTION ACTIVITY.
2. INSTALL CONSTRUCTION ENTRANCE(S) AND PLACE CATCH BASIN FILTER INSERTS IN EXISTING CATCH BASINS.
3. INSTALL PERIMETER E&S CONTROLS AND REQUEST PRE-CONSTRUCTION INSPECTION FROM THE ENGINEER.
4. BEGIN WORK ON THE EXISTING BUILDING. (REFER TO ARCHITECTURAL / STRUCTURAL / M.E.P. PLANS)
5. REMOVE EXISTING PAVING AND CURBING.
6. PERFORM BULK EARTHWORK OPERATIONS.
7. CONSTRUCT STORMWATER APPURTENANCES AND UTILITIES.
8. BOX OUT ROADWAYS AND PARKING LOTS WITH IMPORTED BASE MATERIALS.
9. CONSTRUCT BOTTOM COURSE OF BITUMINOUS PAVEMENT.
10. CONSTRUCT LANDSCAPING AND OTHER SITE AMENITIES.
11. CONSTRUCT CURBING AND TOP COURSE OF BITUMINOUS PAVEMENT.
12. AT THE CONCLUSION OF CONSTRUCTION, COMPLETE THE INSTALLATION OF POST-CONSTRUCTION SITE STABILIZATION MEASURES AS SHOWN ON THE DRAWINGS.

TEMPORARY E&S MEASURES MAINTENANCE SCHEDULE

E&S MEASURE	MAINTENANCE MEASURES	SCHEDULE
FILTER INSERTS IN DRAINAGE SYSTEM	CLEAN CATCH BASIN GRATE, REMOVE SEDIMENT/DEBRIS FROM FILTER INSERTS	WEEKLY & WITHIN 24 HOURS AFTER STORM GENERATING A DISCHARGE
HAY BALES/ SILT FENCE BARRIER	REPAIR/REPLACE WHEN FAILURE OBSERVED, REMOVE SILT WHEN ACCUMULATION REACHES APPROX. HALF HEIGHT OF BARRIER	WEEKLY & WITHIN 24 HOURS AFTER STORM GENERATING A DISCHARGE
CONSTRUCTION ENTRANCE	SWEEP PAVED ROADWAY ADJACENT TO SITE ENTRANCE AS NECESSARY. REFRESH STONE AS NECESSARY, REMOVE SILTED GRAVEL	WEEKLY
MOISTEN EXPOSED SOILS	PERIODICALLY MOISTEN EXPOSED SOIL SURFACES WITH WATER ON UNPAVED TRAVELWAYS AND KEEP TRAVELWAYS DAMP	DAILY
TEMPORARY SEDIMENT TRAP	CHECK AND REPAIR STONE OUTLET, CLEAN WHEN HALF FULL OF SEDIMENT (DEWATER IF NECESSARY), RESTORE TRAP TO ORIGINAL DIMENSIONS	WEEKLY & WITHIN 24 HOURS AFTER STORM GENERATING A DISCHARGE
TEMPORARY DIVERSION SWALE	REPAIR DAMAGED AREAS WITHIN 24 HOURS OF OBSERVED FAILURE	WEEKLY & WITHIN 24 HOURS AFTER STORM GENERATING A DISCHARGE. INSPECT DAILY WHEN CONSTRUCTION ACTIVITIES ARE IN CLOSE PROXIMITY

TEMPORARY CONSTRUCTION MEASURES WITHIN AQUIFER PROTECTION AREAS:

1. SIGNIFICANT FUEL, CHEMICAL OR OTHER HAZARDOUS MATERIALS STORAGE AND HANDLING, INCLUDING FUELING OF CONSTRUCTION VEHICLES, SHOULD BE LOCATED OUTSIDE WELL FIELD AREA AND AQUIFER PROTECTION AREA.
2. NO REPAIR OR MAINTENANCE OF CONSTRUCTION VEHICLES OR WASHING OF CONSTRUCTION VEHICLES IS PERMITTED WITHIN THE AQUIFER PROTECTION AREA.
3. ANY NECESSARY TEMPORARY STORAGE SHOULD BE ABOVEGROUND, PROTECTED FROM RAINFALL, AND ON AN IMPERVIOUS CONTAINMENT SURFACE.
4. AN EMERGENCY SPILL AND RESPONSE PLAN SHOULD BE DEVELOPED, INCLUDING COORDINATION WITH THE WATER SUPPLIER.
5. THE SITE ACCESS SHOULD BE ADEQUATELY SECURED AT ALL TIMES TO PROHIBIT ANY UNAUTHORIZED DISPOSAL OF WASTE MATERIALS.

DEMOLITION, EROSION & SEDIMENTATION CONTROL NOTES

C1.3

DEMOLITION GENERAL NOTES

1. REMOVE EXISTING FINISHES AS NECESSARY

2. REMOVE ALL CEILING GRIDS, LIGHTING FIXTURES & SOFFITS REFER TO MEP DEMO DRAWINGS FOR ADDITIONAL INFORMATION.

3. REMOVE ANY WALL COVERINGS, TREATMENTS & ASSOCIATED ADHESIVES.

4. REMOVE ALL FLOOR TILES & ASSOCIATED SUBSTRATES WHERE INDICATED ON THE DWGS. REFER TO HAZMAT DRAWINGS FOR ADDITIONAL INFORMATION.

5. COORDINATE REMOVAL OF MECHANICAL, ELECTRICAL AND PLUMBING FIXTURES, REFER TO DEMO MEP DRAWINGS.

6. DEMOLITION DRAWINGS DO NOT SHOW ALL COMPONENTS WHICH REQUIRE REMOVAL. CONTRACTOR SHALL VISIT SITE TO DETERMINE THE EXTENT OF THE DEMOLITION WORK. DO NOT REMOVE ANY STRUCTURAL OR LOAD BEARING MEMBERS WITHOUT PRIOR APPROVAL OF THE ARCHITECT AND ENGINEER.

7. REMOVAL OF ANY HAZARDOUS MATERIAL SHALL BE DONE BY A LICENSED CONTRACTOR AND BE REMOVED AND DISPOSED OF OFF SITE IN ACCORDANCE WITH ALL STATE AND LOCAL CODES. REFER TO HAZ MAT DRAWINGS.

8. REMOVE ALL EXISTING WALLS, WINDOWS, DOORS, FRAMES & ASSOCIATED HARDWARE WHERE INDICATED ON DRAWINGS AS WELL AS ANY ADDITIONAL REMOVAL REQUIRED TO ACCOMPLISH THE SCOPE OF THE NEW CONSTRUCTION. AT EXISTING WALLS DESIGNATED TO REMAIN, REMOVE ALL EXISTING GYPSUM WALLBOARD (GWB) AND PREPARE SURFACES FOR NEW FINISHES, V.I.F.

9. SCRAPE AND CLEAN BRICK FACE TO REMAIN EXPOSED IN NEW CONSTRUCTION

10. CONTRACTOR TO VERIFY ALL DIMENSIONS IN FIELD, TYP

11. **EXISTING FIRE ALARM PANELS TO BE SAVED AND REUSED.** REFER TO ELECTRICAL DRAWINGS FOR MORE INFORMATION.

12. **CONTRACTORS TO WALK EXISTING BUILDING. ANY EXISTING FURNITURE, FIXTURES, DEVICES, SMALLWARES, ETC LEFT WITHIN THE BUILDING ARE THE RESPONSIBILITY OF THE CONTRACTOR TO REMOVE AND DISPOSE OF PROPERLY.**

13. **DEMO ALL THE CLEANOUTS COVERS AND PIPING, TOOTH IN NEW BRICK TO MATCH. COORDINATE WITH PLUMBING DWGS.**

DEMO-FIRST FLOOR PLAN-AREA B

D1.1B

6/5/2026 12:03:06 PM C:\Users\mlane\AppData\Local\Autodesk\Revit\Autodesk Revit 2026\CollaborationCache\NX65LUDAB6UY\45df9e2f-f51b-43ed-9bb5-be23aeaea7a2\de47a5db-6fb6-4165-af3f-95f22f20c489.rvt

DEMOLITION GENERAL NOTES

1. REMOVE EXISTING FINISHES AS NECESSARY

2. REMOVE ALL CEILING GRIDS, LIGHTING FIXTURES & SOFFITS REFER TO MEP DEMO DRAWINGS FOR ADDITIONAL INFORMATION.

3. REMOVE ANY WALL COVERINGS, TREATMENTS & ASSOCIATED ADHESIVES.

4. REMOVE ALL FLOOR TILES & ASSOCIATED SUBSTRATES WHERE INDICATED ON THE DWGS. REFER TO HAZMAT DRAWINGS FOR ADDITIONAL INFORMATION.

5. COORDINATE REMOVAL OF MECHANICAL, ELECTRICAL AND PLUMBING FIXTURES, REFER TO DEMO MEP DRAWINGS.

6. DEMOLITION DRAWINGS DO NOT SHOW ALL COMPONENTS WHICH REQUIRE REMOVAL. CONTRACTOR SHALL VISIT SITE TO DETERMINE THE EXTENT OF THE DEMOLITION WORK. DO NOT REMOVE ANY STRUCTURAL OR LOAD BEARING MEMBERS WITHOUT PRIOR APPROVAL OF THE ARCHITECT AND ENGINEER.

7. REMOVAL OF ANY HAZARDOUS MATERIAL SHALL BE DONE BY A LICENSED CONTRACTOR AND BE REMOVED AND DISPOSED OF OFF SITE IN ACCORDANCE WITH ALL STATE AND LOCAL CODES. REFER TO HAZ MAT DRAWINGS.

8. REMOVE ALL EXISTING WALLS, WINDOWS, DOORS, FRAMES & ASSOCIATED HARDWARE WHERE INDICATED ON DRAWINGS AS WELL AS ANY ADDITIONAL REMOVAL REQUIRED TO ACCOMPLISH THE SCOPE OF THE NEW CONSTRUCTION. AT EXISTING WALLS DESIGNATED TO REMAIN, REMOVE ALL EXISTING GYPSUM WALLBOARD (GWB) AND PREPARE SURFACES FOR NEW FINISHES, V.I.F.

9. SCRAPE AND CLEAN BRICK FACE TO REMAIN EXPOSED IN NEW CONSTRUCTION

10. CONTRACTOR TO VERIFY ALL DIMENSIONS IN FIELD, TYP

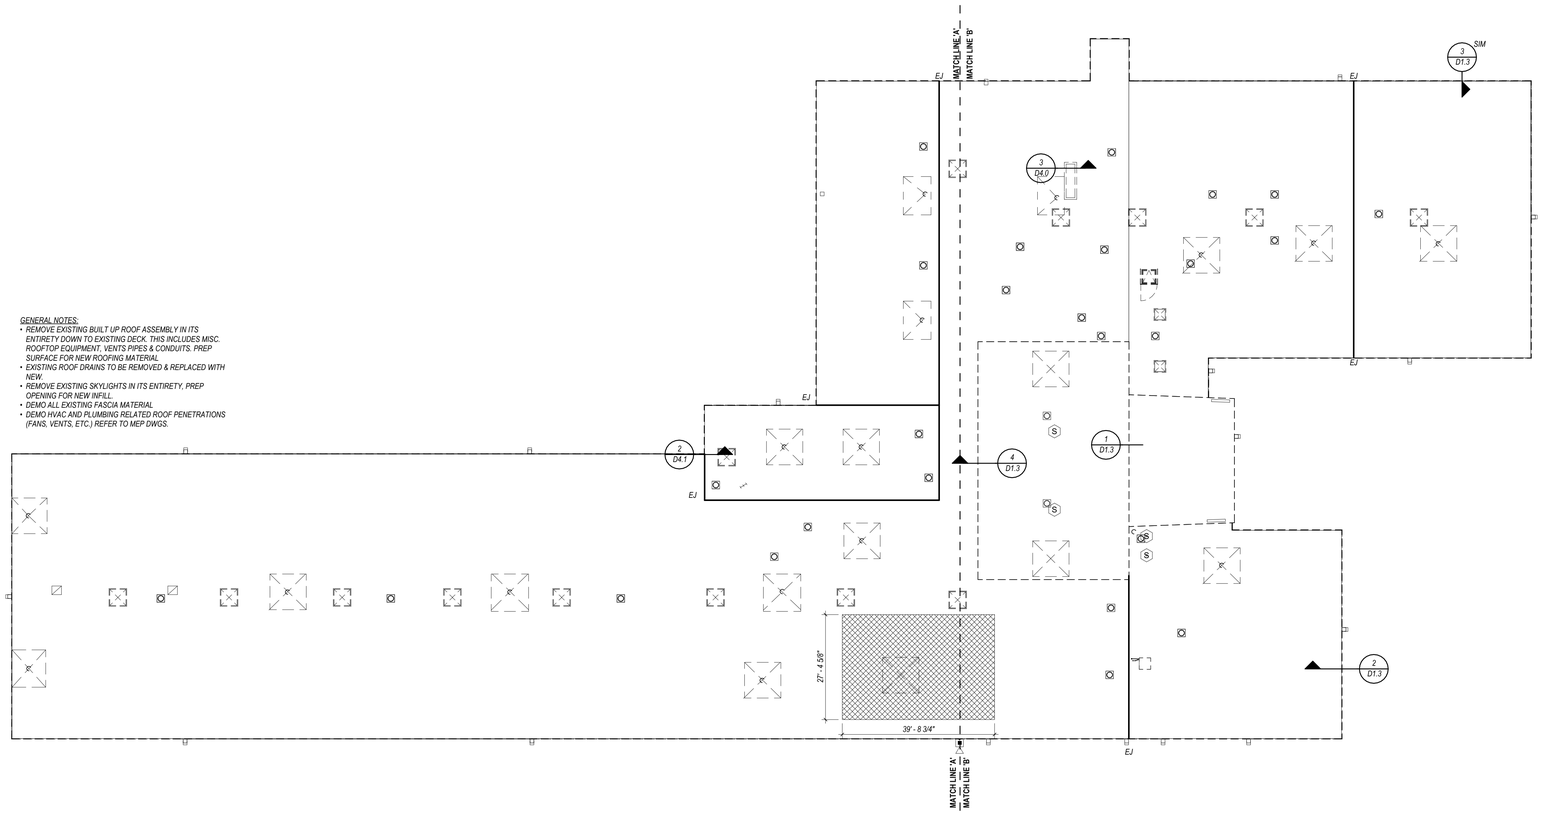
11. **EXISTING FIRE ALARM PANELS TO BE SAVED AND REUSED.** REFER TO ELECTRICAL DRAWINGS FOR MORE INFORMATION.

12. **CONTRACTORS TO WALK EXISTING BUILDING. ANY EXISTING FURNITURE, FIXTURES, DEVICES, SMALLWARES, ETC LEFT WITHIN THE BULDING ARE THE RESPONSIBILITY OF THE CONTRACTOR TO REMOVE AND DISPOSE OF PROPERLY.**

13. **DEMO ALL THE CLEANOUTS COVERS AND PIPING, TOOTH IN NEW BRICK TO MATCH. COORDINATE WITH PLUMBING DWGS.**

DEMOLITION ROOF GRAPHICS LEGEND

- EXISTING ROOF ASSEMBLY
- OBJECT TO BE DEMOLISHED. REFER TO NOTE OR KEYNOTE
- EXISTING WALL TO REMAIN
- EXISTING WALL / ITEM TO BE DEMOLISHED
- FLOOR TO BE DEMOLISHED
- ENTIRE ROOF INCLUDING STRUCTURAL COMPONENTS TO BE DEMOLISHED



GENERAL NOTES:
- REMOVE EXISTING BUILT UP ROOF ASSEMBLY IN ITS ENTIRETY DOWN TO EXISTING DECK. THIS INCLUDES MISC. ROOFTOP EQUIPMENT, VENTS PIPES & CONDUITS. PREP SURFACE FOR NEW ROOFING MATERIAL.
- EXISTING ROOF DRAINS TO BE REMOVED & REPLACED WITH NEW.
- REMOVE EXISTING SKYLIGHTS IN ITS ENTIRETY, PREP OPENING FOR NEW INFILL.
- DEMO ALL EXISTING FASCIA MATERIAL
- DEMO HVAC AND PLUMBING RELATED ROOF PENETRATIONS (FANS, VENTS, ETC.) REFER TO MEP DWGS.

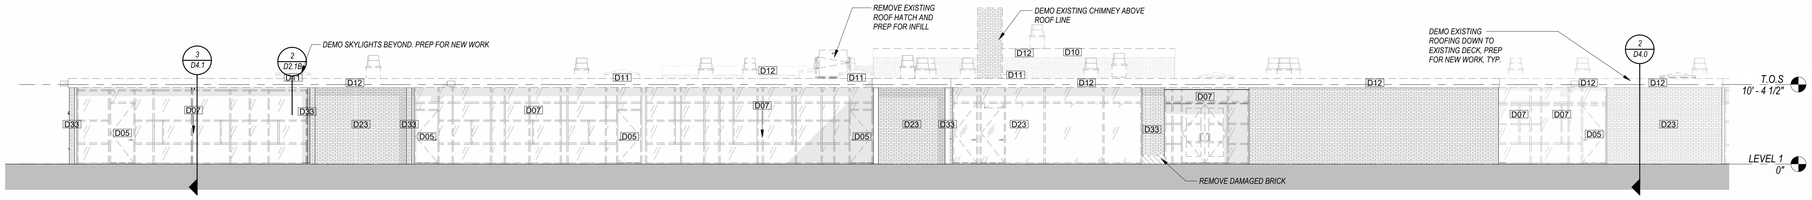
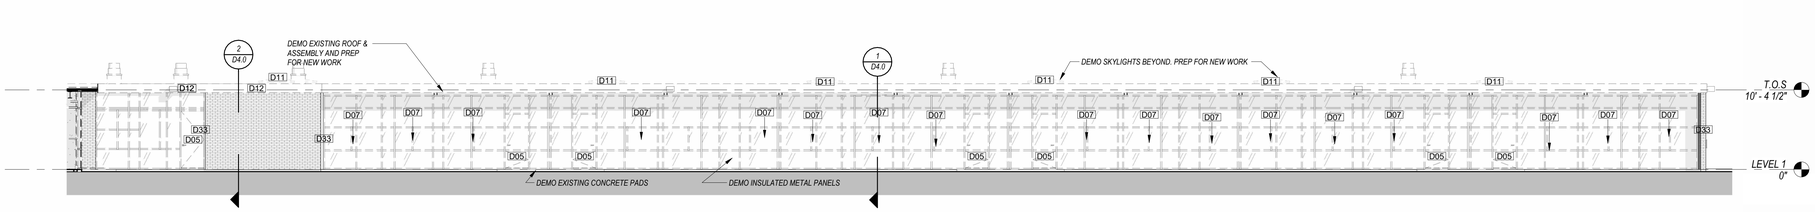
D33	SCRAPE AND CLEAN BRICK FACE TO REMAIN EXPOSED IN NEW CONSTRUCTION

GENERAL EXTERIOR DEMO NOTES:

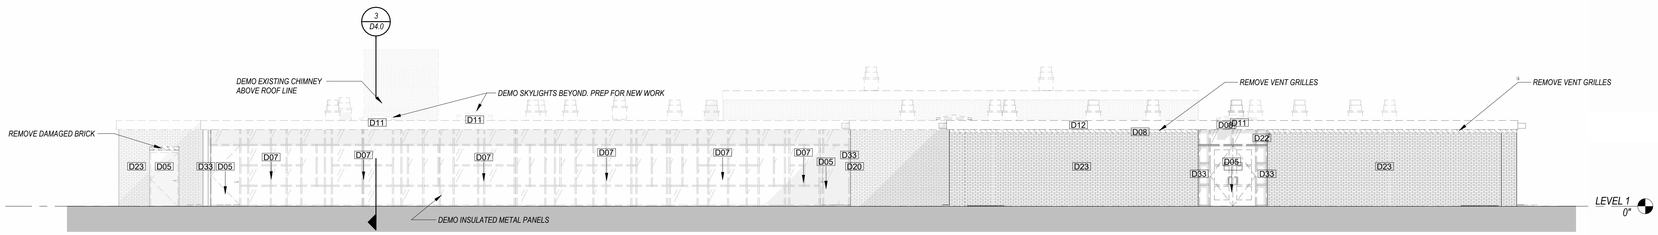
- *EXISTING BRICK TO BE FULLY CLEANED. CARRY 25% FOR REPAIR AND REPOINTING.*
- *REMOVE ALL EXTERIOR SIGNAGE.*
- *REMOVE EXTERIOR MOUNTED LIGHTS, CAMERAS, ETC.*
- *REMOVE EXTERIOR VENTS, AC UNITS, FANS, ETC.*
- **13. DEMO ALL THE CLEANOUTS COVERS AND PIPING, TOOTH IN NEW BRICK TO MATCH.**



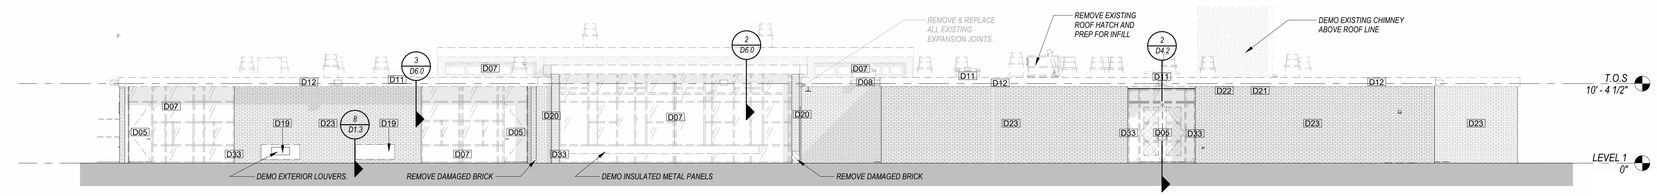
4 D3.0 **DEMO WEST ELEVATION - A**
1/8" = 1'-0"



3 D3.0 **DEMO WEST ELEVATION - B**
1/8" = 1'-0"



2 D3.0 **DEMO-SOUTH ELEVATION**
1/8" = 1'-0"



1 D3.0 **DEMO-NORTH ELEVATION**
1/8" = 1'-0"

DEMO-OVERALL EXTERIOR ELEVATIONS

D3.0

6/5/2026 12:04:13 PM C:\Users\mlane\AppData\Local\Autodesk\Revit\Autodesk Revit 2026\CollaborationCache\NX65LUDAB6UYV45df9e2f-f51b-43ed-9bb5-be23aeaea7a2\de47a5db-6fb6-4165-af3f-95f22f20c489.rvt

DEMOLITION GENERAL NOTES

1. REMOVE EXISTING FINISHES AS NECESSARY

2. REMOVE ALL CEILING GRIDS, LIGHTING FIXTURES & SOFFITS REFER TO MEP DEMO DRAWINGS FOR ADDITIONAL INFORMATION.

3. REMOVE ANY WALL COVERINGS, TREATMENTS & ASSOCIATED ADHESIVES.

4. REMOVE ALL FLOOR TILES & ASSOCIATED SUBSTRATES WHERE INDICATED ON THE DWGS. REFER TO HAZMAT DRAWINGS FOR ADDITIONAL INFORMATION.

5. COORDINATE REMOVAL OF MECHANICAL, ELECTRICAL AND PLUMBING FIXTURES, REFER TO DEMO MEP DRAWINGS.

6. DEMOLITION DRAWINGS DO NOT SHOW ALL COMPONENTS WHICH REQUIRE REMOVAL. CONTRACTOR SHALL VISIT SITE TO DETERMINE THE EXTENT OF THE DEMOLITION WORK. DO NOT REMOVE ANY STRUCTURAL OR LOAD BEARING MEMBERS WITHOUT PRIOR APPROVAL OF THE ARCHITECT AND ENGINEER.

7. REMOVAL OF ANY HAZARDOUS MATERIAL SHALL BE DONE BY A LICENSED CONTRACTOR AND BE REMOVED AND DISPOSED OF OFF SITE IN ACCORDANCE WITH ALL STATE AND LOCAL CODES. REFER TO HAZ MAT DRAWINGS.

8. REMOVE ALL EXISTING WALLS, WINDOWS, DOORS, FRAMES & ASSOCIATED HARDWARE WHERE INDICATED ON DRAWINGS AS WELL AS ANY ADDITIONAL REMOVAL REQUIRED TO ACCOMPLISH THE SCOPE OF THE NEW CONSTRUCTION. AT EXISTING WALLS DESIGNATED TO REMAIN, REMOVE ALL EXISTING GYPSUM WALLBOARD (GWB) AND PREPARE SURFACES FOR NEW FINISHES, V.I.F.

9. SCRAPE AND CLEAN BRICK FACE TO REMAIN EXPOSED IN NEW CONSTRUCTION

10. CONTRACTOR TO VERIFY ALL DIMENSIONS IN FIELD, TYP

11. **EXISTING FIRE ALARM PANELS TO BE SAVED AND REUSED.** *REFER TO ELECTRICAL DRAWINGS FOR MORE INFORMATION.*

12. **CONTRACTORS TO WALK EXISTING BUILDING. ANY EXISTING FURNITURE, FIXTURES, DEVICES, SMALLWARES, ETC LEFT WITHIN THE BUILDING ARE THE RESPONSIBILITY OF THE CONTRACTOR TO REMOVE AND DISPOSE OF PROPERLY.**

13. DEMO ALL THE CLEANOUTS COVERS AND PIPING, TOOTH IN NEW BRICK TO MATCH. COORDINATE WITH PLUMBING DWGS.

DEMOLITION KEYNOTE LEGEND- PLAN

Key Value	Keynote Text
D05	DEMO DOOR AND FRAME IN ITS ENTIRETY, TYP.
D07	DEMO STOREFRONT SYSTEM, IN ITS ENTIRETY. PREP FOR NEW WORK.
D10	REMOVE EXISTING BUILT UP ROOF ASSEMBLY IN ITS ENTIRETY DOWN TO EXISTING DECK. THIS INCLUDES MISC. ROOFTOP EQUIPMENT, VENTS PIPES & CONDUITS. PREP SURFACE FOR NEW ROOFING MATERIAL
D11	REMOVE EXISTING SKYLIGHTS IN INTS ENTIRETY. PREP OPENING FOR NEW INFILL.
D12	DEMO ALL EXISTING FASCIA MATERIAL
D22	REMOVE ALL EXTERIOR SIGNAGE
D23	EXISTING BRICK TO BE FULLY CLEANED. CARRY 25% FOR REPAIR AND REPOINTING.
D27	DEMO EXISTING ROOF HATCH IN INTS ENTIRETY AND PREP FOR INFILL
D33	SCRAPE AND CLEAN BRICK FACE TO REMAIN EXPOSED IN NEW CONSTRUCTION

GENERAL EXTERIOR DEMO NOTES:

DEMO GENERAL NOTES

1. DEMOLITION DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL EXTENT OF WORK ONLY. THIS PROJECT IS A FULL GUT RENOVATION; REMOVE ALL EXISTING PLUMBING SYSTEMS, PIPING, FIXTURES, AND ASSOCIATED COMPONENTS UNLESS SPECIFICALLY NOTED TO REMAIN. CONTRACTOR SHALL FIELD VERIFY ALL EXISTING CONDITIONS PRIOR TO DEMOLITION. REMOVE SYSTEMS BACK TO THE NEAREST ACTIVE MAIN, RISER, OR SOURCE AND PROPERLY CAP OR SEAL.
2. COORDINATE ALL REQUIRED SHUTDOWNS WITH OWNER AND MAINTAIN OPERATION OF ANY SYSTEMS REQUIRED TO REMAIN ACTIVE. PROVIDE TEMPORARY SERVICES AND SUPPORTS AS REQUIRED. PROTECT ALL EXISTING SYSTEMS AND UTILITIES INDICATED TO REMAIN.
3. CONTRACTOR SHALL COORDINATE ALL DEMOLITION WORK WITHIN EXISTING UTILITY TUNNEL CONDITIONS. FIELD VERIFY ALL EXISTING UTILITIES, CLEARANCES, AND ACCESS LIMITATIONS PRIOR TO WORK. MAINTAIN CONTINUOUS OPERATION OF ALL ACTIVE SERVICES ROUTED THROUGH THE TUNNEL. PROVIDE TEMPORARY SUPPORT, BRACING, AND PROTECTION FOR ALL UTILITIES TO REMAIN. NO UTILITIES SHALL BE REMOVED OR DISTURBED WITHOUT PRIOR VERIFICATION AND APPROVAL.
4. PROPERLY DISPOSE OF ALL DEMOLISHED MATERIALS IN ACCORDANCE WITH APPLICABLE CODES. NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO PROCEEDING.

PLUMBING DEMOLITION KEYNOTES

PD10 REMOVE EXISTING ROOF LEADERS AND ALL ASSOCIATED STORM DRAINAGE PIPING, INCLUDING HORIZONTAL AND VERTICAL RUNS AS INDICATED. REMOVE PIPING BACK TO MAIN. COORDINATE WITH FULL BUILDING PLUMBING SCOPE.

PD12 EXISTING BURIED STORM/ SANITARY DRAINAGE PIPING TO BE ABANDONED IN PLACE OR REMOVED WHERE ACCESSIBLE. REMOVE PIPING WHERE FEASIBLE AND COORDINATE WITH SITE/CIVIL DRAWINGS. ANY ABANDONED PIPING SHALL BE CUT, CAPPED, AND PROPERLY SEALED.

BASEMENT PLUMBING DEMO PLAN - AREA A

PD1.0A

6/4/2026 4:30:40 PM Autodesk Docs://Bristol Edgewood Pre-K Academy/MEP_25-169 Bristol Edgewood Pre-K Academy.rvt

DEMO GENERAL NOTES

1. DEMOLITION DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL EXTENT OF WORK ONLY. THIS PROJECT IS A FULL GUT RENOVATION; REMOVE ALL EXISTING PLUMBING SYSTEMS, PIPING, FIXTURES, AND ASSOCIATED COMPONENTS UNLESS SPECIFICALLY NOTED TO REMAIN. CONTRACTOR SHALL FIELD VERIFY ALL EXISTING CONDITIONS PRIOR TO DEMOLITION. REMOVE SYSTEMS BACK TO THE NEAREST ACTIVE MAIN, RISER, OR SOURCE AND PROPERLY CAP OR SEAL.
2. COORDINATE ALL REQUIRED SHUTDOWNS WITH OWNER AND MAINTAIN OPERATION OF ANY SYSTEMS REQUIRED TO REMAIN ACTIVE. PROVIDE TEMPORARY SERVICES AND SUPPORTS AS REQUIRED. PROTECT ALL EXISTING SYSTEMS AND UTILITIES INDICATED TO REMAIN.
3. CONTRACTOR SHALL COORDINATE ALL DEMOLITION WORK WITHIN EXISTING UTILITY TUNNEL CONDITIONS. FIELD VERIFY ALL EXISTING UTILITIES, CLEARANCES, AND ACCESS LIMITATIONS PRIOR TO WORK. MAINTAIN CONTINUOUS OPERATION OF ALL ACTIVE SERVICES ROUTED THROUGH THE TUNNEL. PROVIDE TEMPORARY SUPPORT, BRACING, AND PROTECTION FOR ALL UTILITIES TO REMAIN. NO UTILITIES SHALL BE REMOVED OR DISTURBED WITHOUT PRIOR VERIFICATION AND APPROVAL.
4. PROPERLY DISPOSE OF ALL DEMOLISHED MATERIALS IN ACCORDANCE WITH APPLICABLE CODES. NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO PROCEEDING.

PLUMBING DEMOLITION KEYNOTES

PD10 REMOVE EXISTING ROOF LEADERS AND ALL ASSOCIATED STORM DRAINAGE PIPING, INCLUDING HORIZONTAL AND VERTICAL RUNS AS INDICATED. REMOVE PIPING BACK TO MAIN. COORDINATE WITH FULL BUILDING PLUMBING SCOPE.

PD12 EXISTING BURIED STORM/ SANITARY DRAINAGE PIPING TO BE ABANDONED IN PLACE OR REMOVED WHERE ACCESSIBLE. REMOVE PIPING WHERE FEASIBLE AND COORDINATE WITH SITE/CIVIL DRAWINGS. ANY ABANDONED PIPING SHALL BE CUT, CAPPED, AND PROPERLY SEALED.

PD16 REMOVE EXISTING DOMESTIC WATER METER ASSEMBLY INCLUDING METER, BYPASS PIPING, PRESSURE REDUCING VALVES, STRAINERS, SHUTOFF VALVES, UNIONS, AND ALL ASSOCIATED PIPING AND APPURTENANCES DOWNSTREAM OF THE EXISTING GATE VALVE AS INDICATED. CAP PIPING AT THE EXISTING GATE VALVE AND MAKE READY FOR FUTURE CONNECTION TO THE NEW DOMESTIC METER ASSEMBLY.

PLUMBING DEMOLITION KEYNOTES

PD01 REMOVE EXISTING BATHROOM FIXTURES, INCLUDING WATER CLOSETS, LAVATORIES FLOOR DRAINS, URINALS AND ALL ASSOCIATED DOMESTIC WATER, SANITARY, AND VENT PIPING BACK TO MAIN. CAP AND SEAL AS REQUIRED. COORDINATE WITH ARCHITECTURAL DEMOLITION AND FULL BUILDING PLUMBING DEMOLITION SCOPE. ALL PIPING SYSTEMS SHALL BE REPLACED UNDER THIS RENOVATION.

PD02 REMOVE EXISTING SINKS AND ALL ASSOCIATED DOMESTIC WATER, SANITARY, AND VENT PIPING BACK TO MAIN. CAP AND SEAL AS REQUIRED. COORDINATE WITH ARCHITECTURAL DEMOLITION AND FULL BUILDING PLUMBING DEMOLITION SCOPE. ALL PIPING SYSTEMS SHALL BE REPLACED UNDER THIS RENOVATION.

PD03 REMOVE EXISTING JANITOR'S CLOSET FIXTURES, INCLUDING SERVICE SINK, FLOOR DRAIN, FAUCETS, AND ALL ASSOCIATED DOMESTIC WATER, SANITARY, AND VENT PIPING BACK TO MAIN. CAP AND SEAL ALL PIPING AS REQUIRED. COORDINATE WITH ARCHITECTURAL DEMOLITION AND FULL BUILDING PLUMBING DEMOLITION SCOPE. ALL PIPING SYSTEMS SHALL BE REPLACED UNDER THIS RENOVATION.

PD04 REMOVE EXISTING WALL HYDRANTS AND ALL ASSOCIATED DOMESTIC WATER PIPING BACK TO MAIN.

PD10 REMOVE EXISTING ROOF LEADERS AND ALL ASSOCIATED STORM DRAINAGE PIPING, INCLUDING HORIZONTAL AND VERTICAL RUNS AS INDICATED. REMOVE PIPING BACK TO MAIN. COORDINATE WITH FULL BUILDING PLUMBING SCOPE.

PD19 REMOVE ALL EXISTING DOMESTIC HOT WATER (HW), COLD WATER (CW), AND HOT WATER RETURN (HWR) PIPING IN ITS ENTIRETY. NO PIPING TO REMAIN AND ASSOCIATED COMPONENTS TO REMAIN.

4. PROPERLY DISPOSE OF ALL DEMOLISHED MATERIALS IN ACCORDANCE WITH APPLICABLE CODES. NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO PROCEEDING.

PLUMBING DEMOLITION KEYNOTES

PD01 REMOVE EXISTING BATHROOM FIXTURES, INCLUDING WATER CLOSETS, LAVATORIES FLOOR DRAINS, URINALS AND ALL ASSOCIATED DOMESTIC WATER, SANITARY, AND VENT PIPING BACK TO MAIN. CAP AND SEAL AS REQUIRED. COORDINATE WITH ARCHITECTURAL DEMOLITION AND FULL BUILDING PLUMBING DEMOLITION SCOPE. ALL PIPING SYSTEMS SHALL BE REPLACED UNDER THIS RENOVATION.

PD02 REMOVE EXISTING SINKS AND ALL ASSOCIATED DOMESTIC WATER, SANITARY, AND VENT PIPING BACK TO MAIN. CAP AND SEAL AS REQUIRED. COORDINATE WITH ARCHITECTURAL DEMOLITION AND FULL BUILDING PLUMBING DEMOLITION SCOPE. ALL PIPING SYSTEMS SHALL BE REPLACED UNDER THIS RENOVATION.

PD04 REMOVE EXISTING WALL HYDRANTS AND ALL ASSOCIATED DOMESTIC WATER PIPING BACK TO MAIN.

PD05 REMOVE EXISTING 120-GALLON GAS-FIRED WATER HEATER AND ALL ASSOCIATED DOMESTIC WATER, GAS, FLUE/VENT, TEMPERATURE AND PRESSURE RELIEF, AND DRAIN PIPING BACK TO MAIN. COORDINATE WITH FULL BUILDING PLUMBING AND MECHANICAL DEMOLITION SCOPE.

PD06 REMOVE EXISTING SUMP PUMP, INCLUDING BASIN, DISCHARGE PIPING, CHECK VALVE, ELECTRICAL CONNECTIONS, AND ALL ASSOCIATED APPURTENANCES. CAP AND SEAL DISCHARGE PIPING BACK TO MAIN AS REQUIRED. COORDINATE WITH PLUMBING AND ELECTRICAL DEMOLITION SCOPE.

PD07 REMOVE EXISTING THERMOSTATIC MIXING VALVE INCLUDING ALL ASSOCIATED HOT WATER, COLD WATER, AND MIXED WATER PIPING, ISOLATION VALVES, CHECK VALVES, AND APPURTENANCES BACK TO MAIN AS INDICATED. COORDINATE WITH FULL BUILDING PLUMBING DEMOLITION SCOPE.

PD08 REMOVE ALL EXISTING GAS PIPING, INCLUDING PIPING, VALVES, HANGERS, REGULATORS AND ALL ASSOCIATED APPURTENANCES BACK TO THE GAS METER ASSEMBLY AS INDICATED. CAP AND SEAL GAS PIPING AT METER LOCATION AS REQUIRED.

PD09 EXISTING GAS METER ASSEMBLY. DISCONNECTION AND REMOVAL SHALL BE COORDINATED DIRECTLY WITH THE SERVING UTILITY COMPANY.

PD10 REMOVE EXISTING ROOF LEADERS AND ALL ASSOCIATED STORM DRAINAGE PIPING, INCLUDING HORIZONTAL AND VERTICAL RUNS AS INDICATED. REMOVE PIPING BACK TO MAIN. COORDINATE WITH FULL BUILDING PLUMBING SCOPE.

PD15 EXISTING 4" DOMESTIC WATER SERVICE TO REMAIN. WATER SERVICE RISES TO EXISTING GATE VALVE. REMOVE ALL DOWNSTREAM PIPING BACK TO THE GATE VALVE AS INDICATED AND PROVIDE CAP FOR TEMPORARY TERMINATION. PROTECT AND MAINTAIN EXISTING SERVICE DURING DEMOLITION. CONTRACTOR SHALL FIELD VERIFY SERVICE SIZE, LOCATION, AND CONDITION PRIOR TO PROCEEDING WITH WORK.

PD16 REMOVE EXISTING DOMESTIC WATER METER ASSEMBLY INCLUDING METER, BYPASS PIPING, PRESSURE REDUCING VALVES, STRAINERS, SHUTOFF VALVES, UNIONS, AND ALL ASSOCIATED PIPING AND APPURTENANCES DOWNSTREAM OF THE EXISTING GATE VALVE AS INDICATED. CAP PIPING AT THE EXISTING GATE VALVE AND MAKE READY FOR FUTURE CONNECTION TO THE NEW DOMESTIC METER ASSEMBLY.

PD18 EXISTING FLOOR DRAIN AND TRENCH WITHIN MECHANICAL ROOM SHALL BE INFILLED AND PATCHED. REMOVE ASSOCIATED GRATES AND PIPING AS REQUIRED. INFILL WITH SUITABLE MATERIAL AND RESTORE FLOOR TO MATCH ADJACENT FINISH, FLUSH AND LEVEL. COORDINATE WITH STRUCTURAL REQUIREMENTS AND EXISTING SLAB CONDITIONS PRIOR TO INSTALLATION.

PD19 REMOVE ALL EXISTING DOMESTIC HOT WATER (HW), COLD WATER (CW), AND HOT WATER RETURN (HWR) PIPING IN ITS ENTIRETY. NO PIPING TO REMAIN AND ASSOCIATED COMPONENTS TO REMAIN.

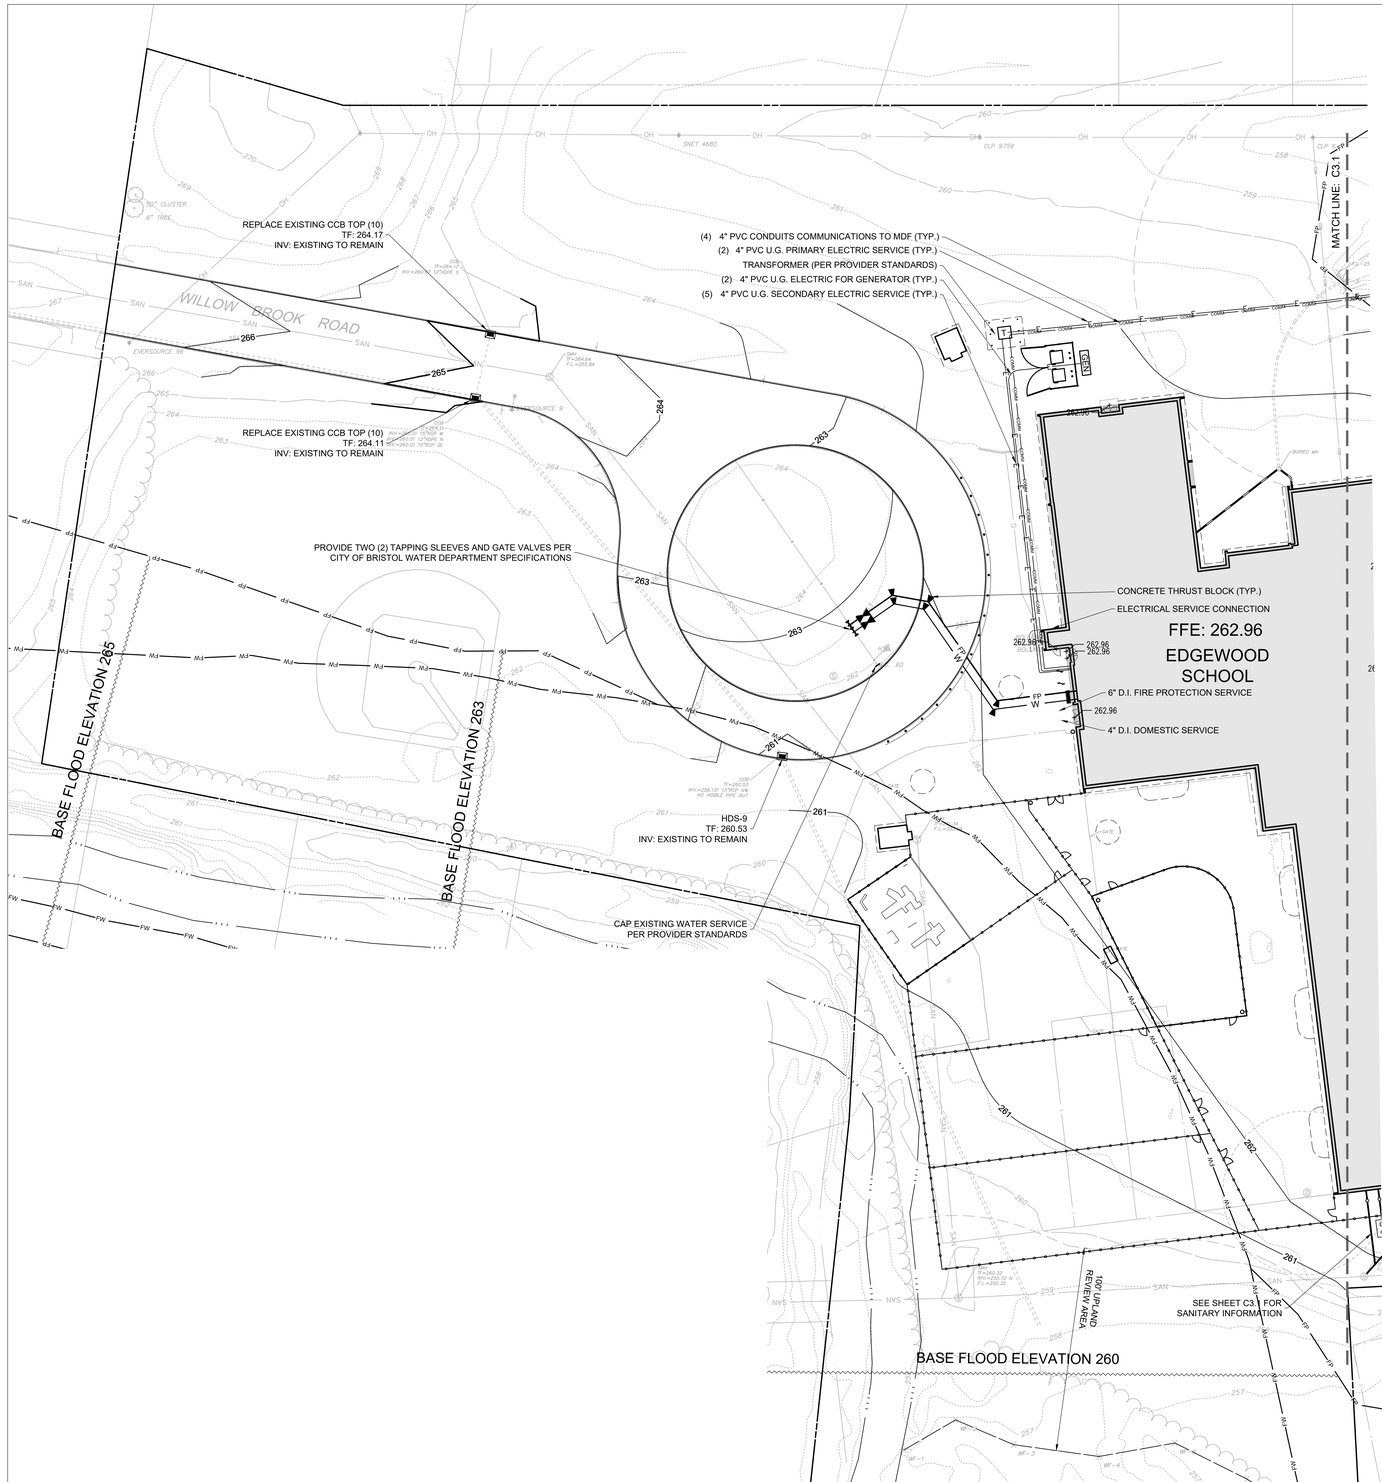
BUS & PARENT DROP OFF PLAN

C2.3



DRAINAGE NOTES

1. CONTRACTOR IS RESPONSIBLE TO ENSURE THAT PROPER STORM DRAINAGE IS MAINTAINED THROUGHOUT CONSTRUCTION AND SHALL MAINTAIN ALL EXISTING AND NEW UTILITIES IN GOOD WORKING ORDER AND SHALL PROTECT THEM AT ALL TIMES UNTIL THE WORK IS COMPLETED AND ACCEPTED.
2. FUNCTIONAL COMPLETION OF STORM WATER STRUCTURES SHALL PRECEDE SITE DEVELOPMENT OF AREAS, ROADS, OR LOTS CONTRIBUTING TO THESE SYSTEMS.
3. CERTIFIED 'AS-BUILTS' VS 'AS-APPROVED' PLANS OF THE STORM WATER SYSTEM SHALL BE SUBMITTED FOLLOWING ITS CONSTRUCTION AND PRIOR TO BOND RELEASE.

STORM SEWER

1. ALL PIPES ARE TO BE 12" HDPE WITH A MINIMUM 1.0% SLOPE AND 2 FT OF COVER UNLESS OTHERWISE NOTED.
2. CONTRACTOR IS RESPONSIBLE TO ENSURE ADEQUATE SIZING OF MANHOLES TO ACCEPT PROPOSED PIPES.
3. ALL EXISTING UTILITY LINES TO BE ABANDONED SHALL BE ABANDONED ACCORDING TO UTILITY COMPANY REQUIREMENTS.
4. ALL WORK SHALL BE COMPLETED IN ACCORDANCE WITH APPLICABLE STANDARDS.
5. DAMAGE TO EXISTING UTILITIES AS A RESULT OF THE CONTRACTOR'S OR ANY OF HIS SUBCONTRACTOR'S ACTIVITIES DURING THE CONSTRUCTION PROCESS SHALL BE REPAIRED AS DIRECTED BY THE ENGINEER AT NO ADDITIONAL COST TO THE OWNER.
6. THE LOCATION OF EXISTING UNDERGROUND UTILITIES IS DEVELOPED FROM THE BEST AVAILABLE INFORMATION. THE ACTUAL LOCATION OF EXISTING UTILITIES SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO THE START OF EXCAVATION ACTIVITIES.
7. ACCESS AND UTILITIES TO EXISTING FACILITIES MUST BE MAINTAINED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER. THE CONTRACTOR MUST MAINTAIN SUFFICIENT TRAVEL LANE(S), APPROVED BY THE OWNER, TO ENABLE ALL EMERGENCY VEHICLES TO ACCESS THE ENTIRE PROJECT SITE.
8. CONTRACTOR TO VERIFY THAT ALL EXISTING UTILITIES TO BE REUSED ARE FUNCTIONAL. TV INSPECTION SHALL BE PERFORMED ON EXISTING UTILITIES TO BE REUSED AND REPORT TO BE GIVEN TO ENGINEER PRIOR TO ORDERING STRUCTURES TO ENSURE DESIGN. STORM DRAINS SHALL BE CLEANED/VACUUMED BEFORE AND AFTER CONSTRUCTION TO ENSURE FUNCTIONALITY.
9. CARE IS TO BE TAKEN WHEN EXCAVATING NEAR EXISTING DRAINAGE PIPES TO REMAIN. CONTRACTOR TO SUPPORT PIPE AS NEEDED/HAND EXCAVATE TO ENSURE PIPE FUNCTIONALITY IS MAINTAINED.
10. PRESERVED EXISTING MANHOLE COVERS AND FRAMES SHALL BE ADJUSTED TO PROPOSED GRADE AS REQUIRED.

ACCESSIBILITY NOTES

1. SLOPES ALONG THE ACCESSIBLE ROUTE SHALL BE LESS THAN 1:20 (5%) AND THE CROSS SLOPES SHALL NOT EXCEED 1:50 (2%). CHANGES IN LEVELS SHALL NOT BE GREATER THAN ¼ INCH.
2. SLOPES ALONG THE ACCESSIBLE ACCESSIBLE RAMP SHALL NOT EXCEED 1:12 (8.3%) AND THE CROSS SLOPE SHALL NOT EXCEED 1:50 (2%). CHANGES IN LEVEL SHALL NOT BE GREATER THAN ¼ INCH.
3. LANDINGS SHALL NOT HAVE A SLOPE GREATER THAN 1:50 (2%) IN ANY DIRECTION.
4. SLOPES WITHIN THE ACCESSIBLE PARKING SPACE SHALL NOT EXCEED 1:50 (2%) IN ANY DIRECTION.

ADDITIONAL NOTES

1. ALL STORM STRUCTURES TO HAVE TOP, FRAMES, AND GRATES/COVER REPLACED IN KIND UNLESS OTHERWISE NOTED.
2. ALL SANITARY STRUCTURES TO HAVE FRAMES AND COVERS REMOVED AND REPLACED IN KIND UNLESS OTHERWISE NOTED.
3. ALL STORM AND SANITARY PIPING TO REMAIN IS TO BE INSPECTED AND REPORT TO BE PROVIDED TO ENGINEER FOR REVIEW.
4. EXISTING WATER SERVICE TO BE REMOVED BACK TO GATE VALVE AT MAIN.
5. EXISTING ELECTRICAL SERVICE TO BE REMOVED BACK TO CONNECTION POINT.
6. GAS SERVICE TO REMAIN AND BE PROTECTED AT ALL TIMES DURING CONSTRUCTION.

AQUIFER PROTECTION AREA NOTES

TEMPORARY CONSTRUCTION MEASURES

1. SIGNIFICANT FUEL, CHEMICAL OR OTHER HAZARDOUS MATERIALS STORAGE AND HANDLING, INCLUDING FUELING OF CONSTRUCTION VEHICLES, SHOULD BE LOCATED OUTSIDE WELL FIELD AREA AND AQUIFER PROTECTION AREA.
2. NO REPAIR OR MAINTENANCE OF CONSTRUCTION VEHICLES OR WASHING OF CONSTRUCTION VEHICLES IS PERMITTED WITHIN THE AQUIFER PROTECTION AREA.
3. ANY NECESSARY TEMPORARY STORAGE SHOULD BE ABOVEGROUND, PROTECTED FROM RAINFALL, AND ON AN IMPERVIOUS CONTAINMENT SURFACE.
4. AN EMERGENCY SPILL AND RESPONSE PLAN SHOULD BE DEVELOPED, INCLUDING COORDINATION WITH THE WATER SUPPLIER.
5. THE SITE ACCESS SHOULD BE ADEQUATELY SECURED AT ALL TIMES TO PROHIBIT ANY UNAUTHORIZED DISPOSAL OF WASTE MATERIALS.

STORMWATER POLLUTION PREVENTION MEASURES:

1. DEICING MANAGEMENT AREAS SHOULD BE ESTABLISHED INCLUDING LOW SALT USE AREAS, ALTERNATIVE CHEMICAL OR SAND METHODS.
2. WELLHEAD PROTECTION SIGNS SHALL BE POSTED IN CLEAR VISIBILITY AT THE ENTRANCE AND EXIT POINTS OF THE AQUIFER PROTECTION AREA.

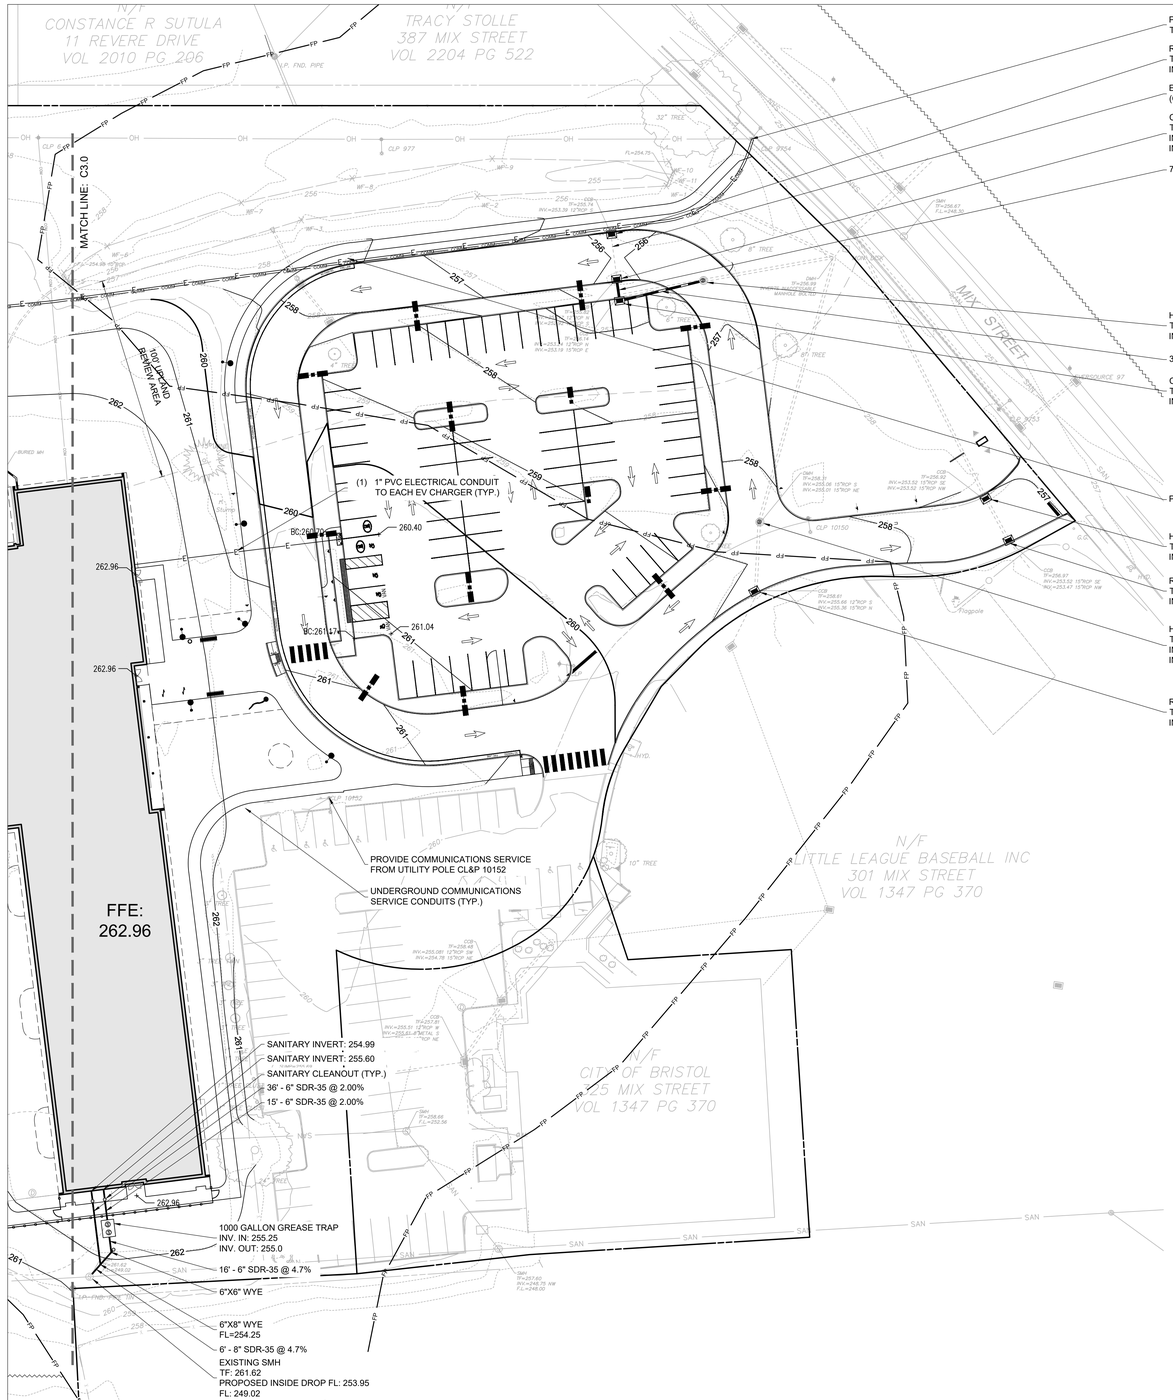
GRADING, DRAINAGE & UTILITY PLAN (WEST)

C3.0



UTILITY NOTES

SANITARY SEWER (CITY OF BRISTOL WATER & SEWER DEPARTMENT)

1. ALL SANITARY SEWER WORK TO COMPLY WITH CITY OF BRISTOL WATER & SEWER DEPARTMENT STANDARDS AND SPECIFICATIONS.
2. ALL SANITARY LATERALS ARE TO BE 6" SDR-35 WITH A MIN. PITCH OF 2% AND 3.5 FT OF COVER UNLESS OTHERWISE NOTED.
3. ALL SANITARY LATERALS ARE TO HAVE INTERNAL CLEANOUTS WITH INLINE BACKFLOW PREVENTER A CLEANOUT WITHIN 10 FT OF BUILDING FOOTPRINT.
4. LOCATION OF SANITARY LATERALS AT BUILDING TO BE COORDINATED WITH PLUMBING DRAWINGS.

WATER SERVICE (CITY OF BRISTOL WATER & SEWER DEPARTMENT)

1. ALL WATER SERVICE WORK TO COMPLY WITH CITY OF BRISTOL WATER & SEWER DEPARTMENT STANDARDS AND SPECIFICATIONS.
2. ALL DOMESTIC WATER SERVICES ARE TO BE 4" D.I. WITH 4.5 FT OF COVER.
3. ALL FIRE SERVICES ARE TO BE 6" D.I. WITH 4.5 FT OF COVER.
4. ALL WATER SERVICES ARE TO BE A MIN. 10 FT FROM ANY SANITARY SERVICE (UNLESS SHELVED IN THE SAME TRENCH) AND A MINIMUM OF 18" OF VERTICAL CLEARANCE FROM ANY OTHER UTILITY LINE.
5. LOCATION OF WATER SERVICES AT BUILDINGS TO BE COORDINATED WITH PLUMBING DRAWINGS.
6. ANY UNUSED WATER MAINS OR WATER SERVICES MUST BE DISCONNECTED AT THE WATER MAIN PRIOR TO DEMOLITION.
7. ALL TAPS ARE TO BE PERFORMED BY THE BRISTOL WATER DEPARTMENT, CONTRACTOR TO COORDINATE.
8. THRUST BLOCKS WILL BE REQUIRED AT EACH CUT AND CAP.
9. EACH CUT AND CAP REQUIRES TWO (2) JOINTS PRIOR TO CUT AND CAP.
10. ALL FITTINGS WILL REQUIRE JOINT RESTRAINTS BEFORE AND AFTER EACH FITTING.

ELECTRICAL SERVICES (EVERSOURCE)

1. ALL ELECTRICAL SERVICES ARE TO CONFORM TO EVERSOURCE CURRENT STANDARDS AND REGULATIONS.
2. FINAL DESIGN TO BE COORDINATED WITH EVERSOURCE.
3. METER LOCATIONS TO BE COORDINATED WITH ELECTRICAL DRAWINGS.
4. CONDUITS ARE FOR REFERENCE ONLY. REFER TO ELECTRIC SITE UTILITY PLAN FOR EXACT NUMBER OF CONDUITS, MATERIAL AND WIRING.

TELEPHONE SERVICES (FRONTIER/SNET)

1. ALL TELEPHONE SERVICES ARE TO CONFORM TO FRONTIER/SNET MOST CURRENT STANDARDS AND REGULATIONS.
2. FINAL DESIGN TO BE COORDINATED WITH FRONTIER/SNET.
3. SERVICE LOCATIONS TO BE COORDINATED WITH M.E.P. DRAWINGS.
4. CONDUITS ARE FOR REFERENCE ONLY. REFER TO ELECTRIC SITE UTILITY PLAN FOR EXACT NUMBER OF CONDUITS, MATERIAL AND WIRING.

CABLE TELEVISION SERVICES (COMCAST)

1. ALL CABLE TELEVISION SERVICES ARE TO CONFORM TO MOST CURRENT STANDARDS AND REGULATIONS.
2. FINAL DESIGN TO BE COORDINATED WITH COMCAST.
3. SERVICE LOCATIONS TO BE COORDINATED WITH M.E.P. DRAWINGS.
4. CONDUITS ARE FOR REFERENCE ONLY. REFER TO ELECTRIC SITE UTILITY PLAN FOR EXACT NUMBER OF CONDUITS, MATERIAL, AND WIRING.

ARCHITECTURAL AREA/SITE

DATE: LOCATION:

TYPE: PROJECT:

CATALOG #:

FEATURES

- 20" size in single/dual arm post top, pole and wall mount
- High performance optics up to 16,874 delivered lumens
- Elegant form factor
- Diffusion lens option
- UL/cUL listed for wet locations, IP66 and 4G/1.5G vibration rated

Ouro

CONTROL TECHNOLOGY

LIGHTGRID

SPECIFICATIONS

CONSTRUCTION
- Die-cast aluminum alloy die-casting is standard on luminaire.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- All external fasteners are stainless steel.
- Cover is secured to Lens frame by the latch and hinge.

OPTICS
- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.
- Optional fixture finish optical surfaces will not affect the IES ratings of the standard white finish.

LENS
- Standard lens (CLR) IK08
- Clear Polycarbonate Lens (CP) IK10

INSTALLATION
- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

FM33

FMA32LEDTEA53, FMA34L, FT34L4, FT34L6

	Weight	EPA
UR20	39 lbs / 18.0 kg	0.052 ft²

ELECTRICAL
- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480, Driver is 347/480V with a tolerance of ±10% and Driver illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor (PF) and less than 20% total harmonic and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and LED module shall have thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection 10,000k in parallel, 20,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

CONTROLS

2PW
- Fully gasketed and wired 7-pin receptacle (ANSI C136.41) standard. Provides a low voltage electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by others.

Standard customer operation modes:
- Traditional on/off photoelectric control.
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for added dimming and additional I/O connections for customer use.

(Specifications continued on page 5)

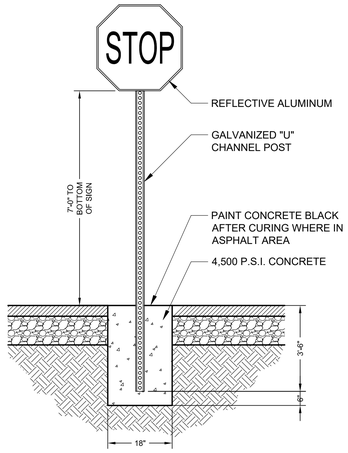
1 PEDESTRIAN LIGHT POLE CONCRETE BASE (12' HT.)

3/4" = 1'-0" P-CO-MEM-47

NOTES:

1. ALL POSTS SHALL BE OF ADEQUATE LENGTH TO MEET THE REQUIREMENTS FOR ERECTION AS STATED IN THE CURRENT "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS".
2. ALL POSTS SHALL BE EMBEDDED 3'-6" MINIMUM BELOW GRADE.
3. ALL STEEL POSTS AND BRACKETS SHALL BE CUT, BENT, AND HOLES PUNCHED AND DRILLED BEFORE GALVANIZING. GALVANIZING SHALL BE IN CONFORMANCE WITH CURRENT A.S.T.M. SPECIFICATION A123-78 (OR LATEST REVISED).
4. POSTS SHALL BE BREAKAWAY TYPE II TWO-PIECE U-POST OR OTHER BREAKAWAY STRUCTURAL SUPPORT HARDWARE AS NOTED IN THE LATEST EDITION OF AASHTO'S "SPECIFICATIONS FOR STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS, LUMINARIES, AND TRAFFIC SIGNALS."
5. SIGN PANEL SIZES SHALL DETERMINE POST TYPE AND NUMBERS AS SHOWN ON THIS DETAIL AND DIRECTIONAL SIGN SHEET.
6. BOLTS SHALL NOT PROTRUDE MORE THAN 3/4" BEYOND THE NUT WHEN TIGHT BUT SHALL ENGAGE ALL THREADS IN THE NUT.
7. ALL TRAFFIC AND PEDESTRIAN SIGNAGE AND LOCATION SHALL BE IN ACCORDANCE WITH THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES AND ALL CURRENT AMENDMENTS.



3 ON-SITE SIGNAGE

ROOF TYPES:

TYPE 1 (FLAT ROOF):
- *EPDM ROOF MEMBRANE*
- *1/2" COVER BOARD*
- *TAPERED RIGID INSULATION*
- *5" RIGID INSULATION (R-30 MIN.)*
- *SELF ADHERED VAPOR BARRIER*
- *5/8" SUBSTRATE BOARD*
- *EXISTING METAL ROOF DECK, SEE STRUCTURAL DRAWINGS*

TYPE 2 (NEW SLOPED STEEL):
- *EPDM ROOF MEMBRANE*
- *1/2" COVER BOARD*
- *5" RIGID INSULATION (R-30 MIN.)*
- *SELF ADHERED VAPOR BARRIER*
- *5/8" SUBSTRATE BOARD*
- *NEW ROOF DECK , SEE STRUCTURAL DRAWINGS*

ROOF PLAN LEGEND

- *1/2"/12" CRICKET*
- *AREA OF 1/4"/12" TAPERED INSULATION*
- *T.* — *AREA OF 1/4"/12" TAPERED INSULATION*
- *ROOF INFILL EXTG SKYLIGHT*
- *WALKPADS*
- *SC* — *SCUPPER*
- *HP* — *HIGH POINT OF ROOF PITCH*

ROOF PLAN GENERAL NOTES:

1. *CONTRACTOR TO TAKE AND VERIFY ALL DIMENSIONS AND CONDITIONS ON THE JOB AS DEFINED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR IS RESPONSIBLE FOR COMPLIANCE OF FINISHED WORK AND FOR THE SAME WORK, SHALL BE HELD RESPONSIBLE.*
2. *STRUCTURAL INFORMATION ON ROOF DETAILS ARE SHOWN DIAGRAMMATICALLY ONLY.*
3. *ALL VERTICAL FLASHING HEIGHTS MUST BE A MINIMUM OF 8" (TYP.) UNLESS OTHERWISE NOTED.*
4. *ROOFING CONTRACTOR TO FIELD VERIFY QUANTITY & LOCATIONS OF PLUMBING VENTS & FLASH IN ACCORDANCE W/ MANUFACTURER SPECIFICATIONS. (ALL VENT STACKS MUST EXTEND 12" ABOVE FINISH ROOF SURFACE)*
5. *SIZE AND LOCATIONS OF EXHAUST FANS, MECHANICAL UNITS, VENT STACKS AND OTHER ROOF PENETRATIONS/CURBS OF ROOF MOUNTED ITEMS ARE DIAGRAMMATIC ONLY. SEE MEP DRAWINGS FOR QUANTITIES & LOCATIONS (TYP.).*
6. *ROOF CONTRACTOR IS TO SURVEY THE ROOF DECKS TO VERIFY THAT SLOPES INDICATES ON PLANS ARE ACCURATE. NOTIFY ARCHITECT IMMEDIATELY OF ANY DISCREPANCIES PRIOR TO PERFORMING ANY ADDITIONAL ROOFING OPERATIONS.*
7. *ROOF DRAIN LOCATIONS ARE INDICATED DIAGRAMMATIC AND MUST BE COORDINATED.*
8. *ON THE HIGH SIDE OF ROOF TOP EQUIPMENT PROVIDE CRICKET TO DIVERT WATER.*
9. *REFER TO STRUCTURAL DRAWINGS FOR MATERIALS, SIZES & LOCATIONS.*

STAIR HANDRAIL AND GUARDRAIL NOTES:

1. STAIRS INCLUDING GUARDRAIL AND HANDRAIL ARE ILLUSTRATIVE OF DESIGN INTENT ONLY. COMPLETE DETAILS OF ALL STRUCTURAL PARTS, THEIR CONNECTIONS, AND ALL CALCULATIONS, SHALL BE DETERMINED AND DETAILED BY THE FABRICATOR ON THE SHOP DRAWINGS. STRUCTURAL DRAWINGS AND CALCULATIONS SHALL BE PREPARED AND STAMPED BY A STRUCTURAL ENGINEER LICENSED TO PRACTICE IN THE STATE/PROVINCE WHERE PROJECT IS LOCATED.
2. GRIND SMOOTH ALL WELDS.
3. HANDRAILS AND BRACKETS TO COMPLY WITH MOST-STRINGENT OF REQUIREMENTS BETWEEN THE AMERICANS WITH DISABILITIES ACT (ADA), UNIFORM FEDERAL ACCESSIBILITY STANDARDS (UFAS), AND NFPA 101 AS MODIFIED BY THE AUTHORITY HAVING JURISDICTION (AHJ) FOR MAXIMUM SIZE AND CLEARANCES.
4. SEE FINISH SCHEDULE FOR PAINTING OR OTHER FINISHES OF RAILINGS.
5. UNLESS SPECIFIED OTHERWISE, RAILINGS SHOWN TO BE EXTRA STRONG 1 1/2" NOMINAL DIAMETER STEEL PIPE. SEE STAIR HANDRAIL AND GUARDRAIL NOTE 3 FOR SIZE CONSTRAINTS.
6. COMPLY WITH APPLICABLE CODE REQUIREMENTS FOR SIZE, SPACING AND ORIENTATION OF GUARDRAIL INFILL.
7. EXIT WIDTH IS TO BE MAINTAINED AND PROVIDED AS INDICATED REGARDLESS OF MANUFACTURER'S OR DETAILER'S CHOICE OF FABRICATION.

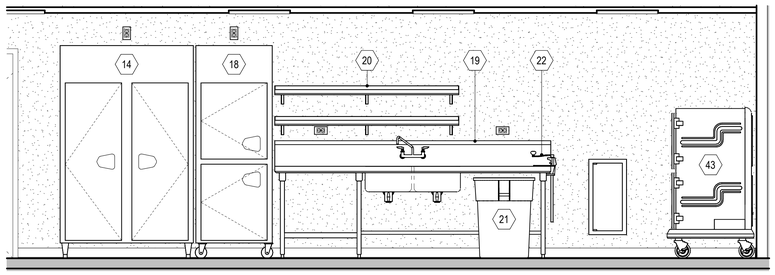
FOODSERVICE EQUIPMENT PLAN

1/4" = 1'-0"

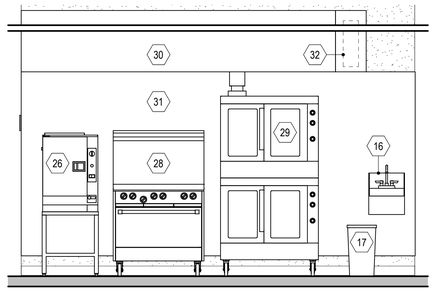
SCHEDULE OF FOODSERVICE EQUIPMENT & CONNECTIONS

Item	Qty	Description	Plumbing	Electrical	Mechanical / Equipment Remarks
1	1	Mop Sink Cabinet	1/2" H&CW; Drain in Floor		Requires wall blocking by GC (See Special Conditions Plans)
2	1	Mop Bucket (by Owner)			
3	3	Staff Locker, Two-Tier (by GC)			Requires wall blocking by GC (See Special Conditions Plans)
4	1	Office Desk (by GC)		20 A circuit - 120/1 wall mounted convenience DR by EC	Provide Data Receptacle
5	1	Walk-In Cooler		1.1 KW - 120/1 (lights, temp. monitoring/alarm, etc); Low voltage wiring from temperature monitor to BMS	Requires floor leveling by GC (See Special Conditions Plan)
6	1	Mechanical Refrigeration System			
7	1	Cooler Evaporator Coil	3/4" IW to FD by KEC	0.85 A - 120/1; Low voltage wiring from evaporator to BMS	Remote refrigeration from Item 8 by KEC
8	1	Cooler Condensing Unit		5.4 A - 0.5 HP - 208/1	Located on Roof per Detail 1/K101
9	6	Mobile Shelving Unit, Four-Tier			
10	1	EXISTING Bun Pan Rack			
11	4	Storage Shelving, Five-Tier			
12	2	Dunnage Rack			
13	1	-Spare Number-			
14	1	EXISTING Reach-In Freezer		11.2 A - 120/1 - C&P	
15	1	Utility Cart			
16	2	Hand Sink	1/2" H&CW; 1-1/2" W		Requires wall blocking by GC (See Special Conditions Plans)
17	2	Waste Bin (by Owner)			
18	1	Reach-in Freezer		9.7 A - 120/1 - C&P	
19	1	Prep Table with Sinks	1/2" H&CW; 2" IW to FS	(2) 20 A circuit - 120/1 wall mounted convenience DR by EC	
20	2	Wall Shelf			Requires wall blocking by GC (See Special Conditions Plan)
21	3	Waste Barrel (by Owner)			
22	1	Can Opener			
23	1	-Spare Number-			
24	1	-Spare Number-			
25	1	Ceiling Mounted Utensil Rack			Requires ceiling support by GC
26	1	Countertop Six Pan Steamer	1/2" G @ 32 MBTU; (2) 3/4" CW; 1-1/2" IW to FS	4 A - 120/1	
27	1	Water Filter Assembly	3/4" CW		Requires wall blocking by GC (See Special Conditions Plan)
28	1	EXISTING Six-Burner Range	3/4" G @ 230 MBTU; QD	2 A - 120/1 - C&P	
29	1	Double Convection Oven	3/4" G @ 100 MBTU; QD	(2) 8 A - 120/1 - C&P	
30	1	Exhaust Hood		Power to lights from Item 33	EXH: 2,200 CFM thru a 14" dia. collar @ -0.969 SP; Coordinate support from structure above for hood hangers by KEC
31	1	Stainless Steel Wall Flashing			
32	1	Fire Suppression System		120/1; J-box for to building alarm system & equipment shutdown	Protection for Item 30; Mounted in hood cabinet
33	1	Hood Auto-Start Control System		15 A circuit - 120/1 (See Note E-33 / K101)	Control for Item 30; Mounted in hood cabinet
34	1	Auto-Start Control Interface		Cable from Item 33	
35	1	Room Temperature Sensor		Wiring from Item 33	
36	14	EXISTING Insulated Food Carrier			
37	1	Cook's Table with Sink	1/2" H&CW; 2" IW to FS	(4) 20 A circuit - 120/1 table mounted convenience DR by KEC	
38	1	EXISTING Hot Holding Cabinet		2 KW - 120/1 - C&P (power from item 37)	
39	1	Water Filter Assembly, Warewasher	3/4" HW		Requires wall blocking by GC (See Special Conditions Plan)
40	1	Milk Cooler		3.3 A - 120/1 - C&P (power from item 37)	
41	1	EXISTING Heated Serving Counter		26 A - 120/208/1 (NEMA 14-50P) (mounted in table #37)	
42	1	Mobile Work Table			
43	5	Insulated Food Carrier			
44	1	Three Compartment Sink	3/4" 120°F H&CW; (3) 2" IW to FS		
45	1	Wall Shelf			Requires wall blocking by GC (See Special Conditions Plan)
46	1	Pre-Rinse Assembly with Add-on Faucet	3/4 H&CW		Requires wall blocking by GC (See Special Conditions Plan)
47	1	Ventless Warewasher	1/2" H&CW; 3/4" IW to FS	53.7 A - 208/3 (single point connection)	6,800 BTU/HR Latent Heat; 5,000 BTU/HR Sensible Heat
48	1	Clean Dishtable			
49	1	Wall Shelf			Requires wall blocking by GC (See Special Conditions Plan)



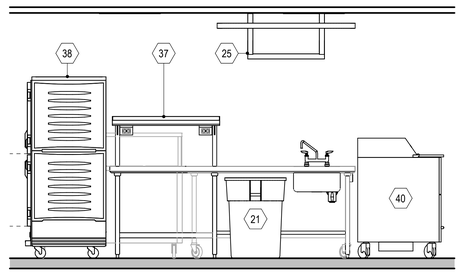
Elevation - Food Prep

1/2" = 1'-0"



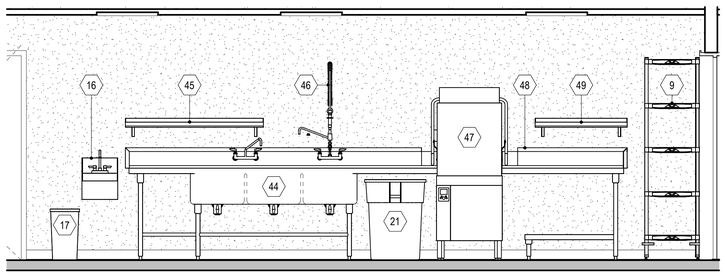
Elevation - Cookline

1/2" = 1'-0"



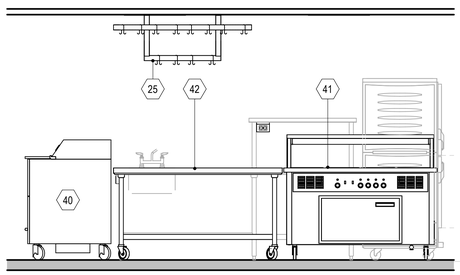
Elevation - Cook's Table

1/2" = 1'-0"



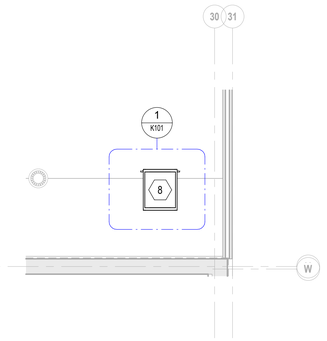
Elevation - Warewashing

1/2" = 1'-0"



Elevation - Tray Make-up

1/2" = 1'-0"



FOODSERVICE ROOF EQUIPMENT PLAN

1/4" = 1'-0"

Abbreviations used:

A	Amperes	EXH	Exhaust	KW	Kilowatt
AFF	Above finished floor	FD	Floor drain	MBTU	BTU per hour/1000
ATC	Automatic Temp. Controls Contractor	FFD	Funnel floor drain	MC	Mechanical Contractor
		FHW	Fahrenheit hot water	MUA	Make-up air
BFF	Below finished floor	FS	Floor sink	PC	Plumbing Contractor
BTC	Branch to connection	G	Gas	QD	Quick disconnect
C&P	Cord & plug provided	GC	General Contractor	SP	Static pressure (WG)
CFM	Cubic feet per minute	GI	Grease interceptor	SR	Single receptacle
CR	Condensate return	HP	Horsepower	SS	Steam supply
CW	Cold water	HW	Hot water	W	Waste (direct conn.)
DFA	Drop from above	H&CW	Hot & cold water		
DR	Duplex receptacle	IW	Indirect Waste		
EC	Electrical contractor	KEC	Kitchen Equip. Contractor		

SCHEDULE NOTES

1) UTILITIES SHOWN IN THESE SCHEDULES ARE SPECIFIC TO THE PRIME MANUFACTURER LISTED IN THE WRITTEN SPECIFICATION SECTION 114000. IF EQUIPMENT FROM AN ALTERNATE MANUFACTURER IS PROVIDED, IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO COORDINATE AND SUBMIT TO THE PROJECT DESIGN TEAM FOR REVIEW.

2) UTILITIES LISTED ON THIS SCHEDULE FOR OWNER FURNISHED OR VENDOR SUPPLIED EQUIPMENT ARE ESTIMATES ASSUMED FOR ENGINEERING PURPOSES ONLY. IT IS THE RESPONSIBILITY OF THE OWNER TO PROVIDE EQUIPMENT CUT SHEETS OF THIS EQUIPMENT TO CRABTREE-MCGRATH ASSOCIATES PRIOR TO CONSTRUCTION.

3) INSTALLING SUB-CONTRACTORS MUST NOTIFY CRABTREE-MCGRATH ASSOCIATES IF A UTILITY REQUIREMENT LISTED ON THIS EQUIPMENT SCHEDULE IS NOT AVAILABLE.

4) REFER TO THE ABBREVIATIONS NOTES PROVIDED ON THIS SHEET FOR CLARIFICATION OF ABBREVIATIONS USED WITHIN THIS EQUIPMENT SCHEDULE.

PLAN NOTES

1) IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO FIELD VERIFY THE DELIVERY PATH OF ALL EQUIPMENT WITHIN THEIR SCOPE WITH BUILDING CONDITIONS PRIOR TO ORDERING TO CONFIRM ALL EQUIPMENT FITS WITHIN THE DESIGNATED SPACE AS LOCATED ON PLANS.

2) KITCHEN EQUIPMENT CONTRACTOR SHALL COORDINATE WITH THE GENERAL CONTRACTOR AS NECESSARY FOR OPENINGS IN BUILDING, WALL LEAVE OUTS, DOOR WIDTHS AND HEADER HEIGHTS REQUIRED FOR DELIVERY AND INSTALLATION MEANS.

3) FINISHES TO ALL WALLS, FLOORS AND CEILINGS ARE TO BE PROVIDED BY THE GENERAL CONTRACTOR AS SPECIFIED BY THE PROJECT ARCHITECT TO MEET THE REQUIREMENTS OF THE LOCAL HEALTH DEPARTMENT.

4) REVISIONS TO THESE PLANS DUE TO FIELD CONDITIONS MUST BE SUBMITTED TO THE PROJECT DESIGN TEAM FOR REVIEW AND APPROVAL PRIOR TO PROCEEDING WITH CONSTRUCTION.

5) FLOORING MATERIAL SPECIFIED BY THE ARCHITECT MUST BE PROVIDED WITH A COVED BASE AT ALL WALLS TO INCLUDE THE INTERIOR AND EXTERIOR OF WALK-IN REFRIGERATED ROOMS.

6) ALL FOODSERVICE EQUIPMENT AND CUSTOM FABRICATED ITEMS MUST MEET THE STANDARDS OF THE NATIONAL SANITATION FOUNDATION AND SHALL BE LABELED ACCORDINGLY.

PLUMBING NOTES

1) DIMENSIONS ON THIS PLAN ARE PROVIDED FOR DESIGN INTENT. IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO VERIFY AND COORDINATE ALL DIMENSIONS AND HEIGHTS LISTED IN THE FIELD WITH THE EQUIPMENT BEING PROVIDED.

2) PLUMBING CONTRACTOR IS RESPONSIBLE FOR ALL FINAL CONNECTIONS TO EQUIPMENT THAT REQUIRE A BRANCH TO CONNECTION (BTC), OR WHERE PLUMBING INTERCONNECTION IS INDICATED ON THE PLAN WITH A DASHED LINE.

3) PLUMBING CONTRACTOR IS RESPONSIBLE FOR REVIEWING ALL MANUFACTURER'S SHOP DRAWINGS AND EQUIPMENT CUT SHEETS SUBMITTED TO CONFIRM SCOPE REQUIREMENTS AND INSTALLATION EXPECTATIONS.

4) ALL FLOOR SINKS AND DRAINS MUST BE PROVIDED AND INSTALLED BY THE PLUMBING CONTRACTOR. AREA DRAINS, IF LOCATED LOCATED ON THESE PLANS, ARE TO BE CONSIDERED RECOMMENDED AREAS. IT IS THE RESPONSIBILITY OF THE PLUMBING CONTRACTOR TO CONFIRM QUANTITIES AND LOCATIONS OF AREA DRAINS WITH THE LOCAL AUTHORITY HAVING JURISDICTION.

5) FLOOR SINKS LOCATED UNDER COUNTERS WITH LIMITED ACCESSIBILITY MUST BE INSTALLED 50% EXPOSED AND EASILY ACCESSIBLE FOR CLEANING. IF A FLOOR SINK CAN NOT BE INSTALLED 50% EXPOSED, THE UNDER SHELF OF THE CABINET MUST BE FULLY REMOVABLE OR BE PROVIDED WITH AN ACCESS PANEL LARGE ENOUGH TO REMOVE THE DRAIN GRATE FOR CLEANING.

6) CONDENSATE DRAIN LINES FROM WALK-IN REFRIGERATED ROOM EVAPORATOR COILS SHALL BE INSTALLED BY THE KITCHEN EQUIPMENT CONTRACTOR. DRAIN LINES MUST BE COPPER AND INSTALLED 1" OFF THE WALLS WITH A MINIMUM PITCH OF 1/2" PER FOOT. KITCHEN EQUIPMENT CONTRACTOR TO PROVIDE AND INSTALL A COPPER UNION WITHIN 24" OF THE CONNECTION TO THE EVAPORATOR COIL. FOR INSTALLATION OF DRAIN LINES IN A FREEZER, THE DRAIN SHALL EXIT THE FREEZER AT THE EARLIEST DISTANCE POSSIBLE. DRAIN PENETRATIONS THROUGH THE WALK-IN REFRIGERATED ROOM WALL PANEL MUST BE APPROPRIATELY SEALED TO INCLUDE A VAPOR SEAL AND PROVIDED WITH CHROME ESCUTCHEON PLATES AT ALL EXPOSED POINTS WHERE PIPING PENETRATES THE WALL. DRAINS MUST BE "P" TRAPPED OUTSIDE OF THE REFRIGERATED ROOM WALL TO AVOID ENTRANCE OF WARM AIR AND TERMINATED 1" ABOVE THE FLOOR DRAIN OR AS REQUIRED BY LOCAL CODE.

7) PLUMBING CONTRACTOR TO INSTALL UTILITIES CONCEALED IN WALLS AND STUB-OUT AT TERMINATION POINTS. PLEASE NOTE THAT NOT ALL JURISDICTIONS ALLOW GAS LINES TO BE CONCEALED IN WALL, IT IS THE RESPONSIBILITY OF THE PLUMBING CONTRACTOR TO VERIFY AND CONFIRM PRIOR TO INSTALLATION.

8) PLUMBING CONTRACTOR IS RESPONSIBLE FOR INSTALLATION OF ALL DRAINS, FAUCETS, PIPING TRAPS, VALVES, SHUT-OFFS, GAUGES, WATER PRESSURE REDUCERS, REGULATORS AND BACKFLOW PREVENTION, ETC. AS REQUIRED BY LOCAL AUTHORITY HAVING JURISDICTION.

9) IT IS THE RESPONSIBILITY OF THE PLUMBING CONTRACTOR TO FLUSH ALL WATER LINES PRIOR TO FINAL CONNECTION TO FOODSERVICE EQUIPMENT.

10) A MAIN SHUT-OFF GAS VALVE MUST BE INSTALLED BY THE PLUMBING CONTRACTOR LOCATED TO MEET THE REQUIREMENTS OF THE PLUMBING CODE.

11) GAS SUPPLY TO ALL COOKING EQUIPMENT MUST BE PROVIDED WITH AN ELECTRIC OR MECHANICAL SHUT-OFF VALVE. KITCHEN EQUIPMENT CONTRACTOR SHALL FURNISH THE VALVE AND INSTALLATION PERFORMED BY THE PLUMBING CONTRACTOR. VALVE SHALL BE TIED INTO THE FIRE PROTECTION SYSTEM FOR AUTOMATIC SHUT-OFF.

12) THE PLUMBING CONTRACTOR IS RESPONSIBLE FOR LOCATION OF GREASE TRAPS AS REQUIRED BY LOCAL AUTHORITY HAVING JURISDICTION. GREASE TRAPS MUST BE LOCATED IN A MANNER THAT DOES NOT INTERFERE WITH FOODSERVICE EQUIPMENT LAYOUT.

ELECTRICAL NOTES

1) DIMENSIONS ON THIS PLAN ARE PROVIDED FOR DESIGN INTENT. IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO VERIFY AND COORDINATE ALL DIMENSIONS AND HEIGHTS LISTED IN THE FIELD WITH THE EQUIPMENT BEING PROVIDED.

2) ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR ALL FINAL CONNECTIONS TO EQUIPMENT THAT REQUIRES A BRANCH TO CONNECTION (BTC), OR WHERE INTER-WIRING IS INDICATED ON THE PLAN IN A DASHED LINE.

3) ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR REVIEWING ALL MANUFACTURER'S SHOP DRAWINGS AND EQUIPMENT CUT SHEETS SUBMITTED TO CONFIRM SCOPE REQUIREMENTS AND EXPECTATIONS.

4) ELECTRICAL PANELS PROVIDED SHALL BE DESIGNED WITH A MINIMUM OF 20% SPARE CAPACITY FOR FUTURE EXPANSION UNLESS OTHERWISE APPROVED BY THE OWNER.

5) ELECTRICAL CONTRACTOR TO INSTALL DROP CORDS AS LOCATED ON PLANS WITH THE CORD ADJUSTED TO HANG 78" ABOVE FINISH FLOOR. PLASTIC WIRE TIES ARE NOT ACCEPTABLE FOR THIS WORK. DROP CORDS MUST BE PROVIDED WITH STRAIN RELIEF.

6) ELECTRICAL CONNECTIONS ON THIS PLAN ARE PROVIDED AS IT RELATES SPECIFICALLY TO FOOD SERVICE EQUIPMENT. CONVENIENCE OUTLETS ARE PROVIDED IN SPECIFIC LOCATIONS AS REQUESTED BY OWNER. IT IS THE RESPONSIBILITY OF THE ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL ANY OTHER ELECTRICAL OUTLETS AS REQUIRED TO MEET CODE REQUIREMENTS BY LOCAL AUTHORITY HAVING JURISDICTION.

7) WALK-IN REFRIGERATED ROOM LIGHT FIXTURES ARE TO BE PROVIDED BY THE KITCHEN EQUIPMENT CONTRACTOR. LIGHTS ARE TO BE MOUNTED AND INSTALLED BY THE ELECTRICAL CONTRACTOR.

8) IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO CONFIRM WITH THE WALK-IN REFRIGERATED ROOM MANUFACTURER THAT THE QUANTITY AND LOCATIONS OF THE LIGHTING LAYOUT WILL MEET 20 FOOT CANDLES OF LIGHT AT A DISTANCE OF 30" ABOVE FINISH FLOOR AS REQUIRED IN WALK-IN REFRIGERATED ROOMS BY THE NATIONAL FOOD CODE.

9) DRAIN PIPING WITHIN A WALK-IN FREEZER SHALL BE PROVIDED WITH A DRAIN LINE HEATER AND INSULATION. FINAL CONNECTION OF THE DRAIN LINE HEATER MUST BE PROVIDED BY THE ELECTRICAL CONTRACTOR.

10) ELECTRICAL CONTRACTOR TO INSTALL UTILITIES CONCEALED IN WALLS AND STUB-OUT AT TERMINATION POINTS.

11) ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL WIRING BETWEEN EXHAUST VENTILATORS, AND ASSOCIATED FAN SYSTEMS, CONTROL PANELS, MAGNETIC STARTERS, FIRE SUPPRESSION SYSTEMS, PULL STATIONS AND SWITCHES AS REQUIRED.

12) CONTROL AND POWER WIRING BETWEEN CONTROL PANELS AND GARBAGE DISPOSALS, WASTE PULPERS, TROUGH COLLECTORS ETC. ARE TO BE PROVIDED AND INSTALLED BY THE ELECTRICAL CONTRACTOR.

13) ELECTRICAL CONTRACTOR MUST PROVIDE ELECTRICAL POWER TO ANY COOKING EQUIPMENT THROUGH A SHUNT TRIP SYSTEM.

14) FOOD PREPARATION AREAS MUST BE PROVIDED WITH 50 FOOT CANDLES OF LIGHTING AS REQUIRED BY THE NATIONAL FOOD CODE.

15) ELECTRICAL CONTRACTOR MUST VERIFY REMOTE FIRE SUPPRESSION PULL STATION LOCATIONS WITH THE LOCAL FIRE INSPECTOR PRIOR TO INSTALLATION.

16) FOODSERVICE EQUIPMENT CAN NOT BLOCK ACCESS TO GFI RECEPTACLES. CRABTREE-MCGRATH ASSOCIATES STRONGLY RECOMMENDS THAT THE ELECTRICAL CONTRACTOR PROVIDE GFI PROTECTION AT THE CIRCUIT BREAKER PANEL. THIS WILL ALSO LIMIT NUISANCE TRIPPING THAT IS COMMON WITH COMMERCIAL FOODSERVICE EQUIPMENT.

SPECIAL CONDITIONS NOTES

1) DIMENSIONS ON THIS PLAN ARE PROVIDED FOR DESIGN INTENT. IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO VERIFY AND COORDINATE ALL DIMENSIONS AND HEIGHTS LISTED IN THE FIELD WITH THE EQUIPMENT BEING PROVIDED.

2) WALK-IN REFRIGERATED ROOM SLAB DEPRESSIONS MUST BE SMOOTH AND LEVEL, SIZED AS SHOWN ON PLAN.

3) THE GENERAL CONTRACTOR IS RESPONSIBLE FOR PROVIDING WALL BLOCKING AS INDICATED FOR SUPPORTING WALL MOUNTED EQUIPMENT. KITCHEN EQUIPMENT CONTRACTOR SHALL VERIFY AND COORDINATE ALL LOCATIONS AND HEIGHTS PROVIDED IN THE FIELD.

4) WALL FLASHING, WHERE SPECIFIED, MUST BE A MINIMUM OF 20 GAUGE STAINLESS STEEL, PROVIDED AND INSTALLED BY THE KITCHEN EQUIPMENT CONTRACTOR. STAINLESS STEEL TO BE CUT IN THE LARGEST SHEETS POSSIBLE TO MINIMIZE JOINTS. ALL SEAMS TO BE COVERED WITH BATTEN STRIPS AND CAP STRIPS PROVIDED AT FLASHING ENDS. PROVIDE CAREFULLY PUNCHED HOLES AT SERVICE LOCATIONS. ALL WALL FLASHING DIMENSIONS MUST BE FIELD VERIFIED BY THE KITCHEN EQUIPMENT CONTRACTOR PRIOR TO FABRICATION.

5) CORNER GUARDS, WHERE SPECIFIED, MUST BE A MINIMUM OF 14 GAUGE STAINLESS STEEL PROVIDED AND INSTALLED BY THE KITCHEN EQUIPMENT CONTRACTOR. BREAK LONG EDGES SO THAT THE GUARDS "HUG" THE WALL AND SECURE TO THE WALL WITH A SUITABLE ADHESIVE. ALL CORNER GUARD DIMENSIONS AND ANGLES MUST BE FIELD VERIFIED BY THE KITCHEN EQUIPMENT CONTRACTOR PRIOR TO FABRICATION.

6) KITCHEN EQUIPMENT CONTRACTOR IS RESPONSIBILE FOR THE INSTALLATION OF THE REMOTE REFRIGERATION LINE RUNS AND COORDINATION OF THE COMPLETE REMOTE REFRIGERATION SYSTEM WITH THE GENERAL CONTRACTOR.

7) EXHAUST HOODS MUST BE HUNG AND MOUNTED WITH THE BOTTOM OF THE HOOD AT 6'-8" ABOVE FINISH FLOOR. HVAC CONTRACTOR IS RESPONSIBLE FOR FINAL CONNECTIONS FROM THE EXHAUST HOOD COLLAR TO THE DUCTWORK. FINAL CONNECTIONS SHALL BE FULLY WELDED AND LIQUID TIGHT.

8) HVAC CONTRACTOR TO PROVIDE AND INSTALL ALL FANS, DUCTWORK AND CURBS AS REQUIRED FOR A COMPLETE AND FUNCTIONING VENTILATIO SYSTEM. START-UP AND AIR BALANCING OF THESE SYSTEMS MUST BE COMPLETED BY THE HVAC CONTRACTOR.

FOODSERVICE EQUIPMENT SPECIAL CONDITIONS PLAN

K102

6/5/2026 9:02:39 AM C:\Users\tmcdonald\Documents\Edgewood - Foodservice R26_tmcdonald77.rvt

6/4/2026 3:46:39 PM C:\Users\JMartin\AppData\Local\Autodesk\Revit\Autodesk Revit 2026\CollaborationCache\TAW22XNFJU7SUGUK\45df9e2f-f51b-43ed-9bb5-be23aeaea7a2\abef80ef-dcdd-4b9d-a1f3-a98b0f7e2e6a.rvt

CODES AND STANDARDS:

1. THE FOLLOWING CODES AND STANDARDS, INCLUDING ALL SPECIFICATIONS WITHIN, SHALL APPLY TO THE DESIGN, CONSTRUCTION, QUALITY CONTROL AND SAFETY OF ALL WORK PERFORMED ON THE PROJECT. USE THE LATEST EDITIONS UNLESS NOTED OTHERWISE.
   a. ALL WORK SHALL COMPLY WITH THE 2022 CONNECTICUT STATE BUILDING CODE WHICH ADOPTS THE 2021 INTERNATIONAL BUILDING CODE (IBC) WITH AMENDMENTS
   b. "BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE, ACI 318", (LATEST EDITION) AMERICAN CONCRETE INSTITUTE.
   c. "AISC "SPECIFICATION FOR THE DESIGN FABRICATION AND ERECTION OF STRUCTURAL STEEL FOR BUILDINGS" AND "STEEL CONSTRUCTION MANUAL" LATEST EDITION, AMERICAN INSTITUTE OF STEEL CONSTRUCTION.
   d. BUILDING CODE REQUIREMENTS FOR COLD-FORMED STEEL FRAMING, AISI S100/S200/S211/S214 (LATEST EDITION).
   e. BUILDING CODE REQUIREMENTS FOR MASONRY STRUCTURES, ACI 530/ASCE 5/TMS 402 (LATEST EDITION).
   f. SPECIFICATIONS FOR MASONRY STRUCTURES, ACI 530.1/ASCE 6/TMS 602 (LATEST EDITION).
   g. HOT WEATHER CONCRETING, ACI 305R AND COLD WEATHER CONCRETING ACI 306R (LATEST EDITION).

DIMENSIONS:

1. THE CONTRACTOR SHALL COORDINATE THE DIMENSIONS AND LOCATIONS OF THE ROOF, FLOOR & WALL OPENINGS SO THE FRAMING PROPERLY FITS THE REQUIREMENTS OF ALL TRADES.
2. THE CONTRACTOR SHALL VERIFY ALL EXISTING DIMENSIONS, ELEVATIONS AND CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO ANY FABRICATION AND INSTALLATION OF ANY NEW MATERIALS. IF ANY DISCREPANCIES ARE FOUND BETWEEN ACTUAL CONDITIONS AND THESE DRAWINGS NOTIFY ARCHITECT AND/OR ENGINEER FOR FURTHER INSTRUCTIONS.

CONSTRUCTION:

1. GENERAL:
   a. SUBMIT SHOP DRAWINGS AT LEAST 15 DAYS BEFORE DATE REVIEWED SUBMITTALS WILL BE NEEDED. SHOP DRAWINGS SHALL BEAR THE CONTRACTOR'S STAMP OF APPROVAL WHICH SHALL CONSTITUTE CERTIFICATION THAT THE CONTRACTOR HAS VERIFIED ALL FIELD MEASUREMENTS, CONSTRUCTION CRITERIA, MATERIALS AND SIMILAR DATA AND HAS CHECKED EACH DRAWING FOR COMPLETENESS, COORDINATION AND COMPLIANCE WITH THE CONTRACT.
   b. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE ALLOWABLE CONSTRUCTION LOADS AND TO PROVIDE PROPERLY DESIGNED FORMWORK, STAGINGS, BRACING, SHEETING, SHORING, ETC.
   c. IMPLEMENTING JOB SAFETY, CONSTRUCTION PROCEDURES AND TEMPORARY SHORING ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
   d. CONTRACTOR SHALL REFER TO ARCHITECTURAL, MECHANICAL, PLUMBING AND ELECTRICAL DRAWINGS FOR SIZE AND LOCATIONS OF OPENINGS, SLEEVES, CONCRETE HOUSEKEEPING PADS, INSERTS, AND DEPRESSIONS.
   e. SEE ARCHITECTURAL DRAWINGS AND SPECIFICATIONS FOR DETAILED INFORMATION REGARDING FINISHES, FIREPROOFING, ETC.
   f. SEE ARCHITECTURAL DRAWINGS FOR LOCATIONS OF MASONRY AND DRYWALL NON-LOAD BEARING PARTITIONS. PROVIDE SLIP CONNECTIONS THAT ALLOW VERTICAL MOVEMENT AT THE HEADS OF ALL SUCH PARTITIONS. CONNECTIONS ARE DESIGNED TO SUPPORT THE TOP OF THE WALLS LATERALLY FOR THE CODE-REQUIRED LATERAL LOAD. PROVIDE COMPRESSIBLE FIRESAFING AT TOP OF WALL AS REQUIRED BY ARCHITECTURAL DRAWINGS.
   g. IN CASE OF CONFLICT BETWEEN THE GENERAL NOTES, DETAILS AND SPECIFICATIONS, THE MOST RIGID REQUIREMENTS SHALL GOVERN.
   h. CONTRACTOR SHALL FURNISH DIMENSIONED SHOP DRAWINGS AT ALL LEVELS LOCATING FLOOR AND ROOF EDGES FOR REVIEW BY THE ARCHITECT AND STRUCTURAL ENGINEER.
   i. CONTRACTOR SHALL FURNISH DIMENSIONED COORDINATED SHOP DRAWINGS AT ALL LEVELS SHOWING THE LOCATIONS OF ALL SLEEVES AND OPENINGS REQUIRED BY ALL TRADES.

TESTING AND SPECIAL INSPECTION NOTES:

1. A SPECIAL INSPECTIONS PROGRAM SHALL BE ESTABLISHED BY THE OWNER AS REQUIRED BY CHAPTER 17 OF THE STATE BUILDING CODE. THE PROGRAM SHALL BE MANAGED BY A SPECIAL INSPECTIONS COORDINATOR TO BE HIRED BY THE OWNER OR AUTHORIZED AGENT.
2. TESTING AND INSPECTIONS SHALL BE PERFORMED FOR ALL STRUCTURAL SYSTEMS INDICATED IN THE "STATEMENT OF SPECIAL INSPECTIONS" FORM ISSUED BY STRUCTURAL ENGINEER OF RECORD. TESTING AGENCIES AND SPECIAL INSPECTOR SHALL BE APPROVED BY THE BUILDING OFFICIAL.
3. THE INSPECTIONS AND TESTING PROGRAM SHALL NOT RELIEVE THE CONTRACTOR OF THE QUALITY ASSURANCE PROVISIONS OF THE BUILDING CODE AND CONTRACT DOCUMENTS..
4. THE CONTRACTOR SHALL ARRANGE FOR THE REQUIRED INSPECTIONS WHEN WORK IS COMPLETE AND READY FOR REVIEW. WORK SHALL REMAIN ACCESSIBLE AND EXPOSED. ALLOW FOR SUFFICIENT TIME FOR THE INSPECTION AGENCY TO SCHEDULE A VISIT PRIOR TO CONCEALMENT.
5. THE SPECIAL INSPECTOR SHALL KEEP RECORDS OF INSPECTIONS. THE SPECIAL INSPECTOR SHALL FURNISH INSPECTIONS REPORTS TO THE BUILDING OFFICIAL AND TO THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE. REPORTS SHALL INDICATE THAT WORK INSPECTED WAS OR WAS NOT COMPLETED IN CONFORMANCE TO APPROVED CONSTRUCTION DOCUMENTS. DISCREPANCIES SHALL BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE CONTRACTOR FOR CORRECTION. IF THEY ARE NOT CORRECTED, THE DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE BUILDING OFFICIAL AND TO THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE PRIOR TO THE COMPLETION OF THAT PHASE OF THE WORK. A FINAL REPORT OF INSPECTIONS DOCUMENTING COMPLETION OF ALL REQUIRED SPECIAL INSPECTIONS AND CORRECTION OF ANY DISCREPANCIES NOTED IN THE INSPECTIONS SHALL BE SUBMITTED PRIOR TO THE ISSUANCE OF THE CERTIFICATE OF OCCUPANCY.
6. PRIOR TO COMMENCEMENT WORK, A PRE-CONSTRUCTION MEETING WITH THE SPECIAL INSPECTIONS COORDINATOR, TESTING AGENCIES, DESIGN TEAM, AND SUBCONTRACTORS TO REVIEW THE SPECIAL INSPECTIONS PROGRAM AND IDENTIFY ALL PARTICIPANTS' ROLES AND RESPONSIBILITIES.

TEMPORARY SHORING :

1. THE CONTRACTOR SHALL ENGAGE THE SERVICES OF A SHORING ENGINEER REGISTERED IN THE STATE WHERE PROJECT IS CONSTRUCTED TO PREPARE ALL SUBMITTALS REQUIRED AND TO BE FULLY RESPONSIBLE FOR DETAILED DESIGN AND CONSTRUCTION SPECIFICATIONS AND PROVIDE SUPERVISION DURING CONSTRUCTION OF THE TEMPORARY SHORING WORK REQUIRED.
2. THE CONTRACTOR AND CONTRACTOR'S SHORING ENGINEER SHALL DESIGN, FURNISH, INSTALL AND PERFORM THE NECESSARY WORK REQUIRED TO SAFELY SUPPORT, PROTECT AND MAINTAIN EXISTING STRUCTURE. ANY MOVEMENT OR DAMAGE OF EXISTING BUILDING OR STRUCTURE SHALL BE CORRECTED TO THE SATISFACTION OF THE OWNER AND ENGINEER AT THE SOLE EXPENSE OF THE CONTRACTOR.
3. THE CONTRACTOR'S SHORING ENGINEER SHALL PREPARE A REPORT OF THE STRUCTURAL PRECONDITION SURVEY OF THE EXISTING BUILDING. THIS ON-SITE SURVEY SHALL BE DONE IN THE PRESENCE OF A REPRESENTATIVE FOR THE OWNER OF THE EXISTING BUILDING. THIS PRECONDITION SURVEY REPORT SHALL INCLUDE A DETAILED ON-SITE INSPECTION OF THE INTERIOR AND THE EXTERIOR OF THE BUILDING WITH PHOTOGRAPHS DOCUMENTING THE EXISTING CONDITIONS OF THE BUILDING.
4. THE CONTRACTOR'S ENGINEER SHALL SUBMIT A COMPLETE SET OF SEALED, DETAILED, DESIGN SHOP DRAWINGS FOR REVIEW AND COMMENTS BY STRUCTURAL ENGINEER. THE SUBMITTAL SHALL INCLUDE ALL CONSTRUCTION SEQUENCES, METHODS, DETAILS, SPECIFICATIONS AND DESIGN LOADS AND OPERATIONS NECESSARY FOR PROPER EXECUTION OF THE TEMPORARY SHORING WORK

FOUNDATIONS & STRUCTURAL EARTHWORK:

1. GENERAL:
   a. FOUNDATIONS HAVE BEEN DESIGNED UNDER ASSUMPTION THAT BUILDING PAD AREA IS COMPACTED STRUCTURAL FILL OR UNDISTURBED VIRGIN INORGANIC SOIL CAPABLE OF PROVIDING BEARING CAPACITY INDICATED. OWNER TO HIRE A GEOTECHNICAL ENGINEER, LICENSED IN THE STATE OF CONNECTICUT, TO VERIFY SOIL CONDITIONS DURING EXCAVATION PRIOR TO CONSTRUCTION OF THE FOUNDATION. ANY DISCREPANCIES WITH NOTED FOUNDATION DESIGN ASSUMPTIONS ARE TO BE FORWARDED TO THE ARCHITECT AND ENGINEER FOR POSSIBLE FURTHER INSTRUCTIONS.
   b. CONTRACTOR SHALL VERIFY ALL EXISTING FIELD CONDITIONS THAT MAY AFFECT THE INSTALLATION OF THE FOUNDATION SYSTEM AS SHOWN PRIOR TO STARTING WORK.
   c. EXISTING UTILITIES KNOWN TO BE IN THE CONSTRUCTION AREA HAVE BEEN INDICATED. THE SIZE, LOCATION AND DEPTH OF THE UTILITIES ARE NOT KNOWN EXACTLY AND MAY VARY SIGNIFICANTLY FROM THAT INDICATED. OTHER UNKNOWN UTILITIES NOT INDICATED MAY ALSO BE PRESENT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING AND PROTECTING ALL EXISTING UTILITIES, WHETHER INDICATED OR NOT, WHICH MAY BE AFFECTED BY THE CONSTRUCTION PROCESS.
   d. ALL FOUNDATIONS SHALL BE PLACED ON UNDISTURBED FIRM, INORGANIC, VIRGIN SOIL OR COMPACTED STRUCTURAL FILL. DETERMINATION OF FINAL BEARING ELEVATIONS AND FIELD VERIFICATION OF ALLOWABLE BEARING PRESSURE SHALL BE MADE BY AN EXPERIENCED QUALIFIED GEOTECHNICAL ENGINEER PRIOR TO PLACING FOUNDATIONS.
   e. CONCRETE FOR FOUNDATIONS SHALL BE PLACED ON THE SAME DAY SUBGRADE APPROVAL IS GIVEN BY THE GEOTECHNICAL ENGINEER.
   f. ALL SHORING, SHEETING, AND DEWATERING SHALL BE THE TOTAL RESPOSIBILITY OF THE CONTRACTOR. SHEETING AND SHORING SHALL BE DESIGNED BY THE CONTRACTOR'S ENGINEER REGISTERED IN THE PROJECT'S JURISDICTION. ALL SUBMITTALS SHALL BEAR CONTRACTOR'S /ENGINEERING SEAL AND SIGNATURE.

2. BACKFILL:
   a. ALL BACKFILL SHALL BE APPROVED GRAVEL COMPACTED TO 95% OPTIMUM DENSITY IN ACCORDANCE WITH ASTM D-1557, OR AS RECOMMENDED BY EXPERIENCED, QUALIFIED, LICENSED STATE OF CONNECTICUT GEOTECHNICAL ENGINEER. DO NOT USE ON SITE MATERIAL, UNLESS TESTED AND ACCEPTED BY THE GEOTECHNICAL ENGINEER.
   b. NO BACKFILL MATERIAL SHALL BE PLACED AGAINST FOUNDATION WALLS UNTIL THE CONCRETE HAS REACHED DESIGN STRENGTH OR ADEQUATE BRACING HAS BEEN INSTALLED.
   c. WHERE THE FINAL GRADE ELEVATIONS ARE APPROXIMATELY EQUAL ON BOTH SIDES OF A WALL, BACKFILL IN LIFTS TO MAINTAIN LEVEL ELEVATIONS WITHIN 12" ON BOTH SIDES AT ANY TIME.

3. STRUCTURAL FILL:
   a. CONTROL FILL SHALL BE PROCESSED AGGREGATE BASE CONFORMING TO CONNDOT M.05.01 INSPECTION OF PLACEMENT OF COMPACTED GRAVEL FILL SHALL BE BY AN EXPERIENCED QUALIFIED GEOTECHNICAL ENGINEER.

GENERAL NOTES:

1. THE CONTRACTOR SHALL VERIFY ALL DRAWINGS FOR COORDINATION BETWEEN TRADES, AND LOCATE SLOTS, SLEEVES AND TRENCHES AS REQUIRED FOR MECHANICAL TRADES. PROVIDE AND OR INSTALL ANCHORS, INSERTS, HANGERS, ETC. AS REQUIRED FOR VARIOUS TRADES.
2. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF CONCRETE REINFORCING STEEL, STRUCTURAL STEEL, AND METAL DECK FOR REVIEW, BEFORE PROCEEDING WITH THE WORK. THE CONTRACTOR SHALL CHECK ALL DIMENSIONS AND ACCEPT FULL RESPONSIBILITY FOR DIMENSIONAL CORRECTNESS. SHOP DRAWINGS SHALL BEAR THE REVIEW AND APPROVAL STAMP OF THE CONTRACTOR, IN ACCORDANCE WITH THE GENERAL CONDITIONS.
3. THE CONTRACTOR SHALL PROMPTLY NOTIFY THE ARCHITECT IN WRITING OF ANY DISCREPANCIES BETWEEN ASSUMED CONDITIONS, ELEVATIONS, ETC. AND THOSE ACTUALLY ENCOUNTERED IN THE FIELD, OR OTHER REASONS THAT MIGHT ADVERSELY AFFECT THE INTENDED FUNCTION OF THE DESIGN, AND SHALL WAIT FOR INSTRUCTIONS BEFORE PROCEEDING WITH THE WORK.
4. STRUCTURAL PLANS SHALL NOT BE REPRODUCED IN WHOLE OR IN PART FOR USE AS SHOP DRAWINGS OR ERECTION PLANS. (THERE WILL BE NO RELAXATION OF THIS RESTRICTION FOR ANY TRADE.) REBAR DETAILER SHALL DRAW ELEVATIONS OF ALL CONCRETE WALLS WHICH SHALL INDICATE ALL POCKETS, OPENINGS, CHASES, ETC. ELEVATIONS SHALL BE DRAWN TO A MINIMUM SCALE OF 1/4"=1'-0".
5. FOR TYPES OF FINISHES ON FLOORS, WALLS, AND ROOFS, SEE ARCHITECTURAL DRAWINGS. DEPRESS OR SLOPE SLABS ON GRADE AS REQUIRED BY ARCHITECTURAL DRAWINGS.
6. REFERENCES MADE ON THESE DRAWINGS TO EXISTING CONDITIONS AND DEMOLITION MUST BE COORDINATED WITH ACTUAL CONDITIONS IN THE FIELD. SUCH REFERENCES ARE NOT INTENDED TO BE ALL INCLUSIVE OF THE WORK REQUIRED TO CONSTRUCT THE PROJECT.
7. THE TEMPORARY SUPPORT OF CONSTRUCTION MATERIALS IS RESTRICTED TO THE DESIGN CAPACITY OF THE NEW OR EXISTING CONSTRUCTION, AND SHALL BE PLACED SO AS NOT TO EXCEED THE CAPACITY OF INDIVIDUAL ELEMENTS. PROVIDE ADEQUATE, ENGINEERED SHORING/BRACING WHERE DESIGN CAPACITY IS NOT SUFFICIENT.
8. PROVIDE AND MAINTAIN TEMPORARY SHORING, BRACING, AND OTHER STRUCTURAL SUPPORTS AS NECESSARY TO PROTECT THE STRUCTURE FROM MOVEMENT, SETTLEMENT, OR COLLAPSE.
9. MEANS, METHODS, TECHNIQUES AND SEQUENCES OF CONSTRUCTION, INCLUDING JOBSITE SAFETY, SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
10. WALLS SHALL BE ADEQUATELY BRACED DURING CONSTRUCTION UNTIL WALL DESIGN STRENGTH HAS BEEN ATTAINED AND ALL PERMANENT SUPPORTS ARE IN PLACE.
11. SEE ARCHITECTURAL DRAWINGS FOR LOCATIONS OF MASONRY AND DRYWALL NON-LOAD BEARING PARTITIONS. PROVIDE SLIP CONNECTIONS THAT ALLOW VERTICAL MOVEMENT AT THE HEADS OF ALL SUCH PARTITIONS. CONNECTIONS ARE DESIGNED TO SUPPORT THE TOP OF THE WALLS LATERALLY FOR THE CODE-REQUIRED LATERAL LOAD. PROVIDE COMPRESSIBLE FIRE-SAFING, IF ANY, AT TOP OF WALL AS REQUIRED BY ARCHITECTURAL DRAWINGS.
12. THESE GENERAL NOTES SUPPLEMENT THE PROJECT SPECIFICATIONS. WHERE A DISCREPANCY OCCURS BETWEEN THESE DRAWINGS AND THE SPECIFICATIONS, THE MORE RESTRICTIVE SHALL APPLY.

CONCRETE:

1. CAST-IN-PLACE
   a. RENFORCING STEEL CLEAR COVER SHALL BE AS FOLLOWS UNLESS NOTED OTHERWISE:
      NON-POST-TENSIONED CONCRETE:

      CONCRETE CAST AGAINST AND PERMANENTLY EXPOSED TO EARTH 3"

      CONCRETE EXPOSED TO EARTH OR WEATHER
      #6 BARS AND LARGER 2"
      #5 AND SMALLER 1-1/2"
      CONCRETE NOT EXPOSED TO WEATHER OR IN CONTACT WITH GROUND
      SLABS, WALL, JOISTS:
      #11 BARS OR SMALLER 3/4"

   b. CONSTRUCTION JOINTS AND CONTROL JOINTS IN SLABS ON GRADE SHALL BE ARRANGED TO LIMIT MAXIMUM AREA BETWEEN JOINTS TO 900 S.F. APPROXIMATELY SQUARE ALLOW A MINIMUM OF 48 HOURS TIME BETWEEN PLACEMENT OF ADJACENT SECTIONS.
   c. ALL FORMWORK, SHORING AND RESHORING SHALL BE DESIGNED BY THE CONTRACTOR'S ENGINEER REGISTERED IN THE PROJECT'S JURISDICTION. ALL SUBMISSIONS SHALL BEAR THE ENGINEER'S SEAL AND SIGNATURE.
   d. NO SLEEVE SHALL BE PLACED THROUGH ANY CONCRETE ELEMENT UNLESS SHOWN ON THE STRUCTURAL DRAWINGS, APPROVED SLEEVING SHOP DRAWINGS OR SPECIFICALLY AUTHORIZED IN WRITING BY THE STRUCTURAL ENGINEER.
   e. CORE DRILLING OF FOUNDATIONS, SLABS, SHALL NOT BE PERMITTED, UNLESS AUTHORIZED IN WRITING BY THE STRUCTURAL ENGINEER.
   f. NO SPLICES OF REINFORCEMENT SHALL BE PERMITTED EXCEPT AS DETAILED OR AUTHORIZED BY THE STRUCTURAL ENGINEER. MAKE BARS CONTINUOUS AROUND CORNERS.
   g. WHEN INSTALLING EXPANSION BOLTS OR ADHESIVE ANCHORS, THE CONTRACTOR SHALL TAKE MEASURES TO AVOID DRILLING OR CUTTING OF ANY EXISTING REINFORCING AND DESTRUCTION OF CONCRETE. HOLES SHALL BE BLOWN CLEAN PRIOR TO PLACING BOLTS OR ADHESIVE ANCHORS.
   h. CHAMFER ALL EXPOSED CONCRETE CORNERS, 3/4" x 3/4" MINIMUM, UNLESS NOTED OTHERWISE ON ARCHITECTURAL DRAWINGS.
   i. THE CONCRETE SLABS SHALL BE FINISHED FLAT AND LEVEL WITHIN TOLERANCE, TO THE ELEVATIONS SHOWN ON THE DRAWINGS.
   j. PROPOSED CONSTRUCTION JOINT LOCATIONS SHALL BE SHOWN ON REINFORCING STEEL SHOP DRAWINGS. ANY STOP IN CONCRETE MUST BE MADE WITH VERTICAL BULKHEADS AND HORIZONTAL KEYS, UNLESS OTHERWISE SHOWN. ALL REINFORCING IS TO BE CONTINUOUS THROUGH JOINTS.
   k. PREMOLDED EXPANSION JOINT FILLER SHALL BE PLACED ALONG EDGES OF SLAB ON GRADE WHERE ABUTTING FOUNDATION WALLS, AND AT ALL OTHER LOCATIONS AS DETAILED.
   l. SLAB SHALL NOT HAVE JOINTS IN A HORIZONTAL PLANE UNLESS SHOWN OTHERWISE. DO NOT PLACE ELECTRICAL CONDUITS IN ANY SLAB.
   m. CONTRACTOR SHALL PREPARE DETAILED DRAWINGS SHOWING DIMENSIONS, BAR SCHEDULES, BENDING DETAILS AND PLACING DIAGRAMS AND DETAILS, FOR ALL REINFORCEMENT. DRAWINGS SHALL BE SUBMITTED FOR APPROVAL AND NO REINFORCEMENT SHALL BE PLACED BEFORE DRAWINGS ARE APPROVED.
   n. METAL REINFORCEMENT SHALL BE SECURED AGAINST DISPLACEMENT WITH SUITABLE TIES.
   o. WELDED WIRE FABRIC REINFORCEMENT SHALL BE SUPPLIED IN SHEETS. LAP TWO FULL MESH LENGTHS AT SPLICES AND WIRE TOGETHER.
   p. ALL CONTINUOUS REINFORCING BARS SHALL BE LAPPED 48 BAR DIAMETERS, UNLESS NOTED OTHERWISE.
   q. WELDED WIRE FABRIC SHALL BE PLACED IN THE UPPER 1/3 OF THE SLAB ON GRADE AND SHALL CONFORM TO SECTION "MATERIALS" ITEM #5 ON THIS DRAWING.
   r. THIS CONTRACT INCLUDES ALL LABOR, MATERIALS, EQUIPMENT AND APPLIANCES NECESSARY TO COMPLETE ALL CAST-IN-PLACE CONCRETE AS INDICATED ON THE DRAWINGS OR HEREINAFTER SPECIFIED.
   s. ANCHOR BOLTS, LEVELING PLATES, SLEEVES, INSERTS, HANGERS, ETC. FURNISHED UNDER OTHER DIVISIONS AND REQUIRED TO BE CAST INTO THE CONCRETE SHALL BE SET BY THIS CONTRACTOR WHERE REQUIRED.
   t. PROVIDE ALL CONCRETE BASES, CURBS, MATS, PADS, TRENCHES, SLOTS, OPENINGS, ETC., AS REQUIRED BY ANY OR ALL OF TRADES TO ACCOMMODATE EQUIPMENT OR WORK OF ALL THE DIVISIONS.
   u. MATERIALS AND OPERATIONS SHALL BE TESTED AND INSPECTED AS WORK PROGRESSES. FAILURE TO DETECT DEFECTIVE WORK SHALL NOT PREVENT REJECTION WHEN DEFECT IS DISCOVERED.
   v. PROVIDE 1.) WATER SHALL BE FRESH, DRINKABLE 2.) AIR-ENTRAINING AGENT: CONFORMING TO ASTM C260 3.) WATER-REDUCING, SET-CONTROLLING ADMIXTURE CONFORMING TO ASTM C494 MANUFACTURED BY MASTER BUILDERS, SONNEBORN, EUCLID, OR W.R. GRACE COMPANIES.
   w. GROUT: NON-SHRINK "SETGROUT" AS MANUFACTURED BY MASTER BUILDERS.
   x. VAPOR RETARDER: SHALL BE INSTALLED UNDER CONCRETE SLABS ON GRADE WHERE INDICATED AND SHALL BE 15 MIL POLYETHYLENE. IT SHALL BE INSTALLED IN WIDEST PRACTICAL WIDTH. ALL JOINTS SHALL BE LAPPED A MINIMUM OF SIX (6) INCHES, AND ALL BREAKS OR HOLES SHALL BE PATCHED PRIOR TO POURING THE CONCRETE. WATER VAPOR RETARDER: ASTM E-1745 THAT MEETS OR EXCEEDS CLASS C.
   y. EXPANSION JOINT: CONFORMING TO ASTEM D 1751 OR ASTM D 1752.
   z. CONCRETE SHALL BE PROPORTIONED AND PRODUCED TO HAVE A SLUMP NOT TO EXCEED 4 IN. IF CONSOLIDATION IS BY VIBRATION OR 5 IN. IF CONSOLIDATION BY OTHER MEANS.
   z1. MAXIMUM SIZE OF COARSE AGGREGATE SHALL NOT EXCEED ONE-THIRD THE THICKNESS OF SLABS, AND ONE-FIFTH THE NARROWER DIMENSION BETWEEN FORMS.
   z2. CONCRETE SHALL BE ADJUSTED TO PRODUCE THE REQUIRED RATE OF HARDENING FOR VARIED CLIMATIC AND JOB-SITE CONDITIONS.
   z3. CONCRETE SHALL BE HANDLED FROM MIXER TO FINAL PLACEMENT RAPIDLY BY METHODS WHICH WILL PREVENT SEGREGATION OT LOSS OF INGREDIENTS TO MAINTAIN REQUIRED QUALITY OF CONCRETE.
   z4. USE OF VIBRATORS TO TRANSPORT CONCRETE SHALL NOT BE ALLOWED.
   z5. IMMEDIATELY FOLLOWING PLACEMENT, CONCRETE SHALL BE PROTECTED FROM PREMATURE DRYING, HOT AND COLD TEMPERATURES, RAIN, FLOWING WATER AND MECHANICAL INJURY.
   z6. FORMS FOR WALLS SHALL BE LEFT IN PLACE FOR A MINIMUM OF 3 DAYS. FINAL CURING SHALL CONTINUE FOR NOT LESS THAN 7 DAYS.
   z7. ALL INTERIOR CONCRETE FLOOR SLABS SHALL BE STEEL TROWELED TO A SMOOTH UNIFORM FINISH, FREE FROM DEFECTS AND BLEMISHES, NOTHING TO BE ADDED TO EITHER WET OR DRY FINISH. STEEL TROWELING SHALL NOT BE DONE UNTIL CONCRETE HAS HARDENED SUFFICIENTLY TO PREVENT FINE MATERIAL FROM WORKING TO THE SURFACE. ALL EXTERIOR CONCRETE FLOOR SLABS SHALL HAVE A BROOM FINISH.
   z8. WHERE DRAINS ARE INDICATED, ALL FLOOR SLABS SHALL SLOPE MINIMUM 1/8-INCH PER FOOT DOWN TO FLOOR DRAINS, AND THE FLOOR SLABS ON THE EQUIPMENT STORAGE ROOMS SHALL SLOPE DOWN TO DOORS A MINIMUM 1/8-INCH PER FOOT.
   z9. CONCRETE SHALL BE PROTECTED FROM DAMAGE. DAMAGED CONCRETE SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF CONCRETE SLABS ON GRADE THROUGH WINTER WEATHER. IF THEY SHOULD HEAVE DUE TO COLD WEATHER, THEY SHALL BE REMOVED AND REPLACED. ALL FILL BELOW THE SLABS SHALL BE REMOVED AND REPLACED.
   z10. COORDINATE WITH DRAWINGS, SECTIONS AND SPECIFICATIONS FOR ALL UNDERSLAB AND EXTERIOR FOUNDATION WALL WATERPROOFING REQUIREMENTS.
   z11. PATCH ALL VOIDS IN EXISTING CONCRETE, INCLUDING INFILL OF CONDUIT PENETRATIONS LESS THAN 12 INCHES WIDE, WITH SIKADUR 32, HI-MOD EPOXY BONDING/GROUTING ADHESIVE AND SIKAGRETE 211 POURABLE CONCRETE MIX. FOLLOW ALL MANUFACTURER GUIDELINES FOR PROPER INSTALLATION. PROVIDE PROPER FORMWORK BELOW RAISED HOLES TO BE PATCHED CAPABLE OF SUPPORTING THE WET CONCRETE MIX TIMES A SAFETY FACTOR OF 1.5.

STRUCTURAL STEEL:

1. GENERAL:
   a. ALL SHOP AND FIELD CONNECTIONS SHALL BE MADE WITH HIGH STRENGTH BOLTS OR WELDS. ALL HIGH STRENGTH BOLTS AND NUTS SHALL BE CLEARLY MARKED AS REQUIRED BY AISC SPECIFICATIONS. CONNECTIONS MADE WITH UNMARKED BOLTS AND NUTS WILL BE REJECTED.
   b. PROVIDE ACCESS FOR INSPECTIONS OF ALL SHOP AND FIELD CONNECTIONS FOR PROPER MATERIALS AND WORKMANSHIP.
   c. ALL CONNECTIONS, SPLICES AND ERECTION PIECES SHALL BE DESIGNED BY THE FABRICATOR'S ENGINEER REGISTERED IN THE PROJECT'S JURISDICTION. STRUCTURAL STEEL FABRICATOR SHALL BE RESPONSIBLE FOR DESIGNING ALL BEAM SHEAR CONNECTIONS AND ALL NEW BEAM TO COLUMN MOMENT CONNECTIONS, INCLUDING STIFFENERS, HORIZONTAL TUBE COLUMN THROUGH-PLATES, AND WEB DOUBLER PLATES, IF REQUIRED (SHEAR AND MOMENT VALUES ARE INDICATED ON THE FRAMING PLANS- VALUES ARE IN ASD). WHEN PROVIDING CONNECTIONS, ALL AISC CODE REQUIREMENTS SHALL BE MET, AS APPLICABLE (I.E., NET SECTION, BLOCK SHEAR, ETC.,) FOR THE MEMBERS AND GUSSET PLATES. CALCULATIONS AND SHOP DRAWINGS FOR ALL CONNECTIONS SHALL BE SUBMITTED BEARING THE ENGINEER'S SEAL AND SIGNATURE.
   d. ALL STRUCTURAL STEEL THAT IS LOCATED IN EXTERIOR UNHEATED SPACES, INCLUDING STEEL DIRECTLY EXPOSED TO WEATHER, SHALL BE HOT DIPPED GALVANIZED. ALL OTHER STEEL TO HAVE ONE COAT OF SHOP PRIMER (2 COATS FOR STEEL SUPPORTING GLASS FLOORS.) FOR EXPOSED STRUCTURAL STEEL, COLOR TO BE APPROVED BY ARCHITECT (COORDINATE WITH SPECIFICATIONS AND ARCHITECTURAL DRAWINGS FOR EXACT LOCATION AND COLOR).
   e. CERTIFIED COPIES OF MILL TEST REPORTS SHALL BE SUBMITTED TO THE STRUCTURAL ENGINEER.
   f. THE CONTRACTOR SHALL NOTIFY THE STRUCTURAL ENGINEER OF ANY FABRICATION OR ERECTION ERRORS OR DEVIATIONS AND RECEIVE WRITTEN APPROVAL BEFORE ANY FIELD CORRECTIONS ARE MADE.
   g. SIMPLE SHEAR CONNECTIONS SHALL BE SELECTED AND DETAILED BY THE FABRICATOR IN ACCORDANCE WITH AISC. IF NO REACTION IS INDICATED, THEN CONNECTION IS TO BE DESIGNED USING A REACTION OF 10 KIPS. MINIMUM WELD 3/16" FILLET. MINIMUM NUMBER OF BOLTS PER CLIP ANGLE OR SINGLE PLATE CONNECTION:

BEAM SIZE	MIN. NO. OF BOLTS
W 8, W10	2
W12, W14	3
W16, W18	4
W21, W24	5

   h. UNLESS OTHERWISE NOTED, ALL A325 BOLTS SHALL BE TIGHTENED TO THE "SNUG TIGHT" CONDITION DEFINED AS THE TIGHTNESS ATTAINED BY A FEW IMPACTS OF AN IMPACT WRENCH OR THE FULL EFFORT OF A PERSON USING AN ORDINARY SPUD WRENCH. THE SNUG TIGHT CONDITION MUST ENSURE THAT THE PLIES OF THE CONNECTED MATERIAL HAVE BEEN BROUGHT INTO SNUG CONTACT.
   i. THE FABRICATOR AND ERECTOR ARE RESPONSIBLE FOR THE DESIGN OF TEMPORARY BRACING AND RECOMMENDED ERECTION PROCEDURES.
   j. WHEN INSTALLING EXPANSION BOLTS OR ADHESIVE ANCHORS, THE CONTRACTOR SHALL TAKE MEASURES TO AVOID DRILLING OR CUTTING OF ANY EXISTING REINFORCING AND DESTRUCTION OF CONCRETE. HOLES SHALL BE BLOWN CLEAN PRIOR TO PLACING BOLTS OR ADHESIVE ANCHORS.
   k. WELDING ELECTRODES, WELDING PROCESS, MINIMUM PREHEAT AND INTERPASS TEMPERATURES SHALL BE IN ACCORDANCE WITH THE AISC AND AWS SPECIFICATIONS. ANY STRUCTURAL STEEL DAMAGED IN WELDING IS TO BE REPLACED OR REINFORCED AS ACCEPTABLE TO THE STRUCTURAL ENGINEER.
   l. WELDERS SHALL HAVE CURRENT EVIDENCE OF PASSING THE APPROPRIATE AWS QUALIFICATION TESTS.
   m. GAS CUTTING TORCHES SHALL NOT BE USED TO CORRECT FABRICATION ERRORS WITHOUT THE APPROVAL OF THE STRUCTURAL ENGINEER.
   n. STEEL FABRICATOR SHALL BE QUALIFIED FABRICATOR CERTIFIED IN THE AISC QUALITY CERTIFICATION PROGRAM AND IS A DESIGNATED AISC-CERTIFIED PLANT.
   o. **MATERIAL SPECIFICATIONS AS FOLLOWS:**

WIDE FLANGE SHAPES AND TEES:	ASTM A992, Fy = 50 ksi.
ANGLES, CHANNELS, AND PLATES:	ASTM A36, Fy = 36 ksi, UNLESS NOTED OTHERWISE.
SQUARE AND RECTANGULAR HOLLOW STRUCTURAL SECTIONS:	ASTM A1085 (50 ksi.) OR ASTM A500 GRADE C
BOLTS:	MIN. 3/4" DIAMETER ASTM A325 WITH BUILT-IN TENSION CONTROLLED SPLINE.
WELDING:	E-70XX ELECTRODES PERFORMED BY CERTIFIED WELDERS IN ACCORDANCE WITH AWS D1.1
ANCHOR BOLTS:	ASTM F1554, GRADE 36, WITH HEAVY PLATE WASHERS.

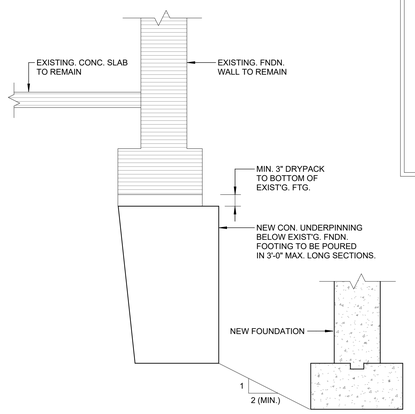
NTS



UNDERPINNING NOTES:

1. THE UNDERPINNING DETAIL IS INTENDED TO BE USED WHEN SOIL CONDITIONS ARE CONDUCIVE TO UNDERPINNING, i.e. DENSE GRANULAR OR GRAVELLY SOILS OR STIFF COHESIVE SOILS. IF SOILS OTHER THAN THESE, SUCH AS LOOSE SANDS, SOFT CLAYS, OR FILL ARE ENCOUNTERED, CONTACT THE OWNER'S AND CONTRACTOR'S ENGINEERS FOR ALTERNATE INSTRUCTIONS TO BE TAILORED TO THE SPECIFIC CONDITIONS ENCOUNTERED.
2. THE TECHNIQUE CONSISTS OF DIGGING SOIL FROM BENEATH THE EXISTING WALL/FOOTING AND REPLACING IT WITH CONCRETE IN SECTIONS OR COLUMNS, ONE AT A TIME, IN SEQUENCE "A", THEN "B" AND THEN "C" DOWN TO THE PROPOSED BOTTOM OF FOOTING ELEVATION.
3. INITIAL EXCAVATION IS DOWN TO BOTTOM OF EXISTING FOUNDATION. EXCAVATION FOR UNDERPINNING COLUMN "A" MAY THEN BEGIN. ONCE THE UNDERPINNING CONCRETE IS CAST, GROUT SOLID TO BOTTOM OF EXIST. FOOTING, AND CURED 48 HOURS, THEN EXCAVATION FOR COLUMN "B" MAY COMMENCE. ETC.
4. GROUT FOR SPACE BETWEEN EXISTING FOUNDATIONS AND NEW CONCRETE: APPLY SIKA "SIKADUR 32 HI-MOD LPL" EPOXY BONDING AGENT TO BOTH THE BOTTOM OF THE EXISTING FOUNDATION AND THE TOP OF THE NEW UNDERPINNING CONCRETE. PACK SIKA "SIKAGROUT 212" OR APPROVED EQUIVALENT WHILE BONDING AGENT IS STILL TACKY.

FOUNDATION PLAN NOTES:

1. PATCHED AREAS OF EXISTING CONCRETE SLAB ON GRADE (INCLUDING TRENCHES COORDINATED W/ NEW UNDERGROUND PLUMBING) ARE TO BE A MINIMUM OF 4" THICK (MATCH EXISTING) REINFORCED WITH 6x6 - W2.9xW2.9 WELDED WIRE MESH CAST ON A 15 MIL VAPOR PATCHED INTO EXISTING VAPOR RETARDER (IF PRESENT). VAPOR RETARDER TO BE PLACED OVER A MINIMUM 8" LAYER OF COMPACTED STRUCTURAL FILL OR COMPACTED CRUSHED STONE. TRENCHES OR EXCAVATED AREAS ARE TO BE BACKFILLED WITH COMPACTED STRUCTURAL FILL OVER NATURAL SOILS. SEE DETAIL 7/S0.2.
2. THE PROJECT DOES NOT HAVE A GEOTECHNICAL INVESTIGATION FOR THIS PROJECT SITE. EXISTING SOILS ARE ASSUMED TO BE SITE CLASS "D" ACCORDING TO ASCE 7-16 SECTION 11.4.3 "SITE CLASS". THE ASSUMED ALLOWABLE SOIL BEARING PRESSURE WITHIN THE BUILDING FOOTPRINT IS 3000 POUNDS PER SQUARE FOOT (PSF).
3. ZERO DATUM FOR ALL ELEVATIONS GIVEN ON THIS PLAN IS FINISHED FLOOR ELEVATION = 0' - 0" (SITE EL. 262.96')
4. T.W.E. (. . . .) INDICATES TOP OF WALL ELEVATION REFERENCING DISTANCE ABOVE OR BELOW ELEVATION 0' - 0".
5. B.F.E. (. . . .) INDICATES BOTTOM OF FOOTING ELEVATION REFERENCING DISTANCE ABOVE OR BELOW ELEVATION 0' - 0".
6. COORDINATE THE BOTTOM OF FOOTING ELEVATIONS WITH UTILITIES. NOTIFY ARCHITECT AND / OR ENGINEER OF CONFLICTS FOR FURTHER INSTRUCTIONS. ALL PLUMBING INVERTS SHOWN ON STRUCTURAL PLANS ARE FOR GENERAL REFERENCE ONLY. FINAL INVERT ELEVATIONS ARE TO BE COORDINATED WITH PLUMBING DRAWINGS & SITE UTILITIES & DRAINAGE PLANS.
7. COLUMN PIERS ARE INDICATED ON THE DRAWINGS. FOR REINFORCING INFORMATION INCLUDING BAR SIZE, QUANTITY, TIE SIZE AND TIE SPACING INSTRUCTIONS REFER TO THE PIER SCHEDULE.
8. ELEVATION OF THE TOP OF CONCRETE COLUMN PIERS AND BUTTRESSES SUPPORTING NEW STEEL COLUMNS ARE AT THE ELEVATIONS LISTED ON THE COLUMN SCHEDULE NOTES AND PIER DETAILS.
9. THE STRUCTURAL CONDITIONS WHERE SECTIONS AND DETAILS ARE CUT AT PARTICULAR LOCATIONS, SHALL APPLY TO COMPARABLE SIMILAR CONDITIONS ELSEWHERE ON PLAN.
10. SEE DWG. S2.6 FOR SHEAR WALL INFORMATION.

6/4/2026 3:47:47 PM

UNIT SUPPORT NOTES:

1.(E) ROOF DECK PROFILE IS STANDARD METAL ROOF DECK COMPOSITION - V.I.F.
2.CUT EXISTING ROOFING, MINIMALLY, AS REQUIRED TO INSTALL STRUCTURAL ELEMENTS I.E. ANGLES/CHANNELS/BEAMS. COORDINATE EXACT LOCATIONS WITH MECH. CONTRACTOR. PROVIDE PROPER FLASHING AND WATERPROOFING AFTER NEW ELEMENTS ARE INSTALLED TO PROVIDE A WATERTIGHT ENCLOSURE (COORDINATE WITH ARCHITECT).
3.ALL STEEL AND CONNECTIONS EXPOSED TO THE ELEMENTS ARE TO BE HOT-DIPPED GALVANIZED.
4.CONTRACTOR TO VERIFY EXISTING STRUCTURAL ELEMENTS IN FIELD AND COORDINATE WITH MECH. DWGS. TO LOCATE THE UNIT CORRECTLY.
5.IF AT EXISTING UNIT SUPPORTS - CONTRACTOR TO VERIFY IN FIELD THE RTU FRAMING IS SUPPORTED BY MIN. „5"X3-1/2"X5/16" LLV OR BETTER . IF NOT, PLEASE UPDATE EXISTING ANGLE ON EACH SIDE OF OPENING.
6.CONTRACTOR TO NOTIFY IF THERE IS ANY DISCREPANCY FOUND TO THE STRUCTURAL ENGINEER OF RECORD.
7.IF NEW DECK INFILL IS REQUIRED: NEW INFILL ROOF DECK PROFILE TO MATCH EXIST. DECK TO SPAN BETWEEN EXISTING OR NEW SUPPORT ANGLE FRAMES. REFER TO ROOF IN-FILL DETAIL FOR MORE INFORMATION.
8.EXISTING JOIST "X" BRIDGING THAT CONFLICTS WITH NEW MECHANICAL DUCT RUNS IS TO BE CONVERTED TO PARALLEL BRIDGING AT TOP AND BOTTOM CHORD. BRIDGING REMOVAL IS NOT PERMITTED WITHOUT CONSENT OF THE ENGINEER OF RECORD.
9.ALL DETAILS ARE CONSIDERED TYPICAL AND APPLY AT SAME AND SIMILAR CONDITIONS WITHIN THE PROJECT SCOPE.
10. SUPPORT FRAMES ARE REQUIRED BENEATH ALL ROOF TOP UNIT (RTU) CURBS AND ROOF PENETRATIONS FOR DUCT AND OTHER MECHANICAL EQUIPMENT. ALL SUPPORT LOCATIONS TO BE COORDINATED WITH NEW RTU LOCATIONS. SEE MECH. AND ARCH. DWGS. FOR LOCATIONS. EXISTING UNDERSIZED OR CONFLICTING ANGLES ARE TO BE REMOVED AND REPLACED SIZED AS SHOWN IN DETAILS.
11. ALL NEW SUPPORT FRAMING IS TO BE INSTALLED TIGHT TO UNDERSIDE OF EXIST. ROOF DECK U.N.O.
12. ALL EXISTING STEEL IS TO BE VERIFIED IN FIELD PRIOR TO FABRICATION / INSTALLATION.
13. **UNLESS NOTED OTHERWISE, REINFORCING REQUIRED AT ALL CONCENTRATED LOADS WHERE NEW FRAMES DO NOT FALL ON PANEL POINTS - SEE TYPICAL DETAILS R4A AND R4B / S0.4**

RTU SUPPORT SCHEDULE:

L1 - INDICATES L5x5x5/16 DECK SUPPORT. DECK SUPPORT ANGLES PERPENDICULAR TO EXISTING FRAMING TO BE SEGMENTED BETWEEN MEMBERS AS NECESSARY (FIELD VERIFY).
L2 - INDICATES L5x3x5/16 (LLV) DUCT SUPPORTS WELDED TO BOTTOM OF HSS 6x3x1/4 AND L5x5 DECK SUPPORTS (V.I.F.)
L3 - L5x3x5/16 x 0'-6" LG. (LLV) CLIFF HANGER

EX. WIDE FLANGE BEAM AND OPEN WEB STEEL JOIST REINFORCING SCHEDULE:

R1 - REFERS TO STEEL BEAM REINFORCING WITH STEEL CHANNEL.
R2 - REFERS TO TOP CHORD AND WEB REINFORCING WITH ANGLES, AND BOTTOM CHORD REINFORCING WITH PLATE AND 3/4" DIA. ROUND STEEL BARS OR ANGLES.
R3 - REFERS TO SHEAR REINFORCING DETAIL FOR OPEN WEB STEEL JOISTS

REFER TO TYPICAL DETAIL SHEET S0.4, "JOIST REINFORCING" FOR TYPICAL OPEN WEB STEEL JOIST REINFORCING DETAILS

UNIT WEIGHTS:

UNIT	DESIGN WEIGHT
DOAS-1	2370#
DOAS-2	2704#
DOAS-3	1592#
DOAS-4	1246#
DOAS-5	1246#
DOAS-6	2372#
RTU-1	1347#
RTU-2	950#
RTU-3	1341#

NOTE: ALL UNIT DESIGN WEIGHTS SHOWN TO BE COORDINATED WITH MEP AND ANY DISCREPANCIES ARE TO BE BROUGHT TO THE ATTENTION OF THE STRUCTURAL ENGINEER

ROOF FRAMING PLAN NOTES:

1. ZERO DATUM FOR ALL ELEVATIONS GIVEN ON THIS PLAN IS FINISHED FLOOR ELEVATION = 0' - 0" (SITE EL. 262.96')
2. ELEVATION OF TOP OF STRUCTURAL STEEL ELEMENTS:

   1956 & 1963 EXISTING BUILDING: TOP OF STEEL = +10' - 4 1/2" AFF (V.I.F.)
   1985 EXISTING BUILDING: TOP OF STEEL = +10' - 4 1/2" AFF (V.I.F.)
3. ELEVATION OF TOP OF STRUCTURAL STEEL BEAMS IS SHOWN [+. . . .] ON PLAN INDICATING DISTANCE ABOVE DATUM. SLOPE (IF ANY) IS INDICATED BY "SLOPED" OR "SL" ON PLAN. SLOPE STEEL PARALLEL TO WORKING POINT ELEVATIONS GIVEN ON PLAN, OR AS DETERMINED FROM DETAILS. ALL EXISTING BUILDING T.O.S. ELEVATIONS AND DIMENSIONS TO BE FIELD VERIFIED.
4. NEW ROOF CONSTRUCTION IS 1 1/2" DEEP, 20 GAUGE, TYPE "B", GALVANIZED METAL ROOF DECK UNLESS OTHERWISE NOTED.
5. LARGE PORTIONS OF THE EXISTING BUILDING HAVE ROOF LEAKS THAT HAVE BEEN ACTIVE FOR SOME TIME. ONCE THE EXISTING FINISHED ROOF MATERIAL AND ROOF INSULATION HAS BEEN STRIPPED AND REMOVED, THE EXISTING ROOF DECK IS REQUIRED TO BE INSPECTED FOR DAMAGE, RUST, OR DETERIORATION.

   SECTIONS OF DETERIORATED DECK WILL REQUIRE REPLACEMENT, RE-FASTENING AND/OR REPAIR DEPENDING ON THE SEVERITY OF THE EXISTING DAMAGE.

   1954 BUILDING ROOF DECK IS 1 1/2" DEEP, 20 GA. ROOF DECK
   1963 BLDG. ADDITIONS ARE 1 1/2" DEEP, UNKNOWN THICKNESS ROOF DECK
   1985 BDLG. ADDITIONS ARE 1 1/2" DEEP, 20 GA. WIDE RIB ROOF DECK
6. LOCATIONS WHERE EXISTING ROOF OPENINGS ARE TO BE ABANDONED AND COVERED OVER, ARE REQUIRED TO BE FILLED IN WITH 1 1/2" DEEP, 20 GA. TYPE "B" GALVANIZED METAL ROOF DECK.
7. ATTACH ROOF DECK WITH MECHANICAL FASTENERS.
8. PROVIDE STEEL ANGLE FRAMES AROUND ALL ROOF OPENINGS FOR ROOF DRAINS, MECHANICAL VENTILATION, AND HATCHES. FOR OPENINGS SMALLER THAN 12", SEE METAL ROOF DECKING SPECIFICATION FOR DECK REINFORCING. FRAMES SHOWN, HAVE NOT BEEN SIZED NOR LOCATED EXACTLY. CONTRACTOR SHALL ESTABLISH SIZE AND LOCATION WITH ARCHITECTURAL AND MECHANICAL DRAWINGS.
9. THE STRUCTURAL CONDITIONS WHERE SECTIONS AND DETAILS ARE CUT AT PARTICULAR LOCATIONS, SHALL APPLY TO COMPARABLE SIMILAR CONDITIONS ELSEWHERE ON PLAN.
10. ADD-ALTERNATE No.1 - ROOF SCREENS

    ADD-ALTERNATE INCLUDES COMPONENTS OF ROOF SCREEN FRAME AND BELOW ROOF SUPPORTS, INCLUDING EXISTING STEEL JOIST REINFORCING, UNLESS OTHERWISE NOTED ON PLANS.

S1 CONTRACTOR TO PROVIDE SHORING FOR EXISTING W12 GIRDERS WHERE INDICATED. SHORING IS REQUIRED TO PROVIDE WORKING ACCESS TO REMOVE THE EXISTING COLUMN AND EXISTING FOUNDATION BELOW.

ACOUSTICAL GENERAL NOTES

1. PROVIDE A MINIMUM OF 10'-0" OF 1" THICK ACOUSTICAL DUCT LINER UPSTREAM AND DOWNSTREAM OF EACH GENERAL DEDICATED OUTDOOR AIR SYSTEM (DOAS-) AND ROOFTOP UNIT (RTU-).
2. PROVIDE A MINIMUM OF 5'-0" OF 1" THICK ACOUSTICAL DUCT LINER UPSTREAM AND DOWNSTREAM OF ALL HORIZONTAL DUCTED FAN COIL UNITS.
3. ALL SUPPLY, RETURN AND EXHAUST DIFFUSERS AND GRILLES SHALL BE SELECTED AT 25 NC OR LOWER.
4. LOCATE ALL VOLUME DAMPERS A MINIMUM OF 6'-0" TO 8'-0" FROM DIFFUSERS AND GRILLES. IF DUCT IS SHORTER THAN 6'-0", LOCATE IT AS FAR AWAY AS POSSIBLE.

HVAC SYMBOLS

	RECTANGULAR, FLAT OVAL OR ROUND AIR DUCT
	AIR DUCT WITH ACOUSTICAL LINING
	SUPPLY AIR DUCT UP
	SUPPLY AIR DUCT DOWN

	PRESSURE REDUCING VALVE
	TRIPLE DUTY VALVE
	OS&Y VALVE
	DRAIN VALVE WITH HOSE END, CAP & CHAIN OR WALL HYDRANT / HOSE BIBB
M	MOTORIZED BUTTERFLY VALVE
	PRESSURE RELIEF SAFETY VALVE
A	AQUASTAT
T	TEMPERATURE SENSOR WITH SEPARABLE SOCKET IN IMMERSIBLE WELL
T	TEMPERATURE GAUGE WITH SEPARABLE SOCKET IN IMMERSIBLE WELL
T	THERMOMETER WITH SEPARABLE SOCKET IN IMMERSIBLE WELL
P	PRESSURE GAUGE
P	PRESSURE SENSOR WITH SYPHON (STEAM)
	FLEXIBLE CONNECTOR
	DUCT SIZING
20x12	RECTANGULAR DUCT
20/12	FLAT OVAL DUCT
20"ø	ROUND DUCT

HVAC GENERAL NOTES

1. ALL WORK SHALL BE PERFORMED IN COMPLIANCE WITH CURRENT APPLICABLE CODES, ORDINANCES, THE REGULATORY AGENCIES HAVING JURISDICTION AND THE SPECIFICATIONS. THE SPECIFICATIONS MAY EXCEED THE REQUIREMENTS OF THE CODE, IN WHICH CASE, THE SPECIFICATION MUST BE FOLLOWED.
2. THE INTENT OF THESE DOCUMENTS IS FOR THE MEP TRADES TO FURNISH AND INSTALL COMPLETE MECHANICAL AND ELECTRICAL SYSTEMS. THE SPECIFIED HVAC SYSTEM SHALL BE COMPLETE IN ALL RESPECTS; OPERATIONAL, TESTED, ADJUSTED, APPROVED BY THE AUTHORITIES HAVING JURISDICTION AND READY FOR BENEFICIAL USE BY THE OWNER.
3. THE TRADES SHALL OBTAIN AND REVIEW ALL CONTRACT DOCUMENTS BEFORE SUBMITTING A BID. INFORMATION IS PROVIDED ON THE VARIOUS DRAWINGS, SCHEDULES, SPECIFICATIONS AND ALL OF THE VARIOUS DOCUMENTS IN THE BIDDING PACKAGE. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY AND FORM A TOTAL PROJECT DESIGN AND INFORMATION SOURCE FOR CONSTRUCTION PURPOSES.
4. THE DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL ARRANGEMENT OF SYSTEMS AND WORK INCLUDED IN THE CONTRACT. COORDINATE LOCATIONS OF EQUIPMENT WITH OTHER TRADES BEFORE AND DURING CONSTRUCTION. ANY MODIFICATION TO THE EQUIPMENT LAYOUT, REQUIRED FOR INSTALLATION, IS TO BE PERFORMED UNDER THE CONTRACT AGREEMENT, AT NO ADDITIONAL COST. REFER TOP DETAILS, SCHEDULES AND SPECIFICATIONS FOR ADDITIONAL INFORMATION.
5. THE CONTRACTOR SHALL BECOME THOROUGHLY FAMILIAR WITH THE PROJECT DOCUMENTS OF ALL TRADES. THE DRAWINGS ARE DIAGRAMMATIC AND SHOW THE GENERAL ARRANGEMENT OF EQUIPMENT AND PIPING. THE CONTRACTOR SHALL COORDINATE THE EXACT LOCATION OF EQUIPMENT AND PIPING INSTALLATION WITH ALL THE TRADES BEFORE COMMENCING WORK.
6. EQUIPMENT SHALL BE INSTALLED IN ACCESSIBLE LOCATIONS, WHEN EQUIPMENT MUST BE LOCATED ABOVE AN INACCESSIBLE CEILING (GYP BOARD OR EQUIVALENT), OR BEHIND A WALL, AN APPROPRIATE ACCESS DOOR SHALL BE PROVIDED. IF AN ACCESS DOOR IS REQUIRED, IT SHALL BE OF A RATING APPROPRIATE FOR THE WALL/CEILING IN WHICH IT IS TO BE INSTALLED. THE CONTRACTOR SHALL COORDINATE LOCATIONS OF ACCESS PANELS FOR ALL VALVES AND DEVICES, REQUIRING ACCESS, WITH THE ARCHITECT, PRIOR TO INSTALLATION OF SUCH DEVICES OR OTHER APPURTENANCES.
7. WHERE A CONFLICT OCCURS BETWEEN THE DOCUMENTS, IT SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT. CARRY AS PART OF THE BID THE LARGER QUANTITY AND/OR MORE EXPENSIVE ITEM(S).
8. THIS CONTRACT SHALL INCLUDE ALL THE NECESSARY PIPING, FITTINGS, TRANSITIONS ETC. AS REQUIRED TO INSTALL PIPING AND EQUIPMENT, AND TO AVOID ANY CONFLICTS WITH OTHER TRADES AND THE BUILDING STRUCTURE. THE CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY ASSUMPTIONS, OMISSIONS OR ERRORS HE MAKES AS A RESULT OF HIS FAILURE TO COORDINATE WITH OTHER TRADES OR BECOME FULLY FAMILIAR WITH THE PROJECT DOCUMENTS OF ALL TRADES.
9. DO NOT INSTALL ANY PIPING OVER ELECTRICAL PANELS, TRANSFORMERS, SPECIAL EQUIPMENT, OR THROUGH ELECTRICAL ROOMS, DATA ROOMS, ELEVATOR MACHINE ROOM, STAIRWELL OR STAIRWELL WALLS THAT ARE NOT ASSOCIATED WITH OR SERVE THE RESPECTIVE ROOMS. COORDINATE THE LOCATION OF ELECTRICAL EQUIPMENT IN THE FIELD AND ADJUST AS NECESSARY.
10. INSTALL SMOKE DETECTORS IN BOTH SUPPLY & RETURN AIR DUCTS FOR AIR HANDLING EQUIPMENT 2,000 CFM AND GREATER.
11. PROVIDE SMOKE DAMPERS IN BOTH SUPPLY & RETURN AIR DUCTS FOR AIR HANDLING EQUIPMENT 15,000 CFM AND GREATER.
12. PROVIDE SMOKE DAMPERS AND SMOKE DETECTORS AT DUCT PENETRATIONS OF SMOKE-BARRIERS, AND AT ELEVATOR SHAFT VENTS PER CODE REQUIREMENTS.
13. PROVIDE FIRE DAMPERS AT DUCT PENETRATIONS OF FIRE-RATED CONSTRUCTION, INCLUDING WALLS, SHAFTS AND FLOOR PENETRATIONS. COORDINATE WITH ARCHITECTURAL DRAWINGS.
14. PROVIDE AN AUTOMATIC TEMPERATURE CONTROL SYSTEM COMPLETE IN ALL REGARDS. ALL ZONES, VAV'S AND SYSTEM SHALL BE THERMOSTATICALLY CONTROLLED. REVIEW THE PLANS AND SPECIFICATIONS OF ALL MEP TRADES FOR A COMPLETE SCOPE OF THE WORK.
15. PIPING SHALL BE SUPPORTED FROM STRUCTURE ABOVE. TO MAXIMIZE HEAD ROOM, INSTALL PIPING TIGHT TO BOTTOM OF BEAMS WHEN RUNNING PERPENDICULAR TO BEAM; INSTALL PIPING TIGHT TO FLOOR SLAB WHEN RUNNING PARALLEL TO BEAM; PROVIDE ALL NECESSARY FITTINGS AND TRANSITIONS.
16. PROVIDE THROTTLING VALVES AND SHUT-OFF VALVES AS INDICATED IN SPECIFICATIONS IN ADDITION TO THOSE INDICATED ON THE DOCUMENTS.
17. INSTALL ALL EQUIPMENT VALVES AS REQUIRED BY MANUFACTURERS INSTRUCTIONS AND RECOMMENDATIONS AND AS DETAILED.
18. PROVIDE AIR VENTS AT ALL HIGH POINTS AND DRAINS AT ALL LOW POINTS.
19. PROVIDE PRESSURE RELIEF DOORS FOR AIR SYSTEMS, PER THE SPECIFICATIONS.
20. PROVIDE MOTORIZED DAMPERS AT ALL PERMANENT OPENINGS (EXHAUST, SUPPLY, RELIEF, O.A. INTAKES, MAKE-UP AIR, SMOKE VENTS, ETC.) EXCEPT DRYER, KITCHEN, AND FUME EXHAUST AND PROVIDE A MEANS TO CONTROL THE DAMPER OPERATION.
21. ALL SUPPLY RECTANGULAR 90° ELBOWS SHALL HAVE TURNING VANES.
22. PROVIDE DUCT TAKE-OFF TYPES AND VOLUME DAMPERS PER THE SPECIFICATIONS AND DUCT TAKE-OFF DETAILS ON DRAWINGS. TAKE-OFFS SHOWN ON FLOOR PLANS DO NOT REPRESENT THE SPECIFIC TYPE OF TAKE-OFF REQUIRED; CONSULT THE DETAILS AND SPECIFICATIONS.
23. PROVIDE VOLUME DAMPERS ON ALL SUPPLY, EXHAUST, AND RETURN BRANCH DUCTS.
24. COORDINATE AND VERIFY LOCATIONS OF ALL ITEMS REQUIRING ACCESS WITH ARCHITECT IN FIELD., INCLUDING VALVES, VOLUME DAMPERS, FIRE DAMPERS, ETC.
25. ALL EQUIPMENT LOCATED ON THE ROOF THAT REQUIRES SERVICING SHALL BE LOCATED A MINIMUM 10'-0" FROM EDGE OF THE ROOF.
26. ALL EXPOSED DUCTWORK SHALL BE FLAT, OVAL, OR ROUND. COORDINATE WITH ARCHITECT'S CEILING PLANS AND IDENTIFY ON DUCTWORK SHOP DRAWINGS.
27. ALL DUCTWORK AND PIPING CROSSING SEISMIC JOINTS SHALL ACCOMMODATE DIFFERENTIAL MOTION. REFER TO DETAILS AND SPECIFICATIONS FOR MORE INFORMATION. SEE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR LOCATIONS.
28. MOUNT THERMOSTATS/TEMPERATURE SENSORS 48" AFF UNLESS OTHERWISE NOTED; COORDINATE WITH ARCHITECT. INCLUDE INSULATED PAD FOR ANY THERMOSTATS/TEMPERATURE SENSORS LOCATED ON AN OUTSIDE WALL.
29. ALL MOTORIZED DAMPERS SHALL BE WIRED BY ATC CONTRACTOR, COORDINATE VOLTAGE REQUIREMENTS WITH EQUIPMENT.
30. ALL TOILETS & BATHROOMS SHALL HAVE 3/4" UNDERCUT DOORS.
31. ALL LOUVERS ARE SELECTED AND SCHEDULED BY ARCHITECT. LOUVER TAGS ARE SHOWN FOR COORDINATION ONLY.
32. SEISMICALLY SUPPORT THE EQUIPMENT AS REQUIRED BY CODE, THE AUTHORITY HAVING JURISDICTION, AND/OR AS SPECIFIED. SUBMIT ENGINEERED INSTALLATION DETAILS PER THE SPECIFICATIONS. THE CONTRACTOR'S SEISMIC ENGINEER SHALL REVIEW THE INSTALLATION AND PROVIDE A DETAILED REPORT FOR THE RECORD.
33. PROVIDE PIPE EXPANSION COMPENSATION FOR THE VARIOUS PIPING SYSTEMS. SUBMIT ENGINEERED DETAILS FOR APPROVAL AND VERIFY INSTALLATION IS IN ACCORDANCE WITH THE CODE. THE CONTRACTOR'S CONSULTING ENGINEER SHALL REVIEW THE INSTALLATION AND PROVIDE A REPORT OF THE FINDINGS.

GENERAL LINETYPES

	THICK, DARK LINES INDICATE NEW OR RELOCATED ITEMS
	THIN, LIGHT LINES INDICATE EXISTING ITEMS TO REMAIN IN PLACE AND BE REUSED
	ON DEMOLITION DRAWINGS, THICK, DASHED LINES INDICATE EXISTING ITEMS TO BE REMOVED
	POINT OF NEW TO EXISTING CONNECTION, INCLUDING TRANSITIONS

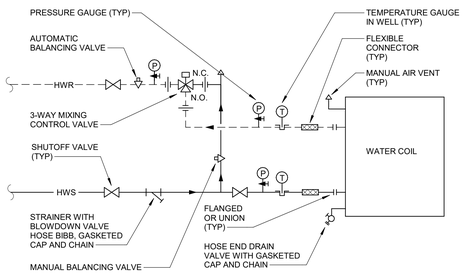
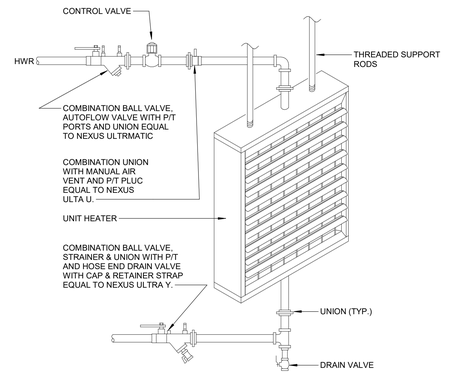
MAIN SIZE	BYPASS FLOW (GPM)
3/4"	0.50
1"	1.00
1 1/4"	1.50
1 1/2"	2.50
≥ 2"	4.00

1 END OF MAIN MIN. FLOW BYPASS LINE PIPING DETAIL
NTS

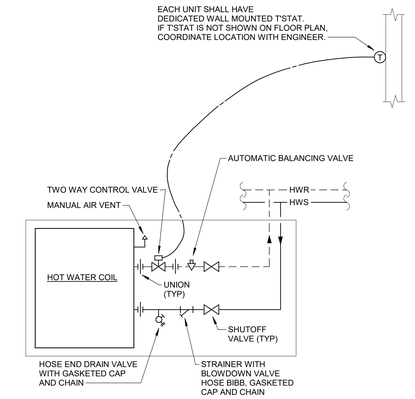


NOTE:
PROVIDE UNIONS IN LIEU OF FLANGES AT CONTROL VALVES AND COIL CONNECTIONS WHERE APPLICABLE.

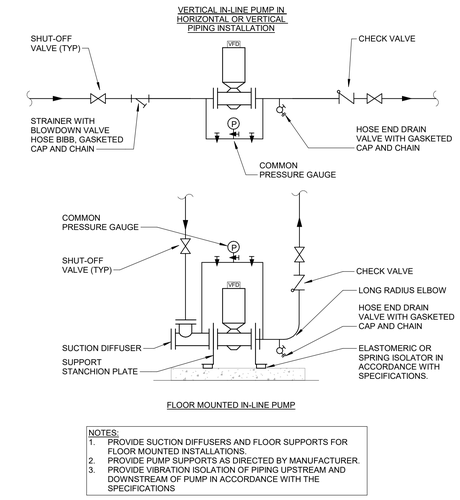
2 3-WAY COIL PIPING DETAIL
NTS



3 HORIZONTAL UNIT HEATER PIPING DETAIL
NOT TO SCALE



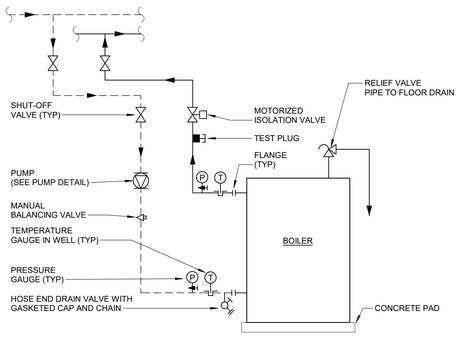
4 CABINET UNIT HEATER PIPING DETAIL
NOT TO SCALE



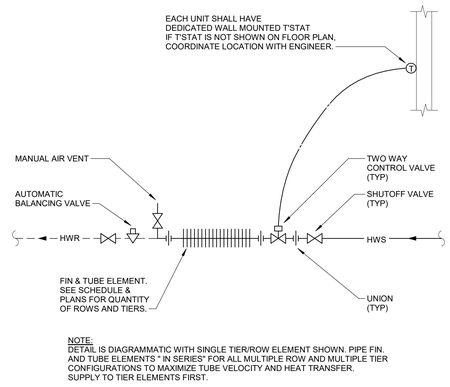
FLOOR MOUNTED IN-LINE PUMP

NOTES:
1. PROVIDE SUCTION DIFFUSERS AND FLOOR SUPPORTS FOR FLOOR MOUNTED INSTALLATIONS.
2. PROVIDE PUMP SUPPORTS AS DIRECTED BY MANUFACTURER.
3. PROVIDE VIBRATION ISOLATION OF PIPING UPSTREAM AND DOWNSTREAM OF PUMP IN ACCORDANCE WITH THE SPECIFICATIONS

5 VERTICAL IN-LINE PUMP DETAIL
NOT TO SCALE

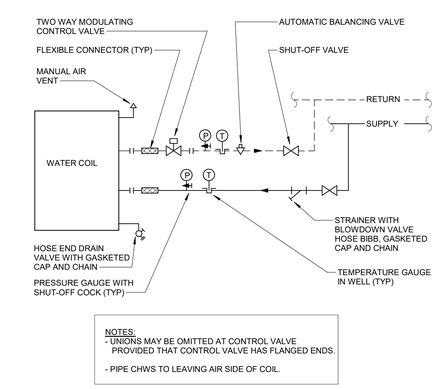


6 HYDRONIC BOILER PIPING DETAIL
NOT TO SCALE



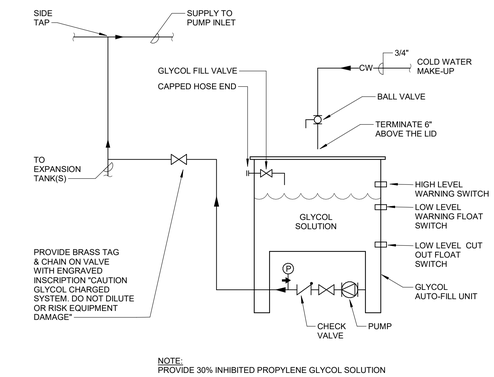
NOTE:
DETAIL IS DIAGRAMMATIC WITH SINGLE TIER/ROW ELEMENT SHOWN. PIPE FIN. AND TUBE ELEMENTS " IN SERIES" FOR ALL MULTIPLE ROW AND MULTIPLE TIER CONFIGURATIONS TO MAXIMIZE TUBE VELOCITY AND HEAT TRANSFER. SUPPLY TO TIER ELEMENTS FIRST.

7 HOT WATER RADIATION PIPING DETAIL
NOT TO SCALE



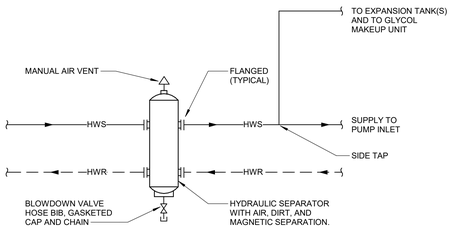
NOTES:
- UNIONS MAY BE OMITTED AT CONTROL VALVE PROVIDED THAT CONTROL VALVE HAS FLANGED ENDS.
- PIPE CHWS TO LEAVING AIR SIDE OF COIL.

8 AHU WATER COIL PIPING DETAIL
NOT TO SCALE

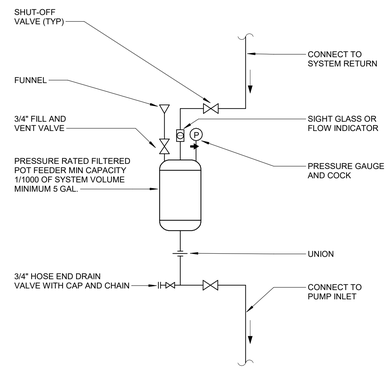


NOTE:
PROVIDE 30% INHIBITED PROPYLENE GLYCOL SOLUTION

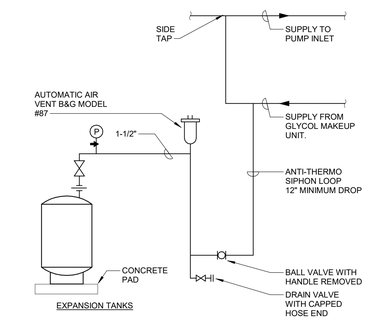
9 GLYCOL MAKEUP UNIT DETAIL
NOT TO SCALE



10 HYDRAULIC AIR & DIRT SEPARATOR DETAIL
NOT TO SCALE



11 CHEMICAL POT FEEDER DETAIL
NOT TO SCALE



12 EXPANSION TANK DETAIL
NOT TO SCALE

GRILLES, DIFFUSERS AND REGISTERS SCHEDULE

(BASED ON PRICE)

SEE ARCHITECTURAL DRAWINGS FOR CEILING TYPES AND CONSTRUCTION, AND COLOR SELECTION. SIZE AND CFM INDICATED ON MECHANICAL DRAWINGS.

A - MODEL SMD DIRECTIONAL DIFFUSER, LOUVERED FACE, 4-WAY THROW (UNLESS SHOWN OTHERWISE), 24X24 MODULE SIZE, LAY-IN BORDER, STEEL CONSTRUCTION. PROVIDE MODEL SR ADAPTER.

A1 - MODEL SMD DIRECTIONAL DIFFUSER, LOUVERED FACE, 4-WAY THROW (UNLESS SHOWN OTHERWISE), 12X12 MODULE SIZE, SURFACE MOUNT, STEEL CONSTRUCTION. PROVIDE MODEL SR ADAPTER.

B - MODEL 530 RETURN GRILLE, 45° FIXED LOUVERS, 3/4" BLADE SPACING, 24X24 MODULE SIZE, LAY-IN BORDER, STEEL CONSTRUCTION.

B1 - MODEL 530 RETURN GRILLE, 45° FIXED LOUVERS, 3/4" BLADE SPACING PARALLEL TO LONG DIMENSION, FLAT SURFACE MOUNT BORDER, STEEL CONSTRUCTION. FACE SIZE TO BE A MINIMUM OF 12X12 UNLESS SIZE IS NOTED ON PLANS.

C - MODEL 520 LOUVERED SUPPLY REGISTER, DOUBLE DEFLECTION CORE, 3/4" BLADE SPACING PARALLEL TO LONG DIMENSION, SURFACE MOUNT FRAME, STEEL CONSTRUCTION.

D - PRICE MODEL SDS LINEAR SLOT DIFFUSER, 1" SLOTS, SURFACE MOUNT FRAME, ALUMINUM CONSTRUCTION, BLACK PATTERN CONTROLLERS. PROVIDE INSULATED PLENUM.

E - MODEL 530FF FILTER RETURN GRILLE, 45° FIXED LOUVERS, 3/4" BLADE SPACING, 24X24 MODULE SIZE, LAY-IN BORDER, STEEL CONSTRUCTION. PROVIDE WITH 1" MERV 8 HIGH CAPACITY FILTER AND PLENUM BOX.

CEILING SUPPLY DIFFUSER TYPE A & A1		CEILING RETURN/EXHAUST DIFFUSER TYPE B & B1		FLEIXBLE DUCT SIZE

REMARKS:
1. HEATING COIL PERFORMANCE BASED ON 30% PROPYLENE GLYCOL SOLUTION.
2. PROVIDE BACNET CARDS.
3. UNITS SHALL BE PREWIRED FOR A SINGLE POINT CONNECTION.
4. ALTERNATE MANUFACTURER OF EQUAL PERFORMANCE AND CAPACITY MUST HAVE SIMILAR PHYSICAL DIMENSIONS, OTHERWISE BASE MANUFACTURER MUST BE SUPPLIED. CONTRACTOR SHALL BE RESPONSIBLE FOR CONFIRMING DIMENSIONS IN FIELD.
5. R-454B REFRIGERANT.
6. PROVIDE 2" MERV 8 AND 4" MERV 13 HIGH EFFICIENCY FILTERS.
7. PROVIDE DUCT TRANSITION AT THE UNIT AS NECESSARY, V.I.F.
8. PROVIDE OA INTAKE HOODS.
9. ROOF OPENING AROUND BOTH SUPPLY AND RETURN DUCTS BELOW EACH ROOFTOP UNIT SHALL BE COMPLETELY SEALED TO PREVENT ANY NOISE TRANSFER.
10. PROVIDE VFD'S ON BOTH SUPPLY AND EXHAUST FANS.
11. PROVIDE MANUFACTURER SUPPLIED AND WIRED DISCONNECT SWITCH.
12. UNITS SHALL BE DOUBLE-WALL CABINET WITH R-13 INSULATION.
13. PROVIDE STAINLESS STEEL DRAIN PAN WITH CONDENSATE OVERFLOW SWITCH.
14. PROVIDE WITH WIND RATED VIBRATION ISOLATION CURB. CURB SHALL BE A MINIMUM OF 18" HIGH UNLESS OTHERWISE NOTEDED. THE HEIGHT OF THE STATIONARY PORTION OF THE CURB SHALL BE A MINIMUM OF 8" ABOVE THE FINISHED ROOF ELEVATION. COORDINATE WITH ARCHITECTURAL ROOF PLANS.
15. FACTORY WIRED 115V CONVENIENCE OUTLET.

REMARKS:
1. ELBOW AND TEE ATTENUATOR LENGTHS TO BE TOTAL OF EACH SIDE. CONTRACTOR IS RESPONSIBLE FOR FINAL COORDINATION.
2. PRESSURE DROP MAY BE ALTERED BY SYSTEM EFFECT. INSTALL EQUIPMENT PER MANUFACTURER'S SPECIFICATION.
3. MAXIMUM STATIC PRESSURE DROP PER ASTM E477-20 PLUS SYSTEM EFFECTS FOR NEARBY DUCT ELEMENTS.
4. MINIMUM DYNAMIC INSERTION LOSS DETERMINED PER ASTM E477-20.
5. LENGTH SHOWN FOR ELBOW SILENCERS IS CENTERLINE LENGTH.
6. CASING TO BE HTL EQUIVALENT TO 14 GAUGE DUCT WALL TO CONTROL BREAKOUT.
7. NON-BASIS OF DESIGN SILENCER MANUFACTURER SHALL PROVIDE, FOR APPROVAL, PROFESSIONAL ENGINEER STAMPED ACOUSTICAL CALCULATIONS FOR ALL SYSTEMS WITH SILENCERS TO DEMONSTRATE THAT THE RESULTANT DUCTBORNE FAN SOUND LEVELS, INCLUDING AIRBORNE AND BREAKOUT NOISE, MEET THE REQUIRED CRITERIA.
8. NON-BASIS OF DESIGN SILENCER MANUFACTURER SHALL PROVIDE, FOR APPROVAL, PROFESSIONAL ENGINEER STAMPED PRESSURE DROP CALCULATIONS FOR ALL SYSTEMS WITH SILENCERS TO DEMONSTRATE THAT THE RESULTANT INSTALLED PRESSURE DROP WITH SYSTEM EFFECTS DOES NOT EXCEED SCHEDULED VALUES.
9. FOR NON-BASIS OF DESIGN PRODUCT SUPPLIED, CONTRACTOR IS FINANCIALLY RESPONSIBLE TO ENSURE NOISE CONTROL SOLUTION IS DELIVERED TO ACHIEVE SPECIFIED NC LEVEL IN SPACES.

EXPANSION TANK SCHEDULE

LESS THAN 3"	1/4
3" TO 6"	1/8

PLUMBING GENERAL NOTES

1. ALL WORK SHALL BE PERFORMED IN COMPLIANCE WITH CURRENT APPLICABLE CODES, ORDINANCES, THE REGULATORY AGENCIES HAVING JURISDICTION AND THE SPECIFICATIONS. THE SPECIFICATIONS MAY EXCEED THE REQUIREMENTS OF THE CODE, IN WHICH CASE, THE SPECIFICATION MUST BE FOLLOWED.
2. THE INTENT OF THESE DOCUMENTS IS FOR THE MEP TRADES TO FURNISH AND INSTALL COMPLETE MECHANICAL AND ELECTRICAL SYSTEMS. THE SPECIFIED PLUMBING SYSTEM SHALL BE COMPLETE IN ALL RESPECTS; OPERATIONAL, TESTED, ADJUSTED, APPROVED BY THE AUTHORITIES HAVING JURISDICTION AND READY FOR BENEFICIAL USE BY THE OWNER.
3. THE TRADES SHALL OBTAIN AND REVIEW ALL CONTRACT DOCUMENTS BEFORE SUBMITTING A BID. INFORMATION IS PROVIDED ON THE VARIOUS DRAWINGS, SCHEDULES, SPECIFICATIONS AND ALL OF THE VARIOUS DOCUMENTS IN THE BIDDING PACKAGE. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY AND FORM A TOTAL PROJECT DESIGN AND INFORMATION SOURCE FOR CONSTRUCTION PURPOSES.
4. THE DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL ARRANGEMENT OF SYSTEMS AND WORK INCLUDED IN THE CONTRACT. COORDINATE LOCATIONS OF EQUIPMENT WITH OTHER TRADES BEFORE AND DURING CONSTRUCTION. ANY MODIFICATION TO THE EQUIPMENT LAYOUT, REQUIRED FOR INSTALLATION, IS TO BE PERFORMED UNDER THE CONTRACT AGREEMENT, AT NO ADDITIONAL COST. REFER TOP DETAILS, SCHEDULES AND SPECIFICATIONS FOR ADDITIONAL INFORMATION.
5. THE CONTRACTOR SHALL BECOME THOROUGHLY FAMILIAR WITH THE PROJECT DOCUMENTS OF ALL TRADES. THE DRAWINGS ARE DIAGRAMMATIC AND SHOW THE GENERAL ARRANGEMENT OF EQUIPMENT AND PIPING. THE CONTRACTOR SHALL COORDINATE THE EXACT LOCATION OF EQUIPMENT AND PIPING INSTALLATION WITH ALL THE TRADES BEFORE COMMENCING WORK.
6. EQUIPMENT SHALL BE INSTALLED IN ACCESSIBLE LOCATIONS. WHEN EQUIPMENT MUST BE LOCATED ABOVE AN INACCESSIBLE CEILING (GYP BOARD OR EQUIVALENT), OR BEHIND A WALL, AN APPROPRIATE ACCESS DOOR SHALL BE PROVIDED. IF AN ACCESS DOOR IS REQUIRED, IT SHALL BE OF A RATING APPROPRIATE FOR THE WALL/CEILING IN WHICH IT IS TO BE INSTALLED. THE CONTRACTOR SHALL COORDINATE LOCATIONS OF ACCESS PANELS FOR ALL VALVES AND DEVICES, REQUIRING ACCESS, WITH THE ARCHITECT, PRIOR TO INSTALLATION OF SUCH DEVICES OR OTHER APPURTENANCES.
7. WHERE A CONFLICT OCCURS BETWEEN THE DOCUMENTS, IT SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT. CARRY AS PART OF THE BID THE LARGER QUANTITY AND/OR MORE EXPENSIVE ITEM(S).
8. THIS CONTRACT SHALL INCLUDE ALL THE NECESSARY PIPING, FITTINGS, TRANSITIONS, OFFSETS, ETC. AS REQUIRED TO INSTALL PIPING, EQUIPMENT, MAINTAINING PROPER CLEARANCES AND TO AVOID ANY CONFLICTS WITH OTHER TRADES, AND THE BUILDING STRUCTURE. THE CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY ASSUMPTIONS, OMISSIONS OR ERRORS HE MAKES AS A RESULT OF HIS FAILURE TO COORDINATE WITH OTHER TRADES OR BECOME FULLY FAMILIAR WITH THE PROJECT DOCUMENTS OF ALL TRADES.
9. DO NOT INSTALL ANY PIPING OVER ELECTRICAL PANELS, TRANSFORMERS, SPECIAL EQUIPMENT, OR THROUGH ELECTRICAL ROOMS, DATA ROOMS, ELEVATOR MACHINE ROOM, STAIRWELL OR STAIRWELL WALLS THAT ARE NOT ASSOCIATED WITH OR SERVE THE RESPECTIVE ROOMS. COORDINATE THE LOCATION OF ELECTRICAL EQUIPMENT IN THE FIELD AND ADJUST AS NECESSARY.
10. IT IS NOT THE INTENT OF THE DRAWINGS TO SHOW INDIVIDUAL BRANCH PIPING TO EACH PLUMBING FIXTURE; ONLY THE BRANCH PIPING TO GROUPS OF FIXTURES IS INDICATED. EACH AND EVERY FIXTURE SHALL BE PROPERLY PIPED TO WATER, WASTE, AND VENT PIPING SYSTEMS. REFER TO THE PLUMBING SCHEDULES FOR INDIVIDUAL PIPE SIZES TO EACH FIXTURE.
11. PROVIDE PROPER PIPING SYSTEM IDENTIFICATION LABELS, SLOPES FOR DRAIN PIPING, CLEANOUTS, HANGERS, ETC. IN ACCORDANCE WITH THE PLUMBING CODE.
12. REFER TO THE ARCHITECTURAL DRAWINGS FOR THE EXACT LOCATION AND MOUNTING HEIGHTS OF PLUMBING FIXTURES OR EQUIPMENT. ALL SUCH EQUIPMENT AND EQUIPMENT COLORS AND FINISHES SHALL BE COORDINATED WITH THE ARCHITECT. MOUNTING HEIGHTS SHALL BE APPROVED BY THE ARCHITECT.
13. INSTALL WATER HAMMER ARRESTORS (WHA) AT ALL QUICK CLOSING VALVES (FLUSH VALVES, SOLENOID VALVES, ETC.); SIZE SHALL BE BASED ON FIXTURE UNITS PER PDI STANDARDS AND INSTALLED PER MANUFACTURER'S RECOMMENDATION.
14. ALL PIPING, DRAINS, STRAINERS, FAUCETS, FAUCET AERATORS, FILTERS, ETC. SHALL BE THOROUGHLY CLEANED AND FLUSHED IMMEDIATELY BEFORE PROJECT COMPLETION. PROVIDE CERTIFICATION ON CONTRACTOR'S LETTER HEAD THAT THIS WORK HAS BEEN COMPLETED.
15. DOMESTIC WATER DROPS AND RISERS INSTALLED IN EXTERIOR WALLS SHALL BE INSTALLED ON THE WARM SIDE OF INSULATION AND THE LOCATION SHALL BE MADE INFILTRATION FREE.
16. BEFORE INSTALLATION, COORDINATE THE WORK WITH OWNER-FURNISHED EQUIPMENT, INCLUDING REQUIRED SERVICE CONNECTIONS, FACTORY START UPS AND INSTALLATION OF FIELD DEVICES.
17. PIPE ALL CONDENSATE DRAINS FROM MECHANICAL EQUIPMENT COOLING COILS, BY GRAVITY (INTERIOR AIR HANDLING UNITS, FAN COIL UNITS, AC UNITS, ETC.) TO FLOOR DRAINS, JANITOR'S SINKS OR OTHER APPROVED LOCATION THROUGH AN AIR GAP. EACH CONDENSATE DRAIN SHALL BE TRAPPED AT THE EQUIPMENT DRAIN OUTLET, REFER TO TRAP DETAILS ON DRAWINGS. COORDINATE EXACT LOCATION OF EQUIPMENT WITH THE HVAC CONTRACTOR AND ADJUST AS NECESSARY.
18. INSULATE ALL WASTE ABOVE SLAB RECEIVING CONDENSATE FROM EQUIPMENT INCLUDING "P" TRAPS AND BRANCH WASTE PIPING
19. ALL INDIRECT WASTE DRAINS SHALL BE PIPED TO FLOOR DRAINS, FUNNELS OR FIXED AIR GAP FITTINGS, THROUGH AIR GAP OR TO A SINK DRAIN TAILPIECE.
20. INSTALL TRAP PRIMERS OR TRAP GUARD SEALER FOR FLOOR DRAINS, HUB DRAINS AND FIXED AIR GAP FITTINGS, WHERE TRAP IS SUBJECT TO LOSS OF SEAL BY EVAPORATION, CONNECT TRAP PRIMER TO COLD WATER LINE. PROVIDE ISOLATION VALVES AND EXTEND SLOPED PRIMING LINE TO DRAIN TRAPS.
21. COORDINATE ALL PLUMBING EQUIPMENT REQUIRING POWER, FOR EXACT LOCATION AND POWER REQUIREMENTS WITH THE ELECTRICAL CONTRACTOR.
22. ALL EXTERIOR EXPOSED GAS PIPING SHALL BE PRIMED AND PAINTED.
23. FLOOR MOUNTED PLUMBING EQUIPMENT SHALL BE INSTALLED ON A 6" CONCRETE HOUSE-KEEPING PAD. COORDINATE SIZE AND FINAL LOCATION OF ALL CONCRETE PADS WITH THE STRUCTURAL ENGINEER. PADS SHALL BE MINIMUM 6" LARGER THAN THE EQUIPMENT IN BOTH HORIZONTAL DIRECTIONS.
24. COORDINATE EXACT LOCATION OF PLUMBING SERVICES ENTERING THE BUILDING WITH THE SITE CONTRACTOR AND UTILITY DRAWINGS PRIOR TO INSTALLATION. COORDINATE ALL FOUNDATION WALL PENETRATIONS AND INVERT ELEVATIONS WITH THE GENERAL CONTRACTOR AND/OR CONSTRUCTION MANAGER BEFORE COMMENCING WORK.
25. SEISMICALLY SUPPORT THE EQUIPMENT AS REQUIRED BY CODE, THE AUTHORITY HAVING JURISDICTION, AND/OR AS SPECIFIED. SUBMIT ENGINEERED INSTALLATION DETAILS PER THE SPECIFICATIONS. THE CONTRACTOR'S SEISMIC ENGINEER SHALL REVIEW THE INSTALLATION AND PROVIDE A DETAILED REPORT FOR THE RECORD.
26. PROVIDE PIPE EXPANSION COMPENSATION FOR THE VARIOUS PIPING SYSTEMS. SUBMIT ENGINEERED DETAILS FOR APPROVAL AND VERIFY INSTALLATION IS IN ACCORDANCE WITH THE CODE. THE CONTRACTOR'S CONSULTING ENGINEER SHALL REVIEW THE INSTALLATION AND PROVIDE A REPORT OF THE FINDINGS.

PLUMBING GENERAL INFORMATION

P0.1

6/4/2026 4:29:07 PM Autodesk Docs://Bristol Edgewood Pre-K Academy/MEP_25-169 Bristol Edgewood Pre-K Academy.rvt

UNDERSLAB GENERAL NOTES

1. VERIFY ALL DIMENSIONS AND ELEVATIONS IN FIELD PRIOR TO INSTALLATION.
2. ALL WORK SHOWN SHALL BE PERFORMED BY PLUMBING CONTRACTOR UNLESS OTHERWISE NOTED.
3. CONTRACTOR SHALL FIELD VERIFY ALL EXISTING INVERTS, UTILITY CONNECTIONS, AND SLAB ELEVATIONS PRIOR TO INSTALLATION. REPORT ANY CONFLICTS TO ENGINEER BEFORE PROCEEDING.
4. RUN ALL PIPING WITHIN EXISTING UTILITY TUNNEL WHERE POSSIBLE.
5. ALL UNDER-SLAB PIPING SHALL BE INSTALLED ON COMPACTED SUBGRADE WITH 4" MIN SAND OR FINE GRAVEL BEDDING. BACKFILL AND COMPACT PER STRUCTURAL REQUIREMENTS.
6. COORDINATE ALL PIPE ROUTES AND PENETRATIONS THROUGH GRADE BEAMS WITH STRUCTURAL PRIOR TO CONCRETE PLACEMENT.
7. PROVIDE PVC OR STEEL SLEEVES THROUGH GRADE BEAMS WITH 1" MIN ANNULAR CLEARANCE AROUND PIPE. SEAL WITH NON-SHRINK GROUT OR FLEXIBLE FIRESTOP SEALANT. FIELD CORING OF REINFORCED GRADE BEAMS IS NOT PERMITTED WITHOUT STRUCTURAL APPROVAL.
8. PIPING LAYOUTS ARE DIAGRAMMATIC. COORDINATE ROUTING TO AVOID CONFLICTS WITH FOUNDATIONS, REINFORCING, AND OTHER UTILITIES.
9. ALL BELOW-GRADE MATERIALS SHALL BE SUITABLE FOR UNDER-SLAB USE AND INSTALLED PER MANUFACTURER'S RECOMMENDATIONS.
10. TEST ALL UNDER-SLAB SANITARY AND STORM PIPING FOR LEAKS PRIOR TO COVER OR CONCRETE POUR.
11. PROVIDE CLEANOUTS AT CHANGES OF DIRECTION >45°, AT BASE OF STACKS, AND AT INTERVALS PER CODE. CLEANOUTS SHALL BE ACCESSIBLE AFTER SLAB POUR.
12. COORDINATE ALL CLEANOUT LOCATIONS WITH ARCHITECT.
13. MAINTAIN REQUIRED COVER UNDER STRUCTURAL SLABS AND COORDINATE ALL TRENCHES AND RECESSES WITH STRUCTURAL.
14. PROVIDE WATERPROOF SLEEVES AND SEALANTS AT ALL EXTERIOR WALL AND FOUNDATION PENETRATIONS. ALL JOINTS BELOW SLAB SHALL BE WATERTIGHT.
15. PLUMBING CONTRACTOR TO PROVIDE SEALING AND FIRESTOPPING OF ALL PENETRATIONS THROUGH FIRE-RATED FLOOR/WALL ASSEMBLIES.
16. GREASE INTERCEPTOR SIZING, SELECTION, AND LOCATION SHALL BE DETERMINED BY CIVIL ENGINEER IN ACCORDANCE WITH LOCAL CODE AND AHJ REQUIREMENTS. COORDINATE FINAL MODEL, CAPACITY, AND INSTALLATION WITH ARCH., PLUMBING, AND SITE DRAWINGS PRIOR TO CONSTRUCTION.
17. RADON MITIGATION SYSTEM SHALL BE PER STRUCTURAL DRAWINGS. COORDINATE PIPE ROUTING, SLEEVES, FOUNDATION PENETRATIONS, AND ROOF TERMINATIONS WITH MECH. EQUIPMENT.

PLUMBING KEYNOTES

BASEMENT DRAINAGE PLAN - AREA B

P1.0B

6/4/2026 4:29:13 PM Autodesk Docs://Bristol Edgewood Pre-K Academy/MEP_25-169 Bristol Edgewood Pre-K Academy.rvt

GENERAL NOTES

1. VERIFY ALL DIMENSIONS AND ELEVATIONS IN FIELD PRIOR TO INSTALLATION.
2. ALL WORK SHOWN SHALL BE PERFORMED BY PLUMBING CONTRACTOR UNLESS OTHERWISE NOTED.
3. PIPING LAYOUTS ARE DIAGRAMMATIC. COORDINATE ROUTING TO AVOID CONFLICTS WITH FOUNDATIONS, REINFORCING, AND OTHER UTILITIES.
4. PROVIDE CLEANOUTS AT CHANGES OF DIRECTION >45°, AT BASE OF STACKS, AND AT INTERVALS PER CODE. CLEANOUTS SHALL BE ACCESSIBLE AFTER SLAB POUR.
5. PROVIDE WATERPROOF SLEEVES AND SEALANTS AT ALL EXTERIOR WALL AND FOUNDATION PENETRATIONS.
6. PLUMBING CONTRACTOR TO PROVIDE SEALING AND FIRESTOPPING OF ALL PENETRATIONS THROUGH FIRE RATED FLOOR/WALL ASSEMBLIES.
7. COORDINATE ALL CLEANOUT LOCATIONS (FLOOR AND WALL PLATE CLEANOUT) WITH ARCHITECTURAL LAYOUT.
8. REFER TO PDI "MINIMUM SPACE REQUIREMENT FOR ENCLOSED PLUMBING FIXTURE SUPPORTS" FOR ALL WALL HUNG FIXTURES. COORDINATE EXACT REQUIREMENTS WITH ARCHITECT.
9. FINAL SELECTION AND FINISH OF ALL PLUMBING FIXTURES SHALL BE COORDINATED WITH ARCHITECT/OWNER.
10. REFER TO ARCHITECTURAL DRAWINGS FOR ALL FIXTURE MOUNTING HEIGHTS.
11. PROVIDE TRAP SEALS FOR ALL FLOOR DRAINS INDICATED.

PLUMBING KEYNOTES

P18 3" ST UP TO RD-1

P19 4" STORM LEADER DROP BELOW SLAB AND CONNECT TO UNDER-SLAB STORM SYSTEM. PROVIDE CLEANOUT (CO) AT BASE OF STACK. COORDINATE INVERT AND ROUTING WITH UNDER-SLAB PIPING. VERIFY IN FIELD AND MAINTAIN REQ'D SLOPE.

P20 3" STORM LEADER DROP BELOW SLAB AND CONNECT TO UNDER-SLAB STORM SYSTEM. PROVIDE CLEANOUT (CO) AT BASE OF STACK. COORDINATE INVERT AND ROUTING WITH UNDER-SLAB PIPING. VERIFY IN FIELD AND MAINTAIN REQ'D SLOPE.

P34 APPROXIMATE LOCATION OF RADON COLLECTION PIT. PROVIDE 6" RADON VENT PIPING FROM RADON PIT AND EXTEND THROUGH BUILDING AS SHOWN. RADON PIT BY OTHERS. COORDINATE EXACT PIT LOCATION, SLEEVES, AND FOUNDATION PENETRATIONS WITH STRUCTURAL DRAWINGS.

P35 6" RADON VENT PIPING. INSTALL UNDERGROUND RADON COLLECTION PIPING AS SHOWN AND CONNECT TO RISER(S) FOR VENTING THROUGH ROOF. TERMINATE IN ACCORDANCE WITH APPLICABLE CODE REQUIREMENTS AND LOCATE A MINIMUM OF 25'-0" FROM ALL OUTSIDE AIR INTAKES, OPERABLE WINDOWS, DOORS, AND OTHER BUILDING OPENINGS. COORDINATE INSTALLATION WITH STRUCTURAL, SITE, AND FOUNDATION REQUIREMENTS.

P45 4" VENT THROUGH ROOF. SEE ROOF PLUMBING PLAN FOR CONTINUATION. COORDINATE EXACT ROOF PENETRATION LOCATION WITH ALL TRADES.

GENERAL NOTES

ALL PLUMBING FIXTURES / APPLIANCES SHALL HAVE THEIR OWN INDEPENDENT SHUT-OFF VALVES, INSTALLED IN AN EASILY ACCESSIBLE AND CONVENIENT LOCATION.

ALL DOMESTIC WATER BRANCH LINES SHALL HAVE THEIR OWN RESPECTIVE SHUT-OFF VALVES.

ANY PRODUCT DESIGNED FOR DISPENSING POTABLE WATER MUST BE LEAD FREE AND MEET BOTH NSF 61 AND NSF 372 TEST STANDARDS VIA THIRD-PARTY TESTING AND CERTIFICATION. LEAD FREE REFERS TO THE WETTED SURFACE OF PIPE, FITTINGS, AND FIXTURES IN POTABLE WATER SYSTEMS THAT HAVE A WEIGHTED AVERAGE LEAD CONTENT ≤ 0.25% PER THE SAFE DRINKING WATER ACT (SEC. 1417), AMENDED 1-4-2011, AND OTHER EQUIVALENT STATE REGULATIONS.

INSTALL 1" INSULATION ON ALL 1-1/4" AND SMALLER PIPE REQUIRING INSULATION AND 1-1/2" INSULATION ON ALL 1-1/2" AND LARGER PIPE REQUIRING INSULATION.

PROVIDE ACCESS DOORS IN CEILINGS AND WALLS AS REQUIRED TO MAKE VALVES, TRAP PRIMERS, ETC. READILY ACCESSIBLE. COORDINATE LOCATIONS WITH INSTALLATIONS OF VALVES, WATER HAMMER ARRESTERS, AND TRAP PRIMERS IN FIELD DURING CONSTRUCTION.

PLUMBING CONTRACTOR TO INSTALL WATER HAMMER ARRESTORS ON ALL WATER SUPPLIES SERVING QUICK CLOSING FIXTURES PER PDI-WH 201.

REFER TO ARCHITECTURAL DRAWINGS FOR ALL FIXTURE MOUNTING HEIGHTS.

PLUMBING CONTRACTOR SHALL MAKE ALL FINAL CONNECTIONS TO ALL PLUMBING FIXTURES AND EQUIPMENT, INCLUDING EQUIPMENT SUPPLIED BY OTHERS.

ALL GAS PIPING SHALL BE IDENTIFIED IN ACCORDANCE WITH THE LATEST ADOPTED EDITION OF IFGC 2022. ALL GAS PIPING EXPOSED TO ELEMENTS SHALL BE PAINTED WITH TWO COATS OF OSHA YELLOW ENAMEL PAINT SUITABLE FOR EXTERIOR USE.

ALL GAS-FIRED EQUIPMENT SHALL BE CONNECTED TO GAS PIPING IN ACCORDANCE WITH IFGC 2022. EACH PIECE OF EQUIPMENT SHALL HAVE A DIRT LEG, UNION, GAS COCK, AND REGULATOR WHERE REQUIRED.

PLUMBING CONTRACTOR TO PROVIDE SEALING AND FIRESTOPPING OF ALL PENETRATIONS THROUGH FIRE-RATED FLOOR/WALL ASSEMBLIES.

PROVIDE AN ASSE 1070 APPROVED TEMPERATURE LIMITING DEVICE ON HAND WASH AND LAVATORY SINKS.

FINAL SELECTION AND FINISH OF ALL PLUMBING FIXTURES SHALL BE COORDINATED WITH ARCHITECT/OWNER.

REFER TO ARCHITECTURAL DRAWINGS FOR ALL FIXTURE MOUNTING HEIGHTS.

PROVIDE TRAP PRIMER FOR ALL FLOOR DRAINS INDICATED.

PROVIDE AND INSTALL CIRCUITSOLVER THERMOSTATIC BALANCING VALVES ON THE DOMESTIC HOT WATER RECIRCULATION LINE. LOCATE VALVES AT THE END OF EACH HOT WATER SUPPLY BRANCH/RISER, DOWNSTREAM OF THE LAST FIXTURE AND PRIOR TO THE RETURN PIPING. INSTALL ALL VALVES, ACCESSORIES, AND CONNECTION TYPES IN STRICT ACCORDANCE WITH MANUFACTURER'S INSTALLATION INSTRUCTIONS AND ENSURE ALL VALVES ARE FULLY ACCESSIBLE FOR SERVICE AND MAINTENANCE.

PLUMBING KEYNOTES

P16 3/4"CW DROP TO SUPPLY HYD-1

P42 PROVIDE FULL PORT SHUTOFF VALVE. COORDINATE EXACT LOCATION AND ACCESS REQUIREMENTS WITH ARCHITECTURAL DRAWINGS.

GENERAL NOTES

ALL PLUMBING FIXTURES / APPLIANCES SHALL HAVE THEIR OWN INDEPENDENT SHUT-OFF VALVES, INSTALLED IN AN EASILY ACCESSIBLE AND CONVENIENT LOCATION.

ALL DOMESTIC WATER BRANCH LINES SHALL HAVE THEIR OWN RESPECTIVE SHUT-OFF VALVES.

ANY PRODUCT DESIGNED FOR DISPENSING POTABLE WATER MUST BE LEAD FREE AND MEET BOTH NSF 61 AND NSF 372 TEST STANDARDS VIA THIRD-PARTY TESTING AND CERTIFICATION. LEAD FREE REFERS TO THE WETTED SURFACE OF PIPE, FITTINGS, AND FIXTURES IN POTABLE WATER SYSTEMS THAT HAVE A WEIGHTED AVERAGE LEAD CONTENT ≤ 0.25% PER THE SAFE DRINKING WATER ACT (SEC. 1417), AMENDED 1-4-2011, AND OTHER EQUIVALENT STATE REGULATIONS.

INSTALL 1" INSULATION ON ALL 1-1/4" AND SMALLER PIPE REQUIRING INSULATION AND 1-1/2" INSULATION ON ALL 1-1/2" AND LARGER PIPE REQUIRING INSULATION.

PROVIDE ACCESS DOORS IN CEILINGS AND WALLS AS REQUIRED TO MAKE VALVES, TRAP PRIMERS, ETC. READILY ACCESSIBLE. COORDINATE LOCATIONS WITH INSTALLATIONS OF VALVES, WATER HAMMER ARRESTERS, AND TRAP PRIMERS IN FIELD DURING CONSTRUCTION.

PLUMBING CONTRACTOR TO INSTALL WATER HAMMER ARRESTORS ON ALL WATER SUPPLIES SERVING QUICK CLOSING FIXTURES PER PDI-WH 201.

REFER TO ARCHITECTURAL DRAWINGS FOR ALL FIXTURE MOUNTING HEIGHTS.

PLUMBING CONTRACTOR SHALL MAKE ALL FINAL CONNECTIONS TO ALL PLUMBING FIXTURES AND EQUIPMENT, INCLUDING EQUIPMENT SUPPLIED BY OTHERS.

ALL GAS PIPING SHALL BE IDENTIFIED IN ACCORDANCE WITH THE LATEST ADOPTED EDITION OF IFGC 2022. ALL GAS PIPING EXPOSED TO ELEMENTS SHALL BE PAINTED WITH TWO COATS OF OSHA YELLOW ENAMEL PAINT SUITABLE FOR EXTERIOR USE.

ALL GAS-FIRED EQUIPMENT SHALL BE CONNECTED TO GAS PIPING IN ACCORDANCE WITH IFGC 2022. EACH PIECE OF EQUIPMENT SHALL HAVE A DIRT LEG, UNION, GAS COCK, AND REGULATOR WHERE REQUIRED.

PLUMBING CONTRACTOR TO PROVIDE SEALING AND FIRESTOPPING OF ALL PENETRATIONS THROUGH FIRE-RATED FLOOR/WALL ASSEMBLIES.

PROVIDE AN ASSE 1070 APPROVED TEMPERATURE LIMITING DEVICE ON HAND WASH AND LAVATORY SINKS.

FINAL SELECTION AND FINISH OF ALL PLUMBING FIXTURES SHALL BE COORDINATED WITH ARCHITECT/OWNER.

REFER TO ARCHITECTURAL DRAWINGS FOR ALL FIXTURE MOUNTING HEIGHTS.

PROVIDE TRAP PRIMER FOR ALL FLOOR DRAINS INDICATED.

PROVIDE AND INSTALL CIRCUITSOLVER THERMOSTATIC BALANCING VALVES ON THE DOMESTIC HOT WATER RECIRCULATION LINE. LOCATE VALVES AT THE END OF EACH HOT WATER SUPPLY BRANCH/RISER, DOWNSTREAM OF THE LAST FIXTURE AND PRIOR TO THE RETURN PIPING. INSTALL ALL VALVES, ACCESSORIES, AND CONNECTION TYPES IN STRICT ACCORDANCE WITH MANUFACTURER'S INSTALLATION INSTRUCTIONS AND ENSURE ALL VALVES ARE FULLY ACCESSIBLE FOR SERVICE AND MAINTENANCE.

PLUMBING KEYNOTES

P04 NEW 4" DOMESTIC WATER SERVICE FROM SITE. REFER TO CIVIL DRAWINGS FOR SIZE, ROUTING, AND CONNECTION LOCATION. PROVIDE OS&Y SHUTOFF VALVE UPON ENTRY INTO BUILDING.

P05 NEW 6" FIRE SPRINKLER SERVICE FROM SITE. REFER TO CIVIL DRAWINGS FOR SIZE, ROUTING, AND CONNECTION LOCATION. PROVIDE OS&Y SHUTOFF VALVE UPON ENTRY INTO BUILDING.

P06 PROVIDE NEW 3" DOUBLE CHECK VALVE BACKFLOW PREVENTER ASSEMBLY. INSTALL IN ACCORDANCE WITH THE STATE OF CONNECTICUT CROSS CONNECTION CONTROL MANUAL, DEPARTMENT OF PUBLIC HEALTH – DRINKING WATER DIVISION.

P07 PROVIDE PRESSURE REDUCING VALVE (PRV). OUTLET PRESSURE TO BE SET AT 60 PSI. CONTRACTOR SHALL ADJUST FINAL SETTING IN FIELD AFTER TESTING TO ENSURE PROPER OPERATION OF ALL FLUSH VALVE FIXTURES AND TO MAINTAIN ADEQUATE RESIDUAL PRESSURE UNDER PEAK DEMAND CONDITIONS. PROVIDE PRESSURE GAUGES UPSTREAM AND DOWNSTREAM OF PRV.

P08 (WH-1) PROVIDE NEW 100 GALLON GAS-FIRED WATER HEATER. INSTALL IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS AND ALL APPLICABLE CODES.

P09 (ET-1) NEW EXPANDION TANK. (SEE SCHEDULE SHEET)

P10 (TMV-1) THERMOSTATIC MIXING VALVE (SEE SCHEDULE SHEET)

P11 NEW 2" GAS SERVICE EXTENDED BACK TO MAIN. REFER TO UTILITY AND CIVIL DRAWINGS FOR CONNECTION LOCATION AND COORDINATE WITH UTILITY COMPANY.

P12 1 1/4" GAS DROP TO SERVE (2) BOILERS. SPLIT INTO (2) 1" BRANCH CONNECTIONS TO EACH UNIT. PROVIDE SHUTOFF VALVE AND GAS PRESSURE REGULATOR AT EACH CONNECTION AS REQUIRED.

P13 3/4" GAS DROP TO SUPPLY DWH-1. PROVIDE SHUTOFF VALVE, AND LINE PRESSURE REGULATOR AS REQUIRED. COORDINATE FINAL CONNECTION TO WATER HEATER IN FIELD.

P14 MAINTAIN FIRE RATING AT EGRESS CORRIDOR. COORDINATE WITH ARCH.

NOTES:

1) UTILITIES SHOWN IN THESE SCHEDULES ARE SPECIFIC TO THE PRIME MANUFACTURER LISTED IN THE WRITTEN SPECIFICATION SECTION 114000. IF EQUIPMENT FROM AN ALTERNATE MANUFACTURER IS PROVIDED, IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO COORDINATE AND SUBMIT TO THE PROJECT DESIGN TEAM FOR REVIEW.

2) UTILITIES LISTED ON THIS SCHEDULE FOR OWNER FURNISHED OR VENDOR SUPPLIED EQUIPMENT ARE ESTIMATES ASSUMED FOR ENGINEERING PURPOSES ONLY. IT IS THE RESPONSIBILITY OF THE OWNER TO PROVIDE EQUIPMENT CUT SHEETS OF THIS EQUIPMENT TO CRABTREE-MCGRATH ASSOCIATES PRIOR TO CONSTRUCTION.

3) INSTALLING SUB-CONTRACTORS MUST NOTIFY CRABTREE-MCGRATH ASSOCIATES IF A UTILITY REQUIREMENT LISTED ON THIS EQUIPMENT SCHEDULE IS NOT AVAILABLE.

4) REFER TO THE ABBREVIATIONS NOTES PROVIDED ON THIS SHEET FOR CLARIFICATION OF ABBREVIATIONS USED WITHIN THIS EQUIPMENT SCHEDULE.

Point-of-Use AGRU Sizing Calculation

Assumptions		
Fill Factor	0.75	
Drain Time	2	min
Retention Factor	2	

Fixture	Compartments	Length (in)	Width (in)	Depth (in)	Total Volume (gal)	Working Volume (gal)	Required Flow (GPM)	AGRU Size
#19 PREP TABLE WITH SINKS	2	18	18	12	33.66	25.25	25.25	30 GPM minimum
# 37 COOK'S TABLE WITH SINK	1	12	12	8	4.99	3.74	3.74	5 GPM minimum
#44 THREE COMPARTMENT SINK	3	18	18	12	50.49	37.87	37.87	40 GPM minimum

PLAN NOTES

1) IT IS THE RESPONSIBILITY OF THE KITCHEN EQUIPMENT CONTRACTOR TO FIELD VERIFY THE DELIVERY PATH OF ALL EQUIPMENT WITHIN THEIR SCOPE WITH BUILDING CONDITIONS PRIOR TO ORDERING TO CONFIRM ALL EQUIPMENT FITS WITHIN THE DESIGNATED SPACE AS LOCATED ON PLANS.

2) KITCHEN EQUIPMENT CONTRACTOR SHALL COORDINATE WITH THE GENERAL CONTRACTOR AS NECESSARY FOR OPENINGS IN BUILDING, WALL LEAVE OUTS, DOOR WIDTHS AND HEADER HEIGHTS REQUIRED FOR DELIVERY AND INSTALLATION MEANS.

3) FINISHES TO ALL WALLS, FLOORS AND CEILINGS ARE TO BE PROVIDED BY THE GENERAL CONTRACTOR AS SPECIFIED BY THE PROJECT ARCHITECT TO MEET THE REQUIREMENTS OF THE LOCAL HEALTH DEPARTMENT.

4) REVISIONS TO THESE PLANS DUE TO FIELD CONDITIONS MUST BE SUBMITTED TO THE PROJECT DESIGN TEAM FOR REVIEW AND APPROVAL PRIOR TO PROCEEDING WITH CONSTRUCTION.

5) FLOORING MATERIAL SPECIFIED BY THE ARCHITECT MUST BE PROVIDED WITH A COVED BASE AT ALL WALLS TO INCLUDE THE INTERIOR AND EXTERIOR OF WALK-IN REFRIGERATED ROOMS.

6) ALL FOODSERVICE EQUIPMENT AND CUSTOM FABRICATED ITEMS MUST MEET THE STANDARDS OF THE NATIONAL SANITATION FOUNDATION AND SHALL BE LABELED ACCORDINGLY.

PLUMBING KEYNOTES

P36 NEW 4" VTR TERMINATE A MINIMUM OF 24" ABOVE ROOF SURFACE OR AS REQUIRED BY CODE. PROVIDE WEATHERPROOF ROOF FLASHING AND COORDINATE FINAL PENETRATION LOCATION WITH STRUCTURAL, ARCHITECTURAL, AND MECHANICAL DRAWINGS.

P42 PROVIDE FULL PORT SHUTOFF VALVE. COORDINATE EXACT LOCATION AND ACCESS REQUIREMENTS WITH ARCHITECTURAL DRAWINGS.

P45 4" VENT THROUGH ROOF. SEE ROOF PLUMBING PLAN FOR CONTINUATION. COORDINATE EXACT ROOF PENETRATION LOCATION WITH ALL TRADES.

P50 2"V DN

P55 PROVIDE WATER HAMMER ARRESTORS PER PDI WH-201. INSTALL ABOVE ACCESSIBLE CEILINGS AS CLOSE AS PRACTICAL TO FIXTURES SERVED. SIZE PER PDI WH-201. PROVIDE ACCESS PANELS AS REQUIRED FOR MAINTENANCE AND REPLACEMENT.

P56 PROVIDE CIRCUITSOLVER THERMOSTATIC BALANCING VALVE AT END OF EACH DHW BRANCH. INSTALL PER MANUFACTURER'S REQUIREMENTS WITH ISOLATION VALVES, UNION, AND ACCESS FOR MAINTENANCE. INSTALL IN CORRECT FLOW DIRECTION AND COORDINATE LOCATION WITH OTHER TRADES.

PLUMBING KEYNOTES

P03 NEW CONCRETE PIT FOR DUPLEX SEWAGE EJECTOR SYSTEM (SP-1 & SP-2). PROVIDE (2) 2" DISCHARGE RISERS & 2" VENT. INSTALL CHECK VALVE AND ISOLATION VALVE ON EACH DISCHARGE LINE. COORDINATE POWER AND CONTROLS WITH ELECTRICAL. REFER TO SCHEDULE AND DETAIL SHEETS FOR ADDITIONAL REQUIREMENTS. PIT CONSTRUCTION BY STRUCTURAL.

P04 NEW 4" DOMESTIC WATER SERVICE FROM SITE. REFER TO CIVIL DRAWINGS FOR SIZE, ROUTING, AND CONNECTION LOCATION. PROVIDE OS&Y SHUTOFF VALVE UPON ENTRY INTO BUILDING.

P05 NEW 6" FIRE SPRINKLER SERVICE FROM SITE. REFER TO CIVIL DRAWINGS FOR SIZE, ROUTING, AND CONNECTION LOCATION. PROVIDE OS&Y SHUTOFF VALVE UPON ENTRY INTO BUILDING.

P06 PROVIDE NEW 3" DOUBLE CHECK VALVE BACKFLOW PREVENTER ASSEMBLY. INSTALL IN ACCORDANCE WITH THE STATE OF CONNECTICUT CROSS CONNECTION CONTROL MANUAL, DEPARTMENT OF PUBLIC HEALTH – DRINKING WATER DIVISION.

P07 PROVIDE PRESSURE REDUCING VALVE (PRV). OUTLET PRESSURE TO BE SET AT 60 PSI. CONTRACTOR SHALL ADJUST FINAL SETTING IN FIELD AFTER TESTING TO ENSURE PROPER OPERATION OF ALL FLUSH VALVE FIXTURES AND TO MAINTAIN ADEQUATE RESIDUAL PRESSURE UNDER PEAK DEMAND CONDITIONS. PROVIDE PRESSURE GAUGES UPSTREAM AND DOWNSTREAM OF PRV.

P08 (WH-1) PROVIDE NEW 100 GALLON GAS-FIRED WATER HEATER. INSTALL IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS AND ALL APPLICABLE CODES.

P09 (ET-1) NEW EXPANDION TANK. (SEE SCHEDULE SHEET)

P10 (TMV-1) THERMOSTATIC MIXING VALVE (SEE SCHEDULE SHEET)

P11 NEW 2" GAS SERVICE EXTENDED BACK TO MAIN. REFER TO UTILITY AND CIVIL DRAWINGS FOR CONNECTION LOCATION AND COORDINATE WITH UTILITY COMPANY.

P12 1 1/4" GAS DROP TO SERVE (2) BOILERS. SPLIT INTO (2) 1" BRANCH CONNECTIONS TO EACH UNIT. PROVIDE SHUTOFF VALVE AND GAS PRESSURE REGULATOR AT EACH CONNECTION AS REQUIRED.

P13 3/4" GAS DROP TO SUPPLY DWH-1. PROVIDE SHUTOFF VALVE, AND LINE PRESSURE REGULATOR AS REQUIRED. COORDINATE FINAL CONNECTION TO WATER HEATER IN FIELD.

P15 1"GAS TO SUPPLY KITCHEN

P18 3" ST UP TO RD-1

P20 3" STORM LEADER DROP BELOW SLAB AND CONNECT TO UNDER-SLAB STORM SYSTEM. PROVIDE CLEANOUT (CO) AT BASE OF STACK. COORDINATE INVERT AND ROUTING WITH UNDER-SLAB PIPING. VERIFY IN FIELD AND MAINTAIN REQ'D SLOPE.

P21 UP TO FCO

P33 4" UP TO FD-2

P44 2" W DN & 2" V RISE

P45 4" VENT THROUGH ROOF. SEE ROOF PLUMBING PLAN FOR CONTINUATION. COORDINATE EXACT ROOF PENETRATION LOCATION WITH ALL TRADES.

P50 2"V DN

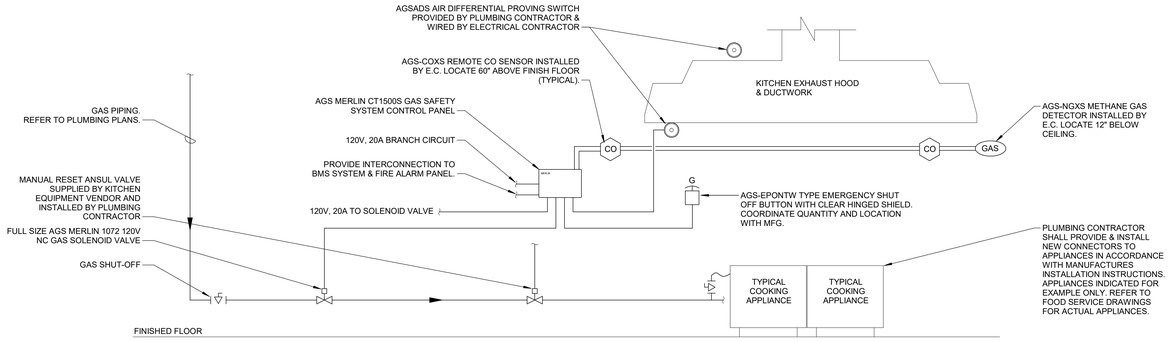
P5.2

6/4/2026 4:29:59 PM Autodesk Docs://Bristol Edgewood Pre-K Academy/MEP_25-169 Bristol Edgewood Pre-K Academy.rvt



SEQUENCE OF OPERATION:

THE SYSTEM'S GAS SOLENOID VALVE SHALL CLOSE UPON ANY OF THE FOLLOWING:

A. WHEN CARBON MONOXIDE IS DETECTED.
B. SHUT DOWN OF HOOD (LOSS OF DRAFT).
C. ALARM SIGNAL FROM PANIC BUTTON
D. ALARM SIGNAL FROM FIRE ALARM PANEL.

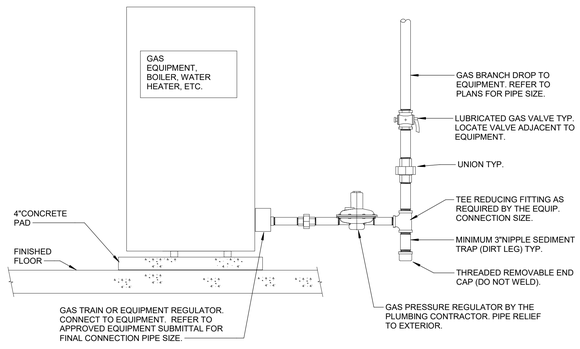
1. UNDER NORMAL OPERATION CONDITION, KITCHEN EXHAUST FAN IS ON HIGH SPEED, GAS CONTROL PANEL IS POWERED, GAS SOLENOID CAN BE MANUALLY OPENED VIA AUTHORITY KEY SWITCH.
2. UPON DETECTION OF CARBON MONOXIDE OR COMBUSTIBLE GAS, GAS CONTROL PANEL SHALL GO INTO ALARM, CLOSING GAS SOLENOID VALVE AND GENERATING A TROUBLE SIGNAL FOR BMS / BAS, FIRE ALARM PANEL
3. UPON LOSS OF POWER TO HOOD OR GAS CONTROL PANEL, GAS SOLENOID SHALL CLOSE, MANUAL RESET OF SYSTEM IS REQUIRED TO OPEN GAS SOLENOID VALVE.
4. UPON SENSOR FAILURE OR FAULT, SYSTEM SHALL GO INTO ALARM AND CLOSE GAS SOLENOID VALVE.
5. INCIDENT ON COOKING LINE SHALL ACTIVATE HOOD ANSUL SYSTEM AND CLOSE THERMALLY-ACTIVATED GAS VALVE.

NOTES:

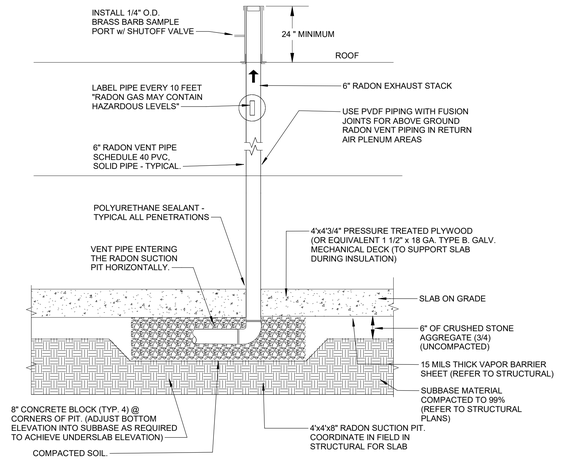
1. INSTALLATION OF SYSTEM MUST CONFORM TO NATIONAL AND LOCAL APPLICABLE CODES AND REQUIREMENTS.
2. BASIS OF DESIGN IS AMERICAN GAS SAFETY (AGS) MERLIN CT1500S GAS VENTILATION INTERLOCK AND SHUTOFF SYSTEM INCORPORATING, CO DETECTOR, AIR DIFFERENTIAL SWITCHES, GAS DETECTOR, AND OTHER ITEMS LISTED IN SCHEMATIC ABOVE. CONTACT LOCAL REPRESENTATIVE: EMERSON SWAN 781-986-2000
3. SYSTEM SHALL BE THE ULTIMATE RESPONSIBILITY OF THE PLUMBING CONTRACTOR. GAS SOLENOID, MERLIN CONTROL PANEL, DETECTORS, DIFFERENTIAL SWITCHES, EMERGENCY STOP BUTTONS AND ALL ACCESSORIES SHALL BE FURNISHED BY THE PLUMBING CONTRACTOR. LIAISE WITH PLUMBING CONTRACTOR, ARCHITECT, AND KITCHEN CONTRACTOR FOR LOCATION AND POSITION OF EQUIPMENT. ELECTRICAL CONTRACTOR TO INSTALL ALL WIRING AND CONDUIT.
4. ELECTRICAL CONTRACTOR SHALL PROVIDE 120VAC LINE VOLTAGE TO MERLIN PANEL AND GAS SOLENOID. PROVIDE 12VDC FROM MERLIN PANEL TO DETECTORS / SENSORS. PROVIDE SIGNAL WIRE FROM DETECTORS AND DIFFERENTIAL SWITCHES TO MERLIN PANEL. VOLT FREE CIRCUIT TO REMOTE EMERGENCY STOP BUTTON.
5. COORDINATE PLACEMENT AND FINAL LOCATION OF DETECTORS WITH MANUFACTURER.

1 GAS CONTROLLER DETAIL
NOT TO SCALE

NOTES:
1. ALL NEW GAS PIPING SHALL BE PAINTED WITH PRIMER AND (2) COATS OF YELLOW RUST INHIBITIVE PAINT.
2. COORDINATE LOCATION OF GAS CONNECTION WITH EQUIPMENT LOCATION AND MECHANICAL CONTRACTOR.
3. GAS PRESSURE REGULATORS TO BE AS MANUFACTURED BY MAXITROL, FISHER OR SENSUS. CONTRACTOR TO SURVEY GAS UTILIZATION EQUIPMENT FOR SELECTION AND SIZING OF PROPER GAS REGULATORS.



2 EQUIPMENT GAS CONNECTION DETAIL
NOT TO SCALE



CRUSHED STONE GRADING REQUIREMENTS

1. USE ASTM SIZE #5 MEETING THE FOLLOWING GRADATIONS (SQUARE OPENING AMOUNT FINER THAN EACH LAB SIEVE WEIGHT %): 100% PASSING 1 1/2"; 90 - 100% PASSING 1"; 20 - 55% PASSING 3/4";0 - 10% PASSING 1/2"; 0 - 5% PASSING 3/8". CONTRACTOR AT THEIR OPTION, MAY SUBMIT ALTERNATELY CRUSHED STONE MEETING CTDOT SPECIFICATIONS FOR #6 (SEE SPECIFICATION EARTHWORK SECTION).
2. CONTRACTOR TO SUBMIT SAMPLES & ANALYSIS BASED ON EARTHWORK SECTION DIVISION 2 REQUIREMENTS FOR CRUSHED STONE ASTM #5.
3. CONTRACTOR TO INSTALL MATERIAL IN CONFORMANCE W/CTDOT FORM 816.

GENERAL NOTES RADON SYSTEM :

1. RADON SUCTION PIPE SHALL BE CENTRALLY LOCATED AS SHOWN.
2. DO NOT LOCATE SUCTION PIT NEAR SUBSLAB BARRIERS OR NEAR UNSEALED OPENINGS THROUGH THE SLAB.
3. VENT PIPE SHALL ENTER THE RADON SUCTION PUT HORIZONTALLY.
4. RUN VENT PIPE UNDER THE SLAB AND EXIT THE SUBSLAB IN THE GENERAL LOCATION INDICATED IN THE PLANS.
5. PROVIDE PRESSURE MONITOR/WARNING SIGNAL AT RISER. WHERE LOCATED IN A CHASE, PROVIDE ACCESS DOOR.
6. HORIZONTAL PIPE RUNS IN CEILING MUST PITCH A MINIMUM OF 1/8"/FT. BACK TO THE RADON SUCTION PIT
7. CONTRACTOR TO CONFIRM PROPER OPERATION OF SYSTEM AFTER INSTALLATION BY DRILLING 10 (1/2") HOLES THROUGH SLAB @ EVENLY SPACED LOCATIONS REPRESENTING THE AREA COVERED BY EACH SUCTION PIT. PRESSURES SHALL BE MEASURED @ EACH HOLE BY USING MICROMANOMETER OR SIMILAR DEVICE. A MINIMUM -0.002 in. WATER COLUMN (WC) IS REQUIRED @ ALL TEST HOLES.
8. CONTRACTOR SHALL FILL HOLES AFTER COMPLETION OF TEST W/APPROVED NON-SHRINK "QUICKRETE" CONCRETE GROUT OR EQUAL.
9. ALL PVC PIPING SECTIONS TO BE CONNECTED USING PVC CEMENT (LOW VOC's).
10 ALL PVC PIPING SECTIONS TO BE CONNECTED USING PVC CEMENT (LOW VOC's).
11. REFER TO STRUCTURAL DWGS FOR MORE INFORMATION AND CRUSHED STONE REQUIREMENTS.
12. CONTRACTOR TO RETAIN LICENSED CERTIFIED (CTDPH) RADON TEST PROFESSIONAL TO PREPARE A WRITTEN PLAN APPROVAL AND CONDUCT ON-SITE TESTING TO DETERMINE RADON LEVELS.
13. CONTRACTOR SHALL UTILIZE A LICENSED CERTIFIED RADON TESTING COMPANY TO COLLECT SAMPLES FROM THE SAMPLE PORT ON THE ROOF TO DETERMINE EFFECTIVENESS OF THE SYSTEM. THE LICENSED CERTIFIED RADON TESTING COMPANY SHALL BE A PROFESSIONAL WHO IS ON THE APPROVED LIST OF QUALIFIED SCHOOL RADON MEASUREMENTS PROFESSIONALS WITH CT DEPT. OF PUBLIC HEALTH.
14. LOCATE EXHAUST STACK ON ROOF A MINIMUM 25' FROM ANY BUILDING AIR INTAKES.
15. COORDINATE INSTALLATION OF NEW RADON/GAS VENT PIPING WITH LOCATION OF STRUCTURAL FOOTINGS, GRADE BEAMS. ADJUST PIPING LOCATION (< 5' EITHER DIRECTION) AS NECESSARY TO AVOID CONFLICTS.
16. RADON SYSTEM SUBSLAB DETAIL APPLIES UNDER ENTIRE BUILDING SLAB AREA.
17. NO PVC PIPING WILL BE ALLOWED IN RETURN AIR PLENUM AREAS. USE PVDF PIPING WITH FUSION JOINTS FOR ABOVE GROUND RADON VENT PIPING IN RETURN AIR PLENUM AREAS.

GENERAL NOTES:

1. THE WATER HEATER SHALL BE FACTORY ASSEMBLED, AND SHALL INCLUDE HOOKUPS FOR ELECTRICAL, GAS, VENTING AND PLUMBING. THE BURNER SHALL BE A HIGH EFFICIENCY TYPE. IGNITION SHALL BE BY AN ELECTRONIC PILOT SYSTEM WITH AUTOMATIC SAFETY CONTROLS FOR HIGH LIMIT, GAS PRESSURE REGULATOR. VENTING SHALL BE U.L. RATED FOR USE WITH CPVC. THE WATER HEATER SHALL BE CONSTRUCTED TO ASME CODE, CERTIFIED BY CSA, AND APPROVED BY NSF FOR DOMESTIC HOT WATER USE.
2. PROVIDE ASME PRESSURE/TEMPERATURE RELIEF VALVE FOR THE WATER HEATER.
3. THE WATER HEATER SHALL COMPLY WITH THE ENERGY EFFICIENCY REQUIREMENTS FOR STANDBY LOSS AND THERMAL EFFICIENCY AS SPECIFIED IN THE LATEST EDITION OF ASHRAE 90.1 STANDARD.

PLUMBING DRAINAGE SCHEDULE

TAG	SPECIALTY ITEM	MANUFACTURER	MODEL	DESCRIPTION	REMARKS
FCO	FLOOR CLEANOUT	JR SMITH	4020 SERIES	AREAS INCORPORATING FLOOR FINISHES, ADJUSTABLE ROUND SCORIATED HEAVY DUTY NICKEL BRONZE SECURED TOP, CAST IRON BODY, FLASHING FLANGE AND CLAMP, TAPERED BRONZE PLUG.	
FD-1	FLOOR DRAIN	JR SMITH	2010(A)-NB-P050	CAST IRON BODY, BOTTOM OUTLET, 6" DIAMETER ADJUSTABLE NICKEL BRONZE STRAINER TOP, COMBINATION SEEPAGE PAN/MEMBRANE FLASHING CLAMP AND TRAP PRIMER CONNECTION.	
FD-2	FLOOR DRAIN	JR SMITH	2110-P050-B	CAST IRON BODY, BOTTOM OUTLET, 9" DIAMETER CAST IRON TOP, SEDIMENT BUCKET, COMBINATION SEEPAGE PAN/MEMBRANE FLASHING CLAMP AND TRAP PRIMER CONNECTION.	
FS-1	FLOOR SINK	JR SMITH	3101-C	ACID RESISTANT COATED(ARC) INTERIOR, 6" DEEP CAST IRON BODY, BOTTOM OUTLET, 8" SQUARE NICKEL BRONZE TOP, ALUMINUM SEDIMENT BUCKET AND COMBINATION SEEPAGE PAN/MEMBRANE FLASHING CLAMP. PROVIDE DRAINS RECEIVING INDIRECT WASTE WITH 1/2 GRATE.	
RD-1	ROOF DRAIN	JR SMITH	1010-E-R-C	DIAMETER CAST IRON BODY, BOTTOM OUTLET, 12" DIAMETER CAST IRON DOME, SUMP RECEIVER, UNDER-DECK CLAMP, FIXED EXTENSION COLLAR, AND COMBINATION MEMBRANE FLASHING CLAMP/GRAVEL GUARD.	

PLUMBING EXPANSION TANK SCHEDULE

TAG	SPECIALTY ITEM	MANUFACTURER	MODEL	DESCRIPTION	REMARKS
ET-1	DOMESTIC WATER EXPANSION TANK	AMTROL	ST-25V-C		10.3 GALLON THERMAL EXPANSION TANK FOR DOMESTIC WATER HEATER SYSTEM. PROVIDE 6.9 GALLON ACCEPTANCE VOLUME. SET TANK PRE-CHARGE TO MATCH INCOMING STATIC WATER PRESSURE. INSTALL ON COLD WATER SUPPLY TO WATER HEATER PER MANUFACTURER REQUIREMENTS.

MIXING VALVE SCHEDULE

TAG	MANUFACTURER	MODEL	TYPE	GPM	MAX. PRESSURE	MIN GPM WITH ACCURATE TEMP.	OUTLET SET TEMP. (°F)	SIZE (INLET, OUTLET)	UNIT COMPLIANCE	REMARKS
TMV-1	ACORN	MV17-3	PACKAGED MIXING STATION	90	125 PSI	2	120	2"	ASSE 1017	COMMAND STATION. INCLUDED WILL BE COMBINATION TEMPERATURE/PRESSURE GAUGES ON THE INLETS AND OUTLET, FULL PORT LOCKABLE BALL VALVES FOR SERVICE STOPS, CARTRIDGE-STYLE INLET CHECKS W/STRAINERS, A HOSE CONNECTION FOR CREATING DEMAND LOCALLY. ATTACHED TO A WELDED UNISTRUT FRAME FOR SUPPORT. ASSEMBLY SHALL BE LEAD-FREE.

DUPLEX EFFLUENT PUMP SCHEDULE

PLUMBING KEYNOTES

P01 NEW SAN. DISCHARGE TO SITE. REFER TO CIVIL FOR CONT. & CONNECTION. COORD. INVERTS & ROUTING W/ CIVIL & FIELD CONDITIONS.

P36 NEW 4" VTR.TERMINATE A MINIMUM OF 24" ABOVE ROOF SURFACE OR AS REQUIRED BY CODE. PROVIDE WEATHERPROOF ROOF FLASHING AND COORDINATE FINAL PENETRATION LOCATION WITH STRUCTURAL, ARCHITECTURAL, AND MECHANICAL DRAWINGS.

P45 4" VENT THROUGH ROOF. SEE ROOF PLUMBING PLAN FOR CONTINUATION. COORDINATE EXACT ROOF PENETRATION LOCATION WITH ALL TRADES.

P57 REFER TO RISER DIAGRAM ON P7.2

P61 AGRU-1: PROVIDE 30 GPM POINT-OF-USE AGRU. REFER TO PLUMBING FIXTURE SCHEDULE.

P62 AGRU-2: PROVIDE 5 GPM POINT-OF-USE AGRU. REFER TO PLUMBING FIXTURE SCHEDULE.

P63 AGRU-3: PROVIDE 40 GPM POINT-OF-USE AGRU. REFER TO PLUMBING FIXTURE SCHEDULE.

PLUMBING KEYNOTES

P04 NEW 4" DOMESTIC WATER SERVICE FROM SITE. REFER TO CIVIL DRAWINGS FOR SIZE, ROUTING, AND CONNECTION LOCATION. PROVIDE OS&Y SHUTOFF VALVE UPON ENTRY INTO BUILDING.

P06 PROVIDE NEW 3" DOUBLE CHECK VALVE BACKFLOW PREVENTER ASSEMBLY. INSTALL IN ACCORDANCE WITH THE STATE OF CONNECTICUT CROSS CONNECTION CONTROL MANUAL, DEPARTMENT OF PUBLIC HEALTH – DRINKING WATER DIVISION.

P07 PROVIDE PRESSURE REDUCING VALVE (PRV). OUTLET PRESSURE TO BE SET AT 60 PSI. CONTRACTOR SHALL ADJUST FINAL SETTING IN FIELD AFTER TESTING TO ENSURE PROPER OPERATION OF ALL FLUSH VALVE FIXTURES AND TO MAINTAIN ADEQUATE RESIDUAL PRESSURE UNDER PEAK DEMAND CONDITIONS. PROVIDE PRESSURE GAUGES UPSTREAM AND DOWNSTREAM OF PRV.

P58 REFER SHEET P3.1 FOR KITCHEN EQUIPMENTS.

NOTES:
TOTAL DEVELOPED LENGTH OF GAS PIPING FROM METER RIG TO FURTHEST OUTLET = 100FT.

GAS PIPING BASED ON SOUTHWEST GAS COMPANY REQUIREMENT AND IPC

NATURAL GAS INLET PRESSURE OF LESS THAN 2.0PSI, PRESSURE DROP OF 0.3 PSI AND 0.6 SPECIFIC GRAVITY.

PLUMBING CONTRACTOR TO COORDINATE ALL GAS VENT ROUTING FROM GAS REGULATORS, ETC... WITH MECHANICAL CONTRACTOR

ALL GAS FIRED EQUIPMENT SHALL BE CONNECTED TO PIPING AS PER INTERNATIONAL FUEL GAS CODE. EACH PIECE OF EQUIPMENT SHALL HAVE A DIRT LEG, UNION GAS COCK, & REGULATOR IF LOWER THEN SUPPLIED PRESSURE IS REQUIRED

CFH - CUBIC FEET PER HOUR MBH = M (1000) BTU PER HOUR

CONTRACTOR TO COORDINATE INSTALLATION WITH GAS UTILITY COMPANY
CONFIRM ALL PRESSURE REQUIREMENTS WITH APPROVED MECHANICAL EQUIPMENT.

General Notes:
1. Lighting Control panel to be interconnected with BMS System.
2. Provide Contacts for Fire Alarm input in Lighting Control Panel & Program the Networked lights to be on to full brightness.
3. Provide Site lighting control panel with BMS integration capability or Provide Separate contacts to support BMS integration.

KITCHEN EQUIPMENT NOTES

1. COORDINATE EXACT LOCATION AND MOUNTING HEIGHT OF ALL KITCHEN EQUIPMENT CONNECTION DEVICES WITH FOOD SERVICE DRAWINGS AND KITCHEN EQUIPMENT CONTRACTOR.
2. PROVIDE RECEPTACLES WITH NEMA CONFIGURATION AS INDICATED ON FOOD SERVICE DRAWINGS OR AS REQUIRED BY MANUFACTURER.
3. ALL 20A/1P RECEPTACLES INSTALLED IN KITCHEN AREA SHALL BE PROTECTED BY LISTED GFCI PROTECTION DEVICE.
4. HOOD EXHAUST FANS TO BE WIRED THROUGH SWITCH PROVIDED INTEGRAL WITH HOOD. HOOD LIGHTS FURNISHED BY HOOD MANUFACTURER AND INSTALLED BY ELECTRICAL CONTRACTOR PER MANUFACTURERS INSTRUCTIONS.
5. SOLENOID IN ELECTRONIC GAS VALVES PROVIDED BY PLUMBING CONTRACTOR TO BE INTERLOCKED WITH FAN SWITCH PROVIDED INTEGRAL WITH HOOD AND FIRE SUPPRESSION SYSTEM IN ORDER TO SHUT RESPECTIVE GAS VALVES WHEN EXHAUST FAN IS NOT RUNNING OR WHEN FIRE SUPPRESSION SYSTEM HAS BEEN ACTIVATED. REFER TO PLUMBING DRAWINGS FOR VALVE LOCATION.
6. REFER TO FOOD SERVICE DRAWINGS FOR ALL INTERCONNECTIONS BETWEEN EQUIPMENT, INCLUDING, BUT NOT LIMITED TO, WALK-IN COOLERS, COMPRESSORS, HOOD, EXHAUST FANS, FIRE SUPPRESSION SYSTEM, ETC.
7. ALL WORK SHOWN AS THE RESPONSIBILITY OF THE ELECTRICAL CONTRACTOR ON THE FOOD SERVICE DRAWINGS SHALL BE INCLUDED, WHETHER SHOWN ON THIS DRAWING OR NOT. CAREFUL COORDINATION SHALL BE MADE BETWEEN THE FOOD SERVICE DRAWINGS AND ALL TRADES TO INSURE PROPER OPERATION OF ALL EQUIPMENT, INCLUDING HOOD FIRE SUPPRESSION SYSTEM AND THE SEQUENCE OF OPERATIONS OF SUCH EQUIPMENT.

1600A4	5 [4" C - 4#400]

E-MON D-MON METER SCHEDULE

TAG	MAKE/MODEL	VOLTAGE/PHASE	LOAD MONITORED
M1	E-mon D-mon class 3200 smart meter	208V/3PH	GENERATOR
M2	E-mon D-mon class 3200 smart meter	208V/3PH	HVAC
M3	E-mon D-mon class 3200 smart meter	208V/3PH	HVAC
M4	E-mon D-mon class 3200 smart meter	208V/3PH	KITCHEN
M5	E-mon D-mon class 3200 smart meter	208V/3PH	LIGHTING
M6	E-mon D-mon class 3200 smart meter	208V/3PH	BUILDING OPS
M7	E-mon D-mon class 3200 smart meter	208V/3PH	RECEPTS
M8	E-mon D-mon class 3200 smart meter	208V/3PH	RECEPTS
M9	E-mon D-mon class 3200 smart meter	208V/3PH	RECEPTS

LOAD CONSUMPTION SHALL BE REPORTED TO BMS AS FOLLOWS:	
GENERATOR LOAD	M1
HVAC LOAD	M2
HVAC LOAD	M3
BUILDING OPERATIONS LOAD	M4
LIGHTING LOAD	M5
BUILDING OPERATIONS LOAD	M6
RECEPTACLE LOAD	M7
RECEPTACLE LOAD	M8
RECEPTACLE LOAD	M9

2 METER SCHEDULE AND NOTES
12" = 1'-0"

THE ADVANCED ENERGY METERING MUST HAVE THE FOLLOWING CHARACTERISTICS:

- METERS MUST BE PERMANENTLY INSTALLED, RECORD AT INTERVALS OF ONE HOUR OR LESS, AND TRANSMIT DATA TO A REMOTE LOCATION.
- ELECTRICITY METERS MUST RECORD BOTH CONSUMPTION AND DEMAND. WHOLE-BUILDING ELECTRICITY METERS SHOULD RECORD THE POWER FACTOR, IF APPROPRIATE.
- THE DATA COLLECTION SYSTEM MUST USE A LOCAL AREA NETWORK, BUILDING AUTOMATION SYSTEM, WIRELESS NETWORK, OR COMPARABLE COMMUNICATION INFRASTRUCTURE.
- THE SYSTEM MUST BE CAPABLE OF STORING ALL METER DATA FOR AT LEAST 36 MONTHS.
- THE DATA MUST BE REMOTELY ACCESSIBLE.
- ALL METERS IN THE SYSTEM MUST BE CAPABLE OF REPORTING HOURLY, DAILY, MONTHLY, AND ANNUAL ENERGY USE.

ELECTRIC METER:

THE CONTROLLER (BMS) SHALL MONITOR THE ELECTRIC METER FOR ELECTRIC CONSUMPTION ON A CONTINUAL BASIS (REAL TIME DEMAND). THESE VALUES SHALL BE MADE AVAILABLE TO THE SYSTEM AT ALL TIMES. ALARM SHALL BE GENERATED AS FOLLOWS:
- METER ALARM: SENSOR READING INDICATES AN INVALID VALUE FROM THE ELECTRIC METER.

PEAK DEMAND HISTORY:

THE CONTROLLER(BMS) SHALL MONITOR AND RECORD THE PEAK (HIGH AND LOW) DEMAND READINGS FROM THE ELECTRIC METER. PEAK READINGS SHALL BE RECORDED ON A DAILY, MONTH-TO-DATE, AND YEAR-TO-DATE BASIS.

USAGE HISTORY:

THE CONTROLLER(BMS) SHALL MONITOR AND RECORD ELECTRIC METER READINGS SO AS TO PROVIDE A POWER CONSUMPTION HISTORY. USAGE READINGS SHALL BE RECORDED ON A DAILY, MONTH-TO-DATE, AND YEAR-TO-DATE BASIS.

DEMAND LEVELS:

THE CONTROLLER (BMS) SHALL SET THE SYSTEM DEMAND LEVEL (ADJ.) BASED ON THE CURRENT POWER CONSUMPTION READINGS FROM THE ELECTRIC METER. THERE SHALL BE SIX DAILY TIME PERIODS IN WHICH THE DEMAND SHALL BE ADJUSTED ON THREE LEVELS. THESE DEMAND LEVELS SHALL BE AVAILABLE FOR FACILITY EQUIPMENT TO UTILIZE FOR DEMAND LIMITING.
- DEMAND LEVEL 1: POWER CONSUMPTION HAS EXCEEDED THE FIRST DEMAND LEVEL THRESHOLD (ADJ.).
- DEMAND LEVEL 2: POWER CONSUMPTION HAS EXCEEDED THE SECOND DEMAND LEVEL THRESHOLD (ADJ.).
- DEMAND LEVEL 3: POWER CONSUMPTION HAS EXCEEDED THE THIRD DEMAND LEVEL THRESHOLD (ADJ.).

FIRE ALARM SEQUENCE OF OPERATION:

1. ACTIVATION OF ANY MANUAL PULL STATION , AREA SMOKE AND HEAT DETECTOR, COMBINATION SMOKE/CO DETECTOR OR FIRE SUPPRESSION SYSTEM FLOW SWITCH(S) SHALL REPORT TO THE FIRE ALARM CONTROL PANEL (FACP) AN ALARM CONDITION. ALL DOOR HOLD OPENS SHALL RELEASE AND ALL FIRE ALARM CONTROL MODULES SHALL ACTIVATE SOUND SYSTEM OVERRIDES.
2. ACTIVATION OF ANY DUCT DETECTOR SHALL REPORT TO THE FACP A TROUBLE CONDITION TO THE FACP AND SHUTDOWN ASSOCIATED HVAC EQUIPMENT.
3. ACTIVATION OF ANY FIRE SUPPRESSION SYSTEM MONITORING MODULES LOCATED ON TAMPER SWITCHES SHALL REPORT A TROUBLE CONDITION TO THE FACP.
4. ACTIVATION OF ANY "LOCKDOWN" MANUAL PUSH BUTTON SHALL REPORT BUILDING LOCKDOWN CONDITION TO THE FACP. A SPECIFIC PRE-RECORDED MESSAGE FOR LOCKDOWN CONDITION SHALL BE BROADCAST THROUGHOUT THE BUILDING.
5. ACTIVATION OF ANY ELEVATOR LOBBY, HOISTWAY, OR MACHINE SPACE SMOKE DETECTORS SHALL INITIATE ELEVATOR RECALL FOR FIRE FIGHTERS SERVICE AND SHALL PROVIDE ALARM INITIATION. PROVIDE SUPERVISIORY SIGNAL FOR ELEVATOR SHUT-DOWN CONTROL CIRCUITS.
6. ANY ALARM CONDITION OR TROUBLE CONDITION SHALL BE BROADCAST TO THE DISTRICT CENTRAL MONITORING ENTITY VIA A DIALER IN THE FACP. TWO TELEPHONE SHALL BE PROVIDED FOR REDUNDANCY.

NOTES:

1. ALL WIRING PER MANUFACTURERS RECOMMENDATIONS TO BE INSTALLED IN AN APPROVED RACEWAY SYSTEM.
2. THIS DIAGRAM IS INTENDED TO SHOW THE GENERAL RELATIONSHIP OF DEVICES AND CONTROL PANEL IS NOT INTENDED TO SHOW ALL DEVICES. REFER TO FLOOR PLANS FOR EXACT QUANTITIES AND LOCATION OF ALL DEVICES.
3. DIVISION 26 CONTRACTOR TO PROVIDE AND SUPPLY ALL DUCT MOUNTED SMOKE DETECTORS TO THE DIVISION 23 CONTRACTOR FOR INSTALLATION IN THE DUCT. DIVISION 26 CONTRACTOR SHALL BE RESPONSIBLE FOR WIRING OF DUCT DETECTORS.

GENERAL NOTES

1. DRAWINGS INDICATE THE GENERAL ARRANGEMENT OF SYSTEMS AND WORK INCLUDED IN THE CONTRACT.
2. ALL COMMUNICATION, SECURITY, AND AV OUTLETS MUST COINCIDE WITH ELECTRICAL POWER DRAWINGS. THE CONTRACTOR MUST COORDINATE ALL LOCATIONS OF THE ELECTRICAL OUTLETS WITH THESE OUTLETS.
3. REQUIRED CABLE COLORS: SUBMIT ALL CABLE AND JACK COLOR WITH PRODUCT SUBMITTALS PRIOR TO PROCUREMENT
4. LABEL ALL CABLES WITHIN 12" OF FINAL TERMINATION.
5. THE CONTRACTOR SHALL MAINTAIN THE TWIST OF THE INDIVIDUAL PAIRS TO WITHIN 1/2" OF FINAL TERMINATION FOR ALL CATEGORY 3 OR HIGHER CABLE.
6. USE ONLY HOOK AND LOOP CABLE TIES (VELCRO) FOR CABLES RATED CATEGORY 3 OR HIGHER.
7. ALL CABLES RUN IN CEILING AREAS SHALL BE PROPERLY SUPPORTED WITH CONDUIT OR J-HOOKS MOUNTED TO SLAT AT MINIMUM OF 5' INTERVALS. NO CABLE SHALL REST OR TOUCH CEILING ASSEMBLIES. CABLES SHALL NOT BE INSTALLED EXPOSED IN OPEN CEILING AREAS.
8. ALL LABELS SHALL BE MACHINE PRINTED. NO HAND LETTERED CABLES SHALL BE USED.
9. USE ONLY PLENUM RATED CABLES.
10. DO NOT RUN ETHERNET CABLES PARALLEL TO POWER CABLES. CROSS POWER CABLES ONLY AT RIGHT ANGLES.
11. MAINTAIN 8" DISTANCE FROM ALL LIGHTING TRANSFORMERS.
12. COLOR AND STYLE OF TELECOMMUNICATION FACE PLATES SHALL MATCH ELECTRICAL FACE PLATES AND BE COORDINATED WITH AND CONFIRMED BY THE ARCHITECT.
13. OBTAIN AND EXTEND TO OWNER ALL AVAILABLE MANUFACTURER AND SYSTEM EXTENDED MANUFACTURER WARRANTEES. THE LOW VOLTAGE INSTALLATION CONTRACTOR SHALL SUBMIT ALL TEST RESULTS TO THE CABLE MANUFACTURER TO CERTIFY THE CABLING INSTALLATION AND ATTAIN AND DELIVER TO THE OWNER THE EXTENDED MANUFACTURER'S WARRANTY FOR MATERIAL AND WORKMANSHIP.
14. SPLICING CABLES IS NOT PERMITTED EXCEPT AS SPECIFICALLY NOTED.
15. DEVICE CABLING SHALL BE TERMINATED WITHIN THE INDICATED DATA ROOMS AND SHALL BE TERMINATED ONTO A 19" RACK MOUNTED, RJ45, 48 PORT, CATEGORY 6A RATED PATCH PANEL.
16. THE FOLLOWING CABLING SHALL BE TERMINATED ONTO IT'S OWN DISCRETE AND SEPARATE CATEGORY 6A RATED, RACK MOUNTED PATCH PANELS. REFER TO RACK ELEVATION DETAILS:
    - A. ALL WIRELESS AP'S
    - B. ALL VIDEO SURVEILLANCE CAMERAS (REFER TO SECURITY DRAWINGS FOR PLACEMENT)
17. LOCATIONS OF EQUIPMENT FOR ALL OTHER TRADES SHALL BE COORDINATED BEFORE CONSTRUCTION.
18. THE CONTRACTOR SHALL COORDINATE LAYOUT LOCATIONS AND CLEARANCE OF ALL EQUIPMENT WITH OTHER TRADES AND ATTAIN OWNER'S APPROVAL PRIOR TO INSTALLATION.
19. CONTRACTOR SHALL COORDINATE ALL RACEWAYS, LOCATIONS, AND POWER REQUIREMENTS WITH THE ELECTRICAL CONTRACTOR.
20. ALL VOICE AND DATA OUTLETS THAT DO NOT HAVE AN ELECTRICAL OUTLET WITHIN 3FT SHALL BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE THE PROJECT ARCHITECT, CONSTRUCTION MANAGER, AND TECHNOLOGY CONSULTANT PRIOR TO THE TIME OF INSTALLATION.
21. ALL DEVICES SHOWN ON THESE PLANS MUST BE COORDINATED AND APPROVED BY THE ARCHITECT. THE INSTALLATION CONTRACTOR SHALL DEPICT ALL DEVICES ONTO ELEVATION SUBMITTALS BEFORE INSTALLATION. ANY DEVICE THAT IS NOT APPROVED BY THE ARCHITECT PRIOR TO INSTALLATION MAY BE REQUIRED TO BE RELOCATED AS DIRECTED BY THE ARCHITECT AND CORRECTED BY THE CONTRACTOR WITH NO ADDITIONAL CHARGE TO THIS PROJECT.
22. ALL PATHWAYS, INCLUDING ALL WALL AND CEILING PENETRATIONS ARE REQUIRED TO INSTALL CABLING TO THE END DEVICE AND SHALL BE COORDINATED BETWEEN THE LOW VOLTAGE AND SECURITY CONTRACTOR AND THE ELECTRICAL CONTRACTOR AND SHALL BE INCLUDED AS PART OF THIS SECTION.
23. SECURE ATTACHMENT OF TECHNOLOGY AND SECURITY DEVICES:
    - A. TO ENSURE PROPER ATTACHMENT OF FIXTURES, FURNISHINGS & EQUIPMENT ITEMS, INCLUDING AND TECHNOLOGY ITEMS, WHERE "ITEMS" ARE ATTACHED TO WALL, CEILING, OVERHEAD STRUCTURE, AND/OR FLOOR, CONTRACTOR SHALL PROVIDE INFORMATION ADEQUATE FOR ARCHITECT TO VERIFY ITEMS, ATTACHED TO WALL, CEILING, AND/OR FLOOR ARE ATTACHED SECURELY AND PER MANUFACTURER'S RECOMMENDATIONS. ARCHITECT'S REVIEW MAY BE IMPLEMENTED DURING SUBMITTAL PROCESS.
    - B. CONTRACTOR SHALL PROVIDE STRUTS, HANGERS, FASTENERS, SAFETY HARNESSES, CHANNELS, BOLTS, SCREWS, RODS, ETC. TO SECURELY ATTACH ITEMS TO THE EXISTING STRUCTURE AS REQUIRED TO MEET FIELD CONDITIONS AND MEET APPLICABLE CODES.
24. ALL CONDUIT IS INSTALLED TO ABOVE ACCESSIBLE CEILING UNLESS OTHERWISE NOTED.
25. PLACEMENT OF ALL SECURITY VIDEO SURVEILLANCE CAMERA CABLING MUST BE COORDINATED WITH THE SECURITY CONTRACTOR AND APPROVED BY THE SECURITY CONSULTANT AND/OR OWNER PRIOR TO CONSTRUCTION.

PRODUCT DESCRIPTION		
KEY	DESCRIPTION	MANUFACTURER #
1	3/4" FIRE RATED PLYWOOD PAINTED WITH 2 COATS OF FIRE RETARDANT PAINT AS SPECIFIED. MOUNT BOTTOM OF PLAYWOOD AT 6" AFF.	AS REQUIRED
2	TWO-POST RACK; 45 RMU 19" W x 7' H x 3" D	CPI #46353-703 OR EQUIV
3	ADJUSTABLE RAIL QUADRACK; 84", 45U H x 23.62" W x 35.43" D; 35.43 to 41.33" to 41.33" RAIL DEPTH; BLACK	CPI #15252-703 OR EQUIV
4	6" WIDE, DOUBLE SIDED VERTICAL WIRE MANAGER	CPI #13912-703 OR EQUIV
5	HORIZONTAL WIRE MANAGER - 1RU	AS SPECIFIED
6	48 PORT MODULAR ANGLED PATCH PANELS, 2RU	AS SPECIFIED
7	24 PORT CATEGORY 5E ANGLED PATCH PANELS, 1RU - VOICE BACKBONE	AS SPECIFIED
8	CATEGORY 6A JACK MODULE, BLUE (DATA)	AS SPECIFIED
9	CATEGORY 6A JACK MODULE, RED (WAP'S)	AS SPECIFIED
10	CATEGORY 6A JACK MODULE, YELLOW (VSS CAMERAS)	AS SPECIFIED
11	FIBER OPTIC CABINET - 2RU	AS SPECIFIED
12	FIBER OPTIC CABINET - 1RU	AS SPECIFIED
13	LC ADAPTER PLATES, 6 LC DUPLEX (12 FIBER STRANDS), COLOR: AQUA	AS SPECIFIED
14	18" WIDE CABLE TRAY MOUNTED TO CEILING DECK, INCLUDE THREADED RODS W/PROTECTIVE COVERS, TRAPEZE BRIDGE SUPPORT AND ALL REQUIRED MOUNTING ACCESSORIES	CPI OR EQUIV
15	18" WIDE RADIUS DROP	CPI OR EQUIV
16	PUBLIC ADDRESS WALL CABINET	AS SPECIFIED
17	SECURITY PANEL LOCATION	AS SPECIFIED
18	4" CONDUITS SLEEVES - REFER TO DETAIL # 8 THIS SHEET	AS SPECIFIED
19	GROUNDING BUSBAR	FURNISHED BE DIV 26 0000
20	110 STYLE WALL MOUNTED VOICE BLOCK, 100 PAIR. COORDINATE LOCATIONS WITH SERVICE PROVIDERS DEMARCATION.	AS SPECIFIED
21	APC Smart-UPS SRT 5000VA RM 208V to 120V 2U Step-Down Transformer, with APC Smart-UPS SRT 19" Rail Kit for Smart-UPS SRT 5/6/8/10kVA	APC #SRT5KRMXLT-5KTF APC #SRTRK2
22	APC Smart-UPS On-Line, 5kVA, Rackmount 3U, 208V, 2x L6-20R+2x L6-30R NEMA outlets, Network Card+SmartSlot, Extended runtime, W/ rail kit, TAA	APC #SRT5KRMXLTUS APC #SRTRK2
23	APC Smart-UPS SRT 2200VA RM 230V	APC #SRT2200RMXLI
24	UPS Network Management Card 2 -Remote monitoring and control of UPS	APC #AP9630
25	TEMPERATURE & HUMIDITY SENSOR	APC #AP9335TH
26	PDU -208V, 1 RU -- (1 PER 5KVA UPS)	APC #AP9571A

BACKBONE DIAGRAM KEYNOTES

1. 12 STRAND OS2 SINGLE-MODE FIBER OPTIC PLENUM RATED ARMORED CABLE TERMINATED ONTO "LC" TYPE ADAPTER PLATES WHICH WILL BE TERMINATED WITHIN RACK MOUNTED FIBER OPTIC CABINETS AT EACH ENDS.
2. 25 PAIR CATEGORY 5E RATED PLENUM CABLE FROM 300 PAIR 110 STYLE WALL MOUNTED BLOCK IN THE MDF #141 AND TERMINATED ONTO 110 STYLE 24 PORT, RACK MOUNTED PATCH PANELS IN MDF #141 & IDF 113. TERMINATE EACH PAIR OF THE COPPER RISER CABLES ON THE BLUE PAIR (PR 1) OF EACH PORT OF THE PATCH PANELS. COIL THE 25TH PAIR (VIOLET/SLATE) AT THE PATCH PANEL END OF EACH CABLE FOR REPAIR OR FUTURE USE.
3. INSTALL #6 AWG (OR AWG AS REQUIRED PER DISTANCES) GROUNDING BUSS WIRE TERMINATING ONTO GROUNDING BUSS BARS AT EACH END.

SECURE ATTACHMENT NOTE

To ensure proper attachment of Fixtures, Furnishings & Equipment items, including and Technology items, where "items" are attached to wall, ceiling, overhead structure, and/or floor, Contractor shall provide information adequate for architect to verify items, attached to wall, ceiling, and/or floor are attached securely and per manufacturer's recommendations. Architect's review may be implemented during submittal process.

Contractor shall provide struts, hangers, fasteners, safety harnesses, channels, bolts, screws, rods, etc. to securely attach items to existing structure as required to meet field conditions and meet applicable codes.

BONDING CONDUCTOR SIZING CHART	
LENGTH (FEET)	SIZE (AWG)
LESS THAN (<) 13'	# 6
14' - 20'	# 4
21' - 26'	# 3
27' - 33'	# 2
34' - 41'	# 1
42' - 52'	# 1/0
53' - 66'	# 2/0
GREATER THAN (>) 66'	# 3/0

WIRE AWG AS REQUIRED PER DISTANCES SPECIFIED IN GROUNDING CHART. GROUNDING BUSS WIRE TERMINATING ONTO GROUNDING BUSS BARS AT EACH END.

GROUNDING AND BONDING KEYNOTES

1. BONDING CONDUCTOR FOR TELECOMMUNICATIONS (BCT) TO BUILDING GROUNDING ELECTRODE. REFER TO RISER DIAGRAM.
2. BCT TO NEAREST BUILDING STEEL STRUCTURE. IF APPLICABLE. UTILIZE EXOTHERMIC WELDING CONNECTION TO BUILDING STEEL.
3. BCT TO NEAREST BUILDING ELECTRICAL PANELBOARD GROUND BAR. UTILIZE LISTED CONNECTOR TO PANELBOARD GROUND BUS.
4. TELECOMMUNICATION BONDING BACKBONE (TBB) FOR GROUNDING EQUALIZER (GE), IF APPLICABLE. REFER TO RISER DIAGRAM.
5. TYPICAL TBB(S) THAT INTERCONNECTS ALL TGB(S) WITH THE TMGB. REFER TO RISER DIAGRAM.
6. BCT TO TELECOMMUNICATIONS CABLE RUNWAY(S), RACK(S), CABINET(S) AND APPLICABLE EQUIPMENT. DAISY CHAINING OF BCT AT RELAY IS NOT ACCEPTABLE. EACH RACK IS TO HAVE A BCT TO A COMPRESSION LUG TAP TO THE DEDICATED HOMERUN BCT BACK TO THE TGB. SEE DETAILS.

GROUNDING AND BONDING GENERAL NOTES

A. REFER TO GROUNDING AND BONDING DIVISION 27 SPECIFICATIONS FOR ADDITIONAL INFORMATION.
B. REFER TO GROUNDING AND BONDING RISER DIAGRAM FOR ADDITIONAL INFORMATION.
C. PROVIDED 2"C SLEEVE PATHWAY AT EACH FLOOR AND WALL PENETRATIONS FOR THE TELECOMMUNICATION BONDING BACKBONE (TBB). COORDINATE PROPER METHODS FOR PENETRATIONS WITH FIRESTOPPING AS REQUIRED PER DIVISION 07 SPECIFICATIONS.
D. BONDING CONDUCTORS SHALL BE #3/0 AWG COLOR GREEN INSULATED COPPER CONDUCTOR OR SIZED PER "BONDING CONDUCTOR SIZING CHART" (ANSI J-STD-607-A) IN PATHWAY.
E. FASTENING BONDING CONNECTOR TWO-HOLE LUGS TO ALL BUSBARS SHALL BE CLEANED AND APPLY A COPPER ANTI-OXIDANT TO THE CONTACT AREA OF BOTH THE CONNECTOR LUG AND THE BUSBAR.
F. BONDING CONDUCTORS AND BUSBARS SHALL BE LABELED WITH IDENTIFICATION IN ACCORDANCE WITH THE REQUIREMENTS OF ANSI/TIA/EIA-606-A.
G. BONDING CONDUCTORS SHALL BE LABELED WITH IDENTIFICATION LABEL NOTED BELOW AND SECURED WITH CABLE TIE TO EACH CONDUCTOR. (ANSI J-STD-607-A). "IF THIS CONNECTOR OR CABLE IS LOOSE OR MUST BE REMOVED, PLEASE CALL THE BUILDING TELECOMMUNICATIONS MANAGER".
H. CONTINUITY TESTING MEASUREMENTS OF THE GROUNDING RESISTANCE TO NOT EXCEED 0.1 OHM BETWEEN:
H.1 THE TMGB AND THE NEAREST GROUNDING ELECTRODE.
H.2 EACH TGB AND THE NEAREST GROUNDING ELECTRODE.
H.3 EACH TGB AND PATHWAY(S), RACK(S), CABINET(S) AND APPLICABLE EQUIPMENT.

NOTES

1. **CABLING REQUIREMENTS:** ALL PUBLIC ADDRESS SYSTEM CABLING FOR DEVICES SHALL TERMINATE IN THE DATA ROOMS AS SPECIFIED IN THE LOW-VOLTAGE CABLING SCHEMATICS.
2. **RISER DIAGRAM:** THE RISER DIAGRAM PROVIDED IS FOR DESIGN PURPOSES ONLY. THE CONTRACTOR IS RESPONSIBLE FOR CREATING A COMPLETE RISER DIAGRAM REFLECTING THE ACTUAL FIELD WIRING.
3. **SPECIFICATIONS REFERENCE:** REFER TO PROJECT SPECIFICATIONS FOR THE SYSTEM DESCRIPTION, SEQUENCE OF OPERATION, AND WIRING DETAILS.
4. **MICROPHONE CABLE CLEARANCE:** MAINTAIN A MINIMUM CLEARANCE OF 12 INCHES BETWEEN MICROPHONE CABLE RUNS AND CONDUITS OR CABLES USED FOR ELECTRICAL POWER DISTRIBUTION. WHERE 12-INCH CLEARANCE IS NOT FEASIBLE, CROSS HIGHER VOLTAGE LINES PERPENDICULARLY.
5. **FIRE-RATED WALL PENETRATIONS:** ALL PENETRATIONS THROUGH FIRE-RATED WALLS SHALL BE SEALED USING APPROVED FIRE-STOPPING MATERIALS.
6. **SPEAKER CONDUCTORS:** SPEAKER CONDUCTORS INSTALLED IN INSTRUCTIONAL ROOMS AND OFFICES SHALL RUN AS A CONTINUOUS HOME RUN TO THE CENTRAL CONTROL RACK WITHOUT SPLICES.
7. **RISER DIAGRAM VALIDATION:** THE RISER DIAGRAM INCLUDED IN THE DRAWINGS INDICATES GENERAL LOOPING AND ZONING REQUIREMENTS. THE CONTRACTOR MUST CONFIRM ACTUAL QUANTITIES FROM ARCHITECTURAL DRAWINGS (T-SERIES).
8. **INSTALLATION STANDARDS:** THE PUBLIC ADDRESS SYSTEM SHALL BE INSTALLED IN COMPLIANCE WITH NFPA 72 (2010 EDITION) OR THE MOST CURRENT FIRE CODE STANDARD ADOPTED BY THE STATE OF CONNECTICUT.
9. **FIRE ALARM INTEGRATION:** COORDINATE THE CONNECTION BETWEEN THE PUBLIC ADDRESS SYSTEM AND THE FIRE ALARM SYSTEM WITH THE OWNER, FIRE ALARM INSTALLER, SECURITY CONSULTANT, AND PUBLIC ADDRESS SYSTEM DESIGNER.
10. **PRIORITY OVERRIDE LOADS:** ENSURE PRIORITY OVERRIDE LOADS AT INTERACTIVE DISPLAY LOCATIONS ARE CALCULATED INTO THE PUBLIC ADDRESS AMPLIFIER LOADS.
11. **WIRELESS CLOCK SYSTEM:** INCLUDE A 1-WATT REPEATER IN EACH DATA CLOSET FOR THE WIRELESS CLOCK SYSTEM.
12. **EXTERIOR HORNS:** ALL EXTERIOR HORNS SHALL BE ON AN ISOLATED ZONE AND PROGRAMMABLE TO ENGAGE ONLY DURING BUS OR EMERGENCY ANNOUNCEMENTS.
13. **LAN CONNECTIONS:** LAN CONNECTIONS INDICATED IN THE WIRING DIAGRAM SHALL TERMINATE ON THE REAR OF 19" CATEGORY 6A-RATED PATCH PANELS MOUNTED IN THE MDF/IDF RACKS AS SHOWN IN THE TECHNOLOGY DETAILS.
14. **REQUIRED LICENSES:** REFER TO THE PUBLIC ADDRESS SYSTEM SPECIFICATION FOR ALL REQUIRED LICENSES.
15. **NETWORK ELECTRONICS AND SYSTEM CONFIGURATION:**
    - A. NETWORK SWITCHES WILL BE FURNISHED BY THE OWNER IN A LATER PHASE.
    - B. THE CONTRACTOR SHALL ADVISE THE OWNER ON IP ADDRESSING, VLAN CREATION, AND FURNISH THE CONFIGURATION FOR A FULLY FUNCTIONAL PUBLIC ADDRESS SYSTEM ON THE OWNER'S LAN.
    - C. INCLUDE WORK HOURS FOR SYSTEM CONFIGURATION WITH THE OWNER AFTER SUBSTANTIAL COMPLETION OF THE PROJECT, ONCE SWITCHES ARE INSTALLED.

KEY NOTES

KEY	NOTE
1	CLASSROOM SPEAKERS: UP TO 24 CLASSROOM SPEAKERS AND ANALOG CALL SWITCHES CAN BE POWERED VIA QTY (1) #NQ-E7030. EACH CLASSROOM SPEAKER ASSEMBLY SHALL TERMINATE ONTO A #NQ-E7030.
2	OFFICE SPEAKERS: UP TO 24 OFFICE SPEAKERS AND ANALOG VOLUME CONTROL PANELS CAN BE POWERED VIA QTY (1) #NQ-E7030. EACH OFFICE SPEAKER ASSEMBLY SHALL TERMINATE ONTO A #NQ-E7030.
3	HORNS: EXTERIOR HORNS SHALL BE LOOPED ONTO AN ISOLATED ZONE. GYMNASIUM HORNS SHALL BE ON AN ISOLATED ZONE. UP TO 20 EXTERIOR HORNS MAY BE ON ONE ZONE AND DAISY-CHAINED. HORNS SHALL TERMINATE ONTO #NQ-A300
4	CORRIDOR SPEAKERS: MAY BE LOOPED ONTO AN ISOLATED ZONE. UP TO 20 CORRIDOR SPEAKERS MAY BE ON ONE ZONE AND DAISY-CHAINED. CORRIDOR SPEAKERS SHALLTERMINATE ONTO #NQ-A300
5	METAL WALL SPEAKERS MAY BE LOOPED ONTO AN ISOLATED ZONE. UP TO 20 METAL WALL SPEAKERS MAY BE ON ONE ZONE AND DAISY-CHAINED. METAL WALL SPEAKERS SHALL TERMINATE ONTO #NQ-A300
6	PENDANT SPEAKERS MAY BE LOOPED ONTO AN ISOLATED ZONE. UP TO 20 PENDANT SPEAKERS MAY BE ON ONE ZONE AND DAISY-CHAINED. PENDANT SPEAKERS SHALL TERMINATE ONTO #NQ-A300

GENERAL NOTES

1. DRAWINGS INDICATE THE GENERAL ARRANGEMENT OF SYSTEMS AND WORK INCLUDED IN THE CONTRACT.
2. ALL SECURITY DEVICES AND OUTLETS MUST COINCIDE WITH ELECTRICAL POWER DRAWINGS AND TECHNOLOGY DRAWINGS. THE CONTRACTOR MUST COORDINATE ALL LOCATIONS OF THE ELECTRICAL OUTLETS WITH THE SECURITY DEVICES.
3. REQUIRED CABLE: SUBMIT ALL CABLE AND TERMINATION DEVICES WITH PRODUCT SUBMITTALS PRIOR TO PROCUREMENT
4. LABEL ALL CABLES WITHIN 12" OF FINAL TERMINATION.
5. ALL CABLES RUN IN CEILING AREAS SHALL BE PROPERLY SUPPORTED WITH CONDUIT OR J-HOOKS MOUNTED TO SLAT AT MINIMUM OF 5' INTERVALS. NO CABLE SHALL REST OR TOUCH CEILING ASSEMBLIES. CABLES SHALL NOT BE INSTALLED EXPOSED IN OPEN CEILING AREAS.
6. ALL LABELS SHALL BE MACHINE PRINTED. NO HAND LETTERED CABLES SHALL BE USED.
7. USE ONLY PLENUM RATED CABLES.
8. DO NOT RUN ETHERNET CABLES PARALLEL TO POWER CABLES. CROSS POWER CABLES ONLY AT RIGHT ANGLES.
9. MAINTAIN 8" DISTANCE FROM ALL LIGHTING TRANSFORMERS.
10. SPLICING CABLES IS NOT PERMITTED EXCEPT AS SPECIFICALLY NOTED.
11. LOCATIONS OF EQUIPMENT FOR ALL OTHER TRADES SHALL BE COORDINATED BEFORE CONSTRUCTION.
12. CONTRACTOR SHALL COORDINATE LAYOUT LOCATIONS AND CLEARANCE OF ALL EQUIPMENT WITH OTHER TRADES AND ATTAIN OWNER'S APPROVAL PRIOR TO INSTALLATION.
13. CONTRACTOR SHALL COORDINATE ALL RACEWAYS, LOCATIONS, AND POWER REQUIREMENTS WITH THE ELECTRICAL CONTRACTOR.
14. ALL DEVICES SHOWN ON THESE PLANS MUST BE COORDINATED AND APPROVED BY THE ARCHITECT. THE INSTALLATION CONTRACTOR SHALL DEPICT ALL DEVICES ONTO ELEVATION SUBMITTALS BEFORE INSTALLATION. ANY DEVICE THAT IS NOT APPROVED BY THE ARCHITECT PRIOR TO INSTALLATION MAY BE REQUIRED TO BE RELOCATED AS DIRECTED BY THE ARCHITECT AND CORRECTED BY THE CONTRACTOR WITH NO ADDITIONAL CHARGE TO THIS PROJECT.
15. ALL PATHWAYS, INCLUDING ALL WALL AND CEILING PENETRATIONS ARE REQUIRED TO INSTALL CABLING TO THE END DEVICE AND SHALL BE COORDINATED BETWEEN THE LOW VOLTAGE AND ELECTRICAL CONTRACTOR AND SHALL BE INCLUDED AS PART OF THIS SECTION.
16. SECURE ATTACHMENT OF TECHNOLOGY AND SECURITY DEVICES:
    A. TO ENSURE PROPER ATTACHMENT OF FIXTURES, FURNISHINGS & EQUIPMENT ITEMS, INCLUDING AND TECHNOLOGY ITEMS, WHERE "ITEMS" ARE ATTACHED TO WALL, CEILING, OVERHEAD STRUCTURE, AND/OR FLOOR, CONTRACTOR SHALL PROVIDE INFORMATION ADEQUATE FOR ARCHITECT TO VERIFY ITEMS, ATTACHED TO WALL, CEILING, AND/OR FLOOR ARE ATTACHED SECURELY AND PER MANUFACTURER'S RECOMMENDATIONS. ARCHITECT'S REVIEW MAY BE IMPLEMENTED DURING SUBMITTAL PROCESS.
    B. CONTRACTOR SHALL PROVIDE STRUTS, HANGERS, FASTENERS, SAFETY HARNESSES, CHANNELS, BOLTS, SCREWS, RODS, ETC. TO SECURELY ATTACH ITEMS TO EXISTING STRUCTURE AS REQUIRED TO MEET FIELD CONDITIONS AND MEET APPLICABLE CODES.
17. ALL CONDUIT IS TO ABOVE ACCESSIBLE CEILING UNLESS OTHERWISE NOTED.
18. PLACEMENT OF ALL SECURITY VIDEO SURVEILLANCE CAMERAS MUST BE APPROVED BY THE SECURITY CONSULTANT AND/OR OWNER PRIOR TO CONSTRUCTION.

IDS & ACS DOOR KEYNOTES

1. 4"X4"X2-1/8" DEEP JUNCTION BOX (JB) ON SECURE SIDE, ABOVE ACCESSIBLE CEILING FURNISHED AND INSTALLED BY GENERAL CONTRACTOR.
2. 1" CONDUIT TO [JB] FOR SECURITY COMPOSITE CABLE FURNISHED AND INSTALLED BY GENERAL CONTRACTOR.
3. 3/4" CONDUIT TO [JB] FOR SECURITY DEVICES FURNISHED AND INSTALLED BY GENERAL CONTRACTOR. TYPICAL FOR ALL DEVICES.
4. CARD READER [CR] - FURNISHED AND INSTALLED BY SECURITY CONTRACTOR. SINGLE GANG ELECTRICAL BOX FLUSH MOUNTED 46" A.F.F. ON UNSECURED SIDE FURNISHED AND INSTALLED BY GENERAL CONTRACTOR.
5. ELECTRIFIED TRANSFER HINGE (12 CONDUCTOR MINIMUM) AND WIREWAY TO CRASH BAR FURNISHED AND INSTALLED BY DIVISION 08 DOOR HARDWARE.
6. CRASH BAR WITH ELECTRIFIED TRIM AND INTEGRATED REQUEST-TO-EXIT [REX] - CRASH BAR AND TRIM FURNISHED AND INSTALLED BY DIVISION 08 DOOR HARDWARE. CONNECTION TO ELECTRIFIED TRANSFER HINGE FOR LOCK AND REX BY SECURITY CONTRACTOR. DOOR PREP BY GENERAL CONTRACTOR.
7. NON-ELECTRIFIED CRASH BAR AND TRIM LOCK FURNISHED AND INSTALLED BY DIVISION 08 DOOR HARDWARE.
8. DOOR POSITION SWITCH FURNISHED AND INSTALLED BY DIVISION 08 DOOR HARDWARE. CABLED BY SECURITY CONTRACTOR. DOOR AND FRAME PREP BY GENERAL CONTRACTOR.
9. COMPOSITE ACCESS CONTROL CABLE FURNISHED AND INSTALLED BY SECURITY CONTRACTOR.
10. REQUEST TO EXIT [REX] MOTION SENSOR INSTALLED ON SECURED SIDE OF DOOR FURNISHED AND INSTALLED BY SECURITY CONTRACTOR. SINGLE GANG ELECTRICAL BOX FLUSH MOUNTED HORIZONTALLY @ 6'-8"AFF ON UNSECURED SIDE OF DOOR FURNISHED AND INSTALLED BY GENERAL CONTRACTOR.
11. ELECTRIC STRIKE FURNISHED AND INSTALLED BY DIVISION 08 DOOR HARDWARE. CABLE AND CONNECTION BY SECURITY CONTRACTOR

NOTES:

THE LOCKDOWN BUTTONS SHALL CONNECT TO THE ACCESS CONTROL SYSTEM, MASS NOTIFICATION SYSTEM (PUBLIC ADDRESS SYSTEM) AND FIRE ALARM SYSTEM. CONFIGURATION OF FUNCTIONALITY MUST BE COORDINATED WITH THE OWNER AND SECURITY CONSULTANT. AT A MINIMUM,THE FOLLOWING FEATURES SHALL BE OCCUR UPON ACTIVATION:

1. MUST LOCK DOWN ALL ACCESS CONTROLLED DOORS WITH ASSOCIATED THREAT LEVELS CONFIGURED INTO THE ACCESS CONTROLLED SYSTEM FOR ALL CONTROLLED DOORS. THIS THREAT LEVEL ACCESS SHALL BE DESCRIBED BY THE OWNER DURING CONFIGURATION OF THESE SECURITY SYSTEMS. AS AN EXAMPLE: THE PRINCIPAL, FIRE AND POLICE SHALL BE THE ONLY PEOPLE AUTHORIZED PERSONNEL ALLOWED ACCESS THROUGH THE CONTROLLED DOORS.
2. MUST INTERFACE WITH THE FIRE ALARM SYSTEM TO CLOSE SMOKE DOORS.
3. MUST NOTIFY THE SECURITY MONITORING COMPANY OF AN EMERGENCY EVENT.
4. MUST INITIATE AN EMERGENCY BROADCAST OVER THE MASS NOTIFICATION SYSTEM / PUBLIC ADDRESS SYSTEM. THIS PRE-RECORDED MESSAGE SHALL BE CREATED WITH THE OWNER DURING SYSTEM CONFIGURATION OF THE PA SYSTEM.
5. THE LOCKDOWN BUTTON SHALL BE COLORED GREEN.
6. LABEL AS "LOCKDOWN"
7. MOUNT 48" AFF
8. REFER TO WRITTEN SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
9. LOCKDOWN BUTTON MUST IONCLUDE A PROTECTIVE, HINGED, COVER.

NTS

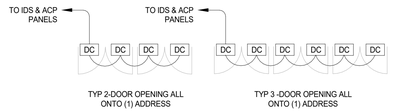
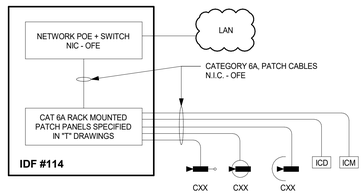
DOOR GANGING DIAGRAMS

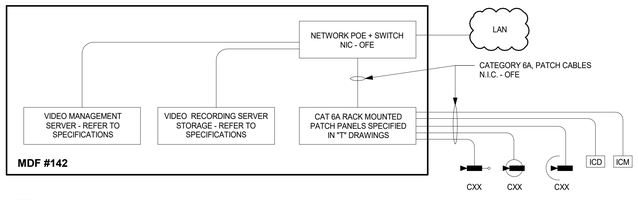


3 IDS- WIRING DIAGRAM
NTS

NOTES:

1. **CONTROL PANEL CAPACITY:** THE IDS CONTROL PANEL SHALL INCLUDE AN ADDITIONAL 40% CAPACITY FOR FUTURE EXPANSION OF SENSORS.
2. ZONING REQUIREMENTS: ZONING DETAILS SHALL BE PROVIDED BY THE OWNER PRIOR TO INSTALLATION. AT A MINIMUM, THE SYSTEM SHALL BE CONFIGURED TO ALLOW SEPARATE ARMING AND DISARMING FOR THE FOLLOWING ZONES:
   A. ENTIRE BUILDING
   B. GYMNASIUM
   C. AUDITORIUM
   D. CENTRAL ADMINISTRATION AREA
   E. EACH GRADE LEVEL
   F. EACH FLOOR
   G. EXTERIOR OF THE BUILDING
3. **COMMUNICATION CAPABILITIES:** THE IDS SHALL BE CAPABLE OF ALERTING CENTRAL MONITORING VIA CELLULAR, POTS (ANALOG), AND IP COMMUNICATION METHODS. ALL THREE TYPES OF COMMUNICATION MUST BE CONFIGURED AND OPERATIONAL IN THE SYSTEM.
4. **DAY-ALARM CONFIGURATION:** THE SYSTEM SHALL INCLUDE A "DAY-ALARM" FEATURE TO NOTIFY SCHOOL ADMINISTRATORS IF DOORS ARE PROPPED OPEN. NOTIFICATIONS SHALL BE CONFIGURABLE TO SEND ALERTS VIA TEXT AND EMAIL AS DIRECTED BY THE OWNER DURING SYSTEM SETUP. THE SYSTEM MUST ALLOW PROGRAMMING OF ALERTS BASED ON THE DURATION THAT DOORS REMAIN PROPPED OPEN.
5. **GRAPHICAL USER INTERFACE:** THE IDS SHALL INCLUDE A GRAPHICAL USER INTERFACE FEATURING A MAP OF THE FACILITY TO VISUALLY INDICATE DOOR PROPPED OPEN SENSORS. ALL NECESSARY LICENSING AND SOFTWARE FOR THIS FEATURE SHALL BE INCLUDED.
6. **COMPLETE SYSTEM INSTALLATION:** ALL ENCLOSURES, CABLING, TERMINATIONS, CONFIGURATION, AND FINAL TESTING ARE REQUIRED TO DELIVER A FULLY FUNCTIONAL SYSTEM.
7. **POWER SUPPLIES:** INCLUDE ALL BATTERIES AND POWER SUPPLIES AS SPECIFIED AND REQUIRED FOR A FULLY OPERATIONAL SYSTEM.
8. **SYSTEM MODULES:** PROVIDE ALL MODULES NECESSARY TO ACHIEVE A FULLY FUNCTIONAL SYSTEM.
9. **DEVICE CABLING:** EACH ENDPOINT SHALL BE CABLED AS A HOMERUN TO THE APPROPRIATE MDF (MAIN DISTRIBUTION FRAME) OR IDF (INTERMEDIATE DISTRIBUTION FRAME).
10. **SENSOR CONFIGURATION:** EACH SENSOR SHALL BE INDIVIDUALLY CONFIGURED TO PROVIDE A UNIQUELY IDENTIFIED POINT FOR CENTRAL MONITORING, ENABLING EXACT IDENTIFICATION OF THE SENSOR IN ALARM CONDITIONS.
11. **SYSTEM INTEGRATION:** THE SYSTEM SHALL OPERATE AS ONE COMPLETE AND INTEGRATED SYSTEM.
12. **WIRE GAUGES AND INSPECTION:** CONFIRM ALL WIRE GAUGES WITH THE MANUFACTURER BEFORE INSTALLATION. INCLUDE ALL EOL (END OF LINE) RESISTORS. DO NOT APPLY POWER TO THE SYSTEM UNTIL AN OSM (OWNER'S SITE MANAGER) REPRESENTATIVE HAS INSPECTED AND APPROVED THE INSTALLATION TO PREVENT POTENTIAL EQUIPMENT DAMAGE.
13. **CABLING STANDARDS:** ALL CABLING USED SHALL BE PLENUM RATED.
14. **SHOP DRAWING SUBMITALS:** THE CONTRACTOR AWARDED THIS PROJECT SHALL SUBMIT A COMPREHENSIVE SET OF SHOP DRAWINGS DURING THE PRODUCT SUBMITTAL PHASE. THESE DRAWINGS MUST DETAIL EACH DEVICE AND ITS INTERCONNECTION, AND THEY MUST BE APPROVED PRIOR TO ROUGH-IN OR CABLE INSTALLATION.

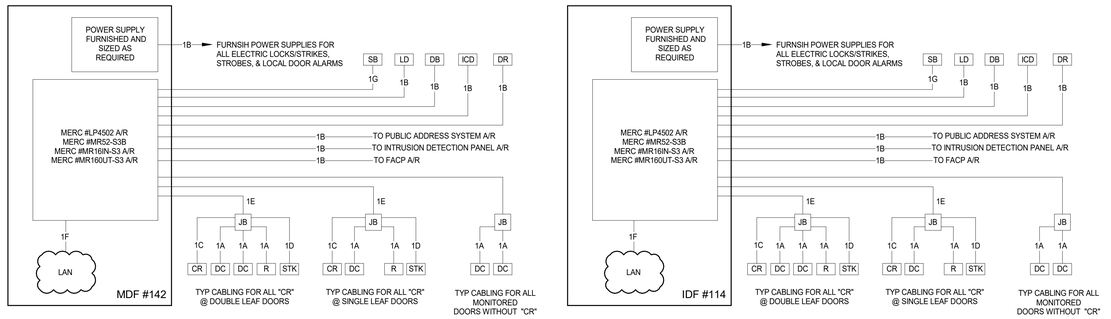




NOTES:

1. **CAMERA TERMINATION:** REFER TO THE SECURITY DRAWINGS TO DETERMINE THE SPECIFIC DATA ROOM WHERE EACH CAMERA IS TERMINATED.
2. **INTERCOM VIDEO STORAGE:** ENSURE THAT VIDEO FROM INTERCOM DOOR RELEASES IS STORED ON THE VIDEO SURVEILLANCE SERVERS. INCLUDE AND CONFIGURE ALL NECESSARY LICENSES.
3. **ACCESS CONTROL INTEGRATION:** CONFIGURE INTERCOM DOOR RELEASES TO UNLOCK THE APPROPRIATE DOORS VIA THE ACCESS CONTROL PANELS.
4. **MASTER STATION ROLL-OVER CONFIGURATION:** SET UP INTERCOM DOOR RELEASES AND MASTER STATIONS TO "ROLL-OVER" TO ALTERNATE MASTER STATIONS IF A CALL IS NOT ANSWERED WITHIN A SPECIFIED TIME FRAME. ENSURE EACH INTERCOM DOOR RELEASE CAN ACTIVATE ANY MASTER STATION IN THE FACILITY. COORDINATE THE ROLL-OVER PROCEDURES AND SEQUENCE OF OPERATIONS WITH THE OWNER DURING THE CONFIGURATION PROCESS.
5. **EQUIPMENT QUANTITIES:** VERIFY AND CONFIRM THE QUANTITIES OF CAMERAS, INTERCOM DOOR RELEASES, AND MASTER STATIONS AS PART OF THE SCOPE OF WORK OUTLINED IN THE SECURITY DRAWINGS.

2 VSS- WIRING DIAGRAM
NTS



ELECTRIC LOCKSETS, REQUEST TO EXIT DEVICES, AND DOOR POSITION SWITCHES REFER TO DIV 08 FOR DOOR HARDWARE

ELECTRIC LOCKSETS, REQUEST TO EXIT DEVICES, AND DOOR POSITION SWITCHES REFER TO DIV 08 FOR DOOR HARDWARE

NOTES:

1. **DOOR CONTROLLERS:** THE QUANTITY OF DOOR CONTROLLERS SHALL CORRESPOND TO THE CARD READER QUANTITIES SPECIFIED ON THE PLANS.
2. **ELEVATOR CONTROL LICENSES AND COORDINATION:**
   A. INCLUDE ALL NECESSARY ELEVATOR CONTROL LICENSES.
   B. COORDINATE ELEVATOR FUNCTIONALITY WITH THE OWNER AND THE ELEVATOR CONTRACTOR.
   C. A CARD READER SHALL BE DEDICATED TO EACH ELEVATOR ON EACH FLOOR. UPON PRESENTATION OF A VALID CREDENTIAL, THE ACCESS CONTROL SYSTEM SHALL ACTIVATE THE ELEVATOR VIA THE ELEVATOR CONTROL PANEL.
   D. PROVIDE ALL REQUIRED LICENSES, CABLING, AND CONFIGURATIONS TO ENSURE A FULLY FUNCTIONAL SYSTEM.
3. **CONTROL CABLING:** ALL CONTROL CABLING FROM DATA ROOMS TO EACH ACCESS CONTROL DEVICE IS REQUIRED AND SHALL BE INCLUDED IN THE BID DOCUMENTATION.
4. **POWER CABLING:** PROVIDE ALL NECESSARY POWER CABLING TO EACH LOW-VOLTAGE DEVICE AT EVERY DOOR EQUIPPED WITH A CARD READER. THIS SHALL ALSO BE INCLUDED IN THE BID DOCUMENTATION.
5. **DOOR HARDWARE AND POWER SUPPLIES:** REFER TO DIVISION 08 – DOOR HARDWARE SPECIFICATIONS. ENSURE ALL REQUIRED POWER SUPPLIES ARE APPROPRIATELY SIZED TO SUPPORT CARD READERS, ELECTRONIC DOOR STRIKES/LOCKS, AND REQUEST-TO-EXIT DEVICES INTEGRATED INTO THE SYSTEM.
6. **SYSTEM TERMINATIONS AND TESTING:** THE CONTRACTOR SHALL PERFORM ALL FINAL TERMINATIONS, CONFIGURATION, AND TESTING.
7. **INTERCOM DOOR RELEASE:** THE INTERCOM DOOR RELEASE AND DOOR RELEASE BUTTONS SHALL RELEASE THE DOORS THROUGH THE ACCESS CONTROL SYSTEM (ACS) PANEL.
8. **FIRE ALARM INTEGRATION:** CONTROL CABLING TO THE FIRE ALARM CONTROL PANEL SHALL ENABLE THE RELEASE OF MAGNETIC HOLD-OPEN DOORS, AS SPECIFIED IN THE DRAWINGS, DURING A LOCKDOWN EVENT.
9. **LOCKDOWN AND DURESS FUNCTIONALITY:** ACTIVATION OF LOCKDOWN OR DURESS BUTTONS SHALL REGISTER AS AN ADDRESSABLE ALARM ON THE INTRUSION DETECTION PANEL AND TRIGGER A DIAL-OUT TO THE CENTRAL MONITORING COMPANY.
10. **MERCURY CONTROLLER CONNECTIONS:**
    A. MERCURY CONTROLLERS SHALL CONNECT TO READER INTERFACE PANELS AND I/O PANELS VIA RS-485 WITHIN THE ENCLOSURE.
    B. MERCURY CONTROLLERS SHALL ALSO CONNECT TO THE BUILDING LAN. NETWORK SWITCHES ARE PROVIDED BY OTHERS. COORDINATE SECURITY VLAN AND IP ADDRESSING WITH THE OWNER'S IT TEAM.
